Active Consent Preferences for Personal Information

Setup Considerations: Active Consent Preferences for Personal Information

You can use this topic to help make decisions when planning your configuration and use of active consent preferences for personal information. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

Active consent preferences for personal information enable you to collect consent preferences from workers in relation to how you process their personal information.

Business Benefits

- Respect the privacy of an individual's personal information in compliance with global regulations such as the General Data Protection Regulation (GDPR).
- Meet regulatory requirements in countries that require explicit consent to process personal information.
- Promote transparency about data usage in your organization.
- Enable workers to actively manage their consent preferences without manual processes.
- Expand self-identification as a feature in countries that require active consent.

Use Cases

- Obtain explicit consent by country for the use of personal data.
- Control the language of consent.
- Require a consent for a processing purpose if needed to support your business needs.

- View worker consent preferences to ensure you are respecting them.
- Purge data for workers who don't provide consent.

Questions to Consider

Question	Consideration
When you configure active consent for the country of a worker's primary position, do the preferences apply to other countries?	Workers can have active consent preferences in every country where they have a position. Active consents can be different for each country.
Do active consent preferences settings respect your existing localization settings?	Compare available data elements in your active consent and existing localization settings to ensure consistency.
Do you need to collect an active consent for every personal information field?	A single active consent applies to all selected personal information fields.
What happens when you create a new configuration?	Workers must provide their consent again when you create a new configuration because it replaces the previous configuration.
Does Workday provide an audit trail for active consents.	We maintain a history of all active consent configurations.
How do you purge data when a worker has active consents in multiple countries?	For a purge to occur with the new purgeable data types (PDTs), all consent preferences for a processing purpose must be Do Not Consentin all countries. When there's a single consent, Workday doesn't purge.
What's the difference between an acknowledgement and a consent processing type?	An acknowledgement is a check box and isn't considered in a purge. A consentis a prompt that is considered in a purge.
Can terminated workers continue to access their consent preferences?	Consent preferences don't expire so terminated workers who still have access to Workday can manage their consent preference until you: • Turn off active consent for a country. • Create a new configuration. • Purge their consent preferences.

Recommendations

Test data purging in your Sandbox environment before you purge data in you Production environment.

Note: Workday can't reverse or roll back the purged data.

Requirements

No impact.

Limitations

Workday doesn't transfer consent preferences when a candidate becomes a worker.

Tenant Setup

No impact.

Security

These domains in the Active Consent functional area:

Domain	Considerations
Active Consent	Enables you to access report fields and view active consent preferences for a worker.
Self-Service: Active Consent	Enables workers to manage their active consent through: • The initiation of the Change My Personal Information task. • The initiation of the My Task for Change My Personal Informationtask as a part of Onboarding. • The Manage Active Consent Preferences task.
Set Up: Active Consent	Use to configure your active consent processing purposes and active consent preferences by country.

Business Processes

Configure the *Change Personal Information* business process to collect active consent data in the countries where you enable it.

Workers don't have to initiate the *Change Personal Information* business process to manage their active consent preferences.

Reporting

Use the View Active Consent Preferences for Worker report to view active consents.

Integrations

Use the *PUT Active Consent Preferences by Country for Role* web service to import existing consent preferences into a configuration.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Related Information
Examples
24R1 What's New Post: Active Consent Preferences for Personal Information

Steps: Set Up Active Consent Preferences for Personal Information

Prerequisites

Review setup considerations for active consent preferences for personal information.

Review settings you have enabled in the Maintain Localization Settings task.

Context

You can collect consent preferences from workers for how their personal data can be processed. The consent preferences that you configure appear on the Active Consent Preferences page. This provides a safe and transparent experience for workers.

Steps

1. Enable the Active Consent functional area, and configure these domains:
   - *Active Consent*
   - *Self-Service: Active Consent*
   - *Set Up: Active Consent*

   See: Steps: Enable Functional Areas and Security Policies.
2. Access the Maintain Active Consent Processing Purposes task.

   Security: Set Up: Active Consent domain.

   Define and configure processing purposes. Example: DEI Analytics, 3rd party integrations, and Annual Reporting. You can also configure processing types, either Consent or Acknowledgment, and you have the option to make them required.

See next sentence

3. Access the Maintain Active Consent by Country task.

   Security: Set Up: Active Consent domain.

   As you complete the task, consider:

Option	Description
Add	Click to create a new configuration. When you create a new configuration, workers must give their consent again as of the effective date. Workers don't have to give their consent again when you modify an existing configuration.
Copy current configuration	Select when you want to create a new configuration with the same options, but a new effective date.
Effective Date	Select the effective date for the configuration.
Do you want to stop collecting consent for this country?	Select when you create a new configuration and want to stop collecting consent for a country on an effective date.
Custom Consent Statement	Enter a statement to inform your workers about how your organization will process their personal information. Example: You want to provide information about the purpose of active consent. For your statement enter: We will collect, store, and use these categories of personal information about you.
Personal Information Data To Be Processed	From the Personal Information Attributes menu, select the fields that the consent statement applies to.

Option	Description
	For consistency, ensure that you select the same attributes that you enabled on the Maintain Localization Settings task.
Active Consent Processing Purposes	From the Processing Purposes menu, select the processing purposes that you configured. You can select multiple processing purposes. A single consent applies to all personal information fields you've selected for active consent. (Optional) Select the Required check box to require a Consent or an Acknowledgement for any processing purpose. In the Override Processing Purpose Label field, enter custom text that requests consent for the processing purpose. In the Custom Consent Preferences section, define the preferences for consent processing types and map them to the consent values. Example: For Consent, enter text that says: Yes, I'll like that. For Do Not Consent, enter: No thank you. You can also add an Acknowledgment check box in this section. The Custom Consent Preferences option is required to enable report fields and purgeable data types.

4. Create Custom Reports.

   Create custom reports using report fields to view consent preferences or filter personal data.
5. (Optional) Access these tasks:
   - Maintain Custom Labels
   - Maintain Non-English Custom Labels

   Change the Active Consent term to a term that is appropriate for your organization.
6. (Optional) Access the Maintain Active Consent by Country task.

   To enable translation of the Custom Consent Statement in context:
   a) Click the magnifying glass icon next to Active Consent Configuration.
   b) Click the globe icon that appears with the Custom Consent Statement to open the *In-Context Translation* widget.

   Select a language in the translation grid to add translations.
7. (Optional) Access the Translate Business Object task.

   Select business objects to translate and the target language. Workday displays the consent preferences values, label overrides, and processing purpose options in the target language.

Result

Once you configure consent preferences, a person can give consent using these tasks:

- Change Active Consent Preferences.
- Change Personal Information as a subprocess of the *Onboarding* business process.

- Change Personal Information from their profile.

Consent preferences that you configure as required, display with a red asterisk in these tasks.

Next Steps

You can use the PUT Active Consent Preference by Country for Role web service to create or update active consents.

When needed, active consent preferences can be purged using the Person's Active Consent Preferences Purgeable Data Type (PDT).

Use these PDTs to purge personal data when consent isn't given:

- Person's Gender Identity without Active Consent
- Person's Pronoun without Active Consent
- Person's Sexual Orientation without Active Consent

Related Information
Tasks
Steps: Purge Person Data Privacy

Concept: Active Consent Preferences for Personal Information

The Workday Active Consent feature addresses the need for companies to collect explicit consent from their users to process their personal information. You must inform your users of what they’re consenting to and this information must be easy to understand. You have the option to require a consent for a processing purpose that you configure.

In countries that regulate data privacy, active consent directly impacts a company's ability to effectively collect and process personal information.The Workday Active Consent feature uses the requirements of the General Data Protection Regulation (GDPR) law as guidelines for data privacy.

Active consent differs from passive consent, which is consent by silence or omission of information. Passive consent is essentially implied and companies assume that if the data exists, they can use it.

Personal Information

Setup Considerations: Personal Information by Country

You can use this topic to help make decisions when planning your configuration and use of personal information by country. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

You can concurrently maintain, view, and report on multiple sets of personal information for a worker that are specific to a country when:

- A person has an international transfer and their active position moves to another country.
- A person has an international assignment and has 2 active positions, 1 in their home country and 1 in their host country.
- A person has additional jobs in multiple countries.

In addition, you can maintain, view, and report on country-based personal information for a person who was considered for a position as a pre-hire.

Business Benefits

- You can more easily manage personal information for countries in which a person currently has or had a position and for countries where you'd like to track data outside of positions.
- You can provide an enhanced user experience by not limiting the country-specific data that you can track for a person. This promotes collaboration and fosters a safe and inclusive work environment.

Use Cases

- You can accurately calculate pay for a person based on their country-specific information.
- You can configure payroll templates with country-specific fields for third-party payroll providers.

Questions to Consider

Question	Considerations
What types of workers might need additional personal information?	For a person with 1 active position who transfers to another country, you can retain the existing country-based personal information of their former location. You can also collect personal information in the country of their active position. For a person on international assignment with 2 active positions, a home (primary) position and a host position, you can add personal information specific to the host country. You can also maintain and continue to report on personal information specific to the home position country.
Who will be able to view different sets of personal information?	You can use role-based security and segmented security to limit access to personal information. When setting up security, consider: • Personal information is associated with a country. Role-based users can access personal information associated with the country of the position or positions they can access. • When a role-based user has access to a person that isn't based on position, such as a student, the user's access to personal information isn't restricted by country. • An unconstrained user with access to personal information can access personal information for any country. • You can create country-segment security groups to restrict access based on country for unconstrained users. • Self-service users only see the personal information associated with the country of their current and future positions. You can enable a security policy to grant self-service users access to all country-specific sets of personal information that exist for them.

Question	Considerations
What personal information do you want to collect?	Some types of personal information are only applicable to certain countries. For other types of personal information, different countries have varying policies on tracking the information. Workday enables you to specify which countries track these types of personal information.

Recommendations

When setting up security, consider if you want to restrict or grant access to multiple sets of personal information that is automatically available in your tenant.

Requirements

No impact.

Limitations

No impact.

Tenant Setup

No impact.

Security

The *Set Up: Personal Information Country Security Segments* domain in the System functional area enables you to restrict access to personal information based on the country associated with the personal information.

Business Processes

The *Change Personal Information* business process has a new initiating action, Edit Personal Information by Country. It enables unconstrained or segment-based users to add personal information for a country where the worker never worked or was never considered for a position.

Reporting

Users can see all their personal information in the countries in which they have an active or future position in the View My Personal Information by Country report. The All Personal Information for Country report field returns personal information for each country in which a person has personal information. It includes numerous individual report fields that you can use in condition rules and custom reports. The Personal Information for Country field prompts the user for country and returns personal information specific to that country.

Integrations

New versions of the *GET Change Personal Information* and *PUT Change Personal Information* web services support multiple sets of personal information by country.

Workday converted all tenants to support personal information by country so you don't need to modify your integrations to use this feature.

Connections and Touchpoints

Feature	Considerations
Payroll	You can use Workday to manage payroll for: • Canada • France • United Kingdom • United States
Tenant Setup - Payroll	You can enable different countries for Workday Payroll and configure many tenant-wide payroll options.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Reference

2022R1 What's New Post: Personal Information by Country

The Next Level: Overview of Primary Position Designation Impact

Steps: Manage Personal Information by Country

Prerequisites

Review setup considerations for personal information by country.

Security: *Personal Data: Personal Information* in the Personal Data functional area.

Context

You can maintain more than 1 set of country-based personal information for a person.

Steps

1. From the related actions menu of a person's profile, access 1 of these tasks or reports:
    - For ESS, Edit Personal Information by Country task.
    - For ESS, View My Personal Information by Country report.
    - For MSS, Edit Personal Information by Country task.
    - For MSS, Personal Information report.

    Workday displays personal information for each country where a person has a position as a worker or where a Pre-Hire was considered for a position. The location of the supervisory organization for a considered Pre-Hire determines the country for personal information. This country can differ from the location of the position.

    Security permissions determine who can access personal information.
2. (Optional) Enable the Self-Service: Personal Information by Country domain security policy.

    Add the relevant self-service security groups to enable self-service users to access their personal information for countries where they don't have a current or future position.

    See ../../../../authentication-and-security/configurable-security/configurable-security-basics/eyf1577465288705.dita.

3. (Optional) Configure the security policy for the *Personal Information Change* business process.

   Access the Business Process Security Policies for Functional Area report.

   Select Business Process Policy > Edit from the related actions menu of the domain security policy.

   Add the relevant unconstrained or country-segment based security groups to the Edit Personal Information by Country initiating action. This configuration enables editing of personal information for additional countries where a worker hasn't held a position or been considered for one.
4. (Optional) Configure country segment-based security.

   Access the Edit Personal Information Country Security Segment task.

   a. Create the security policy for the *Set Up: Personal Information Country Security Segments* domain. Configure the domain with the security groups that need to create Personal Information country security segments. See ../../../../authentication-and-security/configurable-security/security-policies/dan1370797389950.dita.
   b. Create Personal Information country security segments to control access to personal information for a specific country or countries. See ../../../../authentication-and-security/configurable-security/security-groups/segment-based-security-groups/dan1370797248403.dita.
   c. Create a segment-based security group to provide the unconstrained security groups access rights to the Personal Information country security segments. See ../../../../authentication-and-security/configurable-security/security-groups/segment-based-security-groups/dan1370797248403.dita.
   d. Remove the unconstrained security groups that are part of the segment-based security group from the relevant personal data security policies. See ../../../../authentication-and-security/configurable-security/security-policies/dan1370797389950.dita.
   e. If you have several country segment-based security groups that have the same security permissions, create an aggregate security group. See ../../../../authentication-and-security/configurable-security/security-change-control/dan1370796405018.dita.

Result

You can collect, report on, and view multiple sets of country-based personal information at the same time.

Related Information

2022R1: What's New Post: Personal Information by Country

Reference: Personal Information Fields on page 46

Steps: Set Up Personal Information Fields

Context

You can define the values for certain personal information fields by country or country region.

On personal information tasks, Workday displays the fields and values for workers based on their primary position location. When you opt in to the Personal Information by Country feature, Workday displays personal information for each country where a person has a position as a worker or where a pre-hire was considered for a position.

Depending on the field, you can select a value defined for the country or country region of that location. Example: You can define 8 ethnicity values for Canada. Workers in Canada can select among those values in personal information tasks. Example: If you don't want to track ethnicity in Austria, don't configure values for Austria and Workday automatically hides ethnicity for workers in Austrian locations.

Workday includes personal information fields that can have different values by country and fields that have the same set of values regardless of the country. Example: The value of Marital Status is different by country.

Steps

1. Access the Edit Tenant Setup - Global task.

   Specify which countries track:

   - Citizenship
   - Date Entered Workforce
   - Dependents for Payroll Purposes
   - Medical Exams
   - Multiple Ethnicities
   - Multiple Veteran's Preferences
   - Place of Birth

   Workday displays these fields for workers with a position in a specified country.

   Security: *Set Up: Tenant Setup - Global* domain in the System functional area.
2. Access the Maintain Localization Settings task.

   Select the *Personal Information* Area. Specify which countries track certain types of personal information, such as nationality, gender identity, and citizenship.

   See Maintain Localization Settings on page 144.
3. Review personal information fields that are non country-specific and fields that are country specific.

   See Reference: Personal Information Fields on page 46.
4. Define values for personal information fields by country or country region.

   See Reference: Personal Information Localizations on page 47 for a list of maintenance tasks to define values for:

   - Aboriginal/Indigenous identification details
   - Citizenship statuses
   - Disability
   - Ethnicities
   - Gender identities
   - Genders
   - Marital statuses
   - Military ranks, statuses, and service types
   - Political affiliations
   - Pronouns
   - Race/ethnicity details
   - Religions
   - Relative types
   - Sexual orientations
   - Sexual orientation and gender identities
   - Social benefits localities
   - Uniform Service Statuses
   - Veteran's Preferences

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
5. (Optional) Access the Maintain Feature Opt-Ins report.

   Select the Multi Select for Gender, Pronoun, and Sexual Orientation task to select multiple values for those fields.
6. (Optional) Access the Maintain Non-Country Nationalities task.

   Create non-country nationalities and specify which countries track them.

7. (Optional) Access the Maintain Custom Labels task.

   Create alternative terms for these fields:

   - Aboriginal/Indigenous Identification
   - Additional Military Service
   - Gender Identity
   - Pronoun
   - Race/Ethnicity Details
   - Region of Birth
   - Sexual Orientation

   Security: *Custom Label Management* domain in the System functional area.
8. (Optional) Send personal data to external endpoints in the Russian Federation using Enterprise Interface Builder.
   a) Create an outbound EIB that uses a copy of 1of these standard reports as a data source:

      - Contact Information Changes
      - Dependents
      - Hire
      - Job History
      - Propose Compensation
      - Proposed/Current Name Changes
      - Proposed/Current Personal Information Changes

      See: Steps: Set Up Outbound EIB.

   b) Add the EIB as an Integration step on 1 of these business processes:

      - Legal Name Change
      - Personal Information Change
      - Preferred Name Change

Next Steps

View the Localized Fields and Values report. It has a consolidated list of worker and job information fields that are specific to each country. This report doesn't display all localized and country-specific fields in Workday. It also excludes fields for which you haven't defined values, even fields applicable to the location.

Steps: Set Up Genders by Country

Prerequisites

Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

Context

You can configure country-specific genders that enable users to select the gender with which they identify.

Steps

1. Access the Maintain Genders task.

   You can:

   - Keep existing configured genders.
   - Add rows for any additional genders you want to report on.
   - Select the Inactive check box to remove a gender you don't want to use.
2. Access the Maintain Genders by Country task.

   Enter Gender Code and Gender Description values to display as prompts for gender-related tasks associated with the selected country.Example: Select *Canada*, enter Male_Canada for Gender Code and Male for Gender Description, and select the Is Male check box.

Result

Country-specific genders display on the Change Personal Information task for a worker associated with the configured country.

Tasks

Steps: Manage Personal Information by Country on page 35

Reference

2022R1 What's New Post: Configure Gender by Country

Steps: Set Up Reporting Gender

Prerequisites

Security: *Set Up: Contact Info, IDs, and Personal Data* in the Contact Information functional area.

Context

You can report on the gender of an employee who doesn't self-identify or who self-identifies as a gender that doesn't map to male or female.

Steps

1. Edit Domain Security Policies.

   Set up the *Person Data: Reporting Gender* domain in the Personal Data functional area.
2. Maintain Localization Settings on page 144.

   From the Area prompt, select *Personal Information*.

   In the Allow for Countries or Regions column, select the Reporting Gender (Worker) field and countries. For the Reporting Gender (Worker) localized field, select the Active check box.
3. (Optional) Access the Maintain Genders task and the Maintain Genders by Country task to verify gender values and configure as needed.

   Ensure the gender values display on the Reporting Gender prompt.
4. (Optional) Access the Maintain Custom Labels or Maintain Non English Custom Labels task.

   Select HR Compliance and enter a term to override Reporting Gender.

   Security: *Custom Label Management* domain in the System functional area.

Next Steps

Create custom reports for workers' reporting gender details. See Create Custom Reports.

You can view reporting gender details in the Personal Details report.

Related Information
Tasks
Steps: Set Up Personal Information Fields on page 36

Steps: Set Up Gender Pronouns to Display on a Worker Profile

Context

You can enable your organization and workers to configure gender pronouns to display with their name and job title on their public profile. This helps workers feel included and in control of sharing their personal information with others in their organization.

Steps

1. Set up public profile preferences.

   See Steps: Set Up Public Profile Preferences on page 59.
2. Access the Maintain Public Profile Preference task.

   Select the Pronoun check box to enable pronouns to display.

   Security: *Set Up: Public Profile*.
3. Have your workers access the Change Public Profile Preferences task.

   From the Pronoun prompt, have them select *Show to all*.
4. You or your workers access the Change Personal Information task.

   In the Pronoun section, select 1 pronoun option from the Pronoun prompt to display under the worker's name on their profile and on their Personal Details card. The pronoun will display exactly as you configure it for the Pronoun prompt. You can configure pronouns in multiple ways, depending on the needs of your organization. Examples: She/Her, They/Them.

   Security: *Person Data: Personal Information.*
5. (Optional) Access the Configure Profile Summary task to prevent sharing of other personal information such as Military Status or Sexual Orientation..

   Select *Worker Profile* and remove the Personal Details card.

   Security: *Set Up: System.*

Result

Workers' pronouns display within the organization, depending on how you configure visibility for pronouns. Pronouns display under a person's name and on their Personal Details card, regardless of their sharing preferences, for workers and support personnel with appropriate security permissions.

Related Information
Reference
Display Gender Pronouns With Worker Names

Steps: Set Up Audio and Phonetic Name Pronunciation on a Profile

Prerequisites

- Configure the *Name Pronunciation* business process in the Person Data functional area.
- Before recording an audio name pronunciation, you might need to take additional steps to set up Media Cloud based on your organization's subscription service agreement. For more information, see Getting Started with Workday Media Cloud.

Context

Enable workers to record an audio pronunciation of their name and add it to their profile. Workers can also add a phonetic pronunciation of their name to their profile. This provides a positive user experience, promotes collaboration, and fosters a safe and inclusive environment for workers.

Steps

1. Edit Domain Security Policies.

   Edit permissions for these domain security policies:

   - *Person Data: Name Pronunciation* in the Personal Data functional area.
   - *Self-Service: Name Pronunciation* in the Personal Data functional area.
2. Maintain Localization Settings.

   At the Area prompt, select *Personal Information*:

   - Enable the Audio Pronunciation field to add an audio pronunciation.
   - Enable the Phonetic Pronunciation field to add a phonetic pronunciation.
   - Select the countries for the localized fields.
   - Select the Active check box to activate a setting.
3. (Optional) Access the *Name Pronunciation* business process definition to add an approval step.
4. Access the Change My Name Pronunciation task.

   - Click the microphone to record your audio name pronunciation. You can listen to the recording and replace it if desired.
   - Enter a phonetic pronunciation of your name. Example: Enter *A-ver-ree Shi-vawn* as the phonetic pronunciation of Avery Siobhan.
   - Click Submit to add the recording to your profile, or route it for approval if you configured an approval step.
5. (Optional) Maintain Custom Labels.

   At the Term Context prompt, select *Global* and override the Audio Pronunciation field, or the Phonetic Pronunciation field, or both.
6. (Optional) Configure help text on the *Name Pronunciation* business process.

Result

The speaker icon displays under a worker's name on their profile. The phonetic pronunciation displays under a worker's name on their profile.

2023R1 What's New Post: Name Pronunciation on Profile

Steps: Set Up Personal Information for Multiple Person Types

Context

A company or institution can have several different person types, such as candidates, students, and workers. In addition, individuals within an organization can be more than 1 of these person types at once:

- Academic affiliate.
- External committee member.
- External student.
- Student.
- Student prospect.
- Worker.

When your organization uses multiple person types, you must configure personal information business processes and security policies to ensure that personal data for all person types is secure.

Steps

1. Set up all of these business processes that apply to your organization:

    - *Edit Government IDs*
    - *Edit ID Information*
    - *Edit Licenses*
    - *Edit Other IDs*
    - *Legal Name Change*
    - *Passports and Visa Change*
    - *Preferred Name Change*
    - *Personal Information Change*

    See Steps: Configure Business Process Definitions.
2. Maintain Organization Type Precedence.

    In a company or institution with multiple person types, you must define an organization type precedence to enable Workday to know which business process to launch first. Example: For a person who is both a student and a worker, the precedence definition for the *Legal Name Change* business process is the Supervisory organization.
3. Create Business Process Condition Rules.

    Configure condition rules to route business processes for a supervisory organization or academic unit using these fields as conditions:

    - Active worker.
    - Is Affiliate.
    - Is Student.
    - Is Student Prospect.

    Example: A university administrator can set up condition rules so that student approval steps route to a student administrator and worker approval steps route to an HR administrator.

    Condition rules take priority over organization precedence.

    Note: If your business processes use unconstrained security groups, those groups automatically have access to the personal information of person types other than workers. If that is acceptable, the setup is complete. If you don't want the unconstrained security groups to have that type of access, continue with steps 4 - 6.
4. (Optional) Create Segment-Based Security Groups.

    Create segment-based security groups so that unconstrained security groups in your business process don't have access to certain information. Example: If a university administrator doesn't want workers to access personal information of academic affiliates, they can replace the unconstrained HR Administrator security group for both person types. A new segment-based security group called HR Administrator for Worker can control access to the personal information.
5. (Optional) Edit Business Process Security Policies.

    Set up the business process security policy using the security groups you set up. If you assign a segment-based security group to actions on a business process, you must also assign the group to the subprocess actions so they initiate successfully.
6. (Optional) Edit Domain Security Policies.

    Set up the domain security policy using the security groups you set up. If you assign segment-based security groups to these domains, you must do the same for any custom objects on the domain. If you don't, the business processes that use these custom objects won't execute successfully.

Steps: Set Up Disability Tracking

Prerequisites

Security:

- *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
- *Set Up: Tenant Setup - Global* domain in the System functional area.

Context

You can track disability types by country or country region. You can also track disability certification data, severity, and grades by country. When you enable disability tracking, global disability fields are available in the Edit Personal Information task along with any localized fields you configure.

Steps

1. Access the Maintain Disability Configuration task.
2. Select the Country or Country Region.
3. In the Disability Type grid, define the types of disabilities and the applicable subjects you want to track.

   You can restrict a disability type from either workers or dependents using the Applicable Subjects prompt and selecting:

   - *Worker*: The disability type applies to workers and all other person types except dependents.
   - *Dependent*: The disability type applies to dependents and all other person types except workers.

   The disability type applies to all person types if the Applicable Subjects prompt is blank.

   Note: Define at least 1 disability type to enable disability tracking in the country or country region. If you want to track other disability data but not the type, create a generic disability type.
4. In the Certification and Severity and Grade sections, specify which fields to track by selecting the check boxes.

   - If you select Certification Basis or Grade, you must also define country-specific values for selection.
   - If you select Certified By, you can define values for selection or leave the table blank to use a free-form text field for certifying authorities.
   - If you leave the Restricted to Disability Types field blank, that basis, authority, or grade is available for all disability types in that country.
     - If you add a new disability type, save it and navigate back to this task to restrict basis, authorities, or grades.

   The fields in these sections apply to all workers in the country, regardless of country region.

5. (Optional) Select or clear the check boxes to enable or disable any fields in these sections:
   - Disability Date
   - Severity and Grade
   - Additional Disability Information
   - Notes and Attachments

   When you disable a field, you can no longer enter, edit, or add data to it. Existing disability data remains on a field, unless you manually remove it. Disabled fields no longer display when you edit a worker's personal information.
6. Access the Maintain Localization Settings task.
   a) Select Personal Information.
   b) Select the Active check box to display disability information on worker or candidate profiles by country and when viewing or editing personal information.
   c) Clear the check box to hide disability information.

Next Steps

Track disability data for workers and pre-hires with the Edit Personal Information or Edit Personal Information for Pre-Hire task.

Concepts

Concept: Country-Specific Information, Locales, and Languages

Tasks

Steps: Set Up Personal Information Fields on page 36

Steps: Set Up Aboriginal/Indigenous Identification Details

Prerequisites

Security:

- *Person Data: Aboriginal/Indigenous Identification* domain in the Person Data functional area.
- *Self Service: Aboriginal/Indigenous Identification* domain in the Person Data functional area.

Context

Workday enables workers to provide more granularity around self-identifying as Aboriginal/Indigenous, helping you with your diversity and inclusion goals.

Steps

1. Edit Domain Security Policies.

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
2. Maintain Localization Settings on page 144.

   From the Area prompt, select *Personal Information*. Select the Aboriginal/Indigenous Identification (Worker) and Aboriginal/Indigenous Identification Details (Worker) check boxes. Select the countries for these localized fields.
3. Access the Maintain Aboriginal/Indigenous Identification Details task.

   Configure values for details that display for workers in the Aboriginal/Indigenous Identification Details prompt on the Change My Personal Information task.
4. (Optional) Create Custom Labels.

   From the Term Context prompt, select *Global* and override the Aboriginal/Indigenous Identification Details field.

Next Steps

Create custom reports for workers' Aboriginal/Indigenous identification details.

View your configuration for Aboriginal/Indigenous identification details using the View Aboriginal/ Indigenous Identification Details report.

Related Information
Tasks
Steps: Set Up Aboriginal/Indigenous Self-Identification for Candidates on page 347
Reference
2021R2 What's New Post: Aboriginal and Indigenous Identification

Steps: Set Up Race and Ethnicity Details

Context

Workday enables workers to provide more granularity around self-identifying their race and ethnicity, helping you with your diversity and inclusion goals.

Steps

1. Edit Domain Security Policies.

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
2. Access the Maintain Ethnicities task.

   Configure race and ethnicity values that display for workers on the Race/Ethnicity prompt on the Change My Personal Information task.
3. Maintain Localization Settings on page 144.

   At the Area prompt, select *Personal Information*, and enable the Race/Ethnicity Details (Worker) field.
4. Access the Maintain Race/Ethnicity Details task.

   Configure values for race and ethnicity details that display for workers on the Race/Ethnicity Details prompt on the Change My Personal Information task.
5. (Optional) Create Custom Labels.

   At the Term Context prompt, select *Global*, and override the Race/Ethnicity Details field.

Next Steps

Create custom reports for workers' race and ethnicity details.

View your configuration for race and ethnicity details using the View Race/Ethnicity Details report.

Add Help Text for Personal Information

Prerequisites

Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

Context

Configure help text on the *Change Personal Information* business process by adding text to sections and fields on the Edit Personal Information task. The help text explains the reason for collecting personal information.

Steps

1. Access the Maintain Personal Information Help Text task.

   Select a Country. Enter and format help text that is appropriate for the country and your organization.
2. Access the View Personal Information Help Text report.

   Select a Country to display its personal information help text.

Result

Instructional text is available to guide users entering self-identification data.

Reference
2021R2 What's New Post: Personal Information Help Text

Concept: Custom Label for Gender

If you want to use a different term for gender throughout Workday, access the Maintain Custom Labels task to override the term. Example: you can use a term such as sex or sex assigned at birth instead of gender. Using a custom label for gender can help support inclusion and diversity, and comply with government regulatory requirements in Canada.

Workday displays the custom label instead of the default label in:

- Field labels.
- Help text.
- Prompts.
- Task names.
- Validations.
- Workday-delivered report fields and report names.

Custom labels can't replace gender in certain fields required by government agencies:

- Centers for Medicare & Medicaid Services (CMS) VDSA integration:
  - Beneficiary Sex Code report field.
  - Gender - CMS label.
- UK Government:
  - Gender Pay Gap
  - Current Gender label in the RTI FPS report.

In addition, you can't override the term gender in the gender identity value on the Maintain Custom Labels task.

Related Information
Tasks
Create Custom Labels

Reference: Personal Information Fields

Workday includes personal information fields that can have different values by country and fields that have the same set of values regardless of the country.

Country-Specific Personal Information Fields:

- Aboriginal/Indigenous Identification & Aboriginal/Indigenous Identification Details
- Additional Military Service
- Country Specific Section 1
- Country Specific Section 2
- Country Specific Section 3
- Disability
- Gender
- Hispanic/Latino
- Hukou
- Marital Status
- Political Affiliation
- Race/Ethnicity
- Relative Names
- Religion
- Reporting Gender
- Sexual Orientation & Gender Identity (LGBT Identification)
- Social Benefits Locality

Non Country-Specific Personal Information Fields:

- Additional Nationalities
- Blood Type
- Citizenship Status
- City of Birth
- Country of Birth
- Date of Birth
- Date of Death
- Gender Identity
- Medical Exams
- Military Service
- Non Country Specific Section 1
- Non Country Specific Section 2
- Non Country Specific Section 3
- Primary Nationality
- Pronoun
- Region of Birth
- Sexual Orientation

Reference: Personal Information Localizations

Localized fields refer to personal information that applies to certain countries. Workday enables you to specify which countries track these types of personal information.

When applicable, use the related actions to define values for a localization after enabling it for a country.

Localized Field	Description	Related Task
Aboriginal/Indigenous Identification (Worker)	Tracks Aboriginal/Indigenous Identification for a worker.	
Aboriginal/Indigenous Identification Details (Worker)	Tracks Aboriginal/Indigenous Identification details for a worker.	Maintain Aboriginal/Indigenous Identification Details

Localized Field	Description	Related Task
Active Military Uniformed Service	Tracks active military uniformed service for the specified person type.	Change My Personal Information
Additional Nationalities (Worker, Dependent, Pre-Hire)	Tracks additional nationalities for workers, dependents, and pre-hires. To track additional nationalities, a country must first track primary nationalities.	
Advanced Disability (Dependent)	Tracks advanced disabilities for dependents.	
Basic Disability (Dependent)	Tracks basic disabilities for dependents.	
Allowed for Tax Deduction (Dependent)	Tracks whether dependents are eligible for tax deductions.	
Annual Income (Dependent)	Tracks the annual income for dependents.	
Audio Pronunciation (Worker)	An audio pronunciation of a person's name.	
Blood Type (Worker)*	Tracks the blood type for the worker.	
Citizenship Status (Dependent)*	Tracks the citizenship status for dependents.	Maintain Citizenship Statuses
Citizenship Status (Pre-Hire)*	Tracks the citizenship status for pre-hires.	Maintain Citizenship Statuses
Citizenship Status (Worker)*	Tracks the citizenship status for workers.	Maintain Citizenship Statuses
City of Birth (Dependent)*	Tracks the city of birth for dependents.	
City of Birth (Pre-Hire)*	Tracks the city of birth for pre-hires.	
City of Birth (Worker)*	Tracks the city of birth for workers.	
Country of Birth (Dependent)*	Tracks the country of birth for dependents.	
Country of Birth (Pre-Hire)*	Tracks the country of birth for pre-hires.	
Country of Birth (Worker)*	Tracks the country of birth for workers.	
Covered by Worker's Health Insurance (Dependent)	Tracks whether or not a dependent has valid health insurance.	
Date of Birth (Candidate)*	Tracks the date of birth for candidates.	

Localized Field	Description	Related Task
Date of Birth (Pre-Hire)*	Tracks the date of birth for pre-hires.	
Date of Birth (Worker)*	Tracks the date of birth for workers.	
Disability (Candidate)	Tracks disability for candidates.	Maintain Disability Configuration
Disability (Worker)	Tracks disability for workers.	Maintain Disability Configuration
Full-Time Student Status (Dependent)	Tracks full-time student status for the specified person type.	
Gender (Candidate)*	Tracks the gender for candidates.	Maintain Genders
Gender (Pre-Hire)*	Tracks the gender for pre-hires.	Maintain Genders
Gender (Worker)*	Tracks the gender for workers.	Maintain Genders
Gender Identity (Worker)*	Tracks gender identities for workers.	Maintain Gender Identities
Government Identifiers (Candidate)	Tracks government identifiers for the specified person type.	
Hispanic/Latino (Candidate)	Tracks Hispanic or Latino for the specified person type.	
Hispanic/Latino (Worker)	Tracks Hispanic or Latino for the specified person type.	
ID Info (Pre-Hire)	Tracks IDs for pre-hires.	Create National ID Type Maintain Additional Government ID Types
Lives with Worker (Dependent)	Tracks if dependents live with a worker.	
Marital Status (Candidate)*	Tracks the marital status for candidates.	Maintain Marital Statuses
Marital Status (Pre-Hire)*	Tracks the marital status for pre-hires.	Maintain Marital Statuses
Marital Status (Worker)*	Tracks the marital status for workers.	Maintain Marital Statuses
Medical Exams (Worker)	Tracks medical exams for workers.	
Military Service (Candidate)	Tracks military service for candidates.	Maintain Military Service Types
Military Service (Worker)	Tracks military service for workers.	Maintain Military Service Types
Occupation (Dependent)	Tracks the occupation of dependents.	

Localized Field	Description	Related Task
Personal Information (Pre-Hire)	Tracks personal data (marital statuses, ethnicities, and so on) for pre-hires.	
Phonetic Pronunciation (Worker)	The phonetic pronunciation of a person's name.	Change My Name Pronunciation
Political Affiliation (Pre-Hire)*	Tracks political affiliations for pre-hires.	Maintain Political Affiliations
Political Affiliation (Worker)*	Tracks political affiliations for workers.	Maintain Political Affiliations
Preferred Communication Language (Worker)	Tracks the preferred communication language for workers.	Configure Preferred Communication Languages
Primary Nationality (Dependent)*	Tracks the primary nationality for dependents.	
Primary Nationality (Pre-Hire)*	Tracks the primary nationality for pre-hires.	
Primary Nationality (Worker)*	Tracks the primary nationality for workers.	
Pronoun (Candidate)	Tracks pronoun for a specified person type.	
Pronoun (Worker)*	Tracks pronoun for a specified person type.	Maintain Pronouns
Race/Ethnicity (Worker)	Tracks race/ethnicity for workers.	Maintain Ethnicities
Race/Ethnicity Details (Worker)	Tracks race/ethnicity details for workers.	Maintain Race/Ethnicity Details
Region of Birth (Dependent)*	Tracks the region of birth for dependents.	
Region of Birth (Pre-Hire)*	Tracks the region of birth for pre-hires.	
Region of Birth (Worker)*	Tracks the region of birth for workers.	
Relatives' Names (Worker)	Track the names of relatives for workers.	Maintain Relative Types
Religion (Candidate)	Tracks religion for candidates.	Maintain Religions
Religion (Pre-Hire)*	Tracks religion for pre-hires.	Maintain Religions
Religion (Worker)*	Tracks religion for workers.	Maintain Religions
Reporting Gender (Worker)	Tracks the gender of an employee who doesn't self-identify or who self-identifies as a gender that doesn't map to male or female.	Maintain Genders and Maintain Genders by Country

Localized Field	Description	Related Task
Selective Service Registration	Tracks Selective Service Registration for the specified person type.	Change My Personal Information
Sexual Orientation (Candidate)	Tracks the sexual orientation for the specified person type.	Maintain Sexual Orientations
Sexual Orientation (Worker)*	Tracks the sexual orientation for the specified person type.	Maintain Sexual Orientations
Sexual Orientation & Gender Identity (Worker)	Tracks sexual orientation and gender identity for workers.	Maintain Sexual Orientations & Gender Identities
Social Benefits Locality (Worker)	Tracks social benefits locality for workers.	Maintain Social Benefits Localities
Uniform Service Reserve Status	Tracks Uniform Service Reserve Status for the specified person type. Configure values on the Maintain Uniform Service Reserve Statuses task.	Change My Personal Information
Veteran's Preference	Tracks a veteran's preference for the specified person type. Configure values on the Maintain Veteran's Preferences task.	Change My Personal Information
Veteran's Preference for RIF	Tracks a veteran's preference for RIF for the specified person type.	Change My Personal Information

* You can require these localizations for a country.

You can hide localizations for a country by not selecting the country from the Allow for Countries or Regions prompt.

Configurable Fields for Personal Information

Setup Considerations: Configurable Fields for Personal Information

You can use this topic to help make decisions when planning your configuration and use of configurable fields for personal information. It explains:

- Why to set them up.
- How it fits into the rest of Workday.

- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

For full configuration details, see task instructions.

What They Are

You can define and configure the personal information data fields that you want to collect and manage for your users. You can collect both country-specific and non-country-specific data.

Business Benefits

- You can tailor personal data collection more precisely to meet your needs and provide a better user experience for your workers.
- You aren't limited to collecting personal information for Workday-delivered fields. You can configure personal information fields specific to your organization.

Use Cases

Configure:

- Country-specific fields to provide prompt options by country, similar to delivered fields like Marital Status and Race/Ethnicity.
- Non-country-specific fields that enable you to have global prompt options, similar to delivered fields like Pronoun, Gender, and Sexual Orientation.
- Frequently requested types of personal information. Example: A person's status in these areas:
    - Caregiver
    - Immigration
    - Neurodiversity
    - Socioeconomic
    - Transgender

Questions to Consider

Question	Consideration
How can you make configurable fields for personal information translatable?	You can translate: • Drop-down values using the Business Object Translations task. • Help text using the Business Object Translations task. • Section and field labels using the Maintain Non-English Custom Labels task.
How can you use configured fields for personal information in a payroll integration?	You can use field overrides in these integrations to retrieve your configurable field values: • *Payroll Effective Change Interface (PECI)* • *Payroll Interface Common Output File (PICOF)*

Recommendations

When you configure domains for their corresponding sections, add a Note in Workday that describes what the domain secures, because custom labels don't display in domain names. Example: This domain secures Caregiver Status information.

Requirements

No impact.

Limitations

You can only use this feature to collect personal data for a worker. You can't configure personal information for candidates.

You can't configure personal information as free-form text, only as prompt options.

Tenant Setup

To enable multi-select for configurable fields, access the Edit Tenant Setup - Global task.

Security

Domain	Description
Set Up: Contact Info, IDs, and Personal Data in the Contact Information functional area.	Enable this domain to provide access to the Configure Personal Information Sections task.
These domains in the Personal Data functional area: • *Person Data: Country Specific Section 1* • *Person Data: Country Specific Section 2* • *Person Data: Country Specific Section 3* • *Person Data: Non Country Specific Section 1* • *Person Data: Non Country Specific Section 2* • *Person Data: Non Country Specific Section 3*	Enable the domain that corresponds to the section you've enabled. These domains provide access to security groups to view personal information data on the worker. Example: When you set up values for Country Specific Section 1, you need to enable the *Person Data: Country Specific Section 1* domain.
• *Self-Service: Country Specific Section 1* • *Self-Service: Country Specific Section 2* • *Self-Service: Country Specific Section 3* • *Self-Service: Non Country Specific Section 1* • *Self-Service: Non Country Specific Section 2* • *Self-Service: Non Country Specific Section 3*	Enable the domain that corresponds to the field you've enabled. These domains provide access to self-service security groups to view their own personal information data. Example: When you set up values for Country Specific Section 1 - Field 1, you need to enable the *Self-Service: Country Specific Section 1* domain.

Business Processes

You can use the *Change Personal Information* business process to update a worker's personal information.

Reporting

Workday-delivered report fields enable you to report on personal information on these business objects:

- Personal Information Change Event
- Personal Information for Country (for country-specific sections)
- Worker

You can add new report fields to existing reports or build new custom reports to report on new configurable fields.

Integrations

You can use field overrides in these integrations to retrieve configurable field values:

- *Payroll Effective Change Interface (PECI)*
- *Payroll Interface Common Output File (PICOF)*

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Configurable Fields for Personal Information

Prerequisites

Review the example of creating a new section with configurable fields to understand the dependency of fields in the configuration. See Example: Create a New Section with Configurable Fields for Personal Information on page 55

Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

Context

You can define the personal information data fields that you want to collect and manage for your users, including both country-specific data and non-country-specific data. You can build new reports for the new configurable fields or add new report fields to existing reports.

Steps

1. Access the Configure Personal Information Sections report.

   Define prompt values for each section and field that you want to configure. You can configure up to 3 fields in each section.

   a) Select a county-specific section or a non-country-specific section.
   b) Select a section to configure and select a country if you selected a country-specific section.
   c) Configure the values you want to display on the personal information fields. You can optionally restrict values to specific sections, which creates a dependency between them.

      Example: You want to configure personal information sections and fields for caregiver status in the United States. In the Country Specific Section 1 - Field 1 section, enter these values:

      - *Yes*
      - *No*

      In the Country Specific Section 1 - Field 2 section, enter these values:

      - *Child caregiver*
      - *Adult caregiver*

      From the Restricted to Country Specific Section 1 - Field 1 prompt, select *Yes*.
2. Enable the security domains that correspond to the sections you configured.

   Example: If you configure values for Country Specific Section 1, enable these domains in the Personal Data functional area:

   - *Person Data: Country Specific Section 1*
   - *Self-Service: Country Specific Section 1*

   See: ../../../../authentication-and-security/configurable-security/configurable-security-basics/eyf1577465288705.dita.

3. Access these tasks:
   - Maintain Custom Labels
   - Maintain Non-English Custom Labels

   a) From the Term Context prompt, select *Personal Information: Configurable Fields*.
   b) Enter terms to override the delivered labels for configurable sections and fields.
4. Access the Maintain Localization Settings task.
   a) From the Area prompt, select *Personal Information: Configurable Fields*.
   b) Enable and require the localized fields per country for the section you configured.
5. (Optional) Access the Maintain Personal Information Help Text task.

   Create section and field level help text per country.
6. (Optional) Access the Edit Tenant Setup - Global task.

   In the Allow Multiple Values for Configurable Personal Information Fields section, enable configurable personal information fields for multiple values.

Result

Workday displays the configured fields as prompts for workers entering their personal information on these tasks:

- Change My Personal Information
- Edit Personal Information
- Edit Personal Information by Country

Related Information
Examples
2024R1 What's New Post: Configurable Fields for Personal Information

Example: Create a New Section with Configurable Fields for Personal Information

This example illustrates how to use configurable personal information sections and fields to create a new personal information section that enables you to collect specific information to support your changing business needs and local compliance regulations. This example creates a section for Caregiver Status.

Context

Many workers in your company are also caregivers. You want to set up a Caregiver Status section to collect caregiver information from employees when they edit their personal information.

Steps

1. Enable the *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area and configure security policies.

   See: ../../../../authentication-and-security/configurable-security/configurable-security-basics/eyf1577465288705.dita.

2. Access the Configure Personal Information Sections report.
    a) From the Section prompt, select *Country Specific Sections > Country Specific Section 1*.
    b) From the Country/Country Region prompt, select *United States of America*.
    c) In the Country Specific Section 1 - Field 1 section, add rows with these values:
        - Yes
        - No
        - Decline to answer
    d) Click Next.
    e) In the Country Specific Section 1 - Field 2 section, add rows with these values:
        - Child caregiver
        - Adult caregiver
    f) Select the Restricted to Country Specific Section 1 - Field 1 check box and select Yes from the drop-down.
    g) Click Next.
    h) In the Country Specific Section 1 - Field 3 section, add rows with these values:
        - Infant caregiver
        - Special needs child
    i) Select the Restricted to Country Specific Section 1 - Field 2 check box and select Child caregiver from the drop-down.
    j) Click OK.
3. Access the Maintain Custom Labels task.

    Override the country specific sections and fields that you've configured:
    a) Select Personal Information: Configurable Fields from the Term Context prompt.
    b) Enter these values:

Populate Value	Override Value
Country specific section 1	Caregiver Status
Country specific section 1 - field 1	Do you identify as a caregiver?
Country specific section 1 - field 2	Caregiver details
Country specific section 1 - field 3	Additional caregiver details

    c) Click OK and Done.
4. Access the Maintain Localization Settings task.

    Define the caregiver status fields that you've configured.
    a) Select Personal Information: Configurable Fields from the Area prompt.
    b) For each localized field that you configured, select *United States of America* in the Allow for Countries or Regions field.
    c) Click OK and Done.
5. Access the Edit Tenant Setup - Global task.
    a) In the Allow Multiple Values for Configurable Personal Information Fields section, select the Enabled for Multiple Values check box for these fields:
        - Caregiver status
        - Additional caregiver details
6. Click OK and Done.

Result

When an employee in the United States edits their personal information, they can access the Caregiver Status section. As they answer the questions, they can view the dependencies that you set up to restrict the values that an employee can select.

- When the employee answers Yes to the Do You Identify As A Caregiver? question, we display the Caregiver Details field.
- When they select Child Caregiver, we display the Additional Caregiver Details field.
- When they select Adult Caregiver, we don't display the Additional Caregiver Details field.

When the employee submits their changes, they can view the values on their personal information page.

Public Profile Preferences

Setup Considerations: Public Profile Preferences

You can use this topic to help make decisions when planning your configuration and use of public profile preferences. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Public profile preferences enable workers to select certain personal and talent information as public on their worker profile and related reports.

Business Benefits

- Help create a corporate culture of diversity and inclusion.
- Continue to collect personal information while giving workers more control over the information shared with others in their organization.

You can enable workers to:

- Control their personal brand with how they want to identify themselves.
- Find others with similar backgrounds, creating affinity groups.

Use Cases

- Collect information that's restricted to support roles.
- Enable workers to specify certain personal and talent information as public on their worker profile and related reports.

Questions to Consider

Questions	Considerations
What happens if a worker has a primary job location in a country that restricts certain personal information collection?	You can configure localization settings to override the preferences you set for workers when they work in a particular location.

Questions	Considerations
Example: You enable sexual orientation tracking for the entire company, but the company has a business location in a country with restrictions.	
Can anyone access the personal information that a worker selects to hide from their worker profile?	When a user has security access, they can view the information.
How can I report on public profile preferences?	You can use these report fields in custom reports and condition rules: • Public Preference - Education • Public Preference - Military Service • Public Preference - Pronoun • Public Preference - Sexual Orientation

Recommendations

Configure help text for workers on these business processes:

- *Manage Education*
- *Personal Information Change*

Create a To Do on the *Personal Information Change* business process. When workers make a change to their personal or talent information, they receive a reminder to check their public profile preference elections.

Review the description of the Change Public Profile Preferences task to decide which personal information to display.

Requirements

No impact.

Limitations

When a worker shares their information, all elements associated with that information are visible. Example: When a worker shares their education information, Workday displays all of their education information to anyone with access. The worker can't select to display only certain colleges.

Tenant Setup

No impact.

Security

Domains	Considerations
Reports: Public Profile in the Personal Data functional area.	Secures report fields for public profile preferences. The report fields provide information on whether the worker decided to enable certain person and talent information as public on their public profile cards. The information these report fields return depends on your settings on these tasks: • Change Public Profile Preferences • Maintain Localization Settings • Maintain Public Profile Preferences

Domains	Considerations
Set Up: Public Profile in the System functional area.	Secures tasks that give access to configuring public profile preferences.

Business Processes

Business Processes	Considerations
Public Profile Preferences	Enables workers to decide which personal information is public on their worker profile.

Reporting

Report Fields	Considerations
Public Preference - Education	Indicates whether education is public on the worker's profile and related reports.
Public Preference - Military Service	Indicates whether military service is public on the worker's profile and related reports.
Public Preference - Pronoun	Indicates whether pronouns are public on the worker's profile and related reports.
Public Preference - Sexual Orientation	Indicates whether sexual orientation is public on the worker's profile and related reports.

Integrations

No impact.

Connections and Touchpoints

Public profile preferences interact with:

- Talent.
- Worker information. Example: Information that a worker chooses to share, such as their birthday, can display in the Important Dates section on the Home Page if that section is configured in their tenant. See: Reference: Home Page Sections.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Public Profile Preferences

Context

Enable your workers to decide which personal and talent information is public on their worker profile and in related reports. This promotes inclusion and helps workers feel in control of sharing their personal information with others in their organization.

Steps

1. Edit Domain Security Policies.

   Edit permissions for these domain security policies:

   - *Reports: Public Profile* in the Personal Data functional area.
   - *Self-Service: Pronoun* in the Personal Data functional area.
   - *Set Up: Public Profile* in the System functional area.
2. Activate Pending Security Policy Changes.
3. Access the Create Business Process Definition (Default Definition) task.

   Create the default definition for the *Public Profile Preferences* business process in the Personal Data functional area if it doesn't exist in your tenant.
4. Edit Business Process Security Policies.

   Configure the *Public Profile Preferences* business process security policy in the Personal Data functional area.
5. Set up segment-based security groups on the appropriate domains for public profile preferences.

   See Steps: Set Up Segmented Security for Public Profile Preferences on page 61.
6. Set up profile cards.

   On the Configure Profile Summary task, select *Personal Details* to display the public profile card for:

   - Birthday.
   - Military Service.
   - Pronoun.
   - Sexual Orientation.

   Select *Education* to display the public profile card for education.

   See Steps: Set Up Profile Cards.
7. Access the Maintain Public Profile Preferences task.

   Select the Personal Information and Talent Related Information fields that you want to enable for workers.
8. Maintain Localization Settings on page 144.

   At the Area prompt, select *Personal Information*. Localization settings are available for these fields:

   - Date of Birth (Worker)
   - Military Service (Worker)
   - Pronoun (Worker)
   - Sexual Orientation (Worker)

Next Steps

You can create custom affinity reports for your workers.

Workers can access the Change Public Profile Preferences task to select the enabled personal and talent information they want public on their worker profile and in related reports.

2023R2 What's New Post: Birthday Sharing with Public Profile Preferences

Steps: Set Up Segmented Security for Public Profile Preferences

Context

Configure segment-based security to grant access to certain personal and talent information to members of designated security groups. Example: You can configure a segment-based security group to enable members of the *All Employees* security group to view education information for employees who make their education data public.

Steps

1. Create Segment-Based Security Groups.

   Specify which security groups can access these segments:

   - *Public Profile: Birthday*
   - *Public Profile: Education*
   - *Public Profile: Military Service*
   - *Public Profile: Pronoun*
   - *Public Profile: Sexual Orientation*

   Include only 1 public profile security segment for each segment-based security group.

   Example: The *Public Profile Access (Education)* segment-based security group includes the *All Employees* security group with access to the *Public Profile: Education* segment.
2. Edit Domain Security Policies.

   Grant View access to the appropriate segment-based security groups on the appropriate domain:

   - *Public Profile Preferences: Birthday*
   - *Person Data: Education*
   - *Person Data: Military Status*
   - *Person Data: Pronoun*
   - *Person Data: Sexual Orientation*

   Remove any existing security groups that grant access to all users from these security policies. Example: Remove *All Employees* and replace it with the appropriate segment-based security group.

   Note: You must add the correct segment-based security group to the appropriate domain or you could allow others to view other sensitive worker information.
3. Activate Pending Security Policy Changes.

Result

Segment-based security group members can view public information on worker profile cards, which are on the Summary section of the worker profile.

Names

Setup Considerations: Name Configuration by Country

You can use this topic to help make decisions when planning your configuration and use of names by country. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.

- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday enables you to control how your tenant collects name data at the country level, so you can:

- Hide or require name components, such as prefixes or middle names, or make them optional.
- Select basic configuration options for countries with local script.
- Control the behavior of name components you define for specific countries.

Business Benefits

Name configuration by country enables you to:

- Only collect name data relevant for your company.
- Improve the user experience by reducing data entry confusion, which improves data accuracy and worker efficiency.

Use Cases

- Hiding optional name components, such as middle name, prefix, and suffix, so you collect only name data that meets your business needs.
- Enforcing local names for workers who only have a local name, giving you more control over your name data.

Questions to Consider

Question	Considerations
What is the recommended option to require local script?	We recommend you use the *Local Script required* option to collect a minimum set of local script name components and other name components on the Maintain Name Components by Country task. Otherwise, you can use the *Western Script required* option to collect a minimum set of Western script name components and any local script name components you select.
Why do you want to override required local script or Western script name components?	An administrator without knowledge of a local script might need to add a person's name for a country with local script names. You can select the *Enable Western Script check box* option on the Maintain Name Components by Country task. When you do this, Workday displays a check box on name tasks that the administrator can select to enter a name in Western script instead. Enabling Western script makes it required and makes local script not required for a particular name.
What does the *Enable Enter Western Script check box* option do?	This option: • Makes the Enable Western Script check box available on name tasks. • Gives you the flexibility to make Western script or local script required, depending on if you select the check box.

Question	Considerations
	• When you select it, Western script name component fields become available for edit.
What happens if name data exists on a component that you want to hide?	When you modify a name configuration, your selections on the Maintain Name Components by Country task can impact the name data you collect and save after you edit it. Example: When you collect middle names but hide them later, Middle Name is no longer collected when a user makes a change to their name.
When you make Western script names optional for a country, what is the default option for those names?	Those name configurations are set by default to the *Enable Western Script check box* option.
When you require Western script names for a country, what is the default option for those names?	Those name configurations are set by default to the *Western Script required* option.
Does the Maintain Name Components by Country task control how names display in your tenant?	No. This task only controls collection of names; it doesn't affect how names display. Access the Name Formats for Country report to view how names are set up for display.

Recommendations

Workday recommends that you require the same name components for both web services and the user interface, especially when you want web services to initiate business process approvals. When you set web services and the user interface to require different name components, you risk bringing incomplete data into your tenant.

In addition, when web services trigger approvals, the user interface requirements apply and approvers must enter any missing data. If you do need a web service to bring in different name data, we recommend that you set up web services to autocomplete and bypass approvals.

Requirements

You must use Workday Web Services v.33 or higher for name configuration changes that you make on the Name Components and Recruiting Name Components tabs of the Maintain Name Components by Country task to take effect.

Limitations

No impact.

Tenant Setup

No impact.

Security

The *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area enables you to configure name components.

Business Processes

No impact.

Reporting

Access the Name Components tab on the View Country report or the View Name Components by Country report to see country name configurations.

Integrations

Hiding or requiring name components can impact your integrations. Setting up names in your tenant without properly assessing how it works with your integrations might cause them to fail. We recommend that you test your name configuration with your integrations before you set up names in your Production tenant.

The Core Connector: Worker integration supports worker personal data, including name data. See: Concept: Core Connector: Worker Integration Data Mapping.

Connections and Touchpoints

Names touch all functional areas in Workday. Access the Name Components tab on the Maintain Name Components by Country task to configure names, except for recruiting. To configure names for Workday Recruiting, access the Recruiting Name Components tab on the Maintain Name Components by Country task.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Worker Names

Context

Workday enables you to track both legal and preferred names for people. You enter the legal name when you create a pre-hire, dependent, or beneficiary. When you convert a pre-hire to a worker, you can also enter a preferred name. By default, Workday uses the legal name for the preferred name unless you specify a different preferred name. In that case, Workday tracks the names separately.

Local script name components are available for countries that use a non-Western script. If you enter any name component in local or Western script, you must complete all required fields in that script.

Steps

1. Access the Edit Tenant Setup - System task.

   Decide if you want a worker's legal name, preferred name, or both their legal and preferred name to display throughout Workday and on reports. Select the format:

   - *Long:* Full name format. Example: David Alan Smith.
   - *Reporting:* Last-name-first format. Example: Smith, David Alan.
   - *Short:* Short name format (recommended). Example: David Smith.

   You can only select the Legal and Preferred option on the General Name Display Type prompt. You can use the Name Formats for Country report to view the display formats for a specific country.

   Security: *Set Up: Tenant Setup - System* domain in the System functional area.

   See Reference: Edit Tenant Setup - System.

2. Access the Maintain Name Components by Country task.

   Select the country where you want to configure names.

   On the Name Components tab, select the options you want for name components.

   If you're setting up names for a country with local script name components, there are additional options to select.

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
3. Access the Maintain Name Types task.

   Define additional name types, which enables you to search for workers by other names or aliases. To view your additional name types, use the Name Types report.

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
4. Access the Maintain Predefined Name Component Values task.

   Define the name prefix or suffix values for a specific country. Example: Dr., Ms., Jr., Sr., III, or PhD.

   The country associated with a person's name determines which components display, their order, and whether they're required. You must set up predefined name component values for the country for the field to be available. You must do this before you can set it to required.

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

Next Steps

- To edit a worker's legal or preferred name, select Personal Data > Maintain Names from the worker's related actions menu.

  Note: Employees can update their own names using the Change My Legal Name or Change My Preferred Name tasks.
- To view a worker's Name Change History:
  - In a worker profile, click the Names tab in the Personal profile group.
  - Select Personal Data > Maintain Names from the worker's related actions menu.
- To see a list of name changes for workers in 1 or more organizations, access the Name Change Report.

Related Information

Tasks

Set Up Name Components on page 65

Maintain Name Components by Country on page 145

Create Custom Business Processes

Set Up Name Components

Prerequisites

Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

Context

You can review name components and configure names in your tenant.

Steps

1. Access the Maintain Name Components by Country task.
2. Select the country to configure name components for.

3. Select the Recruiting Name Components tab to set up names only for Workday Recruiting. Select the Name Components tab to set up names for all other functional areas in Workday and for recruiting agencies.
4. Use these options to hide or require name components, or make them optional:
    - *Allowed* to control the component the user interface and web services can collect.
    - *Required* to control the component the user interface enforces.
    - *Required in web services* to control the component web services enforce.
    - *Label Override* to control the descriptive label for a name component. Workday delivers label overrides for name components for each country. You can't change the label override for a required component. You can clear the Allowed check box for a name component and it will no longer be used.
5. Select from these options if you're setting up names for a country that has local script name components:
    - *Enable Western Script check box* to allow your users to override required local script or Western script name components.
    - *Western Script required* to enforce a minimum set of Western script name components.
    - *Local Script required* to enforce a minimum set of local script name components.

Result

Access the View Country report or View Name Components by Country report to view name configurations by country for all functional areas in Workday.

IDs

Steps: Set Up Workday IDs

Context

You can configure different types of Workday IDs based on a sequence generator for pre-hires, employees, contingent workers, dependents, beneficiaries, and academic persons. You can also define a universal ID so you can consistently track a person as they transition through these person types with a single ID:

- Contingent Workers
- Employees
- Pre-hires
- Prospects
- Students

Steps

1. Create ID Definitions and Sequence Generators.

    Configure how Workday automatically generates Workday IDs such as employee IDs, contingent worker IDs, and universal IDs.
2. Access the Edit Tenant Setup - HCM task.

    Select the ID definition for the Workday ID from the applicable prompt in the ID Sequence Generators section.

    See Reference: Edit Tenant Setup - HCM.

    Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

3. (Optional) Access the Edit Tenant Setup - System task.

   Select the ID definition from the ID Definition for Universal Id prompt.

   See Reference: Edit Tenant Setup - System.

   Security: *Set Up: Tenant Setup - System* domain in the System functional area.
4. (Optional) Manually create a universal ID.

   Select Integration IDs > Create Universal Id from a worker's related actions menu.

   Security: *Person Data: Universal ID* in the Personal Data functional area.
5. (Optional) Access the Maintain Custom Labels task.

   Create a different name for universal ids.

   Security: *Custom Label Management* domain in System functional area.

Related Information

Reference

Reference: ID Management on page 70

Steps: Set Up Identification Documents

Prerequisites

Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

Context

Workday enables you to add and track several types of external identification documents and custom IDs such as licenses and passports to comply with local regulatory requirements. You can assign the IDs to:

- Academic persons
- Beneficiaries
- Contingent Workers
- Employees
- Pre-hires
- Students

Steps

1. Access the Maintain Global Identifier Usage Types task.

   Configure the reasons for using IDs such as to establish identity or provide international travel identification.

   When you create ID types, you can associate them with these usage types. You can then report on a specific usage type when you audit for IDs that are about to expire.
2. Access the Create Authority task.

   Configure licensing authorities for countries and country regions. When you edit a person type's ID information, except beneficiaries, you can select the authority that issued the license ID.
3. Create Identification Document Types on page 68.

4. Edit Business Processes.

   Configure business processes and their security policies in the Personal Data functional area.

   - Individual business processes for different ID types:
     - *Edit Government IDs*
     - *Edit ID Information*
     - *Edit Licenses*
     - *Edit Other IDs*
     - *Passports and Visa Change*
   - *Edit ID Information* business process to modify any of the 4 ID types in 1 business process event.

Related Information

Reference: ID Management on page 70

Workday Community: Global Matrix

Create Identification Document Types

Prerequisites

- Configure reasons for using IDs.
- Configure licensing authorities if you're creating a license ID type.
- Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

Context

You can create different identification document types such as licenses and passports to comply with local regulatory requirements. You can then assign the IDs to:

- Academic Persons
- Beneficiaries
- Contingent Workers
- Employees
- Pre-hires
- Students

Steps

Access these tasks to create different ID types:

- Maintain Additional Government ID Types
- Maintain Custom ID Types
- Maintain License ID Types
- Maintain Passport ID Types
- Maintain Visa ID Types

As you complete these tasks, consider:

Option	Description
ID Definition / Sequence Generator	(Custom IDs only) Select from definitions created on the task for a custom ID type.
Identifier Validation	Indicate whether the ID values for the ID type must be unique:

Option	Description
	• Globally Unique: ID values must be unique across all issuers of the ID type. • Unique to Issuer: ID type values must be unique for a specific issuer, but are reusable by a different issuer. • Leave the field blank to require no ID recurrence validation. Workday issues a warning for duplicate IDs, but you can still save the reused value. If you change the Identifier Validation setting, you could have existing duplicate IDs that violate the new validation.
Global Identifier Usage Type	Associate a usage type for reporting on specific usage types when you audit IDs that are about to expire to establish identity or provide international travel identification.
Maps to	(Additional Government IDs only) Select an ID type to which the government ID maps for the RUP (France) report.
Public	Enable access to custom ID data in a report field secured to a different domain than the domain for a custom ID. Example: If you don't have security access to the *Person Data: Other IDs* domain, but you do have security access to the *Worker Data: Current Staffing Information* domain, select the Public check box to provide access to the custom ID information. For noncustom IDs, the check box delivers a value that indicates if it’s selected. Note: The Public check box doesn't make information public for ID types.

Access an Encrypted National ID

Context

Some countries require that you store their National ID in an encrypted state. Workday complies with encryption requirements by storing data on disk.

When you need an encrypted National ID, Workday can retrieve it and temporarily decrypt the data in an in-memory data cache. You can access the data for a single use and then Workday removes the data from memory.

Steps

1. Access the Schedule National ID Migration task to configure a job to migrate a National ID from a cached to an uncached data state or from an uncached to a cached data state.

   This job creates a copy of an existing National ID. It also purges and deletes the old National ID instance. As a result, the audit history associated with the National ID no longer exists and can't be restored. Following the migration, you can't search for an uncached National ID by value in Workday. This might impact your integrations. Because of this, we recommend that you run the

Schedule National ID Migration task in a sandbox tenant to determine the impact before you run it in a production tenant.

2. Use the Uncached National ID Instance report field to display data about uncached National IDs.

Result

Your decrypted National ID data complies with regulatory requirements, but you can't search for it in Workday by value.

Reference: ID Management

Workday enables you to manage multiple types of IDs for different person types:

- Workers.
- Pre-hires.
- Student prospects.
- Academic affiliates.
- Dependents.
- Beneficiaries.

Workday also enables National ID verification for these self-service person types:

- Academic affiliates.
- Candidates.
- Employees.
- External committee members.
- External students.
- Pre-hires.
- Students.

Note: Users secured to the *Person Data: Add Government IDs* domain in the Personal Data functional area can enter IDs in the *Edit Government IDs* and *Edit IDs* subprocesses of the *Hire* and *Contract Contingent Worker* business processes. Users with access to that domain can't view or modify the ID after they complete the subprocess.

Enable security access to the *Edit ID Information* business process only for users who can edit all 4 of these ID types:

- Government IDs.
- Licenses.
- Other IDs.
- Passports and Visas.

Users with security access to some of these ID types should use the business process specific to the ID type. Example: Use the *Edit Government IDs* business process for Government IDs. If a user without access to all 4 ID types edits 1 or more of them, Workday deletes the IDs the user can't access.

To maintain and view IDs for different person types, access these tasks:

For Workers, Pre-Hires, and Academic Affiliates:

Action	Access
Enter and update IDs.	• Edit Government IDs task. • Edit Licenses task.

Action	Access
	• Edit Passports and Visas task. Security: *Person Data: Personal Photo* and *Self-Service: Personal Photo* domains in the Personal Data functional area. • Edit ID Information for Pre-Hire task. Security: *Pre-Hire Person Data: ID Information* domain in the Pre-Hire Process functional area.
View IDs.	• ID Information report. Security: *Person Data: ID Information*, *Person Data: Government IDs*, *Person Data: Passports and Visas*, *Person Data: Licenses*, and *Person Data: Other IDs* domains in the Personal Data functional area. *Worker Data: I-9 Forms* in the Onboarding functional area. • Pre-Hire ID Information report. Security: *Pre-Hire Personal Data: ID Information* domain in the Pre-Hire Process functional area.
Track expiring or duplicate IDs.	• Expiration Dates for Worker IDs report. Security: *Audit: Worker IDs* domain in the Personal Data functional area. • Workers with the Same National ID report. Security: *Person Data: Government IDs* domain in the Personal Data functional area.
Identify invalid IDs.	Workers with Invalid National IDs report. Security: *Person Data: Government IDs* domain in the Personal Data functional area.

For Student Prospects:

Action	Access
Enter IDs.	Create Student Prospect task. Security: *Manage: Student Prospect* domain in the Student: Recruiting functional area.
Update IDs.	IDs report on the Personal profile group of the prospect profile.

For Dependents and Beneficiaries:

Action	Access
Enter and update IDs.	On the profile of the worker with a beneficiary or dependent, select either View Beneficiaries or View Dependents report on the Benefits profile group.

Action	Access
	Security: *Worker Data: Beneficiaries and Dependents* domain in the Benefits functional area and the Personal Data functional area.

For Workers, Contingent Workers, Pre-Hires, Students, and Student Prospects:

Action	Access
Enter and update IDs.	Select Integration IDs > Create Universal ID. Select Integration IDs from the person's related actions menu. Security: *Person Data: Universal ID* domain in the Personal Data functional area.

For Academic Affiliate, Candidate, Employee, External Committee Member, External Student, Pre-Hire, and Student:

Action	Access
Verify National ID	To access the Verify National ID button, on a person's profile, select Personal and IDs. Security: *Self-Service: Verify National ID* domain in the Personal Data functional area.

Example: Restrict a National ID Length

This example illustrates 1 way to restrict the number of digits that users can enter for a national ID.

Context

Workday enables you to enter 10 or 12 digits for the Swedish national ID, Personnummer. You want to restrict the ID length so that users must enter 12 digits. You create a condition rule on the *Edit ID Information* business process using calculated fields to extract the Personnummer ID length.

Prerequisites

Security: *Custom Field Management* in the System functional area.

Steps

1. Access the Create Calculated Field task.
2. Enter these values:

Field	Value
Field Name	CF National ID is Personnummer ID
Business Object	*National Identifier*
Function	*True/False Condition*

3. Click OK.

4. Enter these values:

Field	Value
Field	*National Identifier*
Operator	*in the selection list*
Comparison Type	*Value specified in this filter*
Comparison Value	*Personal ID Number (Personnummer)*

5. Click OK, then click Create Another Calculation.
6. Enter these values:

Field	Value
Field Name	CF Proposed Personnummer on Composite ID Event
Business Object	*Composite Identifier Event*
Function	*Extract Single Instance*

7. Click OK.
8. Enter these values:

Field	Value
Source Field	*National IDs - Proposed*
Condition	*CF National ID is Personnummer ID*
Sort Field	*Current Entry Date*
Sort Direction	*Descending (Z to A)*
Instance to be returned	*First occurrence*

9. Click OK, then click Create Another Calculation.
10. Enter these values:

Field	Value
Field Name	CF Unformatted Personnummer on Composite ID Event
Business Object	*Composite Identifier Event*
Function	*Lookup Related Value*

11. Click OK.
12. Enter these values:

Field	Value
Lookup Field	*CF Proposed Personnummer on Composite ID Event*
Return Value	*National ID Unformatted*

13. Click OK, then click Create Another Calculation.

14. Enter these values:

Field	Value
Field Name	CF Proposed Personnummer Length on Composite ID Event
Business Object	*Composite Identifier Event*
Function	*Text Length*

15. Click OK.
16. On the Text Field prompt, select *CF Unformatted Personnummer on Composite ID Event*.
17. Click OK and click Done.
18. Select Business Process > Create Condition Rule from the related actions of the initiation step on the *Edit ID Information* business process.
19. Create a condition rule with these 2 conditions:

Field	Rule Condition 1	Rule Condition 2
Description	Personnummer ID	Personnummer ID Length
Source External Field or Condition Rule	*National ID Type - Proposed*	*CF Proposed Personnummer Length on Composite ID Event*
Relational Operator	*any in the selection list*	*equal to*
Comparison Type	*Value specified in this filter*	*Value specified in this filter*
Comparison Value	*Personal ID Number (Personnummer)*	*10*

20. Click OK.

Next Steps

- Configure custom validation text for the initiation step on the *Edit ID Information* business process.
- You can also restrict the Personnummer national ID length on the *Edit Government IDs* business process by creating:
  - Similar calculated fields based on the Government Identifier Event business object.
  - A similar condition rule on the initiation step of the *Edit Government IDs* business process.

Related Information

Tasks

Steps: Set Up Identification Documents on page 67

Contact Information

Steps: Set Up Contact Information

Prerequisites

Set up 1 or both of these business processes:

- *Contact Change* to manage contact information updates in 1 task.
- *Home Contact Change* and *Work Contact Change* to manage contact information updates in 2 parallel tasks.

Set up the domain security policies in the Contact Information functional area. Set up the security policies on the business process.

Context

You can set up the *Contact Change* business process to add, edit, or delete contact information for workers.

You can set up the *Home Contact Change* and *Work Contact Change* business processes to add, edit, or delete contact information for these people:

- Workers
- Students
- External Committee Members

Using these business processes requires you to disable the security policies on the *Contact Change* business process.

Steps

1. Access the Maintain Localization Settings task.

   Identify which countries use certain contact information localizations.

   Security: *Set Up: Tenant Setup - Global* domain in the System functional area.

   See Reference: Contact Information Localizations on page 78.
2. Steps: Set Up Address Components by Country on page 79.
3. Steps: Set Up Phone Numbers on page 90.
4. Access the Maintain Instant Messenger Types task.

   Define the available instant messenger providers.

   - Providers listed in the Integration Action prompt have an active link to launch the application.
   - Providers that have no Integration Action display as plain text in contact information displays.

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
5. Access the Maintain Social Network Types task.

   Define which social networks are available by country.

   Add links to social network accounts in these formats:

Social Network	Required Format
Facebook	http(s)://*.facebook.com/profile.php?id=
Google+	http(s)://plus.google.com/<number>/
IBM Connections	URL of the user account
LinkedIn	http(s)://*.linkedin.com/profile/view?id= http(s)://*.linkedin.com/pub/ http(s)://*.linkedin.com/in/
Twitter	Username (no URL)
XING	http(s)://www.xing.com/profile/
Yelp	http(s)://www.yelp.com/user_details?userid=

   Note: Social network icons are active links. LinkedIn™ displays a preview card in Workday, while all other profiles launch in new pages.

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
6. Configure the *Manage Social Networks* business process in the Contact Information functional area.

7. Configure the *Change Emergency Contacts* business process and security policy in the Personal Data functional area.
8. Use the Maintain Related Person Relationships task to specify relationships between people.
9. (Optional) Edit contact information for a person. Select Personal Data from the related actions menu of their profile and then select the relevant task:
    - Change Contact Information
    - Social Network
    - Change Home Contact Information
    - Change Work Contact Information
    - Edit Pre-Hire Contact Information

    Once you enter a primary home address for a worker, you can change or share it, but you can't delete the address entry.

    When you enter an Alternate Work Location on the *Work Contact Change* business process, Workday displays the current date as the effective date. When you enter a different effective date, Workday uses the last effective date entered for all addresses that the Work Contact Change event updates.

Result

Workers can edit their own contact information in the Personal Information worklet. To provide access to the self-service tasks:

- Add *Employee as Self* to initiating actions for the *Contact Change, Home Contact Change, Work Contact Change,* and *Manage Social Networks* business processes.
- Add *Employee as Self* to the *Self-Service: Home Contact Information* and *Self-Service: Work Contact Information* security domains.
- Use the Configure Worklet task to add the Contact Information and Social Networks actions to the Personal Information worklet.

Reference: Edit Tenant Setup - Global
Reference: Phone Number Formats on page 91

Concept: Access to Worker Information

You can secure access to worker names, contact information, and personal information through a combination of domain and business process security policies. You can constrain access by organization context.

- Domain security policies determine who can view or modify each type of worker information in business processes, tasks, related actions, worker profiles, and reports. To manage permissions, use the Domain Security Policies for Functional Area report.
- Business process security policies determine who can perform actions in the *Contact Change*, *Home Contact Change*, *Work Contact Change*, *Personal Information Change*, *Legal Name Change*, and *Preferred Name Change* business processes. To manage permissions, use the Business Security Policies for Functional Area report.

- Role-based security groups limit access to secured items (such as reports, tasks, and data) to members of specific organizations.

Worker Profiles

To view personal and contact information on worker profiles, set up domain security:

Section	Domains	Notes
Contact Information	*Person Data: Home Contact Information* *Person Data: Work Contact Information* *Self-Service: Home Contact Information* *Self-Service: Work Contact Information*	When you disable these security policies, you can't see the Contact section of the worker profiles.
Personal Information	*Person Data: Personal Information* *Self-Service: Personal Information*	When you disable these security policies, you can't see the Personal Information section of the worker profiles. The *Self-Service: Personal Data* and *Person: Personal Data* parent domains don't provide access to personal information, but can be used for subdomains to inherit permissions.

Public and Private Contact Information

You can designate each type of contact information (except home addresses) as public or private. The designation only affects the visibility of contact information on worker profiles and worker preview cards. Anyone with view permission on the *Worker Data: Public Worker Reports* domain can see public contact information on worker profiles and worker preview cards.

A worker's home address is always private unless it's also their work address, in which case you can make the home address public.

For broader access to contact information, you must have permission on the *Person Data: Work Contact Information* and *Person Data: Home Contact Information* domains. These domains provide access to both public and private contact information in these places:

- Change Contact Information, Contact Information, and Work Contact Information for Worker standard reports.
- Change Contact Information and View Contact Information related actions on workers.
- Worker Contact tab on worker profiles.

Workday recommends that you limit permission on these domains to administrators. Don't assign the *All Users*, *All Employees*, *All Contingent Workers*, *All Retirees*, or *All Terminees* security groups to the *Person Data: Work Contact Information* and *Person Data: Home Contact Information* domains if you want to restrict visibility of private contact information.

Note: You can further restrict access to worker information by creating an intersection security group. This group enables only administrators or specific organization roles to view directory information. It also excludes workers from search results, organization profiles and charts, and reports.

Security Permissions

Workers secured to actions in the *Contact Change*, *Home Contact Change*, *Work Contact Change*, *Personal Information Change*, *Legal Name Change*, and *Preferred Name Change* business processes need these domain security permissions to view and modify data in the business processes:

- Groups assigned to the initiation or review steps in the business processes require modify permission on the domains that control access to each type of information.
- Groups with view all, view completed only, approve, cancel, or rescind permission in the business processes require view permission (at a minimum) on the domains that control access to each type of information.

Access the Template-Driven Business Process Security report to confirm that the business process and domain security permissions are aligned.

Reference: Contact Information Localizations

Workday enables you to specify which countries use different contact information localizations.

Localized Field	Description
City Prompt	Enables you to select from a Workday-maintained list of cities for the selected countries. Note: We recommend that you contact Professional Services for assistance when activating this localization, which significantly impacts your data, existing integrations, EIBs, and web services. When you activate City Prompt, Workday prevents you from entering city names as text for the selected countries. If you later inactivate the City Prompt, you must re-enter all cities for which you selected an address using the prompt.
Country Names	Enables custom names for countries. Note: Activating this localized field for any country is a significant tenant change and requires additional setup in the Maintain Workday Delivered Country Names task. Workday displays custom country names based on the country of the primary position. Example: If you activate this localized field for Hong Kong, workers in your organization with a primary position within Hong Kong see the custom names you configured in the Maintain Workday Delivered Country Names task for Hong Kong.
Enable Address Lookup	Enables you to search for an address based on address components such as Postal Code.

Localized Field	Description
Number of Days (Worker)	Enables you to track the number of days a worker in the selected country works from home. If you activate this localized field, you can track both the Number of Days Per Week and the Days of the Week in a worker's home contact information. Once enabled, access the Maintain Address Usages task and activate the Work From Home address usage as the default for Communication Usage Behavior Default to use and display these fields.

Related Information

Tasks

Steps: Set Up Contact Information on page 74

Steps: Set Up Custom Names for Countries

Steps: Set Up Core Connector: Location Integration

Addresses

Steps: Set Up Address Components by Country

Context

You can enable, hide, or require address components by country in your tenant.

Steps

1. Access the Maintain Address Components by Country task.

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
2. Select a country to configure address components for it.
3. Select the Address Components tab to configure addresses for all functional areas in Workday other than Recruiting.
4. (Optional) Include additional address components when you enter or update address information that displays when you edit a home or work address.

   Note: When you edit additional address components and submit the changes, those changes are saved, but don't display on the UI. Example: When you edit the home address of a worker, the changes don't display on the worker profile. You can see the changes when you edit the worker's home address.
5. As you complete the task, consider:

Option	Description
Allowed	Select the check box to enable the relevant address component.
Required	Select the check box to require the relevant address component.
Enforce Required in Web Services	If you require an address component, select this check box to include this component in the relevant web services.

Option	Description
Label Override	Workday delivers label overrides for address components for each country and uses the override as the descriptive label for the component. You can't change the label override for a required component. You can clear the Allowed check box for an address component and it will no longer be used.

6. As you complete the task for a country with local script address components, consider:

Option	Description
Enable Enter Western Script Check Box	This option enables you to: • Enter the required local script address components that display by default. • Select the Enter Western Script check box. When you select it, you can enter either local or Western script address components, but Western are required.
Western Script Required	This option enables you to enter only Western script address components.
Local Script Required	This option enables you to enter only local script address components.

Some address components are always required and you can't configure them. The required components vary by country. Example: For Canada, the required components are: *Address Line 1*, *Region*, and *Postal Code*. For Japan, the required components are: *Postal Code*, *City*, and *Address Line 1*. For the United States, the required components are: *Address Line 1*, *City*, *Region*, and *Postal Code*.

7. (Optional) Use the directional arrows to configure the display order of address components in tasks where you enter address data, and in the View Address Components by Country report.
8. (Optional) Ensure consistency of address components in Workday and web services:
   a) Access the View Address Component Configuration Sync report to identify address components that aren't in sync with hidden or additional address components.
   b) Review and resolve any inconsistencies identified in the report.
   c) Submit configuration changes on the Maintain Address Components by Country task.
   d) Opt in to Address Component Sync for Get Web Services on the Maintain Feature Opt-Ins report to sync address components with web services.

Next Steps

Use the View Address Components by Country report to view your address component configurations.

2023R1 What's New Post: Configurable Addresses by Country

Set Up Global Address Lookup

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Context

Workday enables you to enter a small portion of an address, such as a postal code or street name, to retrieve possible matching addresses in a selected country or territory.

Steps

1. Access the Enable Innovation Services Feature and AI Data Contributions for MSA Customerstask.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   On the Innovation Services Opt-In task, select the Global Address service on the Available Services tab in the Global Address category.
2. Access the Maintain Localization Settings task.

   Security: *Set Up: Tenant Setup - Global* in the System functional area.

   a) Access the Contact Information area.
   b) Select Global Address Lookup Using Third-Party Services and select the countries or territories to enable for address lookup. Workday supports address lookup for more than 200 countries and territories. You can enable it for most countries and territories except for Google maps prohibited territories. For each country or territory, we map vendor address data to a Workday address component. We provide a default mapping for every country and territory. Your can customize how address fields are autofilled with vendor data using the Maintain Address Components by Country task. See Set Up Address Autofill.
3. (Optional) Access the Change Home Contact Information task or the Change Work Contact Information task.

   Security:*Person Data: Personal Photo* and*Self-Service: Personal Photo* domains in the Person Data functional area.

   In the Country field, select a country or territory that has Global Address Lookup enabled. The Search Address powered by Google field displays. Enter some portion of an address to retrieve possible matches.

Result

When you select an address returned by address lookup, Workday populates some address component fields, overwriting any existing information.

Countries and territories supported by Global Address Lookup may vary in time, and support for certain countries may be added or removed.

Related Information
Reference
2022R1 What's New Post: Address Lookup for the United Kingdom

Set Up Address Autofill

Prerequisites

Access the Maintain Localization Settings task to enable either:

- Global Address Lookup
- Global Address Validation

Activate 1 of these features for a county to have the Vendor Address Components column display in the Maintain Address Components by Country task.

Context

You can configure how an address is autofilled by vendor data by changing the vendor address component assignment.

Steps

1. Access the Maintain Address Components by Country task and select a country.

   Security: *Set Up: Contact Info, IDs, and Personal Data* in the Personal Data functional area.
2. View the default mapping of vendor address components for the country.
3. If Address Lookup is active for the selected country, search for and select an address in the Address Preview field. If only Address Validation is active for that country, enter an address.
4. View how address information is autofilled in the Workday address fields.
5. To change the displayed address configuration, map vendor address components to Workday address components. Example: For the United States, Subpremise Number displays on Address Line 1 in the default mapping, but you want it to display on Line 2. Remove Subpremise Number from Line 1 in the Vendor Address Component column and select it to map it to Line 2 in the Component column. Click Refresh Address Preview to view your changes.

Result

Configurable address autofill enables you to accurately capture an address as you enter it, which helps ensure consistency of address data.

Set Up Global Address Validation

Prerequisites

Determine if you need to access the Innovation Services Opt-In task to enable this feature. See Set Up Global Address Lookup.

Context

Workday validates an address upon entry. You receive an alert if the address isn't an officially recognized postal address.

Steps

1. Access the Maintain Localization Settings task, Contact Information Area, to enable Global Address Validation by country or territory.

   Security:*Set Up Tenant Setup - Global* in the System functional area.
2. Select the Enter Western Script check box to enable address validation for countries that use a local script.
3. (Optional) Once enabled, observe how address validation works by entering an address in a task where we capture address information. Example: Access the Change My Home Contact Information task and enter a home address in all required fields.

   Workday validates the address and displays an alert when the address needs a correction. When possible, a matching valid address displays that you can use to overwrite the incorrect address fields. When Workday can't suggest a matching valid address, an alert displays. You can attempt to validate an address 5 times.
4. (Optional) Initiate a review or approval step when you submit an invalid address as part of a business process.

   Access the business process definition of any Contact Change event and select these options:
   a) Type = Approval or Review
   b) Optional = No
   c) Group = groups that the business process routes to
   d) Do not Advance = No
5. Access the Related Actions near the magnifying glass and select the *Maintain Step Conditions* business process.
6. Click + to add an entry condition. Select Create Condition Rule.
7. Add these options for the condition rule:
   a) Description. Example: If address entered isn’t valid, route to HR Partner.
   b) And/or = And
   c) -(= leave empty
   d) Source External Field or Condition Rule = Contact Change Event has Invalid Address
   e) Relationship Operator = equal to
   f) Comparison Type = Value specified in this filter
   g) Comparison Value is checked
8. Click Done.

Result

Once enabled in your tenant, this feature validates addresses for candidates, students, and workers.

Countries and territories supported by Global Address Validation may vary in time, and support for certain countries may be added or removed.

Countries supported by Global Address Validation may vary in time, and support for certain countries may be added, removed, or provided by another current Address Service Provider.

Reference: Address Usages

Address usages track the purpose for an address. Example: Billing, Mailing, Shipping, and so on. Workday delivers several address usages and corresponding mapping values that you can configure using the Maintain Address Usages task.

You can rename an address usage or create a new one in the Address Usages column of the Maintain Address Usages task. You can map the new or modified address usage to the Workday-delivered values in the Communication Usage Behavior Default column. You can select Default to make the new or modified address usage the default behavior for the address usage. You can also restrict an address usage to specific countries.

The mapping values determine which address usages are available for selection when you enter or edit an address. Example: When you create a Corporate Billing address usage, you can map it to the Billing value. Corporate Billing then displays as an option on the Usage prompt when you enter or edit a business address. It's not an option if you enter or edit a home address.

Address usages and address types can be useful for tracking and reporting purposes. Workday provides 6 address types that you can associate with address usages. The combination of address usage and address type indicates the purpose of the address. Example: If your company has several addresses for a supplier business, you can track which address is for billing and which is for shipping. Example: You can associate the Payroll Tax Form usage with the home and work address types for tax reporting purposes. See: Steps: Add Worker Tax Elections (USA).

You can link a single address type to several different usages. Example: A person's home address can have a type of international assignment, mailing, other - home, or permanent address, but not procurement. You can select an address usage in the Usage or Use For prompt when you enter or edit the corresponding address types:

Address Usage	Address Type
Billing	Academic Contact Business Home Institutional

Address Usage	Address Type
	Work
International Assignment	Home
Lockbox	Lockbox
Mailing	Academic Contact Business Home Institutional Work
Mileage Calculation	Home Work
Other - Business	Business
Other - Home	Home
Other - Work	Work
Paycheck	Home Work
Payroll Tax Form	Home Work
Permanent	Home Institutional
Procurement	Business
Remit To	Business
Shipping	Business Home Institutional Work
Storage	Business Work
Street Address	Academic Contact Business Home Institutional Work
Student Refund	Home Institutional
Tax Reporting	Business

Address Usage	Address Type
Work From Home	Home

Workday determines which address types are valid for different business objects. The association of address type to business object also indicates which address usages are appropriate for a business object. Example: An educational institution can have an academic contact address, but not a home or work address. Similarly, a student can have an address type of home or institutional, but not one for business or lockbox. These business objects can have these address types:

Address Type	Business Object
Academic Contact	Educational Institution External Association Student Recruiting Event Ad Hoc Location
Business	Ad Hoc Payee Authority Benefit Provider Business Entity Business Entity Contact Info Change Business Site Corporate Credit Card Account Miscellaneous Payee Professional Affiliation Recruiting Agency Requisition Service Center Subaward Contact Supplier Change Supplier History
Home	Beneficiary Trust Person Professional Affiliation Student Subaward Contact
Institutional	Student
Lockbox	Lockbox
Work	Ad Hoc Payee Beneficiary Trust Person Professional Affiliation Student

Address Type	Business Object
	Subaward Contact

The Business Entity and Person business object groups contain business objects. The contained business objects have the same address types as their business object group. Example: A pre-hire can have a home address and a work address because the Person business object can have a home address and a work address.

Business Object Group	Business Object
Business Entity	Bank Branch Company Customer Deduction Recipient Donor Financial Institution Investor Prospect Sponsor Supplier Tax Authority
Person	Academic Affiliate Beneficiary Candidate Committee Member Dependent Emergency Contact Former Worker Pre-Hire Student Student Prospect Service Center Representative Worker

Related Information

Tasks

Steps: Set Up Address Components by Country on page 79

Phone Numbers

Steps: Set Up Phone Numbers

Context

You can configure what kinds of phone devices and numbers workers can select and enter for your Workday tenant.

Steps

1. Access the Maintain Phone Device Types task.

   Set the available phone device types you can use to enter or update contact information in Workday. Phone number validations are available for mobile and landline device types, but not VoIP device types. If you've enabled the Recruiting functional area, you can also select device types to exclude from Recruiting phone numbers.

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
2. Access the Edit Tenant Setup - System task.
   a. Set the default phone number view format to control how phone numbers display in your tenant.
   b. (Optional) Select the Include National Prefix check box to include the national prefix, such as zero, with the area code. If you select this setting, the national prefix displays in all web services that use an area code. This setting affects new phone numbers that you save in the Workday Traditional Phone Format, and any phone numbers that you later edit. The setting doesn't affect phone numbers that use E164, International, or National formats. Workday recommends selecting this setting only once.
3. (Optional) Access the Edit Tenant Setup - Global task.

   Enable phone number validations by country to have Workday validate phone numbers. If you select this setting, Workday won't accept invalid phone numbers. When necessary, Workday has defined separate validations for mobile and landline types of phone numbers.

   Security: *Set Up: Tenant Setup - Global* domain in the System functional area.
4. (Optional) Access the Invalid Phone Numbers report.

   View invalid phone numbers for workers.

   You can use an EIB based on the Maintain Contact Information web service to correct invalid phone numbers or incorrectly formatted phone numbers. Make sure that you include the Country ISO Code (Alpha-3). Workday automatically assigns the correct Country Phone Code after you load the EIB.

   Security: *Audit: Contact Information* domain in the Contact Information functional area.

Related Information
Reference

Reference: Edit Tenant Setup - Global

Reference: Edit Tenant Setup - System

Reference: Phone Number Formats on page 91

Workday 31 What's New Post: Single Field Phone Number

Workday Community: Incorrect Phone Number Formatting

Concept: Entering and Validating Phone Numbers

Workday has required fields for both Country Phone Code and Phone Number. After you enter the phone number, Workday:

- Validates the phone number for a country, if you select Allowed Phone Validations in the Edit Tenant Setup - Global task.
- Automatically formats a valid phone number for a country in the format selected in the Phone Number View Format setting in the Edit Tenant Setup - System task.

Workday uses the Google libphonenumber library to validate and format phone numbers. If you enter an invalid phone number, Workday doesn't format it and displays the number as entered. If the phone number digits are valid, Workday automatically formats the number based on the Country Phone Code.

Access the View Sample Phone Number Library report to see the allowed number of digits in phone numbers for different countries. You can also view sample phone numbers for different countries in the report. It includes fixed line and mobile numbers in these formats:

- International Phone Number
- National Phone Number

Reference: Phone Number Formats

Workday displays phone numbers in your tenant based on the selected Phone Number View Format setting in the Edit Tenant Setup - System task.

Workday supports 4 phone number formats. International is the default format. These examples display the differences in the formats:

Country	Workday Traditional Phone Format	E164	International	National
USA	+1 (925) 2006574	+19252006574	+1 925-200-6574	(925) 200-6574
United Kingdom	+44 (7974) 424832	+447974424832	+44 7974 424832	07974 424832
Japan	+81 (90) 17901357	+819017901357	+81 90-1790-1357	090-1790-1357
France	+33 (6) 86579014	+33686579014	+33 6 86 57 90 14	06 86 57 90 14

You can export a list of all phone number formats using an outbound Enterprise Interface Builder (EIB) integration.

Vaccination and Workplace Test Tracking

Set Up Vaccination Tracking

Prerequisites

Security: *Person Data: Vaccination Setup* domain in the Vaccination Tracking functional area.

Context

You can specify the vaccination types, status, and manufacturers for your workers as part of your disease preparedness and control plans.

Once users have entered vaccination data, any changes you make on the Vaccination Tracking Setup report might impact that data.

Steps

1. Access the Vaccination Tracking Setup report.
2. As you configure vaccine types, consider:

Option	Description
Order	Specify the order in which Workday displays the values in the Vaccine Type prompt on these tasks: • Add My Vaccination • Add Vaccination
Vaccination Type Name	Enter the name of the disease that the vaccination is providing immunity against.
Inactive	Select to inactivate the type. Users won't be able to select the type when adding vaccinations. You might have downstream impacts if there's existing vaccination data.
In Use	Workday automatically selects this check box when someone uses the Vaccine Type in a worker's vaccination record.

3. As you configure vaccination statuses, consider:

Option	Description
Order	Specify the order in which values display on these tasks: • Add My Vaccination • Add Vaccination
Vaccination Status Name	Enter the status of the worker's vaccination. Example: • *Vaccinated* • *Not Applicable - Medical Exemption*
Valid for Vaccine Types	Enter the vaccine types the vaccination status applies to. Workday displays this vaccination status when workers enter vaccinations for the selected vaccine type.
Attestation	Enter custom text that workers view when they verify to their vaccination status.
Collect Vaccination Details	Select to display a Vaccination Details section where workers can enter the manufacturer, vaccination event type, and date on these tasks: • Add My Vaccination • Add Vaccination

Option	Description
Fully Vaccinated	Select to mark the worker as Fully Vaccinated when they select this Vaccination Status on these tasks: • Add My Vaccination • Add Vaccination
Inactive	Users won't be able to select the status when adding vaccinations on these tasks: • Add My Vaccination • Add Vaccination You might have downstream impacts if there's existing vaccination data.
In Use	Workday automatically selects this check box when someone uses the Vaccination Status in a worker vaccination record.

4. As you configure vaccination event types, consider:

Option	Description
Order	Specify the order in which Workday displays vaccination event types on these tasks: • Add My Vaccination • Add Vaccination
Vaccination Event Type Name	Enter the type of vaccination event workers can select when entering their vaccination. Example: *First Dose*.
Valid for Vaccine Types	Enter the vaccine types the vaccination event type applies to. Workday displays this vaccination event type when workers are entering vaccinations for the selected vaccine type.
Inactive	Select to inactivate the event type. Users won't be able to select the type when adding vaccinations on these tasks: • Add My Vaccination • Add Vaccination You might have downstream impacts if there's existing vaccination data.
In Use	Workday automatically selects this check box when someone uses the Vaccination Event Type in a worker vaccination record.

5. As you maintain vaccine manufacturers, consider:

Option	Description
Vaccine Manufacturer Name	Workday displays the manufacturer on these tasks: • Add My Vaccination

Option	Description
	• Add Vaccination
Inactive	Select to inactivate the vaccine manufacturer. Users won't be able to select the type when adding vaccinations. You might have downstream impacts if there's existing vaccination data.
In Use	Workday automatically selects this check box selected when someone uses the Vaccine Manufacturer in a worker vaccination record.

6. Configure your vaccine tracking requirements using the selections that you created.

   Select Vaccine to display the Maintain Vaccines task.
7. As you complete the task, consider:

Option	Description
Vaccine Type	Select the relevant type that you created.
Vaccine Manufacturer	Select the relevant manufacturers that you created.
Selectable Vaccination Event Type	Enter the event types that you want workers to be able to select for the vaccine.
Inactive	Select to inactivate the vaccine. Users won't be able to select the type when adding vaccinations. You might have downstream impacts if there's existing vaccination data.
In Use	Workday automatically selects this check box when someone uses the Vaccine in a worker vaccination record.

Example

You want to support workers as they return to the workplace after COVID-19. You create these values for workers to select when adding vaccinations:

Option	Value
Vaccine Type	*COVID-19*
Vaccination Status	*Vaccinated* *Partially Vaccinated* *Not Vaccinated* *Other* Enter the attestation: *I certify the information that I provided is true and correct to the best of my knowledge.*
Selectable Vaccination Event Type	*Single Dose* *First Dose* *Second Dose* *First Booster*

Option	Value
	Second Booster
Vaccine Manufacturer	*AstraZeneca* *Johnson and Johnson* *Moderna* *Pfizer*
Vaccine	*Moderna*, with these selectable event types: • *First Dose* • *Second Dose* • *First Booster* • *Second Booster* *Pfizer*, with these selectable event types: • *First Dose* • *Second Dose* • *First Booster* • *Second Booster* *AstraZeneca*, with these selectable event types: • *First Dose* • *Second Dose* • *First Booster* • *Second Booster* *Johnson and Johnson*, with these selectable event types: • *Single Dose* • *First Booster* • *Second Booster*

Next Steps

Configure the *Add Vaccination* business process.

You can report on workers who are *Fully Vaccinated*, and create condition rules that includes or excludes them.

Use the Configure Worklet task to add the My Vaccination task as an option on the Personal Information worklet. The option displays as Vaccination Status on the worklet.

Reference

2021R2 What's New Post: Vaccination and Workplace Test Tracking

The Next Level: Vaccination Tracking

Set Up Workplace Test Tracking

Prerequisites

Security: *Person Data: Workplace Testing Setup* domain in the Workplace Test Tracking functional area.

Context

You can set up different workplace health and safety tests for your organization. This can help you with reacting to different regulations. Example: Covid-19 Tests.

Steps

1. Access the Workplace Test Tracking Setup report.
2. As you configure workplace test types, consider:

Option	Description
Workplace Test Type Name	Enter what the workplace health and safety test is checking for. Example: • *COVID-19* • *Measles*
Inactive	Users won't be able to select the type when adding workplace tests. You might have downstream impacts if there's existing workplace test data.
In Use	Workday automatically selects this check box when someone uses the Workplace Test Type in a workplace test record for a worker.

3. As you maintain workplace test results, consider:

Option	Description
Workplace Test Result Name	Enter the types of results workers can receive from their workplace health and safety test. Example: • *Pending Results* • *Negative* • *Positive*
Attestation	Enter custom text that workers view when they verify to their workplace test results.
Inactive	Users won't be able to select the result when adding their workplace tests. You might have downstream impacts if there's existing workplace test data.
In Use	Workday automatically selects this check box when someone uses the Workplace Test Result in a workplace test record for a worker.

Example

You want to support workers as they return to the workplace after COVID-19. You create these values for workers to select when adding workplace tests:

Option	Value
Workplace Test Types	*COVID-19*
Workplace Test Results	*Pending Results* *Positive*

Option	Value
	Negative *Not Applicable* Enter the attestation: *I certify the information that I provided is true and correct to the best of my knowledge.*

Next Steps

Configure the *Add Workplace Test* business process.

Use the Configure Worklet task to add the My Workplace Test task as an option on the Personal Information worklet. The option displays as Workplace Test Result on the worklet.

Related Information
Reference

2021R2 What's New Post: Vaccination and Workplace Test Tracking

The Next Level: Workplace Test Tracking

Steps: Configure the Add Vaccination Business Process

Prerequisites

Security: The *Person Data: Vaccination* domain in the Vaccination Tracking functional area.

These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

Context

You can configure the *Add Vaccination* business process to track worker vaccinations. You have the flexibility to react to health and safety concerns in the workplace. Example: You require workers to get vaccinated against Covid-19 before they return to the office.

Steps

1. Edit Business Process Security Policies.

   Select the *Vaccination Tracking* functional area and add the appropriate security groups.
2. Edit Business Processes.

   Configure the *Add Vaccination* business process as a subprocess of the *Onboarding* business process.
3. (Optional) Hide or Require Optional Fields.

   Configure these fields on the Add Vaccination and Add My Vaccination tasks:

Option	Description
Vaccination Event Type	When you hide this field, users can still view and enter values in the Vaccine field.
Vaccine	When you hide this field, users can't enter values in the Vaccination Event Type field.

   Example: You hide both the Vaccination Event Type and Vaccine fields so that you can only track the vaccination status and vaccination date for workers.

4. (Optional) Create Security Rules.

   From the Security Field prompt, select *Fully Vaccinated*.
5. (Optional) Create Custom Labels.

   Select *HR Compliance* from the Term Context prompt.

Result

Users can add vaccinations for themselves or for workers using the *Add Vaccination* web service, and these tasks:

- Add My Vaccination
- Add Vaccination

Next Steps

- Add the Vaccinations report to the Personal for Worker Profile profile group. This profile report enables you to view all vaccinations for a worker.
- You can create custom reports for worker vaccine events using the indexed *Vaccinations* report data source.
- You can use the *Get Vaccinations* web service to retrieve vaccination data in bulk from Workday.
- You can access the *Vaccination* purgeable data type on the Purge Person Data and Create Purge Plan tasks to remove vaccination data you no longer need.

- *Manage: Business Process Definitions*

Context

You can configure the *Add Workplace Test* business process to complete the series of steps for workplace test tracking. This configuration provides you with the flexibility to react to health and safety concerns in the workplace. Example: Requiring employees to provide proof of a negative Covid-19 test.

Steps

1. Edit Business Process Security Policies.

   Select the *Workplace Test Tracking* functional area.
2. Edit Business Processes.

   Configure the *Add Workplace Test* business process as a subprocess of the *Onboarding* business process.
3. (Optional) Create Custom Labels.

   Select *HR Compliance* from the Term Context.

Result

Users can add workplace tests for themselves or for workers using the *Add Workplace Test* web service, and these tasks:

- Add My Workplace Test
- Add Workplace Test

Next Steps

- Add the Vaccinations report to the Personal for Worker Profile profile group. This profile report enables you to view all workplace tests for a worker.
- You can create custom reports for worker vaccine events using the indexed *Workplace Tests* report data source.
- You can use the *Get Workplace Tests* web service to retrieve vaccination data in bulk from Workday.
- You can access the *Workplace Test* purgeable data type on the Purge Person Data and Create Purge Plan tasks to remove workplace test data you no longer need.

Tasks

Steps: Configure Business Process Definitions

Reference

2021R2 What's New Post: Vaccination and Workplace Test Tracking

Example: Create Alerts for Not Fully Vaccinated Workers

This example illustrates how to set up an alert based on the vaccination status of workers.

Context

You're managing the return to office for your workplace. You want to remind workers to complete their COVID-19 vaccination. You configure a monthly alert that routes to My Tasks of not fully vaccinated workers.

Prerequisites

Set up vaccination tracking. Create a *Vaccinated* status for COVID-19 vaccine types. Mark it as Fully Vaccinated.

Configure the *Add Vaccination* business process.

Security: These domains in the System functional area:

- *Custom Report Creation*
- *Manage: All Custom Reports*
- *Report Tag Management*
- *Notification Alerts*

Steps

1. Access the Create Custom Report task.
2. Enter these values:

Option	Description
Report Name	*Workers Not Fully Vaccinated*
Report Type	*Advanced*
Optimized for Performance	Clear the check box.

Option	Description
Data Source	*Workers for HCM Reporting*

3. Click OK.
4. Select *All Active Workers* for the Data Source Filter.
5. Select these values in the first grid on the Columns tab:

Business Object	Field	Options
Worker	*Worker*	*Worker Indicator*

6. Access the Filter tab.
7. Select these values in the Filter conditions for filtering on instances grid:

And/Or	Field	Operator
and	*Fully Vaccinated*	*is blank*

8. Access the Prompts tab.
9. Select these values in the Prompt Defaults grid:

Field	Default Type	Default Value	Do Not Prompt at Runtime
Vaccine Type Parameter	*Specify default value*	*COVID-19*	Select the check box.

10. Click OK.
11. Access the Configure Alert task.
12. Select *Workers Not Fully Vaccinated* for the Report Name.
13. Select *Monthly Recurrence* for the Run Frequency.
14. Click OK.
15. Enter *Alert for Not Fully Vaccinated Workers* for the Request Name.
16. Select *General Notifications* for the Notification Type.
17. Select these values in the Alert Configuration tab:

Section	Field	Description
Included Task	Task	*Add My Vaccination*
Recipients	Groups	• *Employee As Self* • *Contingent Worker As Self*
Subject	Notification Subject	*Update Your Vaccination Status*
Body	Introductory Comments	*We are reaching out to you regarding your vaccination status.*
Body	Details	In the Text field, enter *As we return to an in-person environment, we are asking all workers to be vaccinated. Please add your vaccination details.*
Body	Concluding Comments	*Thank you for doing your part to keep our workplace and our customers safe.*

18. Access the Schedule tab.
19. Select these values in the Monthly Recurrence Criteria section:

Option	Description
Every Month	Select the check box.
Day of the Week	*First Monday*
Start Time	*4:00 AM*
Time Zone	*GMT-08:00 Pacific Time (Los Angeles)*
Catch Up Behavior	*Run Once*

20. Select these values in the Range of Recurrence section:

Option	Description
Start Date	*03/01/2022*
End Date	*01/01/2023*

Result

Workday:

- Displays the alert in the Process Monitor report as an *Alert Job* process.
- Sends the alert to all workers who don't have the *Vaccinated* status.

Next Steps

Access the View Alerts report to view defined configurable alerts.

FAQ: Contact and Personal Information

- What is the purpose of an alternate work location?
- How does Workday display primary and alternate work locations?
- Can I add a date when removing an alternate work address?
- Why can't I remove a worker's primary contact information?
- Does deleting emergency contact information for a worker impact dependent or beneficiary records? on page 102
- How can I prevent duplicate IDs when I hire an employee?
- Why are parts of an address missing on worker profiles?
- Is it possible to display some worker names in Western script only and others in both Western and a local script?
- How do I enter the date of death in Workday for a worker who dies?

What is the purpose of an alternate work location?	An alternate work location enables you to identify a work location address that is different than the business address. By default, the business location address is a worker's primary work location. When a worker defines a different address as their alternate work location, that address becomes their

	primary work location address. Example: a worker who always works from home selects their home address as an alternate work location; their home address becomes their primary work location.
How does Workday display primary and alternate work locations?	Worker profiles display the primary business location unless an employee has an alternate work location. The Change Contact Information task and the Change Work Contact Information task specifies: • *Current work location is business location* for workers who don't have an alternate work location. • *Current work location is home* for workers whose alternate work location is their primary home address. • *Current work location is alternate location* for workers who have an alternate work location with a different address.
Can I add a date when removing an alternate work address?	Yes. To include an effective date when you remove an alternate work address: 1. Access the Change Contact Information task. 2. Open the edit window and select the alternate work location. 3. Specify the Effective Date that the address is no longer valid. 4. Save the date by clicking away from the address field. 5. Remove the alternate work address and submit your changes. In the worker's history, the *Contact Change* event displays the specified date.
Why can't I remove a worker's primary contact information?	You can't remove primary contact information when the worker: • Has additional contact information. • Shares the contact information with others. First remove the worker's additional contact information or remove the shared information from the other person's record. Then remove the primary contact information.
Does deleting emergency contact information for a worker impact dependent or beneficiary records?	Deleting an emergency contact won't affect any entries that exist for the deleted individual. Example: A worker deletes an emergency contact listed as a dependent. Workday removes the dependent as an emergency contact, but continues to store the existing contact and personal information of the dependent.
How can I prevent duplicate national IDs when I hire an employee?	You can add a condition rule to the *Edit Government IDs* or the *Edit ID Information* business process.

The rule stops the business process when the employee's proposed ID duplicates an ID already in Workday.

1. Add a condition rule on the initiating step of the business process with these Rule Conditions:

Field	Value
Source External Field or Condition Rule	*National IDs - Proposed with Duplicates*
Relational Operator	*Is not empty*
Comparison Type	Leave blank

2. (Optional) Configure a custom validation message for the step.
3. Add the *Edit Government IDs* or *Edit IDs* step before the completion step of the *Hire* business process.

Why are parts of an address missing on worker profiles?

Workday displays addresses in a format typical of mailing addresses for a country. This format doesn't necessarily include all the fields you can enter. Example: In the U.S., you can enter a county, but it's not typically included in mailing addresses, so it doesn't display on worker profiles.

Is it possible to display some worker names in Western script only and others in both Western and a local script?

Workday displays names in the script that you enter for the worker.

How do I enter the date of death in Workday for a worker who dies?

Workday makes the Date of Death field available on the Edit Personal Information task after the *Termination* business process completes for the involuntary termination.

Worker Photos

Load Worker Photos Individually

Prerequisites

- Configure the *Photo Change* business process. Workday recommends that you add an *Approval* step to the business process.
- Configure security for each initiating action on the *Photo Change* business process.

- Security for the initiating actions:
    - *Self-Service: Personal Photo* domain in the Personal Data functional area.
    - *Person Data: Personal Photo* domain in the Personal Data functional area.

Context

Use the Edit Photo task to change worker photos, 1 photo at a time. To upload a batch of worker photos from an external server, see Steps: Set Up Integration to Load Worker Photos in Bulk on page 104.

Workers can change their own photos by selecting the related action from Personal Data > Change My Photo . Optionally, configure the Personal Information worklet on the Home landing page to include Photo as an action. You can also include the Change My Photo task as a step in the *Onboarding* business process to require the task in My Tasks.

Steps

1. Access the Edit Photo task to update the photograph associated with a particular employee.
2. In the Person field, enter the name of the employee (or select the name of the employee from the search results) and click OK.
3. Add the photo as an attachment.

Related Information

Concepts

Concept: Landing Pages

Concept: Worker Photo Recommendations on page 105

Concept: Security for Worker Photos on page 105

Tasks

Create Custom Business Processes

Steps: Set Up Integration to Load Worker Photos in Bulk

Context

You can create an integration to upload multiple worker photos from an external server.

Steps

1. Create Integration System.

   Enter the *Image Upload Template* on the New Using Template prompt.
2. Access the Create an Integration System User task.

   Security: *Integration Security* domain in the Integration functional area.
3. Grant the ISU *Put* access to these domains:

    - *Integration Event*
    - *Person Data: Personal Photo*

   See: Steps: Grant Integration or External Endpoint Access to Workday.
4. Select Integration System > Configure Integration Attributes as a related action on the integration system and enter integration service attributes.

   Security: *Integration Build* and *Integration Configure* domains in the Integration functional area.
5. Access the Configure Integration Services task.

   Enable the *Document Image Retrieval Service*, and don't enable the FTP client. You can't use both at the same time. We recommend using the *Document Image Retrieval Service* because it supports multiple protocols.

6. (Optional) Set Up Integration Retrieval.

   Complete this step if you enabled the *Document Image Retrieval Service*.
7. Launch an Integration .

Related Information

Tasks

Launch an Integration

Steps: Grant Integration or External Endpoint Access to Workday

Concept: Worker Photo Recommendations

Once you upload an image, it can display in many places throughout Workday. Therefore, images are dynamically scaled and cropped so that they display at an appropriate size. Although an image might be scaled and cropped at run time, the aspect ratio of the original image never changes.

For best results and performance, follow these guidelines:

Feature	Description
Size	The maximum image size (in terms of storage) is 10 MB.
Aspect Ratio	Use square images for best results. Because images typically display as circles within Workday, images in any other shape don't fit properly, resulting in white spaces in the circular area. An image about 200 x 200 pixels produces good results for most applications. Example: The worker profile image is 150 x 150 pixels. Elsewhere, the same images might display at 50 x 50 pixels. At run time, users can enlarge the image to its original size.
Background	A transparent background (available with PNG images, but not with the JPG format) is optimal. However, a solid white background also produces good results.
Color Space	Workday doesn't support images in the CMYK color space.
File Format	Workday supports JPG, PNG, and GIF formats for worker images. However, PNG and JPG images produce the best results in terms of size and quality. Worker images in GIF format might produce undesirable results when resized for different uses at run time.
Layout	Use a consistent photographic layout for all workers.

Related Information

Tasks

Load Worker Photos Individually on page 103

Steps: Set Up Integration to Load Worker Photos in Bulk on page 104

Concept: Security for Worker Photos

Access to worker photos is secured through a combination of:

- Domain security policies, which control who can view and modify worker photos.
- The business process security policy for the *Photo Change* business process, which controls who can perform actions on the *Photo Change* business process.

Viewing Worker Photos

To view and modify worker photos in Workday, set up the security on these domains:

- *Self-Service: Personal Photo*
- *Person Data: Personal Photo*

These domains control access to worker photos on profiles, preview cards, directory swirls, and elsewhere in Workday.

Note: On the *Person Data: Personal Photo* domain, users can see worker photos in directory swirls if they are granted access to either the Report/Task Permissions or the Integration Permissions. Visibility for all other worker photos is secured to Report/Task Permissions only.

Use the Domain Security Policies for Functional Area report to manage permissions. These domains are in the Personal Data functional area.

Changing and Editing Photos

The security policy for the *Photo Change* business process controls who can perform these initiating actions:

- Change My Photo
- Edit Photo
- Delete Photo
- Delete My Photo

You can also regulate who can perform actions on the business process such as approve, cancel, and rescind.

Use the Business Process Security Policies for Functional Area report to manage permissions. The *Photo Change* business process is secured to the Personal Data functional area.

Edit Domain Security Policies
Edit Business Process Security Policies

Worker Documents

Maintain Worker Documents

Prerequisites

- Create categories for worker documents with the Maintain Document Categories task.
- Secure document categories by segment and restrict access to certain types of documents with the Create Document Category Security Segment task.
- Security: These domains in the Personal Data functional area:
  - *Worker Data: Add Worker Documents*
  - *Worker Data: Edit and Delete Worker Documents*

Context

Government regulations and internal policies require that you maintain supporting documentation for many business processes. You can manage these documents with the Maintain Worker Documents report.

The Maintain My Worker Documents task is available for self-service employees to add, edit, and delete their worker documents. Employees who have permission on the *Self-Service: Add Worker Documents* domain can add worker documents. Employees who have permission on the *Self-Service: Edit and Delete Worker Documents* domain can edit and delete worker documents. You can also provide access to this task for pre-hires and terminated employees.

Note: Terminated employees can only view their worker documents. Terminated employees can't add, edit, or upload worker documents.

You can use these tenant setup tasks to configure attachments:

- The Edit Tenant Setup - System task specifies the allowed file types and size limits.
- The Edit Tenant Setup - Business Processes task enables business process attachments at the tenant level. Alternatively, you can enable attachments for a specific business process by configuring the business process security policy.

Steps

1. Access the Maintain Worker Documents report.
2. Add, edit, or delete documents in the Worker Documents section.

   You can view documents uploaded through various transactions in staffing, benefits, and compensation, but you can't edit or delete them. Instead, correct the related events.
3. When the worker has Reviewed Documents as part of a business process, you can:
   - View the effective date, signature type, and the signature date.
   - Access the document as an attachment or through a link.

Next Steps

You can also use the Business Process report field to report on business processes where a worker document was attached. For these business processes, Workday returns the latest created event:

- *Manage Certifications*.
- *Manage Education*.

Reference: File Size and Printing Limits

Personal Notes

Set Up Personal Notes

Prerequisites

Security: *Security Configuration* domain in System functional area.

Context

Personal notes to enable workers to capture notes about other workers directly on their worker profile. You can use personal notes to engage with other workers. Only you can view and edit your own notes. There are no web services for personal notes.

Steps

1. Set up security for the *Worker Data: Personal Notes* domain in the Worker Profile and Skills functional area.

   We recommend that you grant permission to all employees.
2. Add the Personal Notes report to the Overview or Personal profile group on the worker profile.

Next Steps

You can use the Personal Notes report field in a custom report to view your personal notes.

Reference Letters

Steps: Manage Reference Letters

Context

You can set up the *Request Reference Letter* business process to create, review, and generate dynamic documents for reference letter requests from your workers. Examples: Work reference, salary certificate.

Either you or your workers can initiate the *Request Reference Letter* business process, so you can create reference documents for your workers. These documents can provide your workers with information needed for local procedures such as:

- Applying for a visa.
- Renting a property.
- Requesting a mortgage.
- Setting up bank accounts.

You can complete reference letter requests for active, future, and terminated workers.

Steps

1. Edit Domain Security Policies.

   Set up these domains in the Staffing functional area:

   - *Set Up: Reference Letters*
   - *Worker Data: Reference Letters*
2. Access the Maintain Reference Letter Categories task.

   Create reference letter categories to organize reference letter templates.
3. Access the Maintain Reference Letter Templates task.

   Create reference letter templates for the Reference Letter Category and select whether you want to secure them to a country.

   The countries you select control access through the location of the worker's primary position when:

   - You create a reference letter for a worker.
   - A worker requests a reference letter.
4. Configure segment-based security groups to secure reference letter templates by security groups.

   See Steps: Set Up Segmented Security for Reference Letters on page 110.
5. Edit Business Process Security Policies.

   Set up security for the *Request Reference Letter* business process policy.

6. Create Custom Business Processes.

   Set up the *Request Reference Letter* business process.

   You can either configure:

   - A single business process definition with condition rules for the different reference letter categories and templates.
   - Multiple business process definitions with a separate definition for each reference letter category or template.

   See Configure Rule-Based Business Processes.
7. Set up the *Request Reference Letter* business process to generate dynamic documents using document templates associated with reference letter templates. See Steps: Generate Dynamic Documents.

   You can also create document templates for reference letters using Workday Docs. See Steps: Set Up Workday Docs.

   For information on how generated and uploaded reference letter documents display in the Worker Document File, see Concept: Review Documents Step.
8. Set up security segments for the *Reference Letter* document category.

   See Steps: Maintain Access to Documents.
9. Hide or Require Optional Fields.

   Workday recommends that you hide the *Document Language* field on the *Request Reference Letter* business process. The Generate Document step sets the document language based on the locale and language settings of the requester. Hiding the *Document Language* field simplifies the user experience.

   We recommend that you hide the *Document Language* field for all security groups to provide consistency between the Create Reference Letter for Worker task and Request Reference Letter tasks.
10. Activate Pending Security Policy Changes.

Result

You can now create a reference letter when:

- You select Worker Request > Create Reference Letter from a worker's related actions menu.
- A worker requests a reference letter by selecting Worker Request > Request Reference Letter from their related actions menu.

Next Steps

Configure the Create Reference Letter for Worker and Request Reference Letter tasks as:

- Bulletin worklets on the My Dashboard and Home dashboards.
- Announcements on the My Dashboard and Home dashboards.
- Actions on the Requests worklet.

Configure the Create Reference Letter for Worker as a bulletin worklet and announcement on the My Team Management dashboard.

Related Information

Concept: Workday Docs

Tasks

Add Dashboard Menus

Set Up Worklets

Add Home and Dashboard Announcements

Reference

Reference: Edit Tenant Setup - Business Processes

Steps: Set Up Segmented Security for Reference Letters

Prerequisites

- Security: Configure these domains in the Staffing functional area:
  - *Set Up: Reference Letters*
  - *Set Up: Reference Letter Security Segments*
- Set up reference letter categories and reference letter templates.

Context

You can use segment-based security to restrict access to reference letter templates by security groups when:

- HR administrators create reference letters for workers.
- Workers request reference letters.

If you use segment-based security groups for reference letters, you must secure all reference letter templates to a segment-based security group.

When you restrict a reference letter template to a segment-based security group, the workers in this group can view the template in both of these tasks on the Reference Letter prompt:

- Create Reference Letter for Worker
- Request Reference Letter

Steps

1. Access the Create Reference Letter Security Segment task.

   Create security segments to restrict access to reference letter templates.
2. Create Segment-Based Security Groups.

   Select segments from the *Reference Letter Security Segment* category in the Access to Segments prompt and map these segments to security groups.

   Note: We recommend that you link each segment-based security group to its own segment. As a result, you can remove the segment-based security groups individually from reference letter templates.
3. Edit Domain Security Policies.

   Configure access for the segment-based security groups on the *Set Up: Reference Letter Security Segments* domain in the Staffing functional area.
4. Access the Maintain Reference Letter Templates task.

   Select the segment-based security groups for the reference letter templates.
5. Activate Pending Security Policy Changes.

Concept: Security Groups

Find and Compare Workers

Compare Workers

Prerequisites

- Configure access to the domains that secure worker attributes. See Reference: Worker Attributes on page 115.
- Security: *Compare Workers* domain in Worker Profile and Skills functional area.

Context

You can compare worker information in a side-by-side layout from the Find Workers report. You can analyze key worker attributes related to compensation, skills and experience, talent, and work history.

You can also compare workers from a custom version of the Find Workers report by enabling the Compare mass action in the Mass Actions section on the Advanced tab of the report definition.

Steps

1. Access the Find Workers report.
2. Select up to 5 workers from the search results.
3. Click Compare.

   On the Compare Workers report:

   - Arrange the comparison to meet your needs by expanding or collapsing individual sections.
   - Click Table View to display the comparison in a grid.

Concept: Finding Workers

You can use the Find Workers report to search and filter your worker population. You can search by text and faceted options, such as location, job profile, and supervisory organization. When you select a value in the facets, Workday dynamically updates the list of workers and facet value counts in the Find Workers report. The facet value counts help you understand the worker population that satisfies the current filter criteria and guides your exploration.

Facets and Facet Values

Workday displays search facets on the Find Workers report.

- Facets correspond to generic categories, such as location and Job Profile.
- Each facet contains 1 or more facet values, which correspond to specific values in your tenant. Example: The location facet displays values for your specific locations.
- The number in parentheses indicates how many workers are associated with the facet value. Example: If you have a Chicago location with 8 workers, the location facet displays a value of *Chicago (8)*.
- If a facet has many possible values, a prompt enables you to select an additional facet value.
- The Skills facet displays recognized skills on the skills table, including both maintained skills and Skills Cloud skills.
- As you narrow your search, Workday updates the count numbers for other facet values. Workday hides the facet when:
  - A facet value count is zero.
  - All values for a facet are zero.

When workers have multiple jobs, Workday doesn't return data on the Find Workers report for these facets:

- Management Level
- Job Classification
- Employee Type
- Job Profile
- Base Pay Quartile

Keyword Search Options

You can use the keyword search field in combination with faceted search with these restrictions:

- Keyword search applies only to workers currently returned by the faceted search.
- Keyword search applies a hidden *worker:* prefix to the keyword that you enter.

Facet Search Index Updates

Workday updates the search index when any worker-related event is complete. Example: When an event such as hiring or terminating an employee completes, Workday updates the search index.

Search Security

The Find Workers report is secured to the *Search: Find Worker* domain. Individual facets are secured to the same domains as their underlying report fields. When you:

- Don't have view access to a facet domain, Workday doesn't display that facet on the Find Workers report.
- Do have access to the facet domain, Workday only includes those employees whose data you have permission to see. Example: You have permission to see the performance rating facet, but only for certain employees. The facet value counts for the ratings only includes the appropriate employees.

To identify the facet report fields, copy the Find Workers report and view the Facet Options on the Advanced tab.

To determine how a facet is secured in your tenant, search for the associated report field and select Security > View Security from its related actions menu. The View Report Field report also briefly describes the purpose of the report field and facet.

Saving Your Search

You can save Find Workers searches to use later or to determine membership in a dynamic talent pool. Saved searches are for your personal use and not available to others.

You can clear, open, or save a search. When you clickOpen, you can:

- Continue your last search, if there was a previous search during the same session.
- Select a search from a list of saved searches.
- Rename or delete any saved searches. You can't change the criteria of a saved search.

Custom Search Reports

You can create a custom version of the Find Workers report using the Workday Report Writer. A custom search report enables you to control the available search facets, the order, and the fields that display in the search results.

To simplify creation of a custom search report, you can access the delivered Find Workers report and select Standard Report > Copy from its related actions menu. You can then modify the report to meet your needs.

If you want to replace the standard version of Find Workers with the custom report, you can access the Hide Workday Delivered Report task. This task enables you to remove the standard report from menus and search results. Tasks and reports that you add to the Hide Workday Delivered Report are no longer visible in Workday.

Related Information

Concepts

Concept: Crowdsourced Skills and Experience Management on page 121

Tasks

Steps: Manage Talent Pools on page 1803

Configure Faceted Search Reports for Mobile

Reference

Reference: Search Workday

Concept: Worker Tags

Workday enables you to put workers into candidate, succession, or talent pools using tags. You can tag up to 500 workers at a time. Example: You can tag workers as outstanding contributors, potential directors, or ready for promotions.

You can tag workers by using the Tag icon at the top of reports. The icon is a solid right-facing arrow above a worker's name on their profile. You can tag workers when you include the Worker report field in your report definitions and the primary business object is either:

- Contingent Worker
- Employee
- Worker

You can also tag workers using:

- A report created on the Worker business object.
- The Find Workers report.

In addition to tagging workers manually, you can use the search results of a saved search from the Find Workers report to update talent pool membership automatically.

You can use search reports to tag workers. However, Workday recommends using another report type when you want to use a report to tag workers.

Related Information

Tasks

Add Members to Static Talent Pools on page 1806

Steps: Create Search Reports

Steps: Manage Talent Pools on page 1803

Concept: Employee Timeline

You can use the Employee Timeline report to compare the job, compensation, performance, and talent information for an employee on an annual basis. To access this report, you need access to either of these domains:

- *Self-Service: Historical Staffing Information*
- *Worker Data: Historical Staffing Information*

You can search for the report or add it to worker profiles. Using a side-by-side layout, it displays this information by year:

- Job: Job Profile, Manager, Location, Management Level.
- Compensation: Base Pay, Bonus, Pay Segment, and Compa-Ratio.
- Performance: Manager Rating, Manager Comment, Employee Rating, Employee Comment.
- Skills: Awards.

The report information is effective as of:

- The current date for the current year.
- December 31 for previous years.

You can also create a custom version of the Employee Timeline report with your own data points.

Concept: Previous System History

You can add a worker's job and compensation history from a previous system in 2 ways:

- Enter data manually for 1 worker at a time. From the related actions menu of the worker, select Worker History > Maintain Worker History from Previous System.

  Security: *Worker Data: Historical Staffing Information* domain in the Staffing functional area.

  Use the Maintain Custom Labels and Configure Optional Fields tasks to customize the data that you track in this grid. Workday doesn't enforce optional field configurations for previous system history in web service operations.
- Load data from a spreadsheet for 1 or more workers. Use the Create EIB task to set up an inbound integration and generate a spreadsheet template from a public Workday Web Service operation:
  - *Put Previous System Job History*
  - *Put Previous System Compensation History*

  Security: *Worker Data: Historical Staffing Information* domain in the Staffing functional area, and *Integration Build*, *Integration Event*, and *Integrations: EIBs* domains in the Integration functional area.

Reference IDs

Workday assigns a unique reference ID to each event from a previous system. When you enter events manually, Workday automatically generates the reference IDs. When you load history from a spreadsheet, you can either define your own reference ID values or have Workday create them during the upload.

Update or Delete History

You can also update or delete previous system history from a spreadsheet. Populate the spreadsheet ID column (*Previous_System_Job_History_ID* or *Previous_System_Compensation_History_ID*) with the reference IDs for the existing events. Follow these steps to find the existing reference IDs:

1. Access the worker profile.
2. In the Job profile group, click the Worker History tab.
3. In the Worker History from Previous System grid, select Integration IDs > View IDs from the related actions menu of the event.

View History

You can view the previous system job history of a worker by selecting Worker History > View Worker History by Category from a worker's related actions menu.

Report History

You can report on worker information from a previous system by creating custom reports using the My Direct Reports report data source. To report on:

- Compensation history, use the *Compensation History - Previous System* business object.
- Job history, use the *Job History from Previous System* business object.

Former Workers

Steps: Manage Former Worker Data

Prerequisites

Security: *Former Worker Storage* and *Former Worker Documents* domains in the Staffing functional area.

Context

Former workers are workers you terminate before your Workday implementation, but whom you still want to continue tracking. When storing data for former workers, you can identify rehires more quickly and access former worker data without impacting Workday performance. You can track these details for former workers:

- Names (legal, preferred).
- IDs (worker, national).
- Dates (hire, termination, service).
- Contact information (address, phone, country).
- Personal information (birthdate, ethnicity).
- Job details (title, manager, location, compensation).

You can't store previous Workday history or track events for former workers.

Steps

1. Use the Enterprise Interface Builder (EIB) to bulk load former worker data from a spreadsheet.

   The *Get Former Worker* and *Put Former Workers* web services have a 50,000 row limit for all transactions.

   Note: To enter or update former workers manually, access the Create Former Worker or Edit Former Worker task.

   See Steps: Set Up EIBs Using Templates from Web Service Operations.
2. (Optional) Access the Former Worker Documents report to add attachments for former workers.

   If you secure document categories by segment, you must have access to a category to view or update attachments in that category.
3. (Optional) Create and Edit Custom Object Definitions.

   Store additional data about former workers using custom fields.
4. (Optional) Access the Edit Tenant Setup - HCM task to manage data for rehired former workers.

Option	Description
Reuse Former Worker ID	Select this check box to reuse a former worker's ID as the employee ID or contingent worker ID when rehired.
Hide Former Worker Personal Data when Rehired	Select this check box to hide personal data in a former worker's record when rehired.

   See Reference: Edit Tenant Setup - HCM.

Result

You can use the View Former Worker report to search for and view former workers by their legal or preferred name, national ID, or worker ID.

Next Steps

Rehire a former worker with the Hire Employee or Contract Contingent Worker tasks.

Related Information

Tasks

Steps: Maintain Access to Documents

Concept: Rehire Former Workers

Former workers are workers you terminate before your Workday implementation, but you loaded them into storage. To access these workers, use the *Former Worker Storage* security domain. You can rehire a former worker using these tasks:

- Contract Contingent Worker
- Hire Employee

When you rehire former workers, Workday:

- Creates a pre-hire record.
- Populates the Original Hire Date field from the former worker's record.
- Prevents you from using the Edit Former Worker task to change the former worker's name, contact information, personal data, and national ID. However, you can update this information in the worker's profile.
- Adds a link to the former worker record on the worker's profile.

Related Information

Tasks

Steps: Manage Former Worker Data on page 115

Contract Contingent Workers on page 723

Hire Employees on page 690

Merge Duplicate Candidates on page 304

Reference

Reference: Edit Tenant Setup - HCM

Troubleshooting: Can't Reuse Employee ID for a Rehired Contingent Worker

The new hire event assigns a new employee ID to a rehired contingent worker even when you:

- Select the Reuse Worker ID and Reuse Former Worker ID check boxes on the Edit Tenant Setup - HCM task.
- Use the same pre-hire record to rehire a former worker.

Cause: The contingent worker has a rescinded hire event, and the worker profile associated with the rescinded hire event uses the contingent worker ID as the reference ID. The new hire event uses a unique employee ID for the rehired worker.

Solution:

Steps

1. From the related actions menu of the contingent worker and the new worker profiles, select Integration IDs > View IDs.

   Note the reference IDs for both former contingent worker and new worker.

   Security: *Integration Build* domain in the Integration functional area.

2. Access the Create Custom Report task.
    a) Clear the Optimized for Performance check box.
    b) Select *All Active* and *Terminated Workers* from the Data Source prompt.
    c) On the Columns tab, add rows with these values in the Field column:
        - *Reference ID*
        - Worker
    d) On the Filter tab, enter these values:

Option	Description
Field	*Reference ID*
Operator	*equal to*
Comparison Value	Enter the reference ID of the contingent worker.

    This report displays all active and terminated worker profiles that are linked to the reference ID of the contingent worker.

    Security: *Custom Report Creation* domain in the System functional area:
3. From the related actions menu of the worker profile with the same reference ID as the former contingent worker profile, select Worker History > View Worker History.

    Review all the events related to the worker profile for a rescinded hire event for this profile.
4. Access the Create Custom Report task.
    a) Clear the Optimized for Performance check box.
    b) Select *Workers with Rescinded Hire* from the Data Source prompt.
    c) On the Columns tab, add rows with these values in the Field column:
        - *Reference ID*
        - *Worker*
    d) On the Filter tab, enter these values:

Option	Description
Field	*Reference ID*
Operator	*equal to*
Comparison Value	Enter the reference ID of the contingent worker.

    This report displays the rescinded worker profile that uses the same reference ID as the contingent worker.

    Security: *Custom Report Creation* domain in the System functional area:
5. From the related actions menu of the rescinded worker profile with the same reference ID as the contingent worker, select Integration IDs > Edit Reference ID.

    Append *DNU* to the reference ID.

    Workday uses *do not use (DNU)* labels for objects that are planned for retirement.
6. From the related actions menu of the worker profile, select Worker History > View Worker History.

    Select Rescind as the related action on the *Hire* event.
7. Access the Hire Employee task.

    Hire the worker using the same pre-hire record.

Worker Experience

Steps: Set Up Skills and Experience

Prerequisites

Configure these business processes and security policies in the Worker Profile and Skills functional area:

- *Manage Awards and Activities*
- *Manage Certifications*
- *Manage Competencies*
- *Manage Education*
- *Manage Internal Projects*
- *Manage Job History*
- *Manage Languages*
- *Manage Professional Affiliations*
- *Manage Publications*
- *Manage Training*
- *Manage Work Experience*

Context

Skills and experience are components of worker profiles. Before you can assign a skill or experience to a worker, set up these components:

- Award and Activity Types.
- Competencies.
- Education.
- Certifications.
- Languages.
- Publication Types.
- Work Experiences.
- Training Types.
- Job History Companies.

Steps

1. Create a set of maintained skills that your organization wants to track.
   See Steps: Maintain Skills on page 1828.
2. Create a library of skill competencies to track.
   See Steps: Set Up Competencies on page 122.
3. Create schools, degrees, and fields of study to track.
   See Steps: Set Up Education on page 137.
4. Create certifications to track.
   See Steps: Set Up Certifications on page 131.
5. Create a library of languages, ability types, and proficiency levels to track.
   See Steps: Set Up Languages on page 139.
6. Define the different types of work experience and training types that you want to track.
   See Concept: Work Experience and Training Types on page 122.
7. Create a library of professional affiliations to track.
   See Steps: Set Up Professional Affiliations on page 139.

8. Create a list of companies to track.

   See Steps: Set Up Job History Companies on page 137.

Related Information

Concepts

Concept: Skills and Competencies Comparison on page 127

Manage Skills and Experience

Prerequisites

- Set up the individual skills and experiences that you want to track.
- Add skills and experience to worker profiles with the Configure Profile Group task.
- Security: *Set Up: System* domain in the System functional area.

Context

You can add, remove, and report on past and present skills and experience for workers.

Example: During talent reviews, managers and workers can have informed and specific discussions about how workers' skills and competencies have developed over time, and can discuss whether workers are ready for promotions by comparing their current skills and competencies to those required by higher job titles.

You can manage workers':

- Achievements
  - Awards
  - Activities
  - Publications
- Certifications
- Competencies
- Education
- Job History
- Internal Projects
- Languages
- Professional Affiliations
- Skills
- Training
- Work Experience
- Worker Projects

Steps

1. Add skills and experience for a worker:
   a) From the worker's related actions menu, select Talent > View Skills and Experience.
   b) Add each type of skill or experience on a separate tab.

   For certifications, competencies, professional affiliations, and schools, you can select values or create new ones if needed.

   You can also upload certification documents and view them in the Maintain Worker Document report.

2. Compare a worker's competencies to the competencies associated with their job:
    a) From the worker's skills and experience, select the Competencies tab.
    b) Click Compare to Job.

    This option is only available for workers assigned to jobs. 1 chart displays the competencies required for the job and the other chart displays additional competencies.
3. View the history of a worker's competencies:
    a) From the worker's Skills and Experience, click the Competencies tab.
    b) Click History.

Next Steps

- You can remove a worker's skills and experience unless they have pending actions.
- You can't remove competencies from a worker.
- Access the Business Process Security Policies for Functional Area report to give security groups permission to remove skills and experience.

Related Information
Concepts
The Next Level: Power of Skills
The Next Level: Establishing a Skills Blueprint
The Next Level: Skills versus Competencies
Tasks
The Next Level: Establishing a Skills Blueprint
Steps: Set Up Profiles and Profile Groups

Concept: Crowdsourced Skills and Experience Management

Administrators maintain libraries of recognized skills and experience that users can search for and add to their profiles. You can find recognized skills and experience on these reports:

- Maintain Certifications
- Maintain Job History Companies
- Maintain Schools
- Maintain Skills

If candidates and workers can't find certain skills and experience in your tenant, they can create crowdsourced versions to add on their profile. Crowdsourced skills and experience enable users to expand their profiles, but variations of the same crowdsourced skills and experience can create redundancies. Example: A worker creates Math as a crowdsourced skill, and a candidate creates Arithmetic.

Workday stores crowdsourced skills and experience on these reports:

- Find Certifications
- Find Job History Companies
- Find Schools
- Find Skill

To manage crowdsourced data, you can use these reports to merge crowdsourced skills and experience with recognized versions. Workday updates profiles to use the recognized versions.

You can prevent workers from creating crowdsourced skills by selecting the Disable Create New Skill for Edit Skills check box on the Maintain Skills and Experience Setup task.

If you enable this option, candidates can still create crowdsourced skills, but Workday won't migrate these crowdsourced skills to other person types. Example: When the candidate is hired, Workday won't copy crowdsourced skills from the candidate's skill profile to the worker's profile. The crowdsourced skills remain on the candidate's skill profile.

Concept: Work Experience and Training Types

Work Experience

You can add different types of work experiences and associate levels with the experiences in:

- Job profiles.
- Talent reviews.
- Worker profiles.

You can use the Maintain Work Experience task to create, edit, and delete work experiences. For each work experience, create different experience Levels. Levels can track years of experience, level of proficiency, or other tiered measurement you want to associate with the experience. You can optionally specify a Talent Card Sort Order to control the priority of the experience as it displays on the talent card.

Training Types

Training types are available to add to worker and job profiles. Examples:

- Classroom.
- Online.
- Textbook.
- On-the-job.

Add Training to worker or job profiles using the Configure Profile Group task. You can add this section to the:

- Overview, Career, or Performance profile group on worker profiles.
- Qualifications profile group on job profiles.

When you convert contingent workers to employees, or when you rehire former employees, Workday carries over their previous training to the new role.

Delete or Inactivate Work Experience or Training Types

- Select the Inactive check box to remove a work experience, experience level, or training type from selection lists. Though inactive, these items remain valid for employees who have already selected them.
- Delete a work experience, experience level, or training type by removing its row from the setup table. You can only delete items that aren't in use.

When you inactivate an experience level or training type, you may need to update job profiles or other objects to reflect a valid experience level or training type. When you submit changes to a job profile that includes an inactive work experience, you must remove the inactive entry.

Competencies

Steps: Set Up Competencies

Prerequisites

Security: *Set Up: Skills and Experience* domain in Worker Profile and Skills functional area.

Context

Create a library of skill competencies and associate them with a:

- Job family.
- Management level.
- Job profile.

- Position.

You can:

- Group related competencies into categories and related categories into classes.
- Set up multiple proficiency rating scales to measure competencies.
- Define behaviors associated with a competency by:
    - Management level.
    - Compensation grade.

Steps

1. Access the Maintain Skills and Experience Setup task.

   To associate competency behaviors to either management level or compensation grade, select *Compensation Grade* or *Management Level* from the Proficiency Rating prompt.
2. (Optional) Access the Maintain Competency Classes task.

   Create classes for grouping related competency categories.
3. (Optional) Access the Maintain Competency Categories task.

   Create categories for grouping related competencies.
4. (Optional) Access the Maintain Competency Precedence task.

   See Concept: Competency Precedence on page 130.
5. (Optional) Create Proficiency Rating Scales on page 123.

   Define the values that measure an employee's performance or proficiency rating in a specific competency.
6. Create or Edit Competencies on page 125.
7. Assign expected competencies and proficiency ratings to job families or management levels.

   See Concept: Job Family or Management Level Competencies on page 130.
8. (Optional) Edit Business Process Security Policies.

   Enable managers and workers to hide and restore competencies on worker profiles. Specify the security groups for the *Archive and Restore Competencies* initiating action on the *Manage Competencies* business process in the Performance Enablement functional area.
9. Configure the Competencies report on any of these profile groups:
    - Career for Worker Profile.
    - Overview for Worker Profile.
    - Performance for Worker Profile.

   See Steps: Set Up Profiles and Profile Groups.

The Next Level: Skills versus Competencies

Create Proficiency Rating Scales

Prerequisites

Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.

Context

Measure the proficiency of employees in specific competencies by creating rating scales with values and behaviors.

Steps

1. Access the Create Proficiency Rating Scale task.
2. For each proficiency rating scale, specify:

Option	Description
Rating	You can use alphabetic or numeric values.
Exclude From Calculations	To exclude items with this rating from calculations for section ratings or overall ratings, select this check box.
Rating Value	Enter a numeric value up to 2 decimal points. Workday uses this value to calculate employee performance rating.
Begin Range/End Range	Enter a numeric value up to 2 decimal points. Determines which rating value to use when calculating a section summary or overall rating. Example: If the rating is 3.25 and you don't have a 3.25 rating value, Workday finds the range for the value and converts it. Beginning and ending ranges can't overlap or have gaps.

Example

Rating	Rating Value	Begin Range	End Range	Behavior
Limited	1	0	1.49	Limited or no use of competency required for the job. Might have had limited opportunity to apply the competency.
Basic	2	1.5	2.49	Basic understanding and sufficient knowledge to do routine tasks. Understands and can discuss terminology and concepts related to the competency.
Proficient	3	2.5	3.49	Requires minimal guidance or supervision. Works

Rating	Rating Value	Begin Range	End Range	Behavior
				independently. Capable of assisting others in the application of the competency.
Advanced	4	3.5	4.49	Highly developed knowledge, understanding, and application of the competency. Has a long-term perspective.
Expert	5	4.5	5	Recognized by others as an expert in the competency. Has a strategic focus.

Next Steps

- To view details about the proficiency rating scale, access the View Proficiency Rating Scale report.
- To change or inactivate an existing proficiency rating scale, access the Edit Proficiency Rating Scale task.

  Note: You can't change a proficiency rating scale after associating it with a competency.
- To define competencies, access the Configure Competency task.

Related Information
Tasks
Steps: Set Up Skills and Experience on page 119
Create Rating Scales on page 1644

Create or Edit Competencies

Prerequisites

- Security: *Set Up: Skills and Experience* domain in Worker Profile and Skills functional area.
- Enable competency description and behaviors for either management level or compensation grade using the Maintain Skills and Experience Setup task.

Context

You can create a library of skill competencies to associate with a:

- Job family.
- Management level.
- Job profile.
- Worker.

You can change or inactivate existing competencies and assign a proficiency rating scale to measure each competency.

Steps

1. Access the Configure Competency task.

2. Select an Effective Date.

   For more information, see Concept: Competency Effective Date on page 131.
3. Click OK and Edit.
4. As you complete the task, consider:

Option	Description
Category	Workday displays the classes that the competency belongs to based on the categories you select.
Inactive	Select when the competency isn't ready for use or to discontinue use. Workday hides inactive competencies on worker profiles.
Description Applies to All Levels	Select to apply the description to all levels in your organization. Leave blank to define description by either the employee's: • Management level. • Compensation grade.
Proficiency Rating Scale	Select or create a proficiency rating scale to measure this competency. When you select an option, you can use the grid to enter behaviors that best reflect the ratings for this competency.
Behaviors Apply to All Levels	Select to apply behaviors to all levels in your organization. Leave blank to define behaviors by either the employee's: • Management level. • Compensation grade.

5. Click Save.
6. (Optional) Click the Configure for Management Level or Configure for Compensation Grade button to create different descriptions for the levels within the competency.

   Workday displays the applicable button from your setting on the Maintain Skills and Experience Setup task.

Next Steps

To use a competency in a talent matrix report, access the Set Up nBox Report task to map rating values to each box in the talent matrix grid.

You can't delete competencies, but you can rescind or correct employee competencies with the *Manage Competencies* business process.

Concept: Skills and Competencies Comparison

Comparing Skills with Competencies

Skills describe what tool sets workers need to perform the job, while competencies describe how well workers perform the job. Skills are specific learned abilities. Examples:

- Cloud Applications
- Cloud Security
- Python
- Software as a Service (SaaS)

Competencies are proficiencies workers use to achieve role objectives. Examples:

- Building Talent
- Championing Innovation
- Leadership
- Results Orientation

You can use skills and competencies to track the capabilities that users acquire from various sources. Examples include education, certifications, and languages. Knowledge of these capabilities can help you to make smart decisions in growing your organization. Skills and competencies provide different levels of configurability and insight. Familiarize yourself with both features to learn how each can support your organization.

You can use skills or competencies, or both, depending on your use cases and objectives.

Skills and competencies provide different approaches to administrative control and worker development.

Approach	Skills	Competencies
Administrative Control	Provide a user-driven approach to understanding the capabilities of your workforce. When you enable Skills Cloud, you can organize your skills catalog with less administrative maintenance. Skills Cloud also contributes to machine learning products and solutions.	Provide a high degree of control defined by the organization, and relies on administrative configuration to maintain the catalog. Competencies contribute to selected machine learning solutions for suggested learning, connections, and mentors.
Worker Development	Skills support discovery and growth for your workers. Examples: • How to bridge the skill gaps between an employee's current role and targeted future roles. • Determining what resources might support the employee in building more skills. • How to match the right people to the right job.	Competencies help improve evaluations, including reviews and retrospective conversations. Examples: • How did your competency rating compare to your target? • How do competency ratings impact overall performance ratings and compensation?

Use Cases and Maintenance

Skills and Competencies address different use cases and require different levels of maintenance.

	Skills	Competencies
Use Cases	• You need to optimize your talent (such as building, buying, or redeploying talent) based on a wide variety of technical skills, knowledge, and capabilities. • You need to build a broad and deep understanding of your workers' skill data, gaps, and trends. • You need to help your workforce understand their skill gaps to help them increase their skills. • You need to encourage a career development experience based on a wide variety of technical skills, knowledge, and capabilities.	• You need to rate all employees at specific, defined levels or compensation grades on 8 leadership competencies defined by your organization. • You need to rate targeted employees on 4 core values that you define for your organization. • You need detailed control over all definitions and descriptions, including proficiency rating scales, to evaluate employees by specific bands. • You need to conduct assessments of various worker populations to meet compliance requirements.
Maintenance	If you don't enable Skills Cloud, or if you have customer-specific skills (such as unique or proprietary skills), you must maintain the skills in your tenant. If you enable Skills Cloud, Workday continuously maintains and updates Skills Cloud skills.	You must maintain the competency catalog in your tenant. Workday supports Competencies business processes, so you can set effective dates for any changes.

Functionality

You can use Skills and Competencies to address different methods for evaluating workers.

Function	Skills	Competencies
Assign to employees	Mark skills as critical for employees based on supervisory organization, job family, and job profile. You can also assign skills as being critical to all employees.	Assign competencies based on worker's compensation grade and management level.
Ratings	You can set ratings using skill levels. Skills support peer-to-peer rating, manager-to-direct-report rating, and self-rating.	You can set targets by a worker's management level or compensation grade. Rating scales might vary by competency. Descriptions on ratings might vary based

Function	Skills	Competencies
	You can apply weights to different skill rating sources. You can add the *Get Feedback* step in employee review business processes to include skill ratings and surface ratings in employee reviews.	on compensation grade and management level. You can also change ratings over time and set effective dates for them.
Definitions	Skills don't support definitions. Skills Cloud skills are skills in Workday that are commonly understood in the market.	Competencies support definitions. You can change competency names and descriptions over time, and set effective dates for them.
Categorization and structure	You can set skill item categories and category groups to create an internal skills hierarchy. You can also mark skills as critical for a specific context. Examples: Job families, job profiles, or supervisory organizations.	You can set up competency classes and categories to organize a competency catalog.

Skills Cloud Features

You can use skills with or without enabling Skills Cloud. We recommend using Skills Cloud to take advantage of Workday's machine learning capabilities to:

- Collect the data to help you understand the skills of your workforce.
- Gain insight to plan for future organizational growth, including developing existing workers and hiring new ones.
- Optimize your programs for adding new skills and increasing expertise in existing skills of your workers.

Skills Cloud provides additional features when you enable it.

Features without Skills Cloud	Features with Skills Cloud
• Administrators maintain a list of skills that users can add to their profile. • Workers and candidates can create crowdsourced skills that they can't find, and add them to their profile.	• Increases the number of skills users can add to their profile. • Returns related skills based on a person's search. • Automatically performs regular background jobs that can reduce the number of skills to maintain. • Prepares your tenant for machine learning solutions from Workday.

Note: You can't disable Skills Cloud once you enable it.

For more information, see Setup Considerations: Skills Cloud on page 1844.

Related Information

Concepts

The Next Level: Power of Skills

The Next Level: Establishing a Skills Blueprint

The Next Level: Skills versus Competencies

Tasks

Steps: Set Up Competencies on page 122

Reference

The Next Level: Skills versus Competencies

Concept: Job Family or Management Level Competencies

You can set expected competencies and competency ratings for all employees in a job family or management level as a single action. Before you can work with Job Family or Management Level competencies:

- Create proficiency rating scales.
- Create competencies.
- Security: *Set Up: Skills and Experience* domain in Worker Profile and Skills functional area.

Use 1 of these tasks and select a Job Family or Management Level:

- Maintain Competencies for Job Family
- Maintain Competencies for Management Level

Select 1 or more competencies for this job family or management level. Managers and workers see these competencies in the Competencies from Other Sources section on the Competencies tab of their job profiles.

Each worker inherits specific competencies and competency ratings from all job levels. If the same competency is assigned to a worker at more than 1 job level, the competency rating set at the lower job level takes precedence:

- Job Family - Applies to any lower level unless overridden.
- Management Level - Overrides any competency rating for the same competency set at the job family level.
- Job Profile - Overrides any competency rating for the same competency set at the job family or management level.
- Position - Overrides any competency rating for the same competency set at the job family, management level, or job profile.

Specify that all employees with a management level of Director must have a rating of 3 (Proficient) on the Negotiating Skills competency. Then, edit the Director of Sales job profile to have a rating of 4 (Advanced) on the same competency. The job profile setting overrides the setting at the management level.

Related Information

Tasks

Steps: Set Up Development Plans on page 1692

Steps: Set Up Disciplinary Actions on page 1695

Steps: Set Up Performance Improvement Plans on page 1699

Steps: Set Up Performance Reviews on page 1679

Steps: Set Up Skills and Experience on page 119

Concept: Competency Precedence

You can add a single competency to a worker multiple times from different sources. Examples of sources include performance reviews, talent reviews, a talent administrator, and the worker. The Competencies tab on the Skills and Experience report displays a single instance of the worker's competency. The Compare to Job button compares a single instance of the worker's competency to the same competency associated with the job profile or position.

Competency precedences enable you to rank the priority of the sources so Workday can determine which instance of the competency to use. If you don't set up a precedence list, Workday uses the most recent update of a competency.

These precedences apply only to competency proficiency levels, not to competency ratings. On the worker profile, the assessed and target ratings for competencies reflect evaluations based on proficiency scales. If you use a rating scale to evaluate competencies in an employee review, access the history from the competency's related actions menu to view the ratings.

Concept: Competency Effective Date

When you create a competency, you set the date it becomes effective. The effective date applies to these attributes:

- Description.
- Proficiency scale.
- Proficiency ratings.
- Behaviors.

If you make multiple changes to these attributes and start an employee review with the changed competency, Workday applies only the first change. Changes you make to other attributes of a competency immediately impact the competency throughout Workday. If you change the proficiency rating scale on a competency, talent cards display competency ratings only after you evaluate the competency using the new scale.

When a competency is pulled into an employee review, the competency effective date might be different from the date the review was launched. In this situation, Workday pulls in the competency description of the compensation grade that's effective before or on the day the review was initiated.

Example: If you initiate the review on 3/14/22 with a competency effective date of 3/14/22, then Workday pulls the competency description into the employee review with the description as of 3/14/22. If you initiate the review on 3/14/22 and you change the competency grade with an effective date of 3/17/22, then Workday still pulls in the competency description with the description as of 3/14/22.

Certifications

Steps: Set Up Certifications

Context

You can create certifications that workers and academic affiliates can add on their worker or academic affiliate profiles. You can also access these certifications when you create or edit:

- Job profiles.
- Job requisitions.
- Positions.
- Position restrictions.

The combination of issuer name and certification must be unique.

Steps

1. Access the Maintain Certification Issuers task.

   Create a list of organizations that issue certifications.

   Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
2. (Optional) Access the Maintain Skills and Experience Setup task.

   Select the Enable Specialties for Certifications check box.

   Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
3. (Optional) Create or Edit Specialties and Subspecialties on page 132.
4. (Optional) Hide or Require Optional Fields.

   Configure specialty date fields on the *Manage Certifications* business process.

5. Access the Create Certification task.

   Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
6. Set up security segments for the *Certification* document category and assign segment-based security groups to these domains:

   - *Worker Data: Add Worker Documents*
   - *Worker Data: Edit and Delete Worker Documents*

   See Steps: Maintain Access to Documents.
7. Steps: Set Up Profiles and Profile Groups.

   Configure the Certifications report on any of these profile groups:

   - Academic for Academic Affiliate Profile
   - Career for Worker Profile
   - Overview for Academic Affiliate Profile
   - Overview for Worker Profile

Result

Users with security permission on the *Manage Certifications* business process can view certification attachments.

Next Steps

- Access the Find Certifications report to merge crowdsourced certifications with recognized certifications.
- Access the Maintain Certifications report to:
  - Delete unused certifications.
  - View recognized certifications.
- To see worker certifications, access one of these reports:
  - Worker Certifications.
  - Worker Certifications with Specialties.

Setup Considerations: Delegation

Tasks

Steps: Set Up Skills and Experience on page 119

Create or Edit Specialties and Subspecialties

Prerequisites

Enable specialties for certifications on the Maintain Skills and Experience Setup task.

Security:

- *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
- *Set Up: Appointment Specialties* domain in the Academic Faculty functional area.

Context

Use specialties and subspecialties to give context to the certification achievements of workers and academic affiliates. You can:

- Track them on the worker or affiliate profile.
- Include them in job requisitions, position restrictions, and job profiles.

Steps

1. Access 1 of these tasks:
    - Create Specialty.
    - Edit Specialty.
    - Create Subspecialty.
    - Edit Subspecialty.
2. Enter a Name and a Code.

    The combination of name and code must be unique.
3. (Optional) To associate this specialty with only predefined certifications, select Restrict Specialty Usage.

    Use the Create Certification task to create predefined certifications.

Result

- Associate 1 or more specialties to a certification on the Create Certification or Edit Certification task.
- Workers and academic affiliates can select the associated specialties and subspecialties on the Add Certification task when they add a certification achievement to their profile.
- Search for workers with a specific specialty or subspecialty on the Find Workers report.

Next Steps

To see worker certifications with specialties and subspecialties, access the Worker Certifications with Specialties report.

Steps: Set Up Skills and Experience on page 119

Create Qualification Equivalence Rules

Prerequisites

Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.

Context

Create qualification equivalence rules to define complex certification requirements for job profiles that can be satisfied by multiple certifications. These rules help you track worker compliance with the certification requirements on their job profiles.

Steps

1. Access the Create Qualification Equivalence Rule task.

    As you complete this task, consider:

Option	Description
Description	This description will be the name of the rule.
Category	Select a category to make this rule easier to find. You can create *Qualification Equivalence Rule* categories using the Maintain Condition Rule Categories task.

Option	Description
Copy Condition from Rule	Select an existing rule to copy its existing condition.

2. In the Rule Conditions grid, build a qualification rule that identifies equivalent or additional certification requirements.

Example

You want to create a rule for an Imaging Technologist job profile that requires the ODHC - Ohio Department of Health Certification and any 1 of these certifications:

- ARRT(CI) - Cardiac Intervent Radio Certification
- ARRT(CT) - Computed Tomography Certification
- ARRT(MR) - Magnetic Resonance Imagery Certification
- ARRT(N) - Nuclear Medicine Technology Certification

1. In the Description field, enter a name such as *Imaging Technologist Certification Rule*.
2. In the Rule Conditions grid, enter these 2 rows:

And/Or	(	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value	)
And		*Unexpired Certification Achievements*	*exact match with the selection list*	*Value specified in this filter*	*ODHC - Ohio Department of Health Certification*	
And		*Unexpired Certification Achievements*	*any in the selection list*	*Value specified in this filter*	*ARRT(CI) - Cardiac Intervent Radio Certification* *ARRT(CT) - Computed Tomography Certification* *ARRT(MR) - Magnetic Resonance Imagery Certification* *ARRT(N) - Nuclear Medicine Technology Certification*	

Next Steps

- Assign the qualification equivalence rule to an active job profile.

- Access the Maintain Qualification Equivalence Rules task to view or update your qualification equivalence rules.

Assign Qualification Equivalence Rules

Prerequisites

- Create a qualification equivalence rule.
- Security:
    - *Set Up: Job* in the Jobs & Positions functional area.
    - *Set Up: Skills and Experience* in the Worker Profile and Skills functional area.

Context

Assign qualification equivalence rules to job profiles so that HR administrators and managers can easily keep track of worker compliance with certification requirements.

You can assign a rule to multiple job profiles, but job profiles can only have 1 rule at a time.

Steps

Access the Assign Qualification Equivalence Rule task.

As you complete this task, consider:

Option	Description
Qualification Equivalence Rule	Select an active qualification equivalence rule to assign to a job profile.
Already Assigned to:	Workday displays this field if there are any job profiles associated with the rule you select.
Job Profile	Select 1 or more job profiles for the rule. You can't select job profiles with a future effective date.

Result

- Workday assigns the rule to the job profiles in addition to any previous job profiles.
- If a job profile that you select already has a rule, Workday replaces the existing rule with the new one.

Next Steps

- Use the Maintain Qualification Equivalence Rules to manage and view any rule assignments
- Use the Job Profile Qualification Equivalence Rule Compliance report to assess worker compliance with the rule on their job profile.

Job History

Steps: Set Up Job History

Context

Set up the *Manage Job History* business process so that workers, academic affiliates, and students can add their previous or current jobs on their talent profiles. If you want Workday to initiate job history changes during staffing events, you can configure the *Manage Job History (Sub Process)* action step on these staffing business processes:

- *Add Additional Job*
- *Change Job*
- *Hire*
- *Title Change*

Steps

1. Edit Business Process Security Policies.

   Set up security for the *Manage Job History* business process policy.

   (Optional) Assign security groups to the *Manage Job History (Sub Process)* action step.
2. Activate Pending Security Policy Changes.
3. Edit Business Processes.

   Set up the *Manage Job History* business process.

   (Optional) Add the *Manage Job History (Sub Process)* action step after the completion step of any of these business processes:

   - *Add Additional Job*
   - *Change Job*
   - *Hire*
   - *Title Change*
4. Create a library of companies for users to add on their job history.

   See Steps: Set Up Job History Companies on page 137.
5. (Optional) Access the Edit Tenant Setup - HCM task.

   On the Default Job History Company prompt in the Talent section, select a company that Workday populates during the *Manage Job History (Sub Process)* step.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.
6. Configure the Job History report on any of these profile groups:

   - Career for Worker Profile
   - Overview for Academic Affiliate Profile
   - Overview for Worker Profile
   - Performance for Worker Profile
   - Portfolio for Student

   See Steps: Set Up Profiles and Profile Groups.

Result

If you configure *Manage Job History (Sub Process)* as a step of a staffing business process, Workday updates a worker's job history to include the new job. During the subprocess, Workday populates these fields based on a worker's new job details and a default job history company if you selected one:

- Company
- Job Title
- Location
- Start Date

Related Information

Reference

Reference: Edit Tenant Setup - HCM

Steps: Set Up Job History Companies

Prerequisites

Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.

Context

Create a list of companies that workers can select from when they add their job history to their worker profile. You can associate a company with 1 or more industries to track job history industries for workers.

Workers can also add new companies when they add their job history on the worker profile. Workday automatically adds these companies and the companies imported from the Upload My Experience task to this list.

Steps

1. (Optional) Access the Maintain Job History Industries report.

   Create and maintain a list of job industries to associate with job companies.
2. Access the Maintain Job History Companies report.
3. Click Add.

   As you create companies, consider:

Option	Description
Industry	Select 1 or more industries to associate to this company.
Watching	Select to watch this company for recruiting or other purposes. You can then report on watched companies.
Duplicate of	Select to: • Merge company with a duplicate. • Link all usages to the existing company. • Inactivate a company.

Next Steps

To view the list of industries in your tenant, access the View Job History Industries report.

Related Information

Concepts

Concept: Crowdsourced Skills and Experience Management on page 121

Tasks

Steps: Set Up Skills and Experience on page 119

Steps: Set Up Education

Prerequisites

Configure the *Manage Education* business process and security policy in the Worker Profile and Skills functional area.

Context

You can create schools, degrees, and fields of study that workers or academic affiliates can use to complete or modify the education records on their profiles.

Steps

1. Access the Maintain School Types task.

   Define the types of educational institutions to group schools.

   Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
2. Access the Create School task.

   Create recognized schools to add on the Maintain Schools table.

   Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
3. Access the Maintain Degrees task.

   Define the degrees students can earn from educational institutions.

   Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
4. Access the Maintain Fields of Study task.

   You can define the:

   - Classification of Instructional Programs (CIP) code.
   - Terminal degree by country.

   Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
5. Set up security segments for the *Education* document category and assign segment-based security groups to these domains:

   - *Worker Data: Add Worker Documents*
   - *Worker Data: Edit and Delete Worker Documents*

   See Steps: Maintain Access to Documents.
6. Steps: Set Up Profiles and Profile Groups.

   Configure the Education report on any of these profile groups:

   - Academic for Academic Affiliate Profile
   - Career for Worker Profile
   - Overview for Worker Profile
   - Overview for Academic Affiliate Profile
   - Performance for Worker Profile
7. (Optional) Access the Edit Tenant Setup - Global task.

   In the Use Date with Day Precision for Education section, select the countries that track academic attendance by calendar date rather than by year. Workday doesn't convert yearly values to date values. When you select a country with existing worker and academic affiliate records, Workday leaves the date of attendance fields blank.

   Security: *Set Up: Tenant Setup - Global* domain in the System functional area.

Result

A worker or academic affiliate can use the Add Education task to add the schools, degrees, and fields of study you created to their academic record.

Users with security permission on the *Manage Education* business process can view education attachments.

Next Steps

- Access the Find Schools report to merge unrecognized schools with recognized schools.
- Access the Maintain Schools report to:
  - Delete unused schools.
  - View recognized schools.

Steps: Set Up Languages

Prerequisites

Security: *Set Up: Skills and Experience* domain in the Worker Profile Skills functional area.

Context

You can add language abilities to:

- Job profiles.
- Worker profiles.
- Talent Reviews.

To measure the language abilities, create a library of:

- Languages.
- Ability types.
- Proficiency levels.

Steps

1. Access the Maintain Languages task.

   Define languages.
2. Access the Maintain Language Ability Types task.

   Define language ability types.

   If you include languages in talent reviews, select 1 language ability type for the talent review template. Employees specify their proficiency level for the selected ability type.
3. Access the Maintain Language Proficiency Levels task.

   Create language proficiency levels.

Next Steps

- To add language skills for workers:
  - From the worker's related actions menu, select Talent > View Skills and Experience > Languages.
  - From the worker's profile, select Languages in the Overview, Career, or Performance profile group.
  - From the worker's Talent Review, complete the Languages section if it is part of the review template.
- To delete a language, ability type, or proficiency level:
  - Select the Inactive check box. Inactive languages remain valid for employees who selected them.
  - Remove the row from the setup table. You can only delete language options if they aren't in use.

Steps: Set Up Professional Affiliations

Prerequisites

Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.

Context

With professional affiliations, you can track external work experience details, such as board membership, volunteer work, and visiting professorship, for workers, academic affiliates, and external committee members.

To track professional affiliations, create a library of:

- Professional affiliation types.
- Professional affiliation relationship types.
- Professional affiliations.

Steps

1. Access the Maintain Professional Affiliation Types task.
    a) Create a list of professional affiliation types, such as *Foundation* and *Military*.
    b) (Optional) Select the Enable Workday Delivered Professional Affiliation Types (School/ Company) check box to display Workday delivered professional affiliation types in your tenant.
2. Access the Maintain Professional Affiliation Relationship Types task.

    Create a list of professional affiliation relationship types, such as *Board Member* and *Volunteer*.
3. Access the Maintain Professional Affiliations task.

    Create a list of professional affiliations, such as *Salvation Army* and *YMCA*.
4. Configure the Professional Affiliations report on any of these profile groups:

    - Academic for Academic Affiliate Profile
    - Career for Worker Profile
    - Overview for Academic Affiliate Profile
    - Overview for External Committee Member Profile
    - Overview for Worker Profile
    - Performance for Worker Profile

    See Steps: Set Up Profiles and Profile Groups.

Result

You can select from predefined values when you add your professional affiliations on the worker, academic affiliate, or external committee member profile using the Add Professional Affiliation or Edit Professional Affiliation task.

Next Steps

- To view professional affiliation information, access these reports:

    - View Professional Affiliation Types.
    - View Professional Affiliation Relationship Types.
    - View Professional Affiliations.
    - Professional Affiliations for Organizations.
- To inactivate a professional affiliation, affiliation type, or relationship type, select the Inactive check box. The professional affiliation, affiliation type, or relationship type remains active for workers, academic affiliates, or external committee members who have already selected them.

Talent Statements

Steps: Set Up Talent Statements

Prerequisites

- Read Concept: Talent Statements on page 143.
- Security: *Security Configuration* domain in the System functional area.

Context

Set up talent statements so workers and academic affiliates can add personal, research, or talent-specific statements on their Workday profiles.

Steps

1. Edit Domain Security Policies.

   Configure the security policies for these domains:

   - *Person Data: Talent Statements* in the Worker Profile and Skills functional area.
   - *Self-Service: Talent Statements* in the Worker Profile and Skills functional area.
   - (Optional) *Talent Review: Talent Statements* domain in the Talent Pipeline functional area.
2. Access the Maintain Talent Statement Types task.

   - Define talent statement types for your tenant.
   - Select only the types that workers write about themselves to display on the card on the worker profile.

   Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
3. Set Up Segmented Security by Talent Statement Type on page 142.
4. Edit Business Processes.

   Configure the *Manage Talent Statements* business process and security policy in the Worker Profile and Skills functional area.

   If you include an approval step, make sure that the approver has view-only access to the talent statement type on the *Access Talent Statement Type (Segmented)* security domain. Example: a manager or dean.
5. Configure the Talent Statements report on the applicable profile group:

   - Career for Worker Profile
   - Overview for Academic Affiliate Profile

   See Steps: Set Up Profiles and Profile Groups.
6. (Optional) Add the My Team's Talent Statements report to the:

   - Home landing page.
   - My Dashboard dashboard.

   See Steps: Set Up Dashboards and Landing Pages.
7. (Optional) Embed Related Worklets in Business Processes.

   Add the My Team's Talent Statements report as an embedded worklet on the *Assess Potential* business process.

Result

- The Statements card on the worker profile Summary enables workers to add, edit, or remove their personal talent statements.
- The Talent Statements section of the talent review enables workers to add their personal talent statements as part of their talent reviews.
- The Talent Statements report on the worker profile enables you to view talent statements others wrote about you.
- The Talent Statements report on the academic affiliate profile enables you to manage talent statements you write for yourself or view talent statements others wrote about you.
- Managers can use the My Team's Talent Statements report to view talent statements for their direct reports.

Set Up Segmented Security by Talent Statement Type

Prerequisites

- Define talent statement types with the Maintain Talent Statement Types task.
- Security: *Security Configuration* domain in the System functional area.

Context

You can secure potentially sensitive statement content with segmented security. Configure it to restrict access of certain talent statement types to members of designated security groups.

Example: You can configure security so only career coaches can see career coach statement types.

Note: Even if you don't secure talent statements by type, you must create a segment with all statement types.

Steps

1. Create a segment-based security group for a talent statement type.
    a) Access the Create Security Group task.
    b) For Type of Tenanted Security Group, select *Segment-Based Security Group*.
    c) Enter a Name that reflects the statement type you're segmenting.
    d) Select 1 or more groups from the Security Groups prompt.
    These groups will have access to the talent statement types you select in the next step.
    e) Select 1 or more talent statement types from the Access to Segments prompt.
2. Add the segmented security groups to the *Access Talent Statement Type (Segmented)* domain in the Worker Profile and Skills functional area.
    a) Access the *Access Talent Statement Type (Segmented)* domain.
    b) From the related actions menu of the domain, select Domain > View Security Policy.
    c) From the related actions menu, select Domain Security Policy > Enable.
    d) From the related actions menu, select Domain Security Policy > Edit Permissions.
    e) Add the segmented security groups in the Report/Task Permissions section.
    f) Select View or Modify.
3. Access the Activate Pending Security Policy Changes task to confirm changes.

Result
On the Add Talent Statement task, you can only see the talent statement types for which you have Modify permission.

Example

Statement Type	Description	Display on Worker Profile Card	Security Groups for Segment Security	
Personal (Talent Statement for Self)	Workers write statements about their career interests.	Yes	Employee as Self (View and Modify)	All Employees (View Only)
Professional Development (Talent Statement for Others)	Managers write statements for their direct reports about development areas.	No	Manager (View and Modify)	All Managers' Managers (View Only)

Related Information

Tasks

Create Segment-Based Security Groups

Concept: Talent Statements

Talent statements are brief professional descriptions about a person on their Workday profile. You can write talent statements about yourself or others. You can edit or remove the statements you write or statements that users in your security segment write if that is the group secured to the type of talent statement. Example: As an HR partner, you can edit or delete talent statements other HR partners write for any worker that you have security to view.

Workers and academic affiliates can use talent statements. You can use talent statements to support performance reviews, development discussions, and career planning.

Examples:

- Workers and academic affiliates can add statements about their career interests or research interests.
- Managers and deans can add statements about the performance or talent of their workers or affiliates.
- Career coaches can add statements about professional development areas of workers they coach.

Talent Statement Types

You can set up the types of talent statements for your tenant based on your business requirements. Create distinct types for statements about self and those statements written for others.

Examples:

- Personal (Self).
- Research (Self).
- Career Coaching (Others).
- Performance (Others).

Talent Statements for Workers

You can add, edit, and view talent statements written about a worker in the Statements card on the worker profile summary.

You can view talent statements others write about you on the Talent Statements report on the Career profile group of the worker profile.

Talent Statements for Academic Affiliates

You can add, edit, and view talent statements you write about yourself and others on the Talent Statements report on the Overview profile group of the affiliate profile.

Talent Statement Security

In addition to domain security policy, you must set up segmented security by talent statement type to control access to talent statements.

Related Information
Tasks
Set Up Segmented Security by Talent Statement Type on page 142

Country-Specific Information and Reporting

Locally Required Information

Maintain Localization Settings

Prerequisites
Security: *Set Up: Tenant Setup - Global* in the System functional area.

Context

Some types of information are only applicable to certain countries or regions. For other types of information, countries and regions have varying policies on tracking the information. You can enable, hide, or require information with localized fields according to country-specific settings for areas, such as:

- Contact Information
- Personal Information
- Staffing

Steps

1. Access the Maintain Localization Settings task.
2. As you complete the task, consider:

Option	Description
Applies to Person Type	Filter by person type to view applicable localized fields.
Allow for Countries or Regions	Select the countries or regions in which you want to enable the relevant localized field. If a country displays in the field, only workers in that country have the option to enter the localized field on the Edit Personal Information task. To hide the localized field, clear a country or region from this field. Workday hides this column if there are no countries or regions listed.

Option	Description
Require for Countries	This column only displays in areas that have localized fields you can require for specific countries. If the field is blank, all workers have the option to leave the localized field blank on the Edit Personal Information task. If a country displays in the field, only workers in that country are required to enter the localized field on the Edit Personal Information task.
Enforce Required in Web Services	If you required a localized field, you can select this check box to require the localized field in the relevant web services.
Active	To activate your settings, select the check box.

Note: The localized fields you hide or require in the Maintain Localization Settings task override any settings for the related optional fields in the Configure Optional Fields task. Example: If you hide the Reason optional field on the *Manage Probation Periods* business process, but you require the Probation Period: Reason localized field in the Maintain Localization Settings task for France, the field will be required for users managing probation periods in France.

3. Select the Active check box to activate the localized field settings.

Workday 32 What's New Post: Recruiting National and Goverment IDs

Maintain Name Components by Country

Prerequisites

Security: *Set Up: Contact Info, IDs, and Personal Data* in the Contact Information functional area.

Context

You can enable, hide, or require name components by country on the Maintain Name Components by Country task for:

- Your tenant-wide settings.
- Workday Recruiting.
- All other functional areas in Workday.

Note: Workday uses the General Name Display Type field in the Name & Address Display section on the Edit Tenant Setup – System task for candidates and prospects.

Steps

1. Access the Maintain Name Components by Country task.
2. Click either the Name Components tab or the Recruiting Name Components tab.
3. As you complete the task, consider:

Option	Description
Allowed	Select the check box if you want to enable the relevant name component.
Required	Select the check box if you want the relevant name as a required component.

Option	Description
Enforce Required in Web Services	If you require a name component, you can select this check box to include this component as the relevant web services.
Label Override	If you provide a label override, Workday uses the label override as the description label instead.

Result

You configured name components for Workday Recruiting or other functional areas in Workday or both.

Next Steps

You can use the View Name Components by Country report to view your name component configurations.

Related Information

Tasks

Set Up Name Components on page 65

Reference

Workday 32 What's New Post: Recruiting Legal and Preferred Names

Workday 33 What's New Post: Configurable Name Components by Country

Concept: Custom Label for Country

If you want to use a different term for country throughout Workday, access the Maintain Custom Labels task to override this term. Workday displays the custom label instead of the default label in:

- Field labels.
- Help text.
- Prompts.
- Task names.
- Validations.
- Workday-delivered report fields and report names.

Custom labels don't replace country in these terms:

- Country ISO code.
- Country region.
- Country subregion.

Custom labels are available for all Workday supported languages.

Related Information

Tasks

Create Custom Labels

Reference

Workday 33 What's New Post: Custom Labels for Country

Concept: Locally Required Reporting

Workday helps you meet local reporting requirements by enabling you to track and report on job and worker information. You can also define the values of fields for jobs and employees for a country or country region, enabling you to comply with local requirements.

Example: If your enterprise operates within a single country or country region, you can define values that are specific to that location for fields such as:

- Citizenship statuses.
- Disabilities.
- Ethnicities.
- Job classifications.

If you operate in multiple locations and track different worker and job information, you can define values that are specific to each country or country region. The worker's primary business site location determines which country or country region data fields track personal information.

This level of flexibility is useful for countries that track or report data at the state or provincial level instead of, or in addition to, the country level.

Delivered Reports

Workday provides reports that enable you to view staffing information, headcount information, and worker details by organization.

Note: These reports only enable you to track or extract data. They don't output the data in a final, deliverable format. Workday doesn't assume responsibility for your compliance with regulatory reporting requirements.

You can use these reports for turnover analysis and measuring the effectiveness of staffing plans. They also assist you in meeting local reporting requirements, such as:

- Determining adverse impact to protected groups and minorities.
- Providing workers with personal details that your organization stores.

Key reports include:

- Employment Equity Report
- Gender Equality Report
- Headcount Report
- Labor Movement Report
- Retrenchment Report - Search
- Retrenchment Report with Known Termination Date
- Staffing Activity
- Staffing Activity Summary
- Termination Details
- Terminations
- Turnover Summary
- Worker Details

Workday also delivers country-specific reports to assist you in meeting local reporting requirements in France and the United States.

Workday recommends that you copy and customize these reports according to your organizational and local regulatory requirements.

Custom Reports

Using the Workday Report Writer, you can:

- Extract information from various data fields into custom reports.
- Export data into spreadsheets or web services.

As a best practice, verify that these reports conform to the reporting requirements in the given country or country region.

Workday Community: Contributed Solutions

Reference: Locally Required Personal Information

You can create custom reports for locally required reports with these worker and job data fields. Workday doesn't make specific recommendations in this area because your requirements for tracking personal data depend on your organization's legal and local regulatory requirements.

Name and Address

Field	Report Category	Notes
Legal Name	Name	Includes all components of a worker's legal name. In Workday, name components are country-specific.
Addresses	Address & Phone	Returns all addresses that a worker has entered. If the work address doesn’t exist, returns the default location address.

Basic Bio and IDs

Field	Report Category	Notes
Age	Basic Bio	Useful for protected group and diversity reporting.
Citizenship Status	Basic Bio	Tracks a worker's citizenship in countries where the worker is employed or has citizenship. Use the Edit Tenant Setup - Global task to specify which countries track citizenship.
City of Birth	Basic Bio	Useful in countries where tracking city of birth is required for local reports.
Country of Birth	Basic Bio	Useful in countries where tracking country of birth is required for local reports.
Date of Birth	Basic Bio	Useful for protected group and diversity reporting.
Disability	Basic Bio	Useful for protected group and locally required reporting.
Ethnicity	Basic Bio	Useful for census, protected group, and diversity reporting. Values vary according to specific country requirements. If

Field	Report Category	Notes
		you’re required to track multiple ethnicity values for a given worker, access the Edit Tenant Setup - Global task.
Gender	Basic Bio	Useful for census, protected group, and diversity reporting.
Marital Status	Basic Bio	Useful for census reporting and other locally required reporting. Values vary by country, such as capturing *De Facto* in Australia and not capturing *Widowed* or *Divorced* in certain Asian countries.
Primary Nationality	Basic Bio	Tracks a worker's primary nationality if required in the worker's country of work. Use the Maintain Localization Settings task to specify which countries track primary nationality. Use the Maintain Non-Country Nationalities task to configure and edit non-country nationalities, as well as specify which countries track non-country nationalities.
Additional Nationalities	Basic Bio	Tracks a worker's additional nationalities if required in the worker's country of work. Use the Maintain Localization Settings task to specify which countries track additional nationalities. Use the Maintain Non-Country Nationalities task to configure and edit non-country nationalities, as well as specify which countries track non-country nationalities.
Religion	Basic Bio	Useful in countries where tracking religion is needed for locally required reporting or other purposes.
Employee ID	IDs	Returns the employee identification used at your enterprise.
Government Identifiers	IDs	Returns the government ID name and number. Government

Field	Report Category	Notes
		IDs include national IDs such as: • Social Security Number in the United States • Citizen ID Number in China Also includes any additional government IDs that you define, such as work permits or residence permits.
Licenses	IDs	Returns all licenses, including driver's license. You can use licenses to track qualification for a given position where such a license is required.
Passports	IDs	Returns passport information that you can use for identification and employment eligibility.
Visas	IDs	Returns visa information that you can use to verify ongoing employment eligibility.

Staffing

Field	Report Category	Notes
Employee Type	Employment	Indicates whether a person is an employee or contingent worker.
Hire Date	Employment	Use to track worker job changes for locally required reporting (such as adverse impact) and turnover analysis.
Termination Date	Employment	Useful to track worker job changes for locally required reporting (such as adverse impact) and turnover analysis.
Time Type	Employment	Indicates whether a worker is full-time or part time.
Company Insider Type	Job & Position	Use to track employees who are considered company insiders for reasons of stock purchasing.
Job Classification Groups	Job & Position	Returns categories typically established for compliance, such as EEO-1 in the United States; workers' compensation, or census reporting, such as

Field	Report Category	Notes
		Australian Classification of Occupations (ASCO).
Job Code	Job & Position	Returns new and old job codes based on the effective dates of the codes.
Job Title	Job & Position	Returns new and old job titles based on the effective dates of the titles.
Location	Organization	Use to determine the new and old locations for a worker after a reorganization with the effective dates of the organization changes or job transfers.
Supervisory Organization	Organization	Use to determine the new and old organizations for a worker after a reorganization with the effective dates of the organization changes or job transfers.
Termination Reason - Local	Staffing History	Use for locally required reporting (such as adverse impact) and turnover analysis.
Time of Hire	Staffing History	Use for countries where tracking time of hire for employees is required for local reports.

Talent

Field	Report Category	Notes
Education	Skills and Experience	Returns the names of the educational institutions that a worker attended.
Highest Degree	Skills and Experience	Returns the highest degree earned by a worker.
Military Statuses	Skills and Experience	Returns military status, such as whether an individual served in the military or has been waived from service. Also useful for assessing the impact of employment status if a worker is likely to be called to active military service due to active military or reserve status. This type of tracking is available for any country that requires you to track military status for these purposes.

Field	Report Category	Notes
Training	Skills and Experience	Returns training classes that a worker has completed.

China Employment Requirements

Maintain China Subregions

Prerequisites

Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

Context

Set up and maintain subregions in China. Once you define China subregions, you can associate them with your office locations in order to provide different benefits or allowances to employees based on their hukou residence. When a subregion is no longer valid, you can inactivate it.

Steps

1. Access the Maintain China Subregions task.
2. Select the China Region for which you want to add subregions.
3. Add a row to the table.
4. Enter the Subregion Name and any other useful identifying text. You can't reuse a subregion name within the same region.

Result

For workers in China, Workday automatically determines whether a worker's hukou is local for social insurance purposes. A complete list of provinces and autonomous regions is available in Workday.

Example

Your location site is in Fuzhou in Fujian province and local authorities consider that a hukou issued outside the city of Fuzhou is nonlocal. In this case, you only need to define 2 subregions for Fujian province: Fuzhou City and Other Fujian.

Next Steps

- Access the Maintain Location Subregions task to link the China subregions with your location sites.
- Access the China Subregions report to view the subregions setup for particular regions in China.

Maintain Location Subregions

Prerequisites

- Define subregions for any region of China you need to differentiate. You might need to differentiate regions to offer different benefits or allowances, or to specify the portion of a region that's considered local to the worksite from the standpoint of statutory social benefits.
- Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

Context

Once you have defined subregions, link them to a business location in order to assign them to workers in that location. HR Partners can then use the hukou fields to update personal information for workers located in China who are Chinese citizens (as defined in the citizenship classifications). Only companies with locations in China currently use location subregions (also called hukou subregions).

Steps

1. Access the Maintain Location Subregions task.
2. Select the Location.
3. Add a row to the table.
4. Enter the Subregion name.

   You can set multiple subregions for a location.
5. If the subregion is considered local to the location (for social insurance), select the Local Hukou check box.

   When a subregion is no longer valid, you can inactivate it.

Example

Your company has 2 locations, Nanjing and Beijing. Employees in Nanjing receive special benefits if their hukou is for the city of Nanjing, but not if their hukou is for another place in Jiangsu Province.

To accommodate this situation, you must:

1. Define 2 subregions for Jiangsu: *Nanjing* and *Other Jiangsu*.
   a. Access the Maintain China Subregions task.
2. Associate both subregions with your Nanjing business location.
   a. Access the Maintain Location Subregions task.
   b. Select *Nanjing* as your Location.
   c. Add *Nanjing* and *Other Jiangsu* as subregions.
   d. Select the Local Hukou check box for *Nanjing*, if applicable.

Next Steps

Access the Location Subregions report to view the subregions defined for a specific location.

Concept: China Employment Requirements

Workday supports worker regulation in China.

Hukou Data - China

Workers in China are required to have an identifying document called a *hukou*. This document is a type of household registration that employers use to determine a worker's classification for social insurance rates in payroll. Example: A worker whose hukou was issued in Sichuan province might be taxed at a different rate when working in Guangzhou, compared to another worker whose hukou was issued in Guangzhou. In some cases, hukou classifications can also impact a worker's eligibility for leave, benefits, or compensation.

You can only collect hukou data for a worker who is both a Chinese citizen (as defined in the citizenship classifications) and located in China. Hong Kong and Macau don't use the hukou, though identification cards are mandatory for residents there.

The hukou enables an employer to know whether the worker:

- Is considered local to the work site.
- Belongs to an urban or rural locality.

When you enter hukou information for a worker, you can define places as local based on your work sites in China, by specifying the region and subregion where the hukou was issued. Workday then determines whether or not the hukou is local. This process is automatic whenever a worker transfers.

To determine which locations are local, you must define at least 1 subregion in the province or municipality where your work site is located. Use the Maintain China Subregions and Maintain Location Subregions tasks. You only need to set up subregions in provinces where you have locations.

Workday enables you to:

- Specify the subregions of China where you have operations.
- Enter, view, and update a worker’s hukou region, subregion, locality, type, and native region.
- See whether a worker’s hukou is local, based on the worker's location and the hukou subregion.
- Create reports containing China-specific data elements.
- Perform mass entries for new hires using one or more spreadsheets.

Personnel File - China

Workers in China have a Personnel File (人事档案), maintained by an authorized third party or a government agency. This file records their academic and employment history.

You can track the name and address of the agency that holds the worker's Personnel File in the Personnel File Agency field on these tasks:

- Edit Personal Information.
- Edit My Personal Information .

This field displays only when all of these requirements are true:

- The worker is an employee.
- The worker is a citizen of China, as defined in the citizenship classifications for China.
- The worker's location is in China.

Prior Work Experience - China

Chinese regulations require employers to grant employees a minimum amount of annual paid time off based on their total experience in the workforce, including experience with other employers. Use the Edit Service Dates task to enter the date when the worker first entered the workforce and the number of unemployed days since then. Workday then calculates the total work experience in months and displays it with the other service dates. You can also meet requirements for annual leave entitlement by specifying the number of continuous months of employment in the employee's most recent prior job.

France Reporting Requirements

Steps: Set Up for MMO Preparation (France)

Prerequisites
Create the PCS-ESE classifications using the Edit Job Classification Group task.

Context
You can configure Workday to run the MMO Preparation (France) report, enabling you to track all employee movements for a given month and help satisfy the data requirements for the *Déclaration mensuelle obligatoire des mouvements de main-d'œuvre* (DMMO) pertaining to employers operating in France. An employee movement can be a hire, termination, or transfer event.

Note: This report enables you to only extract data but not output the data in a final, deliverable format. You must transform the data to an appropriate form for submission and ensure that your reporting complies with application regulations. Workday enables you to track data for this report, but doesn't assume responsibility for your compliance with regulatory reporting requirements.

Steps

1. Access the Edit Company Tax Details task.

   Identify your company as a French establishment.

   Security:

   - *Set Up: Company General* domain in the Common Financial Management functional area.
   - *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

   On the Tax IDs tab, add a row with these values:

Option	Description
Country for Tax ID Type	*France*
Tax ID Type	*SIRET*
Identification #	Enter the SIRET number.

   We recommend that you use the RUP for Workers (France) and RUP for Trainees (France) reports instead of RUP (France) (Do Not Use). You don't have to identify companies as French establishments when you use these reports.
2. Access 1 of these tasks:

   - Create Job Profile
   - Edit Job Profile

   Security: *Set Up: Job* domain in the Jobs & Positions functional area.

   Add *Professions et Catégories Socioprofessionnelles* (PCS-ESE) job classifications to all job profiles that contain a reportable employee.
3. Access the Maintain Employee Types task.

   Security: *Set Up: Position* domain in the Jobs & Positions functional area.

   Identify trainee and fixed-term employee types by selecting the Fixed Term Employee and Trainee check boxes.

   Note: To ensure proper accounting on the MMO Preparation (France) report for trainees converted to CDI or CDD, terminate the trainee and rehire as an employee rather than changing the employee type. report, terminate the trainee and rehire as an employee rather than changing the employee type.

4. Access the Maintain Local Termination Reasons task.

   Security: *Set Up: Staffing* domain in the Staffing functional area.

   Add codes to the local termination reasons.

   You can use the same code for multiple reasons.
5. (Optional) Access the Maintain Employee Contract Types task.

   Security: *Set Up: Employee Contracts* domain in the Staffing functional area.

   On the Code column, enter *OR* for the contract type you want to identify.

Related Information

Tasks

Create Job Profiles on page 573

Set Up Employee Types on page 530

Steps: Set Up for RUP Reporting

Prerequisites

Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

Context

You can configure Workday to help prepare your Registre Unique du Personnel (RUP) reporting obligations for employers operating in France.

You can use the RUP for Workers (France) report to view:

- Active workers.
- Information from staffing, person, and contract events.
- Terminated workers, or those who changed establishments, in the 5 years before the report run date.

The RUP for Workers (France) report doesn't contain information on workers for whom you require hiring or dismissal authorization.

You can use the RUP for Trainees (France) report to view:

- - All trainees in selected establishment(s), including terminated trainees or those who changed establishments in the 5 years before the report run date.
  - Entry and exit dates for trainees assigned to the selected establishment.

The RUP for Trainees (France) report doesn't contain information on:

- Multiple successive internships in the same establishment.
- Trainees with an international assignment or an additional job

Note: Workday enables you to track data for the Registre Unique du Personnel report, but doesn't assume responsibility for your compliance to regulatory reporting requirements.

Steps

1. Configure French establishments for your organization.

   See Steps: Set Up Establishments on page 172.
2. Access the Maintain Additional Government ID Types task.

   As you complete the Maps To column, consider:

Option	Description
Work Permit Type	Displays as work permits on RUP reports.
Authorization Type	Displays as authorizations on RUP reports.

Steps: Set Up for DPAE Preparation (France)

Context

Workday provides you with these reports to help you gather the data requirements for the Déclaration préalable à l'embauche (DPAE) reporting obligations:

- DPAE Preparation (France) identifies French establishments as companies with a SIRET tax ID. This report displays information regarding information from the Company organization structure in Workday, regardless of whether the worker is attached to an establishment.
- DPAE Preparation by Establishment identifies establishments based on entities configured in the Maintain Establishment task.

Both reports track all hires within a date range for a French establishment.

Note: These reports only extract data and don't output the data in a final, deliverable format. You can use the data as a support for creating the submission. You must ensure that your reporting complies with applicable regulations. Workday enables you to track data for these reports, but doesn't assume responsibility for your compliance to regulatory reporting requirements.

Steps

1. Configure your French organizations for DPAE reporting.

   See:

   - Steps: Set Up Companies for DPAE Reporting (France) on page 159.
   - Steps: Set Up Establishments for DPAE Reporting (France) on page 157.
2. Access the Maintain Localization Settings task.

   From the Area prompt, select the *Staffing* option.

   On the Time of Hire row, select *France* from the Allow for Countries or Regions prompt.

   Security: *Set Up: Tenant Setup - Global* domain in the System functional area.
3. Access the Maintain Employee Types task.

   For employee types you want to report as a fixed-term contract, select Fixed Term Employee.

   Security: *Set Up: Position* domain in the Jobs & Positions functional area.
4. Verify personal and staffing information in Workday for French employees.

   See Reference: Worker Data Requirements for DPAE Preparation (France) on page 159.

Related Information
Tasks
Set Up Employee Types on page 530

Reference: Edit Tenant Setup - Global

Steps: Set Up Establishments for DPAE Reporting (France)

Prerequisites

- Set up establishments for French business sites.
- Define a primary business address for the location of your establishment.

Context

You can configure your establishments with the information required for Déclaration Préalable A l'Embauche (DPAE) reporting.

Note: When preparing a DPAE report based on establishments, use the DPAE Preparation by Establishment (France) report. The DPAE Preparation (France) report doesn't support establishments configured in Workday.

Steps

1. Access the Maintain Establishment task.

   Enter these establishment details:

   - Establishment Name
   - Industry Code
   - NIC
   - URSSAF Code

   Security: *Set Up: Establishment* domain in the Regulatory Reporting (HCM) functional area.
2. Access the Edit Establishment FRA Reporting task.

   On the DSN Header tab, add a row to the Declaration Contracts grid with these values:

Option	Description
Worker	Select a worker with a defined work phone number.
Type	*06 - Contact sur l'identification des salaries (NIR)*

   Security: *Set Up: Payroll (DSN) - FRA* domain in the FRA Payroll functional area.
3. Access the Edit Establishment FRA Tax Configuration task.

   On the URSSAF tab, add a row to the URSSAF grid with a start date and a deduction recipient.

   Security: *Set Up: Payroll - Company Specific (Taxes) - FRA* domain in the FRA Payroll functional area.
4. Access the Maintain Health Treatment Types report.

   Add a row with these values:

Option	Description
Treatment Type Name	Occupational health services
Code	CMT

   Security: *Set Up: Safety Incident Tracking* domain in the Safety Incident Tracking functional area.
5. Access the Maintain Health Facilities task.

   Add a row with these values:

Option	Description
Health Facility Name	Name of the health facility.
Health Facility Code	CMT
Health Treatment Type	Occupational health services

   Security: *Set Up: Safety Incident Tracking* domain in the Safety Incident Tracking functional area.

Related Information

Tasks

Steps: Set Up Establishments on page 172

Steps: Set Up Companies for DPAE Reporting (France)

Prerequisites

Set up companies.

Context

You can prepare data for a Déclaration préalable à l'embauche (DPAE) based on companies in Workday.

Note: When preparing a DPAE report based on establishments, use the DPAE Preparation by Establishment (France) report. The DPAE Preparation (France) report only reports information based on companies.

For regulatory reporting requirements, you can identify a company in Workday as a French establishment, as opposed to configuring establishments in Workday. When you configure a company as a French establishment, you can report on them in these reports:

- DPAE Preparation (France)
- MMO Preparation (France)
- RUP (France) (Do Not Use).

We recommend that you use the RUP for Workers (France) and RUP for Trainees (France) reports instead of RUP (France) (Do Not Use). You don't have to identify companies as French establishments when you use these reports.

Steps

1. Access the Edit Company Tax Details task.

   Identify your company as a French establishment.

   On the Tax IDs tab, add a row with these values:

Option	Description
Country for Tax ID Type	*France*
Tax ID Type	*SIRET*
Identification #	Enter the SIRET number.

   Security:

   - *Set Up: Company General* domain in the Common Financial Management functional area.
   - *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.
2. (Optional) Access the Edit Company Industry Codes task.

   Define the NAF/APE industry codes that apply to the establishment.

   Security: *Set Up: Company General* domain in the Common Financial Management functional area.

Reference: Worker Data Requirements for DPAE Preparation (France)

To ensure that you retrieve accurate data, Workday recommends that you verify worker staffing and personal data before running a DPAE preparation report.

Data	Options	Where to View It	How to Correct It
Hire Date	Hire Date. Workday doesn't report a worker when they change companies.	On the worker profile, access the Job Details report on the Job profile group.	Correct Staffing Events on page 939

Data	Options	Where to View It	How to Correct It
Job details	Employee Type. Workday reports employees with an employee type defined as a Fixed Term Employee on the Maintain Employee Types task as a fixed term contract. Workday reports other contracts as unlimited contracts.	On the worker profile, access the Job Details report on the Job profile group.	Correct Staffing Events on page 939 Set Up Employee Types on page 530
Personal Data	• Gender. • Date of Birth. • Country of Birth. • Region of Birth. • City of Birth.	On the worker profile, access the Personal Information report of the Personal group.	Steps: Set Up Personal Information Fields on page 36
Position	• End Employment Date. For fixed-term contracts only. • Time of Hire. For the DPAE Preparation by Establishment (France) report, Workday reports 9 am by default.	On the worker profile, access the Job Details report on the Job profile group. Click the Position.	Correct Staffing Events on page 939

United States Reporting Requirements

Concept: United States Regulatory Reporting

Workday enables you to track data for United States reporting obligations.

Note: These reports only enable you to track or extract data. They don't output the data in a final, deliverable format. Workday doesn’t assume responsibility for your compliance with regulatory reporting requirements.

Benchmark Reporting

In accordance with the Office of Federal Contract Compliance Programs (OFCCP) regulation updates on August 27, 2013, Workday provides 2 benchmark reports you can use to track hiring goals for veterans and individuals with disabilities:

- Veteran Hire Benchmark
- Disability Placement Benchmark

You can use these reports to review your performance against the OFCCP benchmarks. The benchmark reports track data for the current calendar year as well as the 3 previous calendar years. The Veteran Hire Benchmark report measures your data against a benchmark of 8%. The Disability Placement Benchmark report uses 7%. To use a different benchmark percentage for either report, copy the report and change the percentage.

VETS-4212 Reporting

Workday provides 2 reports to help you meet your VETS-4212 reporting obligations:

- VETS-4212
- VETS-4212 Monthly Headcount for Minimum and Maximum

The VETS-4212 report displays the total number of employees in your organization as of the selected effective date and the number of employees who identify as protected veterans. The report doesn’t include terminated employees in these counts, but does include rehires.

It also displays the total number of newly hired employees in your organization as of an effective date, including employees who identify as protected veterans. The report includes terminated employees in these counts and possibly rehires, depending on their initial hire date. The VETS-4212 report defines new hires as employees initially hired in the 12-month period before the effective date you select.

If the effective date of the report is within 3 years of the discharge date of a recently separated, protected veteran, the report includes that veteran in the count.

On the VETS-4212 Monthly Headcount for Minimum and Maximum report, you can specify a reporting period.

Contingent workers aren't included in any of the counts on the VETS-4212 or VETS-4212 Monthly Headcount for Minimum and Maximum reports.

Diversity Data for U.S. Higher Education

For organizations in the U.S. higher education sector, Workday provides 4 reports to help satisfy requirements for the Integrated Postsecondary Education Data System (IPEDS) reporting requirements:

- Number of Non-Instructional Staff by Occupational Category

- Number of Instructional Staff With Faculty Status On Tenure Track
- Number of Instructional Staff With Faculty Status Not on Tenure Track
- Number of Instructional Staff With Faculty Status Tenured

Workday also provides a methodology and reporting tools to gather additional diversity data for compliance with IPEDS reporting requirements. You can search for IPEDS on Workday Community for step-by-step instructions. Organizations in other sectors can adapt this methodology to satisfy similar diversity reporting requirements.

Reporting for Affirmative Action Analysis

Workday provides 4 reports to help give you insight into the diversity and demographics of your workforce. These reports help you gather employment activity data that you can use to analyze Affirmative Action Programs in your organization:

- Hires by Race and Gender
- Promotions by Race and Gender
- Terminations by Race and Gender
- Transfers by Race and Gender

Related Information
Tasks
Steps: Set Up Reporting for IPEDS
Steps: Set Up Veteran Status Identification and Reporting on page 162

Veteran Status

Steps: Set Up Veteran Status Identification and Reporting

Context

Configure Workday to track veteran statuses for employees and extract data for compliance reports using the:

- *Veteran Status Identification* business process.
- VETS-4212 report.

Note: The VETS-4212 report in Workday helps you extract data you can use for VETS-4212 reporting for the U.S. Department of Labor. Workday doesn't assume responsibility for your compliance with regulatory reporting requirements.

Steps

1. Edit Business Process Security Policies.

   Configure the *Veteran Status Identification* business process security policy in the Personal Data functional area.
2. Edit Business Processes.

   Configure the *Veteran Status Identification* business process in the Personal Data functional area. You can configure the business process as a stand-alone business process or as a subprocess of the *Onboarding* business process.
3. Edit Domain Security Policies.

Report	Domain
VETS-4212	*Regulatory Reporting - USA* domain in the Regulatory Reporting (HCM) functional area.

Report	Domain
VETS-4212 Monthly Headcount for Minimum and Maximum	*Trended Worker Data* domain in the Staffing functional area.
View My Veteran Status Identification	*Self-Service: Veteran Status Identification* domain in the Personal Data functional area.
View Veteran Status Identification for Worker	*Worker Data: Veteran Status Identification* domain in the Personal Data functional area.

4. (Optional) If you want to report on veteran data for terminated workers, configure access to these domains and business process security policy in the Staffing functional area:
    - *Worker Data: Active and Terminated Workers* domain.
    - *Worker Data: Current Staffing Information* domain.
    - *Worker Data: Historical Staffing Information* domain.
    - *Termination* business process security policy.
5. Create Job Classification Groups on page 529.

    Create job categories matching the categories listed on the VETS-4212 form.
6. (Optional) Access the Maintain Veteran Status Identification Form task.
    a) Set the default description that displays for employees when they identify their veteran status. You can also configure your own descriptions for veteran status identification.

    Note: All configured responses that identify a protected veteran must map to the Workday delivered value *IDENTIFY AS ONE OR MORE OF THE CLASSIFICATIONS OF PROTECTED VETERANS*. The mapping ensures that the VETS-4212 report includes those responses as protected veterans.

    b) If you want employees to specify the type of protected veteran, select the Display Type of Protected Veteran Options check box.

    Security: *Set Up: Veteran Status Identification - USA* domain in the Regulatory Reporting (HCM) functional area.
7. Configure your tenant to use trended data that's required to run the VETS-4212 Monthly Headcount for Minimum and Maximum report.

    See Steps: Set Up Tenants for Trended Worker Reporting.

Result

You can extract data from the VETS-4212 report for compliance reporting.

Next Steps

You can use the View Veteran Status Identification for Worker report to view completed veteran status identification forms.

You can access the Change Veteran Status Identification for Worker task to change veteran status identification for employees.

Employees can access the Change My Veteran Status Identification task or the View My Veteran Status Identification report.

Steps: Set Up Personal Information Fields on page 36

EEO

Steps: Set Up EEO Reporting

Context

You can configure Workday so that these reports extract the data necessary for EEO reporting required by the Equal Employment Opportunity Commission (EEOC):

- EEO-1 Employment Data
- EEO-1 Employment Data – Performance Enhanced
- EEO-1 Employment Data by Establishment or Location
- EEO-1 Component 2 Employee Data
- EEO-1 Component 2 Employee Data by Establishment or Location
- EEO-3 Members
- EEO-4 Full-Time Employees
- EEO-4 Other Than Full-Time Employees
- EEO-4 New Hires
- EEO-5 Staff by Employee and Time Type
- EEO-5 New Hires Full-Time

Note: These reports only extract data. Output the data to an appropriate form for submission and ensure that your reporting complies with application regulations. Workday enables you to track data for these reports, but doesn't assume responsibility for your compliance.

Steps

1. Edit Domain Security Policies.

   Security:

   - *Person Data: Ethnicity Visual Survey* in the Personal Data functional area.
   - *Regulatory Reporting - USA* and *Reports: EEO Compliance* in the Regulatory Reporting (HCM) functional area.
2. Access the Edit Tenant Setup - Global task.

   Determine if you want to enable multiple races for the United States of America by selecting *United States of America* on the Allow in these Countries prompt in the Allow Multiple Ethnicities section.

   Security: *Set Up: Tenant Setup - Global* domain in the System functional area.
3. Maintain Localization Settings on page 144.

   In the Area prompt, select *Personal Information*.

   Select *United States of America* for the Allow for Countries or Regions column, and select the Active check box for these localized fields:

   - Hispanic/Latino (Worker)
   - Race/Ethnicity (Worker)
4. Access the Maintain Ethnicities task.

   Select *United States of America* from the Country / Country Region prompt.

   Use the Maps to field to map your races to the Workday-delivered EEOC races required to run the reports. For visual survey, select the *Declined to Answer* option.

   Note: For EEO-1 purposes, don't create a *Hispanic or Latino* Race/Ethnicity on this task.

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

5. Access the Maintain Genders task.

   Ensure your gender codes map to the Is Male or Is Female check boxes.

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
6. Create Job Classification Groups on page 529.
   a) Select *United States of America* as the Country/Country Region.
   b) In the Maps to field, map your job classifications to the *United States of America - EEO* job classifications.

Result

When you enable multiple race values and run EEO reports, the values map to the appropriate EEO categories.

Set Up EEO-1 Component 2 Employee Data Reports

Prerequisites

- Configure EEO reporting.
- Upload Hours Worked data through the *Put EEO Data Record* web service.
- If you subscribe to Workday Payroll, complete the Create W-2 Data task.
- If you don't subscribe to Workday Payroll, use the *Put EEO Data Record* web service to upload both Hours Worked and W-2 Box 1 data.

Security: *Reports: EEO Compliance* in the Regulatory Reporting (HCM) functional area.

Context

The EEO-1 Component 2 Employee Data and EEO-1 Component 2 Employee Data by Establishment or Location reports require employers to report wage information from W-2 Box 1 and total hours worked.

Steps

1. Access the EEO-1 Component 2 Employee Data report.

   Leave the EEO-1 Show Hours Worked check box clear to display the number of workers in the cells. Select the check box to replace these values with the hours worked for these workers. You can't display both views simultaneously.
2. (Optional) Access the EEO-1 Component 2 Employee Data by Establishment or Location report.
   a) From the Establishment or Location prompts, select the establishments or locations you want to aggregate results by.
   b) In the Report By section, you can select *Location* or *Establishment* to group results by establishment or location.

Related Information
Tasks
Steps: Set Up, Audit, and Print Year-End Tax Forms (USA)

Concept: Visual Survey for EEO Reporting

You can configure the visual survey functionality in your Workday tenant to record and report on the race and ethnicity of employees who don't self-identify. Workday secures visual survey race and ethnicity values separately from employee-entered race and ethnicity values. The Race/Ethnicity - Visual Survey section on the Edit Personal Information task and View Personal Information Details report is only visible when you're secured to the *Person Data: Ethnicity Visual Survey* domain in the Personal Data functional area.

Workday displays self-identified or visual survey race and ethnicity values on these reports:

- EEO-1 Component 2 Employee Data
- EEO-1 Component 2 Employee Data by Establishment or Location
- EEO-1 Employment Data
- EEO-1 Employment Data – Performance Enhanced
- EEO-1 Employment Data Audit
- EEO-1 Employment Data by Establishment or Location
- EEO-3 Members
- EEO-4 Full-Time Employees
- EEO-4 New Hires
- EEO-4 Other Than Full-Time Employees
- EEO-5 New Hires Full-Time
- EEO-5 Staff by Employee and Time Type

When you configure the Maintain Ethnicities task for *United States of America*, you can select the *Declined to Answer* option under the Maps to column. If available, Workday populates EEO reports with visual survey values when an employee doesn't self-identify their race or ethnicity.

Reference: EEO Reports

Workday provides 11 preparatory reports that you can use to help reach your Equal Employment Opportunity Commission (EEOC) goals. You only need to run the Workday reports that are specific to the reports you use. To collect all of the data you need for an EEO report, run the corresponding Workday reports.

Note: These reports only extract data. Output the data to an appropriate form for submission and ensure that your reporting complies with application regulations. Workday enables you to track data for these reports, but doesn't assume responsibility for your compliance.

EEO Report	Corresponding Workday Reports	Description of Workday Report	Security
EEO-1 Report Also known as the Employer Information Report.	EEO-1 Employment Data	Displays U.S. employees by job classification, race, ethnicity, and gender. The report uses the employee's primary job classification when an employee has additional jobs. Employees without EEO-1 job classifications display on the (Blank) row of the report.	*Regulatory Reporting - USA* in the Regulatory Reporting (HCM) functional area.

EEO Report	Corresponding Workday Reports	Description of Workday Report	Security
	EEO-1 Employment Data – Performance Enhanced	Generates EEO-1 data faster than the EEO-1 Employment Data report.	*Regulatory Reporting - USA* in the Regulatory Reporting (HCM) functional area.
	EEO-1 Employment Data by Establishment or Location	Displays U.S. employees of an organization by establishment or location in individual reports for each establishment or location.	*Regulatory Reporting - USA* in the Regulatory Reporting (HCM) functional area.
	EEO-1 Component 2 Employee Data	Displays employees by: • Job classification • Race or ethnicity • Gender • Pay band The report uses the employee's primary job classification when an employee has additional jobs. Displays U.S. employees by job category, hours worked, and pay band based on W-2 payroll data.	*Reports: EEO Compliance* in the Regulatory Reporting (HCM) functional area.
	EEO-1 Component 2 Employee Data by Establishment or Location	Displays wage information from W-2 Box 1 and total hours worked for all U.S. employees by: • Job classification • Race or ethnicity • Gender • Pay band The report uses the employee's primary job classification when an employee has additional jobs. You can filter the report by establishment or location.	*Reports: EEO Compliance* in the Regulatory Reporting (HCM) functional area.

EEO Report	Corresponding Workday Reports	Description of Workday Report	Security
EEO-3 Report Also known as the Local Union Report.	EEO-3 Members	Displays U.S. employees in unions by: • Job classification • Race or ethnicity • Gender	*Regulatory Reporting - USA* in the Regulatory Reporting (HCM) functional area.
EEO-4 Report Also known as the State and Local Government Report.	EEO-4 Full-Time Employees	Displays full-time U.S. state and local government employees by: • Job classification • Race or ethnicity • Gender	*Regulatory Reporting - USA* in the Regulatory Reporting (HCM) functional area.
	EEO-4 New Hires	Displays newly hired U.S. state and local government employees by: • Job classification • Race or ethnicity • Gender	*Regulatory Reporting - USA* in the Regulatory Reporting (HCM) functional area.
	EEO-4 Other Than Full-Time Employees	Displays U.S. state and local government employees that aren't full-time by: • Job classification • Race or ethnicity • Gender	*Regulatory Reporting - USA* in the Regulatory Reporting (HCM) functional area.
EEO-5 Report Also known as the Elementary-Secondary Staff Information Report.	EEO-5 Staff by Employee and Time Type	Displays newly hired public elementary and secondary district employees by: • Job classification • Race or ethnicity • Gender	*Regulatory Reporting - USA* in the Regulatory Reporting (HCM) functional area.
	EEO-5 New Hires Full-Time	Displays public elementary and secondary district employees by: • Job classification • Race or ethnicity • Gender	*Regulatory Reporting - USA* in the Regulatory Reporting (HCM) functional area.

Steps: Set Up EEO Reporting on page 164

Self-Identification of Disability

Steps: Set Up Self-Identification of Disability

Context

You can configure Workday so pre-hires and employees can complete the Voluntary Self-Identification of Disability (Form CC-305). You can track this data for the Office of Federal Contract Compliance Programs (OFCCP) compliance reporting in the United States. You can also upload externally collected self-identification of disability data from a spreadsheet using the Enterprise Interface Builder (EIB). Example: You can upload disability statuses, invitation dates, and response dates.

Note: Workday doesn’t assume responsibility for your compliance with regulatory reporting requirements.

Steps

1. Edit Business Process Security Policies.

   (Optional) Add security groups to the *Complete Employer Use Only Section* action step.

   This action step enables you to enter information in the For Employer Use Only section on the Change Self-Identification of Disability (For Employer Use Only) Inbox task. The information you enter is visible to pre-hires and employees.

   You can only correct data in the For Employer Use Only section. You can't correct previous versions of the form.

   Configure the *Disability Self-Identification* business process and security policy in the Personal Data functional area.
2. Edit Business Processes.
3. Edit Domain Security Policies.

   Security:

   - *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.
   - *Self Service: Self-Identification of Disability - USA* and *Worker Data: Self-Identification of Disability - USA* domains in the Personal Data functional area.
4. Send Self-Identification of Disability Invitations on page 170.

Next Steps

You can use these reports to track invitation statuses and retrieve self-identification data:

Report	Description
Disability Placement Benchmark	Extract the data necessary for compliance reports related to the placement of individuals with disabilities in the United States.
Invitations to Disability Self-Identification Form Latest Disability Self-Identification Results for Active Employees Latest Disability Self-Identification Results for Terminated Employees	• Track the status of disability self-identification invitations that you've sent. • View the latest self-identification of disability results for 1 or more organizations, including results loaded externally.
View Disability Self-Identification Form for Worker	View a worker's most recent disability selection.

The View Disability Self-Identification Form for Worker and Disability Placement Benchmark reports only display data from the Edit Personal Information task. They don't display externally collected and uploaded data.

Send Self-Identification of Disability Invitations

Prerequisites

- Configure the *Disability Self-Identification* business process and security policy in the Personal Data functional area.
- Security:
    - *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.
    - *Self Service: Self-Identification of Disability - USA* and *Worker Data: Self-Identification of Disability - USA* domains in the Personal Data functional area.

Context

Invite pre-hires and employees to self-identify their disability status. You can track this data for the Office of Federal Contract Compliance Programs (OFCCP) compliance reporting in the United States.

Steps

1. Access the Edit Tenant Setup - Notifications task.

   In the Notifications Delivery Settings section:

    a. On the HCM tab, access the Voluntary Self-Identification of Disability row and select the Override Parent Notification Type Settings check box.
    b. From the Rule prompt, select or create a routing rule that enables *Email* as the Channel and *Immediately* as the Default Frequency.
2. Access the Send Disability Self-Identification Invitations task.
3. Select 1 or more organizations or workers.

   When you select an organization, Workday sends the invitation only to active workers in the U.S. Workday doesn't send the invitation to:

    - Contingent workers.
    - Pre-hires.
    - Workers in other countries who don't have additional jobs or international assignments in the U.S.

   To send the invitation to pre-hires, you must select them on the Worker prompt.
4. (Optional) Select the Send Email Notification check box.

Result

Pre-hires and employees can update their disability status using the Change Self-Identification of Disability task.

Next Steps

You can print self-identification of disability forms with the Print Disability Self-Identification Form task. Workday prints the version of the Form CC-305 that was effective at the time of submission.

Related Information

Reference

Reference: Edit Tenant Setup - Notifications

Steps: Set Up Self-Identification of Disability (SF-256)

Context

Federal agencies must present the Self-Identification of Disabilities (SF-256) form to an employee during onboarding for voluntary self-identification of disabilities.

Note: Workday doesn’t assume responsibility for your compliance with regulatory reporting requirements.

Steps

1. Access the My Personal Data > Change Self-Identification of Disability (SF-256) task to voluntarily specify if you do or don’t have a disability, or you decline to answer.
2. Edit Domain Security Policies.

   Security:

   - *Self Service: Self-Identification of Disability - US Federal* domain in the Personal Data functional area.
   - *Worker Data: Self-Identification of Disability - US Federal* domains in the Personal Data functional area.
3. View your disability information in the View My Disability Self-Identification Form (SF-256) report.

   Employers can use the View Disability Self-Identification Form for Worker (SF-256) report to view disability information for workers in their organization.

Self-Identification of Ethnicity and Race (SF-181)

Steps: Set Up Self-Identification of Ethnicity and Race (SF-181)

Prerequisites

Configure the *Ethnicity and Race Self-Identification* business process and security policy in the Personal Data functional area.

Context

Federal agencies must present the Self-Identification of Ethnicity and Race (SF-181) form to an employee during onboarding for voluntary self-identification. Workday enables you to complete this form through employee self-service, manager self-service, and as a subprocess of the *Onboarding* business process. You can also upload externally collected self-identification of ethnicity and race information from a spreadsheet using Enterprise Interface Builder.

Note: Workday doesn't assume responsibility for your compliance with regulatory reporting requirements.

Steps

1. Edit Business Processes.

   Edit the *Onboarding* business process definition to add a *Change My Self-Identification of Ethnicity and Race* action.
2. Do 1 or both of:

   - As a worker, access the employee self-service Change My Self-Identification of Ethnicity and Race (SF-181) task from the Personal Data profile group on your profile.

     Security:*Self Service: Self-Identification of Ethnicity and Race - US Federal* in the Personal Data functional area.
   - On a worker's behalf, access the Change Self-Identification of Ethnicity and Race (SF-181) task from the Personal Data profile group on the worker's profile.

     Security: *Worker Data: Self-Identification of Ethnicity and Race - US Federal*

Result

You can generate a printable version of the form using the Print Ethnicity and Race Self-Identification Form (SF-181) task.

You can access the:

- View Ethnicity and Race Self-Identification Form for Worker (SF-181) report to retrieve the SF-181 forms for a worker.
- View My Ethnicity and Race Self-Identification Form (SF-181) report, which enables workers to view personal ethnicity and race information.

These reports only display data collected in Workday.

Steps: Set Up Establishments

Context

You can set up establishments for physical or service locations where your company conducts business. You can assign establishments to workers manually or automatically, making it easier to comply with global regulatory reporting standards, such as EEO reporting.

You can also propose establishments for candidates and assign establishments to workers.

Steps

1. Edit Domain Security Policies.

   Security: These domains in the in the Regulatory Reporting (HCM) functional area:

   - *Set Up: Establishment*
   - *Worker Data: Establishments*
2. Edit Business Process Security Policies.

   Configure the *Assign Establishment* business process security policy in the Jobs & Positions functional area.
3. Edit Business Processes.

   Configure the *Assign Establishment* business process to assign establishments to workers.

   You can either add *Complete Observer Assignment* as an action step to the *Assign Establishment* business process or add *Assign Establishment* as a substep to these business processes:

   - *Add Additional Job*
   - *Change Job*
   - *Contract Contingent Worker*
   - *Edit Position*
   - *Hire*

   If you configure *Assign Establishment* as a substep, you must have a completion step before the *Assign Establishment* step.

   If you add *Complete Observer Assignment* as an action step:

   - You must set it as the completion step.
   - Workday recommends you add a condition rule so the step initiates for locations that use EEO-1 reporting.
   - Workday secures the establishment to the security group you specify for this step.

   Note: If you add *Complete Observer Assignment* step to the *Assign Establishment* business process and then add *Assign Establishment* as a substep to an applicable staffing business process, Workday ignores the *Complete Observer Assignment* step even if there is a condition rule to skip the *Assign Establishment* substep.

4. Access the Configure Establishment by Country task.

   As you complete the task, consider:

Option	Considerations
Legal Entity Type	Select the organization level to associate with establishments.
Allow assignment of multiple jobs per worker	If you don't select this check box, automatic assignments are only based on a worker's primary position.
Inactivate auto reassignment of establishments	Select this check box to turn off assigning establishments automatically.
Allow Establishment on Employment Agreement/Offer	Select this check box to add the Establishment prompt to the *Employment Agreement* and *Offer* business processes.

   Select the organization level to associate with establishments in the Legal Entity Type field.

   Note: If you don't select the Allow assignment of multiple jobs per worker check box, automatic assignments are only based on a worker's primary position.

5. Access the Maintain Establishment task to create or update establishments.

   Select the business sites associated with the Country for Establishment in the Location field. Enter the code numbers for the reports specified in the Configure Establishment by Country task.

   TheLocation field only displays locations that have an address with:

   - The same Country as the Country for Establishment field.
   - An Effective Date that's on or before today's date.

6. (Optional) Access the Assign Establishment task to assign establishments to workers manually.

   You can also manually assign establishments to workers when you enable automatic assignments. However, Workday reassigns them based on your automatic establishment configuration the next time the business process runs. Workday recommends that you turn off automatic assignments to prevent automatic overrides before you manually assign establishments to workers.

7. (Optional) Enable autocomplete on the *Assign Establishment* business process definition.

   When you select the Enable Autocomplete check box and there is a default establishment, Workday automatically completes the add establishment step as a substep of applicable staffing events.

   See Set Up Security to Autocomplete Staffing Events.

Next Steps

- You can create a custom report using the Staff Movements (Reporting France) Events data source for French legal reporting requirements.
- You can view all establishments set up in your tenant for a particular country using the Establishment Set Up report.

Workday 2023R2 What's New Post: Establishment on Employment Agreement, Offer, and Staffing

Reference: Global Library

When adding on another Workday product area or expanding into new countries or regions, use the Global Library report to view sample configurations and common compliance requirements.

The Global Library report is a preconfigured profile of 2 types of configurations:

- Workday delivered and maintained statutory guidance configurations. Example: State minimum wages, tax calculations, withholding and court order data, address and name formats.
- Sample configurations. On the sample configuration tabs, you'll see a description of how to implement them.

The Global Library report is also available as a menu item from these Workday-delivered dashboards:

- Pay Cycle Command Center
- Payroll Compliance Updates

When you click View Library for that country or country region, the Global Library reports display under these product areas:

Product Area	Reports	Security Domain
Contact Information	• Basic Address Format • Address Region • Address Subregions • Extended Address Format • Postal Code Validations • Name Components • International Phone Code	*Set Up: Contact Info, IDs, and Personal Data*
Personal Data	• Ethnicity • Marital Status • Religion • Military Status • Visa Types • Disabilities • National ID Types	*Set Up: Contact Info, IDs, and Personal Data*
Staffing	• Local Termination Reasons • Job Classifications	*Set Up: Staffing*
Time Off and Leave	Time off and Leave	One of these domains: • *Set Up: Time Off (General)* • *Set Up: Leave of Absence*
Time Off and Leave	Holiday Calendars	*Set Up: Calendar*
Time Tracking	Time Tracking Library	*Set Up: Time Tracking*
Payroll	Minimum Wages	*Set Up: Payroll (Minimum Wages View) - USA*
Payroll	• Multistate Withholding Rules • Tax/Allowance Data (Current)	*Set Up: Payroll (Taxes View)*

Product Area	Reports	Security Domain
	• Compliance Updates (Last 2 Years)	
Payroll	Withholding/Court Order Data (Current)	*Set Up: Payroll (Income Withholding Orders)*

You can use the Configure Profile Group task to configure which reports display in the product areas.

This information isn't a source of record for regulatory requirements. Verify requirements for the regions in which you operate.

Note: These reports only display if Workday has uploaded the relevant information for the country.

Your company is expanding and will have workers in Australia. You want to know what time off and leave sample configurations Workday offers for a starting point.

1. Select Australia for the Country.

   The Global Library report returns all configurations for Australia.
2. On the Australia row, click View Library.
3. On the Time Off and Leave tab, you'll see sample configurations and a description of how to implement them.

Related Information
Tasks
Steps: Set Up Profiles and Profile Groups

Reference: Default Establishment Assignments

Workday assigns default establishments to workers according to this logic:

- If there's no establishment in the employment agreement/offer, then Workday retains the existing establishment for a job or position if the location and legal entity remains the same.
- If there's no establishment in the employment agreement/offer and if the location or company changes for a job or position, then establishment populates from the legal entity/location.
- If there's no establishment in the employment agreement/offer and the legal entity/location has multiple establishment options, you'll have to select an establishment manually.
- If there's no establishment in the employment agreement/offer and legal entity/location, you'll have to select an establishment manually.

Recruiting

Recruiting Setup

Setup Considerations: Recruiting

You can use this topic to help make decisions when planning your configuration and use of Workday Recruiting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.

- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday Recruiting is a single platform that enables your organization to find, engage, and select the best candidates.

Business Benefits

- Increase efficiency by managing the entire recruiting process in Workday.
- Attract top candidates with a consistent and engaging candidate experience.
- Work flexibly by moving candidates through the recruiting process using the Workday mobile application.
- Manage your candidate pipeline more efficiently using candidate pools.
- Improve data accuracy by identifying and merging duplicate candidate records.
- Minimize biased candidate screening by masking identifiable candidate information.
- Increase recruiting efficiency with interview schedules for interviewers and locations.
- Improve productivity by automatically moving candidates forward in the recruiting process.
- Keep communication and collaboration in Workday by enabling recruiters and users involved in the recruiting process to add notes to job requisitions and candidate job applications.

Use Cases

- Track position requirements by creating job requisitions.
- Use custom branding on external career sites.
- Work with recruiting agencies to source external candidates using agency career sites.
- Create calendars to enable candidates to schedule their own times for high-volume recruiting events.
- Set up Candidate Engagement recruiting campaigns with message and notification templates that enable recruiters to target pools of prospects or candidates.
- Set up Candidate Engagement recruiting landing pages to enable recruitment marketers to design and publish external web pages that market your organization to specific populations.
- Use recruiting sources to track where your candidates come from. Example: LinkedIn.
- Set up referral payment plans to encourage workers to refer candidates to job openings.
- Collect candidate references and complete a reference check.
- Assess candidates using questionnaires.
- Send a request to external candidates at any stage in the recruiting process to ask them to provide personal information.
- Send or correct an offer of employment.
- Track background check information and automatically process candidates based on results.

Questions to Consider

Questions	Considerations
What kind of positions do you need to fill?	You can create: • Job requisitions to track requirements for unfilled positions. • Evergreen requisitions to continually source and track candidates for high-turnover or high-volume positions.

Questions	Considerations
	• Confidential job requisitions for classified positions. Example: Executive level positions.
How do you want to advertise jobs openings?	You can: • Create internal and external career sites to post job openings. • Use job posting templates to target specific audiences. Example: You can add a video to your job posting advertising your office space in Dublin to attract candidates. • Enable candidates to create alerts on career sites for relevant job postings.
How do you want to manage high-volume recruiting events?	You can: • Create calendars that enable candidates to reserve time slots. Example: Phone screenings. • Enable recruiters to schedule and manage event time slots on behalf of candidates.
How do you want to manage referrals and endorsements?	You can enable: • Workers to submit candidates to open job requisitions. • Candidates to identify a referring worker when applying to a job posting. • Workers to endorse a candidate's job application. Configure referral payment plans to reward workers who refer successful candidates.
How do you want to work with recruiting agencies?	You can create: • Agencies and establish hierarchies between them. • Agency career sites for job postings. • Agency types for different types of vacancies. You can also track agency payments for successful candidates.
How do you want to collect candidate information?	Gather and manage information from candidates using: • Applications. • Questionnaires. • Assessments. • Background check results.
How do you want to organize your candidates?	Create candidate pools to manage your candidate pipeline and group internal and external candidates based on set criteria. Example: Recruiting sources. Create a:

Questions	Considerations
	• Dynamic pool to automatically and continuously add candidates who match your search criteria. • Static pool to add candidates manually.
How do you want to manage duplicate candidate records?	Workday enables you to manage duplicate records using 1 of these functionalities: • Recruiting match and merge, which enables you to merge candidates to different person types. • Duplicate Management Framework, which provides flexibility when configuring merge rules and supports a variety of merge types. When you opt in to the Duplicate Management Framework, you can't opt out or access Recruiting match and merge functionality again.
How do you want to manage interviews?	Manage your interviews entirely in Workday or use 1 of these calendar integrations for scheduling: • Google Calendar • Microsoft™ Outlook 365 You can configure Workday to: • Recommend interview schedules based on interviewer and location availability. • Enable interviewers to provide feedback in Workday. Example: Competency ratings.
How do you want to manage offers or employment agreements?	You can: • Manage and submit multiple offer or employment agreement tasks at once. • Set up offers and employment agreements to automatically initiate in the *Job Application* dynamic business process. Note: Auto-initiate offer only works when salary or hourly are the only forms of compensation in the offer. • Negotiate and regenerate offers through Candidate Home accounts. Example: The candidate requests a later start date and you need to update and regenerate the offer letter.
How do you want to manage compliance obligations?	Workday enables you to: • Track diversity goals by delivering metrics and reports that analyze candidate gender and ethnicity information. • Identify and purge candidate and job application data when you no longer need it.

Questions	Considerations
How do you want to manage access to your recruiting processes?	To control access to recruiting processes: • Use segmented security to restrict access to recruiting processes. Example: Configure access to questionnaire responses. • Hide certain information on the candidate profile to help prevent biased candidate screening. Example: You can mask education details during the candidate screening process.

Recommendations

To increase efficiency, configure business process steps to:

- Post or unpost jobs when you create, edit, or freeze job requisitions.
- Automatically unpost jobs when you close or fill a job requisition.

Requirements

Configure job requisitions to track requirements for unfilled positions and move candidates through the recruiting process.

Limitations

You can't use Outlook for Microsoft Office 365 with Workday Recruiting when you have:

- More than 1 instance of Outlook for Microsoft Office 365.
- Any combination of hybrid, on-premise, or cloud data storage.

When you opt in to the Duplicate Management Framework, you can't use Recruiting match and merge functionality.

The Recruiting business processes don't support the Hide Details from Person check box. We recommend that you don't select the check box when you edit your business process policies.

Tenant Setup

Access the Edit Tenant Setup - Recruiting task to configure:

- Referral ownership levels.
- A duplicate referrals policy.
- Automatic candidate merging for the Recruiting Match and Merge functionality.
- Integrations for interview scheduling calendars.
- The ability for candidates to reapply to job requisitions.
- Settings for populating and copying personal information on job applications.
- Preferred name settings.
- A link to your privacy policy on external career sites.
- Calculations for the Time to Fill report.
- Required Candidate Home accounts.
- Verification emails for candidates creating Candidate Home accounts.

You can also configure the Edit Tenant Setup - HCM task to:

- Create ID definitions. Example: Job requisition IDs.
- Enable Workday to populate organizations on job requisitions.
- Enable users to remove or replace a questionnaire on a job requisition.

Security

Use segment-based security groups to grant specific users access to job application data during the recruiting process.

To view the different security domains for Recruiting, access the Domain Security Policies for Functional Area report and select the Recruiting functional area.

Security domains in the Recruiting functional area enable users to configure, manage, and use Recruiting features, such as:

- Candidates
- Evergreen Requisitions
- External Career Sites
- Interviews
- Job Applications
- Job Postings
- Job Requisitions
- Offers
- Prospects
- Questionnaires
- Recruiting Agencies
- Recruiting Notes
- Referrals and Endorsements

Business Processes

Business Processes	Considerations
Assess Candidate	Configure to send assessment tasks to candidates.
Background Check	Configure to manage background check information for candidates.
Interview	Configure to: • Schedule interviews. • Collect candidate feedback. • Forward candidate feedback to a decision-maker.
Job Application	Configure to create a flexible or linear workflow for candidate management.
Job Requisition	Configure to create job requisitions for new or existing positions.
Offer	Configure to: • Set a compensation basis. • Request and get approval for stock grants or one-time payment plans. • Generate, send, and receive electronically signed documents. • Renegotiate offers.
Refer a Candidate	Configure to manage candidate referrals.
Reference Check	Configure to manage candidate reference checks.

Business Processes	Considerations
Ready for Hire	Configure to initiate staffing transactions automatically. Example: Hire, Change Job.
Screen	Configure the workflow for candidate screening.
Submit Recruiting Agency Candidate	Configure to enable agency users to submit candidates to open job requisitions.

Reporting

To view the available reports for Workday Recruiting, access the Workday Standard Reports report and select one of these categories:

Report Categories	Considerations
Recruiting	Use reports in this category to report on: • Assessments • Candidates • Diversity metrics • Interviews • Job applications • Job postings • Job requisitions • Recruiting agencies • Recruiting self-schedule calendars • Referrals
Set Up Recruiting	Use reports in this category to verify and view a summary of your recruiting configuration.

Integrations

Consider these web services and integrations when configuring Workday Recruiting:

Web Services	Considerations
Assess Candidate	Use to request and manage assessment tests for candidates.
Candidate Attachments	Use to load documents for prospects and candidates.
Create Job Requisition	Use to create job requisitions for positions in position management supervisory organizations.
Offer	Use to initiate offers for job applications.
Post Job	Use to post jobs to third-party websites.
Put Background Check	Use to mass upload background information for multiple records.
Put Candidate	Use to load prospects and candidates.
Submit Recruiting Agency Candidate	Use to submit recruiting agency candidates.

Integrations	Considerations
Adobe Sign *DocuSign*	Use to obtain digital signatures from candidates.
LinkedIn Recruiter System Connect	Enables users on LinkedIn Recruiter to view relevant candidate data from Workday.
Report-as-a-Service (RaaS)	Use to post job openings to third-party websites.

Connections and Touchpoints

Touchpoints	Considerations
Compensation	Workday derives compensation values for offers or employment agreements from job requisitions.
Duplicate Management Framework	Use to manage duplicate records in your tenant. Opting in to the Duplicate Management Framework is a tenant-wide change that you can't repeat or undo.
Extended Enterprise Learning	You can enable extended enterprise learners to view and apply for jobs for nonworkers within your organization. When you hire an extended enterprise learner, their learning transcripts and talent certifications transition with them to their new role.
Skills Cloud	Configure Skills Cloud to build qualification requirements and enable suggested skills on job requisitions and job applications. Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.
Staffing	Job requisitions support the position and job management staffing models.
Talent	You can enable the Opportunity Marketplace to include internal job postings. Employees can browse jobs and access job postings from the Opportunity Marketplace.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Setup Considerations: Skills in Recruiting

You can use this topic to make decisions when planning to use skills in Recruiting. The topic explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are Is

Workday offers a variety of ways to add, maintain, and select skills for:

- Job Requisitions
- Job Applications
- Prospect Profiles
- Candidate Profiles

Prospects and candidates can identify their skills that match your job requirements, and you can search for candidates with the most relevant skills.

This topic explains the differences between configuration options for skills, enabling you to make an informed decision about using skills for Recruiting.

Workday Solution	Description
Machine Learning for Recruiting	Workday uses a machine learning algorithm and integration with Skills Cloud to suggest skills based on similar worker profiles and job requisition data. Recruiters can select required

Workday Solution	Description
	or optional skills for job requisitions. Candidates can select suggested skills when applying to a job. Prospects can select suggested skills on the Prospect Introduce Yourself form.
Skills Cloud	The Skills Cloud is a library of skills. Prospects, candidates, and recruiters can add these skills during the recruitment process. You can also use Skills Cloud to build qualification requirements.
Crowdsourced Skills	If a skill isn't available in your tenant, prospects and candidates can create crowdsourced skills to add to their profiles. See:Concept: Crowdsourced Skills and Experience Management.
Maintained Skills	You can maintain a list of skills specific to your organization that recruiting administrators, prospects, and candidates can add to profiles.

Business Benefits

You can streamline the process of working with skills using any combination of solutions, which:

- Use machine learning intelligence to adapt skills suggestions over time and improve efficiency and accuracy.
- Improve identification of candidates based on the relevant skills that they select.
- Enable prospects and candidates to select and create skills for better job matches.
- Maintain skills data, including skills specific to your company, for roles specific to your company.

Use Cases

Solution	Use Case
Machine Learning for Recruiting	Candidates can review and accept suggested skills as the best matches when they apply for a job. Prospects can select suggested skills after they upload their resume on the Prospect Introduce Yourself form. When creating a job requisition, you can review and accept suggested skills as required or optional for the job requisition.
Skills Cloud	Prospects and candidates can access a library of skills to add to their profiles. You can convert crowdsourced and maintained skills to Skills Cloud skills. You can also view reports based on selected skills.
Crowdsourced Skills	You can increase the number of skills for prospects and candidates to add to their profiles without using Skills Cloud.
Maintained Skills	You can create a categorized list of specialized and proprietary skills for your company.

Questions to Consider

When setting up machine learning for job requisitions and suggested skills in Recruiting, consider:

Questions	Considerations
How do you want to manage machine learning for Recruiting?	Machine learning automates the process of managing skills, but you can delete suggested skills from job requisitions.
Does machine learning consider more than the Skills section of a resume to suggest skills for job applicants?	Machine learning uses logic to consider matches from the entire uploaded resume, not just the Skills section, including: • Certificates • Company • Degree • Description • Education • Experience • Honors • Major and minor • Objective • Publication • Skills • Summary

When setting up Skills Cloud for Recruiting, consider:

Question	Considerations
Where does Skills Cloud get its data?	Skills Cloud gets its data from: • Public data sets. • Purchased data sets.
How do I get skills onto a prospect, candidate, and job requisition?	Convert maintained skills to Skills Cloud skills on prospect and candidate profiles. Workday automatically converts duplicate maintained skills to Skills Cloud skills if they're an exact text match. You can also use web services to load Skills Cloud skills by reference ID or an exact text match. If there's no exact text match and no reference ID, Workday creates a: • Crowdsourced skill for candidates. • Maintained skill for the Qualifications tab on job requisitions.
How does automated skill management work and how does it impact skills on candidates?	Workday Skills Cloud performs regular automated background processes to clean up duplicate and synonymous skills in your tenant. Workday always retains the skill string that a candidate enters, even if that skill gets added as a synonym or canonical skill to the Skills Cloud.

When managing crowdsourced skills, consider:

Question	Considerations
How do you want candidates to submit crowdsourced skills?	External candidates can add skills on their job application, which become part of their candidate profile. You can view crowdsourced skills on the Find Skill report.
Can you view crowdsourced skills in the Maintain Skills report?	Crowdsourced skills don't display in this report.

When managing maintained skills, consider:

Question	Considerations
Do you need Skills Cloud to use maintained skills?	Maintained skills don't require Skills Cloud, but if you enable Skills Cloud, you can convert maintained skills into Skills Cloud skills.
How do you manage maintained skills?	For maintained skills, you can: • Add skills, find duplicate skills, and manage translations. • Merge duplicate skills. • Create categories for skills.
How do you want to search for candidates by maintained skill?	Use the Find Candidates report if you haven't converted the skills to Skills Cloud skills.

Recommendations

No impact.

Requirements

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Understand how Workday implements machine learning when you:

- Set up machine learning for suggested skills and job requisitions. See Steps: Set Up Machine Learning for Recruiting on page 201.
- Set up Skills Cloud skills. See Steps: Set Up Skills Cloud on page 1852.
- Set up maintained skills. See Steps: Maintain Skills on page 1828.

Limitations

- You can't disable Skills Cloud skills once you enable it.
- Reports don't differentiate between suggested skills and skills selected by prospects or candidates.

Tenant Setup

No impact.

Security

Configure these security domains in the Recruiting functional area:

Domains	Considerations
Staffing Actions: Job Requisition Qualifications	Controls the visibility of suggested skills on job requisitions.
Set Up: Skills and Experience	Enable the Workday Skills Cloud.
Self-Service: Candidate	Enables candidates to enter crowdsourced skills.

Business Processes

No impact.

Reporting

You can manage skills with these reports:

Reports	Considerations
Find Candidates	Filter candidates by Skills Cloud skills and maintained skills.
Find Skill	Workday stores crowdsourced data in this report.
Maintain Skills	Add, search for, and edit maintained skills. You can also hide skills from candidates and flag skills as inactive.

Integrations

These web services support skills in Recruiting:

Solution	Web Services
Machine learning for job requisitions	• *Evergreen Requisition* • *Job Requisition*
Machine learning for suggested skills	• *Tenant Setup – HCM*
Skills Cloud skills	• *Candidates* • *Evergreen Requisition* • *Job Profile* • *Job Requisition* • *Manage Skills* • *Position* • *Position Restrictions* • *Recruiting Agency Candidate* • *Skill Profile*

Connections and Touchpoints

Skills in Recruiting interact with Talent features in Workday. You can search for workers by skill. You and workers can also select skills to include in their worker profiles.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Setup Considerations: Recruiting Notes

You can use this topic to help make decisions when planning your configuration and use of notes. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Recruiting notes enable users to create and view notes on job requisitions and candidate job applications.

Business Benefits

- Notes support collaborative hiring by allowing recruiters, hiring managers, and interviewers to share updates during candidate assessments.
- Protect data and ensure compliance by keeping all notes in Workday rather than in third-party tools.
- Preserve candidate history by keeping notes attached to candidates across requisitions for long-term visibility.
- Accelerate decision making by giving hiring teams timely context and consistent information.
- Increase efficiency by reducing duplicate communication channels and making notes easily searchable.
- Increase accountability by creating a clear, auditable record of hiring interactions and decisions.

Use Cases

Hiring managers, recruiters, and other hiring team members can use notes to:

- Communicate updates to job requisitions or job applications.

  Example: A recruiter adds a note that a candidate has completed their technical assessment so the application can be advanced to the interview stage.
- View and track recruiting and hiring activity on job requisitions and job applications.

  Example: A hiring manager adds a note after reviewing feedback from the candidate's phone screen.
- Discuss decisions to close or progress a job requisition or a job application.

  Example: A recruiter adds a note that the hiring team agreed to move a candidate forward to the final interview stage.
- Share feedback among hiring team members.

  Example: An interviewer adds a note that the candidate showed strong presentation skills but struggled with a technical case question.

- Reference external candidate materials.

  Example: A recruiter adds a note about a candidate's GitHub repository asking managers to review coding samples.

Questions to Consider

Question	Consideration
What kind of recruiting activity do you want users to create notes for?	You can enable users to add, view, or modify notes on: • Candidates • Candidate job applications • Job requisitions • Prospects Users must have access to the candidate profile to add notes to a candidate's job application.
Which roles do you want to enable to add or view notes?	You can enable users to view notes or view and modify notes. Users can only see notes for candidates, job applications, prospects, and job requisitions that they have access to. You can use the Maintain Recruiting Notes task to hide notes for masked candidate job applications.
Do you want to tag and notify other members of the hiring team on Recruiting Notes?	You can tag members of the hiring team by selecting their name or searching for them in the People to Notify prompt. Tagging and notifications on Recruiting Notes enhance recruiting efficiency by: • Improving collaboration among hiring team members during candidate assessments. • Enabling faster decision making by speeding up responses. • Streamlining communication by reducing the need for separate messaging threads.

Recommendations

No impact.

Requirements

Your organization must use session storage in order to store notes data. Check your browser settings or confirm with your IT team.

Limitations

You can only currently add or view notes on job requisitions or candidate job applications.

Recruiting Notes are only available on desktop.

Tenant Setup

No impact.

Security

Domain	Consideration
Manage: Candidate Job Application Notes	Enables you to add, edit, and view notes on candidate job applications from the candidate profile.
Manage: Job Requisition Notes	Enables you to add, edit, and view notes on job requisitions.
Manage: Maintain Recruiting Notes	Enables you to use the Maintain Recruiting Notes task to view or delete notes. This task is for administrators.
Manage: Candidate Notes	Grants access to add, edit, and view notes on the candidate and prospect profile.

Business Processes

Business Process	Consideration
Job Application	When you rescind or cancel a job application event, Workday removes any notes associated with the job application.
Job Requisition	When you rescind or cancel a job requisition event, Workday removes any notes associated with the job requisition.

Reporting

You can use these data sources to create custom reports on notes:

- Candidate Job Application Notes
- Candidate Notes
- Job Requisition Notes

Integrations

No impact.

Connections and Touchpoints

When you purge a user, Workday removes their name from any notes they created. Optionally, you can also purge the content of their notes. When you purge a candidate, Workday also purges the job application or the notes on the candidate job application.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Other Impacts

Workday hides notes for masked candidate job applications on the candidate profile and the Maintain Recruiting Notes task.

Tasks

Steps: Set Up Recruiting Notes on page 206

Reference

2022R1 What's New Post: Job Requisition Notes

2022R1 What's New Post: Candidate Job Application Notes

Steps: Set Up Recruiting

Context

Workday Recruiting enables your hiring teams to find, engage, and select candidates for your job openings.

You can also use Recruiting on the Workday mobile app for:

- Android.
- iPad.
- iPhone.

Steps

1. Access the Maintain Functional Areas task.

   Select the Enabled check box for the Recruiting functional area.

   Security: *Security Configuration* domain in the System functional area.
2. Access the Edit Tenant Setup - Recruiting task.

   Configure tenant-level settings for Recruiting features.

   See Reference: Edit Tenant Setup - Recruiting.
3. (Optional) Access the Edit Tenant Setup - System task.

   Enable activity streams for prospects and job applications so your workers can post comments to collaborate. These changes take effect after you sign out of Workday and sign-in again.

   See Steps: Enable Activity Stream.
4. Configure the Workday-delivered Recruiting dashboard.

   Security: *Management Dashboard: Recruiting* domain in the System functional area.

   See Steps: Set Up Dashboards and Landing Pages.
5. Steps: Set Up Profiles and Profile Groups.

   Configure these profiles and their profile groups:

   - Candidate Pool
   - Candidate Profile
   - Job Requisition Composite View
   - Prospect Profile
   - Referral Activity Composite View
6. Set Up Assignable Roles.

   Create a Recruiter role and assign it to your organizations.
7. Set up and create 1 or more external career sites.

   External career sites enable candidates to find and apply to job openings. Workers can share job postings to their social networks or use them to refer candidates.

   See Steps: Set Up External Career Sites on page 366.

8. Create internal career sites.

   You can create:

   - A site that enables workers to apply to internal job openings.
   - Multiple sites that enable nonworkers with a Workday account, such as students and contingent workers, to apply to internal job openings.

   See Steps: Set Up Internal Recruiting on page 371.
9. Set up Recruiting-specific job requisition features.

   See Steps: Set Up Job Requisitions for Recruiting on page 220.
10. Set up evergreen requisitions.

    Use evergreen requisitions to source and track candidates continuously for seasonal or high-volume positions.

    See Steps: Set Up Evergreen Requisitions on page 236.
11. Set up job postings.

    You can post jobs to these types of career sites:

    - Internal
    - External
    - Recruiting agency

    See Steps: Set Up Job Postings on page 413.
12. Set up recruiting agencies.

    Manage your relationship with third-party recruiting agencies through Workday. Recruiting agents can submit candidates to your job postings directly. You can see agency performance metrics, such as:

    - Number of candidates submitted.
    - Time to the first candidate interview.

    See Steps: Set Up Recruiting Agencies and Agency Users on page 425.
13. Set up job applications to configure the data you collect from candidates who apply to jobs.

    See Steps: Set Up Job Applications on page 445.
14. Configure how a candidate moves through the recruiting process.

    See Steps: Set Up the Recruiting Workflow on page 193.
15. Configure prospects and candidates.

    Specify the:

    - Candidate information that Workday collects and stores, as well as how Workday processes that information.
    - Security permissions for internal and external candidates.

    See Steps: Set Up Prospects and Candidates on page 245.
16. Configure referrals.

    Referrals enable your workers to refer their connections to job postings. Candidates can also specify a worker they know at your company as a self-identified referrer. You can configure Workday to process payments for successful referrals and approved endorsements based on condition rules.

    See Steps: Set Up Referrals on page 437.
17. (Optional) Steps: Set Up Recruiting Notes on page 206

    Enable users involved in the hiring process to collaborate, communicate, and track recruiting activity by adding and viewing notes on job requisitions and candidate job applications.
18. (Optional) Create Custom Labels.

    Use the Maintain Custom Labels task to rename Workday terms such as prospect, contingent worker, or evergreen requisition. These values display in object names and search results.

19. (Optional) Create and Edit Custom Object Definitions.

    Create custom objects to track additional fields that Workday-delivered objects don't include. Example: Create a custom object to track recruiting agency payments from a specific cost center.

Concepts

Setup Considerations: Recruiting Notes on page 188

Tasks

Steps: Set Up Job Catalog on page 568

Set Up Recruiting to Staffing Field Defaults on page 205

Steps: Set Up Recruiting Notes on page 206

Examples

Example: Return Candidate to the Recruiting Process on page 281

Steps: Set Up the Recruiting Workflow

Prerequisites

Security: *Set Up: Recruiting* domain in these functional areas:

- Recruiting
- Talent Pipeline

Context

You can configure your recruiting process using Workday-provided stages, and include steps such as:

- *Automatic Stage Routing*
- *Automatically Unpost Jobs*
- *Change Government IDs*
- *Change Personal Information*
- *Document Review*, including electronic signatures

Workday automatically assigns candidates applying to a job to the Review stage. From there, you define the stages a candidate can move to. They can be:

- Linear: Move a candidate to a specific stage in a specific order. Example: Review to Screen, to Interview, to Reference Check, to Offer, to Ready for Hire.
- Flexible: Select from a list of stages to move a candidate to. Example:
    - Review to Screen, Assessment, or Interview
    - Screen to Assessment or Interview
    - Interview to Reference Check, Background Check, or Ready for Hire

Steps

1. Set up electronic signatures.

   To enable candidates to sign documents electronically, add a *Review Documents* type step on any subprocess of the *Job Application* business process for the *Candidate as Self* group.

   See:

    - Set Up DocuSign
    - Set Up Adobe Sign
    - Set Up Review Documents Steps

2. Create Custom Business Processes.

   Configure these business processes for your organization:

Stage	Corresponding Business Processes
Review	*Review Candidate*
Screen	*Screen*
Reference Check	*Reference Check*
Ready for Hire	• *Add Additional Job* • *Change Job* • *Contract Contingent Worker* • *Hire Employee*

   Use the External Site Homepage Link report field to direct candidates to your external career site when you:

   - Configure a business process to include parallel Candidate Home action steps such as *Change Government Identifiers* or *Change Personal Information*.
   - Create custom notifications for candidates.

   Configure business process steps that you might identify as high-volume as they're displayed in My Tasks. On a business process definition, you can apply the exclude task configuration on these step types so that it doesn't deliver notifications to My Tasks:

   - *Action*
   - *Approval*
   - *To Do*

   Once a step is configured for exclusion, you can still access any excluded task in My Tasks from the Recruiter Hub.
3. Configure the Assessment stage.

   See Steps: Set Up Assessments for Candidates on page 463.
4. Configure the Interview stage.

   See Steps: Set Up Interviews on page 472.
5. Configure the Offer stage.

   See Steps: Set Up Offers on page 489.
6. Configure the Employment Agreement stage.

   See Steps: Set Up Employment Agreements on page 635.
7. Configure the Background Check stage.

   See Steps: Set Up Background Checks for Candidates on page 260.
8. (Optional) Steps: Set Up Parallel Stages on page 200.

   Configure parallel stages.
9. Create Recruiting Dispositions.
10. Configure the *Job Application* dynamic business process.

   See Steps: Configure the Job Application Business Process on page 197.

11. (Optional) Access the Configure Dynamic Action Labels task for the *Job Application* business process type.

    You can change the name of the stage a candidate or agency user sees when reviewing information.

    As you complete the task, consider:

Option	Description
Action Label Override	Enter a label that displays to internal users when they move candidates through the recruiting process.
External Label Override	Enter a label that displays on the: • Communications sent to external and internal candidates. • Active Posting tab on the View Recruiting Agency report.

12. (Optional) Set up task consolidation for Recruiting business processes.

    See Steps: Set Up Task Consolidation.

Result

When a candidate applies for a job, Workday:

- Creates a job application and associates it with the candidate record.
- Sets the status of the candidate to *Review*.

Next Steps

You can configure:

- Workday to decline the remaining job applications for a hired candidate.
- A condition rule on the *Initiation* step of the *Hire* business process. Ensure:
    - Source External Field or Condition Rule: Job Application Business Process Created From
    - Relational Operator: Is empty
- The Undo Move from Hire action to move a candidate from the hire process back to the Make Decision step of the last recruiting stage they were in.

Related Information

Tasks

Steps: Automatically Decline a Candidate's Remaining Job Applications on page 268

Steps: Automatically Advance or Decline Candidates on page 266

Steps: Enable Candidates to Withdraw Their Job Applications on page 446

Create Business Process Condition Rules

Examples

Example: Return Candidate to the Recruiting Process on page 281

Steps: Set Up Recruiting Hub

Prerequisites

Create 1 or more configurations for the candidate list grid.

Context

The Recruiting Hub enables recruiters to manage their workload more efficiently. Recruiters can use the Recruiting Hub to take action on candidates in different stages. You configure the Recruiting Hub, but recruiters can customize their experience to:

- Display information they want to see.
- Monitor candidate activity.
- Navigate quickly between tasks.

Steps

1. Edit Domain Security Policies.

   Configure these domains in the Recruiting functional area:

   - *Recruiting Hub*: Enable Recruiting Hub by adding security groups to this domain. Use role-based, unconstrained security groups with view and modify access.
   - *Job Requisition Workspace*.
   - *Candidates for My Jobs*: Defines who has access to the information that displays on the Recruiting Hub. Workday recommends that you assign the role tied to job requisitions. Example: *Primary Recruiter*.
2. (Optional) Configure the announcements and cards that display on the Recruiting Hub.
   a) Access the Maintain Hubs task.
   b) From the *Recruiting Hub* row, select Action > Configure Overview.

   Security: These domains in the System functional area:

   - *Set Up: Tenant Setup – General*
   - *Set Up: Tenant Setup – Hubs*
3. (Optional) Configure the candidate information that displays on the candidate cards and reports in the Recruiting Hub. Examples: Application date, candidate location, list of degrees and veteran status.
   a) Access the Maintain Candidate List Assignment task.
   b) From the Internal Candidate Grid and Referral Candidate Grid prompts in the Recruiting Hub section, select the grids that you want to display.

   Security: *Set Up: Recruiting* domain in the Recruiting and Talent Pipeline functional areas.
4. (Optional) Configure user roles on the Job Requisition Workspace report.
   a) Access the Maintain Job Requisition Workspace task.
   b) Select a Default Role. Workday recommends selecting your most commonly used role as the default for the workspace. Example: *Primary Recruiter*.
   c) Add up to 4 additional recruiting roles, which act as filters on the workspace. When users access the workspace, the Owned By Me filter automatically displays results relevant to the selected role. It can take up to an hour for changes to your role selections to display.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.
5. Access the Configure Recruiter Hub Shortcuts task.

   Define default shortcuts for security groups with access to the Recruiting Hub. They can personalize their shortcuts from the Shortcuts section of the Recruiting Hub navigation.

   Security: *Set Up: Tenant Setup – General* domain in the System functional area.

6. (Optional) Replace the Workday-delivered Recruiting dashboard in the navigation with a custom dashboard.
    a) Access the Maintain Recruiter Hub Navigation Menu Overrides task.
    b) From the Navigation Item prompt, select *Recruiting - Dashboard*.
    c) Select either the custom dashboard that you want to display in the Recruiting Hub from the Override prompt, or the Do Not Show check box. The Workday-delivered dashboard will no longer display.

    Security: *Set Up: Tenant Setup – General* domain in the System functional area.

Steps: Configure the Job Application Business Process

Prerequisites

- Create Recruiting Dispositions on page 208.
- Security: *Security Configuration* domain in the System functional area.

Context

You can use Workday-delivered stages to configure the path that candidates follow in recruiting on the *Job Application* business process. From each stage, you can select the:

- Stages you want available as possible next steps for moving a candidate forward.
- Options for removing the candidate from the recruiting process.

If you want to renegotiate the terms, you can add the Offer and Employment Agreement stages twice. Use label overrides to distinguish between 2 stages with the same name.

Workday uses the job application of a candidate date to determine which *Job Application* business process definition to use.

Steps

1. Access the *Job Application* business process definition.
2. Click Edit Dynamic Definition.
3. Select the groups that can initiate the business process on the Initial Step grid.
4. As you complete the Possible Next Steps grid for each stage, consider:

Option	Description
Specify	Select the stages that the candidate can move to from this stage. You can select any stages, including the current one. After you add the *Ready for Hire* step and click OK, Workday automatically populates the Completion Event row with these business processes: • *Add Job* • *Change Job* • *Contract Contingent Worker* • *Convert to Employee* • *Hire Employee*
Automatically Initiate	This check box only appears when you add 1 of these options on the Specify column: • *Offer*

Option	Description
	• *Employment Agreement*
Group	Select from the security groups you added on the security policy of the *Job Application* business process. If you leave this field blank, Workday sends notifications to the role defined on the subprocess definition for that step. If you select *Initiator* as the group for step b on a subprocess definition, you must select a Group.
Step Label Override	The label you enter: • Becomes the label for the Move Forward option. • Displays on the Candidate tab of the job requisition and on mass action tasks.

5. For integration steps, select Business Process > Maintain Redirect from the related actions menu of an integration step.

   Configure a redirect to prevent the job application process from canceling when the integration fails.
6. (Optional) As you complete the Possible Parallel Steps grid, consider:

Option	Description
Specify	Select the parallel stages you want to run in parallel. Ensure that the *Decision* step is also the *Completion* step on any parallel stage.
Automatically Initiate	Only appears when you add 1 of these options on the Specify column: • *Offer* • *Employment Agreement*
Group	Add the security groups that you want to initiate parallel stages.
Step Label Override	The label you enter: • Becomes the label for the Move Forward option. • Displays on the Candidate tab of the job requisition and on mass action tasks.

7. As you complete the Possible Dispositions grid for each stage, select 1 or more reasons for declining the job application of a candidate.

   If you leave this section blank, the Decline button doesn't display on the task associated with the stage.
8. Configure Custom Notifications.

   Configure custom notifications that send to candidates based on disposition reasons by using the On Disposition prompt in the Triggers section.
9. (Optional) Access the Maintain Business Process Definition Selection report.

   For the *Job Application* business process, click Enable Use Latest Dynamic Business Process. This selection changes the effective date of any *Job Application* subprocess to the date the business process initiates it. Selecting this option ensures that you always use the most current definition for all subprocesses.

Security: *Business Process Administration* domain in the System functional area.

10. (Optional) From the related actions menu of the *Job Application* business process, select Business Process Type > Maintain Business Process Definition Selection.

As you complete the task, consider:

Option	Description
Use Subprocess Initiation Date	Select to use the most recent business process definition for Recruiting-related subprocesses in the *Job Application* dynamic business process.
Use Latest Business Process Definition	Select to use the most recent definition for the *Job Application* dynamic business process.

Next Steps

Configure automatic stage routing so you can use condition rules to advance or decline candidates automatically.

Related Information

Tasks

Steps: Automatically Advance or Decline Candidates on page 266

Reference

2024R1 What's New Post: Notification Trigger on Disposition

Steps: Set Up Segmented Security for Recruiting Stages

Prerequisites

Security: *Set Up: Security Segments* domain in the System functional area.

Context

You can restrict access to job application information based on these stage-related security segments:

- Job Application - Assessment
- Job Application - Background Check
- Job Application - Declined by Candidate
- Job Application - Employment Agreement
- Job Application - Interview
- Job Application - Offer
- Job Application - Ready for Hire
- Job Application - Reference Check
- Job Application - Rejected
- Job Application - Review
- Job Application - Screen

Recruiters can only view information that they have permission to view based on the stage of the job application on these tasks, reports, and profiles:

- Candidate Pipeline.
- Candidate profile.
- Candidate Time Per Stage.
- Compare My Candidates.

- Evergreen profile.
- Internal Sourced Candidates.
- Job requisition profile.
- My Applications.
- My Candidates.
- My Job Applications.
- Source Effectiveness.
- Source to Pipeline.

Steps

1. Create Segment-Based Security Groups.

   Create a security group that grants specific security groups access to specific security segments.
2. Edit Domain Security Policies.

   Update the security policy for these domains on the Recruiting functional area:

   - *Candidate Data: Job Application*
   - *Candidate Data: Other Jobs*
   - *Candidates for My Jobs*
3. Activate Pending Security Policy Changes.

Result

Only users with segmented security can view candidate job application information based on the recruiting stage of the candidate's job application.

Steps: Set Up Parallel Stages

Prerequisites

- Configure the *Job Application* business process. See Steps: Configure the Job Application Business Process.
- Confirm that your subprocess *Completion* steps are also your *Make Decision* steps on the *Job Application* business process.

Context

Parallel stages improve recruiter efficiency by enabling candidates to be in more than 1 stage in the job application process at the same time. However, a candidate can only receive 1 offer or employment agreement at a time.

Steps

1. Access the Maintain Feature Opt-Ins report.

   Enable the Dynamic Parallel Stages feature.

   Note: You can't disable Dynamic Parallel Stages once you enable it.
2. Edit Business Process Security Policies.

   For the *Job Application* business process, add security groups to the Initiate Parallel Step action.
3. For each primary stage from which you want to initiate parallel stages, complete the Possible Parallel Steps section on the *Job Application* business process.

   See Steps: Configure the Job Application Business Process on page 197.

4. (Optional) Access the Maintain Business Process Definition Selection task.

   To enable parallel stages on existing job applications, click Enable Use Latest Dynamic Business Process for the *Job Application* business process type.

Example

To initiate the Background Check stage once a candidate accepts a verbal offer, configure these stages to run at the same time:

- *Offer* or *Employee Agreement* (Primary)
- *Background Check* (Parallel)

Steps: Set Up Machine Learning for Recruiting

Prerequisites

For suggested jobs, configure the *Candidate as Self* security group to enable modify access on these domains in the Recruiting functional area:

- *Self-Service: Candidate*
- *Self-Service: External Recommended Jobs*

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Context

You can enable machine learning for Recruiting to display:

- Suggested skills on job applications, job requisitions, and the Prospect Introduce Yourself page.
- Suggested jobs to external candidates.
- Skills Cloud skills to create dynamic candidate pools.

Candidates can view and select suggested skills when entering skills on their job application. Workday bases the suggestions on an external candidate’s uploaded documents when using the *Quick Apply* option. For internal candidates, the suggested skills are based on several factors from the worker profile, such as their:

- Skills
- Current job title and job description

- Job history
- Projects
- Public feedback
- Completed Learning courses

You can view suggested skills for job requisitions on the Skills section when you create or edit a job requisition. Workday bases suggested skills on similar worker profiles and the data that you enter for these fields on the Job section:

- Job Posting Title
- Job Description
- Additional Job Description
- Job Description Summary

Prospects can view and select suggested skills on the Prospect Introduce Yourself page. Candidate Engagement customers can enable prospects to select skills when they register for a recruiting event.

External candidates can view active job suggestions on the:

- Candidate Home page of an external career site.
- Job Posting page, whether they sign in to their account or not.

Workday suggests jobs based on jobs the candidate:

- Applies to.
- Views.

Steps

1. Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   On the Innovation Services Opt-In task, select the HCM ML Features and Third Party Connectors GA service on the Available Services tab in the HCM category.
2. Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

   Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.
3. Access the Maintain Skills and Experience Setup task.

   To enable suggested skills, select these check boxes:

   - Enable Workday Skills Cloud
   - Populate Suggested Skills for Workers
   - Populate Suggested Skills for Internal Candidates
   - Populate Suggested Skills for External Candidates and Prospects
   - Populate Suggested Skills on Job Requisitions

Result

There's a delay from when you enable Skills Cloud and our background jobs complete processing maintained skills in your tenant. Workday displays suggested jobs within 24 hours. When you post a new job requisition or update an existing one, Workday displays those changes in the Suggested Jobs section within 24 hours. For creating dynamic candidate pools using Skills Cloud skills, we recommend waiting a minimum of 1 week before reviewing the remaining maintained skills and the results from your dynamic candidate pool. See Concept: Automated Skill Management

Next Steps

You can test the feature in your Implementation tenants by accessing the Maintain Weekly Machine Learning Activation for Implementation Tenant task and selecting the Extract for Implementation Tenant check box for the Machine Learning Innovation Service you wish to use.

You can't test the feature in your Sandbox tenant. Workday no longer enables machine learning data extraction in Sandbox.

Related Information

Reference

Workday Community: Suggested Jobs for External Candidates

2024R1 What's New Post: Skills Cloud for Candidate Pools and Prospect Introduce Yourself

2023R2 What's New Post: Suggested Skills on Internal Apply

Workday Community: Available Innovation Services – Service Descriptions and Exhibits

Steps: Add Notification Delays to Recruiting Business Processes

Context

Workday enables you to add a timed delay to custom workflow notifications on recruiting-related business processes. Delaying a notification can prevent a candidate from receiving a rejection message immediately after they submit their job application.

You can create the delay using either the moment the trigger occurs or a report field and define the amount of time for the delay.

Delayed notifications don't work with attachments.

Steps

1. Create Notification Routing Rules.

   Create a routing rule that enables *Email* as a Channel and *Immediately* as the Default Frequency.
2. Access the Edit Tenant Setup - Notifications task.

   Select the Enable Reminders check box on the Reminder Settings section.

   On the Notification Delivery Settings section, select the Business Processes parent notification type. Add the new routing rule in the Rule prompt on the Custom Business Process Notifications notification type.
3. Access the business process definition for 1 of these business processes:

   - *Assessment*
   - *Background Check*
   - *Employment Agreement*
   - *Interview*
   - *Job Application*
   - *Ready for Hire*
   - *Reference Check*
   - *Review*
   - *Screen*
4. From the related actions menu, select Business Process > Add Notification.
5. Complete the Triggers section.

   The trigger for the delay can be a disposition status, or an entry or exit step in the business process definition.

6. Complete the Delay Notification section.

   Workday displays this section when you must select the Enable Reminders check box on the Edit Tenant Set Up - Notifications task.

   The timing of the delay can be the moment the trigger occurs or a report field. You can define the amount of time for the delay. A 1-day delay occurs at midnight of the next day.

Result

You can view pending notifications using the:

- Pending Notifications grid on the All Events profile on the Full Process Record task.
- Delay column on the Custom Notification section on the business process definition.
- Pending Business Process Notifications report. In the Functional Area prompt, you can select the Recruiting functional area to view pending recruiting notifications.

Candidates won't see their job application disposition until they receive the delayed notification. The notification delay also applies to the job application status on the Candidate Home page of an external career site.

Steps: Set Up Auto-Initiate Offers and Employment Agreements

Context

You can configure the *Offer* and *Employment Agreement* business process steps to automatically initiate and send an offer and employment agreement to the candidate quicker. Auto-initiate for the *Offer* step only works when salary or hourly are the only forms of compensation in the offer. This doesn't work if the compensation includes other forms of compensation such as:

- Allowance
- Bonus
- Commission
- Merit
- Other
- Period
- Salary
- Stock
- Unit Salary

When a user moves the job application to the step that's been selected for auto-initiation, Workday automatically submits the offer or employment agreement to the candidate. The candidate can then review the documents and complete any related tasks.

Steps

1. Set Up Recruiting to Staffing Field Defaults on page 205.

   On the Maintain Staffing Field Defaults task, on the Employment Agreement or Offer tabs:

   a. Select either the *Contract End Date* or *Hire Date* for the Field.
   b. Select the Report Field or enter the default date for the Specific Value.
2. Configure the *Job Application* business process.

   See: Steps: Configure the Job Application Business Process on page 197.

3. On the *Job Application* business process definition, select *Offer* or *Employment Agreement* on the Specify field on the Possible Next Steps or Possible Parallel Steps grids for any step and select the Automatically Initiate check box.

   Note: If you have *Approval* and *Review* steps set up, the auto initiate offer step still completes in the business process. If any required fields are missed in the business process, the *Offer* or *Employment Agreement* steps don't auto-initiate.

Next Steps

Test auto-initiation thoroughly to confirm that the necessary fields are filled out for the candidate's offer or employment agreement.

Set Up Recruiting to Staffing Field Defaults

Prerequisites

Set up these business processes in the Staffing functional area:

- *Add Additional Job*
- *Change Job*
- *Contract Contingent Worker*
- *Hire*

Set up Workday Recruiting.

Context

You can set up Workday to populate these fields when you move a candidate to the Ready for Hire stage in Workday Recruiting:

- Benefits Service Date
- Company Service Date
- Continuous Service Date
- Cost Center
- First Day of Work
- Insider Types
- Job Classification
- Job Title
- Pay Rate Type
- Work Shift
- Worker's Compensation Code Override

These defaults apply only to these Staffing business processes:

- *Add Additional Job*
- *Change Job*
- *Contract Contingent Worker*
- *Hire*

When you configure this feature, you:

- Improve the flow of data from Workday Recruiting to Workday HCM.
- Reduce data entry and errors.
- Support autocomplete for staffing events in Workday HCM.

Steps

1. Access the Create Staffing Field Defaults Condition Rule task.

   Create a set of rules that you can use to determine when to populate a specific field.

   Security: *Set Up: Staffing* domain in the Staffing functional area.
2. (Optional) Create Calculated Fields.

   Create custom fields to use in staffing field defaults. Select the Staffing Field Defaults business object.
3. Access the Maintain Staffing Field Defaults task.

   Select a business process tab. Associate 1 or more condition rules for specific staffing fields in the business process and define the value that populates that field. As you complete this task, consider:

   - Workday processes rules in the order they display in the grid. Once a field meets the conditions for a rule, Workday ignores any remaining rules for that field.
   - You can't use calculated fields that contain sensitive data in the Report Field. Example: *Date of Birth*.
   - To ensure that a field always populates, create a row at the bottom of the grid where:
     - The Condition Rule field is blank.
     - The Value field has a value.
   - The Field that display are on the Staffing Field Defaults business object, and can be:
     - An existing Workday-delivered field.
     - Calculated fields you created.

   Security: *Set Up: Staffing* domain in the Staffing functional area.

Result

When you move a candidate to Ready for Hire, Workday applies the rules you created to populate fields in the staffing event. When an event has autocomplete enabled on the business process definition, Workday attempts to complete the event automatically with the information in the populated fields.

Setup Considerations: Autocomplete Staffing Events on page 519

Setup Considerations: Job Changes on page 838

Tasks

Hire Employees on page 690

Contract Contingent Workers on page 723

Add Additional Jobs on page 879

Steps: Set Up Recruiting Notes

Prerequisites

This feature requires session storage. Check your browser settings or contact your IT team to confirm whether your organization enables session storage.

Context

Users can collaborate, communicate, and track recruiting activity by adding and viewing notes on:

- Candidates.
- Candidate job applications.
- Job requisitions.

- Prospects.

Notes support collaborative hiring across recruiting and hiring team roles. Storing your notes in Workday reduces the need for third-party applications and potential data compliance issues.

Steps

1. Create Segment-Based Security Groups.

   Create security groups and give them appropriate view or modify access.
2. Edit Domain Security Policies.

   Configure these domains in the Recruiting functional area:

Domain	Description
Manage: Candidate Job Application Notes	Grants access to add, edit, and view notes at candidate-level on the candidate profile.
Manage: Job Requisition Notes	Grants access to add, edit, and view notes on job requisitions.
Manage: Maintain Recruiting Notes	Enables you to use the Maintain Recruiting Notes task to view or delete notes.
Manage: Candidate Notes	Grants access to add, edit, and view notes on the candidate and prospect profile.
3. (Optional) Create Custom Reports.

   You can use these data sources:

   - *Candidate Job Application Notes*
   - *Candidate Notes*
   - *Job Requisition Notes*

Result

To add a note, access the job requisition, candidate, or prospect profile. Select the note icon to expand the side panel, and select the Add a Note button.

To view or delete notes, access the Maintain Recruiting Notes task.

To purge notes, you can select these purgeable data types on the Purge Person Data task:

- Candidate Job Application Notes
- Candidate Notes
- Job Requisition Notes

Example

As a hiring manager, you can add a note to a job requisition to ask recruiters to inform candidates that the role involves 50% travel. Recruiters and others with access to job requisition notes can see and reply to this note.

2022R1 What's New Post: Candidate Job Application Notes

Create Recruiting Dispositions

Prerequisites

Security: *Set Up: Recruiting* domain in these functional areas:

- Recruiting
- Talent Pipeline

Context

Recruiting dispositions allow you to create reasons for declining a candidate's job application. You can assign dispositions to different stages of the Job Application business process, allowing recruiters to decline candidate applications.

You can create disposition categories:

- Before creating your dispositions in the Maintain Recruiting Disposition Categories task.
- As you create your dispositions.

Steps

1. Access the Maintain Recruiting Dispositions task.

   Create the reasons for declining a job application.
2. As you complete the task, consider:

Option	Description
Disposition Category	(Optional) Select the category for the disposition. You can access the Create Recruiting Disposition Category task from the prompt to create a category. Workday displays disposition categories as prompt categories in the Disposition Reason prompt when users are declining job applications.
Reason	Enter the name or a short description of the reason why a candidate job application is being declined. This is the primary explanation for the disposition.
Candidate Label Override	This field allows you to customize the label that candidates see in notifications related to their job application. Enter the name or description that you want to use instead of the Reason field for custom notifications to candidates. This label override displays when you use the Candidate Disposition Reason and Candidate Disposition Reason as Text report fields in custom notifications.
Maps to	Select if you want to map the disposition to either the *Rejected* or *Declined by Candidate* recruiting stage. This mapping helps to categorize and track the reasons for declining candidates within the job application process.

Result

You can manage disposition categories in the Maintain Recruiting Disposition Categories task.

Next Steps

Assign recruiting dispositions to stages of the Job Application process to allow recruiters to decline candidate applications.

2024R1 What's New Post: Recruiting Disposition Categories

Concept: Parallel Stages

Overview

A parallel stage is a recruiting stage a candidate can be in at the same time as a primary stage. Workday categorizes stages as:

- Primary.
- Parallel.

You can configure the *Job Application* dynamic business process to define:

- The order in which candidates move through the recruiting process.
- The primary stages that can have parallel stages.

When configuring parallel stages on the *Job Application* business process, consider stages that aren't dependent upon another stage to complete before you begin it; such as:

- *Interview*
- *Background Checks*
- *Reference Checks*

Example, a company might want:

- A candidate to complete an assessment test (parallel) when they are in the interview stage (primary).
- Run a background check (parallel) when making an offer (primary).

You can use condition rules to refine when a parallel stage runs.

You can only run 1 offer or employment agreement stage at a time.

Parallel stages support automatic stage routing for declining candidates, but not automatic stage routing for moving candidates forward.

Start a Parallel Stage

Workday enables you to start a parallel stage for either an individual candidate or multiple candidates at a time.

For individual candidates, start a parallel stage from the:

- Start Parallel Stage button on the candidate profile.

  Note: The Start Parallel Stage button is separate from the Move Forward and Decline buttons and isn’t available on mobile devices.
- Job Application > Move Candidate related action menu on the candidate name.

For multiple candidates, start a parallel stage from these reports and tasks:

- Candidate Job Applications report accessed from the Recruiting Hub.

- Review Candidate report on the Recruiting Hub and the Job Requisition profile.
- View Internal Candidates report accessed from Recruiting Hub.
- View Referred Candidates report accessed from the Recruiting Hub.

When you start a parallel stage, Workday records the event in the Process History. You:

- Can only have 1 *Offer* or *Employment Agreement* in progress for a job application at any given time.
- Can configure stages to run at the same time if they don't depend on the completion of other stages. Example: *Interview* and *Reference Check*.
- Can't use the Move Forward task to move a candidate to another stage from a parallel stage.

Complete a Parallel Stage

Use the Move Forward task to complete a parallel stage that's in the *Make Decision* step. You can also move a candidate forward in a primary stage. However, you can only take 1 action at a time and it's recorded on the candidate's Process History report.

The Move Forward button displays only when a primary or parallel stage is in the *Make Decision* step in the applicable business process definition.

Workday completes all parallel stages when you hire a candidate or disposition a job application. To prevent Workday from completing the parallel stages, configure a condition rule.

Decline from a Parallel Stage

Workday enables you to decline a job application from an in-progress primary or parallel stage for:

- Individual candidates. Workday enhances the Decline button to include parallel stages. Declining enables you to select the disposition reason for a primary stage or a parallel stage.
- 1 or more candidates using the Candidate List report or candidate profile. The Decline Job Applications task also displays the dispositions for both primary and parallel stages.

Workday closes the job application and the entire job application event and records the action in the candidates' Process History report.

Reference: Search Prefixes for Recruiting

You can use prefixes in Workday Search to locate particular recruiting objects quickly. Search prefixes are lowercase letters, followed by a colon (:). You can use the search categories to narrow down your search results.

Object	Prefix	Example
Candidate	cand:	Search using the candidate's name, ID, or email address: • cand: s.lee@gms.com • cand: C00000087 • cand: sara lee
Candidate Pool	pool:	Search using the candidate pool name: • pool: sales candidates
Contingent Worker	worker:	Search using the contingent worker's name, ID, or email address: • worker: alice becker • worker: A06746

Object	Prefix	Example
		• worker: abecker@gms.com
Employee	worker:	Search using the employee's name, ID, or email address: • worker: sophie petit • worker: C00000037 • worker: s.petit@gms.com
Job Family	jobfamily:	Search using the job family name: • jobfamily: sales
Job Profile	job:	Search using the job profile name or ID: • job: accountant • job: A503004
Job Requisition	jr:	Search using the job posting title or job requisition ID: • jr: store clerk • jr: R00245
Location	loc:	Search using the location name: • loc: sydney
Pre-Hire	ph:	Search using the pre-hire's name or email address: • ph: david flores • ph: dflores@gms.com
Prospect	prospect:	Search using the prospect's name or ID: • prospect: evan smith • prospect: C00000088

Related Information
Reference
Reference: Search Workday

Reference: Tenant Analyzer

The Tenant Analyzer (secured to the *Set Up: Tenant Setup - Tenant Analyzer* domain in the System functional area) is a preconfigured profile of reports for reviewing your recruiting configurations to enable you to:

- Verify your tenant configuration against Workday recommendations.
- Troubleshoot performance issues.

As your tenant grows, you can also use Tenant Analyzer to get a quick inventory of your recruiting setup.

Recruiting Profile Group

Report	Description	Example
Recruiting Performance Considerations	Displays recruiting configurations that don't meet Workday recommendations.	Identify report fields that you can update to improve performance.
Recruiting Tenant Level Settings	Displays recruiting configurations that don't meet Workday recommendations.	Verify tenant level configurations.

FAQ: Recruiting

Can I cancel a recruiting event?

If you have security access to the *Job Application* business process, you can cancel an *In Progress* event. This action also cancels all steps in the business process. The candidate can then reapply for the job.

How do I share job postings on social media networks?

To share jobs posted to both internal and external career sites:

1. Add either the *All Employees* or *All Contingent Workers* or both roles to the security policy on the Recruiting *Social Share* domain.
2. Select the countries where you want to enable social sharing using the Configure Social Sharing Targets task.

   Security: *Set Up: Social Sharing* domain in the System functional area.

When workers search for a job on your internal career site, they can click the social media icon on the job posting description page and sign in to their social media account. Workday creates a new posting with the *We're Hiring!* header and a link to the external job posting. The worker can edit the *We're Hiring!* text.

Can I include the same step multiple times in the Job Application business process?

Yes, but when you configure the *Job Application* business process, use Step Label Override to distinguish between the steps. Example: Phone Interview versus On-site Interview.

	If you want the notification sent to different people, configure: 1. The security policy for the applicable business processes. Enter *Initiator* in the Security Group field for all Action Steps: • Assess Candidate • Background Check • Interview • Offer • Ready to Hire • Reference Check • Review Candidate • Screen 2. The applicable business processes. Select *Initiator* as the security group for *Step b* (after the initiation step) in the *business process definition*. 3. The *Job Application* business process and select a specific role, such as *Recruiter* or *Manager*, in the Group field for the step.
Can I correct or rescind job requisition events?	You can correct or rescind a *Job Requisition* event when the *Post Job* business process is a step in the business process. *Job Requisition* events include events resulting from: • Close Job Requisition • Create Job Requisition • Edit Job Requisition *Job Requisition* events can be: • Corrected if the Recruiting Start Date is earlier than the Job Posting Start Date. Corrections don't reflect in active job postings. You have to remove the job posting and post the job again for the changes to display. • Rescinded when there aren't any job applications associated with the job. Workday also rescinds the job posting event.
How do I enable the career site from the Recruiting System account?	The Recruiting System account offers the ability to modify settings in the Edit Workday Account task. If the Account Disabled check box is selected, candidates can’t access the career site. To provide access, clear the check box. Additionally, if a date and time in the Account Expiration Date fields has passed, candidates can't access the career site. To provide access, clear the date fields.

Example: Configure a Flexible Recruiting Process

Context

This example illustrates a recruiting plan that enables complete flexibility in the recruiting process. Your company wants to be able to move candidates to any stage in the process and repeat any stage. For legal and security reasons, you must include reference and background checks.

Prerequisites

Create 2 candidate dispositions on the Maintain Recruiting Dispositions task:

- Doesn't meet requirements.
- Not interested.

Steps

1. Access the *Job Application* business process.
2. Click Edit Dynamic Definition and click OK.
3. In the Initial Step section, select *Recruiter* in the Group field.

   Only the recruiter can complete the *Review* stage.
4. For each stage, in the Possible Next Steps section, add these steps:

Specify	Group
Screen	Manager
Assessment	Manager
Interview	Manager
Reference Check	Recruiter
Offer	Recruiter
Background Check	Recruiter
Ready for Hire	Not available

   After you add the *Ready for Hire* step and click OK, Workday automatically populates the Completion Event with these business processes:

   - *Add Job*
   - *Change Job*
   - *Contract Contingent Worker*
   - *Convert to Employee*
   - *Hire Employee*
5. For each stage, select these dispositions in the Possible Conclusions section:

   - *Doesn't meet requirements*
   - *Not interested*

Job Requisitions for Recruiting

Setup Considerations: Job Requisitions for Recruiting

You can use this topic to make configuration decisions for job requisition functionality. It explains:

- Why to set it up.
- How this feature fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

With Workday Recruiting, you can use job requisition functionality to track requirements for unfilled positions or jobs and to move candidates through the recruiting process.

Business Benefits

By configuring job requisitions, you can:

- Improve recruiting efficiency by tracking candidate movement within the job requisition.
- Easily manage your job requisition activities using the Job Requisition Workspace.
- Ensure accurate high-volume recruiting by carrying out mass actions on the candidate grid.
- Increase the number of positions on your job requisitions to reflect your changing business needs.
- Report on your recruiting data to support your planning and compliance needs.
- Recruit for sensitive positions using confidential job requisitions.
- Highlight critical or difficult-to-fill job requisitions using Spotlight Jobs.
- Provide nonspecialist users, such as hiring managers, an easier way to create job requisitions.
- Quickly view the status of your in-progress job requisition events using the Workday Assistant chatbot.

Use Cases

You can use job requisition functionality to:

- Create a new position using recruiting data.
- Track requirements for unfilled positions or jobs.
- Replace a terminated worker.
- Increase the number of positions on a job requisition if your hiring needs change.
- Post to internal and external career sites to advertise jobs.
- Hire confidential candidates for sensitive positions.
- Create job requisitions using a simplified process.
- Request the details of your in-progress job requisition events using Workday for Slack or Workday for Microsoft Teams.

Questions to Consider

Questions	Considerations
How do you want to manage compensation details?	You can include compensation: • At your preferred stage of the *Job Requisition* business process. • As a part of the job requisition consolidated template.
What fields do you want to display on your job requisitions?	You can configure which fields display on a job requisition by configuring optional fields, security domains, and embedded analytics.

Questions	Considerations
	When using the Configure Optional Fields task for job requisitions and confidential job requisitions, you can set these fields as nonenterable for some or all security groups: • Additional Job Description • Job Description • Job Description Summary Example: You can enable recruiters to edit job descriptions while managers can only view them.
How do you want to configure questionnaires and assessments?	You can: • Configure the assessments and questionnaires that you want to make available for users to select. • Control which assessments and questionnaires Workday populates on job requisitions by creating condition rules.
How do you want to populate job requisition information?	You can configure Workday to populate job requisitions with information from existing positions. You can use information from the: • Position when you first created it. • Worker last hired into that filled position. You can also configure Workday to populate the job description and job description summary from the job profile instead of the position. When you create a new position as part of a job requisition, Workday populates the position details from the job requisition. You can configure Workday to populate scheduled weekly hours automatically from a working time rule if you: • Define a working time eligibility rule. • Enter information when creating a job requisition that matches the working time eligibility rule.
Who do you want to create your job requisitions?	For nonspecialist users, such as hiring managers, you can configure the simple, one-page Start Job Requisition task, or items in prompts.
How do you want to manage several job requisitions at the same time?	You can use mass actions to close, freeze, or unfreeze up to 10, 000 unfilled job requisitions at the same time. Example: Your organization has introduced a hiring freeze, and you need to freeze all of your job requisitions at once.
How do you want to highlight critical job requisitions?	You can use Spotlight Jobs to highlight important or hard-to-fill job requisitions.
How do you want to number your job requisitions?	You can define IDs to track your job requisitions. Example: R-2

Recommendations

- Keep your job profiles up to date so that Workday can use them to populate information on the job requisition.
- When configuring your security, only enable users to override hiring restrictions if you want them to be able to change details during the hiring process. Example: Location or Time Type.
- To improve your recruiting efficiency, use evergreen requisitions for your high-volume recruiting needs.
- Don't use padding when configuring your ID definitions for job requisitions as it can impact performance. When you need to use padding, use a setting of 10 zeros or more. Example: R-000000000001

Requirements

No impact.

Limitations

You can increase the number of positions on a job requisition after you've created it, but you can't decrease the number.

When you create a job requisition using an existing position, you can only select that position.

Tenant Setup

You can configure settings on the Edit Tenant Setup - HCM task to enable:

- Workday to populate organizations on job requisitions.
- Job requisitions for all staffing events in position management organizations or based on condition rules.
- Defaulting behavior for job requisition data in position management organizations.
- Workday to populate the Job Description and Job Description Summary fields from the job profile.
- Users to remove or replace a questionnaire on a job requisition, even after a candidate applies.
- You to create your ID definition for new job requisitions.

On the Edit Tenant Setup - Recruiting task, you can configure to enable candidates to reapply to job requisitions from the Candidate Home or internal career sites for nonworkers.

You can also access the Edit Tenant Setup - Assistant task to enable or disable the in-progress job requisitions feature for the Workday Assistant chatbot.

Security

Configure these security domains in the Recruiting functional area.

Domains	Considerations
Confidential Job Requisitions	Users can view and manage confidential job requisitions.
Job Requisitions for Recruiting	Users can access job requisition details that are specific to recruiting. Example: Job posting details.
Job Requisition Workspace	Users can access the Job Requisition Workspace.
Link Evergreen and Job Requisitions	Users can link an evergreen requisition to 1 or more job requisitions.

Domains	Considerations
Move Candidate to Linked Requisition	Users can move candidates between an evergreen requisition and linked job requisitions.

Configure these security domains in the Pre-Hire Process functional area:

Domains	Considerations
Job Requisition Data	Users can access job requisition data.
Pre-Hire Process: Mass Action on Job Requisitions	Users can carry out mass actions to close, freeze, or unfreeze job requisitions.

Business Processes

Business Processes	Considerations
Close Job Requisition	Enables you to close a job requisition. You can't: • Hire into a closed job requisition. • Reopen a closed job requisition.
Freeze Job Requisition	Enables you to freeze or unfreeze job requisitions. Example: You want to stop job requisitions during a hiring freeze.
Job Requisition	Enables you to review and approve steps for job requisitions.
Job Requisition Change	Enables you to edit job requisitions.

Reporting

Reports	Considerations
Job Requisition Aging	View how long job requisitions have been open to help with planning and recruiting. Workday calculates the data in this report using the difference between the current date and the recruiting start date.
Job Requisition Audit Report	View closed, filled, or frozen job requisitions that have active job postings or candidates. Users can take mass action on this report to: • Disposition candidates. • Unpost jobs.
My Open Job Requisitions	View a list of your open job requisitions.
View In-Progress Job Requisitions	View a list of Create Job Requisition events that are awaiting submission or approval.

Use these data sources in custom reports:

- All Job Requisitions
- Job Requisitions - Indexed
- Job Requisitions by Role

Integrations

Web Services	Considerations
Close Job Requisition *Create Job Requisition* *Edit Job Requisition*	Use this web service to manage your job requisitions.
Move Candidate to Linked Job Requisition	Use this web service to move a candidate from an evergreen requisition to a job requisition.
Manage Job Requisition Freeze	Use this web service to freeze or unfreeze open job requisitions.
Move Job Requisition	Use this web service to move a job requisition from 1 job management organization to another.

Connections and Touchpoints

Features	Considerations
Assessments	You can configure assessments to include in your job requisitions.
Compensation	You can include compensation details on your job requisitions.
Evergreen Requisitions	You can move candidates from evergreen requisitions to job requisitions when you're ready to hire them.
Job Application Templates	You can assign job application templates to job requisitions.
Job Postings	You can use open job requisitions to post jobs on career sites.
Headcount Plans	You can create condition rules to check for budget plans when you create job requisitions for existing positions.
Offer	You can use job requisitions to move candidates to the Offer stage.
Qualifications	You can add qualifications on job requisitions for position management organizations.
Questionnaires	You can configure questionnaires to attach to your job requisitions.
Staffing	You can add the *Create Job Requisition* business processes on these staffing business processes: • *Change Job* • *Termination*

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Other Impacts

Workday populates job postings using the data that you enter on a job requisition. You can use job posting templates to configure this data.

When you update a job requisition that affects role assignments, Workday automatically reassigns related in-progress My Tasks items to the enabled roles.

Steps: Set Up Job Requisitions for Recruiting

Context

Set up job requisitions for Recruiting so you can post jobs that candidates can apply to. Recruiters can also create job applications on behalf of candidates. You can view and compare candidates for each job requisition.

You can use candidate questionnaires at any stage of the recruiting process, and assign them to:

- Candidates.
- Any security group involved in the hiring process, such as interviewers or hiring managers.

Steps

1. Edit Domain Security Policies.

   Configure the *Job Requisitions for Recruiting* domain in the Recruiting functional area.
2. Set up questionnaires.

   You can include up to 4 questionnaires with a job requisition.

   See Steps: Set Up Questionnaires for Recruiting on page 455.
3. (Optional) Steps: Set Up Profiles and Profile Groups.

   Select the content you want to display on:

   - The Job Requisition Composite View profile.
   - Each of the profile groups for the Job Requisition Composite View profile.
4. (Optional) Access the Maintain External Recruiting Instructions task.

   If you select the Don’t Send to Recruiting System check box, Workday doesn't send the instruction to:

   - External recruiting companies.
   - Third-party recruiting vendors.

   Security: *Set Up: Pre-Hire Process* domain in the Pre-Hire Process functional area.
5. Hide or Require Optional Fields.

   You can hide or require fields on job requisition tasks, reports, and profiles. If you want to enable these features, select:

Feature	Functional Area	Field
View the number of candidates who are in these stages: • *Review*. • *Interview*. • *Employment Agreement*, *Offer*, or *Ready for Hire* (excluding declined offers).	Recruiting > View Job Requisition Detail	Candidate Stage Metrics

Feature	Functional Area	Field
View the Extend My Search button.	Recruiting > Job Requisition Overview for Composite View	Extend My Search

6. (Optional) Set up Spotlight Jobs.

   Use Spotlight Jobs to highlight critical job requisitions with a customizable label.

   See Steps: Set Up Spotlight Jobs on page 225.
7. (Optional) Enable suggested skills for job requisitions.

   You can enable machine learning to suggest skills when creating or editing a job requisition.

   See Steps: Set Up Machine Learning for Recruiting on page 201.

Next Steps

View all open, pending approval, frozen, and closed job requisitions using the Manage Job Requisitions report.

Post jobs to internal, external, or recruiting agency career sites.

Steps: Set Up and Create Confidential Job Requisitions

Context

You can create sensitive job requisitions that are only visible to a specific set of workers for confidential recruiting efforts. Example: Executive level positions.

Confidential job requisitions respect contextual security like regular job requisitions, with additional security for confidentiality. This confidentiality also applies to job applications for confidential job requisitions.

Steps

1. Set Up Assignable Roles.

   Create roles for groups of users who should have access to confidential job requisitions.
2. Edit Domain Security Policies.

   Access the security policy for the *Confidential Job Requisitions* domain in the Recruiting functional area.

   Specify the security groups that need to view and edit confidential job requisitions.
3. Edit Business Process Security Policies.

   For the *Job Requisition* business process, specify the security groups that can create a confidential job requisition for the *Create Confidential Job Requisitions* initiating action.
4. Activate Pending Security Policy Changes.
5. Edit Business Processes.

   Configure the *Job Requisition* business process definition in the Recruiting functional area. You can create a rule-based process definition to:

   - Determine if the requisition is confidential.
   - Route approval steps to a different role when the job requisition is confidential.

6. Access the Create Confidential Job Requisition task to create a confidential job requisition.

   You can't copy details from an existing job requisition or enter a position, even if you use position management.

   Workday generates a unique ID for the confidential job requisition when the *Create Job Requisition* business process starts. The ID displays in the job requisition name and all related communications, making it easier to differentiate between job requisitions with the same name.

   You can search for an in-progress Create Confidential Job Requisition task using the automatically generated job requisition ID when you:

   - Save the task.
   - Submit the task for approval.

Result

Candidates can apply to the confidential job requisition. Applicants for the confidential requisition are also confidential.

Next Steps

Send the job requisition to candidates by:

- Posting the job to the internal and external career sites you want to use for confidential candidates.
- Sending candidates a secret URL.
- Using the Create Job Application task to apply on their behalf.

Create and Edit Job Requisitions on page 611

Steps: Set Up Job Description Generation on Job Requisitions

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Security: *Manage: Machine Learning for Job Descriptions* domain in the Staffing functional area.

Grant the appropriate roles Modify access on these domains:

- *Job Profile: Generate Job Descriptions*
- *Manage: Machine Learning for Job Descriptions*

Context

Job Description Generation on Job Requisitions enables you to create job descriptions using artificial intelligence, reducing manual effort and ensuring that every job description includes all the details that you consider important. Example: Ensuring that every job description that you post includes your organization's commitment to Diversity and Inclusion.

Workday uses these data points to create job descriptions:

- Job Posting Title
- Company Name
- Skills

Steps

1. Access the Innovation Services and Data Selection Opt-In task.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.
2. On the Innovation Services Opt In tab, select HCM on the Available Services tab.
3. On the Maintain Innovation Services Data Selection Opt In tab, select HCM: HCM ML Features and Third Party Connectors GA.
4. Select the Opt In check box to enable these categories on the HCM: HCM ML Features and Third Party Connectors GA tab:

   - Job Posting Data
   - Job Requisition Data

   If you’re already opted in to Innovation Services and Data Selection Categories, you must select the Opt In to Additional Data check box, if available. You might need to wait 24 hours after you opt in for the Generate with AI button to display on your tasks.

Result

You can use the Generate with AI button on the Job Description field on these tasks, to create job descriptions:

- Create Job Requisition
- Edit Job Requisition
- Create Evergreen Requisition
- Edit Evergreen Requisition
- Create Confidential Requisition
- Edit Confidential Requisition

Job Description Generation on Job Requisitions isn’t currently supported on the Start Job Requisition task.

Setup Considerations: Job Requisitions for Recruiting on page 214
Workday Community: Job Description Generation on Job Requisitions AI Fact Sheet

Steps: Set Up Primary Recruiters

Context

You can manage recruiter workload by assigning primary recruiters to job requisitions. Instead of all recruiters receiving notifications associated with the job application process, they go to only 1 person.

Steps

1. Set Up Assignable Roles.

   Add a row with these values:

Field	Description
Role Name	Enter the name of a new recruiter role.
Workday Role	Select *Primary Recruiter*.
Enabled for	Select *Job Requisition*.
Hide on View if Not Assigned	Select the check box.
Role Assignees Restricted to	(Optional) Select the users or positions that you want to restrict the assignment of job requisitions.

   a) Enter the name of a new recruiter role.
   b) Select *Primary Recruiter* in the Workday Role column.
   c) Select *Job Requisition* in the Enabled for column.
   d) Select the Hide on View if Not Assigned check box.
   e) (Optional) Select the users or positions that you want to restrict the assignment of job requisitions to in the Role Assignees Restricted to column.
2. Create Role-Based Security Groups.

   Create a role-based security group called *Primary Recruiter*.
3. Edit Domain Security Policies.
   a) Configure the security policy for the *Staffing Actions: Job Requisition Role Assignment* domain in the Staffing functional area.
   b) Add *Primary Recruiter* to domains in the Recruiting functional area where *Recruiter* is already assigned.
4. Access the View Business Process Template report.
   a) From the related action menu of these business process types, select Business Process > Configure Consolidated Template:
      - *Job Requisition*
      - *Job Requisition Change*

   b) Add a row with *Assign Roles* as a business process type.

   Security: These domains in the System functional area:

   - *Business Process Administration*
   - *Manage: Business Process Definitions*
5. Edit Business Processes
   a) Add *Assign Roles* as an action step on these business processes:
      - *Job Requisition*
      - *Job Requisition Change*

6. Edit Business Process Security Policies.
    a) Add the *Primary Recruiter* role to the security policies for business processes where the *Recruiter* role is already assigned.

        Example:

        - *Assess Candidate*
        - *Job Requisition Change*
        - *Manage Internal Career Apply*
        - *Post Job*
        - *Refer a Candidate*
    b) Replace the *Recruiter* role with the *Primary Recruiter* role for the business process configurations where you want the *Primary Recruiter* role to take action.
7. Activate Pending Security Policy Changes.
8. Access the Edit Tenant Setup - Recruiting task.

    In the Recruiter Overload Count field, enter the number of job requisitions that you consider too many for a single recruiter or primary recruiter.

    See Reference: Edit Tenant Setup - Recruiting.
9. Create and Edit Job Requisitions

    Assign a primary recruiter to a job requisition.

Result

You can view the assigned primary recruiter on these reports and profiles:

- Candidate Pipeline
- Candidate Time Per Stage
- My Applications
- Internal Sourced Candidates
- Source Effectiveness
- Source to Pipeline
- Candidate profile
- Internal career site
- Job requisition profile

Workday assigns the last recruiter working on a job full credit for all job application stages on theCandidate Time Per Stagereport. Example: Initially, you assign Recruiter A to a job requisition. Later, you assign the same job requisition to Recruiter B. Recruiter B gets credit for all stages.

Next Steps

Use the Manage Recruiter Workload report to manage recruiters and their active assigned job requisitions.

Steps: Set Up Spotlight Jobs

Context

Workday enables you to highlight job or evergreen requisitions with a customizable Spotlight Job label, helping increase visibility for positions that are critical or difficult to fill.

Example: You can mark a *Senior AI/Machine Learning Engineer* role as a Spotlight Job because it is:

- Critical: Essential for a new AI-powered product launch.
- Hard-to-Fill: Requires specialized AI, Natural Language Processing, or computer vision skills that are in high demand but short supply.
- Urgent: Must be filled quickly to meet a tight deadline.

Steps

1. Hide or Require Optional Fields.

   You can use the Configure Optional Fields task to:

   - Hide the Spotlight Job field for all users.
   - Hide the Spotlight Job field for specific security groups that you define.
   - Remove the Spotlight Job row from the Configure Optional Fields by Task grid to display the field for all users.

   On the By Functional Area prompt, select:

Option	Description
Pre-Hire Process > Job Requisition	• Create Job Requisition task. • Find Jobs report. • Internal job postings.
Pre-Hire Process > Job Requisition Change	Edit Job Requisition task.
Pre-Hire Process > Job Requisition Details for Composite View	• Job requisition profile. • View Job Requisition report.
Recruiting > Evergreen Requisition	• Create Evergreen Requisition task. • Evergreen requisition profile. • Find Jobs report.
Recruiting > Evergreen Requisition Change	Edit Evergreen Requisition task.
Recruiting > Close Evergreen Requisition	Close Evergreen Requisition task.

2. (Optional) Create Custom Labels.

   Select *Recruiting* on the Term Context prompt to enter a custom label for spotlight jobs.
3. Add Spotlight Job as a facet on your internal career site.
   a) From the related actions menu of a custom report you have created, select Custom Report > Edit.
   b) On the Search Results grid, add a new row for the Spotlight Job - Text field.
   c) On the Advanced tab, on the Facet Options grid, add a new row for the Spotlight Job field.

Result

Spotlight Jobs display at the top of searches on external career sites, but don't display a custom label.

The My Referrals report displays an additional Spotlight Jobs column if at least 1 referral has a job application for a highlighted job requisition.

Concept: Find Jobs

Workday provides these reports for workers to browse job postings:

- Browse Jobs: Available to workers using the Workday browser application. Workers can access this task through Jobs Hub. Workday redirects workers who select the Find Jobsstandard report in global search to this report.
- Find Jobs: Available to workers using the Workday mobile app. You can copy this report to create custom jobs reports for your employees and contingent workers.

These reports enable you to search for and filter job postings. You can search by text or facets, such as Type, Hiring Manager, or Job Family.

With the Find Jobs report, you can use AND, OR, and NOT to build logical expressions in your text search. You can also save your searches to use later. Saved searches are for your personal use and cannot be accessed by other users.

You can create a custom report to add to your internal and external career sites by copying these standard reports:

- Find Jobs for internal career sites.
- Find Jobs Template for External Career Sites for external career sites.

Workday recommends that you make a copy of these standard reports and keep the Workday-delivered version unchanged.

On your custom report, select Facet Options on the Advanced tab to add, remove, or change the display order of facets.

If you edit a custom report that is configured on a career site and it can't execute, Workday reverts to the Workday-deliveredFind Jobs report.

When you click a result, Workday displays theView Job Posting Details page.

Configure the Time to Fill Report

Prerequisites

Security: *Set Up: Recruiting* domain in the Recruiting functional area.

Context

The Time to Fill report enables you to track the average length of time (in calendar days) it takes to fill an opening. The report displays the number of days it took to fill requisitions for each recruiter:

- Under 30 days
- 30 - 59 day
- 60 - 89 days
- 90+ days

You can define the start and end times used in the time-to-fill calculation:

[(End Time - Start Time) - days frozen] / # of positions tied to the job requisition.

You can set the start time as the:

- Completion date of the job requisition.
- Creation date of the job requisition.
- Earliest date for the job posting.
- Recruiting start date.

You can set the end time as the:

- Fill date of the job requisition.
- Completion date of the offer or employment agreement.
- Hire date.
- Latest initiation date of the hire.

Workday bases the standard Time to Fill report on a calculation defined by the *Average Time Calculation 1* report field.

Steps

1. Access the Edit Tenant Setup - Recruiting task.
2. Complete the Time to Fill section.

Related Information

Tasks

Create a Custom Time to Fill Report on page 228

Create a Custom Time to Fill Report

Prerequisites

Configure the *Time to Fill* report.

Context

You can create up to 4 versions of the Time to Fill Report based on the parameters you define for these time-to-fill calculations:

- *Average Time Calculation 1*
- *Average Time Calculation 2*
- *Average Time Calculation 3*
- *Average Time Calculation 4*

Steps

1. Access the Copy Standard Report to Custom Report task.
   a) Select *Time to Fill* from the Standard Report Name prompt.

      We recommend renaming the report.

      Example:*Time to Fill - Calculation 2*
2. In the Additional Info section, on the Matrix profile group and the Column Grouping (Optional) grid, right-click the *Date Range Bands* for*Time to Fill Report* option and selectSee in New Tab .
   a) From the related action menu of the *Date Range Bands* for *Time to Fill Report* calculated field, select Calculated Field for Report > Edit.
   b) In the Source Field prompt, select 1 of these options:
      - *Average Time Calculation 2*
      - *Average Time Calculation 3*
      - *Average Time Calculation 4*
   c) You can close the window for the Calculated Field - Lookup Range Band task.
3. In the Additional Information section, on the Drill Down tab and the Detail Data section, right-click the*Number of Position Available* option in the Field column and select See in New Tab .
   a) From the related actions menu of the*Number of Positions Available* calculated field, select Calculated Field for Report > Edit.
   b) In theArithmetic Expressiongrid, change the*Number of Positions Filled Calculation 1* selection in theFieldcolumn to 1 of these options:
      - *Number of Positions Filled Calculation 2*
      - *Number of Positions Filled Calculation 3*
      - *Number of Positions Filled Calculation 4*
   c) You can close the window for the Calculated Field - Arithmetic Calculation task.
4. In the Detail Data section, on the Drill Down tab change these values:

Option	Changes
Number of Positions Filled - Calculation 1	Number of Positions Filled - Calculation 2 Number of Positions Filled - Calculation 3

Option	Changes
	Number of Positions Filled - Calculation 4
Average Time Calculation 1	Average Time Calculation 2 Average Time Calculation 3 Average Time Calculation 4

5. In the Filter on Instances section on the Filter profile group, change *Number of Position Filled Calculation 1* in the Field column to 1 of these options:
    - *Number of Positions Filled Calculation 2*
    - *Number of Positions Filled Calculation 3*
    - *Number of Positions Filled Calculation 4*

Result

You have another version of the *Time to Fill* report based on the parameters you entered.

Reference: Auto-Reassign Job Requisition Events

When a requisition has a related event with an in-progress step and you modify role-enabled access, Workday automatically reassigns the step to the updated role-enabled users. Workday also automatically reassigns steps when you rescind an event.

Auto-reassign occurs when you modify these role-enabled instances:

- Business Unit
- Company
- Cost Center
- Custom Organization
- Fund
- Gift
- Grant
- Location
- Program
- Region
- Supervisory Organization

Auto-reassign doesn't occur when you use a web service to modify a requisition.

This table summarizes the events related to each requisition type that this feature supports:

Job Requisition Events	Confidential Job Requisition Events	Evergreen Requisition Events
• *Requisition Compensation* • *Create Job Requisition* • *Edit Job Requisition Additional Data* • *Edit Job Requisition* • *Freeze Job Requisition*	• *Edit Job Requisition Additional Data* • *Freeze Job Requisition* • *Job Application* and related subprocesses • *Job Posting*	• *Compensation* • *Edit Job Requisition Additional Data* • *Job Application* and related subprocesses • *Job Posting*

Job Requisition Events	Confidential Job Requisition Events	Evergreen Requisition Events
• *Job Application* and related subprocesses • *Job Posting* • *Recruiting Agency Candidate* • *Referral* • *Supplementary Questionnaires*	• *Supplementary Questionnaires*	• *Recruiting Agency Candidate* • *Referral* • *Supplementary Questionnaires*

This table summarizes the job requisition events Workday reassigns for different requisition types:

Event	Job Requisition	Confidential Job Requisition	Evergreen Requisition
Close Job Requisition	No	No	No
Compensation Event for Job Requisition	Yes	No	Yes
Create Evergreen Requisition *Create Job Requisition*	No	No	No
Edit Evergreen Requisition *Edit Job Requisition*	No	No	No
Edit Job Requisition Additional Data	Yes	Yes	Yes
Freeze Job Requisition	Yes	Yes	No
Job Application	Yes	Yes	Yes
Job Posting	Yes	Yes	Yes
Move Job Requisition	No	No	No
Recruiting Agency Candidate	Yes	Yes	Yes
Referral	Yes	No	Yes
Supplementary Questionnaires for Job Requisition (Post-completion steps only)	Yes	Yes	Yes

Concepts

Setup Considerations: Job Requisitions for Recruiting on page 214
Setup Considerations: Evergreen Requisitions on page 232
Concept: Confidential Job Requisitions, Prospects, and Candidates on page 231

Concept: Confidential Job Requisitions, Prospects, and Candidates

Confidential Job Requisitions

You can make some sensitive job requisitions, such as those for executive-level replacements, accessible to only a specific set of users. Use the *Confidential Job Requisitions* domain in the Recruiting functional area to control who can view and work with these requisitions. Confidential job requisitions don't require a position until you initiate the decision to hire, even if you use position-based job tracking. When you initiate a hire for a confidential job requisition, the selected position doesn't have the additional confidential security.

Workday automatically makes job applications to confidential job requisitions confidential.

You can post confidential job requisitions, but they don't display in the standard Find Jobs reports on internal or external career sites. To send confidential requisitions to candidates, you can:

- Use the Create Job Application task to apply for the confidential job requisition on behalf of a candidate.
- Invite a prospect to apply by sending them a secret URL to the job posting. Instruct prospects not to share the URL with others, because access to the job posting doesn't require users to sign in.
- Post the job to agencies that allow confidential job postings, as configured on the Create Recruiting Agency task. Once posted, these agencies can submit confidential candidates if the agency users have permission to view the confidential postings.

You can't create a confidential job requisition by:

- Copying details from an existing job requisition.
- Using an existing position.
- Creating a new position.

Example: You can't move an existing candidate on a regular job requisition to a confidential job requisition.

Confidential Prospects and Candidates

Use the *View Confidential Prospects* and *Create Confidential Prospects* domains in the Recruiting functional area to control who can create and who can view confidential prospects.

When a confidential prospect applies for a confidential job requisition:

- Users with access to confidential prospects can view the prospects, even if they don't have access to the confidential job requisition.
- Users who only have access to the confidential job requisition can't view the confidential prospect.

Workday displays confidential prospects on:

- Only the Find Candidates report if they also apply for a nonconfidential job.
- The My Candidates report and other reports for users who have access to view them.

When a confidential prospect applies for a normal job requisition:

- The prospect's job application for the nonconfidential job requisition isn't visible to users who have access to only the confidential prospect.
- The prospect isn't visible to users who have access to only the job application and not the confidential prospect.
- Workday displays the candidates on the Find Candidates report.

Nonconfidential Prospects and Confidential Requisitions

When a nonconfidential prospect applies to a confidential job requisition, Workday displays them on the Find Candidates report. Users without access to confidential prospects can't see which job requisition the nonconfidential prospect applied for.

Troubleshooting: Job Requisitions

This topic provides strategies for diagnosing and resolving these job requisition problems:

- Users can't search for job requisitions in global search. on page 232
- Some job requisitions don't display on the Job Requisition Workspace. on page 232
- Job posting title updated on Edit Job Requisition task not reflected on internal Find Jobs report. on page 232

Users can't search for job requisitions in global search.

Cause: You didn't enable job requisitions for the staffing model of your supervisory organization.

Solution:

Steps

Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

1. Access the Edit Tenant Setup - HCM task.
2. In the Job Requisitions section, select 1 of these options:
    - Enable Job Requisitions for Job Management
    - Enable Job Requisitions for Position Management

Some job requisitions don't display on the Job Requisition Workspace.

Cause: When you have more than 1,000 job requisitions, Workday only displays 1000 requisitions on the Job Requisition Workspace.

Solution: Use filters on the Job Requisition Workspace report to narrow down your search results. Example: Primary Recruiter, Hiring Manager.

Cause: You didn't configure the correct security access for the Job Requisition Workspace.

Solution: Add the user to the *Job Requisition Workspace* domain.

Job posting title updated on Edit Job Requisition task not reflected on internal Find Jobs report.

Cause: The job posting template for the internal career site incorrectly uses the Job Posting Title report field that's secured to the Job Requisition Event business object. This enables Workday to return the job posting title from the original Create Job Requisition event.

Solution:

Steps

Security: *Set Up: Job Postings* domain in the Recruiting functional area.

1. Access the Edit Job Posting Template Content task.

    Select the template content for your internal career site.
2. Select *Job Posting Title* in the External Field prompt on the Section Content grid.

    Use the related actions to ensure that the Job Posting Title report field is on the Job Requisitions business object.

Evergreen Requisitions

Setup Considerations: Evergreen Requisitions

You can use this topic to help make decisions when planning your configuration and use of evergreen requisitions. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Evergreen requisitions remain constantly open. With evergreen requisitions, you can:

- Continually source and track candidates for high-turnover, high-volume, or hard-to-fill-positions.
- Move candidates through the *Job Application* business process.
- Move candidates to regular job requisitions when you want to hire them.

Business Benefits

With evergreen requisitions you can:

- Maintain a pool of skilled candidates for positions that are difficult to fill.
- Expedite the hiring process for seasonal or high-volume positions.
- Source candidates for positions when you don't have all the details yet. Example: Location.
- Have multiple job profiles, enabling you to select the most suitable job profile at the time of hire.

Use Cases

- You need to recruit for more than 100 farm workers in a short period of time.
- You want to continually source candidates for a position that is hard to fill.
- You want to recruit graduates well in advance of their start date, before you know which organization they'll belong to.
- You have a position with constant turnover.

Questions to Consider

Questions	Considerations
Do you want to generate offers?	You can configure offers on evergreen requisitions using condition rules. If you don't want to use condition rules, you can move candidates to a regular job requisition to send offers.
Do you want to generate employment agreements?	To generate employment agreements, move candidates to a regular job requisition.
Do you want to include compensation details?	Add compensation details to evergreen requisitions by adding *Request Requisition Compensation* as a step on these business processes: • *Evergreen Requisition* • *Evergreen Requisition Change*
What fields do you want to display on your evergreen requisitions?	You can define which fields you display by using: • The Configure Optional Fields task. • Security domains. When configuring options, you can set these fields as nonenterable for some or all security groups:

Questions	Considerations
	• Additional Job Description • Job Description • Job Description Summary Example: You can enable recruiters to edit job descriptions while managers can only view them.
Do you want applications to include candidates' personal information?	Specify the location when you create an evergreen requisition to ensure that applications contain personal information related to the location.
Do you want to enable your candidates to complete assessments during the application process?	You can: • Configure assessments using the Maintain Recruiting Assessment Tests task. • Create condition rules using the Maintain Job Requisition Assessment Defaults task to populate assessments into evergreen requisitions.
Do you want your candidates to complete questionnaires during the application process?	You can: • Add the *Complete Questionnaire* action step to any subprocess of the *Job Application* business process. Example: *Review Candidate*. • Create condition rules using the Maintain Job Requisition Questionnaire Defaults task to populate questionnaires into evergreen requisitions.

Recommendations

To enhance system performance and ensure efficient management of evergreen requisitions, Workday recommends that:

- Job profiles associated with each requisition don’t exceed a maximum of 2000.
- Linked requisitions shouldn’t exceed 200.
- You regularly disposition job applications.
- You refresh evergreen requisitions annually.

Features	Considerations
Assign Roles	If you don’t know the supervisory organization, Workday recommends that you configure the assigned roles when creating an evergreen requisition. This prevents steps without anyone assigned to them. Route steps on your *Job Application* business process to Primary Recruiter. If any steps in your *Job Application* business process route to organization-aligned roles, such as Recruiter or Manager, you can use condition rules to prevent unassigned tasks.

Features	Considerations
Load Candidates Using Web Services	To prevent performance issues, Workday recommends loading 3000 candidates or fewer for each evergreen requisition.
Linking Evergreen Requisitions and Job Requisitions	If you know your future hiring needs and recruiting details, make it easier to hire candidates by creating your evergreen and job requisitions at the same time.

Requirements

No impact.

Limitations

Move candidates to regular job requisitions to:

- Generate employment agreements.
- Hire candidates.

Tenant Setup

You can use the:

- Edit Tenant Setup - Recruiting task to enable candidates to reapply to the same evergreen requisition after they're moved to a linked job requisition and dispositioned.
- Edit Tenant Setup - HCM task to enable users to remove or replace questionnaires on evergreen requisitions.

Security

Users secured to the *Manage: Evergreen Requisitions* domain in the Recruiting functional area can view and carry out tasks and reports for evergreen requisitions.

You can also individually configure security for these subdomains:

- *Consolidated Candidate Pool*
- *Evergreen Reporting*
- *Link Evergreen and Job Requisitions*
- *Move Candidate from Evergreen to Evergreen*
- *Move Candidate from Job Requisition to Job Requisition*
- *Move Candidate to Linked Requisition*

Business Processes

When configuring the *Job Application* business process for evergreen requisitions:

- You can configure offers by removing the *Allow Offer if Job Application is not for Evergreen Requisition* condition rule from the *Offer* step on all stages of the *Job Application* business process.
- To avoid unassigned next steps for hiring managers, use condition rules on the *Job Application* business process to hide relevant steps when you don't know the supervisory organization.

Reporting

You can use the Job Requisition Audit Report report to view the status of your evergreen requisitions.

Access the Workday Standard Reports report and select the Recruiting category to view activity on your evergreen requisitions.

Integrations

You can use these web service operations to manage evergreen requisitions:

- *Create Evergreen Requisitions*
- *Close Evergreen Requisition*
- *Edit Evergreen Requisition*
- *Move Candidate to Linked Evergreen Requisition*
- *Move Candidate to Linked Job Requisition*

Connections and Touchpoints

Evergreen requisitions interact with these parts of Workday:

- Supervisory Organizations
- Nonsupervisory Organizations
- Job Profiles
- Questionnaires
- Assessments
- Qualifications
- Job Postings
- Compensation
- Job Applications
- Offer
- Candidates

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Other Impacts

Workday populates job postings using the data that you enter on an evergreen requisition. You can use job posting templates to configure this data.

When a user updates an evergreen requisition that affects role assignments, Workday automatically reassigns related in-progress My Tasks items to the enabled roles.

Related Information

Concepts

Concept: Translated Job Requisitions on page 618

Concept: Link Evergreen Requisitions to Job Requisitions on page 242

Tasks

Create and Edit Evergreen Requisitions on page 238

Create Job Posting Templates on page 416

Steps: Set Up Assessments for Candidates on page 463

Steps: Set Up Questionnaires for Recruiting on page 455

Steps: Set Up Evergreen Requisitions

Prerequisites

Create job requisitions.

Review setup considerations for evergreen requisitions.

Context

You can use evergreen requisitions to fill seasonal, high-volume, or hard-to-fill positions.

Evergreen requisitions and job requisitions follow the same recruiting workflow. While you can configure the *Offer* stage on evergreen requisitions using condition rules, you can't move candidates to the *Hire* stage. To proceed in the job application process, you must transfer candidates to a regular job requisition.

You can use candidate eligibility snapshots to create a list of candidates who were eligible for consideration on the evergreen requisition to help compliance and productivity reporting.

Steps

1. Edit Business Process Security Policies.

   Define and configure security policies for these business processes:

   - *Evergreen Requisition*
   - *Evergreen Requisition Change*
   - *Close Evergreen Requisition*
2. Edit Domain Security Policies.

   Set up the security policy for these domains in the Recruiting functional area:

   - *Evergreen Reporting*
   - *Link Evergreen and Job Requisitions*
   - *Manage: Evergreen Requisitions*
   - *Move Candidate from Evergreen to Evergreen*
   - *Move Candidate to Linked Requisition*
3. Hide or Require Optional Fields.

   Configure optional fields that display on evergreen requisitions.

   a) On the By Functional Area prompt, select *Recruiting*.
   b) Select an option:

      - *Evergreen Requisition*
      - *Evergreen Requisition Change*
      - *Close Evergreen Requisition*
4. (Optional) Configure offers on evergreen requisitions.

   Remove the *Allow Offer if Job Application is not for Evergreen Requisition* condition rule from the *Offer* step on all stages of the *Job Application* business process.
5. (Optional) Configure compensation on evergreen requisitions.

   To enable compensation on evergreen requisitions, add *Request Requisition Compensation* as a step on these business processes:

   - *Evergreen Requisition*
   - *Evergreen Requisition Change*
6. (Optional) Set up Spotlight Jobs.

   Use Spotlight Jobs to highlight critical evergreen requisitions with a customizable label.

   See Steps: Set Up Spotlight Jobs on page 225.
7. (Optional) Assign primary recruiters to job requisitions.

   The location and supervisory organization fields are optional for evergreen requisitions. However, if you leave these fields blank when you create an evergreen requisition, you have to enter a primary recruiter.

   See Steps: Set Up Primary Recruiters on page 224.

8. Access the Maintain Event Categories and Reasons task.

   Define reasons for completing these events:

   - *Close Job Requisition*
   - *Edit Job Requisition*

   Security: *Set Up: Staffing* domain in the Staffing functional area.
9. Link evergreen requisitions to job requisitions.

   When you're ready to make an offer or hire a candidate, you must move the candidate to a linked open job requisition.

   See:Concept: Link Evergreen Requisitions to Job Requisitions on page 242.

Next Steps

Post evergreen requisitions to external and internal career sites.

Move unhired candidates back to the evergreen requisition after you've made a hiring decision.

Concept: Candidate Eligibility Snapshots on page 241

Create and Edit Evergreen Requisitions

Prerequisites

Set up evergreen requisitions.

Context

Create evergreen requisitions so you can track seasonal or hard to fill job positions.

You can also create evergreen requisitions using the *Create Evergreen Requisition* web service.

Workday generates a unique ID for the evergreen requisition when starting the:

- *Create Evergreen Requisition* business process.
- *Create Evergreen Requisition* web service.

The ID displays in the evergreen requisition name and all related communications, making it easier to differentiate between job requisitions with the same name. You can search for an in-progress Create Evergreen Requisition task using the automatically generated job requisition ID when you:

- Save the task.
- Submit the task for approval.

Steps

1. Access the Create Evergreen Requisition or Edit Evergreen Requisition task.
2. In the Recruiting Information section, consider:

Option	Description
Spotlight Job	Highlights evergreen requisitions with a customizable label. To change the Spotlight Job label, access the Maintain Custom Labels task.
Recruiting Instruction	Instructions for third-party recruiting vendors. Define using the Maintain External Recruiting Instructions task.

Option	Description
Target Hire Date	Optional for evergreen requisitions.
Job Application Template	Displays only on the Edit Evergreen Requisition task. Security: *Staffing Actions: Job Requisition Job Application Template* domain in the Staffing functional area.
Use Updated Version Template	Displays only on the Edit Evergreen Requisition task when the selected job application template has changed.

3. In the Job section, consider:

Option	Description
Job Profile	Defines the default values for other job requisition fields. You can only select 1.
Additional Job Profiles	Determines if you can link an evergreen requisition to a job requisition. You can select more than 1.
Job Description Additional Job Description	Enter additional information about the job. You can configure these fields to display on your internal or external career site using job posting templates.
Primary Location	Location for the evergreen requisition. Enter a U.S. location and create location-based questions in the Apply - Personal Information section of the Edit External Career Site task to collect specific information when a candidate applies to a job posting. Example: Ethnicity, gender, veteran status, and voluntary self-identification of disability information.
Primary Job Posting Location	Post jobs to a location that is different from the primary location. Workday also uses this location to identify the location-related facets on the Find Jobs report. Automatically populates from the Default Job Posting Location field on the Create Location task. If no default job posting location exists, automatically populates from the Primary Location field. If you edit a job requisition, Workday won't automatically populate the Primary Job Posting Location and Additional Job Posting Locations fields with data from the Primary Location and Additional Location fields. You can only select a location that has *Business Site* or *Job Posting* as the Location Usage.
Scheduled Weekly Hours	Populates from a rule when: • You define a working time rule.

Option	Description
	• The data populated on the Maintain Working Time for country task applies the rule. Weekly hours default from the scheduled weekly hours on: • The job requisition that you are copying. • The worker who is in a position, or previously filled a position if you create a job requisition on a position management organization. • The restriction on the existing unfilled position, if you create a job requisition on a Position Management Organization. • The time profile on the primary location set when you create the job requisition.
Questionnaire	For Recruiting only. Workday populates questionnaires using condition rules that you can create. Only Recruiting type questionnaires are available. Candidates complete these questionnaires when they apply to jobs on internal and external career sites. To remove or replace questionnaires, select the Enable Primary and Secondary Questionnaire Removal or Replacement on Evergreen and Job Requisitions check box on the Edit Tenant Setup - HCM task.

4. In the Link To Job Requisitions section, select 1 or more open job requisitions with which to associate the evergreen requisition from the Job Requisitions prompt.

   You can associate an evergreen requisition with more than 1 job requisition, but you can only associate a job requisition with 1 evergreen requisition. The evergreen requisition and job requisition must have at least 1 common job profile.
5. (Optional) In the Questionnaire section, associate questionnaires with the evergreen requisition.

   When a candidate applies to a job, they must complete these questionnaires (not available on mobile).

   If you have questionnaires associated with the job profile, Workday automatically populates these fields:

   - Internal Career Site - Primary
   - Internal Career Site - Secondary
   - External Career Site - Primary
   - External Career Site - Secondary

   You can manually change or remove the associated questionnaires.
6. (Optional) In the Assign Roles section, assign the roles for the evergreen requisition.

   Required if the Supervisory Organization and Location fields are blank.

   You can only change the Supervisory Organization using the Edit Evergreen Requisitiontask.

Result

When you create an evergreen requisition, Workday uses the Maintain Job Application Templates task to evaluate which template to assign to the requisition. If you add Review Job Application Template as a step to the *Evergreen Requisition* business process, Workday sends the Review Job Application Template task to the assigned security group's My Tasks. This task enables you to change the assigned template.

Concepts

Concept: Translated Job Requisitions on page 618

Tasks

Steps: Set Up Job Applications on page 445

Concept: Candidate Eligibility Snapshots

When making a hiring decision for a job requisition that's linked to an evergreen requisition, you can create a list of candidates who were eligible for consideration. Workday displays this candidate eligibility snapshot as part of the candidate pool on the job requisition.

Candidates considered eligible for consideration are those that:

- Applied directly to the job requisition.
- Applied to an evergreen requisition before the date of the snapshot.
- Moved from an evergreen requisition to the linked job requisition. Of these candidates, those not considered eligible for consideration:
    - Were rejected before the recruiting start date on the job requisition.
    - Withdrew from the linked evergreen requisition before the date of the snapshot.

  You can create as many snapshots as you need.

Concept: Moving Candidates Between Evergreen and Job Requisitions

You can move candidates between evergreen and job requisitions using the More menu on the Candidates tab of the requisitions. Examples:

- Maria applied for a position on an evergreen requisition, if you now want to move their job application to the *Offer* stage, you have to move them to a job requisition.
- Fritz applied for a position on a job requisition but didn't get hired but you wish to consider their application in the future. You can move Fritz from a job requisition to an evergreen requisition.

You can't move candidates between requisitions if:

- The requisition is closed or frozen.
- The candidate is rejected or the candidate declines an offer.

You can move candidates from:

Action	Consideration
An evergreen requisition to a job requisition.	You need to move candidates to a regular job requisition when you're ready to move them to the *Offer* or *Ready to Hire* stages, unless you have offers configured on evergreen requisitions.
A job requisition to an evergreen requisition.	Change the candidate's stage to anything other than *Ready for Hire*. You can only move candidates back to their original evergreen requisition.

Action	Consideration
An evergreen requisition to another evergreen requisition.	You can move candidates from one evergreen requisition to another when both requisitions have a matching job profile.
Move candidates from a job requisition to another job requisition.	You can move candidates between job requisitions that have a common evergreen requisition.

Workday:

- Moves the candidate and all related data history from 1 requisition to the other. The candidate's job application is no longer connected to the original evergreen or job requisition.
- Sends a My Tasks item to the role assigned to the appropriate stage in the recruiting process.
- Records the action on the Activity Stream tab on the candidate’s job application.
- Assigns all pending events to the person responsible for the requisition.

Related Information

Tasks

Take Action on Multiple Candidates on page 274

Steps: Set Up Evergreen Requisitions on page 236

Concept: Link Evergreen Requisitions to Job Requisitions

You can link an Evergreen Requisition to a Job Requisition to move candidates between the two during the job application process.

Example: Your organization keeps an open Evergreen Requisition to source seasonal workers. This requisition is linked to a job requisition for the upcoming summer season. When you’re ready to hire, move successful candidates from the Evergreen Requisition to the summer job requisition. After filling the summer positions, you can close the summer job requisition and continue using the Evergreen Requisition for winter holiday workers.

You can use the Link to Job Requisition field on the Create Evergreen Requisition task to link an Evergreen Requisition to an existing Job Requisition. You can also link an evergreen requisition to a job requisition using these tasks:

- Create Evergreen Requisition
- Edit Evergreen Requisition
- Create Job Requisition
- Edit Job Requisition

The Link to Job Requisition prompt will return all requisitions that are valid to for linking, and which you have access to.

Security: *Link Evergreen and Job Requisitions* domain in the Recruiting functional area.

You can link an evergreen requisition to an Open or Frozen job requisition if:

1. They share a common job profile across either the primary or additional job profiles.
2. The evergreen requisition is open, and has no In-Progress close events.

You can only link a job requisition to 1 evergreen requisition.

You can't link an evergreen requisition to a job requisition that is:

- Closed or Filled.
- Confidential.
- Linked to another evergreen requisition.

You can update the link to the job requisition using the Edit Evergreen Requisition task.

You can't unlink an evergreen requisition from a job requisition after you have moved candidates between them.

You can unlink an evergreen requisition from a job requisition if candidates made their job applications directly on either requisitions.

Offers on Evergreen Requisition

A condition rule on the *Job Application* business process prevents movement of candidates on evergreen requisitions to the *Offer* stage. To move candidates on evergreen requisitions to the *Offer* stage, you must remove the condition rule *Allow Offer if Job Application is not for Evergreen Requisition* from all stages of the *Job Application* business process where you want to advance candidates to the *Offer* stage.

Best Practices for Linked Evergreen Requisitions

To ensure effective management of evergreen requisitions, Workday recommends the following:

- Limit job profiles per requisition to 2,000.
- Limit linked requisitions per evergreen requisition to 200.
- Regularly disposition job applications.
- Refresh evergreen requisitions annually.

Candidates

Set Up Prospects and Candidates

Steps: Set Up Candidate Security

Context

Set up candidate security so you can determine who can view candidate information and perform candidate-related actions. You can also enable self-service access for candidates by configuring the *Candidate as Self* security group.

You can also enable domain access for these security groups to provide them with candidate information:

- *Active Interviewer*
- *Interviewer*
- *Candidate Share*

Note: You can't view the members of these security groups. You can only test to determine if a given user is a member of these groups. Additionally, you can't remove users from these security groups.

Workday automatically assigns interviewers of a job application to the *Active Interviewer* security group. *Active Interviewer* members have access to the candidate that they're interviewing for as long as the Interview event is in progress. If you want interviewers to always have access to the information of their candidate, you can configure domain access for the *Interviewer* security group instead.

When a recruiter shares a candidate, Workday automatically assigns the recruiter that receives the shared candidate to the *Candidate Share* security group.

Steps

1. Edit Domain Security Policies.

   Configure the security policy for these domains in the Recruiting functional area:

Domain	Controls Access To
Candidate: Global Search	Candidate information accessed in global search.
Candidate Communication	All communications sent to a candidate.
Candidate Data: Edit Job Application	Edit job application information for candidates.
Candidate Data: Employee Referrals	Referral management-related tasks and reports.
Candidate Merge	View and merge duplicate candidates.
Invite to Apply	Invite candidates to apply to job requisitions.
Manage: Candidates	Candidate status tasks.

   Configure these super domains, or their subdomains, in the Recruiting functional area:

Domain	Controls Access To
Candidate Data: Job Application	Candidate job application with details such as assessment results, language skills, and interview feedback.
Candidate Data: Other Information	Additional candidate data such as attachments on the Candidate Profile through the *Candidate Data: Attachment* subdomain.
Candidate Data: Personal Information	Personal information that candidates can submit either with their applications or during the *Job Application* business process. The information is often highly sensitive. Includes access to the Personal Information tab on the Candidate profile page.
Candidate Reporting	Recruiting standard reports data.
Move Candidate	View and move candidates.
Prospects	Prospect tasks, reports, and profiles.
Self-Service: Recruiting Personal	Personal notes for candidates as well as contacts, prospects, and candidates linked to a job requisition.

   If a candidate has a worker record, configure the security policies for these super domains in the Staffing functional area:

Domain	Controls Access To
Person Data: Home Contact Information	Contact information of the candidate, including contact information marked as private.
Person Data: Work Contact Information	Work contact information of the candidate.

2. Maintain Security Group Permissions.

   Configure permissions for these security groups:

   - *Candidate as Self*
   - (Optional) *Active Interviewer*
   - (Optional) *Interviewer*
   - (Optional) *Candidate Share*
3. Configure access to questionnaire response context security segments.

   See Concept: Segmented Security for Recruiting Questionnaires on page 459.
4. Activate Pending Security Policy Changes.

Next Steps

Set up job applications and configure internal and external career sites so candidates can apply for jobs.

Steps: Set Up Candidate Pool Security

Context

You can set up role-based security groups to manage public, private, and restricted candidate pools.

Steps

1. Set Up Assignable Roles.

   Create a role enabled for candidate pools with *Candidate Pool Manager* as the Default Role.
2. Create Role-Based Security Groups.

   Select:

   - *Role-Based Security Group (Unconstrained)* on the Type of Tenanted Security Group prompt.
   - A role you created on the Assignable Role prompt.
3. Edit Domain Security Policies.

   Assign the security groups you created to 1 or more of these domains in the Recruiting functional area:

   - *Candidate Pool: Manage Membership*
   - *Candidate Pool: My Private Pools*
   - *Candidate Pool: Private Pool Create*
   - *Candidate Pool: Private Pool View and Modify*
   - *Candidate Pool: Restricted View*
   - *Candidate Pool: View and Modify Pool*
4. Activate Pending Security Policy Changes.

Related Information

Tasks

Steps: Manage Candidate Pools on page 261

Steps: Set Up Prospects and Candidates

Context

There are 2 types of candidates in Workday:

- Active candidates, who have at least 1 job application.
- Prospects, who are contacts you want to track but don't match any specific job postings.

Set up candidates so you can:

- Create and track prospects.
- Share prospects and candidates with other recruiters.
- Invite candidates to apply for jobs.
- Create job applications on behalf of candidates.

Steps

1. Configure candidate security.

   See Steps: Set Up Candidate Security on page 243.
2. Access the Maintain Prospect Statuses task.

   Create statuses to track prospects. Examples: *New*, *Nurturing*, *Ready*.

   You can define an external-facing status label for prospects in the Prospect Label Override column. This status displays on the My Referrals report until the candidate applies for a job.

   Security: *Set Up: Recruiting* domain in the Recruiting functional area.
3. Access the Maintain Prospect Types task.

   Separate prospects into categories for easier searching. Example: *Contact*, *Networker*, *Key Influencer*.

   Security: *Set Up: Recruiting* domain in the Recruiting functional area.
4. Create your library of schools, degrees, and field of studies.

   See Steps: Set Up Education on page 137.
5. Create your library of companies.

   See Steps: Set Up Job History Companies on page 137.
6. Create your library of languages.

   See Steps: Set Up Languages on page 139.
7. Create your library of skills.

   See Steps: Maintain Skills on page 1828.
8. Steps: Set Up Profiles and Profile Groups.

   Configure the candidate and prospect profiles.
9. (Optional) Create Custom Reference IDs for Candidates on page 254.

   Change the naming convention for the candidate reference ID that Workday generates.
10. Maintain Recruiting Sources on page 272.
11. Set up notifications for internal and external candidates.

    See Steps: Set Up Notifications for Candidates on page 323.
12. Hide or Require Optional Fields.

    For the Recruiting functional area, configure optional fields for the Create Prospect task.
13. (Optional) Access the Edit Tenant Setup - Recruiting task.

    a) Select the Enable Automatic Candidate Merging check box to have Workday merge duplicate candidates that:

       - Apply to a job posting on an external career site.
       - You upload with the *Put Candidate* web service.

    b) Select the Enable Candidate School Look Up for External Career Sites check box.

       This check box enables external candidates to search for and select schools from your tenant when completing job applications. External candidates won't be able to add their school if it doesn't exist in your tenant.

    c) Select the Copy Personal Information from Job Application on Initiate Hire check box.

       When you enable this setting and hire a candidate that was merged to a contingent worker, Workday populates some information on the worker profile from their job application.

    See Reference: Edit Tenant Setup - Recruiting.

Next Steps

Use these reports to view candidate information:

Report	Candidate Information
Find Candidates	All candidates that you have access to.
My Candidates	• Candidates who applied to your job requisitions. • Prospects that you added to your prospect list.
My Recruiting Jobs	Number of active candidates for your job requisitions.

Related Information
Tasks
Steps: Set Up Recruiting on page 191

Steps: Set Up Prospect and Candidate Profiles

Prerequisites

Security: *Set Up: System* domain in the System functional area.

Context

Workday delivers a prospect and candidate profile that enables you to view detailed information about your candidates and prospects. Workday automatically configures these profiles for you. However, you can change the Summary profile group.

Steps

1. Access the Configure Profile Group task.

   Define the profile groups that display on the candidate and prospect profile. The Summary profile group isn't available for configuration using this task.
   a) Select either prospect or candidate profile, then the specific group you want to configure.
   b) Add, remove, or reorder the reports that Workday delivers for the profile group.
2. Access the Configure Profile Summary task.

   Define the information that displays on the Summary profile group.
   a) Select either candidate and prospect profile.
   b) Add, remove, or reorder the cards that Workday delivers for the Summary profile group.
3. Access the Configure Profile Header Card task.

   Define the information that displays on the top card on Summary profile group. If you don't select any items, the card doesn't display.
   a) Select either candidate or prospect profile.
   b) Add, remove, or reorder the items that Workday delivers for the header card on the Summary profile group.

Steps: Set Up Masked Candidate Profiles

Context

You can configure a Masked Candidate Profile to hide certain cards on the profile, which helps eliminate any biased candidate screening.

Steps

1. Access the Configure Profile Summary task.

   Add the summary cards you want to display on the Masked Candidate Profile.

   Workday automatically adds these cards on the Masked Candidate Profile:

   - Job Application Details
   - Active Masked Job Applications

   See: Steps: Set Up Profile Cards
2. Access the Configure Profile task.

   Select the profile groups you want to display on the Masked Candidate Profile.

   See Steps: Set Up Profiles and Profile Groups.
3. Access the Maintain Masked Recruiting Configurations task.

   Create a masked configuration and add the unconstrained security groups you want to mask for any of these recruiting stages:

   - Assessment
   - Review
   - Screen

   Security: The *Set Up: Recruiting* domain in these functional areas:

   - Recruiting
   - Talent Pipeline
4. Create Business Process Condition Rules.

   Select Job Requisition on the Business Process Type prompt.
5. Access the Maintain Masked Job Requisitions Defaults task.

   Assign job application condition rules to your masked configurations.

   Click Default All Job Applications button to apply condition rules and masked configurations to all pre-existing active and frozen job requisitions.

Result

Workday doesn't support these recruiting functionalities if you have a masked configuration on a job application:

- Candidate pools.
- Duplicates.
- Parallel stages.

On masked candidate profiles, you won't have access to the:

- Candidate email and resume attachments, but you can still email a candidate using the Send Message task.
- Business process event history while viewing a masked job application.

Workday doesn't apply the masked configuration on candidate-based reports if at least 1 of a candidate's multiple applications is in an unmasked stage. Workday recommends you use job application-based reports instead, to avoid exposing candidate information. Example: Use the My Candidates in Progress report in place of the My Candidates report.

Next Steps

Configure your candidate list assignment in accordance with your masked configuration. Example: Remove Education from candidate list if you mask school information.

Steps: Set Up Candidate Mass Actions on Recruiting Hub

Prerequisites

Set up the Recruiting Hub.

If you've hidden the Candidates navigation button on the Recruiter Hub, reconfigure it using the Maintain Navigation Menu Overrides task.

Context

You can configure the Candidate Job Applications grid to enable recruiters to take action on multiple candidates at once.

Steps

1. Steps: Maintain Custom Candidate List Grids on page 263.

   Use the Edit Grid Configuration task to select the Default Candidate Job Applications Grid.
2. Hide or Require Optional Fields.

   Select Candidate Job Applications as the functional area.

   Configure fields for the Candidate Job Applications prefilter page that Workday displays if you've more than 5,000 candidates. The Applied After field always displays and can't be configured.

   If a user creates a saved filter, the prefilter is automatically configured as Hidden.
3. Access the Maintain Candidate List Assignment task.

   Select the Candidate Job Applications Grid as the Default Grid to display on the Job Requisition composite view.

Result

Recruiters can now save column filters you've selected on the Candidate Job Applications grid and quickly reapply filters in the future.

2020R1 What's New Post: Mass Actions Across Job Requisitions

The Next Level: Enabling the Candidate List and Mass Actions

Steps: Create Confidential Prospects

Context

You can secure confidential prospects to the *View Confidential Prospects* and *Create Confidential Prospects* domains to control who can view and who can create them.

Steps

1. Set Up Assignable Roles.

   Create roles for the users who can view and create confidential prospects. Select the Self-Assign check box for the role and enable it for prospects.

2. Create Role-Based Security Groups

   Create role-based security groups to:

   - Enable all users in the *View Confidential Prospects* domain to access the prospect.
   - Limit access to the user who created the prospect.
3. Edit Domain Security Policies

   Configure the security policy for these domains:

   - *Create Confidential Prospects*
   - *View Confidential Prospects*
4. Access the Create Confidential Prospect task.

   Workday secures the prospects you create to the *View Confidential Prospects* domain.

Next Steps

Invite the prospect to apply for a confidential job requisition or create a job application on their behalf.

Related Information

Concepts

Concept: Confidential Job Requisitions, Prospects, and Candidates on page 231

Tasks

Set Up Assignable Roles

Steps: Set Up Prospect Consent Collection

Context

To comply with General Data Protection Regulation (GDPR) and other regulations, you can configure emails that Workday automatically sends to prospects to request consent for storing their data. The emails direct prospects to a page on your external career site where they can read and accept or decline your terms and conditions.

You can use Notification Designer to design emails with more advanced branding and layout options than a standard email template.

Steps

1. Create Email Templates.

   Select *Prospect Consent Collection* from the Email Template Behavior prompt.
2. (Optional) Create a Notification Template.

   If you use Notification Designer, you can create and activate a template for the *Prospect Consent Collection* notification type instead of creating an email template.

   See Create and Activate Notification Templates.
3. Create a message template for the *Prospect Consent Collection* notification type.

   Click Insert Tag on the text editor to add the External Site ~Prospect~ Consent Link report field into the body of the email. This report field generates an *Accept and Decline Terms and Conditions* link that prospects can click to access the correct page on your external career site. You can't override the link text.

   See Steps: Set Up Message Templates.
4. Configure Prospect Consent Terms and Conditions on page 255.

5. (Optional) Hide or Require Optional Fields.

   Workday recommends that you make the Email field required on these tasks so prospects can receive emails:

   - Create Prospect
   - Create a Referral
   - Refer a Candidate
6. (Optional) Display responses from prospects on the Prospect Profile profile.

   You can add *Consent Status* as an item on the profile header card.

   See Steps: Set Up Prospect and Candidate Profiles on page 247.
7. Edit Domain Security Policies.

   Grant users who need to report on consent statuses and manually send emails access to the *Manage: Prospect Consent* domain.

Result

Workday automatically:

- Sends emails to prospects when you create them through the user interface.
- Records emails and consent status updates as timeline events on the Recruiting History report on the Prospect Profile profile.

Next Steps

Access the View Prospect Consent Status report to:

- Review responses from prospects.
- Manually send reminder emails to prospects who haven't responded or manually send emails to prospects who haven't received one. Examples: prospects created before feature setup or created by web services.

You can use the Purge Person Data report to purge data for prospects who decline consent.

Related Information
Concepts

Concept: Notification Designer

Tasks

Steps: Purge Person Privacy Data

Steps: Set Up Constrained Prospect Security by Country

Prerequisites

To set up constrained prospect security, you must have access to these security domains:

- *Set Up: Assignable Roles*
- *Security Configuration*
- *Set Up: Recruiting*
- *Set Up: Security Administration*

Context

You can set up enhanced prospect security based on a prospect's country, allowing recruiters to view only the prospect data that's relevant to their assigned regions. This feature enables you to customize regions to align with your organization’s structure and helps your organization comply with General Data Protection Regulation (GDPR) requirements by restricting recruiter access by country.

To configure this functionality, you must first create recruiting regions that contain 1or more countries, and then assign roles to those regions. You can assign roles directly on the region or by using the role assignments on location hierarchies you add to the region.

Constrained prospect security by region applies only to prospects and candidates who have prospect records. This security won't apply if a job application exists without a corresponding prospect record.

These steps enable you to configure security for recruiting regions. If you plan to assign roles directly on the Region of Recruiting, follow steps 1-3. You can skip steps 1-3 if you only plan to use role assignments with location hierarchies added to the region for recruiting.

Steps

1. Run the Maintain Assignable Roles task to create a new role.
    a) Add Region for Recruiting in the Enabled For column.
2. Run the Create Security Group task.
    a) Select Role-Based Security Group (Constrained).
    b) Add a name.
    c) Select the role created in the previous step.
3. Edit the domain security policies for security domains that apply from the attached list.

    If you need constrained access for specific domains, remove the unconstrained groups and add the constrained groups. (Example: The group you created in step 2).
    a) *Prospects*
    b) *Prospect Sharing*
    c) *All Prospects*
    d) *Candidate: Global Search*
    e) *View Confidential Prospects*
    f) *Candidate Data: Personal Information and subdomains*
    g) *Manage: Prospect Consent*
    h) *Candidate Data: SMS Opt-In/Opt-Out*
    i) *Manage: Candidates*
    j) *Candidate Data: Other Information and subdomains*
4. Run the Create Region for Recruiting tasks.
    a) Enter the Name and Description.
    b) Select the Default Region checkbox to create a region that covers countries not specified in other regions.
    c) Select the Inactive checkbox to make the region inactive.
    d) Select 1 or more countries from the prompt.
    e) (Optional) Assign 1 or more roles.
    f) (Optional) Select 1 or more location hierarchies to use the role assignments on those location hierarchies.
    g) Ensure roles are assigned either directly or through location hierarchies.
5. Repeat step 4 for any additional regions as per your requirements.
6. (Optional) Run the Regions for Recruiting report to view all the regions that have been set up.
7. Copy the Find Candidates report to and select the new data source filter Internal and External Candidates Secured by Prospect for the new report.
8. Hide the existing Find Candidates report.

Result

Workday applies the new security constraints to prospect data. After you create or edit regions, assign roles, or add or remove location hierarchies, you must allow 1 to 2 hours for the changes to propagate before the new security takes effect.

Example

As a recruiter assigned to a certain region, login and search for candidates for that region. You can find candidates from your region using either search or the Find Candidates report that you created earlier. As expected, you won't be able to find or view candidates from other regions.

Concept: Guidelines for Constrained Prospect Security by Country on page 257

Tasks

Steps: Set Up Candidate Security on page 243

Reference

2025R2 Feature Release Note: Constrained Prospect Security by Country

Create Prospects

Prerequisites

- Set up candidates.
- Security: *Prospects* domain in the Recruiting functional area.

Context

Creating prospects in Workday enables you to track individuals who don't match a specific job posting. You can add prospects from outside or inside your company.

Steps

1. Access the Create Prospect task.
2. (Optional) In the New Prospect Details section, enter the prospect's details.

   Workday checks these details and displays the Duplicate Information Page if there are any potential duplicates for you to review. If you find an exact match, you can continue working with the existing record instead of creating a new prospect.
3. As you complete the Create Prospect task, consider:

Option	Description
Phone Device Type	You can restrict the phone device types available for prospects using the Hide for Recruiting check box on the Maintain Phone Device Types task.
Source	Workday automatically populates the field with *Internal* for existing workers. Complete the Referred By field when you select a Source mapped to 1 of these sources: • Employee Referral • Proxy Referral • Self-Identified

Option	Description
LinkedIn URL	Recruiters with Linkedin™ accounts can view LinkedIn Shared Connections on the prospect's profile in Workday. This field only displays when you create a new prospect.
Recognized Skills	Recognized skills automatically populate from the worker profile for internal prospects. You can also select 1 or more skills configured on the Maintain Skills task.
Additional Skills	Displays only when you create a prospect from an existing worker who has at least 1 skill that isn't configured on the Maintain Skills task on their profile.

Result

You can only see these values on an external prospect's profile if you have access on the *Prospects* domain:

- Home Address
- Email
- Phone Number

For internal prospects, Workday:

- Doesn't populate candidate pool and succession pool membership.
- Automatically populates theEmail, and Phone from the worker profile. You can't change these values, and can only see them on the Edit Prospect task if you have access to these domains:
    - *Person Data: Home Email*
    - *Person Data: Home Phone*

Next Steps

Add the new prospect to:

- Candidate pools.
- Succession pools.

Create a job application for the new prospect.

Create Custom Reference IDs for Candidates

Context

Third-party vendors might require a specific format for reference IDs in integrations. You can change the naming convention for the candidate reference ID that Workday generates.

Steps

1. Access the Create ID Definition / Sequence Generator task.

   Create the naming convention for the candidate ID definition.

   Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
2. Access the Edit Tenant Setup - HCM task.

   In the ID Sequence Generators section, select the ID definition you created from the ID Definition for Candidate prompt.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

Result

To view the reference ID for a prospect or active candidate, select Integration IDs > View IDs from the related actions menu of the prospect or candidate.

Configure Prospect Consent Terms and Conditions

Prerequisites

- Create a message template for the *Prospect Consent Collection* notification type.
- Security: *Set Up: Recruiting* domain in the Recruiting functional area.

Context

You can enable prospect consent collection and configure a page with these details on your external career site:

- Instructions for prospects.
- Default terms and conditions.
- Terms and conditions to display to prospects located in specific countries.
- Consent responses.

Steps

Access the Maintain Prospect Consent task.

As you complete the task, consider:

Option	Description
Email Template	Email templates specify the structure and layout of emails. You can use the Create Email Template task to create a template using the *Prospect Consent Collection* email template behavior, or select the default email template to use for prospect consent emails. See Create Email Templates. If you use Notification Designer, this field displays as Notification Template instead of Email Template. You can only select templates that you've made active for the *Prospect Consent Collection* notification type using the Maintain Notification Templates task. See Create and Activate Notification Templates.

Option	Description
Message Template	Message templates specify the text within the body and subject line of emails. You can select templates created with the Create Message Template task.
Consent Page	Select the external career site for your prospect consent collection page. You can only select a published career site. You can't unpublish the external career site configured for prospect consent. To unpublish the career site, you must remove it from the Career Site prompt.
Terms and Conditions	Enter text for the terms and conditions that you want to display to prospects. You can use the grid to: • Configure terms and conditions by country. • Disable consent collection in specific countries.

Next Steps

Use the Translate Business Object report to translate instances on the Prospect Consent Collection business object.

2024R2 Release Note: External Career Site Prospect Consent Collection

Concept: Resume Parsing

Resume parsing enables recruiters to create a prospect or job application when attaching a resume in Workday. You can use resume parsing on the View Prospect report and these tasks:

- Create Confidential Prospect
- Create Job Application
- Create Prospect
- Edit Prospect
- View Prospect

You can also use resume parsing on the Attachments tab of the prospect profile.

Resume parsing populates fields from a resume, and Workday enables you to review the resume data. Workday doesn't auto-fill fields you configure as hidden or these fields:

- Languages
- Skills

Resume parsing results can vary based on resume format and order of words. For best results, use resumes that don't have images or image-based styles.

You can configure job application templates to hide resume parsing for external candidates. This enables applicants to apply to jobs that don't require resumes more quickly, without disabling resume parsing for:

- Recruiters
- Prospects who submit resumes though the Prospect Introduce Yourself page.

2021R1 What's New Post: Configurable Resume Parsing for External Job Applications

Concept: Guidelines for Constrained Prospect Security by Country

Constrained prospect security by country provides a way to restrict which prospect and candidate profiles recruiters can access. It is designed for use cases where customers need to limit visibility based on the prospect's country of residence. This is especially useful for companies that operate in multiple countries and have regional recruiters who should only be able to view and manage prospects in their assigned region. Refer to Steps: Set Up Constrained Prospect Security by Country on page 251 for step by step guidance to configure this feature.

Considerations:

1. Constrained prospect security by region applies only to prospects and candidates with prospect records. Constrained security will not apply if a job application exists without a prospect record.
2. Regions can be inactivated but not deleted. Keep this in mind from a maintenance perspective.
3. Only 1 default region is allowed, and default regions can't be inactive. To inactivate a default region, ensure it's not set to Default.
4. Assign roles to the default region to ensure that prospects from any unassigned country are accessible.
5. Allow 1 to 2 hours for changes to propagate before constrained security takes effect after you create or edit regions, assign roles, or add/remove location hierarchies to regions.
6. The *Candidate Data: Personal Information* domain has also been extended to work with constrained security groups. You can add all security group types that are allowed on the *Candidate Data: Job Application* domain.
7. To achieve constrained prospect access, remove unconstrained security groups from these domains:
    a. *Candidate Data: Job Application*
    b. *Job Requisitions for Recruiting*
    c. *Recruiting Agency Careers Self-Service*
8. This feature is OX 2.0 enabled.
9. Customers who currently use candidate pools with prospects from various countries and regions in a single pool might want to re-evaluate their setup to achieve constrained security by country.

2025R2 Feature Release Note: Constrained Prospect Security by Country

Reference: Candidate Attachments on Candidate and Worker Profiles

You can configure these domains to grant access to candidate attachments on candidate and worker profiles:

Domain	Attachment
Candidate Data: Attachments	• Generated Standard Attachments • Other Attachments

Domain	Attachment
	• Standard Attachments
Candidate Data: Offer Details	• Generated Offer Attachments • Non-Generated Offer Attachments
Pre-Hire Data: Employment Agreement	• Generated Employment Agreement Attachments • Non-Generated Employment Agreement Attachments

You can create segment-based security groups using these segments to limit view and modify access to candidate attachments:

- *Candidate Resume and Cover Letter*
- *Prospect Resume and Cover Letter*

Note: No other security segment can support the *Candidate as Self* security group.

Worker Profile

Workday enables you to view candidate attachments on the worker profile if you have access to candidate attachments and corresponding worker.

You can't see candidate attachments from linked candidates, or attachments from candidates weren't hired through the Job Application process.

If you want to view a standard review document that relates to an offer on the worker profile, configure both of these domains:

- *Candidate Data: Job Application*.
- *Candidate Data: Offer Details*.

2021R1 What's New Post: Candidate Attachment Security

Prospect and Candidate Management

Steps: Manage Prospects and Candidates

Context

You can create and manage prospects and candidates to track people for job openings at your company. For sensitive job requisitions, you can create confidential prospects with added security.

To decrease recruiter workload, Workday enables you to find and merge duplicate candidates manually or automatically. You can also take action on multiple candidates at once, such as declining their job application or moving them to a different job requisition.

Steps

1. Create Prospects on page 253.
2. Create and manage confidential prospects.

   See Steps: Create Confidential Prospects on page 249.
3. Access the Find Candidates report.

   See Concept: Find Candidates on page 275.
4. Take Action on Multiple Candidates on page 274.

5. Access the View Candidate As Of task.

   You can research changes in profile information for a candidate. Workday doesn't recommend changing profile information from this task because the information isn't current.

   Security: *Candidate Data: Personal Information*
6. Merge Duplicate Candidates on page 304.
7. Create custom Candidate List grids.

   Create custom grid configurations enabling you to view and filter profile information with different worker subtypes.

   See Steps: Maintain Custom Candidate List Grids on page 263.

Related Information
Tasks
Merge Duplicate Candidates on page 304

Steps: Restrict Access to a Candidate's Other Job Applications

Prerequisites

Security: *Set Up: Security Segments* domain in the System functional area.

Context

You can configure segmented security to control who can see job applications for other jobs a candidate has applied to. Example: An employee or contingent worker has applied to a job outside of his organization. Segmented security enables managers to see other job applications for external candidates while restricting them from seeing any other job applications for those candidates who are employees or contingent workers.

Steps

1. Create Segment-Based Security Groups.

   Use these Workday delivered security segments to configure who has access to internal and external job applications:

   - Job Application - Contingent Worker
   - Job Application - Employee
   - Job Application - External
2. Edit Domain Security Policies.

   Add the segment-based security groups with *Modify* access to the Report/Task Permissions section for the *Candidate Data: Job Application* domain in the Recruiting functional area.

   Delete any security groups that you don't want to restrict access to.
3. Activate Pending Security Policy Changes.

Result

Security groups that have access to a job requisition and job application data can see a job application accessed from Jobs Applied To on the candidate profile.

Related Information
Concepts
Concept: Configurable Security

Steps: Set Up Reminders

Context

You can add reminders to your recruiting process. You can maintain reminders in a more efficient way and use them to:

- Follow up and market to passive candidates.
- Contact candidates and prospects.
- Get notifications through email link that include the candidate or job application.
- Get notifications about reminders in Workday.
- View complete or incomplete reminders.
- View all upcoming reminders.

Steps

1. Access the Edit Tenant Setup - Notifications task.

   Select the Enable Reminders check box.

   Security: *Set Up: Tenant Setup - BP and Notifications* in the System functional area.
2. Access the Configure Profile Group task.

   Add Reminders for Candidate Profile and Reminders for Prospect Profile 1 at a time.

   Select the Display in Profile check box for candidate and prospect reminders to add reminders on candidate and prospect profiles.

   Move the upcoming reminders to the top of the grid with the Order arrows.

   Security: *Set Up: System* in the System functional area.
3. (Optional) Access the Configure Profile task.

   Move reminders in the preferred order for Candidate Profile and Prospect Profile.

   Security: *Set Up: System* in the System functional area.
4. Select the Configure Worklet task.

   Access the Recruiting worklet.

   Add View All Upcoming Reminders to the actions list and move it to the desired placement.

   Security: *Set Up: System* in the System functional area.

Result

Recruiters can set personal reminders about specific candidates and prospects that help support a more personalized and efficient recruiting process.

Related Information
Examples
Workday 31 What's New Post: Personal Reminders on Candidates

Steps: Set Up Background Checks for Candidates

Context

You can record background check results on candidate, pre-hire, or worker profiles using the Background Check stage.

Steps

1. Edit Domain Security Policies.

   Configure the security policies for these domains:

   - *Candidate Data: Background Check History* domain in the Recruiting functional area.
   - *Pre-Hire Data: Background Check Status* and *Set Up: Background Checks* domains in the Pre-Hire Process functional area.
2. Edit Business Process Security Policies.

   Configure the *Background Check* business process and security policy.

   Add these steps:

   - *Select Background Check Overall Status*: Assign a background check status.
   - *Make Background Check Decision*: Mark this as the completion step.
3. Set up the integration with your third-party vendor using the Core Connector: Background Check Order Outbound integration.

   See Steps: Set Up Core Connector: Background Check Order Integrations.
4. Access the Maintain Background Check Packages task.

   Security: *Set Up: Recruiting* domain in the Recruiting functional area.
5. Access the Maintain Background Check Statuses task.

   Security: *Set Up: Background Checks* domain in the Pre-Hire Process functional area.
6. Access the Maintain Background Check Package Conditions Rules task.

   Security: *Set Up: Background Checks* domain in the Pre-Hire Process functional area.

Result

When you advance a candidate to the Background Check stage, Workday:

- Creates a *Background Check* event.
- Sets the status of the candidate to *Background Check*.
- Creates a pre-hire record for the candidate.
- Sends a task to the assigned role's My Tasks for the configured step.

Next Steps

Use the *Put Background Check* web service to upload background check information for multiple records in bulk.

Workday 31 What's New Post: Background Check Condition Rules

Steps: Manage Candidate Pools

Prerequisites

- Use the Maintain Assignable Roles task to select the Candidate Pool Manager role, enable it for *Candidate Pool* organization type, and select the Self-Assign check box for the role.
- For private talent pools, configure the security policies on the *Candidate Pool: Private Pool Create*, *Candidate Pool: Private Pool View and Modify*, and *Candidate Pool: My Private Pools* domains in the Recruiting functional area.
- Security: *Candidate Pool: Create*, *Candidate Pool: View and Modify Pool*, and *Candidate Pool: Manage Membership* in the Recruiting functional area.

Context

Workday enables you to group candidates into candidate pools according to criteria you define. You can use these pools to fill and manage your talent pipeline. Candidate pools can include internal and external candidates.

You can create as many public or private candidate pools as you need and place candidates in multiple pools.

You can provide a custom label for the Add to Pool button using the Maintain Custom Labels task, and this change will reflect everywhere this button exists in Workday.

Steps

1. Access 1 of these tasks:
    - Create Candidate Pool
    - Create Private Candidate Pool

    As you complete the task, consider:

Option	Description
Type	When you select: • Dynamic Pool, Workday automatically and continuously adds candidates that match your search criteria. These pools can include up to 50,000 members. • Static Pool, you can add candidates manually. These pools can include up to 25,000 members. Once you create a pool, you can't change its type.
Restricted View	Only available for public candidate pools. Workday automatically restricts private candidate pools. When you select this check box, users can only see the candidates for job requisitions to which they have access when they view the pool. You must have access to the: • *Candidate Pool: Restricted View* domain can view candidates with job applications in candidate pools. Without access to the domain, you can only view prospects without job applications. • *Prospects* domain in the Recruiting functional area can also see nonconfidential prospects in restricted candidate pools.

    You can't restrict or inactivate any pools from the Edit Candidate Pool task when they're used in active recruiting campaigns.

2. Add members to static candidate pools.

   Use 1 or more of these reports:

   - Find Candidates or Find Workers: Select up to 5000 candidates, and click Add to Pool.
   - View Candidate Pool: Select up to 5000 candidates, and from the related actions menu, select Add to Pool.
   - View Job Requisition: On the Candidates tab, select up to 5000 candidates, and from the related actions menu, select Add to Pool.

     This action is only available if you select a default grid on the Maintain Candidate List Assignment task

   You can add to candidate pools by accessing the:

   - Worker Profile, click the tag icon next to the worker's photo, and select 1 or more candidate pools from the prompt.
   - Prospect or Candidate Profile, use the related actions menu of the prospect or candidate, Candidate Actions select Add to Pool.

   Security:

   - *Candidate Pool: Manage Membership* and *Find Candidates: Internal and External* domains in the Recruiting functional area.
   - *Search: Find Worker* domain in the Worker Profile and Skills functional area.
3. Access the Configure Profile Group task.

   See Steps: Set Up Profiles and Profile Groups.

   From the Profile Group prompt, select *Overview for Candidate Pool*.

   Add the Pool Members report on a new row.

   Select the Display in Profile check box.
4. Define categories and statuses to track candidate readiness on the Maintain Candidate Pool Readiness Statuses task, secured to the *Set Up: Recruiting* domain.

Next Steps

Use the View Candidate Pool report to assign readiness statuses to members.

Steps: Maintain Custom Candidate List Grids

Prerequisites

Security:

- *Grid Management* domain in the System functional area.
- *Set Up: Recruiting* domain in the Recruiting functional area.

Context

Create custom candidate list grids to manage and view candidates for a job requisition. Candidate lists display active and inactive candidates according to stage.

You can define more than 1 grid configuration and associate different grid configurations with specific worker subtypes. Example: Define 1 grid configuration for all candidates and another for seasonal candidates. You can also select a default grid configuration that permanently replaces the Workday-delivered candidate list grid.

Steps

1. Access the Edit Grid Configuration task.

2. Select a grid type:

Option	Description
Grid Configuration	Select a grid that you would like to edit or to create a new grid, select Create > Create Grid Configuration.
What type of grid do you want to create?	To create a new grid, select By Category > Recruiting > Candidate List.
Copy Details from Existing Configurable Grid	To use an existing grid as a template, select Delivered Grid Configurations by Category > Recruiting > Candidate List.

3. Add or remove columns to display on the grid. Consider:

Option	Description
Composite Column	Select the Include Composite Column check box to select up to 3 report fields and 1 image to display in the same column. Note: Workday recommends that you don't use this column type for custom candidate grids.
Individual Columns	Include separate columns for fields and analytics.
Grouped Columns	Group 1 or more fields under a separate tab. Example: Overview contains *Added Date*, *Candidate Location*, and *Current Job Title*.

Workday also recommends that you configure these columns and fields under the Individual Columns and Grouped Column sections:

Option	Description
Read Only	Add Read Only columns to include report fields with job application information from the *Job Applications, Prospects and Referrals* business object. To view jobs that the candidate applied for, include the Jobs Applied For field.
Advanced	To access the task in My Tasks when you have a pending action for the job application, include the Awaiting Me field.

4. Access the Maintain Candidate List Assignment task. Assign a Default Grid to display on the Job Requisition composite view.

Result

On the Candidates tab of the job requisition profile:

- You can save and name up to 10 filters on the candidate list grid for future use.
- Workday records any action taken on more than 1 candidate on the Candidate Search Audit report.
- You can take action on more than 1 candidate when you assign a default grid.

Steps: Maintain Custom Candidate Pool Grids

Prerequisites

Security

- *Grid Management* domain in the System functional area.
- *Set Up: Recruiting* domain in the Recruiting functional area.

Context

Create a configurable grid to manage and view candidate pools. You can define 1 grid configuration for all candidate pools using fields from the External or Internal Candidate business object. We recommend reviewing the grid configuration for the View Candidate Pool task in the Tenant Analyzer report after selecting fields to improve performance.

Steps

1. Access the Maintain Candidate List Assignment task.
2. Select a grid type:

Option	Description
Candidate Pool Grid	Select a grid that you would like to apply or to create a new grid select Create > Create Grid Configuration.
What type of grid do you want to create?	To create a new grid, select By Category > Recruiting > Candidate Pool.
Copy Details from Existing Configurable Grid	To use an existing grid as a template, select Custom Grid Configuration by Category > Recruiting > Default Candidate Pool Grid.

3. Add or remove columns to display on the grid. Consider:

Option	Description
Sorting	Define a field to sort order of the grid.
Composite Column	Select the Include Composite Column check box to select up to 3 report fields and 1 image to display in the same column.
Individual Columns	By default, the Candidate field is available on the grid. Add up to 15 static columns displayed on the left side of the grid.
Grouped Columns	Add up to 15 columns in the Overview section on the right side of the grid.

Workday recommends that you configure Read Only and Editable column types under the Individual Columns and Grouped Columns sections.

Option	Description
Read Only	Add Read Only columns to include report fields with candidate information from the External or Internal Candidate business object.
Editable	To update the status of the candidate, include the Readiness Status field.

4. Change existing Candidate Pool Grids through the Edit Grid Configuration task or by using the View Grid Configuration task and clicking Configure.

Result

On the View Candidate Pool task:

- Only active candidate pools are available.
- Add fields on the View Candidate Pool prefilter page if your dynamic candidate pools exceed 50,000 candidates.
- You can create and save filters for future use.
- You can take action on 1 or more candidates.

Related Information

Tasks

Steps: Manage Candidate Pools on page 261

Reference

Reference: Tenant Analyzer on page 211

2023R1 What's New Post: Candidate Pools Enhancements

Steps: Automatically Advance or Decline Candidates

Prerequisites

- Create candidate dispositions on the Maintain Recruiting Dispositions task.
- Security: These domains in the System functional area:
  - *Business Process Administration*
  - *Manage: Business Process Definitions*

Context

You can use condition rules to automatically advance or decline candidates:

- When a candidate applies to a job. Example: Decline candidates who are ineligible to work in the country where the position is located.
- At any other stage in the recruiting process. Example: Decline candidates who failed the background check.

Workday evaluates condition rules in the order you add them.

You do this by configuring automatic stage routing (ASR) for 1 or more of the business processes of the stages where you want to advance or decline candidates. You can enable ASR for these business processes:

- *Assess Candidate*
- *Background Check*
- *Employment Agreement*
- *Interview*
- *Offer*
- *Reference Check*
- *Review Candidate*
- *Screen*

When you configure automatic stage routing during the initial application, you must add the Candidate Notification Receiver security group to any security domains for fields used within the condition rules applied to the automatic stage routing. Workday evaluates ASR at the end of the step that you configure it on, even if that step is optional or not required.

Steps

1. Create Business Process Condition Rules.

   Create condition rules that determine whether a job application event should continue or end. Use information from the:

   - Job application.
   - Job profile.
   - Job requisition.
   - Questionnaires completed when a candidate first applies.

   Note: If you want to use condition rules for assessment results, create a calculated field for the status of each assessment test result.
2. Access a business process where you want to enable automatic stage routing and add the condition rules.

   From the related actions menu of a business process step, select Business Process > Toggle Automatic Stage Routing:

   - *Review Candidate* business process: Add the condition rule to the *Initiation* step.
   - All other business processes: Add the condition rule on any step.

   If you have parallel steps, automatic stage routing runs after all parallel steps complete.
3. Access the *Job Application* business process.
   a) Click View Dynamic Definition.
   b) Select a stage where you enabled automatic stage routing.
   c) Click Configure Automatic Stage Routing.

      Workday evaluates the rules in the order of display. When a candidate meets a rule, Workday:

      - Processes the step or disposition you selected in the Step column.
      - Ignores all other rules and any remaining business process steps.
   d) Repeat for each additional stage where you enabled automatic stage routing.

Result

When a condition rule is met, Workday automatically moves the candidate to the stage you specified and ignores any remaining rules. The step that you toggle automatic stage routing on must complete before Workday automatically routes candidates to the next stage.

Related Information

Tasks

Steps: Configure the Job Application Business Process on page 197

Reference

The Next Level: Utilize Automatic Stage Routing to Automatically Decline or Move Candidates Forward

Steps: Automatically Decline Candidates for Filled Jobs

Prerequisites

Security: *Move Candidate* domain in the Recruiting functional area.

Context

You can configure Workday to decline the remaining active job applications when you fill the last job opening on a job requisition. A job is filled when a recruiter or hiring manager completes the hiring of a candidate in Workday.

Steps

1. Edit Business Processes.

   Add the *Decline Remaining Candidates* batch process as a step to the *Ready for Hire* business process.

   You can also include a step delay on this business process step so that the initiation doesn't occur until you enter a Candidate Start Date on the offer.
2. Access the Maintain Recruiting Dispositions task.

   Select the Disposition Remaining Candidates check box for the Reason you want to use when closing the remaining job applications on the job requisition. You can only select this check box for 1 reason.

   Security: *Set Up: Recruiting* domain in the Recruiting functional area.

Result

When you move a candidate to the Ready for Hire stage and there are no more open positions on the job requisition, Workday:

- Identifies all other candidates who applied to the job requisition.
- Declines their active job applications, and closes their job application events.
- Displays Recruiting System in the Person column on the Event Process History report for the events initiated by this step.

Related Information
Tasks
Maintain Step Delay

Steps: Automatically Decline a Candidate's Remaining Job Applications

Context

You can configure Workday to automatically close the remaining job applications for a candidate when you move them to the *Ready for Hire* stage.

Steps

1. Access the Maintain Recruiting Dispositions task.
   a) Add the disposition you want to use for automatically declined job applications. Example: Candidate Hired for Another Job.
   b) Map the disposition to a Workday-delivered one.

      This mapping displays as the status for automatically declined job applications on the candidate profile.
   c) Select the Disposition Remaining Jobs check box.

   Security: *Set Up: Recruiting* domain in the Recruiting functional area.
2. Edit the *Job Application* dynamic business process.

   Add the disposition you created in step 1 to the Possible Dispositions section of each stage where you want Workday to close a hired candidate's remaining job applications.

   See Steps: Configure the Job Application Business Process on page 197.
3. Edit Business Processes.

   Add the *Decline Remaining Jobs* batch process as a step to the *Ready for Hire* business process. Workday recommends sending a notification to the recruiter or manager of the jobs for the declined job applications.

Result

When a candidate moves to the *Ready for Hire* stage and reaches this step, Workday:

- Declines their remaining active job applications.
- Displays Recruiting System in the Person column on the Event Process History report for the events initiated by this step.

Related Information
Reference
The Next Level: Automatic Decline and Un-posting Actions

Steps: Set Up Disposition for Purged Candidates

Context

You can configure a recruiting disposition that enables Workday to decline active job applications of candidates that you purge. This can help you reduce the number of tasks in My Tasks that are a result of purged candidates with active job applications.

Steps

1. Access the Maintain Recruiting Dispositions task.

   Select the Default Disposition when Candidate is Purged check box for the Reason you want to use to automatically decline job applications.

   Security: *Set Up: Recruiting* domain in the Recruiting functional area.
2. From the related actions menu of the *Job Application* business process, select Business Process > Edit Dynamic Definition.

   Select the disposition reason you configured on each stage of the *Job Application* business process.
3. From the related actions menu of the *Job Application* business process, select Business Process Type > Maintain Business Process Definition Selection.

   Select the Use Latest Business Process Definition check box to ensure that Workday declines the remaining applications of candidates you purged before configuring the disposition.

Result

Workday runs a background job every weekday at 8 AM PST that declines:

- Existing job applications with previously purged candidates if the disposition is valid for the job application stage.
- Job applications associated with active candidates that you purge.

You will receive tasks in My Tasks after configuring the disposition, but Workday should eventually clear these items. However, tasks in My Tasks from job applications in the Ready for Hire stage might remain even though you configured the disposition.

Steps: Set Up Conversational Messaging for Candidates

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.

3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

- Candidates must have:
  - At least 1 active job application.
  - A phone number for a country that Workday Messaging supports.
  - Opted-in to receive SMS from Workday Messaging.
- Review setup considerations for Workday Messaging.

Context

You can use Candidate Conversational Messaging for SMS to contact candidates quickly and receive timely responses during recruitment. Conversations can involve several members of the hiring team and a candidate using SMS threads within the context of a job application.

Steps

1. Set up Workday Messaging in your Production tenant and acquire a Production and Non-Production phone number for sending SMS messages to candidates.

   See Steps: Set Up Workday Messaging.
2. Edit Domain Security Policies.

   Configure a security policy for the *Manage: Candidate SMS Conversations* domain in the Recruiting functional area.
3. Steps: Set Up Email Notifications for Candidates Conversational Messaging on page 271.

   Configure email notifications for participants to a conversation when they receive a new message.
4. Access the Edit Tenant Setup - Recruiting task.

   On the Days of Open Candidate Conversation After Move to Hire field, enter the number of days you want conversations to stay open after you advance a candidate to the Move to Hire stage.

   On the Days of Open Candidate Conversation After Disposition field, enter the number of days you want conversations to stay open after you Disposition a candidate.

Result

To send a message, access the candidate profile and select the Candidate SMS icon on the collaboration panel.

Candidate SMS messages have a limit of 160 characters.

Security groups with Modify access to the job application can view and send messages to the candidate.

Example

Recruiter Alex initiates a conversation with candidate Rema to schedule an interview for the marketing executive role. Alex goes on leave but the hiring manager Sandra has access to the job application. Sandra messages Rema that Alex is on leave, but the interview will go ahead as scheduled.

Next Steps

Participants to the conversation receive notifications of new SMS messages through:

- A notification on the Collaboration Panel.
- A notification in My Conversations, if configured. Otherwise, the notification appears on the notifications page (bell icon).
- Email, if configured.

Workday displays unanswered messages on the Unanswered Conversations card to the Recruiter Hub. When any participant to a conversation responds to a message, Workday removes the read message from the card.

Related Information

Steps: Set Up Email Notifications for Candidates Conversational Messaging on page 271
Steps: Set Up My Conversations Security
Reference
2024R1 What's New Post: Candidate Conversational Messaging for SMS

Steps: Set Up Email Notifications for Candidates Conversational Messaging

Prerequisites

Security:*Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.

Context

You can configure email notifications for participants in a candidate conversation to alert them when there's a new message in an active conversation.

Steps

1. Access the Edit Tenant Setup - Notifications task.
2. On the Notification Delivery Settings section, select *Recruiting*.
3. In the Notification Type section, select Candidate SMS Messages.

   The Notification Type Candidate SMS Messages is for two-way messaging notifications delivered through email.
4. Select the Override Parent Notification Type Settings check box.
5. On the Rule prompt, select Create Notification Routing Rule.

   As you complete the Create Notification Routing Rule section, consider:

Option	Description
Name	Enter a name that describes the message type. Example: *Incoming Candidate SMS*.
Description	(Optional)

Option	Description
Notification Type Usage	*Candidate SMS Messages*

6. On the Channel Frequencies section, click Add and enter these values:

Field	Value
Channel	*Email*
Default Frequency	*Immediately*

7. On the Delivery Override section, click Add, and select the Channel and the Configuration.

Result

Workday sends email notifications of new SMS messages to the primary recruiter and all participants in a candidate conversation.

Maintain Recruiting Sources

Prerequisites

- Set up the social networks you want to track using the Maintain Social Network Types task.
- Security: *Set Up: Pre-Hire Process* domain in the Pre-Hire Process functional area.

Context

Recruiting sources track where you post jobs and where your candidates come from. Workday assigns a recruiting source to a candidate when creating their job application. You can manually assign a different source to the candidate by editing their job application. You can also use the *Put Candidate* web service to assign recruiting sources to candidates.

Steps

1. Access the Maintain Recruiting Sources task.
2. (Optional) Enable recruiting source categorization on external and internal non-worker career sites by selecting the Allow Recruiting Source Categorization on Career Sites check box.

   Workday categorizes sources on the How Did You Hear About Us? prompt when career sites have 8 or more sources configured for 2 or more categories.

3. Create and edit recruiting sources.

   Custom recruiting sources display in prompts and reports. You can optionally map them to Workday-delivered sources in the Maps To column. You can't map more than 1 custom source to the same Workday-delivered source.

   The Source Administrator column represents the worker assigned to manage a particular recruiting source. This column is for informational purposes only.

   Workday delivers these recruiting sources:

Option	Description
Employee Referral	Applications created using the: • Create a Referral task. • Refer button on a job posting. • Refer a Candidate task. • *Refer a Candidate* web service.
Internal Application	Applications from your internal career site.
Proxy Referral	Applications created using the Create Job Application task.
Recruiting Campaigns	Applications submitted by campaign email recipients.
Recruiting Landing Pages	Applications submitted by landing page visitors and prospects.
Recruiting Events	Applications submitted by registered recruiting event participants.
Self Identified	Applications for external candidates who identify a Referred By worker. You can configure Workday to automatically send the worker a request to endorse the candidate's job application.
Endorsement Denied	Applications for external candidates whose self-identified referring worker refused to endorse their job application.
Social Share: <Name>	Applications created using a link from: • Email • Facebook • LinkedIn • Twitter

   Deleting a category deletes all the sources within it. You can only delete a category if its sources aren't in use.

Example

Source Category	Source	Maps To
Internal Worker	Internal	Internal Application
Employee Referral	Referral	Employee Referral
	Referred by Proxy	Proxy Referral

Source Category	Source	Maps To
	I know someone at the company	Self Identified
Social Referral	Facebook	Social Share: Facebook
	LinkedIn	Social Share: LinkedIn
	Twitter	Social Share: Twitter
	Email	Social Share: Email
Recruiter / Agency	Agency	
	Recruiter	
Corporate Website	University Website	
	Corporate Website	
Job Posting Site	Indeed	
	Monster	
	LinkedIn	
Campus Campaign	Vocational	
	Polytechnic	
	University	
LinkedIn Middleware	LinkedIn Recruiting	LinkedIn Job Posting

Take Action on Multiple Candidates

Prerequisites

- Select a default grid in the Maintain Candidate List Assignment task. Workday recommends that you select the *Default Candidate List Grid*.
- Security: These domains in the Recruiting functional area:
  - *Candidate Communication*
  - *Move Candidate*
  - *Move Candidate to Linked Job Requisition*

Context

Workday enables you to take action on multiple candidates who have active job applications for a job requisition. Example: After you fill a job requisition, decline the remaining candidates.

When you complete this task on behalf of another user who is assigned to the active candidates, Workday removes their pending task in My Tasks.

Steps

1. Access the View Job Requisition report.
2. On the Candidates tab, select 1 or more candidates.

3. Select an action to perform.

Option	Description
Move Forward	Workday recommends you only Move Forward candidates who are in the same stage.
Move to Linked Evergreen Requisition	You can't move candidates who are in the *Ready for Hire* stage. Note: You can only move candidates to a common evergreen requisition.
Copy to Another Job Requisition	When you copy an application to another job requisition, Workday moves the candidate to the *Review* stage. You can't copy a candidate's job application to another job requisition if the: • Candidate is confidential or has a job application for the target job requisition. • Target job requisition is confidential, frozen, closed, or filled. Security: *Copy Candidate* domain in the Recruiting functional area. To copy the personal information of the candidate with their job application, select the Copy Personal Information when Copying Job Applications check box on the Edit Tenant Setup - Recruiting task.

Related Information

Tasks

Steps: Set Up Prospects and Candidates on page 245

Concept: Find Candidates

To search for candidates, you can use the:

- Global search.
- Find Candidates report, for your entire candidate population.
- My Candidates report, which displays candidates for whom you are the recruiter or manager.

Candidate Search Security

These domains in the Recruiting functional area secure access to candidate search:

- *Candidate: Global Search*
- *Candidates for My Jobs*
- *Employee Referrals*
- *Find Candidates: External*
- *Find Candidates: Internal and External*

The *Reports: Headcount Planning* domain in the Headcount Planning functional area secures access to internal candidate search.

Confidential Candidates

If you have access to view them, confidential candidates display on the:

- Find Candidates report only if they apply for a nonconfidential job requisition.
- My Candidates report.

Report Facets

Facets enable you to filter candidates based on 1 or more criteria. Workday uses information on the:

- Primary job for internal candidates.
- All job applications for external candidates.

Candidate Actions

The Find Candidates and My Candidates reports enable you to perform these actions:

Action	Secured To Domain
Add to Pool	• *Candidate Pool: Manage Membership* • *Talent Pool: Manage Membership*
Compare	• *Find Candidates: Internal and External* • *My Candidates*
Invite to Apply	*Invite to Apply*
Send Message	*Candidate Communication*

Related Information
Tasks
Configure Faceted Search Reports for Mobile

Concept: Recruiting Source Tracking

You can configure Workday to track sources from job boards using the Recruiting Sources for Auto-Tracking prompt on these tasks:

- Create External Career Site
- Edit External Career Site

Provide the source ID value to your job board vendor. When a candidate applies to a job using a URL that contains a source ID that you've configured in the prompt, Workday automatically assigns the source to the candidate.

Workday also hides the How Did You Hear About Us? question on the:

- Job application.
- Review page.
- View My Submitted Application page.

Concept: Candidates by Active Stage

The Candidates by Active Stage analytic displays these statistics for each active stage of the recruiting process:

- Number of active candidates.
- Percent of dispositioned candidates.
- Percent of candidates that moved to another stage.

You can view this analytic on the:

- Overview profile group on the job requisition profile.
- Job requisition, by selecting Active Candidates. This option only displays if 1 or more candidates applied to the job requisition.

The Active Candidates report is Workday-defined and only available on mobile. It returns candidates for job requisitions in all recruiting stages, except *Ready for Hire* and *Disposition* stages. It only returns results for a job requisition if the user is in a:

- Primary recruiter role.
- Leadership role other than a recruiter role.
- Recruiter role when no primary recruiter role exists.

Candidate Lists

When you select a default grid on the Maintain Candidate List Assignment task, you can take action on candidates from the Candidates by Active Stage analytic.

Note: Workday recommends that you assign Job Requisition Default as the default candidate list grid. Assigning a default grid permanently replaces the Workday-delivered grid.

Example

This example displays how Workday calculates Conversion and Drop Off percentages for a job requisition for which 44 candidates applied.

Stage	Active Candidates	Inactive Candidates	Total Candidates	Drop Off	Conversion
Review	9	7	16	16% 7/44	64% (44-16)/44
Screen	7	3	10	11% 3/(44-16)	64% (44-16-10)/(44-16)
Assessment	5	3	8	17% 3/(44-16-10)	56% (44-16-10-8)/(44-16-10)
Interview	3	1	4	10% 1/(44-16-10-8)	60% (44-16-10-8-4)/(44-16-10-8)
Reference Check	2	1	3	17% 1/(44-16-10-8-4)	50% (44-16-10-8-4-3)/(44-16-10-8-4)
Offer	1	1	2	33% 1/(44-16-10-8-4-3)	33% (44-16-10-8-4-3-2)/(44-16-10-8-4-3)
Background Check	1	0	1	0% 0/(44-16-10-8-4-3-2)	0% (44-16-10-8-4-3-2-1)/(44-16-10-8-4-3-2)
Ready for Hire	0	0	0	0% 0/[(44-16-10-8-4-3-2-1)+1]	0% (44-16-10-8-4-3-2-1-0)/[(44-16-10-8-4-3-2-1)+1]

Concept: Candidate Conversational Messaging for SMS

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Candidate Conversational Messaging for SMS enhances efficiency in the job application process by enabling hiring teams to conduct interactive conversations with candidates. This improves candidate engagement and provides cross-team visibility of candidate conversations.

Conversations can involve several team members and a candidate using SMS threads within the context of a job application, increasing agility as all members of your hiring team have context from previous messages with the candidate.

Example: A candidate applies for 2 jobs on different teams. The candidate is opted-in to receive SMS from Workday Messaging. There are separate recruiters and hiring managers with access to the candidate's job applications, which are at different stages. Recruiter 1 uses SMS to ask the candidate about scheduling an interview. Recruiter 2 uses SMS to request missing information to complete the offer process.

Messaging on Collaboration Panel

Security: *Manage: Candidate SMS Conversations* in the system functional area.

You can configure Candidate Conversational SMS on the Collaboration Panel independently of:

- *Candidate Notes*.
- *Candidate Job Application Notes*.

Hiring Team Experience

You must have access to the candidate's job application to send messages and receive free form SMS from participating candidates.

You can configure which security groups have permission to access Candidate SMS conversations from the Collaboration Panel on the candidate profile. This functionality is only available for candidates.

For this release, the Candidate Conversational Message for SMS is available on desktop only.

Security groups with View access to the *Manage: Candidate SMS Conversations* domain can view the conversations but can’t contribute.

Security groups with Modify access can view and send messages to candidates.

You can't edit SMS messages.

Workday notifies conversation participants, who already sent a message in the conversation, about incoming messages from an active SMS conversation through:

- A notification on the Collaboration Panel.
- A notification in My Conversations, if configured. Otherwise, the notification appears on the notifications page (bell icon).
- Email, if configured.

Workday batches email and bell notifications immediately.

Candidate Experience

Candidates can participate in Candidate Conversational Messaging for SMS if they:

- Opt-in to receive SMS from Workday Messaging.
- Have a phone number for a country that Workday Messaging supports.
- Have at least 1 active job application.

The phone number that candidates receive messages from differs per job application.

Candidates can't initiate conversations. Only a hiring team member can start the conversation.

Candidates don’t see the role of the message sender in the SMS. For clarity, hiring team members can include their details when sending the SMS.

Conversation Lifecycle

Conversations are group threads specific to job applications.

Only participants to a conversation thread receive notifications of new messages.

You can use these fields on the Edit Tenant Setup – Recruiting task, to specify the duration you want candidate conversations to remain open after Move to Hire or Disposition:

- Days of Open Candidate Conversation After Move to Hire
- Days of Open Candidate Conversation After Disposition

If you don't specify a duration to keep candidate conversations open, Workday automatically closes the conversation after 180 days or at the end of the day in the job requisition’s timezone on:

- *Disposition*
- *Move to Hire*

Candidate conversations also end when the:

- Candidate withdraws application.
- Candidate changes their opt-in phone number.
- Job application is rescinded or canceled.

When a conversation ends:

- No new messages can be sent or received for that job application.
- Hiring team can still see all previous messages. You can configure security settings to specify which members of the team have access to this information.
- Hiring team can see a message at the bottom of the panel informing them that the conversation has ended.
- Workday doesn't inform candidates that conversations has closed.

Note: On non-production tenants, candidate conversations have a lifespan of less than a day and are closed after 6 hours.

Data Purging

Notifications

You can purge candidate conversational messages when you select the *Job Application Conversational Messaging* purgeable data type when using the Purge Person Data task to purge a job application or a candidate.

When you select the *Job Application Conversational Messaging* purgeable data type, Workday purges all conversational messages associated with the job application or the worker from the:

- Candidate profile
- Candidate Communications Report
- Activity Stream
- Recruiting History Timeline
- Report Fields
- Audit Trail

You can configure email notifications that conversation participants receive when they receive a new message in a conversation in which they are participants.

Example: Automatically Decline Remaining Candidates on Close Job Requisition

This example illustrates how to automatically decline all the unhired candidates when you close a job requisition.

Context

As HR Administrator, you now want to close a job requisition that still has several active candidates on these stages of the job application:

- *Review*
- *Screen*

You also want all the unhired candidates to have the same disposition reason.

Prerequisites

Security: *Move Candidate* domain in the Recruiting functional area.

Steps

1. Access the Maintain Recruiting Dispositions task.
2. Add a row, and the Reason: *Job Requisition Closed*.
3. On the Maps to column select: *Rejected*.
4. Select the check box on the Disposition Candidates on Close Job Requisition column.
5. Click OK and Done.
6. Access the *Job Application* business process.
7. Click Edit Dynamic Definition.
8. On the Review tab, add a row to the Possible Dispositions section.
9. On the Disposition section, select *Job Requisition Closed* from the prompt.

   Add the same disposition to the Possible Dispositions section of the Screen stage.
10. Click OK and Done.
11. Access the *Close Job Requisition* business process.
12. From the related actions menu of the Close Job Requisition business process, select Business Process > Edit Definition.
13. Under the Business Process Steps section, add a row and these values:

Option	Description
Type	*Batch/Job*
Specify	*Decline Remaining Candidates for Close Job Requisition.*
Run As User	*HR Admin*

14. Click OK and Done.
15. Access the Configure Optional Fields task.
16. Select *Close Job Requisition* on the By Functional Area prompt.

17. Remove the row *Decline Remaining Candidates* so as to display the Decline Remaining Candidates check box on the Close Job Requisition task.

Result

When you close a job requisition and you select the Decline Remaining Candidates check box, Workday:

- Dispositions all the remaining candidates on the Review and Screen stages.
- Displays *Job Requisition Closed* as the Disposition Reason.

Next Steps

Tasks
Steps: Automatically Decline a Candidate's Remaining Job Applications on page 268

Example: Return Candidate to the Recruiting Process

This example illustrates how to move a candidate from the hire process back to the recruiting process when you need to renegotiate an offer.

Context

As a recruiting administrator, Sofia needs to renegotiate an offer for a candidate who is currently in the Ready for Hire stage. Before she can renegotiate the offer, Sofia has to move the candidate back to the job application process.

Prerequisites

Security: *Undo Move from Hire* domain in the Recruiting functional area.

Steps

1. Access the Maintain Event Categories and Reasons task.
2. Select Undo Move in the Event prompt.
3. Click OK.
4. On the Undo Move Category grid, add a new row.
5. In the row you created, add a Reason row.
6. Enter these values:

Option	Description
Reason Category	*Offer Adjusted*
Reason	*Renegotiate Offer*
Manager Reason	Select the check box.

7. Click OK and Done.
8. Access the candidate profile.
9. Select Job Application > Undo Move from Hire from the related actions menu of the candidate profile.
10. Click OK.
11. In the Reason prompt, select Offer Adjusted > Renegotiate Offer.
12. Click Submit.

Result

Workday reverts the candidate to the *Make Decision* step of the last stage of the *Job Application* business process.

Candidate Skills Match

Steps: Set Up Candidate Skills Match

Context

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

You can configure your tenant to review candidate job applications and assign a Skills Match Score based on the similarity of skills between the job application and job requisition. You can also configure the candidate grid on the job requisition to display the Skills Match Score and score details for each job application. Recruiters might use this machine learning-powered analysis of candidates' applications to improve the efficiency of the application review process.

Note: Workday continues to monitor and periodically test the Candidate Skills Match feature to proactively identify impermissible bias in light of the evolving nature of machine learning tools. To uphold our commitment to ethical AI, Workday reserves the right to change the Candidate Skills Match feature and accompanying functionality (e.g., match details functionality). Where reasonably possible, Workday will provide advance notice of such changes to customers.

Customers are responsible for understanding and complying with any legal obligations arising from their use of Candidate Skills Match, including any assessment, testing, or documentation that may be required under anti-discrimination laws. Customers should consult with their legal counsel to determine whether their configuration and use of Candidate Skills Match satisfies their organization's compliance requirements.

Steps

1. Enable Skills Cloud on page 1854.

2. Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   On the Innovation Services Opt-In task, select the HCM ML Features and Third Party Connectors GA service on the Available Services tab in the HCM category.
3. Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

   Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.
4. Edit Domain Security Policies.

   Configure these domains in the Recruiting functional area:

   - *Candidate Data: Candidate Skills Match*
   - *Candidate Skills Match Details Lookup*
5. Activate Pending Security Policy Changes.
6. Access the Edit Tenant Setup - Recruiting task.

   Use the Candidate Skills Match Location Exclusion and Candidate Skills Match Location Hierarchy Exclusion prompts to select which locations to exclude from Candidate Skills Match.

   See Reference: Edit Tenant Setup - Recruiting.
7. Configure the candidate list grid on job requisitions to display skills match scores.

   From the Grid Configuration prompt on the Edit Grid Configuration task, select *Default Candidate List Grid* or a custom grid used on the job requisition. On the Individual Columns grid, add these fields that are on the Job Application business object.

   - Skills Match Score Details
   - (Optional) Skills Match Score
   - (Optional) Skills Matched
   - (Optional) Skills Not Found

   See Steps: Maintain Custom Candidate List Grids on page 263.

Result

A background process automatically begins scoring all active job applications on open job requisitions.

If you exclude a location after Workday calculated a skills match score for a candidate application, the score will still be available. You can use the Maintain Candidate List Assignment task to create a condition that hides these scores for excluded locations or location hierarchies.

Next Steps

Access the Innovation Services Summary report (secured to the *Manage: Innovation Services* and *View: Innovation Services* domains) to view service opt-in status and last-modified information, and to access the service descriptions on Workday Community.

Create a custom report with these fields on the Job Application business object to assess Candidate Skills Match data:

- Skills Match Score Details
- Skills Match Score
- Skills Matched
- Skills Not Found

2021R2 What's New Post: Candidate Skills Match

Available Innovation Services – Service Descriptions and Exhibits

Workday AI Fact Sheets: Candidate Skills Match

Concept: Candidate Skills Match

Workday uses machine learning algorithms to calculate skills match similarity. We calculate the similarity based on how well the skills derived from the candidate's job application match skills derived from the job requisition.

For calculations, Workday uses Skills Cloud skills:

- Derived from the job application and resume.
- That applicants enter on the job application and resumes.
- Derived from the job details and qualifications sections on the job requisition.
- That recruiters enter on the job requisition.

Workday processes applicant resumes in these file types:

- DOC
- DOCX
- HTM
- HTML
- PDF
- RTF
- TXT

The skills match similarity improves as the skills on the job application match more of the job requisition. Workday assigns greater weight to job applications with the required skills specified on the job requisition. Possible skills match scores are:

- Strong
- Good
- Fair
- Low
- Pending
- Unable to Score

Score Details

When you configure your job requisition to display Skills Match Score Details, you can drill down on the score to view:

- Education and certification details on the job application.
- Job experience details on the job application.
- Skills match details.

Details display on these sections when applicable:

Section	Considerations
Required Skills	Relevant skills on the job application that match required skills on the job requisition. Workday assigns greater weight to these skills in the match calculation.

Section	Considerations
Relevant Skills	All other skills on the job application that match the skills on the job requisition.
Skills Not Found	Skills on the job requisition that aren't on the job application.

Any masked information doesn’t display in the skills match details.

Score Processing

When you first set up this feature, the background process calculates the skills match for all active job applications on open job requisitions. These results display on the candidate list grid on the job requisition. Depending on the volume, this process can take a few hours to days.

After the initial calculation, the background process runs every hour to calculate skills match for job applications. The background process calculates a match for an active job application when you create, update, or partially purge a job application or associated job requisition.

Workday scores most job applications through the background process every hour, however Workday immediately scores job applications when you:

- Add resume attachments from the Attachments profile group of the job application.
- Edit the job application using the related actions menu.
- Move the job application.
- Reactivate the job application.
- Use the Create Job Application task.
- Use the Edit Evergreen Requisition task.
- Use the Edit Job Requisition task.

Workday can’t calculate a skills match score and displays Low or Unable to Score when:

- Either or both the job application or job requisition are in another language than English.
- Either or both the job application or job requisition don’t have enough skills data.
- The uploaded resume is in an unsupported format.
- A recruiter or administrator completely purges the job application or the candidate.

Skills match score calculation doesn’t consider:

- How recently a candidate has acquired relevant skills.
- How long a candidate used relevant skills.
- Years of total work experience.

Reset Skills Match Scores

If you disable Candidate Skills Match and want to re-enable it, you can reset skills match scores for all active job applications so that the scores reflect the latest changes to the job application and requisitions. You can use the Reset Skills Match Scores task only while the feature remains disabled. Once reset, you can’t undo this change.

Candidate Ranking

Steps: Set Up Candidate Rating and Ranking

Prerequisites

Create job requisitions or evergreen requisitions.

Context

You can rank candidates of a job requisition or evergreen requisition by assigning a candidate ranking template. Configure ranking templates to specify the criteria to rank candidates and how Workday calculates rankings.

Steps

1. Edit Domain Security Policies

   Configure these domains in the Recruiting functional area:

   - *Process: Rating and Ranking*
   - *Process: Ranking - Link Job Requisition*
   - *Set Up: Ranking*
   - *Set Up: Rating*
2. Create Candidate Rating Template on page 287.
3. Create candidate rating templates to assign to job requisitions.
4. Access the Assign Candidate Rating Template task.

   Select the job requisitions that you want to apply the rating template to.

   Security: *Set Up: Rating* domain in the Recruiting functional area.
5. Create Candidate Ranking Template on page 288.

   Create candidate ranking templates to assign to job requisitions.
6. Access the Assign Candidate Ranking Template task.

   Select the job requisitions that you want to apply the ranking template to.

   Security: *Set Up: Ranking* domain in the Recruiting functional area.
7. Access the Edit Grid Configuration task.

   Edit the configuration for the Default Candidate List Grid or a custom grid used for job requisitions.

   For ratings, select *Candidate Rating* from the Field prompt in the Individual Columns grid

   For rankings, select:

   - *Candidate Rank (Sort)* from the Field prompt in the Sorting section.
   - *Candidate Rank* from the Field prompt in the Individual Columns grid.

   Security: *Grid Management* domain in the System functional area.
8. Access the Configure Profile Summary task.

   For the Candidate Profile, add the Candidate Rating report as a profile card. Users with access to a candidate's profile can view the candidate's rating from the profile and can view additional rating details.

Result

If you enable candidate ranking, Workday displays a Rank Candidates button in the Candidates list of a job requisition with a ranking template. Recruiters can use this button to have Workday calculate candidate rankings for the requisition.

If you enable candidate rating, Workday automatically calculates ratings when you view the candidate grid or the Candidate Rating report from the candidate profile.

2024R1 What's New Post: Candidate Rating

Create Candidate Rating Template

Prerequisites

Security: Set Up: Rating domain in these functional areas:

- Recruiting
- Talent Pipeline

Context

Create candidate rating templates to define how Workday calculates ratings for candidates on a job requisition or evergreen requisition.

Steps

1. Access the Create Candidate Rating Template task.
2. As you complete the Rating Criteria grid, consider:

Option	Description
Rating Field	Select the fields that you want to use as the criteria to rate candidates.
Rating Field Score Mapping	Select the rating data mapping that determines how candidates are scored. This prompt displays once you select a rating field.
Weight	Enter a number that determines the importance of the rating field when Workday calculates candidate ratings. The total weight from all rows must be less than or equal to 100.

3. If you need to create a rating data mapping for a rating field, access the Create Rating Data Mapping task from the Rating Field Score Mapping prompt.
4. Configure the rating data mapping by selecting or entering the rating field values and assigning a score to each row.

Example

This example illustrates how you can configure a candidate rating template with Degrees and Candidate City as the rating fields:

Rating Criteria

Rating Field	Weight
Degrees	40
Candidate City	60

Rating Data Mapping

Rating Field Score Mapping	Rating Field Value: Score
Degrees Score Mapping	PhD: 100 (maximum score) M.S.: 90 B.S.: 80

Rating Field Score Mapping	Rating Field Value: Score
Candidate City Score Mapping	Atlanta: 100 (maximum score) Dublin: 80

If a candidate lists Atlanta as their city and B.S. as their degree on their application, their total score based on this template configuration will be:

- Location: (100/100) x 60 = 60
- Degree (80/100) x 40 = 32
- Total Candidate Rating: (60 + 32) = 92

Next Steps

Assign the candidate rating template to a job requisition or evergreen requisition.

Create Candidate Ranking Template

Prerequisites

Security: *Set Up: Ranking* domain in the Recruiting functional area.

Context

Create candidate ranking templates to define how candidates are ranked on a job requisition. You can rank candidates based on any of these types of fields on the Job Applications, Prospects and Referrals business object:

- Boolean
- Instance
- Numeric
- Text

Steps

1. Access the Create Candidate Ranking Template task.
2. As you complete the Ranking Order & Sort grid, consider:

Option	Description
Ranking Field	Select the field to use as a ranking criteria for the template.
Ranking Field Priority Mapping	Select the ranking data mapping that determines how candidates are ranked with instance or text fields. This prompt only displays if you select a ranking field that's either an instance or text field. If there are no ranking data mappings for the field, access the Create Ranking Data Mapping task from the prompt to create one.
Sort Direction	Select how Workday should sort the candidate ranking results for the field.

3. If you need a ranking data mapping for an instance or text field, access the Create Ranking Data Mapping task from the Ranking Field Priority Mapping prompt.

4. As you complete this task, consider:

Option	Description
Ranking Field Instance Value	Select the options that you want to use as ranking criteria for the ranking field. You can select multiple options for each row. This prompt only applies to instance ranking fields.
Ranking Field Text Value	Enter the text that you want to use as a ranking criteria for the ranking field. This field only applies to text ranking fields.
Priority	Enter a whole number greater than zero that represents the priority of the options you selected or text your entered. Workday uses this number to calculate how to rank candidates.

Next Steps

Assign the candidate ranking template to a job requisition.

Certificate of Eligibles

Concept: Certificate of Eligibles

Certificate of Eligibles, also called *eligibility list* or *candidate list*, enables selecting officials to generate a list of eligible candidates for job requisitions. Having a list of eligible candidates expedites the selection process for hiring managers for state, local, and federal government.

You can determine the criteria for placing a candidate on a certificate and then add the candidates to the certificate from the Create Certificate of Eligibles task. The criteria can include candidate rating, candidate ranking, and veteran's preference. A certificate must be returned or expired before you can create a new certificate.

The following scenarios require a new certificate on the job requisition:

- When a certificate expires, the hiring manager can no longer hire or disposition a candidate from the certificate.
- If a candidate gets moved from one job requisition to another, the candidate will not remain on the original certificate.
- If a job application is moved to a different job requisition.

When a candidate is moved to a different job requisition, any existing certificates associated with the original requisition will no longer include that candidate. To generate a certificate for the candidate on the new job requisition, a new certificate must be created. Certificates are tied to job requisitions, not candidates, and therefore do not follow the applicant. A candidate can be listed on multiple certificates across different requisitions, however each certificate is unique to its specific requisition. Once the certificate has been issued, the candidate certificates cannot be changed. The certificate can be rescinded or returned by the hiring manager and a new certificate can be issued.

Business Processes

The *Create Certificate of Eligibles* business process is initiated by the Create Certificate of Eligibles task. The *Return Certificate of Eligibles* business process and the Return Certificate of Eligibles task (accessed from the certificate) enables you to request additional candidates.

In addition, you can choose to save the task for later and revisit your candidate list with the Revise Certificate of Eligibles task that you can access from My Tasks or the Revise Certificate of Eligibles button on the Candidates tab.

Grid Configuration

You can customize and configure the Certificate of Eligibles grid using the Maintain Candidate List Assignment task.

Auditing

Auditors can be granted separate access to the Audit Certificate of Eligibles task and can add comments about the certificate. From the certificate, click Audit History.

Reporting

You can use the View Certificate of Eligibles report to obtain a list of candidates by job requisition and profile.

Related Information

Tasks

Steps: Set Up Certificate of Eligibles on page 290

Reference

2025R1 Release Note: Certificate of Eligibles

Steps: Set Up Certificate of Eligibles

Prerequisites

Create job requisitions or evergreen requisitions.

Context

Create a certificate of eligibles for job requisitions or evergreen requisitions. You can determine the criteria for placing a candidate on a certificate and then generate a list of eligible candidates for job requisitions.

Steps

1. Access the Edit Tenant Setup - HCM task.

   Configure the ID Definition for Certificate of Eligibles if a specific pattern for the certificate number is needed.

   See ../../../../manage-workday/tenant-configuration/tenant-setup/dan1370796358261.ditaCreate ID Definitions and Sequence Generators
2. ../../../../authentication-and-security/configurable-security/security-policies/dan1370797389950.dita.

   Configure these domains in the Recruiting functional area:

   - *Audit: Certificate of Eligibles*
   - *Manage: Certificate of Eligibles*
3. Add the Certificate of Eligibles tab on the Job Requisition View:

   - Access the Configure Profile Group task.
   - Select Candidates for Job Requisition Composite View.
   - Add Certificate of Eligibles.

4. ../../../../authentication-and-security/configurable-security/security-groups/segment-based-security-groups/dan1370797248403.dita.

   Set up the following access rights:

   - Active Certificate of Eligibles
   - All Certificate of Eligibles
5. ../../../../manage-workday/business-processes/customize-business-processes/dan1370797384762.ditaEdit Business Processes.

   Set up the following business processes:

   - Create Certificate of Eligibles
   - Return Certificate of Eligibles
6. Access the Maintain Candidate List Assignment task.

   Select the custom grid in the ~Certificate of Eligibles~ Grid prompt.

   Security: *Set Up: Recruiting* domain in the Recruiting functional area.
7. Access the Edit Grid Configuration task.

   Edit the configuration for the Certificate of Eligibles grid or a custom grid used for job requisitions.

   Security: *Grid Management* domain in the System functional area.

Result

On the Certificate of Eligibles tab of the job requisition profile, click Certificate of Eligibles to create a certificate.

2024R1 What's New Post: Candidate Rating

Candidate Work Availability

Steps: Set Up Candidate Work Availability

Context

You can configure candidate availability templates to collect the days and times candidates are available to work. These configured time slots are then displayed for external candidates on the external job application.

Steps

1. Access the Create Candidate Availability Template task.

   Enter start and end times for each day of the week to create work availability time slots. Make sure the time slots you create:

   - Don't overlap.
   - Don’t have duplicates.
   - Are within the same day

   Example: For work availability that spans overnight, you could create a time slot that goes from Monday 8 PM to 11:59 PM and then another time slot that goes from Tuesday 12 AM to 4 AM.

   Security: *Set Up: Candidate Availability Template* domain in the Recruiting functional area.
2. Access the Maintain Job Requisition Candidate Availability Defaults task.

   Select a Job Requisition Event Condition Rule.

   Select a Candidate Availability Template. The first rule in the table is the defaulting rule. Make sure you associate each unique condition rule with one template.

   Security: *Set Up: Candidate Availability Template* domain in the Recruiting functional area.
3. Create and Edit Job Requisitions on page 611.

   Create a new job requisition.

   The template is automatically assigned to the new job requisition if it meets any of the condition rules set up in the Maintain Job Requisition Candidate Availability Defaults task.

   The corresponding candidate availability template will appear in the Details tab on the job requisition.
4. Access the Edit Grid Configuration task to display time slots and availability report fields on the Candidate grid.

   Edit the configuration for the Default Candidate List Grid or a custom grid used for job requisitions.

   Add time slots and the availability report fields that you want to display on the grid.
5. Access the Configure Profile task.

   Add the Candidate Work Availability section to the Candidate Profile.

   Select the Display in Profile check box.

Candidate Self-Scheduling

Setup Considerations: Candidate Self-Scheduling

You can use this topic to help make decisions when planning your configuration and use of Candidate Self-Scheduling. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

You can create calendars for high-volume recruiting events that candidates can use to reserve and manage event time slots. Example: Interviews, orientations, assessments, phone screenings, and campus recruiting events. Recruiters can also schedule and manage event time slots on behalf of candidates.

Business Benefits

Candidate Self-Scheduling:

- Improves recruiter efficiency by reducing the need for manual scheduling administration.
- Streamlines your ability to view, manage, and report on recruiting event metrics.
- Enhances the candidate experience by giving candidates control over their scheduled events.

Use Cases

Candidate Self-Scheduling enables you to:

- Use self-schedule calendars at any stage of the recruiting process for high-volume recruiting events.
- Schedule, reschedule, and cancel events on behalf of a candidate.
- Send tasks to candidates to schedule themselves for an event.
- Track event activity and calendar availability.

Candidates Self-Scheduling enables candidates to:

- Reserve a time slot.
- Reschedule a time slot.
- Cancel a time slot.
- View their upcoming events.

Questions to Consider

Questions	Considerations
How much control do you want to give candidates when self-scheduling?	You can configure: • The number of hours before an event that candidates can reschedule. • A visibility range to limit the range of dates (within the start and end date of the calendar) that a candidate can select when scheduling a time slot. • A minimum number of dates to display to candidates when all time slots within the initial visibility range are filled.
Where do you plan to hold your recruiting events?	If you plan to hold recruiting events at external locations such as hotels or convention centers, you can create off-site recruiting locations and align a self-schedule calendar to the location. You can set a date to inactivate the location when it's no longer needed. You don't need to configure anything for internal locations.
Who's involved in your recruiting events?	You can set up assignable roles and configure an event leader role to give certain workers access to candidate and job application data. You can assign roles to schedules when creating or editing a calendar. Example: You need to give interviewers access to job applications before group interviews.
How do you want to manage recurring recruiting events?	You can configure recurring event schedules for recurring events, such as seasonal group interviews.

Questions	Considerations
	You can also copy schedules to reduce manual effort.

Recommendations

You can view a candidate's self-scheduled calendar events efficiently by configuring a Scheduled Events for Candidate Profile profile group on candidate profiles.

To avoid confusing candidates, add notifications to the *Candidate Self-Schedule* business process to notify candidates of:

- A pending self-schedule task.
- Confirmation of their scheduled event.
- Confirmation of their rescheduled event.
- Confirmation of an event cancellation.

Requirements

External candidates require a Candidate Home account to schedule and manage their time slots for events.

Limitations

- You can't prevent candidates from rescheduling events.
- You can't integrate Candidate Self-Scheduling with any third-party systems such as Microsoft® Outlook, iCal, or Google Calendar.
- Calendars don't detect the candidate's time zone. The time zone associated with the calendar is the time zone that displays to the candidate.

Tenant Setup

No impact.

Security

Domains	Considerations
Manage: Candidate Recruiting Self-Schedule Event in the Recruiting functional area.	Users secured to this domain can schedule, reschedule, and cancel an event on behalf of a candidate.
Manage: Job Requisition Self-Schedule Calendars in the Recruiting functional area.	Users secured to this domain can assign a self-schedule calendar to a job requisition.
Set Up: Recruiting in the Recruiting functional area.	Users secured to this domain can maintain recruiting self-schedule calendar types.
Set Up: Recruiting Self-Schedule Calendar in the Recruiting functional area.	Users secured to this domain can create self-schedule calendars.

Business Processes

You can configure the *Candidate Self-Schedule* business process to enable external or internal candidates to reserve time slots for a calendar event by adding it as a step to business processes.

Reporting

Reports	Considerations
All Recruiting Self-Schedule Calendars	Use to view all recruiting self-schedule calendars.
My Recruiting Self-Schedule Event Roster	Use to view your event roster and manage events on behalf of candidates.
Recruiting Self-Schedule Calendar Availability	Use to view available and reserved time slots for 1 or more recruiting self-schedule calendars. This report returns a maximum of 1000 available dates regardless of the selected start and end dates.
Recruiting Self-Schedule Event Roster	Use to view recruiting events and manage events on behalf of candidates.
Self-Scheduled Events	Configure this report on the Schedule Events profile group to view scheduled events and awaiting actions.

Integrations

Web Services	Considerations
Recruiting Self-Schedule Calendar Types	Use to create and edit calendar types.
Recruiting Self-Schedule Calendars	Use to create a new calendar.
Assign Recruiting Self-Schedule Calendars	Use to assign 1 or more calendars to an evergreen or job requisition.

Connections and Touchpoints

Features	Considerations
Assignable Roles	You can set up assignable roles and assign them to calendar schedules to give workers access to candidate information.
Candidate Profile	You can add the Scheduled Events profile group to the Candidate Profile to display the candidate's events on their profile.
Locations	You can create off-site recruiting locations for events at external locations.
Requisitions	You can assign 1 or more calendars to an evergreen or job requisition.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Related Information

Concepts

Concept: Roles, Time Zones, and Snapshots

Concept: Locations and Location Hierarchies

Reference

Workday 32 What's New Post: Internal Candidate Self-Scheduling

Steps: Set Up Candidate Self-Scheduling

Prerequisites

Review setup considerations for Candidate Self-Scheduling. See Setup Considerations: Candidate Self-Scheduling.

Context

Candidate Self-Scheduling enables you to:

- Create predefined calendars for recruiting events, such as mass interviews or orientations, at any stage in the recruiting process.
- Schedule, reschedule, and cancel events on behalf of a candidate.
- Send tasks to external candidates through Candidate Home so they can schedule themselves for an event.
- Send tasks to internal candidate through My Tasks.
- Track event activity and calendar availability.

Candidate Self-Scheduling enables candidates to reserve, reschedule, view, and cancel time slots for events.

Steps

1. Edit Domain Security Policies.

   Configure these security domains in the Recruiting functional area:

   - *Manage Candidate Recruiting Self-Schedule Event*
   - *Manage Job Requisition Recruiting Self-Schedule Calendars*
   - *Manage: Recruiting Self-Schedule Events*
   - *Self-Service: My Scheduled Recruiting Events*
   - *Set Up: Recruiting*
   - *Set Up: Recruiting Self-Schedule Calendar*
2. Configure the *Candidate Self-Schedule Event* business process.

   See Steps: Configure the Candidate Self-Schedule Event Business Process on page 298.
3. Set Up Assignable Roles.

   Configure the Workday delivered Self-Schedule Event Leader role to give access to workers who might not normally be able to view specific candidate information. This role can be assigned to calendar schedules by those security groups listed in Assigned by Security Groups on the Maintain Assignable Roles task.
4. Steps: Set Up Profiles and Profile Groups.

   Add the:

   - Scheduled Events profile group to the Candidate Profile.
   - Self-Scheduled Events report to the Scheduled Events profile group. This report contains a section for Awaiting Actions and another for Scheduled.
5. Access the Create Off-Site Recruiting Location task.

   Create *Off-Site Recruiting* locations if you have events that are held at external locations such as hotels or convention centers. This task behaves the same as the Create Location task except that *Off-Site Recruiting* is automatically assigned as the Location Usage. You can set a date on which the location is no longer valid.

   See Create Locations.

6. Access the Maintain Recruiting Self-Schedule Calendar Types task.

   Create calendar types, such as *Group Interview*, *Orientations*, or *On-site Assessments*, and associate it with a recruiting stage. You can have more than 1 calendar type mapped to the same recruiting stage.

   Also define the messages candidates see when they access the self-scheduling task on Candidate Home.
7. Access the Create Recruiting Self-Schedule Calendar task to create a new calendar.

   Candidate Visibility Range limits the range of dates (within the start and end date of the calendar) that a candidate can select when scheduling a time slot.

   Example: On January 5, a candidate goes to schedule a time slot. The calendar schedule has start and end dates of January 1 - January 31. The visibility range is 2 days and 10 days. Workday uses the date that the candidate initiated the scheduling and adds the number of days of the visibility range to it. The candidate can select from time slots available on January 7 through January 15.
8. Access the Assign Recruiting Self-Schedule Calendars task.

   You can assign more than 1 calendar to an evergreen or job requisition. Example: Job requisition (JR-10026) can have:

Calendar	With Calendar Type	Mapped to
Assessment Calendar	Skills Test	Assessment Stage
Interview Calendar	Interview	Interview Stage
Orientation Calendar	Orientation	Ready for Hire

Result

When you move a candidate to a stage that has the *Candidate Self-Schedule Event* action step, Workday:

- Creates a *Candidate Self-Schedule Event*.
- Sends a task to the:
  - Registered Candidate Home account of the candidate.
  - Internal candidate's My Tasks.

Next Steps

Manage candidate self-schedule events.

Related Information
Concepts
Setup Considerations: Candidate Self-Scheduling on page 292

Steps: Manage Candidate Self-Schedule Events

Prerequisites

Set up candidate self-scheduling.

Move candidates to a stage that has the *Candidate Self-Schedule Event* action step.

Steps

1. Schedule, reschedule, and cancel time-slots on behalf of a candidate.

   Use the Awaiting Action or Scheduled tabs on the candidate profile to manage time-slots on behalf of the candidate.

2. Use these reports to manage calendars and events:

   For calendars:

   - All Recruiting Self-Schedule Calendars
   - Delete Recruiting Self-Schedule Calendars
   - Edit Recruiting Self-Schedule Calendars

   For events:

   - My Recruiting Self-Schedule Event Roster
   - Recruiting Self-Schedule Calendar Availability
   - Recruiting Self-Schedule Event Roster

Steps: Configure the Candidate Self-Schedule Event Business Process

Context

Configure the *Candidate Self-Schedule Event* business process to enable external or internal candidates to reserve time-slots for a calendar event.

Steps

1. Create a default definition for the *Candidate Self-Schedule Event* business process type.
   a) Access the Create Business Process Definition (Default Definition) task.

      Workday recommends that you only include the initiation step in the business process definition.
   b) Select Business Process Policy > Edit from the Actions menu on the *Candidate Self-Schedule Event* business process.

      Workday recommends that you add *Candidate As Self* on the initiating action. Add *Employee As Self* to View All or View Completed, if you want employees to see a confirmation message when they've self-scheduled for an event.
   c) Select Business Process > Add Notification from the Actions menu on the *Candidate Self-Schedule Event* business process.

      As you complete this task, consider these types of notifications:

If you want an email sent to the candidate to confirm that they've:	Then:
A Schedule Your Event task on Candidate Home when candidate doesn't have a Candidate Home account.	Trigger(s) = On Entry for Initiation
A Schedule Your Event task on Candidate Home when candidate has a Candidate Home account.	Trigger(s) = On Entry for Initiation
Scheduled a time slot.	Trigger(s) = Trigger on Status for *Completed*
Rescheduled a time slot.	Trigger(s) = Trigger on Status for *Corrected*
Canceled a time slot.	Trigger(s) = Trigger on Status for *Rescinded*
   d) Activate Pending Security Policy Changes.
2. Add *Candidate Self-Schedule Event* as an action step to 1 or more of these business processes.

Business Process	Where to add
Assess Candidate	Before *Make Decision* step.

Business Process	Where to add
Background Check	Before any *Review* or *Approval* steps and before *Make Decision* step.
Employment Agreement	Before any *Review* or *Approval* steps and before *Make Decision* step.
Interview	Before *Make Decision* step
Offer	Before any *Review* or *Approval* steps and before *Make Decision* step.
Ready to Hire	Before or after *Completion* step.
Reference Check	Before *Make Decision* step
Review Candidate	Before any *Review* or *Approval* steps and before *Make Decision* step.
Screen	Before *Make Decision* step.

See Steps: Configure Business Process Definitions.

Duplicate Candidate Merging

Setup Considerations: Duplicate Candidate Merging

You can use this topic to make configuration decisions for duplicate candidate merging. It explains:

- Why to set it up.
- How this feature fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

With Workday Recruiting match and merge functionality, you can identify potential duplicate candidates and merge a candidate to a:

- Contingent worker.
- Candidate.
- Pre-hire.
- Previous worker.

Business Benefits

- Improved Data Accuracy and Integrity
    - Eliminates redundancy, ensures a single, complete candidate record.
    - Prevents conflicts, consolidates history, contact information, and application data.
- Increased Recruiter Efficiency
    - Saves time, reduces effort spent managing duplicate profiles.
    - Simplifies hiring decisions especially with high volume hiring
    - Centralized candidate history improves visibility.

- Enhanced Candidate Experience
    - Prevents duplicate outreach for the same role.
    - Reflects a well-managed and respectful hiring process.
- Better Recruiting Analytics and Metrics
    - Accurate source tracking.
    - Improved pipeline metrics, better visibility into time-to-hire and conversion.
- Stronger Compliance and Data Governance
    - Supports GDPR compliance, avoids unnecessary data duplication.
    - Maintains audit trails, tracks changes for transparency and accountability.

Use Cases

You can use duplicate candidate merging to:

- Identify candidates who apply for jobs multiple times through external career sites using different emails or resumes.
- Identify rehires or seasonal workers by asking if they've worked with the company before.
- Merge confidential candidates or candidates with confidential job applications to other candidates, contingent workers, or former workers.
- Link applicants who are also current employees, contingent workers, or former workers under a single profile.
- Merge profiles created through referrals with those already in the system to maintain one source of truth.
- Consolidate records from job fairs, campus events, or sourcing campaigns where candidates might register multiple times.
- Combine profiles when different recruiting agencies submit the same candidate.
- Prevent confusion during hiring and onboarding by ensuring the candidate's history is accurate and complete.

Questions to Consider

Questions	Considerations
How do you want to merge duplicates?	You can merge duplicates manually or automatically. When you enable automatic candidate merging, Workday automatically merges candidates based on specific matching criteria to help you save time. You can merge candidates manually when they don't meet the criteria for automatic candidate merging. Example: Workday doesn't automatically merge candidates if at least 1 of them has a Candidate Home account.
Which types of duplicates do you want to merge?	You can merge candidates to: • Contingent workers • Other candidates • Pre-hires • Previous workers • Terminated workers

Questions	Considerations
	Workday identifies duplicate pre-hires when they're eligible for hire and share the same country. You can merge candidates who apply through an external career site with their active contingent worker profile. Workday enables you to merge confidential candidates or candidates with confidential job applications to: • Contingent workers • Former workers • Other candidates • Terminated workers
When do you want to identify and manage duplicates?	You can add the duplicate candidate merging as a required step at any stage of the recruiting process. When you include previous worker questions on your external career site, external candidates can identify themselves as previous workers. You can display responses to previous worker questions on the candidate grid to make recruiters aware of potential duplicates early in the recruiting process. You can configure Workday to prevent a referral when: • The candidate applied for the job requisition previously. • There's a duplicate prospect for the same job requisition or job area. • The person already exists anywhere in Workday. You can configure Workday to notify recruiters of potential duplicate agency candidates for review.

Recommendations

To avoid duplicate candidates, enable candidates to identify themselves as previous workers.

Requirements

No impact.

Limitations

You can't:

- Automatically merge 2 candidates when at least 1 of them has a registered Candidate Home account.
- Merge external candidates with active internal employees.
- Merge a candidate to a worker who has an in-progress event. Example: Personal information change or future-dated *Hire* event.

- Merge records when the source record has an in-progress event. Example: You can't merge a pre-hire with an in-progress *Hire* event to a previous worker.
- Unmerge records that have an in-progress or completed *Hire* event.

Tenant Setup

You can enable automatic candidate merging on the Edit Tenant Setup - Recruiting task.

Security

Domains	Considerations
Candidate Merge domain in the Recruiting functional area.	Users secured to this domain with *View and Modify* access can view and merge potential duplicate candidates. Users with *View* access can't take action on duplicates.
Former Worker Storage domain in the Staffing functional area.	Users secured to this domain can access information on former workers.

Business Processes

You can add:

- Duplicate candidate merging as a *To Do* step on the *Job Application* business process.
- Condition rules to *To Do* steps to review responses to previous worker questions and send a task to recruiters to review and manually merge duplicates.

Reporting

Reports	Considerations
Find Duplicates for Candidate	Use this report to view and manually merge or link duplicate records.
Merged Candidates	Use this report to review merged and unmerged records.

Integrations

You can use the *Put Candidate* web service to load a small number of candidates. When you enable automatic candidate merging, Workday searches for duplicates created with the *Put Candidate* web service. For loading a large number of candidates, we recommend you use the *Bulk Import Put Candidate* web service. The *Bulk Import Put Candidate* web service offers much more efficient loading. When you use the *Bulk Import Put Candidate* web service, automatic candidate merging will not occur even if it is enabled. You can use the Find Duplicates for Candidate report to identify duplicate candidates and merge them manually.

Connections and Touchpoints

Duplicate candidate merging interacts with these parts of Workday:

Features	Description
Cash	When merging, Workday takes this pre-hire data into account: • Ad hoc payment status. • Ad hoc payment template status.

Features	Description
Expenses	When merging, Workday takes this expenses data on candidate and pre-hire records into account: • Credit card transactions. • Expense item attributes. • Expense payees. • Expense payments. • Expense reports. • Mobile expenses. • Spend authorizations. • Ticket details.
Learning	When merging, Learning takes this pre-hire data into account: • Contact person for a course offering. • Learning history. • Learning paths. • Topics.
Settlements	When merging, Workday takes this payment data on pre-hire records into account: • Ad hoc payments. • Expense payments.
Student	The Match and Merge process suggests potential duplicates for merging.
Talent	When merging, Talent takes this pre-hire data into account: • Awards and activities. • Certifications. • Competencies. • Education. • Internal projects. • Job history. • Languages. • Professional affiliations. • Skills. • Training. • Work experience.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Related Information

Concepts

Concept: Manual Candidate Merging on page 306

Concept: Automatic Candidate Merging on page 309

Tasks

Identify Duplicate Recruiting Agency Candidates on page 429

Merge Duplicate Candidates

Prerequisites

- You can enable candidate merging using the Enable Candidate to Person Merging task.
- Security:
  - *Candidate: Global Search* and *Candidate Merge* domains in the Recruiting functional area.
  - *Exit Interview* and *Former Worker Storage* domains in the Staffing functional area.

Context

Workday Recruiting Match and Merge automatically identifies potential duplicate records for a candidate and enables you to:

- Manually merge a candidate to another candidate, pre-hire, former worker, or contingent worker.
- Unmerge records.

You can merge duplicate External Candidates or Pre-Hires, but not with Internal Candidates or Workers.

Merge events have a:

- Source (the candidate that you want to merge).
- Target (the worker or candidate with whom you want to merge the Source).

The Source is the candidate:

- That applied to a job on the external career site.
- Created by the *Put Candidate* web service.
- From whose profile you initiate the merge on the Duplicates tab.
- Whose name you enter in the Find Duplicates for Candidate report.

Note: You can now opt in to the new Duplicate Management Framework. After you opt in, you can't opt out and won't be able to access the Workday Recruiting Match and Merge functionality. For more information, see:

- Duplicate Candidate Merging/Duplicate Management Framework Feature Comparison
- Steps: Set Up the Duplicate Management Framework for Recruiting on page 312

Steps

1. Access the Edit External Career Site task.

   Complete the Apply - Previous Worker section to check whether external candidates previously worked at your company. Workday uses candidate answers to flag potential duplicates.
2. (Optional) Access the Edit Tenant Setup - Notifications task.

   Configure Workday to send a notification to the email address associated with a deactivated Candidate Home account.

   a) In the Notification Delivery Settings section, access the Recruiting parent notification type.
   b) Configure the Candidate Home Account Deactivated notification category.

   See Reference: Edit Tenant Setup - Notifications.
3. Access the Find Duplicates for Candidate report.
4. Select a candidate and click OK to advance to the list of potential duplicates for that candidate.

5. Select an action on the Merge column:
    - Merge: Merges the candidate to the selected record.

   Clicking Remove prevents that record from displaying as a duplicate for the candidate in future searches.

   If you merge a candidate to a former worker, Workday uses the former worker information when you hire the candidate. This type of merge might trigger data updates on the former worker record. All processes triggered by the merge have (Merge) appended to the process name.

   Before merging a person record, close all other browser tabs, windows, and mobile instances where that record is open.
6. If you want to merge the candidate with a person not shown on the Potential Duplicates grid, click Merge with Other.

   Search for a person with whom you want to merge the candidate. The Last Name that you enter must fully match the person's last name.

   Example: If you want to search for a terminated worker named Ava Coulson-Greene, enter *Coulson-Greene* in the Last Name field.

Result

Workday automatically sets these types of records as the Target when you merge them with a candidate:

- Candidates with a Candidate Home account, except when you merge 2 candidates with different accounts.
- Contingent workers.
- Terminated workers.

When you merge a candidate with a terminated worker, Workday:

- Automatically sets the terminated worker as the Target.
- Updates the terminated worker profile with candidate information, including the:
    - Contact information.
    - Legal name.
- Marks the merged record as a former worker on the job application.

When you merge a:

- Candidate who has a Candidate Home account with a contingent or terminated worker, Workday automatically sets the worker as the merge Target. You can't select any of these record types as a Source for merging.
- Prospect created through Prospect Introduce Yourself with another prospect, Workday displays Terms and Conditions from the merge Target and not the merge Source in the merged record. Terms and Conditions for the Source are still available in audit reports.

When a prospect applies on an external career site that requires a Candidate Home account, Workday creates a candidate record independent of the prospect record. The 2 records don't merge automatically.

When you merge candidate records, the Candidate Confirmed Opt-In Email status is based on the primary email of the candidate not the profile of the candidate. The Candidate Confirmed Opt-In Email status is based on the most recent or updated primary email address.

When you merge a candidate with a worker and the candidate has a pendingReview Documents task, Workday removes the pendingReview Documentstask if you’re usinge-Sign by Adobe Sign as theeSignature Integration Type. Workday recommends that after such a merge, you use theReview Documents task to add this step.

Next Steps

Review merged records on the:

- Candidate profile.
- Merged Candidates report.

You can use these report fields to identify and report on merge targets and the former or terminated worker that a candidate was merged to:

- Candidate is Merge Target
- Merged Former Worker
- Merged Terminated Worker

To restore a merged record to its original state, click the Unmerge button on the Merged Candidates report. All actions you take on the merged record, such as creating a job application, transfer to the target record of the original merge. You can't unmerge records when:

- There's an in-progress or completed *Hire* event.
- The source record is purged.

Related Information
Tasks
Create External Career Sites on page 379
Steps: Set Up Duplicate Management

Concept: Manual Candidate Merging

You can view and manually merge potential duplicate records on the:

- Find Duplicates for Candidate report.
- Duplicates tab on the Overview profile group of the candidate profile.

Possible Actions on Duplicate Records

Workday enables you to take action on duplicate records, depending on the source and target of the merge event. On the grid below:

- The top row lists potential merge targets.
- The first column lists potential merge sources.

	Prospect	Candidate without Candidate Home Account	Candidate with Candidate Home Account	Pre-Hire with Candidate	Pre-Hire	Terminated Worker	Former Worker	Active Contingent Worker	Pre-Hire with Initiated or Future-Dated Hire	Active Worker
Prospect	Merge	Merge	Merge	Merge	Merge	Merge	Merge	Merge	N/A	N/A
Candidate without Candidate Home Account	Merge	Merge	Merge	Merge	Merge	Merge	Merge	Merge	N/A	N/A
Candidate with Candidate Home Account	Merge - Candidate Home account moves	Merge - Candidate Home account moves	Merge - Latest updated primary email address	Merge	Merge	Merge	Merge	Merge	N/A	N/A

	Prospect	Candidate without Candidate Home Account	Candidate with Candidate Home Account	Pre-Hire with Candidate	Pre-Hire	Terminated Worker	Former Worker	Active Contingent Worker	Pre-Hire with Initiated or Future-Dated Hire	Active Worker
	to target	to target	becomes Candidate Home account username							
Candidate with Pre-Hire and Without Hire Events	Merge	Merge	Merge	Merge	Merge	Merge	Merge	Merge	N/A	N/A
Candidate with Pre-Hire and Initiated Hire Event	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A

You can't merge a candidate to a worker who has an in-progress event, such as a personal information change or future-dated hire event.

You can't merge 2 candidates if at least 1 candidate's *Job Application* event is complete.

If you unmerge 2 candidates who previously had different Candidate Home accounts, Workday restores both accounts. You can't unmerge candidates out of order. Example: If you merge 2 candidates, then merge the record with a third candidate, you must undo the second merge before you undo the first.

When you merge a prospect created through Prospect Introduce Yourself with another prospect, Workday displays Terms and Conditions for the merge Target and not the merge Source. Terms and Conditions for the Source are available in audit reports.

Duplicate Record Identification

Workday compares this information on both records to find and display potential duplicates for a candidate:

Type	Description
Candidate name	At least one of these combinations must be an exact match: • First letter of the First Name and full Last Name. • Full First Name and Last Name.

Type	Description
Contact information	The Phone Number or Email must be an exact match. Only available for candidate-to-candidate matching. Workday doesn't match phone numbers if the formatting differs. Example: 555-1234 doesn't match with 5551234.
Date of birth	Must be an exact match.
National ID	You can merge records with national IDs that have different expiration or issue dates when the national ID type and ID are the same. You can't merge 2 records that have different values for the same type of national ID. If both the source and target records have national IDs of the same type, either: • All of the source's national IDs of that type must be contained within the target's IDs of the same type, or • All of the target's national IDs of the same type must be contained within the source's IDs of the same type. Example: You can merge 2 records if the source and target share the same SSN (Social Security Number) and the source has an additional SSN. However, you can't merge the records if they share the same SSN, but both of them have additional, different SSNs. Workday doesn't compare government IDs when identifying duplicate candidates.
Previous worker questions	If you enable previous worker questions on the Edit External Career Site task, Workday compares existing worker data with these candidate answers: • Previous work email. • Employee ID. If at least one of these answers matches with a former or terminated worker, Workday also compares their data with these candidate answers for increased accuracy: • Manager name. • Work location.
Social media	At least 1 of these fields must be an exact match: • LinkedIn URL • X User Name • Facebook URL • Google+ URL

Concept: Automatic Candidate Merging

When you enable automatic candidate merging on the Edit Tenant Setup - Recruiting task, Workday:

- Searches for duplicates for a candidate who applies to a job on an external career site.
- Automatically merges the candidate with any duplicates.

Workday checks for duplicates within these candidate populations:

- External candidates.
- Candidates created from the Create Job Application related action off a prospect.
- Prospects and candidates created with the *Put Candidate* web service.

Workday automatically merges 2 candidates when their First Name and Last Name are exact matches and at least 1 of these fields is an exact match:

- Phone Number
- Email Address
- LinkedIn URL
- X User Name
- Facebook URL
- Google+ URL

Example: Recruiter A submits a candidate with all details, and later, Recruiter B submits the same candidate with the same details but omits their LinkedIn profile. Workday identifies the shared candidate information and consolidates the candidate profile as one.

Workday doesn't automatically merge 2 candidates if at least 1 of them has a registered Candidate Home account.

You can merge duplicate External Candidates or Pre-Hires, but not with Internal Candidates or Workers.

Concept: Confidential Candidate Merging

Workday enables you to merge confidential candidates or candidates with confidential job applications to:

- Other candidates.
- Contingent workers.
- Former workers.

If you have access to view them, confidential candidates display on the:

- Duplicates tab on the candidate profile.
- Find Duplicates for Candidate report.

The prospect on the merged record has the same confidential or nonconfidential status as the target person. If the target person has no prospect, the merged prospect has the same confidential or nonconfidential status as the source candidate's prospect.

Individual job applications retain their confidential or nonconfidential status. If you unmerge, prospects and job applications revert to their original confidential or nonconfidential status. Confidential and nonconfidential prospects can have confidential job applications.

Example of merging confidential candidates to other candidates:

Source Prospect	Source Job Application	Target Prospect	Target Job Application	Merged Record Information
Confidential	Job application 1 (confidential)	Nonconfidential	Job application 2 (nonconfidential)	• Nonconfidential prospect. • Job application

Source Prospect	Source Job Application	Target Prospect	Target Job Application	Merged Record Information
				1 (confidential). • Job application 2 (nonconfidential).
Confidential	Job application 1 (nonconfidential)	Nonconfidential	Job application 2 (nonconfidential)	• Nonconfidential prospect. • Job applications 1 and 2 (nonconfidential).
Nonconfidential	Job application 1 (nonconfidential)	Confidential	Job application 2 (confidential)	• Confidential prospect. • Job application 1 (nonconfidential). • Job application 2 (confidential).
Nonconfidential	Job application 1 (confidential)	Confidential	Job application 2 (confidential)	• Confidential prospect. • Job applications 1 and 2 (confidential).
Confidential	Job application 1 (nonconfidential)	No prospect	Job application 2 (nonconfidential)	• Confidential prospect. • Job applications 1 and 2 (nonconfidential).

Example of merging confidential candidates or candidates with confidential job applications to former or contingent workers:

Source	Target Former or Contingent Worker	Merged Record Information
Confidential prospect	No prospect	Confidential prospect
Confidential job application	No job application	Confidential job application
Confidential prospect	Confidential prospect	Confidential prospect
Confidential job application	Confidential job application	Confidential job application
Confidential prospect	Nonconfidential job application	• Nonconfidential prospect • Nonconfidential job application

Source	Target Former or Contingent Worker	Merged Record Information
Confidential job application	Nonconfidential job application	• Nonconfidential candidate • Nonconfidential job application • Confidential candidate • Confidential job application
Confidential prospect	Nonconfidential prospect	Nonconfidential prospect
Confidential job application	Nonconfidential prospect	• Confidential candidate • Confidential job application

Troubleshooting: Candidate List Grid and Candidate Custom Report Performance

To find duplicate candidates, you can use a calculated field in a business process condition on a job application. Example: Create a calculated field and add a condition to the *Review* business process that notifies the primary recruiter of duplicate candidates.

Users report performance issues on the candidate list grid.

Cause: The candidate list grid uses invalid calculated fields.

Solution:

Steps

Security: *Set Up: Recruiting* domain in the Recruiting functional area

1. Access the Candidate List Assignment task.
2. Open the default grid in a new tab.
3. Remove these invalid calculated fields:
    - Duplicate Candidates
    - Duplicates Found

Users report performance issues on candidate custom reports.

Cause: The custom reports use invalid calculated fields.

Solution:

Steps

Security: These domains in the System functional area:

- *Custom Report Creation*
- *Manage: All Custom Reports*

1. Search Workday for these invalid calculated fields using the field: search prefix.
    - Duplicate Candidates
    - Duplicates Found
2. Select the calculated field from the search results.

3. In the Closely Related Indexed CRF section, select the field from the Object Details column of the Where Used grid.
4. Select the Where Used tab to view the usage count and custom reports containing the calculated field.
5. Access each custom report listed in the Object Details column and remove the calculated field.

Setup Considerations: Calculated Fields
Concept: Calculated Fields

Duplicate Management Framework for Recruiting

Steps: Set Up the Duplicate Management Framework for Recruiting

Prerequisites

Review setup considerations for the Duplicate Management.

Access the Maintain Functional Areas task to enable the Duplicate Management functional area.

Security: These domains in the Duplicate Management functional area:

- *Set Up: Duplicate Management*
- *Manage: Duplicate Records for a Person*
- *Manage: Duplicate Records for the Tenant*

Context

Workday Recruiting supports the Duplicate Management Framework, enabling you to find, merge, and unmerge duplicate candidates and prospects in Workday.

Steps

1. Steps: Set Up Duplicate Management.
2. (Optional) Configure profile groups.

   Access the Configure Profile Group task to add the Duplicates worklet to these profile groups:

   - Duplicates for Candidate Profile
   - Duplicates for Prospect Profile
   - Overview for Candidate Profile
   - Overview for Prospect Profile
3. (Optional) Configure the *Duplicate Check* or *Review* step on the *Agency* business process.

   Workday displays an Identified Potential Duplicates grid in My Tasks for you to review potential duplicates for the agency candidates you submitted based on your configured match rules.
4. (Optional) Configure a Duplicates card on the Summary tab of candidate and prospect profiles.

   The Duplicates card displays up to 5 potential duplicates on the candidate or prospect profile. To configure the card:

   a. Access the Configure Profile Summary task.
   b. Select Candidate Profile or Prospect Profile.
   c. Add the Duplicates Overview card.

   The Duplicates card doesn't currently support masked profiles.

Result

Workday ensures that the referrals policy that you configure on the Edit Tenant Setup – Recruiting task persists when you opt in to the Duplicate Management Framework. The framework identifies duplicates based on your configured duplicate referrals policy and match rules.

Workday flags any potential duplicates for referrals when you use these tasks:

- Create a Referral Exception
- Refer a Candidate

The Refer a Candidate task initiates the *Refer a Candidate* business process and displays a grid listing potential duplicates on the Review Refer a Candidate page.

When creating a new prospect, Workday checks the New Prospect Details that you enter or the curriculum vitae/resumé you upload for potential duplicates. Workday displays a list of potential duplicates for you to review, enabling you to continue working with an existing record if you find an exact match.

Next Steps

- Find Duplicate Records in the Tenant
- Merge Duplicate Records

Duplicate Candidate Merging/Duplicate Management Framework Feature Comparison

2024R2 Bulk Import Put Candidate SOAP Web Service

Reference: Duplicate Management Framework Report Fields for Recruiting

Workday provides these report fields that you can use to identify duplicates in the recruiting process when using the Duplicate Management Framework:

Report Field	Description
Duplicate Candidates Found for the Referral	This field has a value of *Yes* (true) if there are potential duplicate candidates for a referral candidate or job application.
Duplicate Candidates Found for the Same Job Requisition	This field has a value of *Yes* (true)if there are potential duplicate candidates for a referral for the same job requisition.
Duplicates for Candidate	The potential duplicate candidates, pre-hires, workers (employee or contingent), former workers, terminated workers, or retirees for a candidate.
Duplicates for Prospect or Job Application	The potential duplicate candidates, pre-hires, workers (employee or contingent), former workers, terminated workers, or retirees for a job application.
Duplicates for Recruiting Event	The potential duplicate candidates, pre-hires, workers (employee or contingent), former workers, terminated workers, or retirees for a candidate included in a recruiting event.

Report Field	Description
Duplicates Found for Candidate	This field has a value of *Yes* (true) if the candidate has any potential duplicate: • Candidates • Former workers • Pre-hires • Retirees • Workers (employee or contingent) This field excludes confidential candidates. For optimal performance, don't use this field in the Candidate List grid or in calculated fields in custom reports.
Duplicates Found for the Prospect, Referral, and Job Application	This field has a value of *Yes* (true) if the prospect or job application has any potential duplicate: • Candidates • Former workers • Pre-hires • Retirees • Workers (employee or contingent) This field excludes confidential candidates. For optimal performance, don't use this field in the Candidate List grid or in calculated fields in custom reports.
Duplicates Found for Recruiting Event	This field has a value of *Yes* (true) if the recruiting event has any potential duplicate: • Candidates • Former workers • Pre-hires • Retirees • Workers (employee or contingent) This field excludes confidential candidates. For optimal performance, don't use this field in the Candidate List grid or in calculated fields in custom reports.
Duplicates Found for the Job Requisitions (Recruiting Agency Candidate)	This field has a value of *Yes* (true) if any of these person types are potential duplicates of the recruiting agency candidate for the same job requisition: • Candidates • Former workers • Pre-hires • Retirees • Workers (employee or contingent) This field excludes confidential candidates.
Duplicates Found for the Recruiting Agency Candidate	This field has a value of *Yes* (true) if the recruiting agency candidate has any potential duplicate:

Report Field	Description
	• Candidates • Former workers • Pre-hires • Retirees • Workers (employee or contingent) This field excludes confidential candidates.
Duplicates Found with Conflicting Ownership Periods	This field has a value of *Yes* (true) if there are potential duplicate candidates for a recruiting agency candidate under conflicting ownership periods. This excludes confidential candidates.

External Candidate References

Steps: Set Up External Candidate References

Context

You can streamline the recruiting process to collect referees from external candidates during the job application process. Workday sends referees an email that enables them to submit a reference for the external candidate. Referees can decline to send a reference, and Workday enables the recruiter to collect more references using the Manage References task in My Tasks.

Steps

1. Edit Business Processes.

   Enable these Reference Check business process steps as tasks that recruiters can use to manage reference details:

   - *Add References*
   - *Manage References*
   - *Reference Check Decision*
   - (Optional) *Review Add References*

   Security:

   - *Manage: Assign Reference Templates* domain in the Recruiting functional area.
   - *Manage: External References* domain in the Recruiting functional area.
   - *Candidate Data: Reference Check Results* domain in the Recruiting functional area.
   - *Self-Service: External References* domain in the Recruiting functional area.
   - *Set Up: External References* domain in the Recruiting and Talent Pipeline functional areas.
2. Access the Maintain Referee Relationship Types task.

   Create candidate relationship types for referees.

3. Hide or Require Optional Fields.

   Select Add References and configure these fields:

   - Contact me before reaching out to referee
   - Company Name
   - Job Title
   - Phone Number
   - Relationship Type

   You can't optionally configure these fields:

   - Email Address
   - Name
4. Configure Questionnaires and Questions.

   Create a Reference Check type questionnaire.
5. Create Reference Templates on page 317.
6. Access the Maintain Reference Template Rules task.

   Use condition rules to assign reference templates to a specific job requisition. You can view the reference template assigned to a job requisition on the Details tab.
7. (Optional) Access the Assign Reference Template task to change the reference template used on a job requisition.

   Security: *Manage: Assign Reference Templates* domain in the Recruiting functional area.
8. Access Edit Tenant Setup - Notifications task.

   In the Notification Delivery Settings section, select the Business Process tab. As you complete the Custom Business Process Notifications section, select:

   - *Email* for the Channel prompt.
   - *Immediately* for the Default Frequency prompt.

   Security: *Self-Service: External References* domain in the Recruiting functional area.

   See Reference: Edit Tenant Setup - Notifications.
9. Create Custom Notifications

   On the *Reference Check* business process, to notify candidates about the Add References task, select:

   - *Candidate as Self* for Recipients.
   - *On Entry of Add References* for Trigger on Status.

   To notify referees about the reference, select:

   - *Referee as Self* for Recipients.
   - *On Shared Participation Step of Manage References* for Trigger on Status.
10. Create Calculated Fields.

    To collect questionnaire answers, create a Referee (from Reference) calculated field on the *Questionnaire Answers* business object.

    Security: *Candidate Data: Reference Check Results* domain in the Recruiting functional area.

Result

Recruiters can collect references and resend referee links. When recruiters resend referee links:

- Workday resends all notifications associated with the *Manage References* step of the *Reference Check* business process.
- Any step delays don't respect the Step Delay, but Workday does respect the Notification Delay.

When a candidate gets purged, you can also purge their references and associated referees.

Next Steps

Configure the term referee with a custom label.

Related Information
Tasks
Create Custom Labels

Create Reference Templates

Prerequisites

Security: The *Set Up: External References* domain on the Recruiting and Talent Pipeline functional areas.

Context

You can create reference templates to assign to different job requisitions. The reference templates enable you to add questionnaires in the reference.

Steps

1. Access the Create Reference Template task.
2. As you complete this task, consider:

Option	Description
Inactive	Select this check box if you want to use the template in the future. You can also select this check box for an existing template that you no longer want to use.
Minimum	The minimum number of references you'd like to collect for the job requisition.
Maximum	The maximum number of references you'd like to collect for the job requisition.
Help Text to Candidate	Instructions to help guide candidates on which referees they need to submit.
Default Questionnaire	The questionnaire you configured for this type of reference.
Referee Relationship Type	Select the referee relationship types that can submit a reference. Example: • Coworker • Customer • Employee • Friend • Manager • Mentor
Default Questionnaire Override	You can override the default questionnaire and assign different questionnaires for the referee relationship types.

Result

You have a template for the references you want to collect.

Next Steps

Assign the external reference template to the desired job requisition. You can also create more templates to cater to specific job requisitions.

Concept: External Candidate References

Workday supports the collection of external candidate references. Candidates can submit referees directly to Workday without having to go through a third-party vendor using the Add References button on external career sites. Recruiters can then manage those referees from the candidate profile.

Workday enables you to:

- Assign custom reference templates to job requisitions using conditional rules or an override task.
- Create different referee relationship types to collect.
- Create multiple reference templates.
- Create questionnaires for referees to complete and include attachments on the questionnaire.
- Override the default questionnaire and assign different questionnaires for each referee relationship type.
- Purge a candidate, their referees, and their references.
- Report on references after they’re submitted.

Workday sends the referee request though email. The referee can:

- Accept to write this reference.
- Decline to write this reference.
- Decline to write this reference and would like Workday to remove their contact information.

You can use these reports to manage reference checks:

Report	Description
Reference Check Results	Reference check results for job applications with completed reference check events.
Reference Request Status	Referees that haven't submitted a reference for a job application.

Notifications for Candidates

Setup Considerations: Notifications for Candidates

You can use this topic to help make decisions when planning your configuration and the use of notifications for candidates. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday enables you to create predefined message templates so that recruiters can send email notifications to candidates. You can send recruiting marketing information or notifications about specific jobs.

Business Benefits

By configuring notifications for candidates, you can:

- Give recruiters control and flexibility over the content and timing of their emails to candidates.
- Provide consistent communication between recruiters and candidates by creating message templates.
- Improve the candidate experience by reviewing candidate communication history to reduce the risk of sending duplicate emails.
- Reduce manual effort for recruiters by adding merge fields to message templates.
- Increase efficiency by sending emails to candidates in bulk.

Use Cases

You can use notifications for candidates to:

- Invite 1 or more candidates to apply for a job.
- Decline 1 or more candidates on a job requisition.
- Send follow-up emails to candidates after interviews.
- Notify university prospects of upcoming career events.
- Notify a pool of candidates about new positions.

Questions to Consider

Questions	Considerations
How do you want notify candidates?	You can use Workday Messaging to send SMS notifications to internal or external candidates who have opted in to receive SMS messages. • You can send SMS notifications to active candidates at any stage of the recruiting process. These include candidate reminders, custom business process notifications, and recruiting marketing communications. • You can use Workday Messaging as a custom notification within a business process. This allows you to send messages as part of a workflow. Example: When you close a job requisition, all remaining candidates receive a notification about their disposition. • You can configure email notifications for participants in a candidate conversation to alert them when there's a new SMS message in an active conversation.
What information do you want to communicate to candidates?	You can send 2 types of notifications to candidates during the recruiting process: • Emails to candidates who apply for a specific job. Candidates can't unsubscribe from these emails. • Emails to offer marketing information to candidates that isn't related to a specific job they've applied for. Example: Information about a career event involving your

Questions	Considerations
	organization. You can enable candidates to unsubscribe from these emails.
Who is responsible for sending notifications to candidates?	You can limit certain groups or individuals from: • Creating message templates. • Editing email content. • Sending emails. Example: You can enable recruiting administrators to create message templates and enable recruiters to edit and send emails only.
How do you want to communicate with candidates?	If you need to contact a large number of candidates at once, you can email candidates in bulk. Example: You have a pool of candidates that you didn't hire on a job requisition and you want to invite them to apply to a different job. You can also email candidates individually.
How do you want to communicate with candidates who speak different languages?	You can translate your message templates into different languages so that candidates receive messages in their preferred language.

Recommendations

You can enter or configure a default Reply To email for message templates. If you don't enter a Reply To email, candidate replies go to the email configured for your tenant.

Requirements

- Create a recruiting communications email template to define the appearance and branding of your email. Message templates provide the content of your email.
- Create segment-based security groups so that only authorized users are able to create or edit message templates.

Limitations

- You can't delete message templates once you've created them but you can edit them at any time.
- You can only have 1 active recruiting communications email template at a time.
- You can only send attachments through email.
- Attachments have a size limitation of 7MB.

Tenant Setup

Select the Enable Candidate Fields in Notifications check box on the Edit Tenant Setup – Recruiting task for candidates to view data fields and receive notifications. Configure security access for the *Candidate Notification Receiver* security group.

You can configure settings in the Recruiting section of the Edit Tenant Setup - Notifications task to enable recruiters to send emails to candidates on an ad hoc basis. You can also set up routing rules for notifications to specify how you send notifications.

Security

Domains	Considerations
Set Up: Message Templates in the System functional area.	You can create a segment-based security group that only enables users in the group to create recruiting message templates. Example: You want to enable your recruiting administrator to create message templates and you don't want your Learning administrator to have access.
Candidate Communication in the Recruiting functional area.	Users secured to this domain can send notifications to candidates and prospects using message templates for candidates who have applied for a specific job.
Invite to Apply in the Recruiting functional area.	Users secured to this domain can invite candidates to apply for other job requisitions using message templates for marketing information. To setupInvite to Applywith notification designer template: • Create a Segmented Security Group and include the*Candidate Notification Receiver* as the group and theWorkday Owned Segmentof*Job Application - External*. • Add the *Candidate Notification Receiver* security group to the*Invite to Apply* domain withViewaccess.

Business Processes

You can configure custom notifications that trigger on any business process step or on the status of a business process. You can also add a timed delay to custom workflow notifications on recruiting-related business processes. Example: You want to prevent a candidate from receiving a rejection message immediately after they submit their job application.

Reporting

Reports	Considerations
Candidate Communication	View a record of communications sent to a candidate, including: • Message content • Attachments • Sender • Subject • Timestamp
Candidate Job Applications	Access candidates' job applications and send notifications to candidates.
Find Candidates	Search your entire candidate population and send notifications to candidates.
My Candidates	Search candidates for whom you're the recruiter or manager and send notifications.

Integrations

No impact.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Concepts

Concept: Notifications

Steps: Configure Access to Fields in Candidate Notifications on page 322

Setup Considerations: Workday Messaging

Tasks

Steps: Set Up Workday Notifications

Examples

The Next Level: Ad Hoc Communications

Steps: Configure Access to Fields in Candidate Notifications

Context

You can:

- Enable Workday to create notification system accounts for candidates.
- Set up security to determine which fields candidates can view.

Workday only uses notification system accounts to evaluate security. These accounts don't store information about candidates.

Steps

1. Access the Edit Tenant Setup - Recruiting task.

   Select the Enable Candidate Fields in Notifications check box. When you select this check box, Workday initiates a background job to create notification system accounts for all candidates.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.
2. Edit Domain Security Policies.

   Grant View access for the *Candidate Notification Receiver* security group to any of these domains that secure your preferred report fields. Example: For Recruiting the Candidate Data: Interview Schedule domain controls who can view interview schedules.

Functional Area	Domain
Contact Information	• *Person Data: Work Email* • *Person Data: Work Phone*
Pre-Hire Process	• *Pre-Hire Personal Data: Sexual Orientation & Gender Identity* • *Pre-Hire Personal Data: Social Benefits Locality*
Recruiting	• *Candidate Data: Attachments* • *Candidate Data: Bundle Resumes* • *Candidate Data: Interview Schedule* • *Candidate Data: Job Application* • *Candidate Data: Language Skills*

Functional Area	Domain
	• *Candidate Data: LinkedIn Recruiter System Connect* • *Candidate Data: Questionnaires* • *Candidate Data: Reference Check Results* • *Candidate Data: Offer Details* • *Confidential Job Requisitions* • *Job Requisitions for Recruiting* • *Manage: Assign Reference Templates* • *Manage: External References* • *Masked Recruiting Candidates* • *Move Candidate*

Next Steps

To verify that candidates have a notification system account, create a custom report with the Notification System Account report field on the External or Internal Candidate business object.

Related Information
Reference
2021R2 What's New Post: Fields in Candidate Notifications
Reference: Edit Tenant Setup - Recruiting

Steps: Set Up Notifications for Candidates

Context

You can use the Workday notification framework to send notifications at any stage in the recruiting process:

- To active candidates who apply to a specific job. Candidates can't unsubscribe from these emails.
- As informational-only recruiting marketing, unrelated to a job the candidate has applied to. Candidates can unsubscribe from these emails.

In addition to emails, you can also send:

- Mobile push notifications.
- SMS notifications by configuring Workday Messaging.

You can include attachments in emails that you send through the Invite to Apply or Send Message tasks.

The notification framework also enables you to configure message templates for these communications.

Steps

1. Create Segment-Based Security Groups.

   Configure these Workday-delivered security segments for the *Set Up: Message Templates* domain:

   - *Active Candidate Security Segment*
   - *Recruiting Marketing Security Segment*
2. Edit Domain Security Policies.

   Configure the security policies for the *Set Up: Message Templates*domain in the System functional area and these domains in the Recruiting functional area:

   - *Candidate Communication*
   - *Invite to Apply*
3. Activate Pending Security Policy Changes.

4. Access the Edit Tenant Setup - Notifications task.

   In the Notification Delivery Settings section, configure the Active Candidates notification type in the Recruiting tab:

   a. Select the Override Parent Notification Type Settings check box to view the options to configure individual notification settings.
   b. Select a notification routing rule from the Rule prompt, which applies to individual notification types under the parent.

   See Reference: Edit Tenant Setup - Notifications.

   Security: *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.
5. Set up Workday Messaging and enable your candidates to opt in to SMS notifications.

   See Steps: Set Up SMS Notifications for Candidates on page 324.
6. Enable Candidates to Unsubscribe from Marketing Notifications on page 327.
7. Access the Create Message Template task.

   To include a report field in the subject and body of an email or in an SMS message or a push notification, click the Insert tag icon and select it.

   Example: To email a candidate about a job posting that they applied to, add the:

   - Job Posting Title field to the Subject text area.
   - Job Posting field to the Body text area.

   Security: *Set Up: Message Templates* domain in the System functional area.
8. Create Email Templates.

   Select *Recruiting Communications* from the Email Template Behavior prompt.

   Example: Create an email template that includes your company name, company logo, and physical address.

Next Steps

Send Recruiting Marketing notifications to candidates using the:

- Candidate Actions > Invite to Apply or Candidate Actions > Send Message related action from a candidate's name.
- Invite to Apply task.
- Invite to Apply or Send Message mass candidate actions on the Candidates tab of a job requisition profile.

Related Information

Concepts

Setup Considerations: Workday Messaging

Tasks

Steps: Set Up Prospects and Candidates on page 245

Steps: Set Up Message Templates

Steps: Set Up SMS Notifications for Candidates

Prerequisites

Review setup considerations for Workday Messaging. See Setup Considerations: Workday Messaging.

Context

Workday Messaging enables you to send SMS notifications to internal or external candidates who opt in to receive them. Candidates can receive these types of notifications through SMS at any stage in the recruiting process:

- Active Candidates
- Candidate Reminders
- Custom Business Process Notifications
- Recruiting Marketing

You can also enable candidates to view dynamic information from report fields that you include in notifications.

Steps

1. Set up Workday Messaging and configure notification settings for your tenant.

   See Steps: Set Up Workday Messaging.
2. (Optional) Enable candidates and prospects to view data from report fields included in ad hoc messages and candidate notifications.

   See Steps: Configure Access to Fields in Candidate Notifications on page 322.
3. From the related actions of the *Recruiting* business process you want to create a custom SMS notification for, select Business Process > Add Notification.

   Complete the SMS Message Content section.
4. Manage SMS Preferences for Candidates on page 325.

   Opt in or opt out of SMS notifications for external candidates and prospects.

Result

- Internal candidates can opt into SMS notifications on their:
  - Contact Information
  - Preferences

Next Steps

- You can encourage existing external candidates to opt in to SMS notifications with a message that includes the Update Contact Information URL report field.
- To identify the candidates who are receiving SMS notifications, you can create a custom report from the Find Candidates report and add the Opted In to SMS report field as a facet filter.

Manage SMS Preferences for Candidates

Prerequisites

- Set up Workday Messaging in your production tenant.

- Add the SMS channel to the notification rule for any of these notification types:
    - Active Candidate
    - Candidate Reminders
    - Custom Business Process Notifications
    - Recruiting Marketing
- Security: *Candidate Data: SMS Opt-In/Opt-Out* domain in the Recruiting functional area.

Context

Sending SMS notifications enables you to communicate directly with candidates. You can opt in or opt out of SMS messaging on behalf of external candidates and prospects with Australian, Canadian, UK, and U.S. mobile phone numbers (excluding numbers from America Samoa, U.S. Virgin Islands, and United States Minor Outlying Islands). You can also resend opt-in confirmation texts to remind external candidates and prospects who haven't replied.

Steps

1. Access the Manage SMS Preferences for Candidate task.

   You can also access this task from the Candidate Actions option on the related actions menu of a candidate.
2. As you complete the task, consider:

Option	Description
No Eligible Mobile Phone	Displays candidates without a valid Australian, Canadian, UK, or U.S. mobile phone number and are ineligible for opt-in. You can apply up to 2 criteria to filter the candidate list.
Candidates Eligible for Opt-In	Displays candidates that have at least 1 Australian, Canadian, UK, or U.S. mobile phone number. Select the Opt-In check box for each candidate you want to opt in to receive SMS. Workday sends a confirmation text to the candidates that you opted in to receive SMS messages.
Candidates with Unconfirmed Opt-In	Displays candidates who haven't responded to the opt-in confirmation, including those: • Who opted in through a job application. • For whom a recruiter opted in. When you select the Opt-Out check box, Workday cancels the opt-in process for the candidate.
Candidates Eligible for Opt-Out	Displays candidates who have fully opted in to receive SMS. Select the Opt-Out check box to opt the candidate out of receiving SMS messaging. Candidates won't receive a notification that they've been opted out when you opt out on their behalf.

Enable Candidates to Unsubscribe from Marketing Notifications

Prerequisites

Security: *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.

Context

To help you comply with anti-spamming regulations, you can enable internal and external candidates to unsubscribe from the following Recruiting Marketing email notifications:

- Invite to Apply.
- Send Message (excluding messages referencing job applications).

Steps

1. Access the Edit Tenant Setup - Notifications task.
2. In the Email Compliance section, enter content to display in Recruiting Marketing email notifications.
3. In the Notification Delivery Settings section, select the Recruiting parent notification type.
4. From the Rule prompt, select a routing rule that includes *Mute* as an allowed frequency.

   This rule applies to all individual notification types under the parent, unless you select the Override Notification Parent Type Settings check box for an individual notification type.

Result

When internal candidates access the Change Preferences task, they can select the *Mute* frequency for Recruiting Marketing email notifications.

When external candidates receive a Recruiting Marketing email notification, they can click the unsubscribe link you entered in the Email Compliance section.

Reference: Edit Tenant Setup - Notifications

Concept: Confirmed Opt-In for Email Communications

Workday enables you to confirm that prospects and candidates have verified their subscriptions for job alert and recruiting marketing email communications. Confirmed Opt-In (COI) is enabled for:

- Invite to Apply
- Job Alerts
- Prospect Introduce Yourself
- Send Message, when you send a message without a job application.

Email Template

All COI emails use the Confirmed Opt-In Email Standard Email template. The COI template uses Content 1 dynamic content to add Workday-defined content to the COI email. You can customize the content in the template by removing Content 1 and adding text as static content. The COI template requires the Email URL dynamic content. See Concept: Email Templates.

Note:

If you're a Candidate Engagement customer, we recommend updating the Confirmed Opt-In Email standard email template to inform COI recipients that recruiting campaigns and event registration confirmation messages are exempt from COI. See Concept: Recruiting Event Management Messages.

Messages Queued

Workday queues and resends up to 20 of the most recent Job Alert and Recruiting Marketing email communications to recipients with a pending COI request. These message types are queued and resent after recipients opt in to receive recruiting email communications from Workday:

- Job Alerts sent within 2 weeks.
- Invite to Apply messages sent within 4 weeks.
- Send Message, when you send a message without a job application, sent within 3 months.

Testing

You can test the COI email flow using an email redirect restriction, which is set up in the Edit Tenant Setup – Notifications task in the General Notification Restrictions section. Workday redirects the COI request email to the email address that you specify for testing in the Redirect All Notifications to Email Address field. See Reference: Edit Tenant Setup - Notifications.

Tasks and Reports

Name	Domain Security Policy	Description
Manage Confirmed Opt-In Email Preference	*Manage: Email Communication*	Use this task to resend a COI email to an email address.
Manage Confirmed Opt-In Email Preference for Candidate	*Candidate Communication*	Send the COI email to the candidate's home address. You can access this task from the related actions menu for a candidate by selecting Candidate Actions > Manage Confirmed Opt-In Email Preferences for Candidate.
View Confirmed Opt-In Status for Email Communication	*Manage: Email Communication*	Administrators can use this report to view: • Confirmed Opt-In Email Address • Confirmed Opt-In Email Status • Language Selected • Status Date and Time

Prospect and Candidate Profiles

You can configure the Confirmed Opt-In Email Status field using the Configure Profile Header Card task for Prospect Profiles and Candidate Profiles to view the COI status. See Steps: Set Up Prospect and Candidate Profiles. The field displays these statuses:

- *In-Flight*
- *Not Requested*
- *Opted-In*
- *Opted-Out*

View the Recruiting History timeline on prospect and candidates profiles to determine when the COI request email was sent and messages initiated from these tasks:

- Send Message, when you send a message without a job application.
- Invite to Apply

Workday updates the messages when they're sent, delivery is attempted, or if the recipient opted in or opted out of receiving messages. You can see if a message is:

- Not delivered due to COI restrictions (including messages that timeout while queued).
- Pending a COI request.
- Successfully sent.

Recruiting Email Confirmed Opt-in FAQ

Recruiting Email Confirmed Opt-in Configuration

Concept: Templates for Send Message and Invite to Apply

When you use the Send Message or Invite to Apply tasks to communicate with candidates, you can use message and notification templates to customize your recruiting communications.

Message Templates

Use message templates to draft frequently sent messages to candidates because they make it easier to deliver a consistent message. There are several different types of message templates with notification types for recruiting ad hoc communications:

- Active Candidates messages are specifically targeted at individuals who have already submitted an application. These messages keep the candidate informed about the status of their application, next steps in the Recruiting process, or other relevant updates.
- Recruiting Marketing messages are designed to attract potential candidates or leads and encourage them to apply for open jobs. You might send these messages to a wider audience of leads and potential candidates, and might include information about the company or links to a specific job posting.

You can send these ad hoc communications through the Send Message or Invite to Apply tasks, where you can select an existing message template tied to either type. The location of these tasks determines which type of notification that you can use:

Location	Active Candidate	Recruiting(ment?) Marketing
Job Requisition Candidate List Grid	✓	
Job Applications Candidate List Grid (Recruiting Hub)	✓	
Candidate Pools		✓
Embedded Fetch		✓
Find Candidates report		✓
My Candidates report		✓
Related Actions of the Candidate or Prospect Profile		✓

The Send Message and Invite to Apply tasks each have their own use cases and requirements. Workday recommends that you use custom message templates to invite fetched candidates to apply.

Notification Templates

You can use the Notification Designer to create notification templates. With these templates, you can enable users to add rich branding to custom business process notifications and message templates.

Notification templates add branding to the message content provided by message templates. They are complementary and work together. Administrators can create multiple notification templates for each type of notification, and can be used as an alternative to email templates.

Invite to Apply

You can send message templates configured with the Recruiting Marketing notification type using the Invite to Apply task. Use these templates to invite candidates to apply to a job requisition. Invite to Apply messages require a Job Posting selection because the standard job posting URL fields depend on the posting details.

Workday recommends that you use separate message templates for your External and Internal Invite to Apply messages, as these might require different fields.

Note: When using Notification Designer, avoid duplicated links if Invite to Apply or Job Alerts are enabled, by configuring the job posting links in the notification template and not in the message template.

Example: Invite to Apply

```
Message Template: Invite to Apply - External
Subject: Exciting Opportunity for You at XYZ Corporation!

Body:
Hi [Candidate Name],
Thank you for your previous interest in [Company]!

We have a new position open that we think you would be a great match for
 based on your experience and qualifications:

Title: [Job Posting Title]
Job ID: [Job Requisition ID]

If you are interested in the opportunity, please apply directly:
[Invite to Apply - External Posting URL]

We look forward to hearing from you soon!

Best Wishes,

[Primary Recruiter]
[Company] Talent Acquisition
```

Send Message

Use the Send Message task to send message templates configured with the Active Candidates or Recruiting Marketing type. The context and origin of the message play a big role in the behavior of the template and its included fields:

- You can use Recruiting Marketing message templates when you access the Send Message task from the Find Candidates and My Candidates reports, Embedded Fetch, Candidate Pools, and related actions of the Prospect Profile because you access the task outside of a specific candidate job application.
- You can use Active Candidates message templates when you access the Send Message task from the Job Requisition Candidate List Grid, Job Applications Candidate List Grid, and the related actions of the Candidate Profile because you access the task in the context of a candidate’s submitted job application.

The Send Message task doesn’t require a Job Posting selection, which means most Invite to Apply report fields don’t work with the task because they require a job posting context.

Example: Send Message

```
Message Template: Candidate Interview Availability
Subject: Interview Request from XYZ Corporation!
Body:
Hi [Candidate Name],

I hope you're doing well! We’d love to schedule an interview with you
 for the [Job Posting Title] role at [Company]. Could you share your
 availability for the next few days?

Let me know what works best, and we’ll coordinate accordingly. Looking
 forward to speaking with you!
```

Custom Message Templates

You can create customer message templates. Example: candidate reminder message.

Example: Candidate Reminder

```
Notification Type: Candidate Reminder
Message Template: Reminder of Your Interview with XYZ Corporation
Subject: Future Opportunities with XYZ Corporation
Body:
Hi [Candidate Name],

This is a friendly reminder that you have an interview with [Company] for
 the role of [Job Posting Title] and [Date of Earliest Scheduled Interview
 in Minute Precision]. If you have any questions or concerns, kindly reach
 out to your recruiter.

We look forward to meeting you!

Best Regards,
[Company] Talent Acquisition
```

Tenant Setup

The Edit Tenant Setup - Notifications task manages the frequency and channel of message templates and notifications.

Customize Recruiting notification settings on the Recruiting tab of Notification Delivery Settings. Workday recommends that you:

1. Disable Candidate Home Deactivated.
2. Set all other Recruiting Notification Delivery settings to Immediately.

Customize the settings for business process notifications across the tenant from the Business Processes tab of Notification Delivery Settings. Workday recommends that you set them to *Immediately*. This controls notifications from business processes, including job application notifications.

Confirmed Opt-In and Embedded Fetch?

Embedded Fetch uses Recruiting Marketing notification types for the Send Message and Invite to Apply tasks, which always use Recruiting Marketing notification types.

Confirmed Opt-In (COI) is required. Leads must opt-in before they can receive or respond to an Invite to Apply or ad hoc message.

Candidate Personal Information

Setup Considerations: Candidate Personal Information

You can use this topic to help make decisions when planning your configuration and use of Workday Recruiting to collect and manage candidate personal information. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday Recruiting enables you to request, track, and manage candidate personal information, such as gender identity and ethnicity.

Business Benefits

- Support your regulatory compliance obligations by collecting personal information from candidates at any stage of the recruiting process.
- Support your compliance with privacy regulations by purging candidate and job application data.
- Analyze hiring trends to help track your diversity goals through metrics and reports.

Use Cases

- Send requests to external candidates to upload a government or national ID and their date of birth.
- Creating custom reports to access candidate personal information quickly for compliance assessments.
- Send requests to external candidates applying for jobs based in the United States to complete the Voluntary Self-Identification of Disability form.
- View a summary of the gender and ethnicity of employees your organization hired for the current quarter.

Questions to Consider

Questions	Considerations
What kind of information do you want to collect from candidates?	You can collect: • Additional nationalities • Citizenship status • City of birth • Country of birth • Date of birth • Disability • Ethnicity • Gender identity • Hispanic or Latino • Marital status • Military service • National ID/Government ID • Primary nationality • Pronouns • Region of birth • Religion • Sexual orientation • Social benefits locality • Veteran status
Do you need to collect different information from candidates based on the location of the job?	The primary location you configure for a job requisition determines the information you can request from candidates who apply. Example: You can only collect a candidate's veteran status for job requisitions based in the United States. You can configure Workday to hide or require personal information fields based on country.
What kind of diversity goals do you want to track?	Workday enables you to track your diversity goals by delivering metrics and reports that analyze candidate gender and ethnicity information. You can: • Analyze hiring trends. • Identify which sources are giving you diverse candidates. • Review the diversity of your recruiting pipeline.

Recommendations

To ensure your processes when collecting and managing candidate personal information meet compliance obligations, seek guidance from your compliance team and legal advisers.

To avoid purging data unintentionally, test the Purge Person Data task and custom report in your Sandbox tenant before you purge any data in your Production tenant.

Configure custom notifications to notify candidates of requests for personal information.

Requirements

Access the Maintain Localization Settings task to select the personal information you want to collect from candidates and configure country-specific settings.

Limitations

Personal information and national and government ID collection are separate steps and tasks.

Workday only supports purge plans for candidates and job applications.

Tenant Setup

You can configure Workday to transfer country, city, and region of birth information from a candidate record to their pre-hire record by accessing the Edit Tenant Setup- Global task and adding the countries configured on the Maintain Localization Settings task to these fields:

- Country of Birth for Workers and Dependents in these Countries
- Track City of Birth for Workers and Dependents in these Countries
- Track Region of Birth for Workers and Dependents in these Countries

Security

Configure the *Candidate Data: Personal Information* domain and the subdomains in the Recruiting functional area for each item of personal information you want to request from candidates.

Business Processes

You can configure the *Personal Information Change* business process and add it as a step to subprocesses of the *Job Application* business process to collect personal information from candidates.

Reporting

You can use these reports to help you track your diversity goals:

Reports	Considerations
Candidate Flow	View personal information belonging to candidates who applied for a job within a specific date range.
Candidate Flow Summary	View a summary of candidates according to: • Ethnicity • Gender • Job categories • Race
Candidate Hire	View personal information belonging to candidates hired within a specific date range.
Candidate Profile Data	View stored information on candidates with job applications such as:

Reports	Considerations
	• Assessments • Attachments • Personal information You can also use this report to create custom reports that provide quick access to candidate information.
Candidate Search Audit	View the results of actions initiated by: • Automatic stage routing. Example: Automatically move candidates forward when they meet certain criteria. • The Decline and Move Forward buttons. • The Candidate Job Applications report.
Candidate Source Diversity Metrics - Ethnicity Candidate Source Diversity Metrics - Gender	Track how your recruiting sources are helping you reach your ethnicity and gender diversity goals.
Diversity Metrics	Review diversity information and breakdowns of ethnicity and gender according to requisition and job profile.
Pipeline Diversity Metrics - Ethnicity Pipeline Diversity Metrics - Gender	Track how your organization is meeting diversity goals related to ethnicity and gender.
Quarterly Diversity Metrics - Ethnicity Quarterly Diversity Metrics - Gender	View a summary of the gender and ethnicity of employees you hired for the current quarter and past 4 quarters.

Integrations

You can collect candidate personal information through third-party integrations, such as background check providers, and upload the information to the candidate record.

Connections and Touchpoints

Features	Considerations
Benchmark Reporting	Workday provides 2 benchmark reports you can use to track hiring goals for veterans and individuals with disabilities: • Veteran Hire Benchmark • Disability Placement Benchmark
VETS 4212 Report	You can use the VETS-4212 report to view the total number of employees or newly hired employees who identify as protected veterans.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Related Information

Tasks

Steps: Request Personal Information from Candidates on page 345

Steps: Purge Person Privacy Data

Steps: Request Additional Information from Candidates

Prerequisites

- Security: These domains in the Recruiting functional area:
  - *Candidate Data: Personal Information*
  - *Self-Service: Personal Information*
- Security: *Set Up: Tenant Setup - Global* in the System functional area.

Context

You can use the Change Personal Information task to request additional information from external candidates after they've submitted job applications. Example: Citizenship Status.

Workday uses the primary location of the job requisition to determine what types of information you can request. Example: You can collect a candidate's veteran status only for job requisitions based in the U.S.

Depending on the field, you can select a value defined for the country or country region of that location. Example: You can define 8 ethnicity values for Canada. Workers in Canada can select from those values in personal information tasks.

Workday includes personal information fields that can have different values by country and fields that have the same set of values regardless of the country. Example: The value of Marital Status is different by country.

You can add the *Change Personal Information* step to any of these stages of the *Job Application* business process:

- *Screen*
- *Review*
- *Assess*
- *Interview*
- *Reference Check*
- *Offer*
- *Background Check*
- *Ready for Hire*

When a job application reaches the *Change Personal Information* step, a candidate receives a notification requesting them to submit more information. You can configure the custom notification that the candidate receives to include a link to the external career site. The candidate must sign into their Candidate Home account to view and act on the pending tasks.

Steps

1. Access the Maintain Localization Settings task to configure personal information fields by country.
    a) Select *Personal Information* from the Area prompt.
    b) Select the Active check box for each Localized Field for the information that you want to collect. Example: Country of Birth.
    c) Select the countries or regions in which you want to enable the fields.

    Consult your legal counsel to ensure that your processes for collecting and managing candidate personal information meet compliance requirements.

    The Maintain Localization Settings task supports these fields:

    - Additional Nationalities
    - Citizen Status
    - City of Birth
    - Country of Birth
    - Date of Birth
    - Disability
    - Ethnicity
    - Gender
    - Hispanic or Latino
    - Marital Status
    - Military Service
    - Primary Nationality
    - Region of Birth
    - Religion
    - Sexual Orientation and Gender Identity
    - Social Benefits Locality

    For U.S jobs, exclude these data fields from the *Change Personal Information* step if you included them on the initial job application:

    - Gender
    - Ethnicity
    - Hispanic or Latino

    Security: *Set Up: Tenant Setup - Global* in the System functional area.
2. Maintain Security Group Permissions

    After enabling personal information fields for candidates, configure these tasks to ensure that you're collecting valid data:

    - Maintain Citizenship Statuses
    - Maintain Disability Configuration
    - Maintain Ethnicities
    - Maintain Genders
    - Maintain Marital Statuses
    - Maintain Military Statuses
    - Maintain Religions
    - Maintain Sexual Orientation & Gender Identities
    - Maintain Social Benefits Localities

    If you have already configured the fields for workers or pre-hires, you don't need to configure them again for candidates.

3. Steps: Set Up Personal Information Fields on page 36.

   If you're collecting Country of Birth, City of Birth, and Region of Birth, there's no set-up required for candidates. To map this data to the Pre-Hire record:

   a) Access the Edit Tenant Setup - Global task.

      As you complete the Personal Data for Workers section in the Edit Tenant Setup - Global task, consider:

Option	Description
Allow Multiple Ethnicities	From the Allow in these Countries prompt, select the countries where you want to enable multiple ethnicities.
Place of Birth	From these prompts, select the same countries you set up using the Maintain Localization Settings task in Step 1 above: • Track Country of Birth for Workers and Dependents in These Countries • Track City of Birth for Workers and Dependents in these countries • Track Region of Birth for Workers and Dependents in these countries

   The Hide Hispanic or Latino for Person in US check box relates to Workers only.

   If you enabled the Hispanic or Latino field in the Maintain Localization Settings task, candidates must submit this data if you've configured the *Change Personal Information* step.

   For jobs based in the U.S., Workday recommends that you don't use the *Change Personal Information* step to collect these data if you're collecting the same data during the initial job application:

   - Gender
   - Ethnicity
   - Hispanic or Latino

4. Add Candidate to Domain Security Policy.

   Add the *Candidate as Self* role to the domain security policy for each of the fields that you configured using the Maintain Localization Settings task. Example: For the *Self-Service: Citizenship Status* domain.

   a. Access the *Self-Service: Citizenship Status* domain.
   b. Click the magnifying glass icon next to the Domain Security Policy field.
   c. Click Edit Permissions.
   d. Add a row to the Report/Task Permissions section.
   e. On the Security Groups section, select *Candidate as Self* and select the Modify check box.

      Repeat these steps for each self-service domain where you're collecting data. Example: *Self-Service: Date of Birth*.
   f. Access the Activate Pending Security Policy Changes task.

5. Define Business Process Policy.

   Assign the *Change Personal Information* step to the *Candidate as Self* group in the appropriate business process. Example: The *Review Candidate* stage:

   a. From the related actions menu of the *Review Candidate* business process, selectBusiness Process Policy > Edit.
   b. In the Who Can Do Action Steps in the Business Process section on the *Change Personal Information* Action Step, select *Candidate as Self* on the Security Groups prompt.
   c. Click OK and Done.
   d. Activate Pending Security Policy Changes.

6. Update Business Process Definition.

   Add the *Change Personal Information* step to the *Job Application* business process and assign it to the *Candidate as Self* group in the appropriate stage. Example: *Review Candidate* .

   a) Access the *Review Candidate* business process type.
   b) Select the Business Process Definitions tab.
   c) From the related actions menu of the *Review Candidate* default definition, select Business Process > Edit Definition.
   d) Add the Effective Date and click OK.
   e) Add a step to the Business Process Steps section and enter these values:

Order	b
Type	*Action*
Specify	*Change Personal Information*
Group	*Candidate as Self*

   Add the *Change Personal Information* step after the *Initiation* step and before the *Review Decision* step or any completion step of a business process.

   f) Click OK and Done.

   By default, Workday displays the stage name to the candidate on Candidate Home when the *Change Personal Information* step gets activated. You can use the Step Label Override task to specify a custom name to display to the candidate instead of the stage name.

7. ../../../ilx/admin-guide/en-us/manage-workday/business-processes/business-process-notifications/dan1370797382653.dita.

   Configure a custom notification to alert candidates that you require more information when the *Change Personal Information* step is activated.

   Example: At the *Review Candidate* stage.

   a) From the related actions menu of the Review Candidate business process definition, select Business Process > Add Notification
   b) Select the Do Not Include Notification Details Link check box.
   c) In the Triggers section, click the On Entry option and select *Change Personal Information*.
   d) In the Recipients section, select *Candidate*.
   e) In the Email Message Content section, add a row and add the Subject and Body details.

8. Configure Domain Security Policy.

   Configure the appropriate domain policy for the roles that can access personal information on the Candidate Composite View page. This domain policy applies to both personal information data collected:

   - During the initial job application process.
   - While using the *Change Personal Information* step.

Result

Candidates who apply to jobs on the external career site receive an email notification when they move to a stage that has the *Change Personal Information* step. Requests for personal information also display as tasks on Candidate Home. The data provided is visible on the Personal Information tab on the Candidate Composite View page.

Next Steps

Update personal information for internal and external candidates from the candidate profile. To support your compliance obligations, purge candidate data and job applications when you no longer need them. You can use the:

- Agency Candidates in Progress report field to identify agency candidates for purging that have a Submit Recruiting Agency Candidate event in progress.
- Candidate Only Has Non-Submitted Job Applications report field to identify candidates who started a job application but didn't submit it.
- Latest Job Application Created On report field to identify incomplete job applications from a specific date range.
- Partially Completed Job Application report field to identify incomplete external candidate job applications that haven't been submitted.

The Candidate Only Has Non-Submitted Job Applications and Partially Completed Job Application fields exclude:

- Candidates who have at least 1 submitted job application that's not canceled or rescinded.
- Recruiting agency candidates.
- Purged candidates.

To include purged candidates in your custom reports, you can use these data source filters:

- *Existing and Purged Job Applications*, which won't return purged job applications when used with search reports.
- *My Applied Candidates (Including Purged Candidates)*

Related Information

Concepts

Setup Considerations: Personal Information by Country on page 32

Tasks

Steps: Set Up Personal Information Fields on page 36

Steps: Set Up Government and National IDs for Recruiting

Context

You can ask external candidates to upload a government or national ID at any of these stages in the recruiting process:

- *Review Candidate*
- *Screen*
- *Assess Candidate*
- *Interview*
- *Reference Check*
- *Offer*
- *Employment Agreement*
- *Background Check*
- *Ready for Hire*

You can configure a custom notification to alert candidates when you require additional information. Workday directs the candidate to the external career site or to the Edit Government IDs task, if they have a Candidate Home account.

To enter information on behalf of external candidates, select Edit Government IDs from the related actions menu of the candidate. This task isn't available for internal candidates.

Steps

1. Access the Maintain Localization Settings task.
    a) Select *Personal Information* from the Area prompt.
    b) For the localized fields of Government Identifiers (Candidate) and National Identifiers (Candidate), select the countries where you want to collect ID information on the Allow for Countries or Regions prompt.
    c) Select the Active check box for each localized field.

    This localization, along with access to the *Candidate Data: National and Government IDs* domain determines whether you can select Personal Data > Edit Government IDs from the candidate's related actions menu.

    Security: *Set Up: Tenant Setup - Global* domain in the System functional area.
2. Edit Domain Security Policies.

    Configure the security policy for the *Candidate Data: National and Government IDs* domain.
3. Activate Pending Security Policy Changes
4. Edit Business Process Security Policies.

    For each recruiting-related business process where you want candidates to enter IDs, assign the *Candidate as Self* security group to the *Change Government Identifiers* action step.

    Example: at the *Assess Candidate* step
    a) From the related actions menu of the Assess Candidate business process, select Business Process Policy > Edit.
    b) In the Who Can Do Action Steps in the Business Process section, under the *Change Government Identifiers* Action Step, select *Candidate as Self* on the Security Groups prompt.
    c) Access the Activate Pending Security Policy Changes task.

        Enter a comment to describe the security changes made, then review and confirm.
5. Edit Business Processes.

    For each recruiting-related business process where you want candidates to enter IDs, add the *Change Government Identifiers* step between the *Initiation* step and the *Review Decision* or *Completion* steps. Assign the step to the *Candidate as Self* security group.

    Example: at the *Assess Candidate* step

    a) From the related actions menu of the *Assess Candidate* business process, select Business Process > Edit Definition.
    b) Select the Effective Date.
    c) On the Edit Business Process Definition section, add a row to the Business Process Steps grid in the preferred order with these values:

Option	Description
Type	*Action*
Specify	*Change Government Identifiers*
Group	*Candidate as Self*

6. Create Custom Notifications.

   For each recruiting-related business process where you want candidates to enter IDs, add a notification to inform the candidate that you're requesting information from them.

   a) Select the Do Not Include Notification Details Link check box.
   b) In the On Entry field, select *Edit Government ID*.
   c) In the Recipients field, select *Candidate*.
   d) Include either of these report fields:

      - External Site Homepage: Link to the external career site where the candidate originally applied to the job.
      - External Career Site Task Link: Link that takes the candidate to the specific task.
7. Edit Domain Security Policies.

   Define the security policy for the *Candidate Data: National and Government IDs* domain in the Recruiting functional area.
8. Steps: Set Up Profiles and Profile Groups.

   Configure the candidate profile to include government and national IDs. This step adds a Personal tab and 2 subordinate tabs to the candidate profile. It also removes Personal Information from the Overview tab.

   a) Access the Configure Profile Group task.
   b) In the Profile Group field, select *Personal for Candidate Profile*.
   c) Select the Display in Profile check box.
   d) Add 2 rows.

      In the Report column, select:

      - *Personal Information*
      - *IDs*

Steps: Set Up Veteran Status Identification for Candidates

Context

When candidates apply for a job requisition that has the primary location in the United States, the Office of Federal Contract Compliance Programs (OFCCP) allows you to ask whether they identify as a protected veteran.

Steps

1. Access the Maintain Veteran Statuses for Candidates task.

   a) (Optional) Enter a Disclaimer Text. This text displays on the Veteran Status Identification Form for candidates.
   b) Give each status a unique Veteran Status Name.
   c) Select a Workday-delivered status that corresponds to each Veteran Status Name in the Maps to column.

   You can map more than 1 Veteran Status Name to 1 Workday-delivered status. You can't delete a status once you use it, but you can inactivate it.

   Security: *Candidate Data: Personal Information* domain in the Recruiting functional area.
2. Access the Create External Career Site or Edit External Career Site task.

   Add the *Veterans Status* field to the Apply - Personal Information section.

   Security: *Set Up: Career Sites* domain in the Recruiting functional area.
3. Edit Business Process Security Policies.

   Add the Candidate as Self security group to the *Update Candidate U.S. Veteran Status* action step for any subprocess of the *Job Application* business process.

4. Activate Pending Security Policy Changes.
5. Edit Business Processes.

   Add the *Update Candidate U.S. Veteran Status* action step to the subprocess of the *Job Application* business process for which you completed step 3. This step enables you to collect veteran status information for candidates who didn't enter it when they first applied. You can use condition rules to configure which candidates complete this step. Example: Candidates who didn't submit veteran status information when applying to a job posting on the external career site.

   Select these values:

Option	Description
Specify	*Update Candidate U.S. Veteran Status*
Group	Candidate As Self

Result

Candidates applying to job requisitions in the United States on the external career site can complete the optional Veteran Status Identification Form. The *Update Candidate U.S. Veteran Status* action step sends external candidates a request to enter their veteran status information.

For internal candidates applying to job requisitions in the United States, Workday extracts their military status from their personal information. If they:

- Have a military status that maps to the Workday-delivered Active Duty military status, Workday populates their veteran status as *IDENTIFY AS A VETERAN, JUST NOT A PROTECTED VETERAN* on the job application.
- Have a military status that maps to other Workday-delivered military statuses, Workday populates their veteran status as *IDENTIFY AS ONE OR MORE OF THE CLASSIFICATIONS OF PROTECTED VETERANS*.
- Don't have any military status information, Workday populates the veteran status as *I DO NOT WISH TO SELF-IDENTIFY*.

Steps: Request Personal Information from Candidates

Prerequisites

- Hide or require personal information fields by country on the Maintain Localization Settings task.
- Security: Configure these domains in the Recruiting functional area:
  - *Candidate Data: Gender Identity*
  - *Candidate Data: Pronoun*
  - *Candidate Data: Sexual Orientation*

Context

You can send a request to external candidates at any stage in the recruiting process to provide additional personal information.

Workday uses the primary location of the job requisition to determine what types of information you can request. Example: You can collect a candidate's veteran status only for job requisitions based in the U.S.

Steps

1. Set up personal information for candidates.

   Selecting the Hide Hispanic or Latino for Person in US check box on the Edit Tenant Setup - Global task has no impact on collecting this information for candidates.

   See Steps: Set Up Personal Information Fields on page 36.

2. Maintain Security Group Permissions.

   For the *Candidate as Self* security group, enable *Modify* permission on the *Self-Service: Personal Information* domain and relevant subdomains.
3. Edit Business Processes.

   Add the *Personal Information Change* business process as a step to these business processes:

   - *Assess Candidate*
   - *Background Check*
   - *Interview*
   - *Offer*
   - *Reference Check*
   - *Review Candidate*
   - *Screen*

   Add the *Change Personal Information* step between the *Initiation* step and the *Review Decision* or *Completion* steps. Select *Candidate as Self* as the Group.
4. Create Custom Notifications.

   Set up a custom notification on the *Personal Information Change* business process to let candidates know they received a request to provide personal information. To include a link to the external career site in the notification body, use the External Site Homepage Link report field.
5. Edit Domain Security Policies

   Define the security policy for the *Candidate Data: Personal Information* domain and its associated subdomains.

Result

Candidates who apply to jobs on the external career site receive an email notification when they move to a stage that has the *Change Personal Information* step. Requests for personal information also display as tasks on Candidate Home.

Next Steps

Update personal information for internal and external candidates from the candidate profile.

To support your compliance obligations, purge candidate data and job applications when you no longer need them. You can use the:

- Agency Candidates in Progress report field to identify agency candidates for purging that have a Submit Recruiting Agency Candidate event in progress.
- Candidate Only Has Non-Submitted Job Applications report field to identify candidates who started a job application but didn't submit it.
- Latest Job Application Created On report field to identify incomplete job applications from a specific date range.
- Partially Completed Job Application report field to identify incomplete external candidate job applications that haven't been submitted.

The Candidate Only Has Non-Submitted Job Applications and Partially Completed Job Application fields exclude:

- Candidates who have at least 1 submitted job application that's not canceled or rescinded.
- Recruiting agency candidates.
- Purged candidates.

To include purged candidates in your custom reports, you can use these data source filters:

- *Existing and Purged Job Applications*, which won't return purged job applications when used with search reports.

- *My Applied Candidates (Including Purged Candidates)*

2020R2 What's New Post: Include Purged Candidates in Reports

Steps: Set Up Aboriginal/Indigenous Self-Identification for Candidates

Context

You can configure career sites with options for candidates to self-identify as Aboriginal or Indigenous.

Steps

1. Configure Aboriginal and Indigenous identification for workers.
   See Steps: Set Up Aboriginal/Indigenous Identification Details on page 44.
2. Edit Domain Security Policies.
   Configure the *Candidate Data: Aboriginal/Indigenous Identification* domain in the Recruiting functional area.
3. (Optional) Create External Career Sites on page 379.
   As you configure personal information, add both of these fields:
   - *Aboriginal/Indigenous Identification*
   - *Aboriginal/Indigenous Identification Details*
4. (Optional) Create Internal Career Sites for Non-Workers on page 386.
   As you configure personal information, add both of these fields:
   - *Aboriginal/Indigenous Identification*
   - *Aboriginal/Indigenous Identification Details*

Result

Candidates can specify how they identify as they complete their application.

Concept: Purging Recruiting Data

To meet privacy regulations and General Data Protection Regulation (GDPR), Workday enables you to purge Personally Identifiable Information (PII) from your tenant for data types you select.

You can purge specific PII from your Workday tenant for populations you select in a custom report.

Examples:

- Active workers
- Candidates
- Pre-Hires
- Pre-Hires with candidate profiles
- Prospects
- Terminated workers

Workday enables you to create and manage purge plans where you can specify data populations to include in a purge.

Note: When you purge data, you permanently remove it from your tenant. Workday can't reverse or roll back the data deletion.

To protect against deleting crucial data, Workday recommends that you:

- Grant the ability to purge data to users who understand the purging process and its consequences.
- Only purge the data that you've tested and confirmed in Sandbox before you purge in your Production environment.

Person Data Purge

You can use the Purge Person Data task to remove only the PII that you specify in the purge plan. You can use this task when you periodically need to purge sets of data. Example: For terminated workers.

Single Entity Purge

Workday enables you to purge a single entity like a candidate or a job application using the related actions menu of that entity. Security groups with access to the *Purge Single Entity Data* domain can purge individual records.

Candidate Data Purge

You can purge candidates or candidate documents upon request or when you no longer need them. Example: Candidate job applications when they've accepted another job.

When you purge a:

- Candidate who you don't hire, Workday removes the candidate PII, their Candidate Home username, and all documents associated with the candidate.
- Candidate who you hire, Workday removes their Candidate Home username and the Candidate Documents section from their worker profile.

Worker Data Purge

Workday only purges workers who you:

- Mark as Eligible for Purge in a custom report that you can create using the Purge Person Data task.
- Terminate. You can't purge workers with an active worker position or a pending termination.

Workday doesn't purge:

- Candidates for an open or frozen job.
- Future hires.

Terminated Worker Data Purge

When you purge terminated workers, Workday no longer returns them in searches, and removes all their PII. For historical headcount purposes Workday:

- Indicates the purged instance as Purged Person wherever their name normally displays.
- Associates any remaining data with Purged Person instead of an identifiable person.

Collect Candidate Disability Statuses

Prerequisites

Security: *Candidate Data: Personal Information* domain in the Recruiting functional area.

Context

You can send a request to external candidates to complete the Voluntary Self-Identification of Disability form at any stage in the recruiting process. The request also displays as a task on Candidate Home.

If you configure the Voluntary Self-Identification of Disability form to display in the job application and in another stage of the recruiting process, the candidate only receives the form once.

Steps

1. Access the corresponding business process of the stage in which you want external candidates to be able to self-identify a disability status.

   Example: If you want the Voluntary Self-Identification of Disability form to display in the *Review Candidate* stage, access the *Review Candidate* business process.

   Note: Ensure that the business process you select is configured as a step on the larger *Job Application* business process.
2. Select Business Process > Edit Definition from related actions menu of the business process.
3. Add *Update Candidate U.S. Disability Status* as an action step on the business process for the *Candidate as Self* group.

Next Steps

To change a candidate's disability status, select Candidate > Update Disability Status from the candidate's related actions menu.

Steps: Set Up the Recruiting Workflow on page 193
Create External Career Sites on page 379

Troubleshooting: Incorrect Candidates or Job Applications Purged

When you run a custom purge report in your Sandbox tenant, Workday purges the wrong records or more records than intended.

Note: Purging is permanent and irreversible. Test custom purge reports in your Sandbox tenant before purging in your Production tenant.

Cause: The custom purge report uses an OR filter condition.

Solution:

Steps

Security: The *Purge Person Data* domain in the System functional area.

1. Access the Edit Custom Report task.
2. Select your custom purge report.
3. On the Filter tab, replace rows that use OR filter conditions with AND filter conditions.

Candidate Expenses

Setup Considerations: Candidate Expense Reports

You can use this topic to help make decisions when planning your configuration and use of candidate expense reports. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

You can enable workers to create expense reports on behalf of candidates to reimburse them for incurred expenses.

Business Benefits

- Analyze candidate expense data to make more informed decisions for HR initiatives.
- Eliminate manual workarounds, such as ad hoc payments and use of noncandidate payee types.
- Expedite reimbursement by routing candidate expense reports to specific reviewers and approvers.
- Reduce data duplication by centralizing candidate expense data in Workday.
- Track and report on recruiting costs for greater spend control.

Use Cases

- Reimburse candidates who incur recruitment costs, such as flights to interview sites and hotel stays.
- Report on job requisition totals, such as total costs for supplier invoices and candidate expenses.
- Submit expense reports that include multiple payee types, such as candidates and employees who attend the same team lunch.

Questions to Consider

Questions	Considerations
What expense data do workers manage?	You can configure segmented security to enable workers to access only candidate expense data. When you enable segmented security, workers with: • Constrained security can work only with candidate expense data and job applications for the companies they can access. • Unconstrained security can access expense data and job applications for candidates associated with all companies in their tenant. When you don't enable segmented security, constrained and unconstrained workers can select

Questions	Considerations
	all nonworker payee types, including candidates, on the Create Expense Report for Non-Worker task. However, without the adequate security permissions, workers won't have the ability to select specific nonworkers on the Pay To prompt.
How do you manage credit card transactions for candidates?	Although candidates don't use corporate expense credit cards, you can reassign credit card transactions to them to expense costs incurred on their behalf. When you reassign credit card transactions to candidates, Workday displays the transactions on their expense reports so you can select them for inclusion. When you don't reassign credit card transactions to candidates, your custom and standard reports might contain limited expense data, which can affect your ability to analyze total spend.
What expense report data can you purge for candidates?	When you select the *Financials – Expense Reports* purgeable data type on the Purge Person Data task, Workday purges: • Any memos on the expense report header and line items. • The file, filename, and comments on any attachments.

Recommendations

- For accurate reporting, enable the Job Requisition worktag type on expense reports to track cost totals for job requisitions.
- When evergreen job requisitions don't have an associated manager or supervisory organization, configure calculated fields to route expense reports to other reviewers and approvers.

Requirements

- Assign workers with constrained security access to the required companies so that they can access candidate data and associated job applications.
- To submit expense reports on behalf of candidates, add expense payments as an option on their payment elections.

Limitations

Candidates don't have the ability to create their own expense reports in Workday.

We don't provide a *Candidate* worktag for use on expense reports. Instead, you can use these report fields to report on candidate expenses:

- Expense Payee Type
- Expense Report Payee

Workday doesn't support:

- Confidential job requisitions on candidate expense reports.
- Spend authorizations and cash advances for candidates.

Tenant Setup

No impact.

Security

Domains	Considerations
Candidate Data: Candidate Expenses in the Recruiting functional area.	Enables you to create expense reports for candidates and associate job applications with candidate expenses.
Process: Credit Card in the Common Financial Management functional area.	Enables you to reassign credit card transactions to candidates.
Process: Expense Reports in the Expenses functional area.	Enables you to manage expense reports and related reporting. You can configure segmented security on this domain to enable workers to access only candidate data on expense tasks and reports.
Manage: Payment Election in the Expenses functional area.	Enables you to manage payment elections on behalf of candidates.

Business Processes

You can configure the *Expense Report Event* business process to route candidate expense reports for review and approval. You can also route candidate expense reports to specific reviewers and approvers.

Reporting

Reports	Considerations
Find Credit Card Transactions	Use to view credit card transactions you reassign to candidates.
Find Expense Report Lines for Organization	Use to view expense report lines for candidates by organization.
Find Expense Reports	Use to view expense reports you create for candidates.
Find Payments	Use to view candidate expense payments: • For auditing purposes. • To review payment statuses.
Maintain Worktag Usage	Use to enable the Job Requisition worktag type on expense reports and supplier invoices. To make manual corrections on journal entries related to expense reports and supplier invoices, you can also enable the Job Requisition worktag type on: • Accounting journals. • Ad hoc bank transactions.

When you enable segmented security, you can use these report data sources and their filters to create custom reports with candidate expense data only:

- Expense Report Lines and Itemizations
- Expense Report Lines for Company
- Expense Reports for Company

You can configure multiple security segments to enable workers to access expense data for multiple payee types on custom reports. Example: Create a custom report that includes candidate and student expense data, but not expense data for external committee members.

Integrations

Web Services	Considerations
Get Expense Reports	Use to retrieve data for candidate expense reports. When you enable segmented security, you can use this web service to retrieve expense data only for candidates.
Get Payments	Use to retrieve data for candidate expense payments.
Get Settlement Run Custom Filters *Put Settlement Run Custom Filter*	Use to upload and retrieve data for the custom filters you create for candidate settlement runs.
Get Payment Election Options *Put Payment Election Option*	Use to upload and retrieve payment election options for candidate expenses.
Submit Expense Report for Non-Worker	Use to upload data to submit expense reports for candidates. When you enable segmented security, you can use this web service to upload expense data only for candidates.
Submit Settlement Run	Use to upload data to settle and reimburse candidate expenses.

Connections and Touchpoints

Features	Considerations
Accounting	Workday automatically generates a *Job Requisition* worktag on accounting journal lines associated with candidate expense reports and their job applications. We generate this worktag only on spend journals, not on journals related to: • Liabilities. • Payables. • Payments.
Settlement	You can create: • Custom filters for settlement runs for candidates. • Settlement runs to settle and reimburse candidate expenses.

Features	Considerations
Supplier Accounts	You can enable the Job Requisition worktag type on supplier invoices to capture more detailed cost totals for job requisitions.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

2022R1 What's New Post: Expense Reporting for Candidates

Steps: Enable Workers to Create Expense Reports for Nonworkers

Prerequisites

- Set up expense reporting.
- Review setup considerations for nonworker expense reports.

Context

You can enable workers to create and submit expense reports on behalf of these nonworker types as they don't typically have access to Workday:

- Candidates.
- External committee members (ECMs).
- Students.

Steps

1. Steps: Set Up Security Permissions.

   Add workers to the *Process: Expense Reports* domain in the Expenses functional area and 1 or more of these domains so they can create expense reports for nonworkers:

Nonworker	Domains
Candidate	*Candidate Data: Candidate Expenses* in the Recruiting functional area.
ECM	*Committees: View* in the Organizations and Roles functional area.
Student	For matriculated students, these domains in the Student Core functional area: • *Student Data: Student ID* • *Student Data: Student Profile* For external students: • *External Student Data: Student ID* in the Personal Data functional area.

Nonworker	Domains
	• *External Student Data: Student Public Reports* in the Staffing functional area.

2. (Optional) Create Segment-Based Security Groups.

   Configure which nonworker types display on the Create Expense Report for Non-Worker task by enabling access to the *Expense Payee Type* security group segment.
3. (Optional) ../../../../financial-management/expenses/setting-up-expense-reports/dan1370797729300.dita.

   Use these report fields to route nonworker expense reports to specific reviewers and approvers:

   - Expense Report Pay To is Candidate
   - Expense Report Pay To is External Committee Member
   - Expense Report Pay To is Student
4. (Optional) Access the Maintain Worktag Usage report.

   In the Expense Report section, enable the Job Requisition worktag type to select *Job Requisition* worktags manually on these tasks:

   - Create Expense Report
   - Create Expense Report for Non-Worker: ECMs and students only
   - Create Expense Report for Worker

   When you add nonworkers on the Attendees prompt on these tasks, you can use the *Job Requisition* worktag to associate attendee expenses with job requisitions. Example: You create an expense report for an employee lunch that a candidate also attends.

   Note: Workday always automatically includes *Job Requisition* worktags on journal lines for candidate expense reports that you create on the Create Expense Report for Non-Worker task. You can't remove these worktags as they help ensure accurate accounting and reporting.

   Security: *Set Up: Enable Worktags* domain in these functional areas:

   - Common Financial Management
   - Worktags
5. (Optional) ../../../../financial-management/settlement/settlement-configuration/dan1370797014754.dita.

   Create custom filters for the settlement runs that you make for nonworkers.
6. (Optional) Access the Reassign Expense Credit Card Transactions task.

   Reassign credit card transactions to nonworkers to include the transactions on their expense reports.

   Security: *Process: Credit Card* domain in the Common Financial Management functional area.

Next Steps

- Add expense payments on payment elections for nonworkers.
- Create nonworker expense reports and itemize expense lines.

Related Information

Concepts

Concept: Worktags

Reference

2022R1 What's New Post: Expense Reporting for Candidates

Steps: Create Expense Reports for Nonworkers

Prerequisites

- Configure the *Expense Report Event* business process and security policy in the Expenses functional area.
- Enable workers to create expense reports on behalf of nonworkers.

Context

You can create expense reports on behalf of these nonworker types to reimburse them for incurred expenses:

- Candidates
- External committee members (ECMs)
- Students

Steps

1. ../../../../financial-management/expenses/payment-elections/dan1370797015134.dita.

   Add the *Expense Payments* option on payment elections for nonworkers.
2. Access the Create Expense Report for Non-Worker task.

   As you complete the task, consider:

Option	Description
Payee Type	Workday displays these options when you don't enable segmented security: • *Candidate* • *External Committee Member* • *Student* When you enable segmented security, you can select only the nonworker types for which you have access.
Pay To	You need the adequate security permissions to select specific nonworkers from this prompt. You can enter unique student IDs to ensure that you select the correct student.
Committee	Workday displays this prompt when you select *External Committee Member* as the payee type. When ECMs have: • One associated committee, Workday populates this prompt automatically. • Multiple committees, you can select a committee manually.
Job Application	Workday displays this prompt when you select *Candidate* as the payee type. When candidates have: • One associated job application, Workday populates this prompt and any related worktags automatically. This

Option	Description
	functionality doesn't apply to evergreen job requisitions. • Multiple job applications, you can select a job application manually.
Creation Options	Workday doesn't copy: • Attachments. • Expense itemizations. • Quick expenses.
Worktags	Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the Maintain Worktag Usage task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.
Credit Card Transactions	Select the reassigned expense credit card transactions that you want to include on the expense report.

Next Steps

Create a manual settlement run or schedule an automatic settlement run to settle expense reimbursements.

Itemize Expense Lines

Career Sites

Setup Considerations: External Career Sites

You can use this topic to help make decisions when planning your configuration and use of external career sites. It explains:

- Why to set up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday provides you the ability to create 1 or more external career sites. You can post and market jobs that candidates can apply to.

Business Benefits

You can configure external career sites to:

- Enable your candidates to complete tasks.
- Support specific countries and locations.
- Use company branding.
- Enable prospects to submit a resume and additional information without applying to a job, logging in, or creating an account.
- Define the sections that candidates must complete when they apply for a job.
- Integrate it with your social media recruiting outlets, such as Facebook, Twitter, Glassdoor®, and more.
- Detail terms and conditions by country as well as collect account creation consent.
- Provide job alerts.

Workday also makes it easier for candidates to use Quick Apply, to apply to jobs. Quick Apply populates fields on the job application from the resume, CV, or previous applications of a candidate. Workday also performs a virus scan on files that candidates upload using industry standard virus scanning tools, but doesn't guarantee that all files are scanned or that all viruses are detected.

Use Cases

- Collect information for particular job requisitions from candidates including their skill-set, experience, and interests to assess their qualifications.
- Candidates can create and manage their account.
- Prospects can submit information and create a prospect record.
- Workday enables you to configure language options that your candidates can select.
- Workday enables you to require candidates to complete regulatory compliance information when applying to jobs.

Questions to Consider

Question	Considerations
Why should you create multiple career sites?	You can target specific audiences with each career site to present relevant data to specific populations like brands and locations.
What features are available if you want to communicate important messages to candidates or collect candidate consent?	Workday enables you to stay GDPR compliant by enabling you to configure certain settings that maintain data privacy for external candidates, such as: • To explain your data collection and retention policies, configure a link to your company privacy policy. • Configure terms and conditions by country for your candidates to agree, on a job application. • Require consent when external candidates create an account. • Enable external candidates to request that their information gets deleted from Workday.
Can you brand your career site?	You can use the Create Brand task to brand your career site to match your company branding. You can also add an About Us description in the Candidate Home section.

Question	Considerations
Can you use Google Analytics?	You can attach your Google Analytics account.
What data does Workday share with social sign in companies such as Google or Apple?	Workday does not share any candidate data with social sign in companies except the candidate's email address.
Can I enable social sign in for some of my external career sites?	No, this is a tenant-level setting, meaning that either social sign in is enable for all of your external career sites or none of them.
Can you track where candidates see your job postings?	You can set up tracking pixel URLs for each external career site. Workday uses values in the section to embed a URL from your third-party application, on the confirmation pop-up. The tracking pixels send conversion data for completed applications back to your third-party application. If you configure the EU Cookie Policy settings for an external site: Workday only sends the tracking pixel data to the third party after the candidate dismisses the EU Cookie Policy and they reach the Apply Confirmation pop-up. If you don't configure an EU Cookie Policy or candidates are in a different time zone, then tracking happens automatically.
Can you edit or delete external career sites?	You can't delete used sites, but you can maintain sites with the Edit External Career Sites task.
Can you automatically announce when your company posts new jobs?	You can set up external job alerts, which enable candidates to set and receive automated notifications of new jobs posted either daily or weekly.

Recommendations

Set up accounts with third-party vendors that do your tracking pixel reporting.

You can ensure that your candidates have helpful facets to find the jobs, by selecting a custom report in the Find Jobs Custom Report field.

You can configure and display sidebar configurations that provide candidates with information about your organization.

Requirements

Before enabling candidates to use Skills Cloud skills, you must opt in to the Skills Cloud.

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Limitations

You can configure items like Tracking Pixels, but Workday doesn't support the reporting. You need separate third-party vendors for reporting.

Tenant Setup

You can configure these external career site features for your tenant on the Edit Tenant Setup - Recruiting task:

- Require Candidate Home Account
- Enable Candidate Verification Email
- Candidate Social Sign-In Providers
- Candidate Social Sign-In Consent Message
- Enable Alternate External Career Site URL
- Candidate Consent
- Collect Preferred Name
- Privacy Policy Link URL
- Privacy Policy Link Text

Security

Configure these domains in the Recruiting functional area:

Domains	Considerations
Set Up: Career Sites	The security groups in this domain have access to create and edit external and internal career sites.
Set Up: External Career Site Access	This domain enables you to create, manage, and edit external career sites.
Candidate Data: Personal Information	This domain enables you to collect personal information from candidates.
Self Service: External Recommended Jobs	This domain enables similar recommended job postings to display on the Candidate Home.

Business Processes

You can configure steps on the *Job Application* business process that you can send to external candidates in the *Candidate as Self* group. Candidates can complete the task in their Candidate Home. Candidates have the option to withdraw a job application, which cancels the *Job Application* business process.

Reporting

You can use these reports:

Report	Considerations
Candidates With Purge Request	You can use this report to view candidates who request that you delete their information from Workday.
• Find Jobs for External Career Sites • Find Jobs Template for External Career Sites	You can use these reports to present a list of published job postings to candidates. You can also use these reports to configure the subtitle fields that display for job posting search results.

Integrations

Integration Technology	Description	Advantages
Adobe Sign	This tool replaces paper and ink signature processes with fully automated electronic signature workflows.	You can easily send, sign, track, and manage signature processes using a browser or mobile device.
Apply with LinkedIn	This tool prefills the job application of a candidate based on information from their LinkedIn account.	Reduces the amount of time a candidate takes to apply to a job posting.
Apply with SEEK	This tool prefills the job application of a candidate based on information from their SEEK account.	Reduces the amount of time a candidate takes to apply to a job posting.
DocuSign	This tool enables you to collect electronic signatures and manage digital transactions.	This tool enables you to have electronic exchanges of signed documents.
Google Analytics	This tool helps you track data on how users interact with your company.	This data gives you information about candidate traffic on your external career sites.
Inline Assessments	This tool enables you to integrate with third-party assessment vendors for registering candidates that are applying for a job.	You can collect and view data to find the best candidate for the position you're hiring for.
Tracking Pixels	This tool enables you to configure multiple tracking pixel URLs for each career site that you configure, so that you can track conversions for third-party vendors.	You can use the conversion data to track and analyze website data.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Other Impacts

External career sites also have some impact on these tenant configurations:

- Compliance
- Global
- Translations

Setup Considerations: Branding for External Career Sites

You can use this topic to help make decisions when planning your configuration and use of Branding for External Career Sites. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

What It Is

Custom branding enables you to align external career sites to the brand of your company. You can create custom brands that you can publish and apply to your published external career sites. Custom branding provides a better experience for external users when they apply to your company.

Business Benefits

Configurable branding presents candidates with an external career site that continues the look and feel of your company brand instead of a third party. You can configure separate brands per career site.

Use Cases

You can brand your external career sites to maintain branding throughout external career sites.

Questions to Consider

Questions	Considerations
How can you create new brands?	You can use these tasks to create, view, edit, and publish brands: • Create Brand • Edit Brand • Review Brand Summary • View All Brands
How do you apply a brand to an external career site?	First create and publish a brand to apply it to an external career site. You can then apply it to an external career site by editing the external career site.
What are Hex colors?	The Create Brand task uses Hex codes for all colors. A color Hex code is a 6-digit code to specify color using hexadecimal values. The code itself is a Hex triplet, which represents 3 separate values that specify the levels of the component colors. Workday designed the brand tasks this way in order to support 16,777, 216 colors. Example: #b4d455

Questions	Considerations
	If you don't enter a Hex color code in a field, Workday populates a Workday defined-default color for that field.
What can you brand with Hex colors?	Use the Create Brand task to specify Hex colors for: • Header • Buttons • Additional Components
What header elements can you brand?	You can specify Hex colors for: • Accent Color • Background Color • Text Color
What button elements can you brand?	You can specify Hex colors for: • Border Color • Color • Hover Border Color • Hover Color • Hover Text Color
How does Workday calculate active and disabled button colors?	Workday calculates colors based on other button color configuration for these button elements: • Active buttons change color when you click them. Active button colors are a slightly darker version of Hover Color. If you use white for Hover Color, Workday uses gray for the active color. • Disabled buttons are buttons that aren't active. They're a slightly lighter version of Color, Border Color, and Text Color.
What additional components can you brand?	You can specify Hex colors for the progress bar. • Accent Color • Header Text Color • Progress Bar The Accent Color value applies to UI objects that include: • Check boxes. • The field focus color. • The prompt selection color. • Radio buttons. • The upload resume icon.
What happens if you don't specify something for a branding element?	If you select not to configure an element, then the element gets the default color that Workday provides. You can review the default color for a given element on the Review and Submit section of the Create Brand task.
Where can you upload images?	In the Header section, you can upload:

Questions	Considerations
	• A banner image • An image • Your logo
What is an image pixel width and height?	Workday identifies resolution for branding on external career sites with pixels.
What is the difference between Maintain Proportions and Keep Height and Crop Image for the Image Banner?	If you select Maintain Proportions option, Workday keeps the entire Logo Attachment image in view. The Maintain Proportions option also aligns the banner image with the web page content. If you select this option, select a width bigger than 1098 pixels wide. If you select the Keep Height and Crop Image, Workday maintains height specified in pixels and expands the image width according to the window size. If you select this option, select an image bigger than 1920 pixels wide. You can select this option if you don't need to see the entire image on every screen size.
What are the different statuses of brands?	Brands can be in these statuses: • Edited (Unpublished Changes) • Published • Not Published To view brand changes on an external career site, you need to first republish a brand. These changes might take up to 15 minutes. To apply a brand, you must first have a published career site.
What is the difference between an Edited and Published brand?	When you edit both types of brands, your changes only affect the Published brand. You can also only apply Published brands on external career sites.
Is there anything that you need to know about accessibility and Web Content Accessibility Guidelines (WCAG)?	You're responsible for evaluating whether your color contrast choices comply with your accessibility obligations, including default and non-default Workday colors.
Does Logo have any special limitations?	Workday uses the Logo Attachment for the About Us image.

Recommendations

Functionality	Recommendation
Logo	For best results on social media sites, attach an image that is 1200 x 630 pixels. This image also displays when you share job posts on LinkedIn. We recommend that you test out different sizes to ensure it renders

Functionality	Recommendation
	appropriately on both sites. Use an image that is at least 400 pixels wide to ensure optimal viewing on shared posts. You can review documentation on LinkedIn for their image specifications.
Maintain Proportions	Select a banner with a width that is more than 1098 pixels wide.
Keep Height and Crop Image	Select an image for image banner with a width more than 1920 pixels wide.
Color Contrast Ratio	Select a Color Contrast Ratio of 4.5 or higher between background and text colors because of Web Content Accessibility Guidelines AA (WCAGAA).
Start Your Application Message	When candidates click Apply on a job, Workday displays available apply options in a pop-up. You can use this field to configure a message with up to 150 characters to display in the pop-up with apply options.

Requirements

No impact.

Security

Users with security enabled for the *Set Up: Site Branding* domain in the Recruiting functional area can create, edit, and maintain brands.

Integrations

You can use these web services to create, edit, or bulk upload brands:

- Get Site Brands
- Put Site Brand

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Other Impacts

Branding directly affects your live external career sites that are using brands.

The Next Level: Custom External Career Site Branding
2020R2 What's New Post: Job Application Branding and Usability for External Career Sites

Concept: Social Sign In for Candidate Accounts

As the External Career Site administrator, you can enable external candidates to use their Google or Apple accounts to create candidate accounts and apply for jobs in your organization. This can streamline the candidate account creation process and eliminates the need for a separate password for candidates to remember. Enabling social sign in doesn't change the URL for Create Candidate Home Account. You can use the Candidate Social Sign-In Consent Message field on the Edit Tenant Setup- Recruiting task to create a rich text message for candidates using social sign in. You can add helpful links and information to this custom consent message. Selecting a provider from the Candidate Social Sign-In Providers field

The sign in process is the standard process for Google or Apple accounts owned and managed by those companies. Google and Apple control the password reset process. Workday doesn't control the sign in process or password reset.

The *Register SSO Client* background job needs to run before candidates can use their social accounts to sign in. Depending on when you enable this feature by selecting a provider, this can take up to 24 hours before the feature works for your external career sites.

Related Information

Tasks

Enable Social Sign in for Candidate Accounts on page 377

Steps: Set Up External Career Sites

Prerequisites

Security: *Set Up: Career Sites* domain in the Recruiting functional area.

Context

Workday enables you to create 1 or more external career sites where you publish and market jobs that candidates can apply to. Candidates can also use Quick Apply that populates fields on the job application from their resume or CV automatically. Workday performs a virus scan on files that candidates upload using industry standard virus scanning tools, but doesn't guarantee that all files are scanned or that all viruses are detected.

Steps

1. Maintain Security Group Permissions.

   Add the *Candidate as Self* group with *Modify* access to the security policies on these domains:

   - *External Application History*
   - *External Careers*
   - *External Recommended Jobs*
2. Access the Edit Tenant Setup - Recruiting task.

   Consider these fields:

   - Enable Automatic Candidate Merging
   - Enable Candidate Verification Email
   - Require Candidate Home Account

   See Reference: Edit Tenant Setup - Recruiting.

   Security: *Set Up: Tenant Setup - HCM* in the System functional area.
3. Maintain Recruiting Sources on page 272.
4. Create Job Posting Templates on page 416.
5. Create Locations.
6. Access the Maintain Feature Opt-Ins report.

   Opt in to the External Career Site Apply Flow Improvements feature.

   Security: *Set Up: System* in the System functional area.
7. Create External Career Sites on page 379.

8. Create sidebar configurations.

   See Steps: Configure External Career Site Sidebars on page 368.
9. (Optional) Configure automatic address lookup for Japan and Republic of Korea.

   Select Contact Information for the Area.

   Enter *Japan* and *Korea, Republic of* in the Allow for Countries or Regions column for the Enable Address Lookup localized field and select the Active check box.

   See Maintain Localization Settings on page 144.

Next Steps

Use these reports to view candidate sign-in activity:

- Candidate Signons and Attempted Signons
- Candidate Invalid User Signon Attempts

To add, remove, and reorder subtitle fields on the Search for Jobs page for external career sites, use the Find Jobs for External Career Sites report.

To support global recruiting, you can translate external career sites.

Related Information
Reference
Reference: Track Sign-In Activity for External Sites
Workday 31 What's New Post: Address Lookup for Japan and Korea
2024R2 Feature Release Note: External Career Site Job Applications

Steps: Set Up Candidate Home Accounts

Prerequisites

Set up external career sites.

Context

When you set up Candidate Home accounts, candidates can register an account on your external career site. You can also require Candidate Home accounts for all job applications.

You can send candidates with a Candidate Home account requests to:

- Complete questionnaires.
- Provide additional information.
- Schedule, reschedule, or cancel an event.
- Sign electronic documents.
- Upload government or national IDs.
- Take assessment tests.

Workday uses the most recent language that the candidate selects in the Language field on their account settings to determine their preferred language for communications.

Steps

1. Access the Edit Tenant Setup - Security task.

   Configure tenant-wide password requirements.

   See Reference: Edit Tenant Setup - Security.

2. Access the Edit Tenant Setup - Recruiting task.

   To prevent email delivery issues, Workday recommends selecting the Require Candidate Home Account check box. If you don't select this check box, Workday selects the Enable Candidate Verification Email check box to restrict application data to the candidate.

   a) (Optional) Select the Require Candidate Home Account check box and enter an Account Creation Consent Message.
   b) Select the Enable Candidate Verification Email check box.

   See Reference: Edit Tenant Setup - Recruiting.
3. Edit Domain Security Policies.

   Configure the security policy for the *Manage: Candidate Account* domain in the Recruiting functional area.
4. Create External Career Sites on page 379.

   a) In the Apply - Terms and Agreement section, enter an Apply Confirmation Message.
   b) Complete the Candidate Home section.

Result

Workday automatically assigns candidates who create a Candidate Home account to the *Candidate as Self* security group.

Next Steps

Use the Manage External Accounts task to perform these actions on external accounts in bulk:

- Lock accounts.
- Reset passwords.

Merge 2 candidates who have separate Candidate Home accounts, as long as neither candidate has a complete *Job Application* event. Workday sets the email address of the most recent candidate record as their Candidate Home username.

Concept: User Accounts for External Sites

Tasks

Manage External Accounts

Reference

The Next Level: To Require or Not to Require - The Candidate Home Debate

Steps: Configure External Career Site Sidebars

Context

You can configure sidebar panels to display on the Search for Jobs and Candidate Home pages of your external career sites. Sidebars enable you to provide applicants with additional information about your organization. You can configure additional sections that include a combination of these components:

- A Prospect Introduce Yourself shortcut (on Search for Jobs page only)
- Images
- Rich Text
- Videos

Note: You must have a valid Workday Media Cloud contract before you can upload videos. See: Workday Community: Media Cloud.

You can also configure job post template-specific sidebars that only display when users view jobs.

Steps

1. Create sidebar configurations.

   Access 1 of these tasks:

   - Create Sidebar Configuration.
   - Edit Sidebar Configuration.
   - Copy Sidebar Configuration.

   Avoid using nonbreaking spaces to control the spacing and flow of text. Consider manually entering text to avoid copying and pasting in unsupported HTML characters that can impact how content displays.

   Security: *Set Up: Career Sites* domain in the Recruiting functional area.
2. Access the Edit External Career Site task.

   Select the sidebar configuration from the:

   - Default Sidebar prompt in the Branding section for the sidebar to display on the Search for Jobs page.
   - Sidebar prompt in the Candidate Home section.
3. Create Job Posting Templates on page 416.

   You can configure the job posting template content with a different sidebar that displays when users click a job from the search results page.

Result

Changes to sidebar configurations that are in use on a published external career site are effective immediately.

2022R2 What's New Post: Welcome Page for Candidate Home

2021R2 What's New Post: External Career Site Search Experience and Job Details

Steps: Add Location Hierarchy Facets to Find Jobs

Context

You can configure the Find Jobs report that displays on external and internal career sites to include 2 additional location hierarchy subtype facets.

Example: You might want to see job postings according to these location hierarchy subtypes:

- Geographic region
- Product line

There's no limit on the location hierarchy subtypes you can configure. You can also configure different types for different external career sites.

Steps

1. Access the Maintain Organization Subtypes task.

   Create a new organization subtype. Example:

   - Organization Subtype Name: Product
   - Organization Type(s): Location Hierarchy

   Security: *Set Up: Organization* and *Committee Definition: Set Up* domains in the Organizations and Roles functional area.

2. Create Location Hierarchies.

   Associate a location hierarchy with the organization subtype. Example:

   - Name: Electronic Games
   - Subtype: Product
3. From the related actions menu of the location hierarchy, select Reorganization > Assign Locations.

   Associate locations to the location hierarchy. To see facet results on the Find Jobs report after completing this setup, you must have at least 1 job posting associated with the locations mapped to this location hierarchy.

   Security: *Manage: Organization Edit and Reorganization Action* domain in the Organizations and Roles functional area.
4. Access the Edit Internal Career Site task.

   To use the location hierarchy as a facet on Find Jobs, select it on the Location Hierarchy Subtype 1 or Location Hierarchy Subtype 2 prompt. Example: Location Hierarchy Subtype 1: Product.

   For immediate results, we recommend testing new facets using your internal career site.

   Security: *Set Up: Career Sites* domain in the Recruiting functional area.
5. Access the Edit Internal Career Site for Non-Workers task.

   To use location hierarchy as a facet on Find Jobs, select it on the Location Hierarchy Subtype 1 or Location Hierarchy Subtype 2 prompt for a specific type of internal career site for nonworkers. Example: Location Hierarchy Subtype 1: Country.

   Security: *Set Up: Career Sites* in the Recruiting functional area.
6. Copy the Find Jobs standard report.
   a) Click the Advanced profile group.
   b) In the Facet Options section, add *Location Hierarchy 1* as a Facet Filter.
   c) Add a Label Override. Example: Product Area
   d) Add or remove other facet fields as needed.
   e) Run the report.
   f) Repeat these steps if you want to add additional location hierarchy facets on the copy of your internal Find Jobs report.

   Security: *Internal Careers* domain in the Recruiting functional area.
7. Access the Edit External Career Site task.

   Select the location hierarchy on the Location Hierarchy Subtype 1 or Location Hierarchy Subtype 2 prompt. Example: Location Hierarchy Subtype 1: Product.

   Wait 2 hours for Workday to index the entries.

   Security: *Set Up: Career Sites* domain in the Recruiting functional area.
8. Copy the Find Jobs Template for External Career Sites standard report.
   a) In the Search Results tab, don't change anything.
   b) In the Share profile group, select the *Share with all authorized users* option in the Report Definition Sharing Options section.
   c) In the Facet Options section of the Advanced tab:

      - Select the Enable As Web Service check box.
      - Add the Location Hierarchy 1 or Location Hierarchy 2 fields in the Facet Filters grid and enter a Label Override.

   Security: *Set Up: Career Sites* domain in the Recruiting functional area.

9. Access the Edit External Career Site task.

   In the Job Details section, select the report you created in step 7 on the Find Jobs Custom Report prompt.

   Security: *Set Up: Career Sites* domain in the Recruiting functional area.
10. (Optional) Update the Find Jobs report for internal career sites.
    a) Access the Edit Internal Career Site task and complete Location Hierarchy Subtype 1 or 2.
    b) Copy the Find Jobs report.

    Security: *Set Up: Career Sites* domain in the Recruiting functional area.

Result

The Find Jobs report used on the external career site reflects the changes you made.

Tasks
Steps: Create Search Reports
Reference
Workday 31 What's New Post: Internal Apply for Non-Workers

Steps: Set Up Internal Recruiting

Prerequisites

- Create job posting templates.
- Configure the *Manage Internal Career Apply* business process.

Context

Workday enables you to create 1 internal career site to source talent from within your organization or company. When you post jobs for your employees, they can:

- Add jobs to their job interests on their worker profile.
- Apply for jobs and track their applications.
- Review their upcoming scheduled recruiting events.
- Refer other candidates.
- Share job postings on their social media profiles.

Steps

1. Edit Domain Security Policies.

   Configure the security policy for the *Internal Careers* domain in the Recruiting functional area to enable workers to find and apply for jobs, or to withdraw their application.
2. Edit Business Process Security Policies.

   Add the Employee As Self security group to the *Manage Internal Career Apply* business process security policy.
3. Access the Create Internal Career Site task.

   Create an internal career site for your employees.

   Security: *Set Up: Career Sites* domain in the Recruiting functional area.
4. Set up Jobs Hub.

   See Steps: Set Up Jobs Hub on page 372.

5. Steps: Set Up Profiles and Profile Groups.

   Add the My Job Applications report to the Career, Job, or Personal profile group of the worker profile.
6. (Optional) Access the Hide Workday Delivered Report task.

   Note: When you hide standard reports, Workday doesn't display them in searches. If you can't find a specific report, access the Hide Workday Delivered Report task to determine if you or another administrator hid it.

   - We recommend you hide the My Job Applications and old My Applications standard reports and use the newer My Applications report instead.
   - If you use a custom report named Find Jobs, hide the Find Jobs report that redirects workers to the Browse Jobs report from global search. You can select this specific report from the Recruiting prompt category. Hiding this report enables workers to access your custom report in global search without being redirected.

   Security: *Set Up: Tenant Setup - General* domain in the System functional area.
7. (Optional) Hide or Require Optional Fields.

   From the By Functional Area prompt, select:

   - *Manage Internal Career Apply* to configure which fields are hidden or required on internal job applications.
   - *My Applications* to hide any columns from the report as needed.
8. (Optional) Steps: Set Up Internal Job Alerts on page 373.

   Create job alerts templates and enable employees to create, manage, edit, and delete their job alerts.
9. Create Internal Career Sites for Non-Workers on page 386.

   Create internal career sites for contingent workers and students to access.
10. Create a custom dashboard for your contingent workers and students to access.

    See Example: Create Career Dashboard for Non-Workers on page 388.

Next Steps

Post jobs to your internal career site.

Related Information
Reference
2023R1 What's New Post: Internal Mobility

Steps: Set Up Jobs Hub

Context

Jobs Hub provides employees a single place to access:

- Job alerts.
- Job postings.
- Their applications and relevant tasks.
- Their referrals.
- User-configured Quicklinks.

Steps

1. Access the Configure Home Page Content task.

   Add the Jobs Hub worklet to the Workday Home page menu.

   Security: *Set Up: Tenant Setup - Worklets* domain in the System functional area.

2. Set Up Hubs.

   Configure Jobs Hub and customize its:

   - Name.
   - Announcements.
   - Navigation items.
   - Suggested links.
   - Sections and cards.

   Security: *Set Up: Tenant Setup - Hub* domain in the System functional area.
3. Edit Domain Security Policies.

   Configure employee access to the *Self-Service: Career Alerts* domain in the Career and Development Planning functional area and these domains in the Recruiting functional area:

   - *Employee Referrals*
   - *Self-Service: My Applications*

Next Steps

If you configured Opportunity Marketplace or Career Hub, you can add the Manage Job Alerts and My Referral Activity reports as Quick Links.

Related Information

Concepts

Setup Considerations: Career Hub on page 1543
Setup Considerations: Talent Marketplace on page 1569

Steps: Set Up Internal Job Alerts

Prerequisites

Security: *Self-Service: Career Alerts* domain in the Career and Development Planning functional area.

Context

Employees can create custom job alerts and directly apply to internal job opportunities that interest them. When you configure internal job alerts, your employees can:

- Create, manage, edit, and delete job alerts.
- Access job alerts from Jobs Hub and internal job postings.
- Receive job alerts through email, push notification, and Workday Notifications.

Steps

1. Edit Domain Security Policies.

   Configure these domains:

Domain	Description
Reports: Job Alerts in the Recruiting functional area.	This domain controls access to the Job Alert Preferences for All Candidates report data source and the Job Alert Insights report.
Set Up: Message Template in the System functional area.	Configure to have a segment-based security group with Edit access. Give the segment-based security group access to the Job Alerts for Internal Candidates notification type security segment.

2. Access the Edit Tenant Setup - Notifications task.
    a) In the Mobile App Notification Settings section, select these check boxes:
        - Enable Apple Push Notifications
        - Enable Google Cloud Messaging
    b) In the Recruiting notification category, select a routing rule and enable delivery settings for email and push notifications.

        Workday recommends configuring a unique routing rule on the Job Alerts - Internal Candidates notification type by enabling the Override Parent Notification Type Settings check box in the Recruiting parent notification type. Internal job alerts use the notification settings on the parent routing rule unless you override it.

        See: Reference: Edit Tenant Setup - Notifications.
3. Create Email Templates.

    From Email Template Behavior, select Job Alerts to define the branding elements, layout, and content for your custom internal job alerts email template.
4. Access the Maintain Email Templates task.
    - Activate the custom email template.
    - Select a default email template, if you've more than 1 template.
5. Access the Create Message Template task.

    Create a message template with the Job Alerts – Internal Candidates notification type. You can use the Job Alert Name and Job Alert Links merge tags to personalize job alerts and include links to the job postings.

    See: Steps: Set Up Message Templates.
6. Copy Reports.
    a) Copy the Find Jobs standard report to create a custom report with these values:

Prompt	Value
Data Source	Select Job Posting Anchor.

Prompt	Value
Data Source Filter	Select Approved Job Posting Anchor.

b) On the Advanced tab, add job alerts-specific facets in the Facet Options section.

These facets determine the filters workers can use when creating or editing their job alerts.

Workday supports only these job alerts filters:

- Company
- Full/Part-time
- Hiring Manager
- Job Families
- Job Family
- Job Posting Employee Contract Type
- Job Profiles
- Job Type
- Location Country
- Location Hierarchy 1
- Location Hierarchy 2
- Location Region/State/Province
- Locations
- Management Level
- Organization
- Primary Location
- Skills
- Work-Study
- Work Shift

7. Set up Jobs Hub.

   See Steps: Set Up Jobs Hub on page 372.
8. Access the Edit Internal Career Site task.

   As you complete the Job Alerts section, consider:

Option	Description
Enable	Select to enable internal candidates to create job alerts.
Message Template	Select the message template that you created to enable standardized messaging for internal candidate job alerts.
Override Email Template	Select an email template to override the default job alerts email template.
Override Find Jobs Report for Job Alerts Filters	Select the custom report whose facets that you modified earlier. If you don't select a custom report, the job alert filters use the facets on the Find Jobs report.

Result

Employees can now create and customize their job alerts when searching for jobs internally or viewing a job posting. Workday processes sending job alerts at:

- 4:00 AM PST for the daily frequency.
- 9:00 AM PST for the weekly frequency.

Next Steps

You can access the Job Alert Insights report to view the status of job alerts.

Steps: Hide Similar Jobs on an Internal Career Site

Prerequisites

Security: *Internal Recommended Jobs* domain in the Recruiting functional area.

Context

You can hide the Similar Jobs section on the View Job Posting Details report of an internal career site from specified security groups. Candidates in those security groups can then focus solely on referred jobs.

Steps

1. Edit Domain Security Policies.

   Edit permissions on the *Internal Recommended Jobs* domain in the Recruiting functional area to exclude selected security groups.
2. Activate Pending Security Policy Changes.

   Enter a comment about the security changes.

Steps: Set Up Notifications for Candidate Home Tasks

Prerequisites

Create an email template for external candidates.

Context

When external candidates have tasks to complete on Candidate Home, you can configure notifications that inform them of the tasks. In some cases, however, candidates might not have Candidate Home accounts, such as when:

- An agency submits the candidate.
- A recruiter creates a prospect and then creates a job application for the candidate.
- A data migration of candidate records occurred.

To send Candidate Home task notifications to external candidates:

- Create a condition rule that identifies if candidates have a Candidate Home account.
- Create 2 messages: 1 for candidates with a Candidate Home account and another for candidates without an account.

Steps

1. Access the business process where candidates must complete a task. Example: *Offer* or *Screening*.
2. Identify the step in which to send a notification.

   Example: *Review Documents* or *Change Personal Information*.
3. Disable Workday-generated business process notifications for the step.
   a) Click Notifications.
   b) Click Maintain System Notifications.
   c) Click OK.
   d) Click the Disabled check box for the step.

4. Create Custom Notifications.

   Create 2 notifications for the business process. As you complete the task, consider:

Prompt	External Candidate with a Candidate Home account.	External Candidate without a Candidate Home account.
Overall Email Template	Select a template.	Select a template.
Don’t Include Notification Details Link	*Yes.*	*Yes.*
Triggers	*On Entry.*	*On Entry.*
Conditions and Rules	Leave blank until you create the conditions and rules.	Leave blank until you create the conditions and rules.
Recipient	Candidate.	Candidate.
Message Content	Include the *External Site Task Link* report field in the body of the message.	Include the *Create Candidate Home Account URL* in the body of the message.

5. Create Business Process Condition Rules.

   Create 2 condition rules for the notifications. As you complete the task, consider:

Source External Field or Condition Rule	Relational Operator	Candidate Home Status
Valid for Candidate Account Creation	*Is blank*	Candidate has a Candidate Home account.
Valid for Candidate Account Creation	*Is not blank*	Candidate doesn't have a Candidate Home account.

6. Add the appropriate Rules and Conditions to the new notifications.

Concept: User Accounts for External Sites

Enable Social Sign in for Candidate Accounts

Prerequisites

Set up external career sites.

Context

When you enable Social Sign In for candidate accounts on your external career sites, external candidates can use their Google or Apple accounts to create candidate accounts and apply for jobs in your organization. This is a tenant-level setting and applies to all of your external career sites.

Steps

1. Access the Edit Tenant Setup - Recruiting task.

   From the Candidate Social Sign-In Providers list, select the providers that you want candidates to use to create accounts.

   Example: Google and Apple.

2. Enter the message for candidates in the Candidate Social Sign-In Consent Message field.

   This message should explain that the candidate is giving user consent by using their social account for account creation. The message appears above the social sign in options when candidates sign into the external career site.
3. Wait for the Register SSO Client background job to complete.

   This can take up to 24 hours.

Result

Candidates can use the specified providers to create accounts on your external career sites.

Concept: Social Sign In for Candidate Accounts on page 365

Populate Job Applications with LinkedIn Profile

Prerequisites

An agreement with LinkedIn for LinkedIn Recruiter or Job Slots.

Security: These domains in the Recruiting functional area:

- *Set Up: Recruiting*
- *Set Up: External Career Site Access*

Context

Workday enables candidates to use their LinkedIn profile to quickly fill in their job applications. This saves time by reusing information they have already entered in LinkedIn.

Steps

1. Access the Edit Tenant Setup - Recruiting task.
2. Click the Configure LinkedIn Integrations button.
3. On the Integration System User for LinkedIn Integration prompt, select the integration system user (ISU) that you created.

   This page is required for the LinkedIn RSC One-Click Export integration and not needed for Apply with LinkedIn.
4. Click OK.
5. On the Terms and Conditions Agreement page select the I Agree check box.
6. Click OK.
7. Sign into your LinkedIn account.
8. Click OK and Done.

   Once logged into LinkedIn, click Request next to Apply with LinkedIn.
9. Access the Create External Career Site or Edit External Career Site task.
10. In the Apply - Social Profiles section, select the Enable Apply with LinkedIn check box.

Result

When applying through an external career site, candidates can use the Apply with LinkedIn or Sign In to LinkedIn buttons to submit their applications. When candidates sign into their LinkedIn account, Workday automatically populates these fields on their job application with details from their LinkedIn profile:

- Country

- Contact Information
- Education
- Experience
- Skills

Populate Job Applications with SEEK Profiles

Prerequisites

Obtain a license agreement with SEEK and a SEEK Advertiser ID.

Context

Workday enables candidates to use information from their SEEK profile to populate information in their job applications. Using their SEEK profile enables candidates to save time by using information they have already entered in SEEK.

Steps

1. Access the Create or Edit Career Sites tasks.
2. Select the Enable Apply with Seek check box.
3. Enter your SEEK Advertiser ID.

Result

When candidates apply for a job using an external career site, they'll see an Apply with SEEK button. SEEK will request the candidate to authorize access to their profile. Workday automatically populates job applications with these fields from their SEEK profile:

- Achievements
- Company Name
- Description
- Email Address
- End Date
- Experience
- First Name
- Job Title
- Last Name
- Phone Number
- Skills
- Start Date
- Work History

Create External Career Sites

Prerequisites

- Set up veteran statuses for Recruiting.
- Create a message template.
- Security: These domains in the Recruiting functional area:
    - *Candidate Data: Personal Information*
    - *Set Up: Career Sites*
    - *Set Up: External Career Site Access*
    - *Set Up: Site Branding*

Context

You can create 1 to 100 active external career sites to support specific:

- Countries or locations.
- Population groups, such as college graduates.

When you create an external career site, you can:

- Brand it with your company logo or embed it into another website.
- Define sections that candidates must complete when they apply for a job.
- Integrate it with your social media recruiting outlets.
- Add a Prospect Introduce Yourself page to branded external career sites. Prospective candidates can submit information without signing in or applying to a specific job. The submission creates a prospect record. When the prospect uploads a resume, Workday parses contact information, education, and experience, which becomes part of the prospect record.

Steps

1. Access the Create External Career Site task.
2. As you complete the task, consider:

Option	Description
ID	Enter a unique alphanumeric identifier that becomes part of the URL. Workday converts spaces to dashes.
Languages	When you select more than 1 language, Workday displays the external career site in English and allows candidates to choose another language from the ones you selected. If you configure a Native Country Name on the Maintain Workday Delivered Country Names task, Workday displays the custom name on the external career site when candidates choose a language option. You can select a non-US English language option to enable candidates outside the United States enter dates in the DD/MM/YYYY and YYYY/MM/DD formats. Example: Selecting English (United Kingdom) will display the Date of Birth as 02/12/2025. Workday defaults locales based on browser settings and these predefined mappings: • Preferred language browser settings for Ireland, India, New Zealand, Singapore, Australia, and Hong Kong are mapped to English (United Kingdom). • Preferred language browser settings for South Africa are mapped to English (Canada). • All other preferred language browser settings map to English (U.S.).

Option	Description
Embed Mode	Embed mode enables you to display your external career site within another page, which offers flexibility regarding customization. Note: If you enable embed mode, you're allowing other sites outside of Workday-delivered domains to host your external career site within their pages. This can be done by third parties with or without your consent. This means you’re incurring the risk of exposing your users to social engineering scams such as phishing. As a result, users can be misled into performing unwanted actions on your career site. We advise that users should be educated on basic internet safety, as well as which third-party websites they can expect to see with your job postings or other career site-related information. When you enable embed mode, these items don't display on the embedded page: • Follow Us icons. • Privacy Policy link. • Prospect Introduce Yourself link, which you can add manually. Embed mode doesn't support LinkedIn applications. Note: Users with these browsers might not be able sign in or complete applications because they block third-party cookies by default: • All browsers on iPhone and iPad devices. • Safari on desktop. Workday recommends that you include instructions for impacted users so they know how to adjust browser settings.

3. The EU Cookie Policy section includes a Cookie Display Notice.

   When you select *Show only in limited time zones*, the notice displays for users who set their local time for 1 of these time zones:

   - UTC
   - UTC+1
   - UTC+2
   - UTC+3
4. As you complete the Tracking and Analytics section, consider:

Option	Description
Google Analytics Tracking ID	Workday accepts IDs from Google Universal Analytics (UA) and Google Analytics 4 (GA4).

Option	Description
	You can configure 1 Tracking ID type for each external career site.
Tracking Pixels	To count completed applications, enter the URL of an image pixel tracker. If you configure multiple tracking pixel URLs, each must have a unique URL. Workday doesn't support these URL types: • HTML • Image tags • JavaScript Work with your third-party vendors to get a URL that meets Workday's requirements. Depending on the vendor, you might need to: • Complete additional steps to set up conversion tracking in a third-party application. • Wait for a period of time before you can report on conversion data. • Omit unnecessary attributes from the image tag that contains the URL. Example: If the vendor gives you this tag, only enter. *https://ExampleURL.com/pixeltracking.gif*: `<img height="1" width="1" src="https://ExampleURL.com/pixeltracking.gif">`

5. As you complete the Branding section, consider:

Option	Description
Published Brand	You can use the Create Brand task to configure branding settings then select brands from this prompt.

6. In the Chatbot Configuration section, enter the Paradox Chatbot widget token to enable the chatbot on your external career site.

   This step only applies if you have:

   - A Paradox AI license.
   - Connected Paradox AI and Workday using the Paradox integration.
   - Obtained a widget token from Paradox. You need a unique token for each external career site that you want to enable the chatbot for.

7. As you complete the Prospect Introduce Yourself section, consider:

Option	Description
Header Link Text and Page Title	Workday recommends entering fewer than 25 characters. If you edit text in this field later, the page URL won’t change. The format for the direct link to the Prospect Introduce Yourself page is *[External site URL]/introduceYourself*.
Require Email Address	Select to require an email address.

Option	Description
Require Phone Number	Select to require a phone number.
Require Resume Attachment	Select to require prospects to attach a resume.
Enable Skills	You can use this check box to enable prospects to select skills when they fill out the Prospect Introduce Yourself form. If you enable Skills Cloud, Workday automatically displays suggested skills.
Default Opt-in Terms and Conditions	Default terms and conditions are specific to the Prospect Introduce Yourself page. Enter terms and conditions that display when you don't configure Opt-in Terms and Conditions by Country.
Opt-in Consent	Text that you enter in the Opt-in Consent field displays next to the consent check box.
Auto-Append Source	You can select 1 source, which applies to all submissions for the site.
Auto-Tag to Candidate Pool	Tag up to 50,000 prospects to candidate pools. When you reach the limit, Workday no longer adds prospects to the pool but continues to create a prospect record. The pools apply to all submissions for the site. If you anticipate over 50,000 submissions and don't have a process to move prospects from the selected pool into another, Workday recommends that you don't use this feature.
Auto-Tag with Candidate Tag	The tags apply to all submissions for the site.
Confirmation Message for Direct Links	Enter a confirmation message that displays: • When prospects access the Prospect Introduce Yourself page from a direct link (other than the header link). • If the Hide Search for Jobs Link is selected in the Branding section. Otherwise, Workday displays the confirmation message on the job search page.

8. As you complete the Job Alerts section, consider:

Option	Description
Enable	Select the check box to allow prospects and candidates to specify search criteria to create job alerts in Candidate Home.
Message Template	Select the message template you created for standardized job alert emails.
Notification Template	Select a Notification Designer template to customize the branding for job alerts emails.

9. As you complete the Job Details section, consider:

Option	Description
Location Hierarchy Subtype 1 and Subtype 2	Select additional location-related subtypes to use as facets on the Find Jobs report. It can take up to 2 hours for Workday to make facets available.
Find Jobs Custom Report	Select the custom report that you want to use to display jobs on this external career site. Custom reports must be: • Based on the Find Jobs Template for External Career Sites report. • Shared with all authorized users. • Web service enabled. Workday doesn't recommend changing the XML alias for these report fields as it can impact the filtering and placement of icons: • Any of the Location fields. • Date Posted • Distance • Time Type When you leave this field blank or Workday detects a problem with the selected custom report, the external career site uses the Find Jobs report.

10. As you complete the Apply - Intro section, consider:

Option	Description
How Did You Hear About Us?	When you configure more than 1 source, Workday displays the How Did You Hear About Us? prompt on the job application. If candidates select a source mapped to 1 of these Workday-delivered sources, they can identify the worker who referred them: • *Employee Referral* • *Proxy Referral* • *Self-Identified*
Recruiting Sources for Auto-Tracking	Assign 1 or more recruiting sources for this career site. When a candidate applies through a URL with a reference ID for 1 of these sources, Workday hides the How Did You Hear About Us? prompt on the job application.
Resume Parsing Message	Replace the standard message on the Quick Apply page of the job application.

11. In the Apply - Background section, enter social network types that candidates can select.

    Workday supports Facebook, Glassdoor®, LinkedIn, Twitter, and YouTube in this section.

12. In the Apply - Previous Worker section, select the Enable Previous Worker Verification check box.

    Select options from the Field prompt on the Previous Worker Questions grid to collect information on candidates who previously worked at the company. If you enable the previous worker verification, the View Application action in Candidate Home displays Are you a previous worker? as the section name and first question.

13. As you complete the Apply - Terms and Agreement section, consider:

Option	Description
Provider	Select the provider that you want you use to configure terms and conditions in Workday. Integrate with a third-party vendor for alternative configuration options.
Hosted Web Form Link	Enter the OneTrust Collection Point URL to integrate the web form hosted by OneTrust.
Terms and Conditions by Country	Add 1 or more countries on the grid and enter terms and conditions for each country.
Candidate Consent	Enter a message for when candidates consent to terms and conditions. Workday automatically includes a check box for the candidate consent message.
Apply Confirmation Message	Replace the standard confirmation message that displays when candidates submit job applications. You can configure 1 message for the entire career site. Workday recommends that you use 200 characters or fewer.

14. (Optional) Complete the Apply - Voluntary Self Identify Disability (US Only) section.
    a) To display the Voluntary Self-Id Disability Form (CC-305), select the Include Voluntary Self-Identification of Disability check box.
    b) To require that external candidates complete disability information, select the Require Completion of Voluntary Self-Identification of Disability check box.
15. In the Apply - Inline Assessment section, add instructions that display on the Take Assessment task.
16. As you complete the Candidate Home section, consider:

Option	Description
Enable Delete My Information	When you select this check box, the Delete My Information Message and Delete My Information Confirmation Message fields populate.
Withdraw Confirmation Message	Enter text that candidates will review before withdrawing their application from your company.
Delete My Information Message	Enter text that candidates will review before submitting a request for your company to delete their information.
Delete My Information Confirmation Message	Enter text to display after candidates confirm that they want your company to delete their information.

Result

If you enable the Paradox AI chatbot, job seekers can converse with the chatbot on your external career site to receive job suggestions and assistance with completing job applications.

Next Steps

Add or update personal and contact information for external candidates from their candidate profile.

Publish your brands to your external career sites using the View All Brands report. You can edit your brands on the Edit Brand task.

You can use the Delete External Career Site task to delete an external career site. You can only delete unused sites and can't delete sites that have been used for job postings.

Create Internal Career Sites for Non-Workers

Prerequisites

Security: Configure these domains in the Recruiting functional area:

- *Candidate Data: Job Application*
- *Self-Service: Candidate*
- *Self-Service: My Applications*
- *Set Up: Career Sites*

Context

Workday enables you to create internal career sites for nonworkers who have Workday accounts to search and apply for jobs. Nonworkers can be:

- Contingent workers
- Extended enterprise learners
- External students

When you create an internal career site for nonworkers, you can define the sections that candidates must complete when they apply for a job.

You can configure internal career sites for nonworkers to enable you to:

- Reduce duplicate candidate records for nonworker applications.
- Provide an easy apply flow within Workday.
- Manage different job postings with separate nonworker career sites.

Steps

1. Access the Create Internal Career Site for Non-Workers task.
2. As you complete the task, consider:

Option	Description
Location Hierarchy Subtype 1 Location Hierarchy Subtype 2	Select additional location-related subtypes to use as facets on the Find Jobs report. It can take up to 2 hours for Workday to make facets available.
Recruiting Source	You can't map more than 1 custom source to the same Workday-delivered source.
Inactive	You can make the site inactive. Candidates will be able to see the site but can't apply.
Withdraw Confirmation Message	This message displays to candidates on the Withdraw Application confirmation page when they withdraw their job application.

3. (Optional) Complete the Apply - Personal Information (U.S.) section if job requisitions on the internal career site for nonworkers are in the United States of America.

   Add fields on the Personal Information - U.S. grid to collect from candidates when they apply to job requisitions in the United States of America.
4. (Optional) Complete Apply - Personal Info (Non-U.S.) section if job requisitions on the internal career site for nonworkers aren't in the Unites States of America.
   a) Add 1 or more countries and personal information fields on the grid for Personal Information - Non-U.S.
   b) Add 1 or more fields for Personal Information Question Text Override - Non-U.S. and enter question text for each field.
5. (Optional) Complete the Apply - Voluntary Self Identify Disability (US Only) section.
   a) To display the Voluntary Self-Id Disability Form (CC-305), select the Include Voluntary Self-Identification of Disability check box.
   b) To require that internal non-workers complete disability information, select the Require Completion of Voluntary Self-Identification of Disability check box.
6. Complete the Apply - Terms and Agreement section.
   a) Enter text to display in the Default Terms and Conditions section on the job application.

      Workday automatically includes a check box for the candidate consent.
   b) Add 1 or more countries on the grid Terms and Conditions by Country and enter terms and conditions for that country.

   You can replace the standard confirmation message that displays when a candidate submits their job application in the Apply Confirmation Message field. You can only configure 1 message for the entire career site. Workday recommends that you use 200 characters or fewer.

   You can use these report fields to create custom reports for Terms and Conditions:

   - Candidate Terms and Conditions Consent
   - Job Application Language
   - Terms and Conditions for Job Application
   - Terms and Conditions Lock Date

Workday 31 What's New Post: Internal Apply for Non-Workers

Example: Create Career Dashboard for Non-Workers

This example illustrates how to create a custom dashboard for a group of non-workers to provide them access to internal job postings on the Workday browser application.

Context

You want to create a custom dashboard for students to provide them with quick access to a custom Find Jobs for Students report that was previously accessible on the Career worklet. You can make this custom dashboard a required worklet on the Home page for students to make it more accessible.

Prerequisites

- Create a custom Find Jobs for Students report for students.
- Security: The *Set Up: Tenant Setup - Worklets* domain in the System functional area.

Steps

1. Access the Create Custom Dashboard task.
2. In the Dashboard prompt, enter *Student Careers*.
3. Click OK.
4. Enter these values:

Field	Enter
Domains	• *Business Process Administration* • *Internal Careers* • *Security Administration* • *User-Based Security Group Administration*
Description	*A career dashboard for students to search for and apply to job opportunities.*
Dashboard Icon	*Career*

5. Click OK.
6. From the related actions menu of the Student Careers dashboard, select Dashboard > Edit.
7. Click Add.
8. Enter *Careers* in the Tab Name field.
9. Click the Menu section to expand it.
10. In the Menu Sections grid, add a row to add a new section. and enter these values:

Section Label	+	Item
Find Jobs	Click +	From the Custom Report prompt, select: *Find Jobs for Student*

11. Click Done.
12. On the Maintain Dashboards task, click the Dashboard column and enter *Home*.
13. Click Filter.
14. Click Edit.

15. Click the Worklets section on the Content tab.
16. In the Dashboards/Worklets grid, add a row and enter these values:

Worklet	Required for Groups	Required
Student Careers	*All Students*	Select the check box.

17. Click Done.

Reference: Custom Events in Google Analytics 4

Workday delivers custom events and parameters for tracking external career site metrics in Google Analytics 4. You can track these items when you add your Google Analytics tracking ID to your external career site.

Job Search and Facet Usage

Custom events and parameters for job search and facet usage.

Event Name	Description
facet_filter	Candidate selects a value from a facet filter.
search	Candidate enters a search term.
view_job_posting	Candidate views a job posting.
view_search	Candidate views the Search for Jobs page.

Parameter Name	Description
facet_name	Included in facet_filter events.
facet_value	Included in facet_filter events.
job_posting_id	Included in view_job_posting and the Workday delivered custom apply flow events.
search_term	Included in search events.

Apply Flow

Custom events and parameters for apply flow pages. Events listed in apply flow order.

Event Name	Description
apply_login	Candidate asked to sign in or create an account.
apply_start	Candidate begins the job application process.
apply_autofill_with_resume	Candidate lands on page to autofill application with a resume.
apply_my_information	Candidate lands on the My Information page.
apply_my_experience	Candidate lands on the My Experience page.
apply_personal_information_agreement	Candidate lands on the Voluntary Disclosures page.
apply_self_identify	Candidate lands on the Self Identify page.
apply_assessment	Candidate launches the Assessment page.

Event Name	Description
apply_primary_questionnaire	Candidate lands on Application Questions 1 of 2 page.
apply_secondary_questionnaire	Candidate lands on Application Questions 2 of 2 page.
apply_supplementary_questionnaire	Candidate lands on Supplementary Questionnaire page.
apply_review	Candidate lands on the Review page.
apply_job_application_submitted	Candidate successfully submits a job application.

Parameter Name	Description
apply_method	Included in the apply_start event, and indicates the method that the candidate selected to apply.

Candidate Lifecycle

Custom events for candidate lifecycle events.

Event Name	Description
sign_up	Candidate creates an account on the career site.
login	Candidate logs into the career site.

Troubleshooting: External Career Sites

This topic provides strategies for diagnosing and resolving these external career site problems:

- External career site is down or failing to load. on page 390
- Users are unable to sign in or complete applications. on page 391

External career site is down or failing to load.

Cause	Solution
Career site isn't published.	Security: *Set Up: Career Sites* domain in the Recruiting functional area. 1. Access the Edit External Career Site report. 2. Ensure that the Publish Site check box is selected.
The Recruiting System account is disabled, expired, or locked.	For disabled or expired accounts: Configure the *Edit Workday Account* business process and security policy in the System functional area. 1. Access the Edit Workday Account task. 2. Select *Recruiting System*. 3. Clear the Account Disabled check box and Account Expiration Date fields. For locked accounts:

Cause	Solution
	Security: *Lock Out Workday Accounts* domain in the System functional area. 1. Access the Manage Workday Accounts task. 2. Click the *Unlock Workday Accounts* option. 3. Select *Recruiting System* from the Include Selected Workday Accounts prompt.
Recruiting System isn't excluded from any current session restrictions.	Security: *Security Administration* domain in the System functional area. 1. Access the View Workday Maintenance Window History report to see if a session restriction is in progress. 2. Access the Manage Workday Maintenance Window task. 3. Click *System Accounts Excluded from Session Restriction* and select *Recruiting System*.

Users are unable to sign in or complete applications.

Cause: Embed mode is enabled for the external career site. Users with these browsers might run into issues because they block third-party cookies by default:

- All browsers on iPhone and iPad devices.
- Safari on desktop.

Solution: Provide text that mentions that browsers on iOS devices and Safari on desktop might block third-party cookies by default, preventing the career site from working properly. You can include this text where you link to the external career site or somewhere visible on the page with the embedded site.

Candidate Engagement

Recruiting Campaigns

Steps: Set Up Recruiting Campaigns

Prerequisites

See 2022R2 What's New Post: Recruiting Campaigns.

Context

You can set up message and notification templates that enable recruiters to send branded marketing communications to pools of prospects or candidates. The emails can include links to job postings. You can also configure an analytics discovery board so recruiters can view engagement metrics and conversion rates for job applications submitted by campaign recipients.

Steps

1. Enable the Candidate Engagement functional area.

   See Steps: Enable Functional Areas and Security Policies.
2. Edit Domain Security Policies.

   Configure the *Manage: Recruiting Campaigns* domain in the Candidate Engagement functional area.

3. Set up email analytics for the Recruiting Campaigns notification type in the Candidate Engagement service.

   See Steps: Set Up Email Analytics.
4. Ensure recruiters who manage campaigns can view candidate pools.

   See Steps: Set Up Candidate Pool Security on page 245.
5. Create templates with Notification Designer.

   You can create and activate notification templates for the *Recruiting Campaigns* notification type.

   You can insert the Recruiting Campaign data row on the template to enable recruiters to add up to 25 job posting links in a message.

   See Create and Activate Notification Templates.
6. (Optional) Create message templates for the *Recruiting Campaigns* notification type.

   See Steps: Set Up Message Templates.
7. (Optional) Maintain Recruiting Sources on page 272.

   Add a new recruiting source category and recruiting source and map it to the *Recruiting Campaigns* option. This enables you to view the campaign that is the source of the job application on a candidate's profile.
8. (Optional) Access the Edit Tenant Setup - Recruiting task.

   Select the Enable Automatic Candidate Merging check box. This supports candidate source tracking by merging candidates who submit applications with email recipients.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.
9. (Optional) Enable workers to mute internal recruiting campaigns.

   Set up the Notification Routing Rule for Recruiting Campaigns in the Edit Tenant Setup – Notifications task to include *Mute* as an Allowed Frequency.

   See Concept: Notifications.
10. Steps: Set Up Recruiting Campaign Email Analytics Discovery Board on page 395.
11. (Optional) Access the Candidate Engagement Hub.

    The hub displays published recruiting campaign and landing page analytics and provides links that enable you to drill down to further details and reports.

    Recruiters can add a link to the Candidate Engagement Hub in the Recruiting Hub under Shortcuts or add the Candidate Engagement worklet to their Workday homepage.

Result

Recruiters can manage campaigns and access analytics using the Maintain Recruiting Campaigns task.

Related Information

Tasks

Steps: Set Up Recruiting Hub on page 195

2022R2 What's New Post: Recruiting Campaigns

Manage Recruiting Campaigns

Prerequisites

- Create candidate pools that include external or internal candidates.
- For internal recruiting campaigns, configure the Apply to Job initiating action on the *Manage Internal Career Apply* business process security policy to include the *Employee as Self* security group to allow employees to apply to jobs from internal recruiting campaigns.
- Security: *Manage: Recruiting Campaigns* domain in the Candidate Engagement functional area.

Context

Workday enables you to create recruiting campaigns and schedule them to send to pools of prospects and candidates. You can configure a series of messages within a campaign and specify the conditions and timeframe in which Workday should send each message. Example: You can send a message to prospects who read your first email and another message to prospects who don't read your email after 5 days. You can also monitor campaign analytics using the Recruiting Campaign Analytics dashboard.

Steps

1. Access the Manage Recruiting Campaigns task.
2. Click Add New Campaign.

   As you complete the guided sections on the task, consider:

Option	Description
Campaign Name	Enter a unique name for the campaign.
Audience Type	Select *External* or *Internal* for your targeted audience type. Campaigns for external and internal candidates are mutually exclusive.
Select Recipients	Add recipients from existing candidate pools. Workday displays a count for recipients based on the audience type and exclusions. Workday doesn't send messages to these recruiting campaign recipients: • Purged candidates. • Recipients who unsubscribe from receiving campaign emails. External recruiting campaign exclusions: • Active workers in your tenant. • Confidential candidates and prospects. • Prospects who have declined consent for collecting their information Internal recruiting campaign exclusions: • External candidates or prospects. • Terminated workers. • Workers who have removed their primary work email address. • Workers who aren't internal candidates. • Workers that don't have a Workday account. You can't use private pools in recruiting campaigns. You also can't restrict or inactivate a pool used in a campaign until the campaign ends.
Set Up Messages	Set the campaign start and end dates, then configure emails and conditions. As you configure emails, you can select:

Option	Description
	• A notification template to specify the layout and design. • A message template to specify the text within the body and subject line. • How long you want to delay the message from sending. • Up to 25 job postings to link to if the notification template has the Campaign data row on it. The audience type selected restricts job postings listed. You can also draft messages by editing an existing template or by selecting a notification template and writing a custom message. However, if you modify a campaign message, Workday won't persist your edits in the message template. After configuring the initial email, you can configure subsequent emails and select conditions for sending them. The *Previous Email Is Clicked Into* condition checks if recipients click a link in the email. The *Previous Email Is Opened* condition checks if recipients read an email.
Review	If you don’t publish the campaign, Workday saves it as a draft.

3. Add or remove recipients individually from campaigns from the related actions menu on the Candidate profile.
    - Add recipients by selecting Candidate Actions > Add to Campaign.
    - Remove recipients by selecting Candidate Actions > Remove from Campaign.

Result

Workday begins processing campaign messages at 11:00 AM in the default time zone for your tenant. Campaign messages might take up to an hour to send to all recipients. Messages display on the timeline on the Recruiting History profile group of the Candidate profile.

If you've opted in to the Workday 32 - Time Zones feature, then Workday uses the user's local time zone.

Next Steps

- Click a campaign to view details or view the analytics dashboard to monitor campaign and recipient activities.
- Purge campaign records for job applications and candidates.

Related Information
Reference
What's New Post: Internal Recruiting Campaigns

Concept: Recruiting Campaign Analytics

Workday delivers email analytics so you can drill into email metrics and understand actions candidates take in response to campaigns. Examples:

- Number of emails delivered.
- Number of bounced, or undeliverable emails.
- Number of emails clicked and click-through rate.
- Number and rate of opened emails.
- Number and rate of unsubscribed emails.

Workday calculates open and click rates by dividing the number of opens or clicks for an email by the number of emails successfully delivered. When a recipient opens and clicks the same email more than once, Workday only counts 1 open and 1 click.

Purging and Merging Candidate Records

When you purge recruiting campaign communications for job applications, Workday no longer counts them in analytics. Purging campaigns for candidates has no impact on analytics.

You can use the Candidate Actions > Find Duplicates related action on the Candidate profile to merge candidate records. Workday automatically updates campaign data and analytics after a merge. Consider the impacts of these merge scenarios:

Scenario	Impact
You merge 2 prospects who each click the same email once.	Workday keeps the merge target in the campaign. Analytics show that 1 person clicked the email once.
You merge 2 prospects. One is in a campaign and the other isn't.	Workday keeps the merge target in the single campaign.
You merge 2 prospects who are each in different campaigns.	Workday keeps the merge target in both campaigns.
You want to unmerge a prospect who was previously 2 prospects in different campaigns. While merged, the prospect clicked an email in a campaign.	Workday separates the merge source from the merge target. Analytics show that only the merge target clicked the email.

Steps: Set Up Recruiting Campaign Email Analytics Discovery Board

Prerequisites

- Set up your tenant for Drive.
- Security: These domains in the System functional area:
    - *Discovery Boards: Administration*
    - *Discovery Boards: Create*
    - *Discovery Boards: Manage Delivered Discovery Boards*

Context

You can use the Recruiting Campaign Email Analytics discovery board to examine key performance indicators, including these tabs:

- Engagement: Provides information on recruiting campaigns and a breakdown of each campaign by open rate, click rate, and job application rate. You can determine which messages result in the most engagement and which recipients are most engaged. You can also see which campaigns have the highest unsubscribe, spam, and bounce rates.
- Job Applications: Displays data on job applications by campaign and details on which campaigns result in the most applications, interviews, offers, and hires.

The email analytics calculations include:

- Bounce Rate
- Click-Through Rate
- Job Application Conversion Rate
- Open Rate
- Spam Complaint Rate
- Total Clicked
- Total Opened
- Total Spam
- Total Unsubscribed
- Unsubscribe Rate

Steps

1. Access the Delivered Discovery Boards report.
2. Select Recruiting Campaign Email Analytics from the list of Workday-delivered discovery boards available in your tenant.
3. Select Make a Copy and save it in your Drive.
4. Configure your Recruiting Campaign Email Analytics discovery board and select controls as you see fit.

   Workday updates indexed data sources and fields every hour.
5. Configure which discovery board displays when you click the View Analytics button from a recruiting campaign.

   Access the Maintain Candidate Engagement task and select a discovery board from the Recruiting Campaigns prompt. When you click View Analytics from the Manage Recruiting Campaigns task, your selected discovery board displays.

Next Steps

You can customize the Recruiting Campaign Email Analytics discovery board by adding visualizations and sheets. Examples:

- Add indicators to your visualizations.
- Configure the Show Details functionality to enable users to drill down to prospect and job application records.

Tasks

Copy Workday-Delivered Discovery Boards

Steps: Set Up Tenant for Discovery Boards

Steps: Set Up Recruiting Hub on page 195

FAQ: Recruiting Campaign Email Analytics

Why don't the job application counts on the Job Application tab match the Engagement tab on the delivered discovery board?	You can enable Automatic Candidate Merging in the Edit Tenant Setup - Recruiting task to merge the candidate records. See Concept: Automatic Candidate Merging on page 309. Example: Workday creates a candidate record for when a candidate receives a campaign message.

	When the same candidate applies to a job marketed through a recruiting campaign, Workday creates another candidate record. Enabling Automatic Candidate Merging allows Workday to count the job application for the campaign recipient.
Why is a campaign message in my spam folder not counted as Spam on the discovery board?	Candidate Engagement email analytics calculations for spam only capture messages marked as spam by the message recipient. Workday counts messages delivered to the spam folder as delivered emails.

Recruiting Landing Pages

Steps: Set Up Recruiting Landing Pages

Context

You can enable recruitment marketers to design and publish external web pages that market your organization to specific populations. A landing page can include prospect forms, job postings, photos, videos, and content relevant to the target population. You can also configure an analytics dashboard to view engagement metrics and conversion rates for prospect forms and job applications submitted by landing page visitors.

Steps

1. Enable the Candidate Engagement functional area.

   See Steps: Enable Functional Areas and Security Policies.
2. Edit Domain Security Policies.

   Grant access to these domains:

   - *Manage: Recruiting Landing Pages* to create landing pages.
   - *Drive* to upload video media files stored in Workday.
3. Create External Career Sites on page 379.

   Landing pages share the URL path, header, and footer of your career site. Workday doesn't support embed mode with landing pages.

   Enable Prospect Introduce Yourself on the external career site if you plan to use a Prospect Form on landing pages.
4. (Optional) Create candidate pools and candidate tags to apply to prospects who introduce themselves from landing pages.

   Use these tasks:

   - Maintain Candidate Tags (secured to the *Set Up: Recruiting* domain).
   - View All Candidate Pools (secured to the *Candidate Pool: View and Modify Pool* domain).

   You can only use static candidate pools for landing pages.
5. (Optional) Maintain Recruiting Sources on page 272.

   Add a new recruiting source category and recruiting source and map it to the *Recruiting Landing Pages* option. This step enables you to view the landing page that is the source of a prospect record on the prospect's profile.
6. Steps: Set Up Recruiting Landing Pages Analytics Discovery Board on page 400.

7. (Optional) Access the Candidate Engagement Hub.

   The hub displays high level metrics for campaigns and landing pages and provides a link to the analytics dashboard. Consider adding Candidate Engagement as a worklet on your Workday homepage or in your Recruiting Hub shortcuts.

Result

Recruitment marketers can create, publish, and analyze landing pages using the Manage Recruiting Landing Pages task.

2022R2 What's New Post: Recruiting Landing Pages

Manage Recruiting Landing Pages

Prerequisites

- Set up landing pages and analytics.
- Create and publish an external career site with branding.
- Security: *Manage: Recruiting Landing Pages* domain in the Candidate Engagement functional area.

Context

You can create landing pages that are associated with an external career site. You can include these components on a landing page:

- Branded buttons.
- Images.
- Job postings.
- Prospect sign up forms.
- Text blocks.
- Videos

Steps

1. Access the Manage Recruiting Landing Pages or the Create Recruiting Landing Page tasks.

   Select an external career site to associate with the landing page.
2. Configure landing page contents.

   You can access these options by clicking Insert on the toolbar or by hovering over an existing content container. You can add new contents by clicking the + icon along the border of existing containers.

   Workday recommends that you click Save frequently on the header as you make changes.

Component	Settings
Image	Select an image that is less than 10MB. On the Image properties panel, you can: • Adjust positioning. • Expand the image to the full width of the page. • Resize images that aren't full-width. • Add descriptive text for screen reader users.

Component	Settings
	• Enter a link.
Text	Use options available on the toolbar to configure text formatting, such as styling, font size, adding links. On the Text properties panel, you can adjust positioning.
Buttons	Workday limits the shape and color of buttons to what's available on the associated career site. You must have access to the Edit Brand task to change button styling. On the Button properties panel, you can: • Adjust positioning. • Change a button to a primary or secondary brand style. • Enter button label text. • Enter a link.
Job Postings	You can add a subset of job postings from the associated career site. You can filter job postings to display only jobs relevant to the target audience. The filters that display depend on the configuration of the career site associated with the landing page. Up to 5 jobs display. Select the overflow button to display all the jobs that match page criteria. Workday automatically updates the list of jobs that display as you repost or unpost jobs. If you've mapped a recruiting source, Workday indicates the name of the landing page as the source after users submit the job application.
Prospect Form	You can add a link to the prospect form so interested users can create a prospect record. On the form properties panel, you can: • Adjust positioning. • Select a button style. • Enter button label text. • Specify candidate pools and candidate tags to associate with prospects who complete the form. If you've mapped a recruiting source, Workday indicates the name of the landing page as the source after users complete the form.
Video	You can upload a video from your device or select 1 available in Drive.

Component	Settings
All Components	From the properties panel on any component you can: • Adjust the padding, or amount of blank space around the component. • Select a background color. To change the background color for the entire landing page, select Settings > Background on the toolbar.

3. Translate page contents.

   To translate a landing page, select Language > Add Languages on the toolbar. You can only edit the layout of the landing page in the base language, English. Workday doesn't update content in other languages as you make changes to the base language. Consider adding languages after you finalize the base language content.

   Candidates who visit a published landing page can change the language on the web page header.
4. Publish the landing page or save it as a draft.

Result

When you publish a landing page, anyone who has the URL can view it.

Next Steps

Copy the published landing page URL and share it on your social media sites or in your recruiting campaigns. To make changes to a published landing page, edit and republish it. To archive a landing page permanently, unpublish it. You can reuse the contents of an archived landing page by copying it into a new page.

Click View Analytics on the Manage Recruiting Landing Pages task to access conversion rates and metrics.

Steps: Set Up Recruiting Landing Pages Analytics Discovery Board

Prerequisites

- Set up your tenant for Drive.
- Security: These domains in the System functional area:
  - *Discovery Boards: Administration*
  - *Discovery Boards: Create*
  - *Discovery Boards: Manage Delivered Discovery Boards*

Context

You can use the Recruiting Landing Pages Analytics discovery board to examine key performance indicators, including these tabs:

- Engagement: Provides information to help you determine which pages result in the most engagement for your audience, including page views, prospects, and job applications.
- Prospects and Job Applications: Provides data on prospects and job applications and details on which landing pages result in the most job applications that advance to interviews, offers, and hires.

Steps

1. Access the Delivered Discovery Boards report.

2. Select Recruiting Landing Pages Analytics from the list of discovery boards available in your tenant.
3. Select Make a Copy and save it in your Drive.
4. Share the copied discovery board with the security groups you want to view landing page analytics.
5. Configure which discovery board displays when you click the View Analytics button from a recruiting landing page.

   Access the Maintain Candidate Engagement task and select a discovery board from the Recruiting Landing Pages prompt. When you click View Analytics from the Manage Recruiting Landing Pages task, your selected discovery board displays.

Next Steps

You can customize the Recruiting Landing Pages Analytics discovery board by adding visualizations and sheets. Examples:

- Add indicators to your visualizations.
- Add Prospects and Job Applications to the Drill By Fields tab.
- Configure the Show Details functionality to enable users to drill down to prospect and job application records.

Recruiting Event Management

Steps: Set Up Recruiting Event Management

Context

Recruiting event organizers can create and manage virtual, in-person, and hybrid recruiting events to improve candidate engagement. You can set up event landing pages and registration forms for recruiting event management.

Steps

1. Enable the Candidate Engagement functional area.

   See Steps: Enable Functional Areas and Security Policies.
2. Edit Domain Security Policies.

   Grant access to these domains:

   - *Manage: Recruiting Events for Candidate Engagement* to create recruiting events.
   - *Set Up: Recruiting Events for Candidate Engagement* to enter recruiting event information.
3. Create External Career Sites.

   Event landing pages share the URL path, header, and footer of your career site.

4. (Optional) Create candidate pools and candidate tags to apply to event participants who register for events.

   When an event participant registers for an event, Workday creates a prospect record for the participant. Use these tasks:

   - Maintain Candidate Tags (secured to the *Set Up: Recruiting* domain).
   - View All Candidate Pools (secured to the *Candidate Pool: View and Modify Pool* domain). You can only use static candidate pools for event landing pages.
5. (Optional) Maintain Recruiting Sources.

   Add a new recruiting source category and recruiting source and map it to the *Recruiting Events* option. This step enables you to view which recruiting events are the source of a prospect record and job applications on a candidate's profile.
6. Create Recruiting Event Types.

   Create event types for recruiting events.
7. Create Recruiting Event Registration Templates.

   The template allows you to set up fields for recruiting event registration. You can require event participants to provide their email address, phone number, or resume during registration.
8. Review recruiting event communications.

   See Concept: Recruiting Event Management Messages.
9. Steps: Set Up Recruiting Event Analytics Discovery Board.
10. Access the Candidate Engagement Hub to access recruiting events.

Result

You can use the Manage Recruiting Events for Candidate Engagement report to access tasks to create and publish recruiting events and event landing pages.

2024R1 What's New Post: Recruiting Event Management for Candidate Engagement - Part 4

Create Recruiting Event Types

Prerequisites

Security: *Set Up: Recruiting Events for Candidate Engagement* domain in the Candidate Engagement functional area.

Context

You can create and set up recruiting event types offered by recruiting event organizers.

Steps

1. Access the Maintain Recruiting Event Types for Candidate Engagement task.
2. Enter a name for the event type.

   You can use the same name for multiple event types. Create a name that is clear to all event administrators.
3. Set the order that you want the event types to display.

4. Confirm that the Inactive check box is clear.

Result

Recruiting event types display in the Create Recruiting Event for Candidate Engagement task. If 1 or more events use an event type, Workday selects the In Use check box.

Example

You can create an event type to use for all on-campus recruiting events.

Next Steps

You can use this same task to inactivate or edit event types. You can't delete an event type when 1 or more events use the type.

Create Recruiting Event Registration Templates

Prerequisites

- Set up recruiting events.
- Security: *Set Up: Recruiting Events for Candidate Engagement* domain in the Candidate Engagement functional area.

Context

You can create registration forms to be associated with recruiting events. Workday creates a prospect record for registered event participants.

Steps

1. Access the Create Recruiting Event Registration Template for Candidate Engagement task.
2. As you complete this registration form, consider:

Option	Description
Template Name	Name of the registration template.
Page Title	Workday recommends entering fewer than 25 characters.
Page Instruction Text	The instructions to provide during registration.
Require Email Address	Select if you want to require an email address for registration to use for event check-in.
Require Phone Number	Select if you want to require a phone number for registration.
Require Resume Attachment	Select if you want to require participants to attach a resume or CV.
Default Opt-in Terms and Conditions	Default terms and conditions are specific to the Registration Form page. Enter terms and conditions that display when you don't configure Opt-in Terms and Conditions by Country.

Option	Description
Opt-in Consent	Text that you enter in the Opt-in Consent field displays next to the consent check box.
Auto-Tag to Candidate Pool	Tag up to 50,000 prospects to candidate pools. When you reach the limit, Workday no longer adds prospects to the pool but continues to create a prospect record. The pools apply to all submissions for the site. If you anticipate over 50,000 submissions and don't have a process to move prospects from the selected pool into another, Workday recommends that you don't use this feature.
Auto-Tag with Candidate Tag	The tags apply to all submissions for the site.
Confirmation message for direct links	Enter a confirmation message that displays to the event participant once they register.

Next Steps

You can associate the registration template with an event. Use the Delete Recruiting Event Registration Template for Candidate Engagement task to delete registration templates that aren't in use.

2024R1 What's New Post: Recruiting Event Management for Candidate Engagement - Part 1

Steps: Manage Recruiting Events for Candidate Engagement

Prerequisites

- Set up recruiting events types.
- Create and publish an external career site with branding.
- Create a registration template.
- Security: *Manage: Recruiting Events for Candidate Engagement* and *Manage: Recruiting Landing Pages* domains in the Candidate Engagement functional area.

Context

You can create recruiting events that are associated with an external career site and registration form. When you create an event, Workday also creates an event landing page. You can include these components only on event landing pages:

- Registration forms.
- Data field enabled text blocks.

Additional content types available for event landing pages:

- Branded buttons.
- Images
- Job Postings
- Videos

Steps

1. Access the Manage Recruiting Events for Candidate Engagement report or the Create Recruiting Event for Candidate Engagement task.

2. Enter event details. Select an external career site and registration form to associate with the event landing page.

   As you complete this task, consider:

   - Event Name
   - Description (Internal) for internal users to view.
   - Event Type
   - Start Date and Time
   - End Date and Time
   - Time Zone
   - Event Format: Virtual, In-person, or Hybrid.
   - Location for in-person events.
   - Conference Link for virtual and hybrid events.
   - Career Site for Event Page
   - Registration Template
   - Auto-Create Candidate Pool

     Security: *Candidate Pool: Create* domain in the Recruiting functional area.
3. Set up the event landing page contents.

   You can access these options by clicking Insert on the toolbar or by hovering over an existing content container. You can add new contents by clicking the + icon along the border of existing containers.

   Workday recommends that you click Save frequently on the header as you make changes.

Table 1: Event Landing Page Components

Component	Settings
Registration Form	You can add a button to the registration form so interested users can sign up to be an event participant. Workday creates a prospect record for all registered event participants. On the form properties panel, you can • Adjust positioning. • Select a button style. • Specify candidate pools and candidate tags to associate with prospects who complete the form. Note: If you selected the Auto-Create Candidate Pool check box, Workday defaults the automatically created candidate pool in the Auto-Tag to Candidate Pool prompt for the registration form.

Component	Settings
Data Enabled Text	You can add these data fields in text blocks for event landing pages. • Recruiting Event Conference Link • Recruiting Event Format • Recruiting Event Location • Recruiting Event Name • Recruiting Event Time Zone • Formatted Recruiting Event End Date • Formatted Recruiting Event End Time • Formatted Recruiting Event Start Date • Formatted Recruiting Event Start Time On the Text properties panel, you can adjust positioning.

Table 2: Landing Page Components

Components	Settings
Buttons	Workday limits the shape and color of buttons to what's available on the associated career site. You must have access to the Edit Brand task to change button styling. On the Button properties panel, you can: • Adjust positioning. • Change a button to a primary or secondary brand style. • Enter the button label text. • Enter a link.
Image	Select an image that is less than 10MB. On the Image properties panel, you can: • Adjust positioning. • Expand the image to the full width of the page. • Resize images that aren't full-width. • Add descriptive text for screen reader users. • Enter a link.
Job Postings	You can add a subset of job postings from the associated career site. You can filter job postings to display only jobs relevant to the target audience. The filters that display depend on the configuration of the career site associated with the landing page. Up to 5 jobs display. Select the overflow button to display all the jobs that match the page criteria. Workday automatically updates the list of jobs that display as you repost or unpost jobs.

Components	Settings
Text	Use options available on the toolbar to configure text formatting, such as styling, font size, adding links, and data fields.
Video	You can upload a video from your device or select 1 available in Drive.
All Components	From the properties panel on any component you can: • Adjust the padding, or amount of blank space around the component. • Select a background color. To change the background color for the entire landing page, select Settings > Background on the toolbar.

4. Publish the event landing page or save it as a draft.
5. Provide a link to the Check In page for Hybrid, In-Person, and Virtual events to enable registered participants to check in from a computer or mobile device.

   Set up a link to the Check In page on:

   - The event landing page.
   - An email or campaign communication.
   - Using event management QR codes.
   - Event participants must submit the email used during the registration process to check in.

Result

When you publish a page, anyone who has the URL can view it and use the registration button to access the registration form. To make changes to a published event landing page, edit and republish it. To archive an event landing page permanently, from the related actions menu select Recruiting Event for Candidate Engagement > Unpublish Event..

If you've opted in to the Workday 32 - Time Zones feature, then Workday uses the user's local time zone.

Next Steps

View and change recruiting event details on the Event Details tab of the View Recruiting Event for Candidate Engagement report. You can:

- View candidate pools and candidate tags that are associated with the event.
- Generate scannable QR codes for links to the event landing page, event registration, and event check-in page.
- Share these links for published events: event landing pages, event registration, event check-in.

Use the Event Roster tab on the View Recruiting Event for Candidate Engagement report to view:

- The contact information, registration status, and resumes for event participants.
- Use the Check In and Remove Check-In mass actions to manage event participant attendance.
- Use these mass actions on registered event participants: Add to Pool, Invite to Apply, Send Message, Share.

Use the Copy Recruiting Event for Candidate Engagement task to copy any recruiting event, including archived events.

- Access the task from the related actions menu on an event. Select Recruiting Event for Candidate Engagement > Copy Event.

- When you copy a recruiting event, Workday copies:
    - All event fields, except for the event name, start date and time, and end date and time. Workday will append copy to the name of the copied event.
    - All event landing page configurations, including candidate pool and candidate tag associations.
- Copying a recruiting event doesn't copy the event campaign and memberships.

2024R1 What's New Post: Recruiting Event Management for Candidate Engagement - Part 2

2024R1 What's New Post: Recruiting Event Management for Candidate Engagement - Part 4

Steps: Set Up Recruiting Event Analytics Discovery Board

Prerequisites

- Set up your tenant for Drive.
- Security: These domains in the System functional area:
    - *Discovery Boards: Administration*
    - *Discovery Boards: Create*
    - *Discovery Boards: Manage Delivered Discovery Boards*

Context

You can use the Recruiting Event Analytics discovery board to examine key performance indicators, including these tabs:

- Engagement: Provides information to help determine which recruiting events result in the most engagement for your audience, including page views, registrations, event attendance, and job applications.
- Prospects and Job Applications: Provides data on prospects and job applications and details on which recruiting events result in the most job applications that advance to interviews, offers, and hires.

Steps

1. Access the Delivered Discovery Boards report.
2. Select Recruiting Events Analytics from the list of discovery boards available in your tenant.
3. Select Make a Copy and save it in your Drive.
4. Share the copied discovery board with the security groups you want to view recruiting event analytics.
5. Configure which discovery board displays when you click the View Analytics button on the Manage Recruiting Events for Candidate Engagement report.

    Access the Maintain Candidate Engagement task and select a discovery board from the Recruiting Events prompt. When you click View Analytics from the Manage Recruiting Events for Candidate Engagement report, your selected discovery board displays.

Next Steps

Use the delivered controls to filter results by date or event status. You can customize the Recruiting Event Analytics discovery board by adding visualizations and sheets.

Tasks

Copy Workday-Delivered Discovery Boards

Steps: Set Up Tenant for Discovery Boards

Reference

2024R1 What's New Post: Recruiting Event Management for Candidate Engagement - Part 3

Concept: Recruiting Event Management Messages

Recruiting event participants can receive registration confirmation and recruiting campaign messages. Workday sends confirmation messages to event participants who register with an email address. You can use recruiting campaigns to deliver messages for events.

Registration Confirmation

Workday automatically sends a registration confirmation message to all event participants who provide an email address. The confirmation message provides the event name, date, time, time zone, location, and the URL link (for hybrid and virtual events). See Create Recruiting Event Registration Templates.

If you've opted in to the Workday 32 - Time Zones feature, then Workday uses the user's local time zone.

We recommend creating a recruiting event email template using the Recruiting Event for Candidate Engagement Confirmation Email Template Behavior. See Create Email Templates.

Complete the task:

Option	Description
Static Content	• Add your company logo. • Add a registration confirmation message.
Dynamic Content	• For event details, select Recruiting Event Message . • Include the Conference Link URL for virtual or hybrid events.

The registration confirmation message triggers the Confirmed Opt-In (COI) request. We deliver the Event Management registration confirmation message regardless of the COI status of the recipient. We recommend updating the COI standard email notification template to inform COI recipients that Candidate Engagement messages are exempt from COI. See Concept: Confirmed Opt-In for Email Communications.

Note: At this time, only Job Alerts, Invite to Apply, and Send Message (without the context of a job application) emails require COI.

Recruiting Campaigns

You can optionally associate a recruiting event with 1 or more recruiting campaigns in a draft or published status to send branded email communications to event participants. See Steps: Set Up Recruiting Campaigns.

You can't remove campaigns from events once they've started, and once you associate a campaign with a recruiting event it's unavailable for other events.

You can access the Manage Event Campaigns for Candidate Engagement task using the Manage Event Campaigns option from related actions on an event.

The View Recruiting Event for Candidate Engagement report includes a Manage Event Campaigns button for the Manage Event Campaigns for Candidate Engagement task.

You can use recruiting event data fields in text blocks for recruiting campaign messages. Only published recruiting events return a value for fields in messages for the associated campaign.

Example: Include Recruiting Event Name and Recruiting Event Landing Page URL data fields in the campaign message to display the event name and URL in the body of the message.

Job Postings

Setup Considerations: Job Postings

You can use this topic to help make decisions when planning your configuration and use of Job Postings functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Job Postings functionality enables you to advertise open job requisitions on internal and external career sites.

Business Benefits

Workday Job Postings improve hiring efficiency by enabling you to:

- Broaden candidate reach by posting job openings to internal, external, or agency sites.
- Protect confidential job requisitions by restricting access to sensitive postings.
- Attract top talent by allowing you to embed promotional videos about your organization into configurable job posting templates.
- Save time and reduce manual effort by automatically unposting of filled positions.
- Increase job visibility and reach by sharing job postings on social media.

Use Cases

- Post confidential job postings. Example: Share confidential requisitions with select agencies so they can source candidates for sensitive roles without public disclosure.
- Automatically unpost jobs when you've filled all positions on a job requisition. Example: If a requisition has 3 openings and all are filled, Workday unposts the job from all career sites.
- Post jobs to agency career sites. Example: Partner with agencies so their users can submit candidates directly.
- Add a video to promote your organization. Example: Add videos to job posting templates to showcase your culture and attract candidates.
- Sharing Job Postings on Social Media. Example: Post openings on LinkedIn or Facebook to reach a wider audience.

Questions to Consider

Question	Consideration
How do you want to send job posting details to third-party sites?	You can use integrations with external job board services to send job postings to third-party career sites. Example: Use eQuest to send job postings to a job board.
Where do you want to post your available jobs?	You can post your jobs to internal, external, and agency career sites.
Do you want candidates to find translated job postings?	Workday supports multi-language search for translated job postings including the Job Description and the Job Posting Title on the external career site.
How do you want to share confidential job openings?	Workday doesn't display confidential job openings in the search results on external career sites. You can share the link to a confidential job posting directly with candidates. Example: A job posting for a prospective top executive.
What media do you want to add to your job postings?	You can configure your job posting templates to include videos.
What social media websites do you want to enable internal users share your job postings on?	You can configure social media platforms for users to share jobs from a job posting page. To support social media sharing from internal career sites, post a job requisition both externally and internally.

Recommendations

To increase efficiency, Workday recommends that you configure business process steps to:

- Post or unpost jobs when you create, edit, or freeze job requisitions.
- Automatically unpost jobs when you close or fill a job requisition.

When you use the Find Jobs Template for External Career Sites report, we recommend that you ensure the report displays correctly on external career sites by:

- Creating a custom report.
- Modifying only the search facets associated with the report.

Requirements

Before configuring job postings:

- Set up job requisitions for Recruiting.
- Configure the *Update Job Posting* business process to manage your job postings.

Limitations

To update a job posting, you must unpost it, and repost the updated job posting.

Tenant Setup

No impact.

Security

Domain	Description
Internal Careers	Users can access tasks and reports associated with internal careers. Example: Using the Browse Jobs report to view current openings.
Job Postings *Job Postings: External* *Job Postings: Internal*	Users can view job postings posted to internal and external career sites.
Set Up: Job Postings	Users can create and edit job posting templates.
Set Up: Social Sharing	Users can configure social sharing tasks and reports.

Business Processes

Business Process	Consideration
Post Job	You can use the *Post Job* business process to post jobs. Add *Post Jobs* as a subprocess of these business processes: • *Evergreen Requisition* • *Job Requisition*
Update Job Posting	You can use the *Update Job Posting* business process to manage existing job postings. You can add *Update Job Posting* as a subprocess of these business processes: • *Evergreen Requisition Change* • *Close Evergreen Requisition* • *Close Job Requisition* • *Freeze Job Requisition* • *Job Requisition Change*
Close Job Requisition	You can also use the *Automatically Unpost Jobs* step in the *Close Job Requisition* business process, and on subprocesses of the *Job Application* business process. Example: You can configure the business process to unpost a job automatically once you send an offer to a candidate.

Reporting

Report	Description
Browse Jobs	Enables workers to view approved internal job postings on the Workday browser application.
Find Jobs	Enables workers to view approved internal job postings with Workday on: • Android • iPad

Report	Description
	• iPhone You can copy this report to create custom Find Jobs reports for your employees and contingent workers.
Find Jobs for External Career Sites	Enables external candidates to view with a list of published job postings.
Find Jobs Template for External Career Sites	Enables users to create a custom Find Jobs report for an external career site. Workday recommends that you only modify the search facets associated with the report.
Job Requisition Audit	Enables users to view any closed, frozen, or filled job requisitions that have active postings. You can also unpost job postings from this report.

Integrations

You can use integrations to post jobs to third-party sites using:

- Core Connector.
- The *Post Job* web service.
- Report-as-a-Service (RaaS).

You can also use the *Get Job Posting* web service to retrieve active posted jobs, jobs from a specific date range, or from a specific job requisition.

Connections and Touchpoints

Touchpoint	Description
Career Sites	You can post your job postings to external, internal, and agency career sites.
Job Applications	Candidates can apply to jobs from external and internal career sites. Agency users can also submit applications on behalf of a candidate.
Evergreen Requisitions Job Requisitions	You can post jobs for open evergreen or job requisitions.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Job Postings

Prerequisites

Security: These domains in the Recruiting functional area:

- *Internal Careers*
- *Set Up: Job Postings*

Context

Configure Workday so you can post your job openings to external and internal career sites and source candidates.

Steps

1. Configure the *Post Job* and *Update Job Posting* business processes and security policies.

   Note: To unpost jobs from the Job Postings tab of the job requisition profile, users need access to the *Unpost Jobs* initiating action on the *Update Job Posting* business process security policy.

   See:

   - Edit Business Processes.
   - Edit Business Process Security Policies.
2. (Optional) Send a task to My Tasks to post a job when you create, edit, or unfreeze a job requisition.

   Add *Post Job* as a step on these business processes:

   - *Close Evergreen Requisition*
   - *Create Job Requisition*
   - *Evergreen Requisition*
   - *Evergreen Requisition Change*
   - *Job Requisition Change*
   - *Unfreeze Job Requisitions*
3. (Optional) Send a task to My Tasks as a reminder to remove a job posting when you edit, close, or freeze a job requisition.

   Add *Unpost Job* as a step on these business processes:

   - *Close Evergreen Requisition*
   - *Close Job Requisition*
   - *Evergreen Requisition*
   - *Evergreen Requisition Change*
   - *Freeze Job Requisitions*
   - *Job Requisition Change*
4. (Optional) Configure Workday to remove jobs from career sites automatically.

   Add *Automatically Unpost Jobs* as an *Action* step on 1 of these business processes:

   - *Assess Candidate*
   - *Background Check*
   - *Interview*
   - *Offer*
   - *Reference Check*
   - *Screen*

   Workday recommends that you add this step after the *Make Decision* step. When the step is added, a condition rule; *Event is valid for auto unposting?*, also displays.

   You only need to edit the business processes you would hire a candidate from. If you never move a candidate from the *Assessment* stage to the *Ready for Hire* stage, there's no need to edit the *Assess Candidate* business process.

   Security: These domains in the System functional area:

   - *Business Process Administration*
   - *Manage: Business Process Definitions*
5. Create Job Posting Templates on page 416.
6. Create External Career Sites on page 379.

7. Set up an internal career site.

   See Steps: Set Up Internal Recruiting on page 371.
8. Steps: Set Up Profiles and Profile Groups.

   Configure the Job Postings for Job Requisition Composite View profile group. You can add these reports:

   - Current
   - Future
   - Historical
9. Access the Configure Social Sharing Targets task to enable workers to post job links on their social media accounts.

   Enable the applicable country for a specific social media site.

   Security: *Set Up: Social Sharing* domain in the Recruiting functional area.

Related Information

Tasks

Steps: Set Up Recruiting on page 191

Post Jobs on page 418

Reference

Release Center: Job Posting End Date and Time Left to Apply on Job Postings

The Next Level: Capitalizing on Your Career Site

Steps: Set Up Remote Jobs

Prerequisites

Security: *Set Up: Recruiting* in the Recruiting functional area to provide access to these tasks:

- Maintain Job Requisition Remote Types
- View Job Requisition Remote Types

Context

Create custom values that you can use when creating remote job requisitions. You can post these remote jobs to your career sites making it easier for prospects to search, find, and apply to remote opportunities in your organization.

This feature is hidden by default. Use the Configure Optional Fields task to display the Remote Type field.

Steps

1. Access the Maintain Job Requisition Remote Types task and configure Remote Types to display on Job Requisitions and Evergreen Requisitions.

2. Access the Configure Optional Fields task.

   From the By Functional Area prompt add the Remote Type field to these areas appropriate for your use cases:

   - Job Requisition
   - Job Requisition Change
   - Job Requisition Details for Composite View
   - Close Job Requisition
   - Freeze Job Requisition
   - View Job Requisition Detail
   - Evergreen Requisition
   - Evergreen Requisition Change
   - Close Evergreen Requisition
3. (Optional) Add the Remote Type filters to your External Career Site, enabling prospects to filter jobs on your career site.

   Edit the Find Jobs custom report:

   - Under the Advanced tab:
     - Add the Is Remote field to enable it to display as a boolean filter under the Location/ Distance facet on the career site.
     - Add the Remote Type report field under the Advanced tab to display the specific remote type as an additional filter.
   - Under the Search Results tab:
     - Add the Remote Type field to display the specific remote value for each individual job posting preview card and job posting.

Example

Use the Maintain Job Requisition Remote Types task to assign your remote type an internal facing name. You can also assign the same remote type an external facing name, which displays on the career site of your organization.

Next Steps

Use the View Job Requisition Remote Types report to view:

- The Name of the Remote Type.
- If Primary Job Posting Location is required.
- If the Remote Type is Inactive or In Use.

2022R2 What's New Post: Support for Remote Jobs

Create Job Posting Templates

Prerequisites

Security: *Set Up: Job Postings* domain in the Recruiting functional area.

Context

Templates define the look and content of a job posting. Once you create a template, you can assign it to an external or internal career site. Workday enables you to create as many templates as you need, but you can only assign 1 template to a career site.

Steps

1. Access the Create Job Posting Template Content task.
2. Select a sidebar configuration to display next to job details on external career sites.
3. Add rows for template content using the Section Content grid.

   If your job posting requires compensation information, consider adding these report fields:

Report Field	Description
• *Job Profile Compensation Grades* • *Job Profile Minimum - Maximum Compensation Pay Range*	These fields pull compensation data from the primary job profile and any additional job profiles. If you use these fields, ensure the compensation grade and applicable compensation grade profiles are added to a job requisition's primary and additional job profiles.
Minimum - Maximum Requisition Compensation Pay Range	This field displays the pay range of job requisitions using requisition compensation. If you use this field, you must have the Request Requisition Compensation step in your Job Requisition business process.

4. (Optional) Upload a logo to display next to the job title on the posting. This logo can be different than your external career site logo.
5. (Optional) Upload a video or select a video from Drive.

   Note: You must have a valid Workday Media Cloud contract before you can upload videos. See: Workday Community: Media Cloud.
6. Access the Create Job Posting Template task.

   Use condition rules to associate content with job posting templates.

   If no rules evaluate as true, the job posting will use the default template content.

Next Steps

To assign the job posting template to your:

- External career site, access the Edit External Career Site task and select the Job Posting Template prompt under Job Details.
- Internal career site, access the Edit Internal Career Site task and select the Job Posting Template prompt.
- Internal career site for nonworkers, access the Edit Internal Career Site for Non-Workers task and select the Job Posting Template prompt.

Related Information

2023R1 What's New Post: Salary and Compensation Grade Ranges for Job Postings

Post Jobs

Prerequisites

- Set up job requisitions for Recruiting. See Steps: Set Up Job Requisitions for Recruiting.
- Set up job postings. See Steps: Set Up Job Postings.
- Configure these security domains in the Recruiting functional area:
  - *Job Postings: External*
  - *Job Postings: Internal*
  - *Set Up: Social Sharing*

Context

Post jobs to career sites to source candidates for your job openings. Candidates can apply to job postings directly. Recruiters can also create job applications on behalf of candidates.

You can post jobs to:

- External career sites.
- Recruiting agencies.
- Your internal career site.

You can only post jobs for open requisitions. You can't post a job when the requisition is assigned to someone and has a pending My Tasks item. If you schedule a job posting, Workday uses the time zone of the primary location defined on the job requisition.

Steps

1. Access the Post Job task or click Post Job on the Job Posting profile group of the job requisition profile.
2. As you complete the task, consider:

Option	Description
Job Posting Site	Select 1 or more job posting sites.
Preview Job Posting	Workday displays a preview of the job posting based on the job posting template.
Primary Posting	Workday uses the Primary Posting check box to determine the site to use as the link to the job posting for: • Notifications sent by the Refer a Candidate task. • Social share links on the internal career site job posting. You can only select 1 primary posting site for a job requisition.
Forecasted Agency Payout	When you post a job to an agency, this field populates with the percentage or value set in the Payout Terms section on the Create or Edit Recruiting Agency tasks.

Result

The Job Postings grid on the job requisition profile displays all internal, external, and agency postings for the job requisition.

Next Steps

You can also post jobs to third party websites using:

- The Core Connector: Job Postings integration.
- The *Post Job* web service.
- A Report-as-a-Service (RaaS) integration.

To manage job postings, use these tasks:

- Update Job Posting.
- Unpost Job. You can also unpost multiple job postings at once from the Job Postings profile group on the job requisition. You can't remove job postings assigned to a user who has a pending My Tasks item.

You can use the *Get Job Posting* web service to retrieve all active posted jobs, jobs posted within a specific date range, or a specific job requisition.

To change recruiting agency payout information, edit a job application and update the Recruiting Agency Payout.

Related Information
Tasks

Steps: Set Up Job Requisitions for Recruiting on page 220

Steps: Set Up Job Postings on page 413

Steps: Set Up Job Applications on page 445

Concept: Automatically Unpost Jobs

When you move a candidate from one of the stages where you added *Automatically Unpost Jobs* as a step, Workday uses the *Event is valid for auto unposting?* condition rule to determine whether to perform the step based on the outcome of the decision step.

If you decline the candidate at the decision step, Workday skips the *Automatically Unpost Jobs* step and marks it as *Not Required* in the business process history. Otherwise, Workday completes the step and moves to the next step of the *Job Application* business process.

The *Automatically Unpost Jobs* step evaluates the positions left on the job requisition.

- If no positions remain, Workday removes all related job postings on all career sites, including current and future dated listings.
- If 1 or more positions remain, the job postings stay posted.

You can manually unpost jobs when you've configured the *Automatically Unpost Jobs*. Workday skips the step if an *Update Job Posting* business process is already in progress.

If you rescind the *Job Application* business process, Workday rescinds the *Automatically Unpost Jobs* step and reposts all unposted jobs.

Related Information
Tasks

Steps: Set Up Job Postings on page 413

Reference

The Next Level: Automatic Decline and Unposting Actions

Concept: Job Posting End Date and Time Left to Apply

Workday displays the Job Posting End Date and the Time Left to Apply on all internal, external, and agency sites job postings.

Displaying the Job Posting End Date and Time Left to Apply fields enables potential candidates to track application deadlines, ensuring they don't miss job opportunities. This also ensures regulatory compliancy in jurisdictions where job posting transparency is a legal requirement.

Note: If you've opted in to the Workday 32 - Time Zones feature, then Workday uses the user's local time zone.

Job Posting End Date

The value of the Job Posting End Date field will display on all internal, external, and agency site job postings. The job posting will end and Workday will unpost the job after 23:59 on the previous day.

Workday follows this time zone logic for the Job Posting Start Date and Job Posting End Date:

- If the job requisition has a Primary Location, it uses the time zone of the Primary Location.
- If the job requisition has no Primary Location, it uses the default time zone on your tenant.
- If the job requisition has no Primary Location, and there's no default time zone on your tenant, it uses Pacific Standard Time (PST).

Time Left to Apply

The Time Left to Apply is the time difference between the Job Posting End Date and the current time in the job requisition location.

Example: If a job posting has the Job Posting End Date as November 2, 2024 and the current datetime is November 1, 2024 at 23:00, the Time Left to Apply field will display as 1 Hour Left to Apply. Workday will remove the job posting on September 2, 2023, at 00:00.

Job Cards in Search for Jobs

To display the Job Posting End Date and Time Left To Apply on Job Cards in Search for Jobs on the external career site, you can edit the Find Jobs Report and add 1 or both of these report fields to the search results:

- Job Posting End Date as Text
- Time Left to Apply

Job Posting End Date and Time Left to Apply Opt-Out

You can opt out of displaying the Job Posting End Date and Time Left to Apply on your Job Postings.

Access the Edit Tenant Setup - Recruiting task and select the Hide End Date and Time Left to Apply on Job Postings checkbox.

Related Information
Tasks
Post Jobs on page 418

Concept: Google Jobs

Workday enables you to draw external candidates to your job postings by ensuring that your job postings are compliant with Google for Jobs search.

When you post a job, the data structure for the posting includes:

- Date Posted: The start date on the job posting.
- Employment Type: The time type on the position or hiring restrictions. If time type is *Full time* or *Part time*, then Workday uses those values. If time type is anything else, Workday uses *Other* as the value.
- Hiring Organization: The company on the evergreen or job requisition.
- Identifier: The requisition Id.

- Job Description: The job description associated with the job posting.
- Job Location: The city and country from the primary location on the evergreen or job requisition. Exception is when evergreen requisition doesn't have a location.
- Job Title: The job title from the evergreen or job requisition.

Recruiting Agencies

Setup Considerations: Recruiting Agencies

You can use this topic to help make decisions when planning your configuration and use of recruiting agencies, it explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Recruiting agency management enables you to work with recruiting agencies who source and submit candidates for your open job requisitions.

Business Benefits

- Create agencies and establish hierarchies between them.
- Share job postings with specific agencies, including confidential postings.
- Create Workday accounts for agency users and enable them to submit candidates to job postings.
- Send questionnaires to agency users.
- Track agency payouts for successful candidates.

Use Cases

- Manage multiple recruiting agencies that each specialize in 1 type of vacancy by creating different agency types.
- Manage multiple types of vacancies that each have different payouts.
- Use Candidate Home accounts to collect further candidate information from agency candidates.

Questions to Consider

Question	Considerations
How do you want to track recruiting agency candidates?	You can create any number of custom recruiting sources on the Maintain Recruiting Sources task. Decide whether you want to create: • Individual sources for each recruiting agency, which enables more granular reporting for agency candidates, but requires additional configuration and maintenance. • A single source for all recruiting agencies.

Question	Considerations
Do you want to organize agencies by their type?	You can create recruiting agency types on the Maintain Recruiting Agency Types task.
Do you want to restrict agency job postings to specific locations?	When you create and edit recruiting agencies, you can limit job postings on the agency career site to specific locations.
Do you want recruiters to review agency candidates before they enter the recruiting workflow?	Add a *Review* step on the *Submit Agency Candidate* business process.
Do you use recruiting agencies to fill sensitive positions?	You can post confidential job requisitions to recruiting agencies so they can source confidential candidates.

Recommendations

Workday recommends that you configure external label overrides for the *Job Application* business process type on the Configure Dynamic Action Labels task. These labels replace the internal names of job application stages on the:

- Agency Job Applications report for recruiting agency users.
- Candidate Home for external candidates.

To ask agency candidates to create a Candidate Home account, configure a custom notification on one of the subprocesses of the *Job Application* business process.

Workday also recommends that you configure regions when setting up recruiting agencies. Configuring regions improve search results for jobs posted on the career site.

Requirements

To create Workday accounts for agency users, they must have a valid Primary Work email address.

Limitations

Workday doesn't create invoices or process automatic payments to recruiting agencies for successful agency candidates. The agency fees that you specify are for informational purposes only.

Workday doesn't enable you to:

- Send ad hoc messages to agency users. You can configure business process notifications to notify agency users of important events, such as newly posted jobs.
- Mass distribute tasks and documents to agency users within Workday. However, you can store document attachments, such as terms and conditions, on the agency profile.

Tenant Setup

When creating Workday accounts for agency users you can select tenant-wide configurations on the Edit Tenant Setup - Security task to determine whether to:

- Enable agency users to receive Workday generated emails, such as password reset confirmation. For security reasons, select the Send to work email only option.
- Email a temporary password to agency users when a Workday account is created.
- Enable agency users to reset their password at the Workday sign in page.

Note: These settings aren't limited to agency users. They impact all users with Workday accounts.

Security

Domain	Considerations
Set Up: Recruiting Agency in these functional areas: • Recruiting • Talent Pipeline	Users with Modify permission on this domain can create and edit: • Recruiting agencies. • Agency users. They can also view agency performance statistics.
Manage: Recruiting Agency in the Recruiting functional area	Users secured to this domain can: • View recruiting agencies. • View, create, and edit agency users.
Recruiting Agency Careers in the Recruiting functional area	Agency users secured to this domain can: • Access the agency career site (Find Agency Jobs report). • View their own candidates. We recommend adding the All Recruiting Agency Users security group to this domain policy.
Recruiting Agency Careers Self-Service in the Recruiting functional area	Users secured to this domain can: • View agency candidates and their job applications on the Find Agency Jobs report. • View job posting details. • Set personal candidate reminders. We recommend adding the Recruiting Agency User as Self group to this security policy.
Self-Service: Recruiting Agency User in the Recruiting functional area	This domain provides recruiting agency users with access to their own information.
Worklet: Recruiting in the Recruiting functional area	We recommend adding the Recruiting Agency User as Self group to this security policy if you want to use the Recruiting worklet for agency users.
Confidential Job Requisitions in the Recruiting functional area	Agency users secured to this domain can: • View confidential jobs posted to their agency career site. • Submit confidential candidates to these job postings.

Business Processes

Business Process	Considerations
Create Workday Account business process in the System functional area	Users with access to this business process security policy can create new Workday accounts. Add a role that can create Workday accounts for new agency users.
Submit Recruiting Agency Candidate business process in the Recruiting functional area	Add the Recruiting Agency User as Self security group to the *Submit Candidate* initiating action.

Business Process	Considerations
	Consider adding a *Review Recruiting Agency Candidate Duplicates* step on this business process. This step notifies the assigned security group when: • The candidate is a potential duplicate of another candidate. • More than 1 agency potentially owns this candidate.

Reporting

Reports	Considerations
Agency Job Applications report	Agency users can access this report to view a list of approved candidates submitted by their agency.
Agency Performance Summary report	Recruiting administrators can access this report to view and compare agency performance metrics.
Find Agency Jobs report	Agency users can access this report to view a list of approved agency job postings and submit candidates.
Recruiting Agency Payouts report	Recruiting administrators can access this report to view and compare agency fees, forecasted payouts, and actual payouts for hired agency candidates.
Source Effectiveness report	Recruiters can access this report to view and compare recruiting source effectiveness, including agency sources.
Recruiting worklet	You can add these tasks and reports to the Recruiting worklet and enable them for agency users: • Find Agency Jobs task. • View Recruiting Agency report. • View Recruiting Agency User report.

Integrations

You can perform bulk data operations using these Workday-delivered web services:

Web Services	Considerations
• *Put Recruiting Agency* • *Put Recruiting Agency Additional Data* • *Put Recruiting Agency User*	Enables you to mass upload recruiting agency and agency user information.
• *Get Recruiting Agencies* • *Get Recruiting Agency Additional Data* • *Get Recruiting Agency Users*	Enables you to mass retrieve recruiting agency and agency user information.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Concept: Segmented Security for Recruiting Questionnaires on page 459

Tasks

Steps: Enable Self-Management for Recruiting Agencies on page 427

Steps: Set Up Notifications for Candidate Home Tasks on page 376

Reference

Reference: Edit Tenant Setup - Security

Workday Community: Workday Recruiter Experience for End Users

Steps: Set Up Recruiting Agencies and Agency Users

Prerequisites

Review setup considerations for recruiting agencies.

Context

You can configure Workday to:

- Manage your relationship with third-party recruiting agencies.
- Enable recruiting agency users to submit candidates to job postings.
- Enable recruiting agencies to support confidential job postings and enable agency users to submit candidates to these job postings.

Use these Workday-delivered security groups to configure access for recruiting agency users:

- All Recruiting Agency Users
- Recruiting Agency User as Self

The *Set Up: Recruiting Agency* domain enables users with Modify permission to create recruiting agencies. You can also create or configure a Recruiting Agency Administrator role who can create and manage agency users.

Steps

1. Edit Domain Security Policies.

   Configure security for these domains:

   - *Confidential Job Requisitions*
   - *Manage: Recruiting Agency*
   - *Recruiting Agency Careers*
   - *Recruiting Agency Careers Self-Service*
   - *Self-Service: Recruiting Agency User*
   - *Set Up: Recruiting Agency*
   - *Worklet: Recruiting*

2. Edit Business Processes.

   Configure the *Submit Recruiting Agency Candidate* business process. Consider these steps:

   - *Complete Questionnaire*: The candidates' answers display on their profiles. To send the notification to the recruiting agent who referred a candidate, use the *Initiator* security group.
   - *Review Recruiting Agency Candidate Duplicates*: Workday sends the assigned security group a task in My Tasks when:
     - The candidate is a potential duplicate of another candidate submitted by the recruiting agency.
     - There's a potential ownership conflict for this candidate.
   - *Candidate Review of Agency Submission*: Sends the submission to the candidate so they can review and edit information that an agency has submitted on their behalf. Workday recommends you add this step after any internal review steps you've configured.
3. Edit Business Process Security Policies.

   Configure security for the *Submit Recruiting Agency Candidate* business process.
4. Create Segment-Based Security Groups.

   Configure the segment-based security groups that have access to the *Candidate Data: Recruiting Agency Questionnaires* security segment.
5. (Optional) Create Custom Notifications.

   You can create custom notifications on the:

   - *Post Job* business process to notify recruiting agency users when you post a job to their agency career site.
   - *Submit Recruiting Agency Candidate* business process to notify candidates that they have a submission to review. You can configure separate notifications for candidates with existing home accounts, and candidates with no home account.
6. Maintain Recruiting Sources on page 272.
7. Create Job Posting Templates on page 416.
8. Create Recruiting Agencies and Agency Users on page 427.
9. Create Workday accounts for recruiting agency users.

   From an agency user's related actions menu, select Security Profile > Create Workday Account.

   Security: Configure the *Create Workday Account* business process security policy in the System functional area.
10. (Optional) Set Up Recruiting Agencies for Confidential Job Postings and Candidates on page 428.
11. Set Up Worklets.

    Add these reports to the Recruiting worklet:

    - Find Agency Jobs
    - View Recruiting Agency
    - View Recruiting Agency User
12. Identify Duplicate Recruiting Agency Candidates on page 429.

    Prevent recruiting agencies from submitting duplicate candidates.

Next Steps

- Create recruiting agency types on the Maintain Recruiting Agency Types task.
- Post jobs to the recruiting agency career site.

Concepts

Concept: Recruiting Agency Management on page 429

Tasks

Steps: Set Up Recruiting on page 191
Edit Domain Security Policies
Set Up Recruiting Agencies for Confidential Job Postings and Candidates on page 428

Steps: Enable Self-Management for Recruiting Agencies

Context

You can enable the Recruiting Agency Administrator to create recruiting agency users and manage their information.

Steps

1. Set Up Assignable Roles.

   Create a Recruiting Agency Administrator role and enable it for recruiting agencies on the Enabled for prompt.
2. Create Role-Based Security Groups

   Create the Recruiting Agency Administrator role-based security group and associate it with the Recruiting Agency Administrator role on the Assignable Role prompt.
3. Maintain Security Group Permissions.

   Enable View and Modify permission on the *Manage: Recruiting Agency* domain for the *Recruiting Agency Administrator* security group.
4. Activate Pending Security Policy Changes.
5. Assign the Recruiting Agency Administrator role to an active recruiting agency user.

   See Concept: Assign Roles.

Result

The Recruiting Agency Administrator role now has access to the:

- Create Recruiting Agency User task.
- Edit Recruiting Agency User task.
- View Recruiting Agency report.
- View Recruiting Agency User report.

Create Recruiting Agencies and Agency Users

Prerequisites

- Create recruiting sources for agency-submitted candidates.
- Security: Configure these domains in the Recruiting functional area:
  - *Set Up: Recruiting Agency*
  - *Manage: Recruiting Agency*

Context

You can create recruiting agencies, establish hierarchies between them, and create recruiting agency users. You can assign a user to more than 1 agency.

Each agency has its own internal career site where agency users can submit candidates for job postings.

Steps

1. Access the Create Recruiting Agency task.

2. On the Career Site Configuration tab, consider:

Option	Description
Ownership Period (Months)	The ownership period begins once the candidate is in the Review stage of the *Job Application* business process. More than 1 recruiting agency can own a candidate.
Linked External Career Site	Enables Workday to route agency candidates to the external career site, where they can review and complete their application.
Allow Confidential Job Postings	Enables you to post confidential job requisitions to this recruiting agency.
Restrict to Locations	Limit job postings only to job requisitions with this location as the primary location.
Terms and Conditions	This text displays before a recruiting agency user submits a candidate.
Require e-signature	Require agency users to acknowledge they read the terms and conditions before they submit a candidate.

3. On the Payout Terms tab, select a Fee Type.

   Workday calculates percentage fees based on the candidate's total compensation. The payment options you select are for informational purposes only. Workday doesn't generate invoices or make automatic payments to recruiting agencies based on these settings.
4. On the Agency Users tab of the confirmation page that displays once you finish creating the agency, click Create Agency User.

   If you want to create a Workday account for an agency user, they must have a Primary Work email address.

Next Steps

Workday provides a number of standard reports to help you track and manage recruiting agencies. For a complete list with report descriptions, access Workday Standard Reports and select the *Recruiting* category.

Set Up Recruiting Agencies for Confidential Job Postings and Candidates

Prerequisites

- Set up agencies and agency users.
- Security: These domains in the Recruiting functional area:
  - *Confidential Job Requisitions*
  - *Set Up: Recruiting Agency*
- Security: *Set Up: Assignable Roles* in the Organizations and Roles functional area.

Context

You can configure recruiting agencies to support confidential job postings and enable agency users to submit candidates to these job postings.

Steps

1. Access the Edit Recruiting Agency task.

2. On the Career Site Configuration tab, select the Allow Confidential Job Postings check box.
3. Create an assignable role for recruiting agencies on the Maintain Assignable Roles task. See Set Up Assignable Roles.
4. Add agency users to the *Confidential Job Requisitions* domain.

Result

You can now post confidential job requisitions to agency career sites and agency users can submit candidates to these job postings.

Next Steps

Update the agency job posting template to include job postings from confidential requisitions.

Identify Duplicate Recruiting Agency Candidates

Prerequisites

- Configure the *Submit Recruiting Agency Candidate* business process and security policy in the Recruiting functional area.
- Security: *Candidate Merge* domain in the Recruiting functional area.

Context

You can configure the *Submit Recruiting Agency Candidate* business process to prevent recruiting agencies from submitting duplicate candidates. Workday flags candidates with matching first and last names as a duplicate if at least one of these fields is also an exact match:

- Any social network username or profile.
- Email.
- Phone.

Steps

1. Access the *Submit Recruiting Agency Candidate* business process definition.
2. Add a new condition rule on the initiation step.

   As you complete the task, consider:

Option	Description
Source External Field or Condition Rule	Select *Exact Duplicate Match*.
Relational Operator	Select *equal to*.
Comparison Type	Select *Value specified in this filter*.
Comparison Value	Select the check box.

Related Information

Tasks

Create Business Process Condition Rules

Concept: Recruiting Agency Management

Workday enables you to manage your relationship with third-party recruiting agencies. You can create recruiting agencies and agency users, or you can assign the Recruiting Agency Administrator role to manage agencies and their user information.

Each recruiting agency has its own internal career site based on the Find Agency Jobs report. You can post jobs to the agency career site and create an agency-specific job posting template to control which information displays.

You can configure recruiting agencies to support confidential job postings and enable agency users to submit candidates to these job postings. To view confidential agency job postings, users must:

- Belong to the agency that the confidential job requisition was posted to.
- Have permission to view the confidential job requisition.

Recruiting agents with a Workday account can:

- Receive notifications about new job postings on the agency career site.
- Submit candidates to job postings using the agency career site or the *Submit Recruiting Agency Candidate* web service.

Candidates submitted by an agency user can create a Candidate Home account on your external career sites, where they can complete tasks and answer questionnaires.

Tasks
Set Up Recruiting Agencies for Confidential Job Postings and Candidates on page 428

Example: Upload Multiple Workday Accounts for Recruiting Agency Users

Context

As the recruiting administrator for Global Modern Services, you want to upload 2 Workday accounts simultaneously for your newest external recruiting agency users, Kim Jin, and Marie Stanley.

Steps

1. Access the Create Recruiting Agency User task.

   Create agency users for Kim and Marie.
2. Access the View Reference IDs report.
   a) On the Business Object prompt, select *Recruiting Agency User*.
   b) Copy or export Kim and Marie's Recruiting Agency User IDs from the Reference ID Value column.
3. Access the Create EIB task.
   a) Name your EIB *Add Workday Account for Agency Users*.
   b) Select Inbound, and click OK.
   c) In the Get Data section, select *Add Workday Account (Web Service)* on the Web Service Operation prompt.
   d) Click Next and OK to advance to the View Integration System page.
   e) From the related actions menu of the integration system, select Template Model > Generate Spreadsheet Template.
   f) Select the Confirm check box, and click Submit.
4. Download the spreadsheet and replace the column header Academic_Affiliate_ID with Recruiting_Agency_User_ID.
5. Enter the required information for each agency user.

Option	Description
Spreadsheet Key	Enter a unique value for each row.
Recruiting_Agency_User_ID	The Reference ID value from the View Reference IDs report

6. Access the Launch/Schedule Integration task.
    a) In the Integration field, enter *Add Workday Account for Agency Users*.
    b) In the (Attachment) Add Workday Account (Web Service) row of the Integration Criteria grid, select:
        - Specify Value on the Value Type prompt.
        - Create Integration Attachment on the Value prompt.
    c) Select and upload your spreadsheet, and click OK.
    d) Click OK to run the integration.

Result

Access the View Recruiting Agency report to confirm that Kim Jin and Marie Stanley now have active Workday accounts.

Example: Enable Automatic Notifications for Recruiting Agency Users

This example describes how to configure Workday to send automatic email notifications when you:

- Create a Workday account for a recruiting agency user.
- Post a job to the recruiting agency career website.

Context

As the recruiting administrator for Global Modern Services (GMS), you want to create a Workday account for Alex, the newest hire at an external recruiting agency. You also want to send her a custom email notification with her sign-in details.

You also want to notify all users of that recruiting agency whenever you post a job to their career site.

Prerequisites

Create the GMS Recruiting: EMEA recruiting agency in Workday.

Steps

1. Access the Edit Tenant Setup - Notifications task.
    a) In the Default Email Settings section, from the Default SMTP Configuration prompt, select *Workday SMPT: Default SMTP Configuration*.
    b) In the Notification Delivery Settings section:
        - Select the Business Processes tab.
        - On the Custom Business Process Notifications row, select the Override Parent Notification Settings check box.
        - From the Rule prompt, select a routing rule that enables *Email* as a channel and *Immediately* as the email channel frequency.
2. From the related actions menu of the *Create Workday Account* business process definition, select Business Process > Add Notification.
    a) Enter an Effective Date.
    b) Select *Completed* from the Trigger on Status prompt.
    c) Select *Recruiting Agency User as Self* from the Group(s) prompt.
    d) In the Message Content section, add a subject and body for the notification email:
        - Subject: New Workday Account.
        - Body: This is an automatic notification that a Workday account has been created for you. You'll receive separate emails containing your username and password.

3. Access the Create Recruiting Agency User task.
    a) In the Recruiting Agency field, select *GMS Recruiting - EMEA* for the agency user's organization.
    b) In the Legal Name Information section, enter:
        - First Name: Alex.
        - Last Name: Morgan.
    c) In the Contact Information section, add a new Email and enter:
        - Email Address: alex.morgan@external-agency.com
        - Type: Work
        - Primary Work: Workday automatically selects this check box
4. From the agency user's related actions menu, select Security Profile > Create Workday Account.
    a) In the User Name field, enter alex.morgan.
    b) Select the Generate Random Password check box.
5. Access the Create Calculated Field task.

    Create a calculated field that returns all agency users that work for the agency.
    a) Enter:
        - Field Name: Agency Users for Recruiting Agency
        - Business Object: Post Job Event
        - Function: Aggregate Related Instances
    b) Click OK.
    c) On the Calculation tab, enter:
        - Source Field: Job Postings - Proposed
    d) Fields to Aggregate: Agency User Names
    e) Click Done.
6. From the related actions menu of the *Post Job* business process definition, select Business Process > Add Notification.
    a) Select an Effective Date.
    b) Select *Completed* from the Trigger on Status prompt.
    c) From the Recipients prompt, select *Agency Users for Recruiting Agency*.
    d) In the Message Content section, add a subject and body for the notification email:
        - Subject: Job Posting
        - Body: This is an automatic notification that a new job was posted to your external career site.

Result

When you create her account, Alex receives the custom email notification you set up, as well as 2 system-generated emails containing:

- Their user name.
- The random password.

Agency users from a specific agency receive an automatic email notification every time a job is posted to their agency career site.

Referrals and Endorsements

Setup Considerations: Referrals and Endorsements

You can use this topic to help make decisions when planning your configuration and use of referrals and endorsements. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Referrals enable workers to submit candidates to open job requisitions. Candidates can also identify a referring worker when they apply to a job posting. The worker they've identified can then optionally endorse the candidate's job application. You can also setup referral payment plans to award workers for referring or endorsing successful candidates.

Business Benefits

Referrals and endorsements enable you to:

- Reach qualified candidates who current workers already know and support.
- Maintain accurate records for reporting and compensation purposes.
- Process a one-time referral bonus payment to a worker who refers a hired candidate.
- Report on referred candidates who don't have job applications.

Use Cases

- Encourage workers to recommend qualified candidates by offering rewards for successful referrals and endorsements.
- Award points to your workers for sharing a job posting on social media.
- Rank your workers by their referral activity and process rule-based payments to the top referrers.

Questions to Consider

Question	Considerations
Do you want to differentiate between referral sources?	You can access the Maintain Recruiting Sources task to manage your sources and source types for referrals.
Do you want to award referral bonus payments to employees for endorsing candidates?	You can configure eligibility rules to include, exclude, or differentiate between endorsements and regular referrals. Use recruiting sources that map to these Workday-delivered sources: • Self Identified • Endorsement Denied

Question	Considerations
Do you want to enable referrals from social media channels?	You can use the Configure Social Sharing Targets task to enable the social media channels where workers can share job postings. You can enable each social media channel to be available only for specific countries.
Do you want to use referral payments?	Referral payment plans are optional. You can prevent the Referral Payment Plan prompt from displaying on job and evergreen requisitions.
How do you want to track how workers know their referral candidate?	Workday enables you to track the type of relationship between a worker and the candidate they referred. You can: • Define any number of referral relationships. • Require that a worker specifies a referral relationship.
Do you want to enable referrals to job areas as well as specific requisitions?	When you enable job areas on the Edit Tenant Setup - Recruiting task, workers can refer candidates to a job area, in addition to specific job requisitions.

Recommendations

Feature	Recommendations
Recruiting sources	Map your recruiting sources for employee referrals and self-identified referrals these Workday-delivered sources: • Employee Referral for referrals submitted by workers. • Self Identified for candidates who identify a worker to endorse them when they apply to a job.
Refer a Candidate business process	Workday recommends that you: • Use the default definition and don't add additional steps. • Set up a custom notification that triggers on completion to let the candidate know that someone has referred them. • Mark the Email field required for all users who create referrals. Marking this field will ensure that the referred candidates receive all email communications.

Requirements

Feature	Requirements
Referral ownership	Enable referral ownership in your tenant.

Feature	Requirements
Endorsements	Create recruiting sources mapped to these Workday-delivered sources: • Endorsement Denied • Self Identified Note: Configure an Endorsement Denied recruiting source to ensure that Workday removes the referral relationship between the worker and the candidate. This will ensure that payments to workers who declined to endorse the candidate won't be processed.
Referral payment plans.	Configure: • At least 1 amount-based one-time payment plan in the Referral category. • A *Request One-Time Payment for Referral by* Action step on the *Hire* business process.
Referral business processes	Configure these business process definitions: • *Endorse Candidate* • *One-Time Payment for Referral* • *Refer a Candidate*

Limitations

If you use referral payment plans, you can't split referral payments to a worker across multiple installments.

Tenant Setup

You can configure referral-related parameters on the Edit Tenant Setup - Recruiting task. You can specify 1 of these referral ownership levels:

- Candidate-level ownership, which enables you to see the worker who owns the prospect or candidate across all of their job applications.
- Job application-level ownership, which enables more granular referral rewards. Consider how you want ownership to work when 2 or more workers refer the same candidate to different job requisitions.

You can also specify an optional Duplicate Referrals Policy to prevent employee referrals in 1 of these situations:

- If the candidate already applied for the job requisition.
- If there's a duplicate prospect for the same job requisition or job area.
- If the person already exists anywhere in Workday.
- If the candidate has a duplicate referral with an active owner.

When you configure Candidate Level ownership and your Duplicates Referral Policy is set to Prevent referral if the candidate has a duplicate referral with an active owner, Workday:

- Prevents the referral from being created if a duplicate candidate exists and the candidate has an active candidate owner.
- Enables the creation of the referral if a duplicate candidate exists but the candidate owner has expired.

These tenant settings also impact referrals:

- Enable Recruiting Job Areas: Enables workers to submit a referral when no job openings match the candidate's skills.
- Enable Recruiting Referral Levels: Enables you to configure and track the relationship between a worker and the candidates they refer.

Security

Security	Considerations
Candidate Data: Employee Referrals domain in the Recruiting functional area	Enables you to view and modify information for referral ownership, referrals, and endorsements.
Employee Referrals domain in the Recruiting functional area	Enables you to refer candidates and view their referral activity when you add the All Employees security group to this domain.
Set Up: Social Sharing domain in the System functional area	Enables you to configure social sharing tasks and reports.
Social Share domain in the Recruiting functional area	Enables workers to share job postings on social media when you add the All Employees security group to this domain.
Refer a Candidate business process security policy	Configure security for these initiating actions: • Refer a Candidate • Refer a Candidate from Internal Career • Refer a Candidate (Web Service). Enable workers, contingent workers, and pre-hires to refer candidates by selecting one or more of these employee security groups: • Employee as Self • Contingent Worker as Self • Pre-Employee as Self • Pre-Contingent Worker as Self
One-Time Payment for Referral business process security policy	Enable one-time payments for referrals by configuring the *Request One-Time Payment for Referral by* initiating action.

Business Processes

Business Process	Considerations
Endorse Candidate	To ask a nominated worker to endorse a candidate's job application, you can add a *Send Endorsement Request* Action step on any subprocess of the *Job Application* business process.
One-Time Payment for Referral	You can enable referral payments by adding a *Request One-Time Payment for Referral by* Action step on the *Hire* business process, after the completion step. Workday doesn't automatically cancel future dated One-Time Payments to terminated workers. We recommend adding a notification on the

Business Process	Considerations
	Termination business process to remind the appropriate role to rescind any unprocessed payments to the terminated worker. If the referred worker gets terminated before the One-Time Payment is due, Workday removes all future dated One-Time Payments to the referring worker.
Refer a Candidate	Workday only recognizes prospects that you create using the *Refer a Candidate* business process as referrals once the business process event is complete.

Reporting

Workday provides reports that offer insights into the referral activity of your company. For a list, access the Workday Standard Reports report and select the *Recruiting* category.

Integrations

You can use the *Refer a Candidate* web service to:

- Refer a candidate to multiple job requisitions and job areas.
- Build an inbound EIB integration to upload referrals in bulk.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Workday ensures that the referrals policy that you configure on the Edit Tenant Setup – Recruiting task persists when you opt in to the Duplicate Management Framework. The framework identifies duplicates based on your configured duplicate referrals policy and match rules. Workday flags any potential duplicates for referrals when you use these tasks:

- Create a Referral
- Refer a Candidate

Related Information

Tasks

Maintain Recruiting Sources on page 272

Invite Referrals to Apply on page 443

Reference

Reference: Edit Tenant Setup - Recruiting

Steps: Set Up Referrals

Context

Setting up referrals enables workers to:

- Refer candidates to your company.
- Invite candidates to apply to open positions.

Workday supports these referral types:

Type	Description
Direct Referral	Referrals created using the: • Create a Referral task, which enables workers to provide information about candidates like their contact details, and their relationship to them. • Refer a Candidate task, which enables workers to refer candidates for specific job requisitions or to a manager. • *Refer a Candidate* web service, which enables workers to refer candidates for specific job requisitions or to a manager using a web service.
Referral Application	An application where a worker in your organization is the referring worker.
Referral Hired	A successful hire from an application where a worker in your organization is the referring worker.
Social Media Referral	Referrals who apply using links that workers have posted on social media.
Spotlight Job	When a job requisition flags a position as a Spotlight Job.
Self-Identified Referral (Endorsement)	Where candidates, during the job application process, identify workers they know in your organization.

Steps

1. Edit Domain Security Policies.

   Configure the security policies for these domains in the Recruiting functional area:

   - *Candidate Data: Employee Referrals*
   - *Candidate Data: Referral Candidate Ownership*
   - *Employee Referrals*
   - *Social Share*
2. Access the Edit Tenant Setup - Recruiting task.

   Configure the:

   - Referral ownership type and period.
   - Duplicate referrals policy for employee referrals.

   See Reference: Edit Tenant Setup - Recruiting.
3. Access the Maintain Referral Relationships task.

   Configure referral relationships to identify the type of connection between a candidate and their referring worker.

   Security: *Set Up: Recruiting* domain in the Recruiting functional area.
4. Maintain Recruiting Sources on page 272.

   You can map only 1 Workday-delivered recruiting source as a referral source.

5. Configure these business process definitions:
   - *One-Time Payment for Referral*
   - *Refer a Candidate*

   See Steps: Configure Business Process Definitions.
6. Edit Business Process Security Policies.

   Configure these business process security policies:
   - *One-Time Payment for Referral*
   - *Refer a Candidate*
7. (Optional) Create Custom Notifications.

   Set up email notifications to personal or work email addresses.

   You can override the email template. If you use Notification Designer, you can create a template and enable it for the *Custom Business Process* notification category. You can use the notification template to send notifications when using the *Refer a Candidate* business process.
8. (Optional) Set up referral questionnaires.

   Add *Allow Questionnaire* as a step on the *Refer a Candidate* business process to enable recruiters to ask referring workers questions about their candidate.
9. (Optional) Access the Maintain Referral Activity Points task.

   Configure the number of points that Workday assigns to workers for completing set stages of the recruiting and referral processes.

   Security: *Set Up: Recruiting* domain in the Recruiting functional area.
10. (Optional) Set up candidate endorsements.

    Set up endorsements to enable candidates to enter the name or email of a referring worker when they apply to a job posting.

    See Steps: Set Up Endorsements on page 440.
11. (Optional) Hide or Require Optional Fields for Referrals on page 443.
12. (Optional) Access the Edit Referral Candidate Owner task.

    Update these details for an existing referral candidate:
    - Referral candidate ownership.
    - Ownership expiry date.

Result

Workday recognizes prospects that you create using the *Refer a Candidate* business process as referrals once the business process event is complete.

You can only merge or unmerge records when you’ve completed all associated referral events.

When you configure candidate-level ownership and view the candidate profile of a candidate referred using the Refer a Candidate task, Workday displays these updated fields:

- Candidate Owner
- Ownership Expiry Date

When you configure Job Application Level ownership, the Referral Details tab on the candidate profile displays these fields:

- Current Job Application Owner
- Ownership Start Date
- Ownership Expiry Date

When you don't configure any ownership level, the Referral Details tab displays the Current Job Application Owner.

Next Steps

Configure Workday to process a payment to the referring worker when their candidate gets hired.

Access the:

- Referral Activity Leaderboard report to view workers' referral activity points.
- Referral Ownership grid on the Referral Details tab on a candidate's profile to view details of previous candidate owners.

Related Information
Tasks
Steps: Set Up Recruiting on page 191

Steps: Set Up Endorsements

Prerequisites

- Security: These domains in the System functional area:
  - *Business Process Administration*
  - *Manage: Business Process Definitions*

Context

Workday enables external candidates to enter the name or email of a company worker they know when applying to a job. If the information matches an existing worker, the worker receives a request to endorse the candidate's job application.

If the worker:

- Accepts the endorsement request, Workday creates a referral record for the candidate's job application.
- Declines the endorsement request, Workday deletes the association between the worker and the candidate's job application.

Workday blocks existing endorsement requests and doesn't allow any new endorsements if:

- The candidate is hired.
- The job requisition is filled or closed.

Workday doesn't delete endorsement requests from the worker's My Tasks, even when it's no longer possible to endorse that candidate.

If the candidate doesn't have an active worker or pre-hire record, you can delete all endorsement information from the candidate's profile and job application.

Note: Workday stores endorsement information for dispositioned candidates.

Steps

1. Create Custom Business Processes.

   Configure the *Endorse Candidate* business process in the Recruiting functional area.

   Assign the *Endorse Candidate* action step to the appropriate security groups.

   Example: If you want employees to endorse candidates, assign the group *Employee As Self* to the *Endorse Candidate* action step.

2. Edit Business Process Security Policies.

   Access the Business Process Security Policies for Functional Area report and enter these details:

Option	Description
Functional Area	*Recruiting*
Business Process	*Endorse Candidate*

   In the Who Can Do Action Steps in the Business Process section, add or remove security groups for the Endorse Candidate action step.

   (Optional) In the Policy Restrictions section, select the Disable Comments check box. This prevents Workday from displaying 2 comment fields for candidate endorsements.
3. Activate Pending Security Policy Changes.
4. (Optional) From the related actions menu of the *Endorse Candidate* business process, select Business Process > Maintain Help Text.

   Enter instructional text that explains the endorsement process for a referring worker.
5. Edit Business Processes.

   Add the *Send Endorsement Request* action step to the appropriate subprocess on the *Job Application* business process definition where you want a nominated worker to endorse a candidate's job application.

Result

When a candidate identifies a worker they know at your company, the worker receives a request to endorse that candidate.

Workday displays positive endorsement details on the candidate's:

- Profile.
- Job application.

Next Steps

Configure Workday to process a one-time referral payment to the worker if you hire the candidate they endorsed. You can also use eligibility rules to specify how and when to process this payment.

Steps: Set Up Referral Payment Processes

Context

Referral payment processes offer an easier and more convenient way to reward workers for successful referrals. Set up the *One-Time Payment for Referral* business process so you can:

- Manage your referral payment processes.
- Generate referral payments to workers if you hire a candidate they referred.

Steps

1. (Optional) Access the Create One-Time Payment Plan Schedule task.

   Create a plan schedule for referral payments. After a successful hire, you can delay paying the referring worker by a number of days, months, or years from the Date of Hire.

   Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.

2. (Optional) Create Eligibility Rules for Compensation on page 986.

   Configure rules to determine which workers are eligible to receive the one-time payment for the referral.

   Example: The referring worker is in Paris and is in the Engineering organization.
3. Create One-Time Payment Plans on page 1126.

   Create an amount-based plan for referral payments. Select:

   - Referral on the Category prompt.
   - (Optional) A referral Payment Schedule. This section displays after you select a Category.
4. Create Job Profiles on page 573.

   Select the payment plan that you want to associate with the job profile from the Referral Payment Plan prompt.
5. Create and Edit Job Requisitions on page 611.

   When you create a job requisition from a job profile, Workday automatically associates the payment plan of the job profile with the job requisition.

   You can also select a payment plan from the Referral Payment Plan prompt in the Recruiting Information section.
6. Access the Create Business Process Definition (Default Definition) task.

   Create the default definition for the *One-Time Payment for Referral* business process if it doesn't exist in your tenant.
7. Edit Business Process Security Policies

   Configure the security policy for the *One-Time Payment for Referral* business process.
8. Add the *One-Time Payment for Referral* subprocess to the *Hire* business process.
9. (Optional) Access the Edit Tenant Setup - HCM task.

   Select the Route Business Processes Based on Costing Overrides option in the Compensation section. If you use worktags on the *One-Time Payment for Referral* business process, Workday routes steps to the managers associated with the worktags.
10. (Optional) Hide or Require Optional Fields.

    If you don't want to use referral payment plans, you can hide the Referral Payment Plan field on job requisitions.

    a) Select the Pre-Hire Process functional area.
    b) Select an option:

       - Job Requisition
       - Job Requisition Change
       - Job Requisition Details for Composite View

Result

Workday creates a one-time payment to a referring worker if you hire their referral. The candidate owner receives the one-time referral payment for any candidate job application that reaches the *One-Time Payment for Referral* subprocess on the *Hire* business process. When you enable the Referral Ownership Level on the Edit Tenant Setup - Recruiting task, the worker named on the Referred By field receives the one-time referral payment.

If you terminate a referred worker, Workday removes any future dated referral payments to the referring worker.

Changes made to referral payment plans don't impact in-progress and historical job requisitions.

Next Steps

Manually review and approve payments before Workday processes them.

Hide or Require Optional Fields for Referrals

Prerequisites

Security: *Set Up: Configure Optional Fields* domain in the System functional area.

Context

You can hide or require fields on these referral tasks to control what information you collect:

- Create a Referral.
- Refer a Candidate.

Steps

1. Access the Configure Optional Fields task.
2. Select one of these options on the By Functional Area prompt:
    - *Create a Referral*.
    - *Refer a Candidate*.

    Workday recommends that you hide and require the same fields for both of these functional areas to ensure data consistency.
3. As you complete the task, consider:

Option	Description
Email	We recommend that you require this field to ensure that the candidate receives all communications.
Relationship	Require this field to track how workers know the candidates that they referred.

4. Configure visibility for the Referral Payment Plan field.

    You can hide or require the Referral Payment Plan field on job requisitions. Select one of these functional areas:
    - *Job Requisition*
    - *Job Requisition Change*

    If your company doesn't use referral payment plans, hide this field for all users.

Related Information
Tasks
Hide or Require Optional Fields

Invite Referrals to Apply

Prerequisites

- Configure email notifications for candidates.
- Security: *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.

Context

You can configure Workday to automatically notify a candidate when a worker refers them for a job. This notification can also include a link to the job posting that the candidate can use to apply.

Steps

1. From the related actions menu of the *Refer a Candidate* business process, select Business Process > Add Notification.
2. As you complete the task, consider:

Option	Description
Recipient(s)	Select *External Candidate for Business Process*.
Message Content	Use the Job Posting Referral URL field to include a link to the job posting.

Result

The referred candidate receives an email notification with a link where they can apply to the job posting. These business process notifications don't display on the candidate's job requisition.

Related Information
Reference
Reference: Edit Tenant Setup - Notifications

Manage Unmatched Endorsement Requests

Prerequisites

- Configure the *Endorse Candidate* business process in the Recruiting functional area.
- Security: *Employee Referrals* domain in the Recruiting functional area.

Context

If Workday can't match a candidate's self-identified referrer with an existing worker, you can edit the job application and enter the worker's correct name. You can then send the worker a request to endorse the candidate's job application.

You can create a custom report to display all job applications with a self-identified referral that doesn't match an existing worker. Job applications with unmatched self-identified referrals store the name or email that the candidate entered in the Referred by (unmatched) field.

Steps

1. Access the Create Custom Report task.
    a) Create an Advanced custom report based on the Job Applications data source, and clear the Optimized for Performance check box.
    b) Select All Job Applications from the Data Source Filter prompt.
    c) In the Columns grid, add a new row for the Referred by (unmatched) field.

       Add other fields as required. Example: Candidate Name, Job Application.
    d) In the Filter section, select:
        - Referred by (unmatched) on the Field prompt.
        - is not blank on the Operator prompt.
2. Run the custom report.
3. From a candidate's related actions menu, select Candidate Actions > Edit Job Application.
    a) Select the job application to edit from the Job Applications for Candidate prompt.
    b) Edit the candidate's job application and enter the correct worker's name in the Referred by field.
4. From the candidate's related actions menu, select Candidate Actions > Send Endorsement Request.

Result

- Workday creates a link between the worker and the candidate's job application.
- The worker receives a request to endorse the candidate's job application.

Job Applications

Steps: Set Up Job Applications

Context

With Workday, you can configure the job application to collect only the information you want from a candidate.

Steps

1. Create External Career Sites on page 379.

   Define the sections you want included in the job application a candidate completes when they apply for a job using an external career site. Complete the Create External Career Site task sections that begin with the word Apply.
2. Steps: Set Up Job Application Templates on page 447

   Define what resume data you collect on a job application.
3. Set up candidate assessments.

   See Steps: Set Up Assessments for Candidates on page 463.
4. Set up questionnaires.

   See Steps: Set Up Questionnaires for Recruiting on page 455.

Steps: Manage Job Applications

Prerequisites

Set up job applications.

Context

Use this process flow to manage job applications.

Steps

1. Create and Edit Job Requisitions on page 611.
2. Create and Edit Evergreen Requisitions on page 238.
3. Post Jobs on page 418.
4. Candidates apply to jobs using external or internal career sites.

   Job applications created by:

   - External candidates applying to jobs use the job application template associated with the job posting.
   - Internal candidates applying to jobs use content that displays on their worker profile, such as education, job history, and skills. The job application displays using the job application template associated with the internal job posting.
5. Recruiters create job applications on behalf of candidates.

   The Create Job Application task uses the job application template that is associated with the evergreen or job requisition.

6. View the template assigned to a requisition on the Details profile group on the requisition profile.

Next Steps

To meet compliance requirements, purge the job application data of former workers, active workers, or candidates if you no longer need it. Use the Purge Person Data task and the *Job Applications for Purging* data source for your custom report.

Related Information
Tasks
Steps: Purge Person Privacy Data

Steps: Enable Candidates to Withdraw Their Job Applications

Context

You can set up Workday to enable candidates to withdraw their own job applications, improving recruiter productivity. Candidates can withdraw from consideration using the:

- Withdraw button next to their job application for external candidates with a Candidate Home account.
- Withdraw Application task for internal candidates.

Steps

1. Edit Domain Security Policies.

   To enable internal candidates to withdraw their job applications, add these security groups to the *Internal Careers* domain:

   - All Contingent Workers.
   - All Employees.
2. Access the Maintain Recruiting Dispositions task.

   Select the Candidate Withdrawal check box for the reason you want to use when a candidate withdraws their job application. The reason you select must:

   - Be active.
   - Map to *Declined by Candidate*.

   The Candidate Label Override is the label candidates see in any communications that they receive related to their job application.

   Security: *Set Up: Recruiting* domain in the Recruiting functional area.
3. Edit the *Job Application* business process definition.

   Add the candidate withdrawal reason you configured to the Possible Dispositions grid for each stage where you want a candidate to be able to withdraw their job application. If a stage has no candidate withdrawal disposition, the Withdraw button doesn't display for external candidates.

   See Steps: Configure the Job Application Business Process on page 197.
4. (Optional) Create Custom Notifications.

   You can configure a custom a notification on the *Job Application* business process to let you know when a candidate withdraws their job application. Configure the notification to trigger only for candidate withdrawal reasons.
5. Create External Career Sites on page 379.

   Enter a Withdraw Confirmation Message in the Candidate Home section. This message displays to external candidates when they withdraw their job application.

Result

When a candidate withdraws their job application, Workday:

- Sets their status to the one defined as candidate withdrawal status.
- Closes the job application event.

Next Steps

Review the status of candidate job applications on the:

- Candidate profile.
- Candidates profile group of the job requisition profile.

You can also create a custom report that includes the Candidate Withdrawn report field.

Steps: Set Up Job Application Templates

Context

Workday enables you to create job application templates to collect only the information from a candidate that is relevant to a specific evergreen or job requisition. You can hide or require sections or fields for all or for a specific security group.

Steps

1. Edit Domain Security Policies.

   Set up security for these domains in the Recruiting functional area:

   - *Candidate Data: Attachments*
   - *Candidate Data: Edit Job Application*
   - *Candidate Data: Job Application*
   - *Submit Recruiting Agency Candidate*
2. Create Job Application Templates on page 448.

   Define the sections and fields that you want hidden or required on job applications.
3. Access the Create Job Requisition Condition Rule task.

   Create the condition rules that Workday uses to determine which job application template to associate with an evergreen or job requisition. Workday delivers a default template called Job Application Default Template.

   You can use these report fields when creating condition rules:

   - Current Job Application Template on the *Job Requisition* business object.
   - Current Job Application Template on the *Job Applications, Prospects and Referrals* business object.
   - Job Application Template – Current on the *Job Requisition Event* business object
   - Job Application Template – Proposed on the *Job Requisition Event* business object
   - Job Requisition Has/Had Job Applications on the *Job Requisition* business object

   Security: These domains in the Recruiting and Talent Pipeline functional areas:

   - *Set Up: Job Postings*
   - *Set Up: Recruiting*
4. Access the Maintain Job Application Templates task.

   Assign a job application rule to a job application template. When you create an evergreen or job requisition, Workday evaluates the rules in the order they display. When a rule is met, Workday assigns that template to the requisition. When no rule is met, Workday assigns the default template.

   Security: *Set Up: Recruiting* domain in the Recruiting and Talent Pipeline functional areas.

5. (Optional) Edit Business Processes.

   Configure these business processes to include the *Review Job Application Template* step, which enables you to change the assigned job application template:

   - *Evergreen Requisition*.
   - *Job Requisition*.

   Add this step after the completion step but before the *Post Job* step. Workday will send the Review Job Application Template task to My Tasks for the security group assigned to the step.

Result

When you create an evergreen or job requisition, Workday uses the Maintain Job Application Templates task to evaluate which template to assign to the requisition. If you added the Review Job Application Template as a step to one or both of the business processes, Workday sends a new Review Job Application Template task to the assigned security group's My Tasks. This task enables you to change the assigned template.

Workday also adds a new Job Application Template section (secured to the Staffing Actions: Job Requisition Job Application Template domain) to these tasks that also enables you to change the template:

- Edit Evergreen Requisition.
- Edit Job Requisition.

You can view the template assigned to a requisition on the Details profile group on the requisition profile.

Related Information

Create Business Process Condition Rules

Create Job Application Templates

Prerequisites

Security: *Set Up: Recruiting* domain in the Recruiting and Talent Pipeline functional areas.

Context

Job application templates enable you to control the information you gather about a candidate from a job application when:

- Candidates apply to a job using an external career site.
- Recruiters or administrators use the Create Job Application task or the Attachments profile group of a job application.

A template enables you to select the sections to display on a job application, and Workday includes a Default Section Label for each section:

- Certifications
- Education
- Languages
- Resume/CV
- Resume Parsing
- Skills
- Websites
- Work Experience

You can use the Section Label Override fields to change the section labels. In the Instructional Text column, rich text fields enable to you to add instructions and additional information for each section. The text configured in the Instructional Text fields displays on the My Experience page of a job application.

You can include or hide sections and fields within sections based on security groups.

Steps

1. Access the Create Job Application Template task.
2. As you complete the task, consider:

Option	Description
Section Label Override	Text that you enter here replaces section label text on the My Experience page of a job application. The candidate record also displays the Section Label Override text. You can configure the plain-text editable fields with up to 100 characters.
Instructional Text	Text that you enter here displays below the section label text. Configure these rich-text editable fields with up to 500 characters.
Criteria	If you select *Security Group*, Workday enables you to select options from the Hidden For and Required For prompts.
Enforce Required in Web Services	Selecting *Required for All* enforces the criteria defined by the job application template in the *Put Candidate* and *Submit Agency Candidate* web services. Doesn't apply to the Resume/CV section.
Hidden For Required For	Hide or require a section or fields for selected security groups. Workday automatically checks for conflicts between your selected criteria.

Result

When you select *Hide for All* in the Criteria column for the From or To fields in the Education section, Workday suppresses this information in any associated:

- Job applications.
- Report fields.
- Web services.

When you hide resume parsing for external candidates, Workday doesn't display the:

- Autofill with Resume button on custom branded external career sites.
- Quick Apply page on external career sites without custom branding.

For the *Put Candidate* web service, don't remove the Resume_Data section when the Enforce Required in Web Services check box and Required For are selected for any section or field.

Next Steps

To translate configured text in Section Label Override and Instructional Text fields, use the Translate Job Application Template report.

To manage job application templates, use the Edit Job Application Template task. Workday uses the job application template on the requisition at the time of posting. To use the updated template for job applications, edit the job requisition and select Use Updated Version of Template check box in Job Application Template section. Then you can unpost and repost the job requisition.

Troubleshooting: Automatic Stage Routing Not Working

Automatic Stage Routing is not moving the job application to the next stage of the *Job Application* business process as expected.

Cause: In order for Automatic Stage Routing (ASR) to trigger correctly:

- All Conditions listed on the Automatic Stage Routing stage need to be met.
- Conditions listed on the Next Possible Step of the *Job Application* business process stage need to be met.
- The step where Automatic Stage Routing is enabled must be completed.

Example: Automatic Stage Routing is set to move a job application from the *Review* stage to the *Interview* stage.

1. Access the Job Application business process Review > Automatic Stage Routing.
2. Ensure that any condition rules for Automatic Stage Routing to trigger are met.
3. Check that condition rules on the Next Possible Step on the *Review* stage that will allow a move from *Review* to *Interview* are also met.

Solution: Consider removing all condition rules systematically to test where the Automatic Stage Routing conditions are failing.
Related Information
Tasks

Steps: Manage Job Applications on page 445

Troubleshooting: Unable to Decline or Move a Job Application Forward

You want to Move Forward a job application but there are no next steps options to select. Similarly, you want to Decline a job application but the expected next step or Disposition Reason are not available for you to select.

Cause: There is a condition rule on the *Job Application* business process stopping you from taking action. If any of the conditions listed on the Possible Next Steps or Possible Dispositions section are not met, you will not be presented with the next steps options when you select Move Forward or Decline on a job application.

Solution: You need to review the condition rules on the *Job Application* business process.

Steps

1. From the related action menu of the Job Application event, select Business Process > View Definition.
2. Select the tab of the stage where you are taking action. Example: If you want to Move Forward the job application on the Interview stage, select the Interview tab.
3. Review all the conditions rules on the Possible Next Steps or the Possible Dispositions sections.
4. Verify that the role taking action on the job application is included in the security Group assigned to the Possible Next Steps section.

Questionnaires

Setup Considerations: Questionnaires for Recruiting

You can use this topic to help make decisions when planning your configuration and use of recruiting questionnaires. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

Recruiting questionnaires in Workday enable you to gather and collate candidate, recruiter, and interviewer data. You can issue questionnaires at any stage of the recruiting process.

Business Benefits

- Improved Recruiting Efficiency: Gather key details up front to reduce follow-ups. Example: Candidates submit availability and work status with the job application.
- Stronger Compliance and Reporting: Collect structured data to support legal and reporting requirements.
- Better Team Collaboration: Share responses with hiring teams to align on candidate strengths and gaps.
- Personalized Experience: Tailor questions to match the role, location, or business needs.
- Consistent Candidate Evaluation: Ask every applicant the same questions for fair, uniform assessment.
- Efficient Screening and Selection: Example: Assign scores and weights to questions to identify top applicants quickly.

Use Cases

- Candidates Pre-Screening: Collect work eligibility data to filter out ineligible candidates.

  Example: Ask if candidates have legal authorization to work in the country.
- Interview Preparation: Provide hiring managers candidate responses in advance to help guide interviews.

  Example: Share responses about leadership experience before a manager-level interview.
- Role-Specific Assessments. Include job relevant questions for candidates.

  Example: Ask software engineers to describe a recent coding challenge they solved.
- Localization and Compliance: Add region-specific legal or policy questions.

  Example: Ask EU candidates if they consent to data processing under GDPR.
- Capture Candidate Preferences: Gather information on location, salary, or start date preferences.

  Example: Ask candidates if they are open to relocating or working remotely.
- Supporting Internal Mobility: Assess internal candidates' readiness and career progression goals.

  Example: Ask internal candidates what skills they want to develop in their next role.

- Manage High-Volume Recruiting: Use structured questions to efficiently screen large applicant pools.

  Example: In a retail hiring campaign, ask about weekend availability and prior customer service experience.

Questions to Consider

Question	Consideration
What kind of questionnaires do you want to create?	You can create primary questionnaires to ask candidates general questions. You can create secondary questionnaires to ask more specific questions, such as questions about job location. Supplementary questionnaires enable recruiters to: • Create and customize questionnaires and add them to job requisitions. • Ask candidates additional questions. • Use nested branching functionality to configure follow-up questions to gather more detailed information.
How do you want to view questionnaires?	To display questionnaires automatically on job or evergreen requisitions that use that job profile, set a condition rule on the Maintain Job Requisition Questionnaire Defaults task. If you update any of the fields on the job requisition before submitting it, Workday: • Runs the condition rules again. • Overrides any questionnaires that you selected, depending on your defaulting rules. You can also access the View Questionnaire report to view and preview completed questionnaires.
How do you want to filter eligible and ineligible candidates?	You can assign points to multiple choice questions to eliminate ineligible candidates and advance high scoring candidates. Example: A candidate gets low scores because of age threshold. Workday eliminates the candidate. You can also create a branching question for possible answers and assign points to possible responses.

Recommendations

Workday recommends that you create question tags to help you search and keep track of questions. Example: Create question tags for internal and external questions so that you can easily search for these question types.

To ensure that candidates, complete a questionnaire, you can add the *Complete Questionnaire* action step on any subprocess of the *Job Application* business process. Workday recommends that you add this step before the *Make Decision* step.

When using questionnaires on an external career site, Workday recommends that you keep the total number of questions, including branched questions, to under 100 questions.

Requirements

No impact.

Limitations

If you add a *Complete Questionnaire* step to the *Interview* business process, you can't send questionnaires to the groups specified in the *Schedule Interview Team* step. You can associate a questionnaire with the *Schedule Interview* and *Manage Interview Feedback* business process steps of the *Interview* business process so that interviewers receive the questionnaire.

Tenant Setup

To enable changes to primary and secondary questionnaires, select the Enable Primary and Secondary Questionnaire Removal or Replacement on Evergreen and Job Requisitions check box under the Job Requisition section of the Edit Tenant Setup - HCM task.

Security

Domains	Considerations
Candidate Data: Questionnaires in the Recruiting functional area.	Provides access to questionnaire responses. You can use segment-based security groups to determine access to questionnaire responses.
Candidate Data: Questionnaire Total Score in the Recruiting functional area.	Provides access to the total score of a questionnaire on the Job Requisition composite view.
Configure Questions for Business Process and *Configure Questionnaires for Business Process* in the System functional area.	Enables you to manage access to supplementary questionnaires. Provides access to these tasks during the *Supplementary Questionnaires for Job Requisition* event: • Create Questions • Create Questionnaires
Set Up: Questionnaire Calc Fields in the Recruiting and Talent Pipeline functional areas.	Enables you to create a question report field for a question from the related actions menu of the question.
Set Up: Recruiting domain in the Recruiting functional area.	Enables you to add eligibility questions to job applications for external candidates.
Staffing Actions: Job Requisition Job Questionnaires in the Staffing functional area.	Provides access to job requisition questionnaires and the questionnaire sections on these tasks: • Create Job Requisition. • Edit Job Requisition. Provides access to job requisition questionnaires and controls whether the Questionnaire section displays on the Create Job Requisition and Edit Job Requisition tasks.

Domains	Considerations
Questionnaire in the System functional area.	Provides access to all tasks and reports related to configurable questionnaires.
Questionnaire Creation and Distribution in the System functional area.	Enables you to access the Maintain Questionnaires task and create, edit, delete, view, and preview questionnaires.
Question Library in the System functional area.	Provides access to all tasks and reports related to questions and question tags.
Questionnaire Results in the System functional area.	Provides access to all the tasks and reports related to accessing the results and the attachments for a questionnaire.

Business Processes

Business Processes	Considerations
Job Requisition	To add or update questionnaires assigned to job or evergreen requisitions, you can configure the *Job Requisition* business process and security policy for the *Staffing Actions: Job Requisition Job Questionnaires* domain in the Staffing functional area.
Supplementary Questionnaires for Job Requisition	Configure this business process to enable recruiters to create supplementary questionnaires on job and evergreen requisitions.

Reporting

Reports	Considerations
View Questionnaire	View questionnaires you have access to.
View Questionnaire Security Segment	Enables you to identify who has access to questionnaire responses.

Integrations

No impact.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Concept: Segmented Security for Recruiting Questionnaires on page 459

Tasks

Configure Supplementary Questionnaires for Recruiting on page 456

Configure the Interview Business Process on page 482

Reference

Workday 2021R2 What's New Post: Nested Branching Questions for Supplementary Questionnaires

Steps: Set Up Questionnaires for Recruiting

Context

You can ask candidates to complete questionnaires when they:

- Apply for a job on your internal or external career site.
- Reach any stage in the recruiting process. To do this, external candidates must have a Candidate Home account.

Steps

1. Edit Domain Security Policies.

   Configure security for these domains:

   - *Candidate Data: Questionnaires* and *Candidate Data: Questionnaire Total Score* domains in the Recruiting functional area.
   - *Questionnaire*, *Questionnaire Creation and Distribution*, and *Questionnaire Results* domains in the System functional area.
   - *Staffing Actions: Job Requisition Job Questionnaires* in the Staffing functional area.
2. Create your questionnaires.

   See: Steps: Create and Manage Questionnaires.
3. Set up segmented security for Recruiting questionnaires.

   See Example: Configure Segmented Security for Recruiting Questionnaires on page 459.
4. Edit Business Processes.

   To have candidates complete a questionnaire, add the *Complete Questionnaire* action step to any business process that can be a subprocess of the *Job Application* business process. Workday recommends that you add this step before the decision step.

   If you want to send the questionnaire to:

   - External candidates, enter *Candidate As Self* in the Group column. The candidate must have a registered Candidate Home account. Questionnaire requests also display as tasks for a candidate on Candidate Home.
   - Internal candidates, enter *Employee As Self* or *Contingent Worker As Self* in the Group column.

   If you add a *Complete Questionnaire* step to the *Interview* business process, you can't send questionnaires to the groups specified in the *Schedule Interview Team* step.
5. (Optional) Configure Supplementary Questionnaires for Recruiting on page 456.
6. Access the Edit Tenant Setup - HCM task.

   Manage tenant-wide settings in the Job Requisition section. Configure the Enable Primary or Secondary Questionnaire Removal or Replacement on Evergreen and Job Requisitions setting to enable changes to questionnaires, even if candidates have already applied.
7. (Optional) Access the View Job Requisition Defaults task.

   View all defaults for assessments and questionnaires.
8. Access the Maintain Job Requisition Questionnaire Defaults task.

   Create and maintain condition rules and defaults for questionnaires.
9. Create and Edit Job Requisitions on page 611.

   You can select up to 4 questionnaires when creating a job or evergreen requisition. Workday also populates questionnaires using condition rules.

10. Access the Maintain Questionnaires task.

    Select Question > Create Report Field from the related actions menu of a question.

    Generate a calculated report field for any question and its answers. You can use these report fields to:

    - Include questionnaire responses on the Candidate List grid.
    - Create condition rules for business processes based on questionnaire responses.

    Security: *Set Up: Questionnaire Calc Fields* domain in the Recruiting and Talent Pipeline functional areas.

Next Steps

View questionnaire responses for each job requisition on the Questionnaire Results tab of the candidate profile.

Change Questionnaires Assigned to Job Requisitions on page 458

Reference

Workday 31 What's New Post: Evergreen and Job Requisition Rules

Workday 2021R2 What's New Post: Nested Branching Questions for Supplementary Questionnaires

Configure Supplementary Questionnaires for Recruiting

Prerequisites

Set up the *Supplementary Questionnaires for Job Requisition* business process and security policy in the Recruiting functional area.

Add the *Supplementary Questionnaires for Job Requisition* business process as a subprocess on the *Job requisition* and *Evergreen Requisition* business processes.

Security: These domains in the System functional area:

- *Configure Questions for Business Process*
- *Configure Questionnaires for Business Process*
- *Setup: Configure Optional Fields*

Context

You can configure supplementary questionnaires to enable recruiters to create questions and questionnaires while creating job and evergreen requisitions.

Steps

1. Access the Configure Optional Fields task to enable the Supplementary Questionnaires for Job Requisition fields.
2. Select By Functional Area > Recruiting.

   Enable the supplementary questionnaire fields on 1 or both of these options:

   - Evergreen Requisition
   - Evergreen Requisition Change

3. Select By Functional Area > Pre-Hire Process.

   Enable the supplementary questionnaire fields on 1 or more of these options:

   - Job Requisition
   - Job Requisition Change
   - Job Requisition Details for Composite View

Result

When you're creating job or evergreen requisitions, you can:

- Add questions or questionnaires.
- Select supplementary questionnaires.

You can add supplementary questionnaires by selecting Job Change > Configure Supplementary Questionnaires on the related actions of the requisition.

You can configure up to 6 levels of branching questions to add to supplementary questionnaires.

When using questionnaires on an external career site, Workday recommends that you keep the total number of questions, including branched questions, to under 100 questions.

Example

Amy is creating a job requisition to recruit for an IT Support Worker. This position requires weekend work but there are no questions about weekend work available to select. Amy creates new supplementary questions to ask applicants about their ability to work weekends. These questions display as a separate questionnaire page when applicants are applying to the job requisition.

Next Steps

You can use the Maintain Questionnaires task to inactivate supplementary questionnaires when you no longer require them.

Workday 2021R2 What's New Post: Nested Branching Questions for Supplementary Questionnaires

Add Eligibility Questions to Job Applications

Prerequisites

Security: *Set Up: Recruiting* domain in the Recruiting functional area.

Context

You want to screen external candidates who submit job applications to ensure that they're eligible for consideration for employment. Example: The job is in Dublin, Ireland, you want to advance candidates that are legally eligible to work in the European Union.

You can have them answer these eligibility questions:

- Are you at least 18 years of age? Or if under age 18, can you provide work permits?
- Are you legally eligible to work in the country to which you're applying?
- Are you willing to relocate?

- Do you have relatives who work for our company?
- Do you require sponsorship?
- Have you been convicted of a felony?
- Have you been previously employed by our company?
- Can we contact you at your current place of employment?
- What is the notice period that you need to give your current employer?
- What is your current annual salary?
- What is your minimum annual salary requirement?
- When are you available to start?

Example: The age eligibility field maps to the response to the question: Are you at least 18 years of age? Or if under age 18, can you provide work permits?

Steps

1. Create a questionnaire that includes 1 or more eligibility questions.
2. Access the Map Job Application Questions task.

   Map the answers to the eligibility questions so you can:

   - Include them in the Group column on the Candidate List configurable grid.
   - Use them as facets in the My Candidates report.

Next Steps

Add the questionnaire to a job requisition or an evergreen requisition.

Related Information
Tasks
Steps: Maintain Custom Candidate List Grids on page 263

Change Questionnaires Assigned to Job Requisitions

Prerequisites

Configure the *Job Requisition* business process and security policy in the Pre-Hire Process functional area.

Context

Workday enables you to add or update questionnaires associated with an evergreen or job requisition using these tasks:

- Edit Job Requisition
- Edit Evergreen Requisition

When a candidate has applied to a job and there are regulatory restrictions that require you to change the associated questionnaire, Workday recommends that you:

- Create a new questionnaire.
- Update the existing questionnaire.

Steps

1. Access the Edit Tenant Setup - HCM task.
2. Select the Enable Primary or Secondary Questionnaire Removal or Replacement on Evergreen and Job Requisitions check box.
3. Access the Edit Job Requisition task and select the job requisition that you want to update.

4. Under the Job section of the requisition, select the Edit icon beside the Questionnaire section to remove or replace a questionnaire.

Next Steps

If you have candidates that applied to the old requisition, follow your regular policy for addressing those candidates.

Concept: Segmented Security for Recruiting Questionnaires

You can use multiple types of security to control access to questionnaire responses in each stage of the *Job Application* business process.

Segment-Based Security Groups

You can use the Create Security Group or Edit Security Group task to give users access to questionnaire responses. Use these types of security segments:

- Questionnaire security segments restrict access to 1 or more questionnaires. You can create as many as you need using the Create Questionnaire Security Segment task.
- Questionnaire response context security segments secure access to all Recruiting questionnaire answers within a specific stage of the *Job Application* business process. Workday delivers these segments:
    - *Candidate Data: Assessment Questionnaire*
    - *Candidate Data: Background Check Questionnaire*
    - *Candidate Data: Initial Questionnaire*
    - *Candidate Data: Interview Questionnaire*
    - *Candidate Data: Offer Questionnaire*
    - *Candidate Data: Ready for Hire Questionnaire*
    - *Candidate Data: Recruiting Agency Questionnaire*
    - *Candidate Data: Reference Check Questionnaire*
    - *Candidate Data: Review Questionnaire*
    - *Candidate Data: Screen Questionnaire*

You can't combine access to both types of segments for the same security group.

Security Domains

Workday delivers these domains:

- *Candidate Data: Questionnaire Total Score*: Secures the total score to a candidate's screening questionnaire on the Job Requisition composite view.
- *Candidate Data: Questionnaires*: Secures all questionnaire responses submitted by internal and external candidates.

Related Information
Reference
Workday 31 What's New Post: Segmented Security for Recruiting Questionnaire Responses

Example: Configure Segmented Security for Recruiting Questionnaires

This example illustrates how to configure access to questionnaire responses across different stages of the *Job Application* business process.

Context

You are the Security Administrator at Global Modern Services. Your recruiting process includes these questionnaires at these stages of the *Job Application* business process:

Stage	Questionnaire
Review	• Eligibility Questionnaire • Work Experience and Education
Interview	• Interview Feedback • Salary Expectations and Culture Fit
Background Check	• Criminal Convictions • Work References

For privacy and compliance purposes, you only want to share candidate answers to these questionnaires with the appropriate roles in your organizations. You also want to enable managers to see total scores for all screening questionnaires.

You can use a combination of questionnaire security segments, questionnaire response context security segments, and security domains to restrict questionnaire access to these roles:

- Recruiters have access to all questionnaires in the *Review* stage.
- Managers have access to all questionnaires except for the Criminal Convictions questionnaire in the *Background Check* stage.
- HR partners only have access to the Criminal Convictions questionnaire in the *Background Check* stage.

Prerequisites

Create the questionnaires and add them to the appropriate recruiting stages.

Steps

1. Configure Questionnaire Security Segments.

   Create these questionnaire security segments:

Option	Description
Work Experience and Education Questionnaire	Work Experience and Education
Criminal Convictions Questionnaire	Criminal Convictions

2. Create Segment-Based Security Groups.
    a) Create a new security group to give recruiters access to all questionnaires in the *Review* stage.

        Enter:

        - Type of Tenanted Security Group: Segment-Based Security Group.
        - Name: Access to Screening Questionnaires.
        - Security Groups: Recruiter.
        - Access to Segments: *Candidate Data: Review Questionnaire*.
    b) Create a new security group to give managers access to all questionnaires in the *Interview* stage.

        Enter:

        - Type of Tenanted Security Group: Segment-Based Security Group.
        - Name: Access to Interview Questionnaires.
        - Security Groups: Manager.
        - Access to Segments: *Candidate Data: Interview Questionnaire*.
    c) Create a new security group to give managers access to the Work Experience and Education questionnaire.

        Enter:

        - Type of Tenanted Security Group: Segment-Based Security Group.
        - Name: Access to Work Experience and Education Questionnaire.
        - Security Groups: Manager.
        - Access to Segments: *Work Experience and Education Questionnaire*.
    d) Create a new security group to give HR partners access to the Criminal Convictions questionnaire.

        Enter:

        - Type of Tenanted Security Group: Segment-Based Security Group.
        - Name: Access to Criminal Convictions Questionnaire.
        - Security Groups: HR Partner.
        - Access to Segments: *Criminal Convictions Questionnaire*.
3. From the related actions of the *Candidate Data: Questionnaire Total Score* domain, select Domain > Edit Security Policy Permissions.
    a) Add a new row on the Report/Task Permissions grid.
    b) In the Security Groups column, select the Manager group.
    c) Select the View check box.
4. From the related actions of the *Candidate Data: Questionnaires* domain, select Domain > Edit Security Policy Permissions.
    a) Add a new row on the Report/Task Permissions grid.
    b) In the Security Groups column, select the Access to Screening Questionnaires group.
    c) Select the View check box.
    d) Repeat the steps for these security groups:

        - Access to Criminal Convictions Questionnaire
        - Access to Interview Questionnaires
        - Access to Work Experience and Education Questionnaire
5. Activate Pending Security Policy Changes.

Result

The security groups and roles you configured now have access to the appropriate questionnaires.

Example: Reuse Questionnaire Across Multiple Job Application Stages

This example illustrates how to:

- Use 1 questionnaire across multiple stages of the *Job Application* business process.
- Restrict access to questionnaire responses based on job the application stage.

Context

You've configured a feedback questionnaire that you want to use in the *Review* and *Interview* stages of the *Job Application* business process. You want to give access to questionnaire responses to these groups, based on these job application stages:

Job Application Stage	Group
Review	Recruiter
Interview	Manager

To do this, you can use a combination of:

- Domain security policies.
- Questionnaire security segments.
- Questionnaire response context security segments.

Prerequisites

- Create the Feedback questionnaire.
- Add the questionnaire to the *Review* and *Interview* stages of the *Job Application* business process.

Steps

1. Configure Questionnaire Security Segments.

   Create a new questionnaire security segment and enter:

Option	Description
Name	Feedback Questionnaire
Questionnaire	Feedback

2. Create Segment-Based Security Groups.
    a) Create a new security group to give recruiters access to the Feedback questionnaire.

        Enter:

        - Type of Tenanted Security Group: Segment-Based Security Group.
        - Name: Recruiter Access to Feedback Questionnaires.
        - Security Groups: Recruiter.
        - Access to Segments: Feedback Questionnaire.
    b) Create a new security group to give managers access to the Feedback questionnaire.

        Enter:

        - Type of Tenanted Security Group: Segment-Based Security Group.
        - Name: Manager Access to Feedback Questionnaires.
        - Security Groups: Manager.
        - Access to Segments: Feedback Questionnaire.
    c) Create a new security group to give recruiters access to questionnaires in the *Review* stage.

        Enter:

        - Type of Tenanted Security Group: Segment-Based Security Group.
        - Name: Access to Review Questionnaires.
        - Security Groups: Recruiter Access to Feedback Questionnaires.
        - Access to Segments: *Candidate Data: Review Questionnaire*.
    d) Create a new security group to give managers access to questionnaires in the *Interview* stage.

        Enter:

        - Type of Tenanted Security Group: Segment-Based Security Group.
        - Name: Access to Interview Questionnaires.
        - Security Groups: Manager Access to Feedback Questionnaires.
        - Access to Segments: *Candidate Data: Interview Questionnaire*.
3. From the related actions of the *Candidate Data: Questionnaires* domain, select Domain > Edit Security Policy Permissions.
    a) Add a new row on the Report/Task Permissions grid.
    b) In the Security Groups column, select the Access to Review Questionnaires group.
    c) Select the View check box.
    d) Repeat these steps for the Access to Interview Questionnaires security group.
4. Activate Pending Security Policy Changes.

Result

Managers and recruiters now have access to the Feedback questionnaire responses for the appropriate stages.

Assessments

Steps: Set Up Assessments for Candidates

Prerequisites

Security:

- *Set Up: Recruiting* domain in the Recruiting and Talent Pipeline functional areas.
- *Staffing Actions: Job Requisition Assessments* domain in the Staffing functional area.

Context

You can request candidates to complete assessment tests when:

- You move candidates to the Assessment stage in the recruiting process.
- The candidate applies for a job using an external career site.

You can also complete the Assessment stage for a candidate using the *Assess Candidate* web service. To retrieve assessment information, use the *Get Assess Candidate* web service.

Steps

1. Set up assessment-related integrations with your vendors.

   See:

   - Concept: Workday Studio.
   - Steps: Set Up Inline Assessments Integration.
2. Edit Domain Security Policies.

   Configure the security policies for the *Candidate Data: Assessment Results* domain in the Recruiting functional area.
3. Edit Business Processes.

   Configure the *Assess Candidate* business process.

   As you complete this step, consider:

Business Process Step	Description
Assess Candidate	Enables recruiters to select the recruitment tests the candidate takes. If there are assessment tests configured on the evergreen or job requisitions, they automatically display.
Integration	Enables a third-party vendor to administer 1 or more assessment tests.
Take Candidate Assessment	Enables recruiters to send the Take Assessment task to: • An external candidate's Candidate Home account. • An internal candidate. • A nonworker. Workday recommends that you configure this step to run parallel with an *Integration* step.
Make Assessment Decision	Enables you to move the candidate to the next stage in the recruiting workflow or decline the candidate. Make this step the completion step.
4. (Optional) Access the Maintain Recruiting Assessment Categories task.

   Create categories for your assessment tests.
5. Access the Maintain Recruiting Assessment Tests task.

   Set up individual assessment tests to track and evaluate candidates at a more granular level. Inline assessments must have an integration system.
6. Access the Maintain Assessment Statuses task.

   Create assessment statuses for use on individual tests, overall ratings, or both.

7. (Optional) Access the Maintain Job Requisition Assessment Defaults task.

   If there aren't any assessments aligned to a job requisition, select the Automatically Include Blank Row on Assess Candidate Task check box to create an empty row on the Assess Candidate task grid.

   Create condition rules to use to populate assessment tests on job requisitions and the Assess Candidate task.
8. (Optional) Set up task consolidation for the *Assess Candidate* business process.

   See Steps: Set Up Task Consolidation.
9. Configure the *Job Application* business process to include *Assessment* as a stage.

   See Steps: Configure the Job Application Business Process on page 197.
10. Create evergreen and job requisitions.

    See:

    - Create and Edit Evergreen Requisitions on page 238.
    - Create and Edit Job Requisitions on page 611.
11. (Optional) Create External Career Sites on page 379.

    Enter instructions in the Apply Inline Assessment section. These instructions provide help to candidates taking an inline assessment test as a part of their job application.
12. (Optional) Configure segmented security for assessment test results.

    See Steps: Configure Segmented Security for Assessment Test Results on page 465.

Result

When a candidate applies to a job using an external career site and completes an assessment test, Workday records the results on the candidate profile. The status displays if you or the assessment vendor included it.

When a candidate moves to the *Assess Candidate* stage, Workday:

- Creates an *Assessment* event.
- Sets the status to *Assessment*.
- Sends a task to the assigned role's My Task for the configured step.

Concept: Inline Assessments Integration

Reference

2021R1 What's New Post: Consolidated Tasks for Assessments

Steps: Configure Segmented Security for Assessment Test Results

Prerequisites

Create:

- Integrations with third-party assessment test vendors.
- Assessment test categories.
- Assessment tests.

Context

You can configure segmented security to restrict access to assessment test results based on assessment test categories.

Steps

1. Access the Create Recruiting Assessment Category Security Segment task.

   Create a security segment for an assessment category.

   Security: *Set Up: Recruiting Assessment Category Security Segments* domain in the Recruiting functional area.
2. Create Segment-Based Security Groups.

   Create a security group that grants specific security groups access to specific security segments.
3. Edit Domain Security Policies.

   Update the security policy for the *Candidate Data: Assessment Results* domain.
4. Activate Pending Security Policy Changes.

Example: Configure Segmented Security for Assessment Test Results

This example demonstrates how to configure segmented security to determine who can access assessment test results.

Context

As a recruiting administrator, you want to configure security so:

- Only recruiting administrators can view the results from a Work Opportunity Tax Credit (WOTC) assessment.
- All recruiting-related roles can view the results of all other assessment tests.

Prerequisites

Set up assessment-related integrations with your vendors.

Steps

1. Create a WOTC assessment test category.
   a) Access the Maintain Recruiting Assessment Categories task.
   b) Enter these values:

Field	Value
Category Name	*WOTC Eligibility*
ID	*WOTC-1*

   c) Click OK, then click Done.
2. Add assessment tests.
   a) Access the Maintain Recruiting Assessment Tests task.
   b) Enter these values:

Field	Value
Test Name	*WOTC Survey*
Assessment Category	*WOTC Eligibility*

   c) Click OK, then click Done.

3. Create a security segment for an assessment category.
    a) Access the Create Recruiting Assessment Category Security Segment task.
    b) Enter these values:

Field	Value
Name	*WOTC Assessments Security Segment*
Assessment Category	*WOTC Eligibility*

    c) Click OK, then click Done.
4. Create a segment-based security group for restricted assessment tests.
    a) Access the Create Security Group task.
    b) Enter these values:

Field	Value
Type of Tenanted Security Group	*Segment-Based Security Group*
Name	*WOTC Assessments Security Segment*

    c) Click OK.
    d) Enter these values:

Field	Value
Security Groups	*Recruiting Administrator*
Access to Segments	*WOTC Assessments Security Segment*

    e) Click OK, then click Done.
5. Create a segment-based security group for nonrestricted assessment tests.
    a) Access the Create Security Group task.
    b) Enter these values:

Field	Value
Security Groups	*HR Administrator* *Manager* *Recruiter* *Recruiting Administrator*
Access to Segments	*Non-Segmented Recruiting Assessments*

    c) Click OK, then click Done.
6. Update the security policy for the *Candidate Data: Assessment Results* domain.
    a) Access the Domain Security Policies for Functional Area report.
    b) Select *Recruiting* in the Functional Area prompt.
    c) Click *Candidate Data: Job Application*, then click *Candidate Data: Assessment Results*.
    d) Click Override Parent Permissions.
    e) In the Report/Tasks Permissions section, delete all existing security groups.
    f) In the Report/Tasks Permissions section, add view access to these security groups:
        - *WOTC Assessments Security Segment*
        - *Non-Segmented Recruiting Assessments*
7. Activate Pending Security Policy Changes

Result

- Recruiting Administrators can see that test event and view the results.
- HR Administrators, Managers, and Recruiters can see that overall test event but can't view the results.

Interviews

Setup Considerations: Interviews

You can use this topic to help make decisions when planning your configuration and use of interview functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Interviews in Workday help you schedule and track interview details during the recruiting process.

Business Benefits

Interview functionality enables you to:

- Schedule interviews and collect feedback within a unified system, streamlining the hiring workflow and enabling faster, more informed hiring decision-making.
- Integrate with Google Calendar or Microsoft Outlook (Office 365) to synchronize interview schedules, reduce conflicts, and improve coordination among interviewers.
- Use configurable rating scales to ensure consistent and objective interviewer feedback, supporting fair and data-driven hiring decisions.
- Automatically route feedback tasks to interviewers, increasing completion rates and maintaining momentum throughout the recruitment cycle.
- Display interview details, feedback, and interviewer information directly in the candidate profile, giving recruiters and hiring managers a clear, consolidated view.
- Enable candidates to view their scheduled interviews via Candidate Home, promoting transparency and improving communication throughout the process.
- Include targeted questions to evaluate candidates against specific competencies, helping identify the most qualified candidates for the role.

Use Cases

- Configure and manage video interviews for candidates in remote locations.
- Assemble executive-level interview panels for senior leadership roles, such as CEO requisitions.
- Provide hiring managers with a centralized candidate profile that includes interview schedules, feedback, and interviewer details to support informed decision-making.
- Guide interviewers with predefined, role-specific questions aligned to key competencies for consistent and focused evaluations.
- Streamline interview scheduling and coordination during peak hiring periods. Example: During university recruitment or job fairs.
- Use feedback data to identify trends, improve interview practices, and refine hiring strategies.

- Maintain records of interview activities and feedback to support audit readiness and policy adherence.
- Enable interviewers to provide competency-based feedback using standardized rating scales.
- Analyze feedback data to identify patterns, optimize interview techniques, and continuously improve the hiring process.
- Maintain detailed records of interview activities and feedback to ensure compliance with audit requirements and organizational policies.
- Standardize candidate evaluations by enabling interviewers to provide competency-based feedback using structured rating scales.

Questions to Consider

Questions	Considerations
How can you configure your interview process?	Workday enables you to configure your *Interview* business process in 1 of these 3 options: • Interviews solely in Workday. • Interviews with Google Calendar. • Interviews with Microsoft Outlook 365. You can configure a simplified interview experience with minimal steps for interviewers without a calendar integration. When you want interview schedulers to access scheduling data outside of Workday, you can use 1 of these integrations: • Google Calendar. • Microsoft Outlook 365.
How do you want recruiters and hiring managers to communicate with interviewers?	When you don't configure the calendar integration, you can create email templates to send communications to interviewers in Workday. When you configure a calendar integration, Workday sends calendar invitations, updates, and cancellations to interviewers.
How do you want to notify interview schedulers when interviewers accept or decline an interview?	You can configure calendar integration to send an email to the interview scheduler when interviewers respond to an invitation.
How do you want to notify candidates about upcoming interviews?	You can set up email, mobile push notification, and SMS reminders that automatically send to candidates before their interview. The reminders can use message templates or notification templates, if you use Notification Designer. Interview schedulers can configure the reminders as they complete the Manage Interview Scheduling Settings task.
What feedback do you want interviewers to provide?	You can elicit specific feedback by including competency ratings or custom questions specific to your organization. Interviewers can provide feedback directly in Workday, and you can enable interview

Questions	Considerations
	schedulers to send back feedback to interviewers for edits.

Recommendations

To ensure you can move the interview process forward when an interviewer can't complete an interview rating or make an interview decision, configure these business process steps concurrently:

- *Make Interview Decision*
- *Rate Interview*

Requirements

No impact.

Limitations

- You can view invitation responses when you use Outlook for Microsoft Office 365, but Workday doesn't store the response data. You can't report on responses or configure business process notification condition rules based on the data.
- Candidates can't schedule their own interviews in Workday.
- You can't use Outlook for Microsoft Office 365 with Workday when you have:
  - More than 1 instance of Outlook for Microsoft Office 365.
  - Any combination of hybrid, on-premise, or cloud data storage.
- You can't use the *Schedule Interview Team* step on the *Interview* business process with these integrations:
  - Google Calendar
  - Microsoft Outlook

Tenant Setup

No impact.

Security

Domains	Considerations
These domains in the Recruiting functional area: • *Candidate Data: Interview Feedback Comments* • *Candidate Data: Interview Feedback Results* • *Self-Service: Give Interview Feedback*	Users can: • Request interview feedback and view interview ratings. • View interview feedback comments entered by interviewers. • Give interview feedback.
Candidate Data: Interview Schedule in the Recruiting functional area	Users can view interview schedules.
Person Data: Work Email in the Contact Information functional area	Users can view work email addresses of the interviewers.
Set Up: Recruiting in these functional areas: • Recruiting • Talent Pipeline	Users can view information about recruiting setup, including: • Candidates. • Prospects.

Domains	Considerations
	• Job postings. • Recruiting statuses.

Business Processes

Configure the *Interview* business process with specific roles in mind.

Reporting

Reports	Considerations
Compare Candidate Interview Feedback	View interview feedback results for all candidates associated with an active job requisition.
Candidate Interview Schedule	View the interview schedule for a candidate.
Candidate Interview Feedback History	View all interview feedback submitted for a candidate, grouped by job requisition for completed interviews.
Interview Feedback Details	View all interview feedback submitted for each job application, including applicable competency and questionnaire feedback.
Interview Feedback Ratings Summary	View feedback ratings for all job applications associated with a job requisition.
My Interviews	Users can view all of their scheduled interviews.

Integration

Workday imports or exports this security information to or from Microsoft Office 365 when the interview scheduler:

- Creates and sends a calendar event.
- Views the available schedule of an interviewer.
- Selects a room.
- Accesses a calendar event in Workday using calendar view.
- Receives an interviewer's response to a calendar event.

Workday also uses the Microsoft Graph API to call these operations:

- Add Attachment
- Create Event
- Delete Attachment
- Delete Event
- Get Event
- Get Schedule
- List Places (Room Lists)
- List Places (Rooms)
- Update Event

Before you can schedule interviews, an IT administrator must accept the Microsoft Graph API permissions on behalf of all users in your tenant. The permissions grant access to:

- Calendars.
- Places, or conference room locations.

- Sign in to Workday and read profile data.

Connections and Touchpoints

Features	Considerations
Competencies	Configure competencies in the worker profile and Skills functional area to use them in the *Interview* business process.
External Career Sites task	You can display the interview schedule for the candidate on their Candidate Home page per your career site.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Workday 33 What's New Post: Interview Management

The Next Level: COVID-19 Webinar - Adapt to Changing Recruitment and Hiring Needs

Steps: Set Up Interviews

Prerequisites

- Security: *Set Up: Recruiting* domain in the Recruiting functional area.
- Create interview-scheduling location types when you're not integrating with a third-party calendar and you want to assign locations to interview sessions.
- Create competencies if you want to include them in an interview.
- Create questionnaires if you want to include them in an interview.

Context

You can add interviews as a component of your recruiting process. With interviews, you can:

- Define different types of interviews.
- Include 1 or more interview stages in the *Job Application* dynamic business process.
- Create an interview team and link it to a specific evergreen or job requisition.
- Create rating scales used by interviewers when providing feedback.
- Configure interviews to include competencies and questionnaires.
- Configure the candidate profile to display interview details and feedback.
- Configure the evergreen and job requisition profile to include interview-related information.
- Schedule and manage interviews.

Steps

1. Edit Domain Security Policies.

   Define the security groups that can access interview information for these interview-related domains in the Recruiting functional area:

   - *Candidate Data: Interview Feedback Comments*
   - *Candidate Data: Interview Feedback Results*
   - *Candidate Data: Interview Schedule*
   - *Person Data: Work Email*
   - *Self-Service: Give Interview Feedback*
   - *Self-Service: My Scheduled Recruiting Events*
2. Configure the Interview Business Process on page 482.
3. (Optional) Create Email Templates.

   If you don't integrate with Microsoft® Outlook and want to send an email to interviewers, access the Edit Tenant Setup - Notifications task. In the Notification Delivery Settings section, select a routing rule from the Rule prompt that enables *Email* as a Channel and *Immediately* as the Default Frequency for either the:

   - Recruiting parent notification type.
   - Interview Schedule Communications individual notification type.

   Create an interview scheduling template. Use the Candidate URL report field to include a link to the candidate profile in the message.
4. (Optional) Configure Candidate Reminders.

   See Steps: Set Up Interview Reminders on page 477.
5. Access the Maintain Interview Feedback Ratings task.

   Create a rating scale that interviewers use when providing feedback about the candidate. Once you create a rating scale, you can't change it. As you complete your rating scale, consider:

   - Enter at least 2 rows, but not more than 5.
   - For a 2-scale rating on the desktop or mobile application, enter a feedback description such as *Yes* or *No*.
   - For a 3 to 5-scale rating on the desktop application, enter the description exactly as you want it to display.
   - For a 3 to 5-scale rating on the mobile application, the scale displays as stars. Example: 3 = ***, 4= ****, and 5 = *****.
6. Access the Maintain Interview Types task.

   Create different types of interviews so you have flexibility when scheduling an interview. Example: Phone or In-Person.
7. (Optional) Add interview reports to profiles.

   Add:

   - *Interview Team* on the Details for Job Requisition Composite View profile group.
   - *Interview Feedback Details* and *Interview Schedule* on the Interview for Candidate Profile profile group.

   See Steps: Set Up Profiles and Profile Groups.
8. Access the Edit Tenant Setup - Recruiting task.

   Select Location Types for Interview Scheduling.

   Available to users not integrated with Microsoft® Outlook and when Enable Microsoft Outlook Interview Scheduling Integration isn't selected. Enables you to select organization-related locations when scheduling interviews using the Schedule Interview task. Locations only display in this prompt if tied to the location type specified here.

9. (Optional) Access the Edit External Career Sites task.

   To display the complete interview schedule on Candidate Home, select the Enable Interview Schedule on Candidate Home check box. Otherwise, the first-time slot for the interview displays. This setting doesn't apply to Candidate Self-Schedule events.
10. (Optional) Set up internal recruiting.

    See Steps: Set Up Internal Recruiting on page 371.
11. Hide or Require Optional Fields.

    To configure hidden or required fields on Interview Scheduling and Interview Feedback tasks, select Interview for the Recruiting functional area.
12. (Optional) Set Up Guided Tours.

    Add text to help users with the interview feedback task.
13. (Optional) Set up interviews to integrate with Microsoft® Outlook.

    See Steps: Set Up Interviews to Integrate with Microsoft Outlook on page 474.
14. (Optional) Set up interviews to integrate with Google Calendar.

    See Steps: Set Up Interviews to Integrate with Google Calendar on page 475.
15. (Optional) Add web conference links to interview schedules.

    See Steps: Set Up Integration to Web Conference Provider on page 476.

Tasks
Create Locations
Steps: Set Up Competencies on page 122
Steps: Set Up Questionnaires for Recruiting on page 455

Steps: Set Up Interviews to Integrate with Microsoft Outlook

Prerequisites

- A Microsoft® work account through Azure Active Directory.
- Microsoft Exchange Online.
- Microsoft Outlook 365 email work addresses for interviewers.
- Microsoft Outlook 365 room lists.

Context

When you create an interview schedule, Workday integrates with Microsoft Outlook when:

- Viewing the availability of an interviewer.
- Viewing the availability of room lists and rooms.
- Creating a calendar event.
- Sending a notification to the interviewer.

Workday also integrates when:

- Rescheduling or canceling a calendar event.
- Checking the response of an interviewer to a calendar event.

Steps

1. Access the Edit Tenant Setup - Recruiting task.

   Click *Microsoft Outlook* for Enable Interview Scheduling Calendar Integration.

   Note: This takes up to 15 minutes to activate in Workday.

   See Reference: Edit Tenant Setup - Recruiting.

   Security: *Set Up: Tenant Setup - HCM* domain System functional area.
2. Configure the Interview Business Process on page 482.

   Don't add *Schedule Interview Team* as a step. It doesn't work with Microsoft Outlook.
3. (Optional) Access the Maintain Interview Rooms task.

   Sync the available rooms in Outlook with Workday to enable you to search for rooms when scheduling interviews. You'll want to run this task whenever you add new rooms to Outlook.

   Security: *Set Up: Recruiting* domain in the Recruiting and Talent Pipeline functional areas.

Next Steps

When performing these interview-related tasks, interviewers might see a Microsoft Permissions page when Microsoft validates their email address and password:

- Create an interview schedule.
- Cancel an interview schedule.
- Reschedule an interview.
- Manage interview feedback.

They must accept all permissions listed.

Workday 33 What's New Post: Interview Management

Steps: Set Up Interviews to Integrate with Google Calendar

Prerequisites

- A Google account with G Suite Basic, G Suite Enterprise, or G Suite Business.
- Google Calendar email work addresses for interviewers.
- Google Calendar buildings.

Context

When you create an interview schedule, Workday integrates with Google Calendar when you:

- View the availability of an interviewer.
- View the availability of room lists and rooms.
- Create a Google Calendar event.
- Create a Google Calendar event with an attachment.
- Send a notification to the interviewer.

Workday also integrates when:

- Checking the response of an interviewer to a calendar event.
- Rescheduling or canceling a calendar event.
- Rescheduling or canceling a calendar event with an attachment

Steps

1. Access the Edit Tenant Setup - Recruiting task.

   Click *Google Calendar* for Enable Interview Scheduling Calendar Integration.

   Note: This takes up to 15 minutes to activate in Workday.

   See Reference: Edit Tenant Setup - Recruiting.

   Security: *Set Up: Tenant Setup - HCM* domain System functional area.
2. Configure the Interview Business Process on page 482.

   Confirm that the *Schedule Interview Team* isn't a step on the *Interview* business process.
3. (Optional) Access the Maintain Interview Rooms task.

   Sync the available rooms in Google Calendar with Workday to enable you to search for rooms when scheduling interviews. Run this task whenever you update rooms in Google Calendar.

   Security: *Set Up: Recruiting* domain in the Recruiting and Talent Pipeline functional areas.

Result

You can schedule interviews using Google Calendar.

Reference
2020R1 What's New Post: Workday Google Calendar Interview Scheduling Integration

Steps: Set Up Integration to Web Conference Provider

Prerequisites

- Configure the *Interview* business process.
- Register your application client with your third-party web conference provider.
- Configure and deploy an integration system in Workday Studio using these web services:
  - *Get Web Conference Interview Data*
  - *Put Web Conference Interview Data*

Context

You can configure Workday to use a Workday Studio integration that adds a unique link to web conference meetings when you schedule interviews.

Steps

1. Access the Register External OAuth Client task.

   Register your application client with the integration system to enable access to your web conference within Workday.

   Enter these values provided by your web conference provider:

   - OAuth 2.0 Client Name
   - OAuth 2.0 Client ID
   - OAuth 2.0 Client Secret
   - (Optional) Authorize Endpoint URL
   - (Optional) Token Endpoint URL

   Security: *Security Administration* domain in the System functional area.

2. Create and configure access for an integration system user (ISU) account.

   Grant the ISU *Get* and *Put* access to the *Interview Integrations* domain.

   See Steps: Grant Integration or External Endpoint Access to Workday.
3. Access the Edit Tenant Setup - Recruiting task .

   Select your Studio integration system from the Web Conference Integration System prompt.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

Result

Interview schedulers who access the Schedule Interview task through their Inbox can:

- Sign in to their web conference account.
- Select the Include Web Conference Link check box before selecting an interview time.
- Click Confirm to run the integration after selecting an interview time.

Once confirmed, Workday adds the meeting link to:

- The location or web conference field in your meeting invitation if you have a calendar integration set up.
- The schedule interview email if you don’t have a calendar integration set up.
- The Interview profile group on the candidate's profile.
- The candidate's home page on your external career site.

Workday supports only one custom web conferencing provider at a time. Example: You can't have some recruiters using Zoom and others using Teams at the same time.

2021R1 What's New Post: Custom Web Conference Integration for Interview Management

Steps: Set Up Interview Reminders

Prerequisites

Set up interviews.

Context

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

You can configure emails, mobile push notifications, and SMS messages to remind candidates about upcoming interviews.

Steps

1. (Optional) Set up Workday Messaging for the Candidate Reminders notification type to send interview reminders through SMS.

   See Steps: Set Up Workday Messaging in Production.
2. Create a message template for the *Candidate Reminders* notification type.

   See Steps: Set Up Message Templates.
3. (Optional) Create a notification template.

   If you use notification designer, you can create and activate a template for the *Candidate Reminders* notification type.

   See Create and Activate Notification Templates.

4. Access the Edit Tenant Setup - Notification task.

   Select the Enable Reminders check box on the Reminder Settings section. You can also configure notification routing rules for candidate reminders.

   Security: *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.

Result

Workday displays the Candidate Reminder Settings tab on the Manage Interview Scheduling Settings task. Interview schedulers can use the tab to configure:

- Custom Reminders.
- Reminders from message templates you've created.
- Reminders from notification templates you've created.

They can also use the View All Upcoming Candidate Interview Reminders report (secured to the *Candidate Data: Interview Schedule* domain) to view future reminders configured for job requisitions.

Related Information
Reference
2021R2 What's New Post: Interview Reminders

Steps: Manage Interviews

Prerequisites

Set up interviews. See Steps: Set Up Interviews.

Context

With interviews, you can:

- Create interview schedules.
- Create or update interview teams.
- Select locations or rooms.
- Reserve a room (for Microsoft® Outlook users),
- Evaluate and rate candidates.
- Move forward or decline candidates.
- Reschedule and cancel interviews.
- Send notifications and invitations to interviewers for those using and not using Microsoft® Outlook.
- View availability and responses (for Outlook users).
- View reports on schedules and interview details.

You can also add the Manage Interview Scheduling Settings task as a *To Do* step in these business processes:

- *Close Evergreen Requisition*
- *Close Job Requisition*
- *Evergreen Requisition* (Must be after the completion step)
- *Evergreen Requisition Change*
- *Freeze Job Requisition*
- *Job Requisition* (Must be after the completion step)
- *Job Requisition Change*
- *Move Job Requisition*

Steps

1. (Optional) Access the Innovation Services Opt-In task.
    a) In the HCM section, select the Recommended Interview Scheduling check box.
    b) Click OK and Done.

    Security: *Manage: Innovation Services* domain in the Innovation Services functional area.
2. Access the Manage Interview Scheduling Settings task.

    Select a Job Requisition to associate the interview with.
    a) Complete the Interview Team tab.

        Add a row to create an interview team by selecting the Interviewers, Duration of the interview, Interview Type, and Alternative Interviewers.
    b) Select the Recommended Interview Settings tab and enter the necessary details.

        This tab is only available when you opt in to the Recommended Interview Scheduling innovation service.
    c) Select the Candidate Reminder Settings tab to configure a custom reminder.

        Select the Enable Candidate Reminder check box.

        You can select a Notification Template and a Message Template.

        You can also Create Message and specify a Notification Send Date for when you want Workday to send the reminder to candidates.

        Workday will not translate messages if you select the Edit Message Content check box and edit a template.
    d) Click OK and Done.

    When you advance a candidate to the *Interview* stage, Workday:

    - Creates an *Interview* event.
    - Sets the status of the candidate to *Interview*.
    - Automatically assigns the Schedule Interview task to members of the interview team for the requisition.

    Note: This works only if you've configured the *Schedule Interview* step in the *Interview* business process.

    Security: *Job Requisitions for Recruiting* domain in the Recruiting functional area.
3. Access the Evergreen or Job Requisition.

    Review the candidates who have applied for openings.
4. Move a candidate to the interview stage.

    Workday sends the Schedule Interview or Schedule Interview Team task to My Tasks for the security group assigned to the step.
5. Access the Schedule Interview task from My Tasks to arrange the interview for the candidate.

    Complete the Schedule Interview:

Field	Description
Time Zone	Workday uses the Primary Location of the job requisition to determine the time zone, which applies to the entire interview schedule. Note: If you've opted in to the Workday 32 - Time Zones feature, then Workday uses the user's local time zone.

Field	Description
Interviewers	Automatically populates with the interviewers you selected on the Interview Team tab on the Manage Interview Scheduling Settings task.
Use Same Location or Room	Select this checkbox to use the same rooms throughout the entire interview schedule.
Location	This option displays only when you select the Use Same Location or Room check box.
Recommended Interview Settings	Expand the field for options that enable Workday to recommend schedules: • Range of Dates enables Workday to recommend interview dates up to 1 or 2 weeks after the selected date. You can also constrain the recommendation to the selected date. • Use Enable Order of Interviewers
Include Web Conference Link	Displays only when you set up a web conference integration. This check box adds a web conference link to the interview schedule. After selecting an interview time, you can click Confirm to run the integration and retrieve the link.

6. Configure the interview schedule.

   You have 2 options:

   - Use Recommend Times For Me, which enables Workday to suggest interview schedules based on your Recommended Interview Settings.
   - Schedule the interview manually.

Field	Description
Recommended Times For Me	Use to enable Workday to recommend schedules. When you select a recommendation, Workday populates the calendar with the schedule.
The calendar or schedule grid	To schedule the interview manually, click a time slot to enter the detailed information in the Schedule Interview edit window. Don't click Next until the entire schedule is complete. If you selected rooms on the previous page, they automatically populate the grid. If you selected the Use Same Location or Room check box, the rooms in the calendar grid change to reflect any updates you make in the Rooms prompt. If you didn't select Use Same Location or Room, Workday includes all available rooms in the Room prompt on the Schedule Interview

Field	Description
	edit window. The calendar doesn't reflect any changes you make to the rooms.
Available Rooms and Room Lists.	Displays for Microsoft Outlook® users.
Location	Displays for those not using Microsoft® Outlook.
Don’t send email	Displays for those not using Microsoft® Outlook.
Include Link to Candidate Profile	Displays for those using Microsoft® Outlook.
Include Interview Schedule	Displays for those using Microsoft® Outlook.
Submit	Click when the entire schedule is complete.

7. Review interview schedules.

   View the interview schedule of a candidate or your scheduled interviews for a range of dates:

   - Candidate Interview Schedule
   - My Interviews
8. Review the progress of the interviews and the interviewer feedback.

   Give Interview Feedback: the task interviewers use to provide interview feedback.

   If you've configured calendar integration, interviewers receive an interview invitation. Otherwise, you can create email templates to send to interviewers.

   Manage Interview Feedback: The task delivered by the *Manage Interview Feedback* action step. Configuration is on the *Interview* business process. Workday sends the Manage Interview Feedback task to My Tasks for the security group assigned to the step. You can:

   - Move the interview process to the next step.
   - Reschedule an interview.
   - Send the feedback back to an interviewer for rework.
   - View the interview schedule.
9. Review interview information.

   Use:

   - Candidate Profile to review interview schedule and feedback information.
   - (Optional) Generate interview feedback summary for a job applicant. See 2025R2 Feature Release Note: AI-Generated Interview Feedback Summary for additional details.
   - Interview Feedback Details to view all interview feedback comments, including comments for competencies and questionnaires.

     Security: *Candidate Data: Interview Feedback Results* domain.
   - Interview Feedback Ratings Summary to view a list of all job applications for a job requisition and all interview feedback.

     Security: *Candidate Data: Interview Feedback Results* domain.
   - A custom report that includes report fields from *Interview Feedback* business object.
10. Move forward or decline the candidate.

2025R2 Feature Release Note: AI-Generated Interview Feedback Summary

Configure the Interview Business Process

Context

When a candidate reaches the Interview stage in Workday, you can configure a workflow that enables you to:

- Schedule multiple interviews with 1 or more interviewers.
- Collect candidate feedback from interviewers.
- Forward candidate feedback to a decision-maker, who can then move forward or decline the candidate.

You configure this workflow by adding steps to the *Interview* business process. You can also specify what information you want to require when scheduling an interview or collecting feedback from interviewers.

Workday enables you to use these combinations of Action steps:

- *Schedule Interview* > *Manage Interview Feedback* > *Make Interview Decision* (recommended)
- *Schedule Interview* > *Rate Interview* > *Make Interview Decision*
- *Schedule Interview Team* > *Rate Interview* > *Make Interview Decision*

Steps

1. Access the *Interview* business process.
2. From the related actions menu of the *Interview* business process, select Business Process Policy > Edit.

   Select the security groups that can perform specific actions and business process steps.
3. From the related actions menu of the *Interview* business process, select Business Process > Edit Definition.

   As you complete this step, consider:

Business Process Step	Description
Schedule Interview Team	This step doesn't work with Microsoft® Outlook or Google Calendar. Schedule interviews for a specific job application. You can schedule multiple interviews with 1 or more interviewers. Workday doesn't populate interview teams created using the Manage Interview Scheduling Settings task for this step.
Schedule Interview	Schedule interviews for a specific job application. Workday automatically populates the interview team from the Manage Interview Scheduling Settings task. Interviewers who use Outlook or Google Calendar receive a meeting invitation. For other interviewers, you can configure a custom notification on this business process step.
Rate Interview	Workday sends the Rate Interview task to the interviewers' My Tasks. Note: Workday no longer recommends using this step in your interview process. *Manage*

Business Process Step	Description
	Interview Feedback, as an alternative, provides more features and greater flexibility.

Manage Interview Feedback	*Manage Interview Feedback* is a *Shared Participation* type step. Workday initiates 2 tasks in My Tasks:
	• Manage Interview Feedback: Track the progress of the interview, including:
	  ◦ Feedback.
	  ◦ Returning feedback to interviewer.
	  ◦ Rescheduling.
	  ◦ Initiating the next action step.
	• Give Interview Feedback: Interviewers add ratings and comments, providing feedback about the candidate. Workday sends the Give Interview Feedback task to My Tasks for the security group defined on the security policy for the *Self-Service: Give Interview Feedback* domain. Example: Contingent Worker As Self or Employee As Self.
	Once you add this step and click Configure Shared Participation Step, you can:
	• Add a step delay in the Participant Detail Step Delay section. This delay controls when recipients receive their allocated tasks in My Tasks.
	• Use the Maintain Custom Validations task to configure custom validation rules.
	If you configure questionnaires on the Interview business process, the results don't display on the Questionnaire Results tab of the candidate profile.

Make Interview Decision	Move the candidate to the next stage in the recruiting workflow or decline their job application. We recommend that you make *Make Interview Decision* the completion step.

Offers

Setup Considerations: Offers

You can use this topic to help make decisions when planning your configuration and use of Offers functionality. It explains:

- Why to set it up.

- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

You can configure Workday Offers to manage all stages of sending an offer of employment to a selected candidate.

Business Benefits

- Improves efficiency by combining all compensation components into a single task. Example: Salary, bonuses, and stock grants.
- Provides greater flexibility by enabling regeneration of offer letters to update details for candidates who have already moved into the staffing process. Example: Hire date or job title.
- Simplifies task management with workbooks that consolidate multiple offer-related tasks in My Tasks, helping teams manage high volumes more efficiently.
- Increases job requisition flexibility by allowing you to add extra job profiles during the offer stage to customize offers based on role requirements.
- Ensures legal and compliance support by integrating employment agreements directly into the offer process to meet regulatory standards.
- Strengthens auditability by tracking every offer change with a clear history of who made the change and when. This creates a reliable audit trail for internal reviews and regulatory reporting.

Use Cases

- Initiate multiple offer components in 1 task.

  Example: Add a candidate's base salary, signing bonus, and stock option grant to the same offer task.
- Automate offer initiation.

  When a job application moves to the *Offer* stage, Workday automatically generates and sends the offer letter.
- Consolidate multiple My Tasks offer and review tasks into 1 workbook.

  A recruiter combines several offer initiation and review tasks and submits them together.
- Track candidate progress with Offer statuses.

  Example: Use statuses like *Verbal Offer Accepted*, *Offer Sent to Candidate*, and *Offer Accepted*.
- Enable candidates to decline offers online.

  A candidate clicks a Decline Offer button on the external career site.
- Design, create, and preview templates for offer letters with Workday Docs.

  Design a template with placeholders for name, salary, and start date, and preview it before sending.
- Generate and regenerate offer letters easily.

  Update the Hire Date or the Start Date and resend the offer. Workday keeps a record of all changes.
- Renegotiate offers efficiently.

  Example: Update compensation terms, location or job title and resend the offer. Workday retains a record of all changes.
- Attach extra documents.

  Attach a benefits summary or a copy of the employee handbook.

- Send Offer and Employment Agreement in the same job application flow.

  After the candidate accepts the offer, the employment agreement is automatically sent for review and signature.
- Include *Notice Period* and *Probation Period* details in offer documents.

  Example: The offer letter states the probation period is 3 months and the notice period is 1 month.
- Enable candidate interaction.

  Candidates can accept or decline offers, upload documents, and complete forms through the external career site.

Questions to Consider

Questions	Considerations
Do you want to send candidates an offer followed by employment agreement in the same job application flow?	You can configure the *Employment Agreement* step on the *Offer* business process.
Do you need to generate and have candidates sign both an offer letter and an employment agreement document?	If yes, then you need to use both *Offer* and *Employment Agreement* business processes sequentially.
Do you need to include these details on the employment agreement document? • Notice Period • Probation Period • Collective Agreement • Contract Details	You must add the same details on the *Offer* business process. The configurations of the *Offer* and *Employment Agreement* business processes need to mirror each other in order for data to flow down from *Offer* to *Employment Agreement* and onwards to *Staffing Events*. You can edit these details on *Employment Agreement* if desired.
How do you want to manage multiple offer tasks?	You can configure Workbooks to consolidate these steps into 1 task in My Tasks: • Offer Initiation • Review Offer
Who do you want to change information during the offer process?	Security domains enable you to control who can update information when initiating an offer.
How do you want to manage negotiations with candidates?	You can enable candidates to decline an offer directly from the Candidate Home. When you renegotiate an offer, the new offer uses the details from the original offer, even if you update the job requisition.
How do you want to update offer document details after a candidate accepts?	You can configure the regeneration of offer letters after you move a candidate into a staffing process. Example: When you update the hire date after you've moved the candidate to the *Hire* stage, you can regenerate a new offer document to send to the candidate.
Do you want to send other documents to candidates together with the offer letter?	You can configure the *Add Documents* step to the Offer business process. This action step

Questions	Considerations
	enables you to attach documents. Example: Health Insurance Package.
How do you want to populate offer information during high volume hiring? Example: Internships	You can configure condition rules and data fields on the Maintain Staffing Field Defaults task to populate these fields on an Offer during recruiting: • Hire Date • Contract End Date
Do you wish to include Compensation in the generated offer document?	Add Compensation to the *Offer* and *Employment Agreement* business processes. Compensation values added on the *Offer* step don't flow down to the *Employment Agreement* step.
Do you want to: • Renegotiate *Employment Agreement* • Run any other business process between *Offer* and *Employment Agreement.* Example: Background Check.	Remove this Entry Condition; *Allow Employment Agreement step if there is no prior Offer event*, from every stage of the *Job Application* business process where *Employment Agreement* is configured as a Next Possible Step.
Do you want to include these details on the offer document? • Compensation • One Time Payment • Stock Grants	Ensure to add the same details on to *Employment Agreement* so that they can flow down to: • *Staffing Events* • *Hire* • *Change Job.*
Do you wish to make corrections to an Offer?	If you make a Correct to Offer, the corrected *Offer* data will flow down to *Employment Agreement*. • Any subprocesses of *Employment Agreement* that haven't started will get corrected data from *Offer*. • Any subprocesses of the *Employment Agreement* that have started won't get corrected data from *Offer*. • Corrections made to *Employment Agreement* will update only the values on the *Employment Agreement*.
Do you want to report on Compensation in the context of an *Employment Agreement* or have Compensation in the generated employment agreement document?	Configure Compensation on the *Employment Agreement* business process.

Recommendations

Workday recommends that you don't configure *Offer* and *Employment Agreement* as parallel stages to each other. Initiating *Employment Agreement* first with *Offer* as a parallel stage will cause *Offer* not to initiate.

On the *Generate Document* step on the *Offer* business process, Workday bases the document language on the user's locale and language. We recommend you hide the Document Language field for offers.

Configure the *Make Offer Decision* step as the completion step on your *Offer* business process.

To propose establishments that will appear in offer letters, Workday recommends that you select the Allow Establishment on Employment Agreement/Offer check box on the Configure Establishment by Country task.

Use *Employment Agreement* instead of *Offer*, if you need to include these details but don't want to send an offer followed by an employment Agreement:

- Collective Agreement
- Probation Period
- Contract Details
- Notice Period

Workday recommends that you renegotiate *Offer* before you initiate *Employment Agreement*.

You can't go back to *Offer* or renegotiate *Offer* after you initiate the *Employment Agreement* step.

Requirements

Set up job requisitions to track job requirements and move candidates through the recruiting process.

Limitations

When consolidating tasks in a workbook:

- You can include a maximum of 200 offers.
- You can't consolidate delegated tasks.

If you remove mutual exclusivity between *Offer* and *Employment Agreement*, you can’t use the Maintain Staffing Field Defaults task to populate these details on *Employment Agreement:*

- Hire Date
- Contract End Date

On the *Approval* step of the *Offer* business process, when an approver sends back an item with a comment, Workday doesn't display that comment to the user who receives the item.

Tenant Setup

No impact.

Security

Domains	Considerations
Candidate Data: Offer Details in the Recruiting functional area.	Users can access a candidate's offer details and related documents. Only users with access to this domain can view the Compensation tab on the candidate's profile.
Candidate Data: Offer Initiation *Candidate Data: Offer Initiation Business Title* *Candidate Data: Offer Initiation Weekly Hours* in the Recruiting functional area.	Users can access these fields when initiating an offer: • Start Date • Location • Document Language • Business Title • Weekly Hours

Domains	Considerations
Candidate Data: One-Time Payment Offer in the Recruiting functional area.	Users can access a candidate's one-time payment details during the offer process. Example: Signing bonus.
Candidate Data: Stock Grant Offer in the Recruiting functional area.	Users can access a candidate's stock grant details during the offer process.
Candidate Data: Attachments in the Recruiting functional area.	Users can view documents on the Candidate Attachments tab on the candidate profile. Example: Stock plan policy.
Docs *Drive* in the System functional area.	Users can access Workday Docs to create templates for offer letters.
Manage: Candidates in the Recruiting functional area.	Users can update candidate statuses.

Business Processes

Business Processes	Considerations
Offer	Configure steps for: • Compensation. • Document generation and review. • Renegotiation of offers.
Job Application	Configure the *Offer* business process on the *Job Application* business process to enable renegotiation of offers.
Propose Compensation Offer/Employment Agreement *Request One-Time Payment Offer/Employment Agreement* *Request Stock Grant Offer/Employment Agreement*	Configure these business processes as part of the *Offer* business process. These business processes enable you to request and get approval for compensation plans, such as stock grants, and add them to compensation packages.
Regenerate Offer Documents	You can configure this business process to enable regeneration of offer documents.

Reporting

You can use the View Document Template Details report to view offer letter templates created with Workday Docs.

Integrations

You can use the *Offer* web service to initiate offers in bulk.

Connections and Touchpoints

Offers functionality interacts with these areas of Workday:

Features	Considerations
Career Sites	You can configure your career sites to enable candidates to respond to offers from Candidate Home.
Compensation	You can include and group compensation components together in your candidate offers.
Job Requisitions	Your offers use details from the job requisition that you initiate them from. When renegotiating an offer, the details come from the latest completed offer.
Workday Docs	You can configure Workday Docs to create templates for offer letters.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Tasks

Steps: Set Up Task Consolidation for Offers on page 493

Reference

2023R1 What's New Post: Offers and Employment Agreements Field Defaulting

Steps: Set Up Offers

Context

When you configure offers in Workday, you can:

- Group compensation components, such as base pay, stock grants, and one-time payments, as 1 task.
- Use security domains to control who can add and update specific information when initiating an offer.
- Create offer statuses to track candidates at different stages of the offer process.

If you enable the Additional Job Profiles field on job requisitions, you can also change the job profile associated with a requisition during the *Offer* stage for requisitions that have more than 1 profile.

If you select the Allow Establishment on Employment Agreement/Offer check box on the Configure Establishment by Country task, you can display the Establishment prompt on the Details section of *Offer* events.

If you propose an establishment in offer, the proposed establishment populates in the applicable staffing events.

Steps

1. Edit Domain Security Policies.

   Configure the security policies for these domains in the Recruiting functional area:

   - *Candidate Data: Offer Details*
   - *Candidate Data: Offer Initiation*
   - *Candidate Data: Offer Initiation Business Title*
   - *Candidate Data: Offer Initiation Weekly Hours*
   - *Candidate Data: One-Time Payment Offer*
   - *Candidate Data: Stock Grant Offer*
   - *Manage: Candidates*
2. Edit Business Process Security Policies.

   Configure these business processes and their security policies in the Core Compensation functional area:

   - *Propose Compensation Offer/Employment Agreement*
   - *Request One-Time Payment Offer/Employment Agreement*
   - *Request Stock Grant Offer/Employment Agreement*
3. Steps: Configure the Offer Business Process on page 491.
4. Create Segment-Based Security Groups.

   Configure the segment-based security groups that have access to the *Candidate Data: Offer Questionnaires* security segment.
5. Access the Maintain Offer and Employment Agreement Statuses task.

   These statuses display on the candidate profile, along with the candidate's current stage. Example: Offer - Verbal Offer Accepted.

   Security: *Set Up: Recruiting* domain in the Recruiting functional area.
6. Hide or Require Optional Fields.
   a) Configure the optional fields that display on candidate offers. Select 1 of these functional areas:

      - Recruiting > Offer
      - Recruiting > Offer Details Composite View

      If you configured the Generate Document step, we recommend that you hide the *Document Language* field in the Offer functional area. The Generate Document step sets the document language based on the locale and language settings of the user. Hiding the *Document Language* field simplifies the user experience.
   b) (Optional) Enable additional job profiles on job requisitions.

      Select the Pre-Hire Process > Job Requisition functional area.
7. Set up compensation components for the *Offer* business process and its subprocesses.

   See Steps: Set Up Compensation Components.
8. (Optional) Create One-Time Payment Plans.

   Set up one-time payment plans, such as referral bonuses or new hire grants.
9. (Optional) Configure stock plans for new hires.

   See Steps: Manage Stock Plans and Grants.
10. (Optional) Maintain Localization Settings on page 144.

    Configure these localized fields to display on *Offer* business process:

    - *Paid FTE (Worker)*
    - *Working FTE (Worker)*

Result

When a candidate moves to the *Offer* stage, Workday:

- Creates an *Offer* event.
- Sets the candidate's status to Offer.
- Creates a pre-hire record for the candidate.
- Sends tasks to My Tasks for the roles that need to take action on the next business process step you configured.

Next Steps

- Add *Offer* as a Possible Next Step on 1 or more stages of the *Job Application* business process.
- Set up task consolidation to enable users to work on multiple tasks at once from a workbook.
- Regenerate an accepted offer document.

Workday 2023R2 What's New Post: Establishment on Employment Agreement, Offer, and Staffing
Examples
Example: Correct and Regenerate an Offer Document on page 495

Steps: Configure the Offer Business Process

Prerequisites

- Configure the *Offer* business process security policy.
- Security: *Security Configuration* domain in the System functional area.

Context

You can configure the *Offer* business process to:

- Set a compensation basis.
- Request and get approval for stock grants or one-time payment plans, and add them to compensation packages.
- Get candidate endorsements from workers.
- Generate, send, and receive electronically signed documents.
- Renegotiate offers.
- Enable candidates to update their government IDs and personal information.
- Enable you to attach extra documents that you can send to candidates together with other generated documents.

You can also configure Workday to unpost jobs automatically once you've made an offer to a candidate.

Steps

1. Edit the *Offer* business process definition.

   Add 1 or more of these business processes as steps:

   - *Propose Compensation Offer/Employment Agreement.*
   - *Request One-Time Payment Offer/Employment Agreement.*
   - *Request Stock Grant Offer/Employment Agreement.*

   Configure the *Make Offer Decision* step as the completion step.

   See Steps: Configure Business Process Definitions.
2. (Optional) Access the View Business Process Template report.

   From the related actions menu of the Offer business process type, select Business Process-->Configure Consolidated Template to combine these compensation components into a single task:

   - *Propose Compensation Offer/Employment Agreement*
   - *Request One-Time Payment Offer/Employment Agreement*
   - *Request Stock Grant Offer/Employment Agreement*

   Security: These domains in the System functional area:

   - Business Process Administration
   - Manage: Business Process Definitions
3. (Optional) Add a *Review Offer* step.

   The Order of this step must be *b*.

   If you include this step in the *Offer* business process, Workday recommends that you omit the review step on these individual business processes:

   - *Propose Compensation Offer/Employment Agreement*
   - *Request One-Time Payment Offer/Employment Agreement*
   - *Request Stock Grant Offer/Employment Agreement*
4. (Optional) Configure Generated Documents.

   Add a *Generate Document* step to create an offer letter. You can create templates for offer letters using the Create Document task or Workday Docs. When you configure this step, you must select a Default Document from the Workday-delivered Offer category.

   To view offer documents, users must be:

   - Assigned to the *Review Documents* step.
   - Assigned as the Run as User on the *Review Document* step. You can only select users who are assigned to a user-based security group.
   - Secured to the *Candidate Offer Details* domain and belong to a document category security segment with access to the Workday-delivered Offer Letter and Offers document categories.
5. (Optional) Add the *Add Documents* step to enable you to attach extra documents that you can send to selected candidates. Example: Code of Conduct.

   Define a security group for the *Add Documents* step. Example: Recruiter.

   - Edit your *Configure Document Review* on the *Review Documents* step to include the documents from the *Add Documents* step.
6. (Optional) Add a *Review Documents* step to request candidates to view and electronically sign the offer letter.

   To ensure that candidates receive their offer letters, Workday recommends that you enable candidate email verification on the Edit Tenant Setup - Recruiting task.

7. (Optional) Select Business Process Policy > Edit from the related actions menu of the *Offer* business process.

   Enable document attachments for *Initiation* and *Action* steps when sending offer for approval internally. In the Attachment Setting in BP Toolbar section:

   a. Select Enable Attachments.
   b. Select which security groups have permission to view and edit attachments.

   Security: *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.

Next Steps

To regenerate an accepted offer document, configure the *Regenerate Offer Documents* business process and access the Regenerate Offer Documents task.

Examples

Example: Correct and Regenerate an Offer Document on page 495

Steps: Set Up Task Consolidation for Offers

Prerequisites

Set up offers.

Context

You can consolidate multiple tasks for these stages into a workbook to process them at one time:

- Offer
- Offer Review

You need to consolidate tasks for each stage separately.

Steps

1. Set up task consolidation for the *Offer* business process.

   See Steps: Set Up Task Consolidation.
2. (Optional) Set up task consolidation for Compensation subprocesses.

   See Set Up Task Consolidation for Compensation in Recruiting on page 1052.
3. Grant Modify access to security groups in these domains in the Recruiting functional area:

   Candidate Data: Offer Initiation

   Candidate Data: Offer Initiation Business Title

   Candidate Data: Offer Initiation Weekly Hours
4. Activate Pending Security Policy Changes

Next Steps

Access the Consolidate Tasks report to consolidate available tasks.

Related Information

Reference

2020R1 What's New Post: Task Consolidation for Review Offer

Example: Add Documents to Job Offer

This example illustrates how to configure the *Offer* business process so that you can attach documents to employment offers that display on the Candidate Home page.

Context

You want to include documents about your organization's health insurance package and stock options for workers along with the job offer to a successful candidate.

You need to add these steps on the *Offer* business process to enable you add and review the documents before sending them for managerial approval and on to the candidate:

1. Add Documents
2. Review Documents

Prerequisites

Security:

- *Candidate Data: Attachments* domain in the Recruiting functional area.
- *Candidate Data: Offer Details* domain in the Recruiting functional area.
- *Pre-Hire Data: Employment Agreement* in the Recruiting and Pre Hire Process functional areas.

Steps

1. Access the Edit Tenant Setup - Business Processes task.
2. Select the Enable Attachments check box.
3. Click OK and Done.
4. From the related actions menu of the *Offer* business process, select Business Process > Edit Definition.
5. Select current date from the Effective Date prompt.
6. Click OK.
7. On the Edit Business Process Definition section, add 3 rows to the Business Process Steps grid and enter these values:

Order	Type	Specify	Group
b	*Action*	*Add Documents*	*HR Administrator*
c	*Action*	*Generate Document*	*HR Administrator*
d	*Review Documents*		*HR Administrator*

8. On the Make Offer Decision step, set the step order to z.
9. Click OK.
10. Click Configure Generate Document Step.
11. Click OK.

12. On the Configure Generate Document Step task, enter these values:

Option	Value
Default Document	Select *Active Documents* then *Offer Letter Doc Gen*
Run As User	HR Administrator/Recruiter

13. Click OK and Done.
14. Click Configure Document Review.
15. Click OK.
16. On the Configure Review Document task, select *Today* from the Document Effective As Of prompt.
17. In the Documents section, select *Generate Document Step* then *c - Generate Document* from the Document prompt.
18. Click Add.
19. From the Document prompt, select *Add Document Step* then *b - Add Documents*.
20. Click OK and Done.

Next Steps

Move the selected candidate to the *Offer* stage and attach the health insurance package and stock options document for your organization.

Documents added to the *Offer* business process as attachments will display to candidates on Candidate Home in the order they become available to review. Documents that Workday generates using customizable templates are generated after standard documents. This ordering is dependent on how long the document takes to generate. Example: The health insurance package added using the *Add Documents* step may appear above the offer letter.

Related Information

Concepts

Concept: Add Documents Step

Reference

2023R1 What's New Post: Add Documents to Offers and Employment Agreements

Example: Correct and Regenerate an Offer Document

This example describes how to correct and regenerate an accepted offer document.

Context

You send an offer document that includes a hire date of August 27, 2030 to a successful candidate. The candidate signs and returns the offer document and you move the candidate to the *Hire* stage. The candidate later contacts you to request a hire date of September 27, 2030. You need to correct the date and regenerate another offer document for the candidate to review and sign.

Prerequisites

- Configure the *Regenerate Offer Documents* business process and security policy in the Recruiting functional area.
- Add the *Generate Document* followed by the *Review Document* steps to the *Regenerate Offer Documents* business process definition.
- Security: *Security Configuration* domain in the System functional area.

Steps

1. Access the candidate profile.
2. Select Business Process > Business Process Event History from the related actions menu.
3. In the Job Application field, select the job application for the candidate if they have more than 1 job application.
4. Click OK.
5. On the Process tab, select Business Process > Correct from the related actions menu on the *Offer* business process.
6. Change the Hire Date to 09-27-2030.
7. Enter a Comment to explain the update to the offer document.
8. Click Submit.
9. Select Business Process > Regenerate Offer Documents from the related actions menu on the *Offer* event.
10. Click OK.
11. Click Open to review the regenerated offer document.
12. Click Submit.

Result

Candidates can access the regenerated offer document on Candidate Home. If the offer is to a worker, the offer document goes to the worker's My Tasks.

Workday sends a notification to the candidate requesting them to review and sign the regenerated offer document.

Workday displays the regenerated offer document on the Attachments tab of the candidate profile.

Example: Set Up Offer and Employment Agreement for Same Job Application

This example illustrates how to configure the job application business process to enable you to send candidates an Offer letter followed by an Employment Agreement.

Context

As HR Administrator, you want to send an offer letter to a candidate informing them that you wish to hire them. After the candidate accepts the job offer, you want to send them a contractual Employment Agreement with these details:

- *Collective Agreement*
- *Contract Details*
- *Probation Period*
- *Notice Period*

You also want the candidate to sign both the offer letter and the employment agreement document. Both documents will be accessible on the candidate profile within Workday.

Steps

1. Access the *Job Application* business process.
2. Click View Dynamic Definition.
3. Select the Employment Agreement tab.
4. From the related actions menu of the Step on the Possible Next Steps section, select Business Process > Maintain Step Conditions .

5. On the Entry Conditionstab, remove the ***Rule*** *Allow Employment Agreement step if there's no prior Offer event.*

   Note: Workday recommends that you remove this tenanted rule *Allow Employment Agreement step if there's no prior Offer event.* from every stage where the *Employment Agreement* step is configured as a possible next step.)
6. Click OK and Done.
7. On the View Dynamic Business Process Definition page of the Job Application business process, click Edit Dynamic Definition.
8. Select the Offer tab.
9. Add a row on the Next Possible Steps grid and enter these values:

Specify	Group
Employment Agreement	*HR Administrator*

10. Click OK and Done.
11. Access the Offer business process.
12. From the related actions menu of the *Offer* business process, select Business Process > Edit Definition.
13. On the Edit Business Process Definition section, add 4 rows to the Business Process Steps grid and enter these values:

Order	Type	Specify	Group
b	*Action*	*Initiate - Pre Hire-Probation Period Details*	*HR Administrator*
c	*Action*	*Initiate - Pre Hire-Contract Details*	*HR Administrator*
d	*Action*	*Initiate - Pre Hire-Collective Agreement Details*	*HR Administrator*
e	*Action*	*Initiate - Pre Hire-Notice Period Details*	*HR Administrator*

14. Click OK and Done.
15. Access the Employment Agreement business process definition.
16. From the related actions menu of the *Employment Agreement* business process, select Business Process > Edit Definition.
17. On the Edit Business Process Definition section, add 5 rows to the Business Process Steps grid and enter these values:

Order	Type	Specify	Group
b	*Action*	*Initiate - Pre Hire-Probation Period Details*	*HR Administrator*
c	*Action*	*Initiate - Pre Hire-Contract Details*	*HR Administrator*
d	*Action*	*Initiate - Pre Hire-Collective Agreement Details*	*HR Administrator*

Order	Type	Specify	Group
e	*Action*	*Initiate - Pre Hire-Notice Period Details*	*HR Administrator*

18. Click OK and Done.

Result

If you move candidates from *Offer* to *Employment Agreement*, the values added during the offer stage will move down to employment agreement and onwards to *Staffing Events*. You can edit these details in *Employment Agreement* if desired.

Corrections made to *Employment Agreement* will update only the values on the *Employment Agreement* document.

Compensation plans added on *Offer* don't flow down to the *Employment Agreement* step.

Next Steps

After you initiate the *Employment Agreement* step, you can't revert to the *Offer* stage. You also can't renegotiate *Offer*.

Workday recommends that you renegotiate *Offer* before you initiate *Employment Agreement*.

2023R1 What's New Post: Offer and Employment Agreement Alignment

Onboarding Experience

Setup Considerations: Onboarding Experience

You can use this topic to help make decisions when planning your configuration and use of the onboarding experience. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday Onboarding Experience enables you to offer a personalized and engaging experience to new hires at defined stages of their transition from candidates to workers. The onboarding experience ensures new team members feel informed, connected, and prepared to succeed in their roles. You can use the onboarding experience for:

- New Hires
- Pre-Hires
- New Contingent Workers

Business Benefits

- Drives business success by ensuring new hires feel informed, prepared, and supported from the start.

- Builds a positive workplace culture and boosts confidence from day one.
- Reduces first-day no-shows, improves staff retention and lowers turnover costs.
- Improves productivity by helping new hires adapt to their tasks quickly.
- Strengthens employee engagement by fostering a sense of connection to the company culture.
- Enhances managers and HR efficiency by centralizing administrative tasks related to the creation and maintenance of onboarding.
- Supports the 4 core pillars of onboarding: connections, compliance, clarification, and culture.

Use Cases

- Bridge the gap between candidate and worker until they receive Workday access. Example: Provide videos about your organization's history, mission, and values.
- Send a welcome message to keep new hires excited about their new role and reduce the risk of ‘no shows’.
- Give new hires access to forms and documents to review and complete.
- Collect essential documents. Example: Signed offer letters or identification documents.
- Set up payroll, benefits, and other compliance requirements using business process tasks
- Provide ongoing support and resources to help new hires integrate successfully. Example: Connect them with a co-worker.

Questions to Consider

Question	Considerations
How do you want to set up the Onboarding Plan service?	To configure when Onboarding Plans become available to new hires, you can setup the Onboarding Plan Assignment as a step on these business processes: • *Contract Contingent Worker* • *Employment Agreement* (Recruiting customers only) • *Hire* • *Offer* (Recruiting customers only)
Do you need unique onboarding plans for different onboarding groups?	You can use the Maintain Onboarding Plan Audiences task to assign plans to audiences. You can create Audiences using condition rules to send individualized content to groups of new starters based on set criteria.
Do you want to manually assign onboarding plans?	You can also use the Assign Onboarding Plan task to manually assign an onboarding plan outside of a business process. The onboarding plan assignment respects the plan audience configuration, which means you cannot manually select a specific plan for a person. However, you can select a person, and if the person has multiple eligible events, Workday will prompt you to select the correct event.
Do you want to inactivate an onboarding plan?	You cannot inactivate Onboarding Plans but you can inactivate specific plan assignments. You can use the Inactivate Onboarding Plan Assignment task to inactivate a plan assignment.

Question	Considerations
	You can also inactivate a plan assignment from the related actions menu for a specific plan assignment. You can use this task to rectify an incorrect plan assignment. A user can have only one active plan assignment. You must inactivate a plan assignment before reassigning another one.

What type of onboarding content do you wish to create for your onboarding audience?	You can use the Create Onboarding Content task to create:
	
	• You can create a Day 1 Overview Card and add it to an Onboarding Plan providing the new joiner with the key information they need in advance of their first day. You can include these details on the Day 1 Overview Card:
	    • Work Location
	    • Work Location
	    • First Day Start Time
	    • Orientation Location
	    • Orientation Start Time
	    • Instruction Overview
	    • Orientation Facilitator
	
	You can manually enter the information on each section of the card or use an External Field.
	
	For external fields you can create a Calc Field to get to specific information from any of these business objects:
	
	• Job Application
	• Job Requisition
	• Supervisory Organization
	
	• You can create a Message that will default to a Highlight when configuring an Onboarding Plan. This can be:
	    • A welcome message
	    • A message providing context on the organization or their new role.
	
	    To keep these messages short and engaging within the Highlights experience, Workday limits the messages to 228 characters for the body, and 36 characters for the title.

Question	Considerations

	• You can create a Video that you can add to the You Might Be Interested In slider on the Onboarding Plan or as a Highlights.
	
	Highlights enable you to spotlight videos or messages to improve engagement with onboarding content.
	
	Only video titles, limited to 36 characters, are shown in Highlights.
	
	You can use the You Might Be Interested In slider to showcase longer, optional video content with descriptions on videos limited to 240 characters.
	
	There is no length limit to the videos but Workday recommends using shorter videos in Highlights to improve engagement. New hires can view the Highlights and You Might Be Interested In videos multiple times within their plan.
	
	For recommended guidelines on uploading videos, see the Media Cloud documentation:FAQ: Uploading and Viewing Videos
	
	You can create an Announcement to include in an Onboarding Plan. You can embed links, custom reports, messages, images and videos into Announcements which will feature on the onboarding plan, allowing new hires to engage with multiple content types.
	
	• You can configure Notifications for each stage of the Onboarding Plan to let new hires know when new content is available.
	• Access the Edit Tenant Setup-Notifications task to configure routing rules to deliver Notifications using:
	  • Email
	  • SMS (Workday Messaging customers only)
	• You can use notification templates in Workday Notification Designer to customize Email notification with your organization's branding.
	
	You must have Workday Notification Designer enabled to use Email notifications with Onboarding.
	
	Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Please reference this Community Announcement for more information.

Question	Considerations
How do you want to inform new hires about new onboarding content?	You can create an Onboarding Card to show on the Workday homepage to help new employees track their onboarding progress and quickly access their plans.
Do you want to display Required Learning content to new hires?	You can use the Maintain Onboarding Section Configurations task to display the Required Learning for You section on onboarding plans. In this section you can display preconfigured learning content using up to 20 cards, making it easy for new hires to access and complete essential training. To display content on the Required Learning for You section, you need to: • Configure Required Learning. • Assign Required Learning items to the person receiving the onboarding plan. Note: Requires the Learning SKU.
Do you want to help new hires build connections by suggesting coworkers during onboarding?	You can use the Maintain Onboarding Section Configurations task to display the Connect with a Coworker section on onboarding plans. This section leverages machine learning to suggest colleagues for the new hire to connect with, helping them build relationships, navigate their new environment, and feel part of the team quickly. Note: Requires the Talent Optimization SKU.
Do you want to help new hires stay on track and engaged by displaying Journeys during their onboarding?	You can use the Maintain Onboarding Section Configurations task to display the Journeys for You section on onboarding plans. Journeys organize key tasks and resources into a single, easy-to-navigate space, helping new hires access what they need quickly, stay on track, and remain engaged during their first weeks and beyond. This personalized experience helps them build confidence from day one and navigate their onboarding more effectively. Note: Requires the Journeys SKU.
Do you want to use your organization's branding?	You can use the Create Onboarding External Brand task to maintain consistent branding for external preboarding by uploading your organization's: • Logo • Banner. See the Recruiting Career Site documentation for recommendations on best sizing for these images: Setup Considerations: Branding for External Career Sites Internal Onboarding experience takes its branding from Tenant branding. See recommendations for

Question	Considerations
	image sizing: Reference: Recommended Image Sizes for Tenant Branding
Data Purging	You use the Has Active Onboarding Plan Assignment report field on the *Job Application* and *Candidate* business objects to purge the candidate or the candidate job application or both.
Do you want to dynamically generate and distribute documents to New Hires?	You can configure the Generate Document action step in the *Onboarding* business process to use documents dynamically created with Workday Docs. You can then use the Review Document step to distribute these documents to new hires during onboarding. Example: Offer letters.

Recommendations

If you're using both External Preboarding and the Internal experience, Workday recommends that you configure audience condition rules for both the job application and the worker to ensure new hires retain access to content when they become workers. Once a worker exists, Workday ignores job application rules and uses only worker audience condition rules. (Recruiting customers only)

Requirements

External preboarding relies on the use of an external career site. (Recruiting customers only) Onboarding can be used on these business process:

- *Employment Agreement* (Recruiting customers only)
- *Offer* (Recruiting customers only)

Limitations

- New hires can only move forward in their onboarding plan and cannot navigate back to previous stages.
- Not supported for these business processes:
    - *Change Job*
    - *Add Additional Job*
    - *Start International Assignment*
- Not supported on native mobile app.

Tenant Setup

There are two Onboarding tasks used to access the existing Onboarding Dashboard and Onboarding Plans (from global search or homepage menu items). One is conditional and impacted by the Disable Onboarding Dashboard check box on the Edit Tenant Setup - HCM task, while the other will always point to the existing Onboarding Dashboard.

For the conditional task, when you leave the Disable Onboarding Dashboard check box unselected, Workday directs users with an active Onboarding Plan Assignment, or users that have ever had an active Onboarding plan including rehires, to the new Onboarding Plan homepage. Users without an assignment will continue to see the existing Onboarding Dashboard.

When you select the Disable Onboarding Dashboard check box, Workday directs all users to the new Onboarding Plan homepage.

- For users with no active plan and who have never had a plan, when the Disable Onboarding Dashboard check box is not selected:
  - Both static and dynamic tasks direct to the existing Onboarding Dashboard.
- When the Disable Onboarding Dashboard check box is selected:
  - The static task directs to the existing Onboarding Dashboard.
  - The dynamic task directs to the new Onboarding Experience.
- For users with an active plan or who have ever had a plan including rehires, when Disable Onboarding Dashboard check box is not selected:
  - The static task directs to the existing Onboarding Dashboard.
  - The dynamic task directs to the new Onboarding Plans experience.
- When the Disable Onboarding Dashboard checkbox is selected:
  - The static task directs to the existing Onboarding Dashboard.
  - The dynamic task directs to the new Onboarding Experience.

Security

Domain	Considerations
Set Up: Onboarding	Enables Administrators to access tasks on the Onboarding Planner.
Self Service: Onboarding	• Enables external Pre-Hires access to external pre-boarding self service tasks. [Recruiting customers only] • Enables Pre-Employees and Pre-Contingent Workers access internal Onboarding Plan tasks before Day 1. • Enables Workers and Contingent workers to self service Onboarding Plan tasks from Day 1.
View: Onboarding Plans Preview	Enables users to preview configuration of Onboarding Plan details for a person or Plan Assignment.
Manage: Onboarding Audience Condition Rules	Enables users to manage condition rules for audiences for Onboarding Plans.
Worker Data: Onboarding	Enables access to reports associated with onboarding plans.

Business Processes

You can configure the Onboarding Plan Assignment service step to these business processes to establish the starting point point from which an Onboarding Plan can be made available to new hires:

- *Contract Contingent Worker*
- *Employment Agreement* (Recruiting only)
- *Hire*
- *Offer* (Recruiting only)

When a new hire reaches a stage in a business process with a configured Onboarding Plan Assignment, step they are immediately:

- Assigned their Onboarding Plan Assignment.
- Placed into the most recent eligible stage you have configured.

- Receive any eligible notifications configured for that stage.

A new hire will only have access to one active onboarding plan at a time. Workday will grant access to this plan once the new hire reaches the first configured stage.

Reporting

Reports	Considerations
Onboarding Plan Assignments	You can use this report to get an overview of onboarding plan assignment details for workers or pre-hires assigned the plan
Onboarding Business Process Status Summary	Managers can use this report to view a summary of a recently hired worker's onboarding status for a supervisory organization. Example: The worker's contact information, hire date, position, hiring manager, and the status of their Onboarding business process.
Onboarding Advisories	You can use this report to address potential issues during the onboarding process, such as any new worker or pre-hire that may be missing an onboarding plan assignment.

Integrations

No impact.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Tasks

Set Up Onboarding Planner on page 505

Examples

Workday Community:Contributed Solution-General Configuration Guide.

Workday Community:Contributed Solution-Day 1 Card Configuration

Set Up Onboarding Planner

Prerequisites

Configure the *Set Up: Onboarding* domain in the Onboarding functional area.

Context

You can use the Onboarding Planner to configure and maintain onboarding plans for your new hires.

Steps

1. Access the Onboarding Planner report.

2. Complete the task:

<table>
<tr><th>Option</th><th>Description</th></tr>
<tr><td>Overview</td><td>You can use the Maintain Hubs task to personalize the Onboarding Planner landing page with:
Custom Reports
Announcements
External Links</td></tr>
<tr><td>Plans</td><td>You can use the Create Plan task to create an Effective-Dated Onboarding Plan with a unique name and specify the number of days you want the plan to remain active.
You can Add up to 10 Onboarding Stage instances per plan and configure a Stage Trigger to determine when the plan is delivered to the new hire relative to the Hire Date.
You can add Notifications that trigger for a specific Audience at a specified stage.
You can use the Maintain Sections task to display or hide on onboarding plans for new hires:
Required Learning for You

You can enable this section to display preconfigured required learning content directly on the onboarding plan.

Note: Requires the Learning SKU.
Connect with a Coworker

You can enable this section to leverage machine learning to suggest colleagues for the new hire to connect with.

Note: Requires the Talent Optimization SKU.
Journeys for You

You can enable this section to display Journeys content on the onboarding plan.

Note: Requires the Journeys SKU.
You can use the Examine for Issues button to run the Examine for Onboarding Issues task to identify and correct misconfigured onboarding plans before they are assigned, helping reduce errors and ensure a smoother onboarding process. Example: Misconfigured security settings.</td></tr>
</table>

Option	Description
Audiences	Access the Maintain Onboarding Plan Audiences task to assign plans to audiences and set the plan hierarchy. You can create Audiences using condition rules to send personalized Onboarding Plans and individualized content to groups of new starters based on set criteria. Example: Region or Job Area. Maintain Audiences: You can create Audiences that you can use at both plan and content level for more granularity. You can create and select the rules from the Condition Rules prompt: • You can create *Job Application Condition Rules* to target new joiner access content as pre-hires through the External Preboarding site (Recruiting customer only) • You can create *Worker Condition Rules* for new joiners accessing content as Workers or Contingent Workers internally once they receive a Workday account. Audience Selection: You can assign Audiences to an Onboarding Plan. Note: If you're using both the External Preboarding and the internal experience, configure audience rules for both job application and worker to ensure new hires retain access to content when they become workers. Once a worker exists, only Worker audience condition rules are used and Job Application rules are ignored. (Recruiting customers only)
Content Library	You can use the Create Content task to create these types of content for Onboarding Plan: • Onboarding Announcement • Onboarding Bulletin • Onboarding Card • Onboarding Message • Onboarding Video Onboarding Card: You can create a Day 1 Overview Card and add it to a plan providing the new joiner with the key information they need in advance of their first day. You can include these details on the Day 1 Overview Card: • Work Location • First Day Start Time • Orientation Location

Option	Description
	• Orientation Start Time • Instruction Overview • Orientation Facilitator You can use Audience and Condition Rules to localize the content on the Day 1 Overview Card. You can also manually enter values for each field or use a dynamic External Field. You can also configure a custom object for Job Application or Worker to manage these values. You can also create Calculated Fields to get specific information from business objects. Example: Job Application. Onboarding Message: You can create a Message that will default to a Highlight when configuring an Onboarding Plan. This can be a welcome message, a message providing context on the organization or their new role. Onboarding Video: You can create a Video that you can add to the You Might be Interested In slider on the Onboarding Plan or as a Highlight. • Onboarding Announcement: You can create an Announcement to include in an Onboarding Plan. Note: Custom Reports and Tasks will not display in External Preboarding even when configured. Worker photos will display to external users with access to the Person Data: Personal Photo domain. (Recruiting customers only). You can use the task Copy Onboarding Dashboard Announcements to Onboarding Plan Announcements to select and copy existing Announcements that you have configured in the Onboarding Dashboard. Onboarding Bulletins: You can use the Create Onboarding Bulletin task to create a Bulletin as a new content type that you can use to ensure new hires access the content you want to make prominent in their onboarding plans.
Notifications	You can use the Create Notification task to set up notifications for each stage to let new hires know when new content is available. Access the Edit Tenant Setup-Notifications task to configure routing rules for the notifications.

Option	Description

	Enter Onboarding Plan Notifications under HCM for Email or SMS. (Workday Messaging customers only)
	
	Create and publish a Notification Template for Email notifications from Drive using the Onboarding Plan Notifications category.
	
	• You can use Notification Templates in Notification Designer to customize Email notification with your organization's branding.
	• You can link the new hire to their Onboarding Plan using any of these report fields:
	    • Onboarding Plan URL
	    • Onboarding Plan Day 1 Overview URL
	
	You can also create Calculated Fields to get specific information from business objects. Example: Job Application.
	• You can use report fields to personalize notifications for both Email and SMS, reducing the need to create multiple notifications.
	• You can use the using the Notification Events for Onboarding Plan Assignment report field to report on notifications.

Branding	You can use the Create External Branding task to upload your organization logo and banner for consistent branding for your Onboarding Plan in external preboarding. Once the new hire has tenant access, they will see tenant branding, which may differ from External Branding.
Reports	• The Onboarding Business Process Status Summary report enables you track recently hired workers' task completion status . • The Onboarding Plan Assignments report provides an overview of onboarding plan assignments for a worker or pre-hire. • The Onboarding Advisories report enables you address potential issues during the onboarding process. Example: A new worker or pre-hire missing an onboarding plan assignment.
Additional Configurations	Provides insights into business process definitions for: • Onboarding

Option	Description
	• All business processes that can be used to assign the Onboarding Plan to a new hire

Result

An onboarding administrator will be able to create and manage customized onboarding plans for new hires. The administrator can add relevant content, assign tasks, and configure when content is made available to new hires to ensure a structured experience.

Examples

Workday Community:Contributed Solution-General Configuration Guide.

Workday Community:Contributed Solution-Day 1 Card Configuration

Steps: Set Up Workday Docs for Onboarding

Prerequisites

- Set Up Security for Drive for all users who create, edit, or view Docs templates.
- Security: *Security Configuration* domain in the System functional area.

Context

You can configure the Generate Document action step in the *Onboarding* business process to use documents dynamically created with Workday Docs. Then, you can use the Review Document step to distribute these documents to new hires during onboarding.

Steps

1. Create security groups for users who will be working with Docs templates, such as HR Administrators, and users who will be generating documents, such as recruiters.
2. To create Document Generation templates, configure these domains in the System functional area:
   - *Drive*
   - *Docs*
3. Access the Edit Tenant Setup – System task and configure DWXF as a supported file type.
4. Access Drive and select Document Template to create and publish your document templates.
5. On the Configure Document page, on the Select Source prompt, select *Onboarding* .
6. On the Select Category prompt, select *Onboarding* .
7. Click Create.

   Customize your Document Template. You can use the Insert Data Field section to search and add fields. Example: Legal Name.
8. Click Publish to save your template.
9. Access the *Onboarding* business process definition.
10. From the related actions menu of the *Onboarding* business process select Business Process Edit Definition and enter the Effective Date.
11. Click OK.

12. On the Business Process Steps tab, add a row and enter these details:

Order	Type	Specify	Group
b	Action	Generate Document	HR Administrator
c	Review Documents		HR Administrator

13. Click OK.
14. Click Configure Generate Document Step and on the Default Document prompt, select your Document Template from Drive Documents.

    On the Run As User prompt, select *Business Process Administrator* or the user that has been setup for the business process.
15. Click OK and Done.
16. Click OK and Done.
17. Click Configure Review Document Step and on the Document prompt, select Generate Document Step and select the appropriate Signature Options and Attachment Options.
18. Click OK and Done.

Result

When you Launch Onboarding for a new hire, they receive the Document Template you specified in the Generate Document step. They can then review the document, acknowledge it, and electronically sign it based on the Signature Options you selected.

Tasks

Steps: Set Up Workday Docs for Onboarding on page 510

Examples

Workday Community:Contributed Solution-General Configuration Guide.

Workday Community:Contributed Solution-Day 1 Card Configurationy

Concept: Onboarding Experience

With Workday Onboarding Experience, you can create a personalized and engaging experience for new hires at different stages of their journey from candidates to workers. This ensures that new team members feel informed, connected, and ready to succeed in their new roles.

Preboarding

This is the stage between Offer and the first day. Preboarding focuses on bridging the candidate and worker experience.

External preboarding is conducted outside of the Workday tenant using the Candidate Home login credentials. Example: When a candidate has an active plan assignment, they will see the Onboarding button on the candidate home page to be able to review information about their Day 1 activities, or view a video about the organization's culture, before their start date. Once the candidate has reached their Hire Date, or they have logged into their Workday tenant for the first time, the preboarding site will show a message to direct them to the Workday tenant for Onboarding (see below).

Internal preboarding is conducted within the Workday tenant using Workday credentials. Example: A new hire uses their Workday and organization login credentials to complete their Payment Elections task, before their start date.

You can provide your new hires with login credentials before their Day 1.

Onboarding

Onboarding is a continuation of the pre-boarding experience, delivering onboarding content to the new team members within the Workday tenant.

Onboarding Plan

The Onboarding Plan surfaces tasks configured in the Onboarding business process, for new hires to complete and track their progress of onboarding tasks. You can use the Onboarding Plan to deliver content in stages over a configurable period of time, so as not to overwhelm your new team members.

Workday provides an entry point to the Onboarding Plan from the Workday homepage using a configurable onboarding card.

Onboarding Planner

The Onboarding Planner is a centralized space for onboarding administrators to configure and manage Onboarding Plans and related content.

Onboarding Stage

A configured period of time, in relation to the hire date, that shows the new hire defined content on their Onboarding Plan Assignment.

Onboarding Plan Assignment

An Onboarding Plan Assignment is a structured series of tasks assigned to individual new hires with content that they must review and complete during their onboarding process. Depending on your business process configuration, these tasks can have target due dates to ensure timely completion. Example: An Onboarding Plan Assignment can include any or all of the following:

- First-day office tour and workspace setup using a Day 1 Card.
- Job-specific training modules, product or service knowledge training, and company culture immersion activities using Videos.
- Compliance tasks using *Onboarding* business process tasks.
- New hire-specific content delivered as a message, link, or video using an Announcement.
- Company culture immersion information delivered as a short message or video using a Highlight.

Workday Community:Contributed Solution-Day 1 Card Configuration

FAQ: Onboarding Experience

When can you not modify an onboarding stage?	You can’t change stage triggers or delete a stage after you have assigned an onboarding plan to an individual. Changing the stage trigger or deleting a stage could disrupt the individual’s progression through a plan.
What if the Hire Date changes? Will the new hire receive a new preboarding plan?	Any stages that the new hire has already reached will stay unchanged, but future stage triggers will adjust based on the new hire date.

Can you go back to a previous stage?	No, you can only move forward through onboarding stages. To ensure new hires don't miss important content, use the Content Available Until End Of field. This allows you to set a specific number of days to keep content accessible, so it remains available for review throughout multiple stages of their onboarding. You can configure this using a related action from the stage content after setting up the stages .

Workday Community:Contributed Solution-Day 1 Card Configuration

Staffing

Setup Considerations: Staffing

You can use this topic to help make decisions when planning your configuration and use of key staffing features. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Staffing features in Workday enable you to create jobs, manage your workforce, and report on a range of employment details to guide decisions in your organization.

Business Benefits

With staffing features, you can:

- Flexibly manage employees during onboarding, job changes, additional jobs, assignments, and termination.
- Report on a range of details to inform your decisions.
- Track staffing and employment details that your organization requires.
- Track and generate contracts and agreements to help comply with regulatory requirements.
- Process staffing events in bulk, such as hires and terminations, reducing manual effort.

Use Cases

You can use staffing features to:

- Create a job catalog to group your jobs into families.
- Create job requisitions to track requirements for positions.

- Hire employees and contingent workers into jobs and positions.
- Transfer, promote, or change job details for workers.
- Create employment agreements to outline conditions of employment for pre-hire contracts.
- Create and renew contracts for employees.
- Assign country-specific notice periods and probation periods to employees.
- Set up unions and assign collective agreements to employees.
- Manage headcount through headcount plan reports.
- Terminate employees or end contingent worker contracts.
- Manage retired employees.

Questions to Consider

Questions	Considerations
How do you want to fill job openings in your organization?	Workday enables you to fill jobs and positions using these staffing models: • Job management • Position management Position management provides greater control over hiring and enables you to define hiring requirements for each position. Position management is a useful staffing model to use if your organization prefers defining detailed job requirements. Job management hiring requirements apply to all jobs in the supervisory organization. There are also no limits on the number of jobs that you can fill. Job management is a useful staffing model to use if your organization defines broad job requirements. Certain features are only applicable to 1 staffing model. Example: You can only swap positions for workers in the position management staffing model.
How do you want to organize your job profiles?	You can set up a job catalog to create job profiles that define characteristics for jobs and positions. When you want to group related job profiles, you can create job families. You can also group related job families into job family groups. Workday can populate downstream businesses with details from the job profile. You can also create eligibility rules based on job details. You can use management levels to categorize job profiles based on management types or compare similar roles across an organization.
How do you want to manage employees with multiple jobs?	You can enable multiple jobs, international assignments, and domestic assignments to place an employee with a primary job or position into another job or position.

Questions	Considerations
	Workday populates many fields for the additional job from the position or job requisition. If you use job requisitions, you can't change those fields on the additional job because you must update the job requisition instead. Workday Payroll for the UK and Workday Payroll for France don't support multiple jobs.
How do you want to assess candidates for a job or position?	If you use Workday Recruiting, you can use job requisitions to assess candidates that you're hiring. If you don't use Workday Recruiting, you can use job requisitions for employment agreements to outline employment requirements for new hires and internal candidates changing jobs.
How do you want to manage job changes for employees?	You can create simplified job changes for initiators using the templates for the *Change Job* business process. You can also configure Workday Assistant to help complete job changes.

Recommendations

To improve user experience, Workday recommends that you hide or enable:

- Optional fields on the Configure Optional Fields task.
- Localized fields on the Maintain Localization Settings task.

Requirements

Set up a single staffing model for each supervisory organization.

Limitations

After you assign a worker to a supervisory organization, you can't change the staffing model.

If a step is secured by the Employee as Self security group, but the assigned user has a future hire date, the task is unassigned. A task can also be unassigned if the assigned user's Workday Account is disabled, expired, or locked, or if the assigned user has no Workday Account to view their notification or complete their assigned step. To resolve this issue, you must:

- Access the Unassigned Tasks report to view steps with unassigned tasks.
- Add the Pre-Employee as Self security group to the step.

Tenant Setup

Access the Edit Tenant Setup - HCM task to enable:

- Management levels and job hierarchies.
- Multiple jobs for employees.
- Overlap between jobs.

Security

Configure these domains in the Staffing functional area:

Domains	Considerations
Self-Service: Staffing Reports	Enables users to access reports with their employment details.
Set Up: Staffing	Enables users to set up features such as: • Collective agreements. • Employee contracts. • Staffing models. • Terminations.
Staffing Actions	Enables users to manage staffing data in business processes.
Worker Data: Staffing	Enables users to access staffing data.

Business Processes

Business Processes	Considerations
Add Additional Job	Enables you to place an employee with a primary job or position into another job or position when using multiple jobs functionality. You can enable autocomplete for this business process to complete events that initiate from Workday Recruiting automatically.
Change Job	Enables you to manage job changes such as promotions, job detail changes, and transfers. You can enable autocomplete for this business process to complete events that initiate from Workday Recruiting automatically.
Change Organization Assignments	Enables you to change organization assignments. You can enable autocomplete for this business process.
Contract Contingent Worker	Enables you to hire contingent workers into open positions and optionally create purchase orders. You can enable autocomplete for this business process to complete events that initiate from Workday Recruiting automatically.
Create Position	Enables you to create positions for the position management staffing model. You can enable autocomplete for this business process.
End Contingent Worker Contract	Enables you to end a contingent worker's contract. You can also create a mass actions workbook to initiate ending contingent worker contracts in bulk.
Hire	Enables you to hire pre-hires or former workers into jobs or positions in your organization. You can enable autocomplete for this business process to complete events that initiate from Workday Recruiting automatically.
Hiring Restrictions	Enables you to set hiring restrictions for the job management staffing model.

Business Processes	Considerations
Termination	Enables you to manage terminations for employees. You can also create a mass actions workbook to initiate terminations for employees in bulk.

A subset of staffing business processes supports Workday Docs to create document templates for worker documents.

Reporting

Reports	Considerations
Active Employees	View employment details for all active employees in all organizations.
All Contingent Workers	View all employment details for contingent workers.
Critical Open Positions	View unfilled critical positions by supervisory organization.
Headcount Analysis	View headcount by supervisory organization.
Position Summary	View information about all positions in your organization.
Worker's Job History	View the job history for 1 or more workers.

Integrations

Web Services	Considerations
Add Additional Job	Enables you to add additional jobs for workers when they have multiple jobs.
Change Job	Enables you to perform changes for workers when they change jobs, job details, or location.
Change Organization Assignments	Enables you to change the organizations that are assigned to workers.
Contract Contingent Worker	Enables you to hire contingent workers for contracts.
Create Position	Enables you to create positions for the position management staffing model.
End Contingent Worker Contract	Enables you to end contracts for contingent workers.
Hire Employee	Enables you to hire pre-hires into jobs or positions.
Set Hiring Restrictions	Enables you to set hiring restrictions for jobs in the job management staffing model.
Terminate Employee	Enables you to terminate employees.

Connections and Touchpoints

Features	Considerations
Absence	You can configure absence rules and calculations based on employment and position data to determine absence plan eligibility.
Benefits	You can configure benefit eligibility rules based on employment, position, and organization data. Organizations can also impact security for ESS.
Budgets	Job families, job family groups, or job profiles can determine the plan structure in financial budgets and position budgets. Position budgets only support the position management staffing model. Financial budgets support both position and job management staffing models.
Compensation	You can configure compensation eligibility rules based on employment and position data to determine compensation plan eligibility.
Expenses	If you deploy Expenses after HCM, you might require changes to management levels. Management levels can determine routing and approvals for business processes related to Expenses.
Payroll CAN Payroll FRA Payroll UK Payroll US	Your configuration of staffing components, such as organization assignments and positions, have a significant impact on Payroll products. Workday recommends that you review the Workday Touchpoints Kit for your Payroll product.
Procurement	You can use Procurement to track and manage contingent workers, their expenses, and business assets assigned to your workforce.
Recruiting	Recruiting uses job requisitions that represent an organizational document to request a new hire. You can require a job requisition for all position management staffing events, conditionally require them based on rules, or not require job requisitions. Job requisitions support both the position and job management staffing models.
Succession Planning	You can link job profiles and job families to competencies. Succession plans are also linked to positions.
Time Tracking	You can configure time tracking eligibility rules based on employment and position data to determine working time calculations.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Concept: Autocomplete Business Processes

Tasks

Steps: Set Up Workday Docs

Reference

Reference: Staffing Model Comparisons on page 586
Reference: Business Processes That Support Workday Docs

Setup Considerations: Autocomplete Staffing Events

You can use this topic to help make decisions when planning your configuration and use of autocomplete for staffing business processes. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

You can enable autocomplete on these business process definitions to automatically complete hire events or job changes that initiate from Workday Recruiting:

- *Add Additional Job*
- *Change Job*
- *Contract Contingent Worker*
- *Hire*

Once a candidate is *Ready for Hire*, Workday attempts to complete the event initiation step and the rest of the business process. Any steps that can't autocomplete route normally.

Business Benefits

You can use autocomplete to streamline the flow from Workday Recruiting to staffing business processes. This configuration reduces manual labor and errors because you only need to enter information once when hiring a candidate.

Autocomplete also decreases the number of tasks in My Tasks for managers and administrators to complete by skipping some parts of the parent event, including:

- Approval
- Batch/Job
- Checklist

- Complete Questionnaire
- Edit Additional Data
- Report
- Report Group
- Review action step
- To Do

When you enable autocomplete on a business process definition, you can select which steps you want to route normally. Integrations and service steps always route normally.

Use Cases

You can autocomplete external and internal hires from Workday Recruiting. Autocomplete helps you more easily fill positions that don't usually require additional information or manual input, such as:

- High-volume hires.
- Retail positions.
- Seasonal positions.

Questions to Consider

Questions	Considerations
What information do you need in order to hire a worker in your organization?	Autocomplete uses fields entered in Workday Recruiting and Staffing Field Defaults. When a hire event requires fields that don't populate from one of these sources, the event can't autocomplete. Instead, Workday reverts to the normal routing configured in the staffing business process definition. You can create rules to ensure that required staffing fields have values when you opt into and configure the Staffing Field Defaults feature. Test populating fields thoroughly to ensure that they provide the correct values for business processes that you want to autocomplete.
How do you want autocomplete to affect your staffing subprocesses?	You can enable autocomplete on these staffing subprocesses: • *Assign Employee Collective Agreement* • *Assign Pay Group* • *Change Organization Assignments for Worker* • *Edit Notice Periods* • *Employee Contract* • *End Payroll Inputs* • *Manage Probation Period* • *Propose Compensation Change* • *Propose Compensation Hire* • *Request One-Time Payment* • *Request Stock Grant* All other subprocesses route normally. Subprocesses with autocomplete enabled will attempt to autocomplete every time data is

Questions	Considerations
	available and valid for all fields. To prevent these subprocesses from autocompleting, you can use separate business process definitions without autocomplete enabled. The details of your autocomplete configuration depend on the subprocess. Example: You enable autocomplete on the *Employee Contract* business process definition. To complete the subprocess automatically, you must also configure a default contract status for the relevant parent business processes.
Do workers in your organization have multiple jobs?	When you have multiple jobs enabled in your tenant, autocomplete doesn't skip the staffing action to select *Change Job* or *Add Additional Job* for internal hires. Once the staffing action is complete, the selected business process will attempt to autocomplete normally.
Do you want to ensure that only some events autocomplete?	You can use rule-based business process definitions to specify which events should autocomplete. Example: Your retail store enables autocomplete for hiring cashiers, but not for a vice president, who is more likely to need additional manual input.
Do you use consolidated templates for your *Change Job* business process definitions?	You can only autocomplete a consolidated *Change Job* business process definition when all consolidated subprocesses are also configured to autocomplete. Example: You enable a consolidated *Change Job* business process definition to autocomplete. You decide not to configure the *Propose Compensation Change* subprocess to autocomplete, so you remove it from the consolidated template. When any subprocess on the consolidated template fails to autocomplete, the parent process also fails to autocomplete.
Do you want to alter your recruiting timeline to incorporate autocomplete functionality?	When you move a candidate into *Ready for Hire* status, Workday attempts to autocomplete the event instantly. You might want to modify your current recruiting process to account for this change in the hiring timeline. Example: You normally move candidates to *Ready for Hire* as soon as the recruiting process completes. To retain flexibility when you enable autocomplete, you modify your processes to move candidates to *Ready for Hire* within a week of their Hire Date.
Do you use the *Offer* business process in your organization?	The hire event populates the Hire Reason using information entered in the *Offer* business process. When you don't use the *Offer* business process:

Questions	Considerations
	• Ensure that the *Hire* business process doesn't require a Hire Reason. • Workday populates the Hire Date for the hire event from the Target Hire Date on the job requisition.

Recommendations

- Because autocomplete can remove approvals and other verifying steps, configure autocomplete only for events that aren't likely to need additional information or manual input.
- Because job changes always require a hire reason, configure the *Offer* business process to require the Hire Reason field. This configuration ensures that recruiters always complete the field.
- If you add additional jobs from Recruiting, ensure that you select Multiple Jobs as the position setup option in the Edit Tenant Setup – HCM task.
- If you would like skipped steps to run even when an event successfully autocompletes, Workday recommends that you configure the Route Normally prompt for business processes and specify the skipped steps you would like to execute.

Requirements

To ensure that staffing events have all required field values, Workday only enables you to autocomplete staffing events that initiate from Workday Recruiting.

Limitations

Autocomplete doesn't support send-backs.

While service steps never skip, the notifications for service steps always skip.

Tenant

Autocomplete doesn't support the Work Hours Profile field in the Position Setup Options prompt on the Edit Tenant Setup - HCM task because the field isn't available in Recruiting.

Security

To autocomplete a staffing event, you must specify which security groups can initiate and complete the event from the job application. When someone without the correct security moves a candidate to *Ready for Hire* from Workday Recruiting, the event doesn't autocomplete.

Business Processes

When your *Ready for Hire* business process definition includes *Batch/Job* steps, select the Don't wait for this step to complete, move immediately to the next step check box on every *Batch/Job* step. This configuration ensures that the staffing event can autocomplete.

Workday sends custom business process notifications on business processes that autocomplete. You can configure a step condition to bypass the custom notification.

Reporting

If you want to report on events that have automatically completed using the autocomplete functionality, not through a web service, Workday recommends that you create custom reports that include the External Load and the Event Autocompleted fields.

You can set the filter parameters on these fields to flag as:

- False for External Load
- True for Event Autocompleted

Integrations

The autocomplete setting on a staffing business process definition doesn't affect web services.

When you enable autocomplete and configure custom notifications on a business process definition, Workday creates an event record and generates a custom notification for action steps that initiate subprocesses. But when you initiate a business process that allows autocomplete through a web service, Workday creates an event record but doesn’t generate a custom notification for action steps that initiate subprocesses.

Connections and Touchpoints

Autocomplete for staffing events interacts with:

- Compensation.
- Payroll.
- Workday Recruiting.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Concepts

Concept: Autocomplete Business Processes

Tasks

Hire Employees on page 690

Steps: Set Up Job Changes on page 844

Steps: Set Up Contingent Workers on page 722

Add Additional Jobs on page 879

Set Up Recruiting to Staffing Field Defaults on page 205

Set Up Security to Autocomplete Staffing Events

Prerequisites

Enable autocomplete on the relevant staffing business process definitions.

Context

Specify who can initiate staffing events that autocomplete from Workday Recruiting.

Steps

1. Access the business process security policy for the staffing process that you want to autocomplete and add security groups to the initiating action.

   This configuration ensures that users can initiate the business process when they move a candidate to *Ready for Hire*.
2. Access the *Job Application* business process definition.

3. Select View Dynamic Definition.

   For every application stage tab that has *Ready for Hire* specified as a possible next step:

   a. Access the related actions menu in the Step column of the *Ready for Hire* specified action step and select Business Process > Configure Dynamic Completion Step.
   b. Add security groups to the actions that you want to autocomplete. These actions must match the business process definitions configured in Step 1.
4. (Optional) When you have multiple jobs enabled in your tenant, and you enable autocomplete on either the *Change Job* or *Add Additional Job* business processes:

   a. Access the *Ready for Hire* business process security policy.
   b. Add security groups to the Staffing Action action step. These security groups must match the groups selected in Step 3 to ensure that the job change autocompletes correctly.

   This configuration ensures that the *Change Job* and *Add Additional Job* business processes autocomplete correctly after you complete the staffing action for an internal hire from Workday Recruiting.

Result

Users can initiate staffing events that autocomplete when moving candidates into the *Ready for Hire* step in Workday Recruiting.

Example

Example: You enable autocomplete on the *Hire* business process. To ensure that recruiters can autocomplete hires, you add the Recruiter security group to:

- The *Hire* business process definition initiating action.
- The Hire Employee action on the *Job Application* dynamic completion steps.

Steps: Set Up Workday Assistant for Staffing

Prerequisites

Review setup considerations for Workday Assistant and Workday Staffing.

Configure these domain security policies in the Staffing functional area:

- *Staffing Actions*
- *Staffing Organizations* (for consolidated templates)
- *Worker Data: Collective Agreements*

Configure these domain security policies in the Advanced Compensation functional area for consolidated templates:

- *Add Compensation Management Plans*
- *Change Compensation Management Plans*

Context

You can use Workday Assistant to:

- Access the Start Job Change task.
- Initiate *Change Job* business process transactions using Change Job templates.

Steps

1. Set up Workday Assistant.

   Steps: Set Up Workday Assistant.
2. Access the Edit Tenant Setup - Assistant task.

   In the Staffing section, enable 1 of these options:

   - Enable Change Job Templates
   - Enable Change Job

   Security: *Set Up: Tenant Setup - Assistant* domain in the System functional area.
3. Access the Maintain Change Job Templates task.

   In the Enable For Initiating Action column, add Workday Assistant / REST API.

   Security: *Set Up: Staffing* domain in the Staffing functional area.

Basic Staffing Information

Steps: Set Up Basic Staffing Information

Context

Set up basic staffing information to support job profiles. Although not required, this basic staffing information adds detail and depth to your definition of a job. When you perform staffing tasks such as hiring or transferring employees, Workday automatically populates this information from the job profile.

You can also report on basic staffing information with a number of standard reports. For a list, access Workday Standard Reports and select the *Set Up Staffing* category.

Steps

1. Set Up Management Level Hierarchies on page 526.
2. Set Up Job Level Hierarchies on page 527.
3. Create Job Categories on page 528.
4. Create Job Classification Groups on page 529.
5. Set Up Employee Types on page 530.
6. Create Contingent Worker Types on page 532.
7. Create Company Insider Types on page 533.
8. Create Work Shifts on page 534.
9. Set Up Work Hours Profiles on page 535.
10. Steps: Set Up Working Time Localized Fields on page 550.
11. Steps: Set Up Working Time Rules on page 551

12. Create Pay Rate Types on page 554.
13. Change Worker Service Dates on page 541.

Next Steps

Create the job catalog, including job profiles, job families, and job family groups.

Related Information
Tasks
Steps: Set Up Job Catalog on page 568

Set Up Management Level Hierarchies

Prerequisites

Security: *Set Up: Position* domain in the Jobs & Positions functional area.

Context

You can use management levels to categorize job profiles based on management types, or compare similar roles across an organization. Example: A particular job profile belongs to the *Director* management level, while another job profile belongs to the *Individual Contributor* level. When you create a new hierarchy using existing management levels, you still must assign the management levels to job profiles.

Steps

1. Access the Maintain Management Types task.
    a) Set up the management types that you want to include in the management level hierarchy. Example: *Chief Executive Officer*, *Director*, *Manager*, and *Individual Contributor*.

    Note: Once management types are in use, you can rename but not delete them.
2. Access the Create Management Level Hierarchy task.
    a) In the Management Type prompt, select a management type to use as the name of your hierarchy, and create the hierarchy.
    b) Select Level > Insert Subordinate Level from the related actions menu of the management hierarchy name.
    c) In the Management Type field, select the highest management type in the hierarchy.

        This management type displays as level 1 in the Order column. Additional subordinate levels display as level 1, 2, 3, and so on.
    d) (Optional) Select Level > Insert Peer Level from the related actions menu of the management level. Peer levels will also display as level 1, 2, 3, and so on.
    e) (Optional) To create equal levels, select Level > Insert Subordinate Level from the related actions menu of the management level name. These subordinate levels will display as level 1.1, 1.2, 1.3, and so on.
3. Continue to use the related actions menu to insert management levels until the hierarchy is complete.
4. Access the Edit Tenant Setup – HCM task. Select your new hierarchy on the Management Level Hierarchy field.

Next Steps

- Assign management levels to job profiles in the Create Job Profile task.

- Hide level numbers by selecting the Hide Management and Job Levels check box in the Edit Tenant Setup – HCM task.
- Provide access to information for workers across organizations by setting up a management level-based security group.

Set Up Job Level Hierarchies

Prerequisites

Security: *Set Up: Job* domain in the Jobs & Positions functional area.

Context

You can use job levels to categorize job profiles based on factors like the level of education, experience, or training required for the job. Example: A particular job profile belongs to the *Principal Consultant* job level, while another job profile belongs to the *Consultant* job level.

Steps

1. Access the Create Job Level Hierarchy task.
2. In the Name field, enter a name for your job hierarchy.
3. Select Level > Insert Subordinate Level from the related actions menu of the hierarchy name.
4. In the Name field, enter the highest job level type in the hierarchy.

   This job level type displays as level 1 in the Order column. Additional subordinate levels display as level 1, 2, 3, and so on.

   Note: Once job levels are in use, you can rename them but not delete them.
5. (Optional) Select Level > Insert Peer Level from the related actions menu of the job level. Peer levels display as level 1, 2, 3, and so on.
   a) (Optional) To create equal levels, select Level > Insert Subordinate Level from the related actions menu of the management level. These subordinate levels will display as level 1.1, 1.2, 1.3, and so on.
6. Continue to use the related actions menu to insert job levels until the job level hierarchy is complete.
7. Access the Edit Tenant Setup – HCM task. Select your new hierarchy on the Job Level Hierarchy field.

Next Steps

Assign job levels to job profiles. Access the:

- Create Job Profile task to add the job level to new job profiles.
- Edit Job Profile task to add the job level to existing job profiles.

Select the job level on the Job Level prompt in the Category Details section.

You can hide level numbers by selecting the Hide Management and Job Levels check box on the Edit Tenant Setup – HCM task.

Related Information

Steps: Set Up Basic Staffing Information on page 525
Create Job Profiles on page 573
Reference
Reference: Edit Tenant Setup - HCM

Create Job Categories

Prerequisites

Security: *Set Up: Job* domain in the Jobs & Positions functional area.

Context

You can use job categories to group job profiles by broad categories. You can define your own job categories based on your company's needs.

Steps

1. Access the Maintain Job Categories task.
2. For each category, specify the Job Category Name and Job Category Description.

Example

Job Category Name	Job Category Description
Direct Labor	Workers directly involved in the production of goods or services.
Indirect Labor	Workers who don't directly produce goods or services, but who make their production possible or more efficient. Indirect labor costs are'nt readily identifiable with a specific task or work order.
Sales Labor	Workers who are directly involved in the selling of goods and services.
Research contract and grant administration	Workers who are responsible for administration and monitoring of research contracts and research grants.
Data collection, processing, and analysis	Workers who collect, process, and analyze data.

Next Steps

Assign a job category to a job profile. When you staff a job or position based on a job profile, the assigned job category populates.

During a hire, transfer, or other staffing event, you can't override or modify job categories that populate to a worker's job or position.

Related Information
Tasks
Steps: Set Up Basic Staffing Information on page 525
Create Job Profiles on page 573

Create Job Classification Groups

Prerequisites

Security: *Set Up: Job* domain in the Jobs & Positions functional area.

Context

You can use Job classifications for job-related regulatory reporting and to categorize job profiles. Combine your job classifications into job classification groups so that you can meet occupation or job-related reporting requirements. You can define job classification groups for jobs or positions in all locations or a specific country or region.

Note: Once job classifications are in use, you can inactivate them but not delete them.

Workday also delivers several country-specific job classification groups.

Steps

1. Access the Create Job Classification Group task.
2. As you complete the task, consider:

Option	Description
Job Classification Group Mapping	If using Workday for compliance reporting, select a Workday-delivered job classification group. Select: • *Primary Function (IPEDS)* to use this job classification group for IPEDS reporting. • *DSN Job Classification Group (PCS-ESE 2003)* to use this job classification group in Déclaration Sociale Nominative (DSN) reporting. • *DSN Job Classification Group (Complément PCS-ESE 2003)* to report complementary PCS-ESE codes in DSN reporting.
Maps to	For U.S. EEO and IPEDS reporting only. Select the EEO or IPEDS occupational category that your job classification maps to. You can use this mapping to expedite downstream reporting specific to that reporting entity.

Next Steps

Add job classifications to job profiles. The job classifications that you assign to a job profile can come from different job classification groups. When you fill a job or position based on a job profile, Workday automatically assigns the job classifications on the job profile to the worker.

When a job profile has multiple job classifications, Workday automatically populates the classifications applicable to all countries and any country- or region-specific classifications. Workday uses the job location address of a worker to determine the country or region-specific classifications to associate with the worker.

You can assign additional classifications to a job or position during staffing events, such as hires or transfers, or when you edit a job or position. However, you can't override classifications that automatically populate from the job profile during those events.

Steps: Set Up Reporting for IPEDS

Maintain Localization Settings on page 144

Reference

Workday Community: Job Classificaton Groups

Set Up Employee Types

Prerequisites

Security: *Set Up: Position* domain in the Jobs & Positions functional area.

Context

You can configure employee types to best suit your organizational needs. Once configured, you can assign employee types to workers during staffing processes. You can also configure employee types into:

- Business process condition rules.
- Eligibility rules, including Benefits and Compensation eligibility rules.
- Position restrictions.
- Reporting.

Steps

1. Access the Maintain Employee Types task.
2. Specify an Employee Type Name and an Employee Type Description for each type of employee that applies to workers in your organization.

   Examples: *Regular*, *Intern*, or *Temporary*.
3. (Optional) Select the Fixed Term Employee, Seasonal, Trainee, or Inactive check boxes.

   Local regulations might require you to identify certain employee type characteristics.

   The characteristic you select shows up in the Employee Type Name. Example: You create an employee type for interns and select the Fixed Term Employee and Trainee check boxes. The employee type displays as *Intern (Fixed Term) (Trainee)* on the worker profile.

   You can select the Inactivate check box to identify employee types you don't want to use anymore, but you can't delete employee types.
4. (Optional) In the Restricted to Countries field, select 1 or more countries in which the employee type applies.

   Leave the field blank if the employee type is applicable in all countries.

   Note: Restricting employee types to a country doesn't prevent you hiring that employee type in other countries. When you hire an employee, the All prompt category in the Employee Type field lists all employee types, even those that aren't intended for the current country. You can use the For Current Country prompt category to limit your selection to employee types that are restricted to that country and those applicable in any country.

Concept: Hiring Restrictions on page 585

Tasks

Steps: Set Up Basic Staffing Information on page 525

Hire Employees on page 690
Create Benefit Eligibility Rules on page 1255
Create Eligibility Rules for Compensation on page 986
Configure Rule-Based Business Processes

Steps: Set Up Time Types and Subtypes

Context

You can use variable time types to categorize workers who aren't full-time or part-time. Variable time type provides insight into your workforce, job posting accuracy, and compliance in countries that legally require a time type for all workers.

Example: You can categorize workers who work only on demand with no guarantee of continuous employment as variable time type workers in Workday.

You can also configure time type subtypes to gain more granularity on time types for workers.

Example: You can create a Seasonal Time Type subtype to distinguish between part-time, full-time, and variable seasonal workers.

These business processes support variable time types:

- *Add Additional Job*
- *Change Job*
- *Contract Contingent Worker*
- *Create Position*
- *Edit Position*
- *Edit Position Restrictions*
- *Evergreen Requisition*
- *Hire*
- *Job Requisition*
- *Start International Assignment*

Note: For pricing purposes, Workday recognizes variable time type workers as part-time workers. In order forms, variable time type workers are referred to as part-time workers.

Steps

1. Access the Maintain Time Types task.

   Clear the Inactive check box to enable variable time.

   Enter an override for variable time in the Time Type Override field to replace *Variable time* with a label to suit your business needs. Example: Override *Variable time* with *Flex* to identity variable time type workers in your organization as flex workers.

   Security: *Set Up: Jobs & Positions* domain in the Jobs & Positions functional area.
2. Translate Business Data.

   Translate time types and variable time overrides.
3. Access the Maintain Time Type Subtypes task.

   Configure time type subtypes for your organization.

   Examples of annually recurring time type subtypes:

Name	Description
Full-Time Seasonal	Requires employees to work full-time for fewer than 12 months per year.

Name	Description
Part-Time Seasonal	Requires employees to work part-time for fewer than 12 months a year.
Variable Seasonal	Requires employees to work: • Fewer than 12 months per year. • An irregular number of hours or days without a prearranged schedule.

Security: *Set Up: Position* domain in the Jobs & Positions functional area.

4. Hide or Require Optional Fields.

   Select 1 of these options from the By Functional Area prompt and require the *Time Type Subtype* field for all users or by security groups:

   - *Add Additional Job*
   - *Contract Contingent Worker*
   - *Change Job*
   - *Create Position*
   - *Edit Position*
   - *Edit Position Restriction*
   - *Hire*
   - *Start International Assignment*

   These business processes don't support time type subtypes:

   - *Evergreen Requisition*
   - *Job Requisition*
5. (Optional) Create Custom Labels.

   Select *Staffing* from the Term Context prompt and enter overrides for time type subtype.

Result

You can select a:

- Time type subtype on the business processes you configure.
- Variable time type from the Time Type prompt on the business processes you configure.
- Variable time type for job alerts.

Create Contingent Worker Types

Prerequisites

Security: *Set Up: Position* domain in the Jobs & Positions functional area.

Context

You can define contingent worker types to categorize and track contingent workers in your organization. You can also use contingent worker types to generate purchase orders.

Steps

1. Access the Maintain Contingent Worker Types task.

2. Specify a Contingent Worker Type Name for each type of contingent worker contracted by your organization.
   Examples: *Consultant*, *Contractor*, or *Vendor*.
3. (Optional) Select the Require Cost Information on Job Requisition check box if you use job requisitions and plan to create purchase orders automatically from contingent worker requisitions.
4. (Optional) In the Restricted to Countries field, select 1 or more countries in which the contingent worker type applies.

   Leave the field blank if the contingent worker type is applicable in all countries.

   Note: Restricting contingent worker types to a country doesn't prevent you from contracting that contingent worker type in other countries. The Contingent Worker Types prompt category in the Contingent Worker Type field lists all contingent worker types, even types not intended for the current country. The For Current Country prompt category limits your selection to contingent worker types restricted to that country and applicable in any country.
5. (Optional) Select the Inactive check box to inactivate a contingent worker type.

   Note: When a contingent worker type is no longer valid, you can inactivate it, but you can't delete it.
6. Review the Current Position Usage and total Usage Count for each contingent worker type. The Current Position Usage only includes current, filled positions.

Result

You can apply contingent worker types to workers in the Contract Contingent Worker task and other contingent worker staffing tasks.

Related Information
Tasks
Steps: Set Up Basic Staffing Information on page 525
Contract Contingent Workers on page 723

Create Company Insider Types

Prerequisites

Security: *Set Up: Job* domain in the Jobs & Positions functional area.

Context

Some trading regulations require you to identify insiders within your organization who know sensitive nonpublic information. You can create and track different company insider types and assign them to job profiles. You can view details about your company insider types and inactivate types you no longer use.

Steps

1. Access the Maintain Company Insider Types task.
2. For each insider type, specify a Company Insider Type Name and Company Insider Type Description.

   To configure company insider types to different countries on the same job profile, specify the country in which they're valid in the name. Example: Include France in the name of a company insider type that's valid in France.

   Note: When a company insider type is no longer valid, you can inactivate the insider type, but you can't delete it.

Result

The Company Insider Types report displays the Used by Current Positions and the Company Insider Type in Use for each company insider type.

Example

Company Insider Type Name	Company Insider Type Description
United States: 10% Owner	10% Owner
France: 10% Owner	10% Owner
United States - Officer Insider	Officer Insider

Next Steps

Associate a company insider type with a job profile. When you staff a job or position based on a job profile, the assigned company insider type defaults to the employee.

You can override the default value during a hire, transfer, or other staffing event.

Related Information
Tasks
Steps: Set Up Basic Staffing Information on page 525
Create Job Profiles on page 573

Create Work Shifts

Prerequisites

Security: *Set Up: Work Shifts* domain in the Jobs & Positions functional area.

Context

Workday refers to an employee's assigned work shift to determine the number of work days to use in the proration factor. When you don't assign a work shift, Workday uses Monday through Friday as work days.

You can create location-specific work shifts to associate with jobs and positions.

Steps

1. Access the Maintain Work Shifts task.
2. Select a Country or Country Region.
3. For each work shift, specify a Work Shift Name and Work Shift Description.

   Note: When a work shift is no longer valid, you can inactivate it, but you can't delete it.

Example

Work Shift Name	Work Shift Description
Day Shift	8:00 am to 5:00 pm
Night Shift	11:00 pm to 7:00 am
Swing Shift	4:00 pm to 12:00 am
Weekend Shift	Saturday and Sunday

Next Steps

You can associate a work shift with a position based on a job profile. Enable Work Shift for a country on the Maintain Localization Settings task and select the Work Shift Required check box on the job profile. Then select a work shift available for the primary location of the position using the Edit Position task.

Set Up Work Hours Profiles

Prerequisites

- Enable work hours profiles in the Edit Tenant Setup – HCM task.
- Security: *Set Up: Work Hours Profiles* domain in the Jobs & Positions functional area.

Context

The work hours profile specifies the time profile and regular paid hours equivalent for 1 or more job profiles. Use work hours profiles to handle workers whose work week comprises a different number of hours than specified by the time profile for the location.

- Workday can use the regular paid equivalent hours in a work hours profile to calculate estimated annual pay (annualization).
- The regular paid equivalent hours are associated with a time profile. The full-time equivalent (FTE) is 100%, even though the number of hours is different. This affects the calculation of PTO accrual, for example.
- If you have an integration with ADP PCPW, you can have a classification for each work hours profile and exchange it with ADP.

Steps

1. Access the Maintain Work Hours Profiles task.
2. In the Work Hours Profile field, specify a name for this profile.
3. Select a Time Profile for the location where you use this work hours profile.
4. Specify the Regular Paid Equivalent Hours that these employees typically work.
   Normalize this value for overtime. Example: If the typical work week is 44 hours, enter 44. If workers get time-and-a-half for hours over 40, enter 46 to normalize the value so it represents the equivalent hours in straight time. This enables Workday to calculate annualized compensation.
5. If you have an integration with ADP PCPW, enter a Classification for this profile. Otherwise, Workday ignores this field.
6. If this work hours profile applies to all job profiles not associated with a Time Profile, select the Default for Job Profiles check box.
   When this check box is selected, you can have only 1 work hours profile for a given Time Profile. The Job Profile field becomes unavailable.
7. Select 1 or more Job Profiles for which employees normally work the hours specified in the Regular Paid Equivalent Hours field.
   You can't select a job profile that is in another work hours profile with the same Time Profile.

Example

Paramedics normally work a 44-hour week at locations where the normal time profile is 40 hours and also 35 hours (such as in France). You decide that a paramedic's 44-hour week is the equivalent of a standard work week for the location.

Create a work hours profile for:

- The Paramedic job profile at locations where the Time Profile is 40 hours.
- The Paramedic job profile at locations where the Time Profile is 35 hours.

In addition, select the Default for Job Profiles check box for:

- All other workers who work a normal week at a 40-hour location.
- All other workers who work a normal week at a 35-hour location.

Next Steps

Enable Workday to calculate annualized compensation for hourly workers with work hours profiles:

- Access the Maintain Frequencies task:
  - For the Hourly Frequency Name, select the Use Weekly Hours check box.
  - For the Weekly Frequency Name, select *Weekly* at the Frequency Type prompt.
- Set up hourly workers' compensation as follows:
  - They must have an hourly compensation plan.
  - Their compensation package must have a grade with an annual frequency.

Whenever you hire an employee, specify the work hours profile that equates to the correct regular paid equivalent hours with the time profile from the worker's location.

Whenever an employee changes jobs or locations, adjust their work hours profile accordingly.

Tasks

Steps: Set Up Basic Staffing Information on page 525

Create Frequencies on page 979

Create Hourly Plans on page 1077

Reference

Reference: Edit Tenant Setup - HCM

Steps: Set Up Defaults for Service Dates

Prerequisites

Configure the *Service Dates Change* business process and security policy in the Staffing functional area.

Add the *Service Dates Change* business process as a subprocess of a Staffing business process.

Context

You can default service dates when the *Service Dates Change* business process is a subprocess of a Staffing business process such as *Change Job* or *Hire*.

Steps

1. Access the Create Service Date Defaults Condition Rule task.

   Security: *Set Up: Staffing* domain in the Staffing functional area.

2. Create a set of condition rules that you can use to determine when to populate a specific service date.

   You can use these fields in your condition rules:

   - *Employee Was Contingent Worker*
   - *Is Employee Rehired As Contingent Worker*
   - *Worker Termination Date*

   Example: You create a condition rule to identify workers who you rehired within 30 days of their termination date. You want to use the *Original Hire Date* to populate the *Benefits Service Date* for those workers.
3. (Optional) Create condition rules to avoid overriding existing service dates.

   To avoid overriding existing service date values, add the service date is blank report fields as conditions for your rules:

   - *Benefits Service Date is Blank*
   - *Company Service Date is Blank*
   - *Continuous Service Date is Blank*
   - *Date Entered Workforce is Blank*
   - *Expected Retirement Date is Blank*
   - *Original Hire Date is Blank*
   - *Retirement Eligibility Date is Blank*
   - *Seniority Date is Blank*
   - *Severance Date is Blank*
   - *Time Off Service Date is Blank*
   - *Vesting Date is Blank*

   Example: You manually enter a Benefits Service Date when hiring a worker. To avoid overriding that value, you add the *Benefits Service Date is Blank* report field to the condition rule.
4. (Optional) Create Calculated Fields.

   Create custom fields to use in staffing field defaults. Select one of these business objects:

   - Action Event
   - Event
   - Worker Business Process
5. Access the Maintain Staffing Field Defaults task.
6. Select the Service Dates Change tab.
7. Associate 1 or more condition rules for specific staffing fields in the business process and define the value that populates that field.

   As you complete this task, consider:

   - Defaults only apply when *Service Dates Change* is a subprocess of a staffing business process.
   - Workday processes rules in the order they display in the grid. Once a field meets the conditions for a rule, Workday ignores any remaining rules for that field.
   - To ensure that a field always populates, create a row at the bottom of the grid where:
     - The Condition Rule field is blank.
     - The Value field has a value.

   Security: *Set Up: Staffing* domain in the Staffing functional area.
8. (Optional) Default the *Worker Hire Date* for worker service dates.

   Add the *Worker Hire Date* report field to the Report Field.

9. (Optional) Configure defaults to populate service dates from the previous job for a worker.

   Select these fields in the Report Field:

   - *Benefits Service Date – Previous Job*
   - *Company Service Date – Previous Job*
   - *Continuous Service Date – Previous Job*
   - *Date Entered Workforce - Previous Job*
   - *Expected Retirement Date – Previous Job*
   - *Hire Date – Previous Job*
   - *Original Hire Date – Previous Job*
   - *Retirement Date – Previous Job*
   - *Retirement Eligibility Date – Previous Job*
   - *Seniority Date – Previous Job*
   - *Severance Date – Previous Job*
   - *Time Off Service Date – Previous Job*
   - *Union Seniority Date – Previous Job*
   - *Vesting Date – Previous Job*
10. (Optional) Configure calculated fields in the Report Field.

    Note: You can't use calculated fields that contain sensitive data. Example: *Date of Birth*.

Result

When you complete the staffing business process, Workday applies the rules you created to populate the service date fields in the staffing event. When the event has autocomplete enabled on the business process definition, Workday attempts to complete the event automatically with the information in the populated fields.

Example

You hire a worker in the USA who has a default value for the Benefits Service Date field. You want to populate the Benefits Service Date automatically with the hire date for the worker.

1. Configure *Service Dates Change* as a subprocess of *Hire*.
2. Access the Create Staffing Field Defaults Condition Rule task and create a condition rule named *Hire in USA with Default Value*

And/Or	(	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value	)
And		*Part of another business process of Type*	In the selection list	Value specified in this filter	*Hire*	
And		*Benefits Service Date is Blank*	Equal to	Value Specified in this filter	Yes	
And		*Country of Location Proposed*	Equal to	Value Specified in this filter	Yes	

And/Or	(	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value	)
		is United States				

3. On the Maintain Staffing Field Defaults task, access the Service Dates Change tab.
4. Select the Add button.
5. Select *Benefits Service Date* as the Field.
6. Configure the *Hire in the USA with Default Value* condition rule.

   Select *Worker Hire Date* as the Report Field.

Next Steps

- You can view the service dates change event on the Worker History tab on the Job page of the Worker Profile.
- Correcting the parent event, such as *Hire* or *Change Job* business process events, won't automatically update the service dates. If you want to correct the service dates, you can access the Correct action as a related action for the *Service Dates Change* business process event when you have access to the Correct action on the Edit Business Process Security Policy task for the *Service Dates Change* business process.

Reference

2023R1 What's New Post: Configurable Service Date Defaulting

Steps: Set Up Custom Staffing Fields

Prerequisites

Security:

- *Set Up: Position* domain in the Jobs & Positions functional area.
- *Worker Data: All Positions* in the Staffing functional area.

Context

You can configure these fields to add additional details to your filled and unfilled positions:

- Annuitant Indicator
- Appointment Type
- Cybersecurity Area
- Employment System
- Employee Tenures
- Functional Class
- PMIAA Code
- Retirement Special Population
- Security Clearance Level
- Sensitivity and Risk
- Time Type Subtypes

Note: Usage is limited to Position Management organizations. Fields will not be available for Job Management organizations.

This functionality supports US Federal agency requirements for classifying positions, and Personnel Action Request (PAR) processing. You can also use these fields for organizations that aren't related to US Federal by configuring custom field values.

Steps

1. Access these tasks to setup values for the staffing fields:
    - Maintain Annuitant Indicators
    - Maintain Appointment Types
    - Maintain Cybersecurity Areas
    - Maintain Employment Systems
    - Maintain Employee Tenures
    - Maintain Functional Classes
    - Maintain PMIAA Code
    - Maintain Retirement Special Populations
    - Maintain Security Clearance Levels
    - Maintain Sensitivity and Risks
    - Maintain Time Type Subtypes

    Note: Maintain Functional Classes and Maintain PMIAA Code have effective dating capabilities.

    You can setup values for US Federal use cases, including Personnel Action Request (PAR) processing. You can also setup values for your nonfederal staffing use cases.
2. Access the Configure Optional Fields task.
3. Select the relevant business process in the By Functional Area field. Unhide the fields and make them required, optional, or view only on these business processes:

Business Process	Field
• *Add Job* • *Change Job* • *Contract Contingent Worker* • *Edit Position* • *Hire* • *Start International Assignment*	• Annuitant Indicator • Appointment Type • Cybersecurity Area • Employee Tenure • Employment System • Functional Class • PMIAA Code • Retirement Special Population • Security Clearance Level • Sensitivity and Risk • Time Type Subtype
• *Create Position* • *Edit Position Restriction*	• Cybersecurity Area • Employment System • Functional Class • PMIAA Code • Retirement Special Population • Security Clearance Level • Sensitivity and Risk • Time Type Subtype

4. (Optional) Access the Maintain Custom Labels task.

    Rename the fields names based on your organizational needs.

Result

Your fields display on the business processes you configured.

Steps: Configure the Personnel Action Request Business Process

Change Worker Service Dates

Prerequisites

Configure the *Service Dates Change* business process and security policy in the Staffing functional area.

Context

Manage the various service milestone dates for workers. You can tailor your use of these dates to meet your needs.

You can select the Enable Autocomplete check box on the *Service Dates Change* business process definition. Once enabled, Workday automatically completes the change event for the service date.

You can rename service date fields in the *Staffing* context using the Maintain Custom Labels task. Workday suggests that you work with your HR specialist to ensure that you aren't changing the field meaning.

Many of these dates automatically populate from the Hire Employee or Contract Contingent Worker tasks. Changes to some of the dates can impact other areas within Workday, such as Benefits, Compensation, and Absence. Whether they determine eligibility for benefits depends on how you configure your benefit and other eligibility rules.

We recommend that you use v43.0 of the *Edit Service Dates* web service to specify effective dates if you've opted in to *Effective Dating for Service Dates* feature.

You can default service dates when the *Service Dates Change* business process is a subprocess of a Staffing business process. Configure defaulting rules for *Service Dates Change* using the Maintain Staffing Field Defaults task.

Because workers can have multiple jobs, you can find dates relating to:

- Length of time in a position.
- End of employment on the position.

These scenarios can affect service dates:

- First hire or rehire. With or without the Edit Service Dates task as a subprocess, or when making a hire date correction.
- Accessing the Edit Service Dates task: As a stand-alone or as a subprocess on any business process other than *Hire*.
- Termination.

Steps

1. Access the Edit Service Dates task.
2. As you complete this task, consider:

Date	Description
Effective Date	Enter the date that the service date changes are effective for the worker. This field displays when you opt in to *Effective Dating for Service Dates* on the Maintain Feature

Date	Description
	Opt-Ins task. You can't opt out after you opt in. Existing service date events you created prior to opting in to the feature are not effective dated. When you add the *Service Dates Change* business process as a subprocess of a staffing business process, Workday defaults the date with the effective date of the parent event. The defaulted effective date is read-only and isn't editable.
Hire Date or Contract Start Date	Automatically populates from the most recent *Hire* or *Contract Contingent Worker* business processes.
Original Hire Date	Enables you to track when the organization first employed a worker. Used for COBRA eligibility and Form I-9 for US Payroll, and also for the Length of Service in Months from Original Hire Date report field. Automatically populates from the earliest Hire Date. However, when you manually edit the Original Hire Date, automatic population no longer occurs. To ensure that the date once again populates automatically, you can: • Enter a new earliest Hire Date that is before the current Original Hire Date. • Manually edit the Original Hire Date to match the earliest Hire Date. • Rehire the worker. This service date only applies to employees.
Continuous Service Date	Enables you to give credit for past employment. Used in benefit elections, compensation period basis behavior, and length of service calculations. Automatically populates from the most recent Hire Date. However, after you manually edit the Continuous Service Date to a different date, it no longer automatically populates. To restore automatic population, you can either: • Manually edit the Continuous Service Date to match the Hire Date. • Rehire the worker. When the Continuous Service Date and Hire Date are the same, correcting the Hire Date automatically corrects the Continuous Service Date. However, when the 2 dates are different, correcting the Hire Date doesn't affect the Continuous Service Date. You can't manually

Date	Description
	update the Continuous Service Date field on a *Hire* business process correction.
Length of Service	Automatically calculated from the Continuous Service Date to the current date or termination date. If a worker has a future rehire date, this field calculates from the Continuous Service Date to their termination date. This field doesn't calculate based on their future rehire date. When you rehire a worker, their length of service includes the time that you didn't actively employ them. Use the Service Length Type field in the Edit Tenant Setup - HCM task to specify the display format.
Date Entered Workforce	Supports statutory leave entitlements. Use the Edit Tenant Setup - Global task to track for workers in specific countries. This service date only applies to employees.
Days Unemployed	Used only for China. Impacts statutory leave eligibility. This service date only applies to employees.
Months Continuous Prior Employment	Used only for China. Impacts statutory leave eligibility. This service date only applies to employees.
Benefits Service Date	Enables you to track length of service for benefit programs. Example: Workers become eligible for insurance after a 3-month probation period. Available for use in user-defined calculations and eligibility rules. Workday empties the field during rehire. This service date only applies to employees.
Company Service Date	Enables you to track an additional service date, such as date of acquisition. Available for use in user-defined calculations and eligibility rules. Workday empties the field during rehire. This service date only applies to employees.
Time Off Service Date	Enables you to track time off eligibility based on a different service date. Example: Standard time off is 3 weeks per year, but some workers negotiate 4 weeks.

Date	Description
	Available for use in user-defined calculations and eligibility rules.
Retirement Eligibility Date	Enables you to track eligibility for retirement, such as when eligibility is based on length of service or age. Available for use in user-defined calculations and eligibility rules. This service date only applies to employees.
Expected Retirement Date	Enables you to report on retirement for workers who announce their retirement date in advance. Available for use in user-defined calculations and eligibility rules. This service date only applies to employees.
Seniority Date	Enables you to track seniority based on a date other than Hire Date or Company Service Date. Used in the Length of Service in Months from Seniority Date report field. Available for use in user-defined calculations and eligibility rules. Automatically populates from the earliest Hire Date. However, when you manually edit this field on the task, this automatic population no longer occurs until you rehire the worker. This service date only applies to employees.
Severance Date	Enables you to track how long a worker receives severance pay. Also used in compensation period basis behavior. Available for use in user-defined calculations and eligibility rules. This service date only applies to employees.
Vesting Date	Enables you to track when a worker is fully vested, when this differs from standard vesting rules. This service date only applies to employees.
Service Dates Change History	Displays a report of all service date changes for the worker.

Result

You can view service dates on worker profiles and in the View Service Dates report. You can use the View As Of field in the report to view service date changes in effect for a worker as of a specific date.

Next Steps

You can correct the *Service Dates Change* business process event from the related actions menu on the event.

If you opted in to the *Effective Date for Service Dates* feature on the Maintain Feature Opt-Ins task:

- You can't opt out after you opt in.
- Existing service date events you created prior to opting in to the feature are not effective dated. The Effective Date field on those events uses the date the event was initiated. You can update the Effective Date when you correct the event.
-
- You can correct the effective date on standalone *Service Dates Change* business process events.
  - Set up the security for the *Correct* action on the *Service Dates Change* business process using the Edit Business Process Security Policy.
  - Enter an Effective Date that doesn't conflict with any existing staffing events. Example: You have a service date event that's effective 2024-05-30, and a Change Job event effective 2024-03-30. You want to correct the service date event to 2024-02-27. You need to resolve the date of the Change Job event before you can correct the service date event.
- If you rescind an existing service date event that you created without an Effective Date, the worker's current service dates won't change. After you rescind an existing service date event, Workday recommends that you either:
  - Edit the service dates using the Edit Service Dates task.
  - Correct the previous service date event.
- You can see a Service Dates Change History table when you view, edit, or correct service dates. Existing service date events you created prior to opting in to the feature won't display an Effective Date.
- You can create a custom report using the Effective Date for Service Dates report field. The report field returns the effective date for service date events created or corrected after you opted in to the feature, and returns blank for non-effective dated events.

Tasks

Hire Employees on page 690

Contract Contingent Workers on page 723

Steps: Set Up Workday Docs

Change Creditable Service

Prerequisites

Configure the *Creditable Service Change* business process in the Staffing functional area.

Security: These domains in the Staffing functional area:

- Self Service: Creditable Service
- Set Up: Creditable Service Types
- Worker Data: Creditable Service

Context

You can collect, store, and view an employee's prior work history that can be used for absence, benefits, and retirement eligibility calculations.

You can add the *Creditable Service Change* business process as a subprocess of the *Hire* business process.

Steps

1. Access the Maintain Creditable Service Types task to configure service types.
2. Access the Edit Creditable Service task.

   Enter the length of service in the years, months, and days.
3. Access these reports to view creditable service for employees and different types of creditable service:
   - View Creditable Service for Employee
   - View Creditable Service Types
   - View My Creditable Service
4. (Optional) Maintain Custom Labels task.

   Select the Staffing term context. Override the Creditable Service term with one that is better suited to your organization.

Setup Considerations: Working Time Rules

You can use this topic to help make decisions when planning your configuration and use of working time rules. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Working time rules enable you to populate default and scheduled weekly hours for workers.

Business Benefits

You can increase efficiency and reduce manual effort by:

- Creating rules to populate default and scheduled weekly hours for workers.
- Ensuring the correct assignment of full-time equivalent (FTE) percentages to workers.
- Assigning different default and scheduled weekly hours for workers based on job profile, time type, location, and more.

Use Cases

- Record and report working time of a worker.
- Automatically update weekly hours by eligibility rules when workers change job. Example: When changing a full-time worker to part-time.
- Track working time for specific countries.

Questions to Consider

Questions	Considerations
How do you want to populate scheduled and default weekly hours for workers?	You can use working time rules to populate scheduled and default weekly hours for workers. You can assign different default and scheduled weekly hours for workers based on: • Collective agreements • Company • Cost center • Job category • Job family • Job profile • Location • Supervisory organization • Time type • Work shift
How do you want to populate scheduled and default weekly hours for workers if there are no working time rules?	In *Create Position*: You can populate scheduled and default weekly hours from the Location Weekly Hours field. In *Edit Position Restrictions*: You can populate scheduled and default weekly hours from: • Position restrictions. • The Location Weekly Hours field. In all other supported business processes, you can populate scheduled and default weekly hours from: • Job requisition or position restrictions. • The Location Weekly Hours field. • The work hours profile. When you initiate a change job event from a job requisition, Workday populates the Default Weekly Hours and Scheduled Weekly Hours fields from the location weekly hours of the job requisition's primary location, when: • The FTE of the current job is 100%. • There's no work hours profile.
How can you make Workday apply working time rules on supported business processes?	Workday applies a working time rule, if you: • Define a working time eligibility rule. • Enter data on a task that matches the working time eligibility rule. Example: Workday populates rule data based on a previous process when you initiate a task. To apply a rule, enter data that matches the rule. Workday respects the defaulting behavior of weekly hours on initiation, revise, and review tasks of all the related business processes.

Questions	Considerations
How can you populate weekly hours values in web services?	You can populate weekly hours values in the recruiting and staffing web services from a rule if applicable.
How do you want to populate weekly hours in mass action workbooks?	You can populate scheduled and default weekly hours in these workbooks based on the eligibility of rules: • Mass action: Mass Change Job. • My Tasks consolidation: Mass Employment Agreement and Mass Offer.
How can you populate scheduled and default weekly hours for pre-hires and candidates?	Using *Offer* and *Employment Agreement* as a subprocess of *Job Application* you can populate weekly hours for pre-hires and candidates from a working time rule. You can also use *Employment Agreement* as a standalone business process to populate the weekly hours for pre-hires and candidates from a working time rule. You can also configure Workday to populate scheduled and default weekly hours automatically for workers in the job and evergreen requisition business processes using condition rules.
How can you ensure correct assignment of weekly hours and full-time equivalent percentages?	You can configure the editable working time fields like Default Weekly Hours and Scheduled Weekly Hours to be non enterable for certain security groups using the Configure Optional Fields task. Restricting the fields for certain security groups will avoid any incorrect entry of weekly hours values and ensures correct full-time equivalent percentages for workers.

Recommendations

If you want to define a working time rule based on collective agreements:

- Assign a collective agreement to a worker before you define a rule.
- Use *Employment Agreement* instead of *Hire*.

Requirements

No impact.

Limitations

If you enable Work Hours Profile in the Edit Tenant Setup – HCM task, scheduled and default weekly hours won't populate from the working time rules.

Tenant Setup

Enable Enable FTE on Position Restrictions on the Edit Tenant Setup - HCM task to populate default and scheduled weekly hours in the *Edit Position Restriction* and *Create Position* business processes.

Security

Domains	Consideration
Set Up: Working Time domain in the Staffing functional area.	Users secured to this domain can set up country-specific working time.
Set Up: Tenant Setup - Global domain in the System functional area.	Users secured to this domain can restrict settings to certain countries or regions.
Manage: Cost Center domain in the Organizations and Roles functional area.	Provides access to managing all cost center structures.
Manage: Supervisory Organization domain in the Organizations and Roles functional area.	Provides access to viewing and maintaining supervisory organizations to which the user has access.
Public Reporting Items domain in the Tenant Non-Configurable functional area.	Provides access to all publicly available report fields and report data sources. It allows all users with permissions to create or run reports to view these fields.
Worker Data: Collective Agreements in the Staffing functional area.	Provides access to collective agreement data for employees.
Worker Data: Current Staffing Information domain in the Staffing functional area.	Provides information on workers' current information such as status, length of service, seniority. Includes web services.
Worker Data: Work Shifts domain in the Staffing functional area.	Provides access to information regarding workers' work shifts.

Business Processes

Workday populates scheduled and default weekly hours from a working time rule on these business processes:

- *Add Additional Job*
- *Change Job*
- *Contract Contingent Worker*
- *Create Position*
- *Edit Position*
- *Edit Position Restriction*
- *Employment Agreement*
- *Hire*
- *Offer*
- *Start International Assignment*

Reporting

Reports	Considerations
View Working Time Eligibility Rule	Displays the eligibility rules that you create for working time.
View Working Time for Country	Displays the working time rules defined for a country.

Integrations

You can use these web services to upload working time configuration and eligibility rules:

- *Put Working Time Eligibility Rules*
- *Put Maintain Working Time for Country*

You can use these web services to retrieve working time configuration and eligibility rules:

- *Get Working Time Eligibility Rules*
- *Get Maintain Working Time for Country*

Connections and Touchpoint

Feature	Considerations
Recruiting	You can populate scheduled and default weekly hours for pre-hires and candidates using working time rules on *Employment*, *Offer*, and *Job Requisition*.

Tasks

Set Up Work Hours Profiles on page 535

Reference

2022R2 What's New Post: Working Time

Steps: Set Up Working Time Localized Fields

Context

You can record details about a worker's expected schedule on these business processes:

- *Add Additional Job*
- *Change Job*
- *Contract Contingent Worker*
- *Create Position*
- *Edit Position*
- *Edit Position Restrictions*
- *Employment Agreement*
- *Hire*
- *Offer*
- *Start International Assignment*

These working time fields display for a job or position in a country that you set up to track working time:

- Frequency
- Unit
- Value
- Paid FTE %
- Working FTE %
- Work Shift

You can access the Create Allowance Plans or Edit Allowance Plans tasks to set up working time tracking, time rules, or compensation components and grades.

Steps

1. Access the Maintain Localization Settings task.

Option	Description
Area	Select *Staffing*.
Working Time (Frequency, Time Unit, and Time Value)	Select the countries that track working time (frequency, time unit, and time value) for workers.
Paid FTE	Select the countries that track paid full-time equivalent for workers.
Working FTE	Select the countries that track working full-time equivalent for workers.
Work Shift	Select the countries that track work shift information for a worker.

   Security: *Set Up: Tenant Setup - Global* domain in the System functional area.
2. Access the Maintain Frequencies task.

   Set up frequency types for your selection list.

   Security: *Set Up: Compensation General* domain in the Core Compensation functional area.

Steps: Set Up Working Time Rules

Prerequisites

Security: Configure these domains in the Staffing functional area:

- *Set Up: Working Time*
- *Set Up: Staffing*

Context

You can set up working time rules to:

- Populate default and scheduled weekly hours for workers based on rules.
- Ensure correct assignment of FTE to workers.
- Assign different default and scheduled weekly hours for workers based on:
  - Job profile
  - Job family
  - Job category
  - Collective agreements
  - Company
  - Cost center
  - Supervisory organization
  - Location
  - Time type
  - Work shift

Steps

1. Access the Maintain Working Time for country task.
2. Select *Create Working Time Eligibility Rule* from the Working Time Eligibility Rule prompt.

3. Create an eligibility rule for the working time rule.
4. As you complete the Maintain Working Time for country task, consider:

Option	Description
Default Weekly Hours	Enter the default weekly hours associated with the working time rule.
Scheduled Weekly Hours	Enter the scheduled weekly hours associated with the working time rule. If you don't specify a value, the scheduled weekly hour for a worker will be zero even if the worker is eligible for a working time rule.

Result

When you add default and scheduled weekly hours for a worker, based on the eligibility of the rule Workday populates the weekly hours values.

Example

You can create a working time rule to populate 40 default weekly hours and 20 scheduled weekly hours in the WorkingTime section for a part-time consultant in France.

Related Information

Reference

2022R2 What's New Post: Working Time

Concept: Working Time

Overview

You can use the Working Time section in staffing tasks to record details about a worker's working time and full-time equivalent percentile. You can use the full-time equivalent percentile to calculate compensation and to support workforce planning and reporting.

Workday displays these fields for a job or position so that you can track working time:

Field	Description
Location Weekly Hours	The standard weekly hours associated with the location.
Scheduled Weekly Hours	Populates from an eligibility rule when: • You've defined a working time rule. • The data populated on staffing tasks apply the rule. Populates from Default Weekly Hours when there's no working time rule. Populates based on the position restrictions when: • You select the Enable FTE for Position Restriction check box on the Edit Tenant Setup – HCM task. • There's no work hours profile or job requisition for the position.

Field	Description
	For change job events associated with job requisitions, when there's no working time rule and work hours profile: • Populates from the Default Weekly Hours when the full-time equivalent (FTE) of the current job is 100%. • Remains same as the current job when the FTE of the current job isn't 100%.
Default Weekly Hours	Populates from a rule when: • You've defined a working time rule. • The data populated on the task applies the rule. Populates from Location Weekly Hours when there's no working time rule. Populates based on the position restrictions when: • You select the Enable FTE for Position Restriction check box on the Edit Tenant Setup – HCM task. • There's no work hours profile or job requisition for the position. For change job events associated with job requisitions, when there's no working time rule and work hours profile: • Populates from the location weekly hours of the job requisition’s primary location when the FTE of the current job is 100%. • Remains same as the current job when the FTE of the current job isn't 100%.
FTE	The full-time equivalent percentage of a worker.
Specify a Paid FTE	Available when you enable Paid FTE on the Maintain Localization Settings task.
Paid FTE %	Available when you enable Paid FTE on the Maintain Localization Settings task.
Specify a Working FTE	Available when you enable Working FTE on the Maintain Localization Settings task. For use in custom reporting.
Working FTE %	Working full-time equivalent of workers. Used in custom reporting. Available when you enable Working FTE on the Maintain Localization Settings task. For use in custom reporting.
Work Shift	Available when you enable Work Shift on the Maintain Localization Settings task. Available when you select the Work Shift Required check box on the job profile.

Field	Description
	Define the work shifts for a location using the Maintain Work Shifts task.
Frequency	Select from the working time frequencies you specified on the Maintain Frequencies task. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Unit	Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Value	Enter the duration of the time unit for the corresponding frequency. Automatically populates to zero. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.

Working Time Rules

We enable you to configure country-specific eligibility rules for working time. Working time rules enable you to populate scheduled and default weekly hours for workers automatically, providing a more efficient way to assign full-time equivalent (FTE) percentages to workers.

Example: You can automatically update weekly hours based on eligibility rules when changing a full-time worker to part-time.

Note: The Work Hours Profile settings in the Edit Tenant Setup – HCM task take precedence over the rules.

Create Pay Rate Types

Prerequisites

Security: *Set Up: Job* domain in the Jobs & Positions functional area.

Context

You can assign country-specific pay rate types to a job profile.

Steps

1. Access the Create Pay Rate Type task.
2. For each pay rate type, specify a Pay Type Name and select a Target Frequency.

Example

Pay Type Name	Target Frequency
Hourly	Hourly

Pay Type Name	Target Frequency
Salary	Semi-Monthly

Next Steps

- Associate a country-specific pay rate type with a job profile. When you staff a job or position based on a job profile, the pay rate automatically assigns to the employee. If a job profile has more than 1 pay rate type, Workday determines the country-specific classifications to apply to the employee. In this scenario, assignment is based on the primary business address and country associated with the job or position location.
- To update pay rate types, use the Edit Pay Rate Type task.
- To update pay rate types from a worker profile, access the Job Details section of the profile Summary and from the related actions menu of the Position, select Position > Edit Position > Job Details > Pay Rate Type.
- To inactivate pay rate types that you don't want to continue using, use the Inactive check box on the View Pay Rate Type report or the Create Pay Rate Type and Edit Pay Rate Type tasks.
- To delete pay rate types that aren't in use, use the Delete Pay Rate Type task.

Tasks

Steps: Set Up Basic Staffing Information on page 525

Create Job Profiles on page 573

Example Steps: Assign a Work Shift to a Position

This example illustrates how to assign a work shift to an employee's position based on their job profile and location. You can use this configuration to assign a work shift to a position in any staffing business process.

Context

You want to assign a day shift to a Marketing Coordinator in Paris. The marketing coordinator position is based on the Marketing and Communications Coordinator job profile.

Prerequisites

- Create a Day Shift work shift for France.

Steps

1. Access the Maintain Localization Settings task.
    a) Select *Staffing* from the Area prompt.
    b) Click OK.
    c) For the Work Shift localized field, select *France* from the Allow for Countries or Regions prompt, and select the Active check box.
    d) Click OK and Done.

    Security: *Set Up: Tenant Setup - Global* in the System functional area.
2. Access the Edit Job Profile task.
    a) Select an effective date.
    b) Select *Marketing & Communications Coordinator* from the Job Profile prompt.
    c) Select the Work Shift Required check box.
    d) Click OK and Done.

    Security: *Set Up: Job* domain in the Jobs & Positions functional area.

3. Access the Edit Position task.
    a) Select *Marketing Coordinator* from the Position prompt.
    b) Select *Paris* from the Location prompt.
    c) Select *Day Shift* from the Work Shift prompt.
    d) Click Submit.

   Security: *Set Up: Position* domain in the Jobs & Positions functional area.

Next Steps

Access the Maintain Days Worked by Work Shift task to assign days to shifts when you want to prorate by days worked.

Reference: Search Prefixes for Staffing

You can use prefixes in Workday Search to locate particular staffing objects quickly. Search prefixes are lowercase letters, followed by a colon (:). You can use the search categories to narrow down your search results.

Object	Prefix	Example
Contingent Worker	worker:	Search using the contingent worker's name, ID, or email address: • worker: Adam Shreeve • worker: 26712 • worker: ashreeve@gms.com
Employee	worker:	Search using the employee's name, ID, or email address: • worker: Adam Shreeve • worker: 25698 • worker: ashreeve@gms.com
Job Family	jobfamily:	Search using the job family name: • jobfamily: administration
Job Profile	job:	Search using the job profile name or job code: • job: consultant • job: 45100
Location	loc:	Search using the location name: • loc: Chicago
Pre-Hire	• applicant: • ph:	Search using the applicant or pre-hire's name, ID, source name, email address, or phone number: • applicant: Adam Shreeve • applicant: A07193 • applicant: LinkedIn

Object	Prefix	Example
		• applicant: ashreeve@gms.com • applicant: 8001234567 Workday also supports searching for a secondary last name. Example: You have an applicant or pre-hire named David Cook-Smith. When you search using ph: David Smith, Workday displays David Cook-Smith.
Position or Position Restriction	position:	Search using the position, position ID, position restriction ID, location name, job posting title, job profile name, position title, worker name, or username: • position: P-10613 Staff Workforce Analyst - Adam Shreeve • position: P-10613 • position: Staff Workforce Analyst • position: Chicago • position: Adam Shreeve • position: ashreeve When you search for a position using the worker's name, Workday supports searching by current legal and preferred name if you have access to the *Search: Current Legal and All Historical Names* domain. You can search for positions or position restrictions in prompts using the: • Contingent worker ID. • Employee ID. You can't search for: • Closed positions. • Positions using a worker's historical preferred or legal name.

Job Catalog

Job Architecture Hub

Setup Considerations: Job Architecture Hub

You can use this topic to help make decisions when planning your configuration and use of Job Architecture Hub. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Job Architecture Hub provides users with automated insights and actionable steps that they can take to build and maintain a high-quality job architecture that supports their business.

Business Benefits

With Job Architecture Hub, you can enable users to:

- Access a centralized and customizable place to manage your job architecture data.
- Report on job profiles, including any impacts on inactivating or updating a job.
- Identify data gaps and inconsistencies in your job architecture.
- Leverage machine learning suggestions and insights, reducing time spent on analyzing your job architecture.
- View skills-based operational analytics that allows them to compare the supply and demand of skills in their organization, and compare their skills demand to the market.

Use Cases

- Use machine learning to help you identify similar job profiles by scanning across your architecture to highlight jobs that you could consolidate, or adjust for consistency.
- Use automated insights and suggestions to take action on job profiles with data gaps, without workers, and that are out of date.
- View the status of in-progress job profile events.
- Improve data quality for use cases where the data is defaulted and used in machine learning, such as Career Hub and Recruiting.
- Understand the skills supply and demand in your organization.
- Compare your skills in demand against the skills in demand at other companies.

Questions to Consider

Questions	Considerations
What users do I want to access the hub?	You can give users access to all or part of the Job Architecture Hub, based on their roles. Workday recommends that you provide complete access to all pages and sections of the hub to users who manage your job architecture. For most

Questions	Considerations
	organizations, this is a small team that includes HR Partners and Compensation Partners. Workday recommends that you provide partial access to users who benefit from specific insights. Example: You provide your Talent Partners access to the Overview page, and these pages in the Skills Analytics section: Workday Market Skills, Supply and Demand. You don't give them access to the Job Profile Analysis and Job Profile Reports sections. See *Reference: Job Architecture Hub*.
Can I customize the Job Architecture Hub?	Yes. You can customize the Job Architecture Hub, such as by: • Customizing the delivered standard reports. • Renaming the hub, and sections. • Hiding sections, navigation items, and cards. • Including navigation items to custom reports, custom dashboards and Extend Apps. • Adding announcements to sections. • Adding suggested links, such as to your existing custom job architecture reports. • Update your custom reports to return job profiles that meet the filter criteria on the Job Architecture Hub. See *Set Up Hubs*.

Recommendations

Enable the Find Similar and Workday Market Skills pages to view machine-learning driven insights on your job profiles.

Workday recommends you customize the hub to fit your organization's needs.

Requirements

Configure the *Manage: Job Architecture Hub* domain in the Jobs & Positions functional area.

The individual security permissions of users determines what data they can view, and which tasks, reports and cards they can use. Consider the other domains that you want to enable as part of your Job Architecture Hub setup. See *Reference: Job Architecture Hub*.

Limitations

The Workday Market Skills for Job Profiles and Find Similar Job Profiles machine learning features:

- Require customer data contributions to function.
- Update results once every week. This means significant changes to your job architecture or job profiles will take up to a week to reflect in the features.
- Can only be used in your Preview and Production tenants. Implementation tenants are not supported.

The Market Skills feature currently only supports English. Skills and insights provided will be based on English-language job profile and job requisition data, and will not be available in any other languages.

Find Similar Job Profiles only runs on active job profiles. Job Profiles flagged as inactive will not be surfaced.

Tenant Setup

No impact.

Security

Configure the Manage: Job Architecture Hub domain in the Jobs & Positions functional area to enable users to access the hub.

The individual security permissions of users determines what data they can view, and which tasks, reports and cards they can use. Consider the other domains that you want to enable as part of your Job Architecture Hub setup. See *Reference: Job Architecture Hub*.

Business Processes

Ensure that users have the relevant security permissions for the *Manage Job Profile* business process in order to be able to view or initiate it from the hub.

Reporting

No impact.

Integrations

No impact.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Features	Considerations
Compensation	The Job Architecture Hub allows you to report on compensation elements for job profiles, and filter the hub by these compensation fields: • Compensation Grade • Compensation Grade Profile
Recruiting	Job profile data is defaulted and used in machine learning in Recruiting. The hub helps you improve data quality.
Talent Optimization and Career Hub	The hub helps you improve data quality for data that's defaulted and used in machine learning in Career Hub. Insights to help drive career conversations. Example: Career pathing, performance reviews. The Skills Analytics section can help Talent Partners analyze what skills are in demand for the organization, and target skills gaps.

Workday AI Fact Sheet: Market Skills for Job Profiles

Workday AI Fact Sheet: Find Similar Job Profiles

Steps: Set Up Job Architecture Hub

Context

The Job Architecture Hub is a centralized platform that enables users to easily find job architecture related reporting, and machine learning driven insights. It consolidates various tasks and reports into a central location, streamlining administrator's ability to support their job catalog. You can use the insights you gain from the Hub to efficiently maintain a high-quality job architecture that supports your business.

Steps

1. Edit Domain Security Policies.

   Configure the *Manage: Job Architecture Hub* domain in the Jobs and Positions functional area.
2. Configure domain security policies for other tasks and reports that you want to enable in the Job Architecture Hub.

   See Reference: Job Architecture Hub on page 562.
3. Activate Pending Security Policy Changes.
4. (Optional) To use the Market Skills report, opt in to machine learning and Skills Cloud

   a. Enable Skills Cloud.
   b. On the Innovation Services And Data Selection Opt-In task, select HCM ML Features and Third Party Connectors GA on the Available Services tab in the HCM category.
   c. On the Maintain Innovation Services Data Selection Opt-In task, select the HCM ML Features and Third Party Connectors GA innovation service.
   d. Select the opt-in check box for these categories:

      - Job Requisition Data
      - Talent Profile Data

   Security: *Job Profile: Find Similar Jobs*.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   See Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.
5. (Optional) To use the Find Similar report opt in to machine learning.

   a. On the Innovation Services And Data Selection Opt-In task, select HCM ML Features and Third Party Connectors GA on the Available Services tab in the HCM category.
   b. On the Maintain Innovation Services Data Selection Opt-In task, select the HCM ML Features and Third Party Connectors GA innovation service.
   c. Select the opt-in check box for the Talent Profile Data category.

   Security: *Job Profile: Find Similar Jobs*.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   See Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   It may take up to a week to see results in your Production tenant after opting in and setting up the *Job Profile: Find Similar Jobs* domain. Results are updated weekly.

6. (Optional) Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

   Security: *Set Up: Tenant Setup - Machine Learning* domain in the System functional area.

Result

Users can access the Job Architecture Hub and view the tasks and reports you've enabled.

The hub uses your tenant's default time zone to return results as of today's Effective Date.

Next Steps

If needed, access the Maintain Find Similar Job Profiles task to:

- Customize the criteria for returning similar job profiles on the Find Similar Job Profiles report. Select which fields must have identical values in order to be considered similar. Example: When you select Job Level, Workday only displays job profiles with the same job level.
- Select the Opt Out of Explanation on Compare Find Similar to no longer generate an AI explanation when you Compare Similar Profiles on the Find Similar Job Profiles report.

The Workday Market Skills for Job Profiles and Find Similar Job Profiles machine learning features can only be used in your Preview and Production tenants. Implementation tenants are not supported.

Examples

Workday AI Fact Sheet: Market Skills for Job Profiles

Workday AI Fact Sheet: Find Similar Job Profiles

Reference: Job Architecture Hub

This topic lists security domains and consideration for the filters, cards, reports, and tasks displayed in the different sections of Job Architecture Hub:

- Hub Filters on page 562
- Overview on page 563
- Skills Analytics on page 564
- Job Profile Analysis on page 566
- Job Profile Reports on page 568

Hub Filters

You can filter all reports and cards on the Job Architecture Hub to only display job profiles that meet the filter criteria.

In order for users to view consistent results when filtering, make sure that your security configuration on the security domains is consistent with your security configuration for reports and cards on the Job Architecture Hub.

Filters	Security	Description
Job Family Group Job Family Job Profile Organization	*Worker Data: All Positions*	Enables you to only display job profiles with those fields.

Filters	Security	Description
Job Level Skill Job Classification Management Level		
Supervisory Organization Include Subordinate Cost Center	*Manage: Supervisory Organization* *Manage: Cost Center* *Worker Data: All Positions*	Returns job profiles that have an active position or position restriction tied to the Supervisory Organization or Cost Center.
Compensation Grade Compensation Grade Profile	*Non-Worker Data: Compensation Grade* *Set Up: Compensation Packages* *Worker Data: Compensation Grade*	These compensation related filters enable you to only display job profiles with those compensation fields. These compensation fields are contextually secured on the hub: • Compensation Grade • Compensation Grade Profile

Overview

Item	Security	Description
Job Family Groups summary card	*Manage: Job Architecture Hub*	The number of different job family groups represented in the filtered job profiles.
Job Families summary card	*Manage: Job Architecture Hub*	The number of different job families represented in the filtered job profiles.
Active Job Profiles summary card	*Manage: Job Architecture Hub*	The number of different active job profiles represented in the filtered job profiles.
Inactive Job Profiles summary card	*Manage: Job Architecture Hub*	Displays all inactive job profiles. This number isn't impacted by any filters you select for the Job Architecture Hub.
Create Job Profile button	Initiating action on the *Manage Job Profile* business process.	Launches the Create Job Profile task and initiates the *Manage Job Profile* business process.
Edit Job Profile button	Initiating action on the *Manage Job Profile* business process.	Launches the Edit Job Profile task and initiates the *Manage Job Profile* business process.
View Job Profile Audit button	*Audit: Job Architecture Hub*. Users with access to this domain can see all position and job requisition data.	Enables you to view key usages for job profiles, and determine the impact of updating or inactivating them.

Item	Security	Description
View Job Profile button	*Job Profile: View*	Enables you to view a specific job profile.
Without Workers card	*Audit: Job Architecture Hub*. Users with access to this domain can see all position and job requisition data.	Displays the number of active job profiles with no associated workers. You can click Open Page to open the Job Profiles Without Workers report in the Job Profile Analysis section.
Similar card	*Job Profile: Find Similar Jobs*	Displays sets of similar job profiles. Workday uses these data points to determine similar job profiles: • Job Profile Name • Job Profile Summary • Job Description You can click Open Page to open the Find Similar Job Profiles report in the Job Profile Analysis section. You can use the Maintain Find Similar Job Profiles task to customize the criteria for returning similar job profiles. To use this card you must opt-in to machine learning. See *Steps: Set Up Job Architecture Hub*.
Data Gaps card.	*Audit: Job Architecture Hub*. Users with access to this domain can see all position and job requisition data.	Displays job profiles with missing pay rate types, job classifications, skills, job descriptions, and job summaries. You can click Open Page to open the Job Profiles With Missing and Inconsistent Data report in the Job Profile Analysis section. Displays up to 2,000 job profiles with missing pay rate types and job classifications.

Skills Analytics

Skills Supply and Demand Analytics page:

Item	Security	Description
X% of Skills Demand Met card	*Worker Data: All Positions* *Person Data: Skills*	Compares skills demand to skills supply. Enables you to

Item	Security	Description
		quickly identify gaps between supply and demand. We calculate X based on the average ratio of skills supply divided by the skills demand. X won't go above 100%. Example: You have the Leadership and Communication skills in demand. Both have a demand of 50. Leadership has a supply of 25, and Communication has a supply of 50. On average, 75% of the skills demand is met by the skills supply.
Top Job Profile Skills in Demand	*Manage: Job Architecture Hub - Skills Analytics* *Worker Data: All Positions* The *Set Up: Skills and Experience* domain enables users to drill down into the individual Skills	Displays demand for particular skills based on positions, position restrictions, which job profiles those positions are using, and the skills explicitly defined on the job profile. The feature then aggregates the skills to determine demand for a particular skill. To aggregate the top 10 skills we use: • All position restrictions (filled and unfilled) for position management and all jobs for job management. • All associated job profiles. • Skills assigned to those job profiles Workday then aggregates the skills to derive demand. Uses skills on inactive job profiles if they're linked to an active position, position restriction, or job. See *Steps: Set Up Skills and Experience*.
Top Worker Skills in Supply	*Manage: Job Architecture Hub - Skills Analytics* *Person Data: Skills. Contextual* security is applied. The *Set Up: Skills and Experience* domain enables users to drill down into the individual Skills	Displays a list of skills with the most workers. The Top 10 skills are based on the most frequent skills on worker profiles. See *Steps: Set Up Skills and Experience*.

Workday Market Skills page. To use this page you must opt-in to machine learning. See *Steps: Set Up Job Architecture Hub*.

Item	Security	Description
Top Market Skills	*Manage Job Architecture Hub: Market Skills*	Displays the top market skills for your job profiles. Market skills are based on Workday customers who've opted to provide data. Workday uses machine learning to find similar jobs in the Workday customer market, and aggregates inferred skills from those jobs to return the top market skills. The report is sorted by the top market skills for your job profiles. The positions in the Associated Positions column in market skills reports are secured to the *Worker Data: All Positions* domain. To use this page you must opt-in to machine learning. See *Steps: Set Up Job Architecture Hub*.

Job Profile Analysis

Item	Security	Description
Find Similar page	*Job Profile: Find Similar Jobs*	Displays the Find Similar Job Profiles report. Displays sets of similar job profiles. You can use the Compare Similar Profiles button to view a more detailed report allowing you to determine how you might want to act. Workday generates an AI explanation. You can opt out of the explanation using the Maintain Find Similar Job Profiles task. Workday uses these data points to determine similar job profiles: • Job Profile Name • Job Profile Summary • Job Description You can use the Actions column to launch these tasks if you have access to them:

Item	Security	Description
		• Edit Job Profile View Job Profile Audit You can use the Maintain Find Similar Job Profiles task to customize the criteria for returning similar job profiles. These compensation fields are contextually secured: • Compensation Grade • Compensation Grade Profile To use this report you must opt-in to machine learning. See *Steps: Set Up Job Architecture Hub*.
Data Gaps page	*Audit: Job Architecture Hub* Users with access to the *Audit: Job Architecture Hub*domain can see all position and job requisition data on this page.	Displays the Job Profiles With Missing and Inconsistent Data report. Displays job profiles with missing pay rate types, job classifications, skills, job summaries, and job descriptions. You can use the Actions column to launch the Edit Job Profiles task if you have access to it.
Without Workers page	*Audit: Job Architecture Hub*	Displays the Job Profiles Without Workers report. Displays the number of active job profiles with no associated workers. You can use the Actions column to launch these tasks if you have access to them: • Edit Job Profile • Audit Job Profile
Job Profiles Out-of-Date page	*Job Profile: View*	Displays the Active Job Profiles Out-of-Date report. Displays the active job profiles that you haven't updated in the last 6 months, 6-12 months, or over 1 year. Based on your security access, the report also displays the related job families, compensation grade, date of

Item	Security	Description
		last update, and number of workers in the job profile.

Job Profile Reports

Item	Security	Description
All Active Job Profiles	*Job Profile: View*	Displays a consolidated overview of all active job profiles, including all attributes of the job profiles. These compensation fields are contextually secured: • Compensation Grade • Compensation Grade Profile
Manage Job Profile In Progress Events	*Job Profile: Manage Job Profile Events*	Displays all in progress Manage Job Profile events, the Date and Time Initiated, Effective Date, and Awaiting Person(s).

Workday AI Fact Sheet: Market Skills for Job Profiles
Workday AI Fact Sheet: Find Similar Job Profiles

Steps: Set Up Job Catalog

Context

Define characteristics of jobs and positions in the job catalog before filling jobs or positions in a supervisory organization. A job catalog can include levels, titles, grades, compensation, and other attributes.

Steps

1. Create Job Profiles on page 573.

   This describes the jobs or positions in your organization. A job profile can belong to one or more job families.

   You can also configure workflows, such as review and approval, for creating and editing job profiles by setting up the *Manage Job Profile* business process.
2. Create Job Families on page 578.

   This groups job profiles within the job catalog. A job family can belong to a job family group.
3. Create Job Family Groups on page 579.

   A job family group represents a collection of job families.

Example

Job Profile	Job Family	Job Family Group
Senior Benefits Analyst	HR - Benefits	Human Resources
Staff Benefits Analyst		

Job Profile	Job Family	Job Family Group
Senior Payroll Specialist Staff Payroll Specialist	HR - Payroll	
Senior Recruiter Staff Recruiter	HR - Recruiting	

Next Steps

- Create jobs or positions.
- View job catalog reports.

Related Information

Tasks

Create Hiring Restrictions on page 591

Create Positions on page 595

Reference

Reference: Job Catalog Reports on page 581

The Next Level: Build a Job Catalog to Stand the Test of Time

Steps: Set Up Job Profile Business Process

Context

Configure workflows for the Create Job Profile and Edit Job Profile tasks, such as approval and review steps.

The *Manage Job Profile* business process and the *Submit Job Profile* web service use snapshots to capture the job profiles that are effective as of a particular date. When you edit job profiles in date order, each effective date is a snapshot view of the job profile. When you enter job profiles out-of-date order and back-date the Effective Date field, your change won't automatically update the job profile on all later-dated snapshots. Use the Edit Job Profile task to update job profiles on all later-dated snapshots. Example: You have an existing job profile named *Manager A*. You edit the job profile to rename it to *Manager B*, effective 2024-06-01. Later, you edit the job profile to rename it *Manager C*, effective 2024-03-01. You review the job profile on 2024-07-01. The job profile name is *Manager B*, because it's the most recently effective change. Note that all job profile fields are effective dated except Job Code.

Steps

1. Edit Business Process Security Policies.

   Configure the security policy for the *Manage Job Profile* business process in the Staffing functional area.

   You can set up the security for the *Submit Job Profile* web service initiating action.

   You can configure both unconstrained and constrained security groups for the initiating action. For all other actions, you can only configure unconstrained security groups.
2. Edit Business Processes.

   Configure the *Manage Job Profile* business process in the Staffing functional area.
3. (Optional) Enable skills suggestions on the *Manage Job Profile* business process.

   Enable Skills Cloud and select the Populate Skill Suggestions for Job Profiles check box on the Maintain Skills and Experience Setup task.

   See Enable Skills Cloud.

   When the users access the Create Job Profile and Edit Job Profile tasks, they'll see skill suggestions. The skill suggestions will dynamically update as they modify details on the job profile.

4. (Optional)Steps: Set Up Job Description Generation on Job Profiles on page 571.
5. (Optional) Steps: Set Up Similar Existing Job Profiles on page 572.
6. (Optional) Hide or Require Optional Fields.

   Hide or require optional fields, sections, and tabs on the *Manage Job Profile* business process. Workday will hide or require them on the Create Job Profile and Edit Job Profile tasks.

   For some fields, you can select which security groups you want to require a field, or make it not enterable. Example: You want to require the fields in the Pay Rate Types section for HR Administrators, and not enterable for Compensation Administrators.

   When you configure a field as required and select the Enforce Required in Web Services check box, you must enter a value in the field in the *Submit Job Profile* web service.
7. (Optional) Configure what users can view on the Job Profile report.

   You can configure which security groups can view the Overview, Compensation, Pay, and Business Process History tabs on the Job Profile report. Users with access to the:

   - *Job Profile: Compensation* domain can view the Compensation tab in the Overview section.
   - *Job Profile: Pay* domain can view these reports: Pay Rate Type, Job Exempt, Workers' Compensation Code.
   - *Job Profile: Manage Job Profile Events* domain can view the Business Process History tab.

   Access the Configure Optional Fields task to customize what users can view on the Overview and Characteristics tabs on the Job Profile report. Use the *Job Profile Overview – Profile*, and *View Job Characteristics – Profile View* functional areas.

Result

Users can initiate the *Manage Job Profile* business process to create or edit job profiles.

Next Steps

Workday enables you to rescind the *Manage Job Profile* business process. When configured, users can rescind a *Manage Job Profile* business process event from the:

- Related action of the *Manage Job Profile* event.
- Mass Rescind task.
- Rescind web service.

You can't rescind:

- A *Manage Job Profile* business process event that's the only event on the earliest effective date and in use.
- Changes made to the job profile before the introduction of the *Manage Job Profile* business process.
- Those changes were not a business process event, and therefore can't be rescinded.

When a *Manage Job Profile* event is rescinded:

- It's removed from the Business Process History tab on the View Job Profile report.
- The rescinded data is no longer searchable through Global Search. You can view the rescinded event from the Audits > View Audit Trail related action on the associated job profile.
- All data on the job profile is restored to the previous state according to effective date. Except, the Job Code on the associated job profile remains the same.
- If the rescinded event is the the only event in the job profile's history, the Job Code and all associated data is cleared from the job profile.

2024R2 Feature Release Note: Effective Dating Enhancements for Job Profile

2024R2 Feature Release Note: Job Profile User Interface

2024R1 What's New Post: Job Profile Business Process

Steps: Set Up Job Description Generation on Job Profiles

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Security: *Manage: Machine Learning for Job Descriptions* domain in the Staffing functional area.

Grant Modify access to *Manage: Machine Learning for Job Descriptions* domain to the appropriate roles.

Context

Job Description Generation on Job Profile enables you to create job descriptions using generative artificial intelligence and reducing manual effort.

Workday uses these data points to generate job descriptions:

- Job Profile Name: The name you entered on the job profile.
- Company Name: The name associated with your tenant.
- Preferred Display Language: The user's language.

Steps

1. Access the Innovation Services and Data Selection Opt-In task.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.
2. On the Innovation Services Opt In tab, select HCM on the Available Services tab.
3. On the Maintain Innovation Services Data Selection Opt In tab, select HCM: HCM ML Features and Third Party Connectors GA.

4. Select the Opt In check box to enable these categories on the HCM: HCM ML Features and Third Party Connectors GA tab:

    - Job Requisition Data
    - Job Posting Data

    If you're already opted in to Innovation Services and Data Selection Categories, you must select the Opt In to Additional Data check box, if available. You might need to wait 24 hours after you opt in, for the Generate with AI button to display on your tasks.

Result

You can use the Generate with AI button on the Job Description field on these tasks, to create job descriptions:

- Create Job Profile
- Edit Job Profile

Steps: Set Up Job Description Generation on Job Requisitions on page 222

Workday Community: Job Description Generation on Job Profile AI Fact Sheet

2025R1 Feature Release Note: Job Description Generation on Job Profile

Steps: Set Up Similar Existing Job Profiles

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Security: *Job Profile: Find Similar Jobs* domain in the Staffing functional area. Users must have access through an unconstrained security group.

Context

The Similar Existing Job Profiles feature enables you to view similar job profiles using generative artificial intelligence when using the *Manage Job Profile* business process. This helps you reduce duplicate job profiles.

Workday uses these data points to determine similar job profiles:

- Job Profile Name
- Job Profile Summary
- Job Description

Steps

1. Access the Innovation Services and Data Selection Opt-In task.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.
2. On the Innovation Services Opt In tab, select HCM on the Available Services tab.
3. On the Maintain Innovation Services Data Selection Opt In tab, select HCM ML Features and Third Party Connectors GA.
4. Select the Opt In check box to enable the Talent Profile Data category on the HCM ML Features and Third Party Connectors GA tab.
5. If you're already opted in to Innovation Services and Data Selection Categories, you must select the Opt In to Additional Data check box, if available.
6. (Optional) Customize the criteria for returning similar job profiles:

   Access the Maintain Find Similar Job Profiles task. Select which fields must have identical values in order to be considered similar. Example: When you select Job Level, Workday only displays job profiles with the same job level.

Result

When you access the *Manage Job Profile* business process, Workday displays a Does This Job Profile Already Exist? panel with the Similar Existing Job Profiles report.

Example

You want to create a new job profile for a Machine Learning Engineer. You access the Create Job Profile task which launches the *Manage Job Profile* business process. You enter a Job Profile Name. The Does This Job Profile Already Exist? panel displays a similar job profile that already exists. You cancel the creation of the new job profile, and edit the existing job profile to match your needs.

Next Steps
It may take up to a week to see results in your Production tenant after opting in.

The Find Similar Job Profiles machine learning features can only be used in your Preview and Production tenants. Implementation tenants are not supported.

Steps: Set Up Job Architecture Hub on page 561

Create Job Profiles

Prerequisites

- Set up basic staffing information and job qualifications.

  Example: Management levels, job categories, work shifts, pay rate types, certifications, competencies, education, and skills.
- To generate job codes automatically, create an ID definition for job codes and select it in the Edit Tenant Setup - HCM task.

- To configure a frequently used filter on the Restrict to Country prompt, select the relevant countries in the Frequently Used Values section of the Edit Tenant Setup - Global task.
- To hide or require optional fields on the Create Job Profile and Edit Job Profile tasks, use the *Manage Job Profile* functional area on the Configure Optional Fields task.
- Security: *Set Up: Job* domain in the Jobs & Positions functional area.

Context

Define characteristics of jobs and positions.

By default, the Create Job Profile task is an initiating action on the *Manage Job Profile* business process. You can set up the business process to add additional steps to suit the needs of your organization.

You can load and retrieve current job profiles in bulk using these web services:

- Submit Job Profile
- Get Job Profile

When you run the Get Job Profile web service for a job profile that's effective in the future, it only retrieves the ID for the job profile.

Steps

1. Access the Create Job Profile task.
2. Enter an Effective Date.
3. As you complete the task, consider:

Option	Description
Job Profile Name	If you leave the Job Title Default field blank, Workday uses this name as the business title in staffing events. You can override the business title when you staff the job or position. If you want to use the same name as existing job profile in the same Job Family, you must either: • Enter effective dates that don't overlap with the existing active job profile. • Inactivate the existing job profile. • Select a different Job Family.
Job Code	If you set up your tenant for automatic job codes, leave this field blank to have Workday generate the job code. If you enter your own job code, it overrides the generated job code. If you don't use automatic job codes, populate this field.
Job Profile Summary	Enter a description to help selecting an appropriate job profile for a position. The job profile summary automatically populates in the Create Position and Create Job Requisition tasks when you select this job profile.
Job Title Default	If staffing events hire, transfer, or promote employees into this job profile, the business

Option	Description
	title automatically populates from this value. You can override the title when you staff the job or position.
Restrict to Country	Select the countries where this job profile is valid, or leave this blank if the job profile is available for all countries. • Country restrictions automatically apply to the *Change Job* business process, which filters job profiles based on a worker's location. • In other staffing business processes, you can create an exit rule using the Countries for Job Profile or Job Profile Valid for Location report field. The rule enables you to verify that a job profile is valid for a worker's location. • You can also use the Frequently Used prompt category with the *Job Family* filter to identify the proper job profile for staffing transactions.
Job Category	The job category automatically populates in staffing tasks that hire, transfer, or promote employees into this job profile. During a staffing event, you can't override or modify job categories that automatically populate to a worker's job or position from a job profile. You can only apply 1 job category to a job profile.
Company Insider Type	The insider type automatically populates in staffing tasks that hire, transfer, or promote employees into this job profile. You can override the default insider type for a worker when you staff the job or position.
Referral Payment Plan	For Recruiting only. Associates a payment plan for successful referrals with the job profile. Workday automatically associates the selected referral payment plan with all job requisitions that use this job profile.
Work Shift Required	Specifies that the job profile is requiring a work shift for any worker hired, transferred, or promoted into a job or position based on this job profile.
Public Job	Enables employees to select this job profile as a job interest.
Job Description	The job description automatically populates in the Create Position and Create Job Requisition tasks when you select this job profile. If you have set up job description generation on job profiles, you can use the Generate with AI button. Workday creates the job descriptions

Option	Description
	using generative artificial intelligence. See *Steps: Set Up Job Description Generation on Job Profiles*.
Additional Job Description	For Recruiting only. The additional job description automatically populates in the Create Job Requisition and Create Evergreen Requisition tasks when you select this job profile. You can configure this field to display on your internal or external career site using job posting templates.

4. In the Pay Rate Types section, associate the job profile with default pay rate types by country.

   This option enables you to create 1 global job profile that reflects local preferences and requirements for pay rate types. These values automatically populate into the Hire Employee, Change Job, and other Staffing tasks. You can override the country-specific defaults by editing the job profile.

   When you staff a job or position based on this job profile, Workday determines the default pay rate type. The default pay rate type is based on the job and position primary business address and location in these tasks:

   - Create Position
   - Set Hiring Restrictions
5. (Optional) Enter additional information about the job profile, such as Characteristics, Compensation, Unions, Work-Study , and specific qualifications.

   As you complete the task, consider:

Option	Description
Compensation Grade	Select the standard compensation range for the job profile. Grades are guidelines used in determining compensation for a worker.
Compensation Grade Profile	Select the grade profile associated with the selected compensation grade. Grade profiles create more granular compensation ranges within the grade.

Next Steps

- You can translate the values for the Job Profile instance you created by accessing the Translate Tenant Instance task from the Translate related action. However, selecting the Hide Translations after Base Value Change check box won't hide the translation for tenanted translations. If you update the base value on the job profile, you must manually access the Translate Tenant Instance task and update or delete the Translated Value.
- Create jobs or positions.
- To view the job profile you created, access the Job Profile report:
  - Use the View As Of field to view a snapshot of a job profile as of a specific date. You can only select job profiles that are effective on the View As Of date.
  - To select content for the report, use the Configure Profile and Configure Profile Group tasks.
  - Use the Business Process History tab to view details for any job profiles that you create or edit using the *Manage Job Profile* business process.

- To modify or inactivate a job profile, use the Edit Job Profile task.

  The *Manage Job Profile* business process and the *Submit Job Profile* web service use snapshots to capture the job profiles that are effective as of a particular date. When you edit job profiles in date order, each effective date is a snapshot view of the job profile. When you enter job profiles out-of-date order and back-date the Effective Date field, your change won't automatically update the job profile on all later-dated snapshots. Use the Edit Job Profile task to update job profiles on all later-dated snapshots. Example: You have an existing job profile named *Manager A*. You edit the job profile to rename it to *Manager B*, effective 2024-06-01. Later, you edit the job profile to rename it *Manager C*, effective 2024-03-01. You review the job profile on 2024-07-01. The job profile name is *Manager B*, because it's the most recently effective change. Note that all job profile fields are effective dated except Job Code.
- To hide the job profile on the worker profile, use the *Worker Profile - Job - Job Details* functional area on the Configure Optional Fields task.
- To review job profiles and pay amounts, view the Employee Compensation Ranges for Job Profiles report.
- To identify and correct positions that don't meet the country restrictions for their job profile, view the Positions with Invalid Location for Job Profile report.
- To audit updates to the job profile made:
  - Prior to 2024-03-09, Workday recommends that you create an audit history using the Create Audit Log task.
  - After 2024-03-09, Workday recommends that you create a custom report using the event-based current and proposed report fields on the Manage Job Profile Event business object.

2024R2 Feature Release Note: Effective Dating Enhancements for Job Profile

2024R2 Feature Release Note: Job Profile User Interface

Steps: Filter Job Profiles by Country

Context

When you need to locate job profiles for Staffing transactions, you can filter by country to narrow your search results. You can limit the results even further by selecting frequently used countries in your Workday tenant. This enables you to filter job profiles to a subset of job family categories within those frequently used countries.

You can select the Frequently Used prompt for the job profile on these tasks:

- Change Job
- Create Job Requisition
- Create Position

- Edit Job Profile
- Edit Job Requisition
- Edit Position
- Edit Position Restrictions

Steps

1. Access the Edit Tenant Setup - Global task.

   In the Frequently Used Values section, select 1 or more frequently used countries.

   See Reference: Edit Tenant Setup - Global.
2. Create Job Profiles on page 573.

   In the Profile Details section, use the Frequently Used prompt category in the Restrict to Country prompt to select the relevant countries for the new job profile.

Create Job Families

Prerequisites

Security: *Set Up: Job* domain in the Jobs & Positions functional area.

Context

You can use job families to group job profiles within the job catalog. A job profile can belong to one or more job families.

Note: If a job family contains positions associated with position budgets, it can't be modified or deleted.

Steps

1. Access the Create Job Family task.
2. Specify an Effective Date.
3. Specify a Job Family Name.

   Job families and job family groups must have different names.
4. Select staffing elements related to this job family:

Option	Description
In Job Family Group	A job family can belong to only 1 job family group. You can add this job family to a job family group when you create it.
Used in Job Profiles	You can add more than 1 job profile to this job family.

5. Provide a Job Family Summary for reference.
6. (Optional) Access the Configure Optional Fields task and select the relevant business process in the By Functional Area field to hide fields you don't use, and control field visibility based on security groups.
7. (Optional) Specify an Occupational Series code. This field is delivered hidden by default using the Configure Optional Fields task. Access the Maintain Custom Labels task to rename this field based on your organizational needs.

Next Steps

- Create job family groups.
- To update or inactivate a job family, use the Edit Job Family task. You can't select an Inactive job family from menu prompts, but it remains valid for workers to whom it is already assigned.

You can use the *Worker Data: Job Family on Worker Profile* domain to control the visibility of a worker's job family when viewing their own or other workers' profiles.

Create Job Family Groups

Prerequisites

Security: *Set Up: Job* domain in the Jobs & Positions functional area.

Context

Organize related job families into a job family group.

Steps

1. Access the Create Job Family Group task.
2. Specify an Effective Date.
3. Specify a Job Family Group Name.

   Job families and job family groups must have different names.
4. Add 1 or more Job Families to the job family group.
5. (Optional) Provide a Job Family Group Summary for reference.

Next Steps

To update or inactivate the job family group, use the Edit Job Family Group task.

You can use the *Worker Data: Job Family on Worker Profile* domain to control the visibility of a worker's job family group when viewing their own or other workers' profiles.

Mass Update Job Profile Skills with Workbooks

Context

The Edit Skills on Job Profile workbook makes it possible for users to maintain and update job profile names, summaries, and skills data in bulk using Worksheets. This workbook only supports unconstrained security groups.

If you want to access suggested skills within the workbook, you’ll need to subscribe to Workday Skills Cloud. Workday suggests that you enable Skills Cloud Skills within the workbook to use all supported skills types on job profiles.

Steps

1. Steps: Set Up Mass Actions.

   Configure Modify access for users on the Mass Action Events domain.

2. Edit Business Process Security Policies.
    - Configure security permissions on the *Mass Action Event* business process type:
        - Configure the security groups that you'd like to launch and submit the workbook on the *Launch Mass Action Event* initiating action step.
        - Configure the security groups that you'd like to receive the workbook upon initial generation and complete the mass action event. Use the *Complete Mass Action Event* action step type.
        - (Optional) Configure the security groups that you'd like to cancel the workbook on the *Cancel* step type.
    - Configure security permissions on the *Manage Job Profile* business process type:
        - Configure the security groups that you'd like to launch and submit the workbook on the *Edit Skills on Job Profile (Mass Action)* initiating action step.
3. Edit Domain Security Policies.

    Grant access to these domains by selecting security groups and specifying whether they have permission to view or modify data:

Domain	Functional Area	Access Modes	Considerations
Drive	System	View and Modify	Gives users Drive access to create and manage worksheet data.
Worksheets	System	View and Modify	Gives users the ability to generate workbooks.

4. Activate Pending Security Policy Changes.
5. (Optional) Hide or Require Optional Fields.

    You can't hide or mark fields as view-only by security group.
6. Enable Skills Cloud.

    To enable Skills Cloud Skills and suggested skills within the workbook, in the Skills section, select:
    - Enable Workday Skills Cloud
    - Populate Suggested Skills for Job Profiles

    Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

    Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
7. (Optional) Create Custom Reports.

    Create or edit a custom report that has a data source containing job profiles. You can use the report or report filter to populate up to 1000 workers in the workbook using the Launch Mass Action Event task. Example: You have created a custom report that you use regularly to maintain your job profiles, and you want to use it to mass update job profile skills.

    You can use a Workday-delivered report or a custom report. Workday recommends that you use the Workday-delivered Suggested Skills on Job Profile report.
8. Access the Launch Mass Action Event task to generate the workbook.
    a. Select Edit Skills for Job Profiles as the Mass Action Type and any report that contains job profiles. Workday recommends that you use the Suggested Skills on Job Profile report.
    b. (Optional) Configure the Pre-populate Skills on Job Profile section with the skills that you'd like to prepopulate into your Workbook once it generates.

9. After the workbook generates, access My Tasks and click Open Workbook.

   Complete the details in the workbook using the prompts and validation messages. You can also share this workbook with other users to collaborate on data entry.

   Note: You can't add a row to the workbook but you can delete a row or cancel the workbook.
10. Select Validate All.

    Resolve errors and submit the workbook. Any rows with errors remain in the workbook instead of updating job profiles. You can access the workbook later to resolve and submit any remaining rows.
11. Complete the mass action event after you submit or delete remaining workbook rows.

Result

When you submit the workbook, Workday kicks-off a *Manage Job Profile* business process event for every job profile that you've submitted. After Workday generates the workbook, it remains available in the drive of the user for evaluation.

Next Steps

You can keep track of all the workbooks associated to job profile updates by using the All Events - Edit Skills on Job Profile Mass Action report field.

You can also use the Job Profile - Current tab to compare updated values against pre-existing data in the workbook.

Staffing Models

Manage Staffing Models

Prerequisites

To change a staffing model for your organization, rescind any in-progress or completed:

- Hiring or position restriction events.
- *Move Worker (By Organization)* events.
- Staffing events.

Context

Assign staffing models to supervisory organizations to establish how you define and fill jobs and positions.

Steps

- Assign a staffing model to a new parent organization:
    a) Access the Create Supervisory Organization task.
    b) On the Staffing Model tab, select either *Position Management Enabled* or *Job Management Enabled*.

  A supervisory organization has 1 staffing model. However, not all supervisory organizations require the same staffing model.

  Security: *Create: Supervisory Organization* domain in the Organizations and Roles functional area.

  Note: When you attach subordinate organizations to this organization using the Create Subordinate Organization task, the subordinate organizations automatically inherit the staffing model of the parent organization.
- Change the staffing model assigned to a parent organization or update the staffing model that a subordinate organization inherits from its parent organization:
    a) Search for the organization.
    b) From the related actions menu of the organization, select Organization > Edit Staffing Model.
    c) Specify either *Position Management Enabled* or *Job Management Enabled*.

  Security: *Set Up: Staffing Model* domain in the Staffing functional area.

  Note: Changing the staffing model of a parent organization doesn't automatically change the staffing model of existing subordinate organizations. You can use the Edit Staffing Model task to change the staffing model of a subordinate organization to match the parent organization.
- View and maintain the staffing models of all organizations that you own:
    a) Access the Maintain Staffing Models task.
    b) Update and maintain the staffing models assigned to the organizations that you own.

  Set Up: Staffing domain in the Staffing functional area.

Next Steps

Create jobs or positions.

Tasks

Set Up Supervisory Organizations

Create Hiring Restrictions on page 591

Create Positions on page 595

Reference

Reference: Staffing Model Comparisons on page 586

Concept: Staffing Models

Workday supports 2 types of staffing models: position management and job management. These staffing models provide a different level of control over staffing and support different staffing goals.

Position Management

Position management provides the greatest control over hiring. It enables you to define separate hiring rules and restrictions for each position.

Key Features	• Requires you to specify the number of positions to fill. • Requires an open, approved position before you can hire, promote, transfer, or demote workers.

	• Each position you create can have its own definition and hiring restrictions.
Example	Helen Meyer manages a team of customer support specialists in different locations across the country. The requirements vary widely by position and location: • Pay scales. • Expected job skills. • Experience. In addition, each position Helen opens requires a separate approval by her HR Partner. Helen needs the ability to define each position based on the hiring location and current company needs. Because she's subject to tight hiring controls, position management is an appropriate staffing model for her organization.

Job Management

Job management provides the least control over the definition of individual positions. The hiring restrictions you define apply to all jobs in the supervisory organization, and you can define only 1 set of hiring restrictions per organization. In addition, there are no limits on the number of jobs that you can fill. For this reason, job management is useful for organizations that prefer to define broad job requirements. These organizations rely on staffing workflow and approvals to control the number of workers in a supervisory organization.

Key Features	• There's an unlimited number of openings. • You don't have to create a separate, open position for each job you want to fill. • Any hiring restrictions you define apply equally to all jobs in the organization.
Example	Jake Lee manages a growing team of software application specialists in a startup company. He needs the flexibility to hire workers with a wide range of skills, backgrounds, qualifications, and work preferences. He doesn't, however, want to restrict his ability to fill jobs as the right people become available. An expanding customer base requires that he increase the size of his team in the areas of: development, documentation, product management, and QA. Jake's manager agrees to let Jake fill 9 additional openings. After several weeks of interviewing, he hires 2 developers and 1 part-time product manager. Jake still has management approval to expand his team, and he does so as he finds the right people. Jake needs flexibility when hiring. He's not interested in filling narrowly defined positions. Instead, he needs to assemble a critical mass of employees in the shortest possible time. Therefore,

Jake's HR Administrator selected job management as their staffing model, enabling them to define a broad set of job requirements that apply to all potential hires.

Tasks

Manage Staffing Models on page 582

Reference

Reference: Staffing Model Comparisons on page 586

Concept: Hiring Restrictions

Hiring restrictions are rules, conditions, or constraints that determine the hiring and staffing actions within a job management organization. These restrictions enable you to:

- Limit staffing to specific job families and job profiles.
- Restrict the locations where a job or position can be filled.
- Define the required qualifications, experience, and skill levels of workers hired into a job or position (position management organizations only).
- Limit staffing for a job or position to a specific worker type (employees or contingent workers).
- Limit staffing for a job or position to a specific time type (full or part-time workers).

You can apply requirements associated with generic profiles to a job or position, and further refine them using hiring restrictions. Example: Create a Senior Mechanical Engineer job profile that requires a college degree and fluency in Spanish. Then, define 2 positions with different hiring restrictions:

- Senior Mechanical Engineer - Infrastructure is restricted to full-time employees in New York.
- Senior Mechanical Engineer - Systems is restricted to full-time contractors in San Francisco.

You can also select the Allow Override of Restrictions on Staffing Events check box in the Edit Tenant Setup - HCM task to bypass the hiring restrictions on:

- Job Profile
- Location
- Time Type
- Worker Type

Workday enforces hiring restrictions at the point of hire and not during job requisition creation.

Job Profile Defaulting

The hiring restrictions you set can determine the defaulting behavior of the Job Profile field into a job requisition:

- If you copy a job requisition, the Job Profile field on the source job requisition will default into the new job requisition event.
- If you create a job requisition for a job management organization, the Job Profile may default from the hiring restrictions of the job management organization.
- If the job management hiring restrictions have a single Job Profile, and no Job Family, that Job Profile will default.
- If the job management hiring restrictions have a single Job Family, which contains a single Job Profile, and no job profiles, the Job Profile in the Job Family will default.
- If the job management hiring restrictions has a single Job Family, which contains a single Job Profile, and only 1 separate Job Profile which is the same as the Job Profile of the Job Family, that Job Profile will default.

- If any other combinations are set on the job management organizations hiring restrictions, example: multiple job profiles, 1 or multiple job families with multiple profiles or both job profiles and job families with a combined number of profiles greater than 1, no defaulting will occur.
- If you create a job requisition for a new position for a Position Management organization, no defaulting will occur.
- If you create a job requisition for an existing position in a Position Management organization, defaulting behavior will be based on your current tenant setup.

  You can use Edit Tenant Setup-HCM task to set up the defaulting behavior of your tenant. In the Job Requisitions section, select the appropriate option for your Defaulting Behavior for Position Management Job Requisitions:

  1. If you select Default from Position Restriction on Create Job Requisition, Workday will default the Job Profile from the Job Profile or Job Family set on the Position Restriction. This will be default behavior if there is a single Job Profile, similar to the behavior of job profiles and job families outlined for Job Management organizations above.

     If the job requisition is for multiple existing positions, Workday will default the Job Profile from the Job Profile or Job Family set on the position restriction of the Defaulting Position that you specify.
  2. If you select Default from Most Recent Filled Position on Create Job Requisition, Workday will default the Job Profile from the job profile of the worker who last occupied that Position Restriction.

Managing Hiring Restrictions

Hiring restrictions must exist on the Job Management organization before a job requisition can be created.

To edit existing hiring restrictions, select Edit Hiring Restriction from the related actions menu of the job management organization with the hiring restrictions.

You can also Set Hiring Restriction from the related actions menu of the organization.

You can view the hiring restriction on a job management organization from the Staffing tab of the supervisory organization.

Steps: Set Up Workday Docs

Reference: Staffing Model Comparisons

Compare the 2 staffing models in Workday (position management and job management) in these areas:

- Staffing Restrictions
- Hiring Limits and Controls
- Moving Workers, Jobs, and Positions
- Organization Assignments
- Change Job on page 589
- Compensation
- Tracking and Reporting

Staffing Restrictions

	Position Management	Job Management
Set hiring restrictions based on job family, job profile, worker type, location, and full-time or part-time status?	Yes	Yes
Define hiring restrictions based on personal qualifications such as education, experience level, languages spoken?	Yes	No
Level at which Workday sets hiring restrictions?	Hiring restrictions apply at the level of individual positions.	Hiring restrictions apply to the entire organization. You can't define hiring restrictions for individual jobs in the organization.

Hiring Limits and Controls

	Position Management	Job Management
Imposes hiring limits?	Yes. Specify the number of positions that you want to fill; Workday enables you to fill only open positions.	No. Workday imposes no limit on the number of jobs that you can fill in an organization; however, you can set up workflow to require approval for individual jobs.
Open position required before you can hire a worker?	Yes	No
Approval required to fill positions or jobs?	There's no required approval process. Depending on your workflow configuration, you might need approval to create and fill a position.	There's no required approval process. Depending on your workflow configuration, you might need approval to fill a job.
Ability to adjust headcount up or down?	Yes. You can request new positions using the Create Position task; you can close existing ones using the Close Position task. Both tasks have configurable workflow and approvals.	No. Workday imposes no limit on the number of jobs that you can fill in an organization; however, you can limit hiring by enabling approval workflow.
Ability to use job requisitions?	Yes	Yes

Moving Workers, Jobs, and Positions

	Position Management	Job Management
You can move multiple workers from 1 organization to another?	Yes	Yes
You can move multiple positions from 1 organization to another?	Yes	Yes

	Position Management	Job Management
You can move a worker along with their current position or job into a new organization as part of a job change?	Yes	Yes
A worker can be moved into a new position or job in another organization as part of a job change?	Yes	Yes, depending on what you set up at the tenant level for Change Job.
Positions or jobs persist in the old organization after a job change or termination?	• If you move a worker together with their current position into a new organization, the position is unavailable for staffing in the old organization. • If you move a worker into a new position in another organization, you can either close the position in the old organization or keep it open for staffing. • When you terminate an employee, you can either close the position in the employee's organization or keep it open for staffing.	• If you move a worker together with their current job into a new organization, the job remains available for staffing in the old organization. • If you move a worker into a new job in another organization, the job remains available for staffing in the old organization. • When you terminate an employee, the job remains available for staffing in the employee's organization.

Organization Assignments

	Position Management	Job Management
Organization assignments automatically populate (ability to define at the supervisory organization level the company, cost center, and region that defaults to a newly created position or job)?	Yes	Yes
Edit the organization assignments for an open/unfilled position (ability to change the company, cost center, or region that you assigned the position to)?	Yes. You can edit the assignments for each position separately.	No
Edit the organization assignments (ability to change the company, cost center, or region that you assigned the position to) for a filled position?	Yes	Yes

Change Job

You can configure change job for a tenant by selecting the Change Job Use Default Organizations for Job Management check box on the Edit Tenant Setup - HCM task.

	Position Management	Job Management with Change Job Use Default Organizations for Job Management cleared	Job Management - Change Job Use Default Organizations for Job Management selected
When you initiate a Change Job between organizations, Workday moves the worker into a new position?	Yes	No	Yes
When you initiate a Change Job between organizations, Workday applies hiring restrictions to the new position?	No	No	Yes
When you initiate a Change Job between organizations, Workday removes the worker's role assignments?	Yes	No	Yes
When you initiate a Change Job between organizations, Workday populates organization assignments from the new position or job requisition. When there's no job requisition selected, Workday populates the organization assignments from the proposed supervisory organization?	Yes	No	Yes
When you initiate a Change Job between organizations, Workday creates a new position ID?	Yes	No	Yes
You can reassign roles by configuring the Copy Role Assignments service step on the *Change Job* business process definition of the receiving organization?	Doesn't apply.	Doesn't apply.	Yes

Compensation

	Position Management	Job Management
Assign default compensation to a position or job based on either rules or direct assignment?	Yes	Yes

Tracking and Reporting

	Position Management	Job Management
Ability to report on both open and filled positions?	Yes	No. Workday only tracks filled positions.
Full reporting on staffing events (reporting on all hires, job changes, and terminations, with access to details of the job, worker, process, and approvals)?	Yes	Yes
Track worker history (ability to track details of all business processes from the perspective of individual workers - hires, job changes, terminations, compensation changes, bonuses, and so forth)?	Yes	Yes
Track basic position history (ability to track position history from the time an individual worker is hired into a position until the worker transfers out or is terminated)?	Yes	Yes
Track advanced position history (ability to track history of open and closed positions across different workers who have occupied the position)?	Yes	No

Tasks

Manage Staffing Models on page 582

Maintain Jobs

Create Hiring Restrictions

Prerequisites

- Create supervisory organizations.
- Set up basic staffing information.
- Set up the job catalog.
- Configure the *Hiring Restrictions* business processes and security policy in the Staffing functional area.
- For academic jobs, enable educational institution features and tenure tracking in the Edit Tenant Setup - HCM task.

Context

Before you can hire, transfer, promote, or demote workers into a supervisory organization, you must:

- Open jobs.
- Apply hiring restrictions to job profiles.

Hiring restrictions control these factors and more:

- The location of jobs.
- Which jobs you can fill.
- Which people can fill the jobs.

Note: Optionally, you can select the Allow Override of Restrictions on Staffing Events check box in the Edit Tenant Setup - HCM task. If you use job requisitions, this option enables you to override job profile restrictions specified on job requisitions.

Steps

1. Access the Set Hiring Restrictions task.
2. Select the Supervisory Organization in which you're opening the job.
3. On the Hiring Restrictions tab, add the hiring restrictions.

Option	Description
Availability Date	Enter the date when the job is available for staffing transactions. The target hire date on job requisitions can't be earlier than this date. Also, you can't change this date after you fill a job for the first time. The Availability Date, which is associated with the supervisory organization, also determines when the job displays in prompts. If you view the job before its availability date, the supervisory organization is blank.
Earliest Hire Date	Enter the earliest date that you can hire a worker into the job. This date can be later than the job Availability Date.
No Job Restrictions	Makes all job profiles in the job catalog available for staffing. When selected, hiring is

Option	Description
	no longer restricted based on location, worker type, or time type.
Job Family	Makes all job profiles associated with these job families available for staffing.
Job Profile	Makes individual job profiles from one or more job families available for staffing.
Location	Limits hiring to the listed locations. If you don't select a location, all location partners can hire workers into the job.
Time Type	Limits hiring to the listed time types.
Worker Type	Limits hiring to the listed worker type.
Worker Sub-Type	Limits hiring to the specific type within the worker type.

Next Steps

- Modify the hiring restrictions placed on a job.
- Correct the details of a job.

Change Hiring Restrictions

Prerequisites

- Define hiring restrictions for your organization.
- Configure *Edit Hiring Restrictions* business process and security policy in the Staffing functional area.

Context

You can modify the hiring restrictions that limit staffing of a job management organization to specific:

- Job profiles
- Locations
- Time types
- Worker types

These changes don't affect the current incumbents.

Steps

1. Access the Edit Hiring Restrictions task.
2. Select the Supervisory Organization whose hiring restrictions that you want to modify.
3. On the Hiring Restrictions tab, modify the hiring restrictions that apply to the organization.

Next Steps

You can apply these changes to the current job after you update the hiring restrictions. Example: You restricted a job to the Atlanta location, but you want to change the location to Chicago for a specific employee. To do so, add Chicago to the list of allowed locations and then apply the change to the current job holder.

Steps: Set Up Custom Objects

Change a Worker's Current Job Details

Prerequisites

Configure the *Edit Position* business process and security policy in the Staffing functional area.

Context

You can modify the details of a worker's current job. These details include the job profile, worker type, time type, location, job classifications, and work shift. These changes apply to the worker currently in the job, but don't apply to future hires or occupants of the job.

The hiring restrictions that you define using the Set Hiring Restrictions task applies to future occupants of a job. Updates apply to all future hires and job changes. You can optionally enable overrides of hiring restrictions in the Edit Tenant Setup - HCM task.

Steps

1. Access the Edit Job task.
2. Select the Job currently occupied by a worker.
3. In the Job Details and Additional Information sections, specify changes to the worker's job.

   Hiring restrictions limit changes to a worker's job profile, time type, and location. These hiring restrictions are associated with the worker's job. Example: The hiring restrictions limit hiring to the Atlanta location. To change the location to Chicago, you must first modify the hiring restrictions.

Result

Workday makes changes as of the Effective Date, except for these fields, which take effect immediately:

- Contract End Date
- End Employment Date
- Exclude from Headcount

Manage Organization Hiring Freeze

Prerequisites

Security: *Manage Organization Hiring Freeze* domain in the Staffing functional area.

Context

You can freeze and unfreeze hiring to manage staffing. The staffing model for job management supports a hiring freeze for the entire organization.

The Manage Organization Hiring Freeze task isn't part of a business process and doesn't include additional steps or approval workflow. Therefore, secure it to roles that don't require approval to freeze and unfreeze jobs.

Steps

1. Select an organization.
2. From the related actions menu of the organization, select Staffing > Manage Organization Hiring Freeze.
3. Select or clear the Hiring Freeze check box.

Correct Jobs

Prerequisites

The original *Hiring Restrictions* event must:

- Have a status of *In Progress* or *Successfully Completed*.
- Not have subsequent events that edit, freeze, or close the job.
- Not have subsequent job requisition events.

Configure the *Hiring Restrictions* business processes and security policies in the Staffing functional area. Only administrators should have security permission to enter corrections.

Context

You can correct the details of a job with some restrictions:

- You can't correct the supervisory organization.
- If you correct the Availability Date, the new date must be on or before the date of:
  - Subsequent staffing events.
  - Default compensation, organizations, and pay group assignments, if those weren't subprocesses of the original event.

Steps

1. Access the Staffing Activity report:
   a) Select the Organization.
   b) Specify the Time Period or Date Range for the original *Hiring Restrictions* event.
   c) Click OK.

2. From the related actions menu on the Headcount Activity or Staffing Activity event, select Business Process > Correct.
3. Correct the event details as needed.

Result

Corrections to the Availability Date automatically apply to the *Change Organization Assignments* subprocess within the original business process.

Related Information
Tasks
Create Hiring Restrictions on page 591

Maintain Positions

Create Positions

Prerequisites

- Create supervisory organizations.
- Set up basic staffing information.
- Set up the job catalog.
- Configure the *Create Position* business process and security policy in the Staffing functional area.
    - If you use commitment accounting, include the *Assign Pay Group for Position Restriction* and *Request Default Compensation for Position Event* subprocesses.
    - You can hide or require optional fields.
    - If you want to track additional data on position restrictions, you can add custom fields.
- For academic positions, enable educational institution features and tenure tracking in the Edit Tenant Setup - HCM task.
- You can enable job overlap on the position restrictions in the Edit Tenant Setup - HCM task.

Context

Before you can hire, transfer, promote, or demote workers into a supervisory organization, you must:

- Open positions.
- Apply hiring restrictions to job profiles.

Hiring restrictions control these factors and more:

- The location of the positions.
- Which of the positions you can fill.
- Which workers can fill the positions.

Note: Optionally, you can select the Allow Override of Restrictions on Staffing Events check box in the Edit Tenant Setup - HCM task. If you use job requisitions, this option enables you to override job profile restrictions specified on job requisitions.

Steps

1. Access the Create Position task.
2. Select the Supervisory Organization in which you're opening the position.

3. On the Hiring Restrictions tab, add the hiring restrictions that apply.

Option	Description
Availability Date	Enter the date when the position is available for staffing transactions. The target hire date on job requisitions can't be earlier than this date. Also, you can't change this date after you fill a position for the first time. The Availability Date, which is associated with the supervisory organization, also determines when the position displays in prompts. If you view the position before its availability date, the supervisory organization is blank.
Earliest Hire Date	Enter the earliest date that you can hire a worker into the position. This date can be later than the position Availability Date.
No Job Restrictions	Makes all job profiles in the job catalog available for staffing. Provides more flexibility than restricting hiring based on location, worker type, or time type.
Job Family	Makes all job profiles associated with these job families available for staffing.
Job Profile	Makes individual job profiles from one or more job families available for staffing.
Job Description Summary	Automatically populates from the first Job Profile that you select, but you can override it. If you select a job family with multiple job profiles, the job description summary won't automatically populate.
Job Description	Enables you to use rich text formatting when creating job descriptions.
Location	Limits hiring to the listed locations. If you don't select a location, all location partners can hire workers into the position.
Time Type	Limits hiring to the listed time types.
Worker Type	Limits hiring to the listed worker type.
Worker Sub-Type	Limits hiring to the specific type within the worker type.
Critical Job	Automatically populates from the Job Profile, but you can override it.
Difficulty to Fill	Automatically populates from the Job Profile, but you can override it.
Available for Overlap	Enables you to backfill a position that already has a worker with an unknown vacating date.

4. (Optional) Enter full-time equivalent information for the position on the Hiring Restrictions tab.

   These fields display when you opt in to the Enable FTE for Position Restrictions check box on the Edit Tenant Setup – HCM task.

Option	Description
Scheduled Weekly Hours Default Weekly Hours	Automatically populates based off of the location and time type that you select. For both fields, when you select multiple or no locations, and select any time type, Workday uses a default value of zero. When a position restriction has a corresponding job requisition, the position restriction now uses the default and scheduled weekly hours on the requisition: • The Default Weekly Hours field is based on the primary location that you select on the job requisition. • Workday inherits the Scheduled Weekly Hours field from the Scheduled Weekly Hours field on the job requisition. For Scheduled Weekly Hours, Workday uses the time profile of the location you select to determine the default value for weekly hours. When you select a single location with the: • No or *Full Time* time types, Workday uses the value in the Default Weekly Hours field. If the value is too large, you can manually update the value to be less than 168 hours. • *Part Time* time type, Workday uses a value of zero.
FTE	This value is calculated by dividing the Scheduled Weekly Hours by the Default Weekly Hours, and displays as a percentage.

5. Complete the Qualifications tab.

Result

You can view position information with these reports:

- View All Positions displays open, filled, frozen, and future-dated positions.
- Position Summary displays filled positions, pending offers, future hires, and the number of position restrictions available for hire by quarter.

Next Steps

- Modify the hiring restrictions placed on a position.
- Correct the details of a position.
- Add custom data to position restrictions by selecting Additional Data > Edit or Additional Data > Edit Effective-Dated Custom Object from the related actions menu.

View Position Restrictions Information

Prerequisites

- Select content for the View Position Restrictions report using the Configure Profile and Configure Profile Group tasks.
- Security: *Worker Data: All Positions* domain in the Staffing functional area.

Context

You can review information about a specific position, including:

- Hiring restrictions.
- Qualifications.
- Current and historical incumbents.
- Current and historical job requisitions.
- Available position budget.

Steps

1. Access the View Position Restrictions report.
2. Select the links for each profile group and then the tabs within each group.

Next Steps

From the related actions menu on the position restrictions, select Position Restrictions > View As Of to view past hiring requirements for the position.

Change Position Restrictions

Prerequisites

- Define hiring restrictions
- Configure the *Edit Position Restrictions* business process and security policy in the Staffing functional area.

Context

You can modify the hiring restrictions that limit staffing of an organization to specific job profiles, locations, time types, or worker types. These changes don't affect the current incumbents.

In the Edit Tenant Setup - HCM task, you can configure to populate these job profile fields on the Create Position and Edit Position Restrictions tasks:

- Critical Job
- Difficulty to Fill
- Job Description
- Job Profile Summary

These fields automatically populate only when you associate 1 job profile with the position restriction.

This task isn't available for positions with open job requisitions. Use the Edit Job Requisition task instead.

Steps

1. Access the Edit Position Restrictions task.
2. Select the Position whose hiring restrictions that you want to modify.
3. (Optional) Enter a Position Change Reason.

   Reasons display when you configure them on the Maintain Event Categories and Reasons task, under the *Edit Position* event. Managers can select the reason if you select the Manager Reason check box.

   You can find the reference ID for these reason categories and reasons by accessing the View Reference ID report for the *General Event Category* or the *General Event Subcategory* business objects.
4. On the Hiring Restrictions tab, modify the hiring restrictions that apply to the organization.
5. (Optional) Enter full-time equivalent information for the position restrictions on the Hiring Restrictions tab.

   These fields display when you opt in to the Enable FTE on Position Restrictions check box on the Edit Tenant Setup – HCM task.

Option	Description
Scheduled Weekly Hours Default Weekly Hours	Automatically populates based off of the location and time type that you select. For both fields, when you select multiple or no locations, and select any time type, Workday uses a default value of zero. When a position restriction has a corresponding job requisition, the position restriction now uses the default and scheduled weekly hours on the requisition: • The Default Weekly Hours field is based on the primary location that you select on the job requisition.

Option	Description
	• Workday inherits the Scheduled Weekly Hours field from the Scheduled Weekly Hours field on the job requisition. For Scheduled Weekly Hours, Workday uses the time profile of the location you select to determine the default value for weekly hours. When you select a single location with the: • No or *Full Time* time types, Workday uses the value in the Default Weekly Hours field. • *Part Time* time type, Workday uses a value of zero.
FTE	This value is calculated by dividing the Scheduled Weekly Hours by the Default Weekly Hours, and displays as a percentage.

Next Steps

If you want to track additional information on position restrictions, you can add custom fields to the *Edit Position Restrictions* business process.

Freeze and Unfreeze Positions

Prerequisites

Configure the *Freeze Position* business process and security policy in the Staffing functional area.

Context

You can freeze and unfreeze positions in position management organizations. Freezing positions makes them temporarily unavailable for staffing, such as transfers or promotions. You can freeze a position for reasons related to reorganization, budget constraints, or pending decisions on the position's future. You can still make certain data changes to a worker that's tied to a frozen position, such as changing their location. You can't hire into a position when the *Freeze Position* business process is in progress.

The Manage Position Freeze task is part of a business process that can include review and approval steps. Use these tasks when you want to submit freeze and unfreeze actions for approval by one or more administrative roles. Alternatively, you can use the Manage Position Hiring Freeze task to freeze and unfreeze hiring without approval workflow.

To close positions permanently in these organizations, use the Close Position task.

Steps

1. Access the Manage Position Freeze task.
2. Select a Position.
3. Specify a Reason and Date.

   The freeze date is the last date that you can hire or move a worker into the position.

   The unfreeze date is the first date that you can hire or move a worker into the position.
4. Select or clear the Frozen check box.
   - You can't open a job requisition for a frozen position.
   - If you freeze filled positions, you can't restaff as people leave.
   - Frozen unfilled positions become temporarily unavailable for staffing.

Related Information

Concepts

Concept: Workday Docs

Tasks

Close Positions on page 602

Steps: Set Up Workday Docs

Manage Position Hiring Freeze

Prerequisites

Security: *Manage Organization Hiring Freeze* domain in the Staffing functional area.

Context

You can freeze and unfreeze hiring to manage staffing. The position management staffing model supports a hiring freeze at these levels:

- Entire organization.
- Specific positions.

The Manage Organization Hiring Freeze task isn't part of a business process and doesn't include additional steps or approval workflow. Therefore, secure it to roles that don't require approval to freeze and unfreeze positions.

Alternatively, you can use the Manage Position Freeze task to submit freeze and unfreeze actions for approval in position management organizations.

Steps

1. Select an organization.
2. From the related actions menu of the organization, select the type of hiring freeze:
    - For an entire organization, select Staffing > Manage Organization Hiring Freeze.
    - For a specific position, select Staffing > Manage Position Hiring Freeze.
3. Select or clear the Hiring Freeze check box.
   If you freeze filled positions, you can't re-staff as people leave. Frozen unfilled positions become temporarily unavailable for staffing.

Related Information
Tasks
Freeze and Unfreeze Positions on page 601

Close Positions

Prerequisites

Configure the *Close Position* business process and security policy in the Staffing functional area.

Context

You can close unfilled positions to make them permanently unavailable for staffing, with this exception:

- If you use job requisitions, you can't close a position with an open job requisition.

For position management organizations, you can also close positions when you:

- Terminate employees or change their jobs.
- End additional jobs and international assignments.

You can't open or close individual jobs with job management.

The Create EIB task enables you to set up an inbound integration and generate a spreadsheet template from the *Close Position* web service. To close many positions at the same time, use the Create EIB task.

Note: To freeze positions temporarily, use the Manage Position Freeze task.

Steps

1. Access the Close Position task.
2. Select the Position that you want to close.
3. Specify a Close Reason and a Close Date.

   The close date is the last date that you can hire or move a worker into the position.

Result

You can't reopen a closed position. If you want to staff the position later, either rescind the closure or create a position.

Related Information

Concepts

Concept: EIB Template Models and Spreadsheet Templates

Concept: Business Process Management

Concept: Workday Docs

Tasks

Freeze and Unfreeze Positions on page 601

Steps: Set Up Workday Docs

Correct Positions

Prerequisites

The original *Create Position* event must:

- Have a status of *In Progress* or *Successfully Completed*.
- Not have subsequent events that edit, freeze, or close the job or position.

Configure the *Create Position* business process and security policy in the Staffing functional area. Only administrators should have security permission to enter corrections.

Context

You can correct the details of a position with some restrictions:

- You can't correct the supervisory organization.
- If you correct the Availability Date, the new date must be on or before the date of:
  - Subsequent staffing events.
  - Default compensation, organizations, and pay group assignments, if those weren't subprocesses of the original event.
- You can't change the number of positions allocated.
- If the event opened more than 1 position, you can't change the Job Posting Title.
- You can't change the Availability Date to be after the Recruiting Start Date on the job requisition.

Steps

1. Access the Staffing Activity report:
   a) Select the Organization.
   b) Specify the Time Period or Date Range for the original *Create Position* event.
   c) Click OK.
2. From the related actions menu on the Headcount Activity or Staffing Activity event, select Business Process > Correct.
3. Correct the event details as needed.

Result

Corrections to the Availability Date automatically apply to any of these subprocesses within the original business process:

- *Assign Pay Group for Position Restriction*
- *Change Organization Assignments*
- *Request Default Compensation for Position Event*

Workday doesn't update job requisitions with corrections to *Create Position* events.

Concept: When Position Restrictions Are Available to Fill

In position management organizations, a position restriction is available to fill when you have:

- Completed the *Create Position* business process.
- Made the Availability Date on or before the current date.
- Made the Earliest Hire Date on or before the effective date of the *Hire* business process.
- Not filled the position restriction, and don't have an in-progress or completed *Freeze Position* business process.
- Not frozen the supervisory organization.
- Not added an in-progress merit promotion to the position restriction.
- Not proposed the position restriction in an in-progress staffing event.
- Not added a future-dated *Move Worker (By Organization)* or *Move Worker (Supervisory)* business process event to the position restriction.
- No in-progress or completed *Close Position* business processes for the position restriction.
- No in-progress *Job Requisition* business process events for the position restriction.

If you check Require Job Requisitions for all Position Management staffing events in the Edit Tenant Setup - HCM task, you must meet these additional conditions:

- Complete the *Job Requisition* business process.
- Don't fill, freeze, or close the job requisition.
- Have available job openings for the job requisition.

Job Requisitions

Steps: Set Up Job Requisitions

Context

Use job requisitions to track requirements for unfilled jobs or positions in supervisory organizations.

You can use the Create Job Requisition task to create requisitions that contain all necessary information. You can also use the simplified Start Job Requisition task to enable users to create job requisitions. Example: Hiring managers to reduce the recruiter workload.

Steps

1. Access the Edit Tenant Setup - HCM task.
    a) In the ID Sequence Generators section, create, or select an ID definition for new job requisitions.
    b) In the Job Requisitions section, enable job requisitions for your staffing model and configure how Workday automatically populates data.

       Select the Enable Organization Defaults on Create Job Requisition check box if you want to enable organizational defaults into the Create Job Requisition task.

   See Reference: Edit Tenant Setup - HCM.
2. Access the Maintain Event Categories and Reasons task.

   Define categories and reasons for these events:

    - *Close Job Requisition*
    - *Create Job Requisition*
    - *Edit Job Requisition*
    - *Freeze Job Requisition*

   Security: *Set Up: Staffing* domain in the Staffing functional area.
3. Set Up Security for Job Requisitions on page 607.
4. Create Custom Business Processes.

   Configure these business processes:

    - *Job Requisition*
    - *Job Requisition Change*
    - *Freeze Job Requisition*
    - *Close Job Requisition*
    - *Move Job Requisition (Job Management)*

   You can also add a *Create Job Requisition* step to business processes that vacate jobs or positions, such as *Termination* and *End Contingent Worker Contract*.
5. (Optional) Enable users to edit the supervisory organization on a job requisition.

   Access the Configure Optional Fields task to display the Supervisory Organization field for the *Job Requisition Change* business process.
6. (Optional) Enable users to increase the number of positions on position management job requisitions.
    a) Add the *Create Position* step to the *Job Requisition Change* business process.
    b) Give users Modify access to the *Staffing Actions: Job Requisition Positions* domain.
7. (Optional) Configure the Start Job Requisition task on the *Job Requisition* business process security policy.

   Give nonspecialist users, such as hiring managers, access to a simple, intuitive, 1-page task for creating job requisitions.

8. (Optional) Hide or Require Optional Fields.

   Hide or require optional fields for job requisitions on these options in the Pre-Hire Process functional area:

   - *Close Job Requisition*
   - *Freeze Job Requisition*
   - *Job Requisition*
   - *Job Requisition Change*
   - *Mass Close Job Requisitions*

   You can hide or require these fields for the Start Job Requisition task only:

   - Scheduled Weekly Hours
   - Worker Supplier
9. (Optional) Configure Job Requisition Fields.

   You can use the Configure Optional Fields task to hide for all users or hide for specific security groups these fields on the Start Job Requisition task:

   - Replace a worker
   - Add a worker

   If you display the Replace a worker field, you can hide for all users or hide for specific security groups these subsequent fields:

   - Yes
   - No, create a new position for this job.

   If you display the Add a worker field, you can hide for all users or hide for specific security groups these subsequent fields:

   - Create new position.
   - Select an existing unfilled position.
10. Steps: Set Up Mass Actions on Job Requisitions on page 608.
11. Create Job Profiles on page 573.
12. (Optional) Access the Maintain External Recruiting Instructions task.

    When you create or edit a job requisition, you can select 1 of these instructions in the Recruiting Instruction field.

    If you select the Do Not Send to Recruiting System check box, Workday doesn't send the instruction to:

    - External recruiting systems.
    - Third-party recruiting vendors.

    Security: *Set Up: Pre-Hire Process* domain in the Pre-Hire Process functional area.
13. (Optional) Create Contingent Worker Types on page 532.
14. (Optional) Access the Maintain Employee Contract Types task.

    Create employee contract types.

    Security: *Set Up: Employee Contracts* domain in the Staffing functional area.
15. Set Up Worklets.

    Add job requisition Actions to 1 or more of these worklets:

    - Hiring
    - My Team
    - Recruiting

Next Steps

Create and manage job requisitions for your organization.

Set Up Security for Job Requisitions

Prerequisites

Security: These domains in the System functional area:

- *Business Process Administration or Manage: Business Process Definitions*
- *Security Configuration*

Context

Set up security to give managers and administrators access to business processes and their content areas.

- Security policies for business processes specify who can complete steps in business processes.
- Domain security policies give you field-level control over who can view or modify data in each content area.

Steps

1. Access the View Business Process Template report.
2. Select the *Job Requisition* business process type, and select OK to advance to the View Business Process Template report.
3. From the related actions of the business process type, select Business Process Policy > Edit.

   Add and review security groups who can perform initiating actions, review steps, and actions for the business process.
4. Select OK, then Done to return to the View Business Process Template report.
5. On the Section Groups tab, review the template sections and their task dependencies to decide which roles need access to each section.
6. Access the Task Security tab.
   a) From the related actions of a security domain, select Domain > Edit Security Policy Permissions.
   b) Grant view and modify permissions to the appropriate security groups.
7. Repeat these steps for the *Job Requisition Change* business process.
8. Access the Activate Pending Security Policy Changes task to confirm your changes.

Next Steps

Access the Template-Driven Business Process Security report to confirm that domain security permissions are aligned for these business processes:

- *Job Requisition*
- *Job Requisition Change*

Related Information

Concepts

Concept: Business Process Templates

Tasks

Activate Pending Security Policy Changes

Steps: Set Up Mass Actions on Job Requisitions

Context

You can close, freeze, or unfreeze up to 10,000 unfilled job requisitions at the same time, reducing manual effort. You can freeze and unfreeze job requisitions to control when they're available for recruiting.

Steps

1. Create Custom Business Processes.

   Configure these business processes:

   - *Mass Close Job Requisitions*
   - *Mass Freeze Job Requisitions*
   - *Mass Unfreeze Job Requisitions*

   Add an *Approval* step if you want to approve mass actions on all selected job requisitions at once.
2. Edit Business Process Security Policies.

   Configure security for these business processes:

   - *Mass Close Job Requisitions*
   - *Mass Freeze Job Requisitions*
   - *Mass Unfreeze Job Requisitions*
3. Activate Pending Security Policy Changes.
4. Copy the Workday-delivered Job Requisition Events Awaiting Approval report.

   You can use the custom report to view and approve in-progress events in bulk for these business processes:

   - *Create Job Requisition*
   - *Edit Job Requisition*

   Confidential job requisitions don't display on this report.

   Security:

   - *Advanced Business Process* segment on the *Mass Operation Management* domain in the System functional area.
   - *Business Process Administration* domain in the System functional area.
   - Configure access to the *Mass Advance* action on the *Job Requisition* business process security policy.
   - *Job Requisition Data* domain in the Pre-Hire Process functional area.
5. Create Business Process Condition Rules.

   Create a condition rule that prevents Workday from generating an approval notification for each requisition that the mass action affects.

   Select these values:

   - *Mass Action of Job Requisition* in the Source External Field or Condition Rule column.
   - *is empty* in the Relational Operator column.

6. Edit Business Processes.

   Add your newly created condition rule to the *Approval* step of these business processes:

   - *Close Job Requisition*
   - *Freeze Job Requisition*
   - *Unfreeze Job Requisition*
7. Configure Workday to automatically unpost jobs.

   Add the *Automatically Unpost Jobs* step to these business processes:

   - *Close Job Requisition*
   - *Freeze Job Requisition*

   See Steps: Set Up Job Postings on page 413.

Result

The mass actions business processes launch the corresponding individual business process for each job requisition that you select. Example: The *Mass Close Job Requisitions* business process launches a *Close Job Requisition* business process for each job requisition.

Next Steps

Access the Mass Action on Job Requisitions report to close, freeze, and unfreeze job requisitions. When you:

- Close or freeze a job requisition, Workday automatically unposts it unless it has an in-progress posting event.
- Unfreeze a job requisition; Workday doesn't automatically repost it.

Security: *Pre-Hire Process: Mass Action on Job Requisitions* domain in the Pre-Hire Process functional area.

To close unfilled positions when closing 1 or more job requisitions, access the Configure Optional Fields task, and enable the Close Unfilled Positions field for these business processes:

- *Close Job Requisition*
- *Mass Close Job Requisitions*

Security: *Set Up: Configure Optional Fields* domain in the System functional area.

Tasks
Create Business Process Condition Rules

Steps: Manage Job Requisitions

Prerequisites

Set up job requisitions.

Context

Create and manage job requisitions for your organization. You can:

- Edit job requisitions.
- Copy Open, Closed, or Frozen job requisitions.
- Move job requisitions between job management organizations.
- Freeze or Unfreeze job requisitions.
- Close job requisitions for openings that you no longer plan to fill.

Steps

1. Create and Edit Job Requisitions on page 611.

   You can edit a job requisition at any point until it is filled or closed.

   - You can also edit:
     - Position Management job requisitions for new positions, even with an in-progress fill event.
     - Job Management job requisitions, even with an in-progress fill event.
   - You can't edit:
     - Position Management job requisitions for existing positions if they have an in-progress fill event.
     - Confidential job requisitions for Position Management or Job Management if they have an in-progress fill event.

   If you edit a job requisition that has both filled and unfilled positions, your changes only apply to the unfilled positions.

   Security: Configure the *Job Requisition Change* business process in the Pre-Hire Process functional area.
2. Access the Move Job Requisition task.

   You can move a job requisition that is Open or Frozen.

   You can't move a job requisition that is In Progress.

   - If you move a job requisition with an in-progress hire, Workday completes the hire in the original supervisory organization.
   - If you move a job requisition that has both filled and unfilled openings, only the unfilled openings move to the new organization.

   After you move a job requisition and hire a worker in the new supervisory organization, you can't rescind the *Move Job Requisition (Job Management)* business process.

   Security: Configure the *Move Job Requisition (Job Management)* business process in the Staffing functional area.
3. Access the Manage Job Requisition Freeze task.

   You can freeze and unfreeze job requisitions to control when they're available for recruiting. If you have Workday Recruiting, you can add *Post Job*, and *Unpost Job* steps to the *Freeze Job Requisition* business process to manage job postings.

   Security: Configure the *Freeze Job Requisition* business process in the Pre-Hire Process functional area.
4. Access the Close Job Requisition task.

   You can't reopen a closed job requisition. To restart the process of recruiting and hiring for open positions, create a new job requisition.

   If you've opted in to the Workday 32 – Time Zones feature, the *Close Job Requisition* event isn't effective-dated.

   Note: You can only close a job requisition when the Close Date is after the Recruiting Start Date.

   Security: Configure the *Close Job Requisition* business process in the Pre-Hire Process functional area.

5. Access the Mass Action on Job Requisitions task.

   Close, Freeze, or Unfreeze up to 10,000 unfilled job requisitions at the same time.

   Security:

   - *Indexed Data Source: Job Requisitions* domain in the Pre-Hire Process and Staffing functional areas.
   - *Job Requisition Data* domain in the Pre-Hire Process functional area.
   - *Pre-Hire Process: Mass Action on Job Requisitions* domain in the Pre-Hire Process functional area.

Result

When you update a job requisition that affects role assignments, Workday automatically reassigns related in-progress tasks in My Tasks to the enabled roles.

Next Steps

- View job requisition information with standard reports. For a list, access Workday Standard Reports and select the *Job Change* category.
- If you no longer want to use job requisitions, you can turn them off using the Edit Tenant Setup - HCM task.

Related Information

Tasks

Turn Off Job Requisitions on page 617

Steps: Set Up Job Requisitions on page 604

Create and Edit Job Requisitions

Prerequisites

Configure the *Job Requisition* business process and security policy in the Pre-Hire Process functional area.

Context

You can create job requisitions for unfilled positions in organizations that use position or job management as the staffing model.

For position management organizations, you can create multiple job openings with a single job requisition if the requisition creates a new position. You can have only 1 job requisition for an opening. For job management organizations, you can select multiple openings.

You can't create job requisitions for frozen or closed positions.

When you create a job requisition for an existing position, Workday automatically populates some information from the:

- Position itself, for filled positions.
- Position restrictions, for open positions.

Workday generates a unique ID for the job requisition when you start the *Create Job Requisition* business process. The job requisition name and all related communications display the ID, making it easier to differentiate between job requisitions with the same name. You can search for an in-progress Create Job Requisition event using the automatically generated job requisition ID when you:

- Save the task.
- Submit the task for approval.

You can also search for in-progress Create Job Requisition events using the View In-Progress Job Requisition Events report.

Steps

1. Access the Create Job Requisition or Edit Job Requisition task.

   You can also select Copy > To Create Job Requisition from the related actions of a job requisition.

   a) (Optional) Click the Copy Details from Existing Requisition prompt to select an existing requisition to copy from.
   b) Select the Supervisory Organization.
   c) For position management, specify whether the requisition is for a new or existing position.

      If you want to create multiple job openings with this requisition, create a new position.
   d) Select the Worker Type.
2. On the Recruiting Information section, provide general information for the requisition.

Option	Description
Number of Openings	You can add up to 500 positions.
Spotlight Job	For Recruiting only. Highlights job requisitions and internal job postings with a customizable label. To change the Spotlight Job label, access the Maintain Custom Labels task.
Replacement For	You can select an active or terminated worker if: • You have a requisition in a job management organization. • You have a new position in a position management organization. If the position is or was previously occupied, Workday populates the current or preceding incumbent.
Recruiting Instruction	Instructions for third-party recruiters. These instructions display on the Post Job task.
Recruiting Start Date	For open positions with a previous job requisition, the date must be later than the previous job requisition. For filled positions, the Recruiting Start Date must be after the fill date of the current incumbent.
Target Hire Date	This date must be on or after the Recruiting Start Date.
Target End Date	The employment end date applies to fixed-term employees and contingent workers.
Referral Payment Plan	For Recruiting only. If the job profile you selected already has an associated referral payment plan, the job requisition automatically uses that payment plan. You can change an automatically populated referral payment plan by selecting a different payment plan from the prompt.

Option	Description
Job Application Template	Displays only on the Edit Job Requisition task. Security: *Staffing Actions: Job Requisition Job Application Template* domain in the Staffing functional area.
Use Updated Version of Template	Displays only on the Edit Job Requisition task when the selected job application template has changed. Security: *Staffing Actions: Job Requisition Job Application Template* domain in the Staffing functional area.

3. As you complete the Job section, consider:

Option	Description
Additional Job Profiles	Select additional job profiles for a job requisition. You can select any of these job profiles at later stages in the recruiting and staffing processes.
Primary Job Posting Location	For Recruiting only. Post jobs to a location that is different from the Primary Location. This location is also used to identify the location-related facets on the Find Jobs report. Multiple locations can use the same job posting location. Automatically populates from the Default Job Posting Location field on the Create Location task. If no default job posting location exists, automatically populates from the Primary Location field. If you edit a job requisition, Workday won't automatically populate the Primary Job Posting Location field with data from the Primary Location field. You can only select a location that has *Business Site* or *Job Posting* as the Location Usage.
Additional Job Posting Locations	For Recruiting only. Post jobs to locations that are different from the additional locations. If you edit a job requisition, Workday won't automatically populate the Additional Job Posting Locations field with data from the Additional Location field. You can only select a location that has *Business Site* or *Job Posting* as the Location Usage.
Scheduled Weekly Hours	Populates from a rule when: • You define a working time rule.

Option	Description
	• The data populated on the Maintain Working Time for country task applies the rule. Weekly hours default from the scheduled weekly hours on: • The job requisition that you are copying. • The worker who is in a position, or previously filled a position if you create a job requisition on a position management organization. • The restriction on the existing unfilled position, if you create a job requisition on a Position Management Organization. • The time profile on the primary location set when you create the job requisition.
Questionnaire	For Recruiting only. Workday populates questionnaires using condition rules that you can create. Only Recruiting type questionnaires are available. Candidates complete these questionnaires when they apply to jobs on internal and external career sites. To remove or replace questionnaires, select the Enable Primary or Secondary Questionnaire Removal or Replacement on Evergreen and Job Requisitions check box on the Edit Tenant Setup - HCM task. When editing a job requisition, ensure that the associated questionnaires are active.
Assessments	For Recruiting only. Workday populates assessments using condition rules that you can create. Security: *Staffing Actions Job Requisition Assessments* domain in the Staffing functional area.

4. If the job requisition is for a contingent worker, and you plan to create a purchase order, complete the Cost Information section.

Option	Description
Cost Company	Select the company for the purchase order. The company automatically populates from the: • Supervisory organization for new positions. • Company assignment for existing positions. If no company assignment exists, the company automatically

Option	Description
	populates from the supervisory organization.
Supplier	Select a supplier if applicable. This selection determines whether you pay suppliers or contingent workers.
Spend Category	Select the spend category for financial accounting.
Pay Rate	Specify the maximum pay rate for the contingent worker.
Frequency	Specify the pay frequency. If you want to enter time against the purchase order, you must select *Hourly*.
Maximum Amount	Workday estimates the maximum amount by: • Determining the number of weekdays between the Target Start Date and Target End Date. • Multiplying the weekdays by the Scheduled Weekly Hours divided by 5 (days per week). • Multiplying the calculated hours by Pay Rate. You can override this calculation to better reflect the estimated maximum amount for the contingent worker. This estimate doesn't account for holidays or work schedules.
Worktags	Select worktags to expedite approvals and reporting. Workday automatically populates the cost center and region worktags for the Requester. You can override these worktags or select additional ones.

Note: If you create purchase orders for this contingent worker type, all fields except Supplier and Worktags are required.

Workday automatically transfers this cost information to the contingent worker's contract and purchase order.

5. (Optional) Assign a primary recruiter.

   For Recruiting only. The Assign Roles tab displays if you have access to the *Staffing Actions: Job Requisition Role Assignment* domain in the Staffing functional area.

Result

Workday uses the Maintain Job Application Templates task to determine which template to assign to new requisitions. When you add *Review Job Application Template* as a step to the *Job Requisition* business process, Workday sends the Review Job Application Template task to My Tasks of the assigned security group.

Once the job requisition is approved, its status becomes *Open*. On the Recruiting Start Date, the position becomes available for interview and pre-hire tasks as long as it meets these conditions:

- Its status remains *Open*.

- The Availability Date on the hiring restrictions isn't in the future.
- It's not in a job overlap.

The position is available to fill on or after the Recruiting Start Date.

Next Steps

- To hire a worker, select Hire > Hire Employee from the related actions menu of the job requisition.
- View job requisitions from the Hiring worklet on the Home page.
- Click the Requisitions profile group on a position profile to view all job requisitions associated with a position.
- Add the *Pre-Hire Collective Agreement Details* business process as a subprocess of the *Create Job Requisition* business process to help specify collective agreements and factors when creating the job requisition.

2023R1 What's New Post: Create Job Requisitions for Multiple Existing Positions

Create Job Requisition for Multiple Existing Positions

Prerequisites

Configure the *Job Requisition* business process and security policy in the Pre-Hire Process functional area.

Security:

- *Staffing Actions: Job Requisition Positions* in the Staffing functional area.
- *Set Up: Configure Optional Fields* domain in the System functional area.

Context

You can create a single job requisition for multiple existing positions that are part of the same supervisory organization enabling you to manage.

- High-volume hiring jobs. Example: Seasonal sales staff.
- High attrition jobs. Example: Warehouse operatives.

Steps

1. Access the Configure Optional Fields task.
   a) On the Functional Area prompt, select *Job Requisition*.
   b) Delete these rows:
      - *Additional Positions*
      - *For Multiple Positions*
2.
3. Access the Create Job Requisition task.
4. Select the For Multiple Existing Positions option.
5. Select a Defaulting Position.

6. Click OK.
7. (Optional) In the Recruiting Information section, you can add up to 99 filled and open positions as Additional Positions.

   You can't add positions that have a *Check Budget* step configured on the *Job Requisition* business process.

   When you save the Create Job Requisition task for later, Workday doesn't display a warning message if any of the positions selected are no longer available when you resume the task.

Result

After submitting a job requisition, you can’t add or remove positions, however, you can edit other details on the job requisition.

Turn Off Job Requisitions

Prerequisites

Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

Context

If you don't want to use requisition processes to support staffing, you can disable job requisitions for staffing organizations that use:

- Job management.
- Position management.

Note: You can't disable job requisitions for position management if you use commitment accounting for any company in your tenant.

Turning off job requisitions for either a position management or job management organization causes these changes for the affected organizations:

- You can no longer initiate the *Job Requisition* business process.
- Open (nonfrozen) positions become available for recruiting and hiring on their availability date. Previously filled positions become available 1 day after the position vacates.
- You no longer need open job requisitions to fill open positions. Workday only validates against position restrictions.
- If you rescind an event that filled an open position, the related job requisition reopens and becomes effective. To apply position restrictions to future hiring actions, close the job requisition.
- Corrections to events that filled open positions must comply with the job requisition requirements that were in place when the event occurred.
- You can now edit position restrictions for all positions. Your changes to position restrictions have no impact on any in-progress events that fill positions based on job requisitions.

Steps

1. Access the Edit Tenant Setup - HCM task.
2. For the Enable Job Requisitions for Position Management field, select None of the above.
3. Clear the Enable Job Requisitions for Job Management check box.

Result

Turning off job requisitions doesn't impact in-progress events that are based on job requisition hiring restrictions, including transfers and other job changes.

You have continued access to the:

- *Job Requisition Change* business process, enabling you to support or correct staffing events that fill positions.
- *Close Job Requisition* business process, enabling you to close open requisitions.

The View Supervisory Organization report changes:

- The Staffing tab displays all open, nonfrozen positions that have reached their availability date.
- The Unavailable to Fill tab displays open positions before their availability date, frozen positions, and positions with in-progress events.

Next Steps

When you disable job requisitions for either position management or job management for the affected organizations:

- Close or rescind any open job requisitions.
- Cancel any in-progress *Job Requisition* or *Job Requisition Change* events.

Related Information
Tasks
Steps: Manage Job Requisitions on page 609

Concept: Translated Job Requisitions

You can translate job requisitions into multiple languages for the same position, enabling better support for global recruiting.

Base Language for Job Requisitions

The base language is the preferred language of the person who creates the job requisition.

Example: Jacqueline, whose preferred language is French, creates a job profile. The base language of the job profile is French. Elizabeth, whose preferred language is English, creates a job requisition using the French job profile. The base language of the job requisition is English.

Viewing Translated Job Requisitions

Workday automatically displays the job requisition in your preferred language, if translations are available.

Workday displays translated job postings on external career sites for the target language.

Editing Job Requisitions

If you edit a job requisition, and translations exist for your preferred language, Workday saves the changes to the translations. If translations don't exist, Workday saves the changes to the base language.

Example: Paul, whose preferred language is French, edits a job requisition that has English as its base language. Workday saves these edits to the French translation. The English job requisition will remain unchanged.

Elizabeth, whose preferred language is English, can update the English job requisition.

Translating Job Requisitions

To translate a job requisition, select Translation > Translate Instance from the related actions menu of the job requisition. This action is secured to the *Data Translation* domain in the System functional area.

Reference: Job Requisition Features for Recruiting and HCM

Workday enables HCM customers to access job requisition functionality, but some features require access to Workday Recruiting. This table displays the job requisition features that Workday delivers to non-Recruiting customers:

Feature	Available to Non-Recruiting Customers	Description
Assessments	No	You can request candidates to complete recruiting assessments.
Assignable Roles	Yes	You can assign positions to organization roles. You can then assign the users in these positions to a job requisition.
Background Checks	Yes	You can track background checks for: • Contingent workers. • New hires. • Pre-hires. • Workers.
Close Job Requisitions Create/Edit Job Requisitions Freeze Job Requisitions Move Job Requisitions	Yes	You can: • Close job requisitions when you've filled the positions or no longer need a job requisition. • Create and update job requisitions. • Freeze job requisitions to control when they're available for recruiting. • Move job requisitions that are Open or Frozen. You can't move In-Progress job requisitions.
Compensation Details	Yes	You can configure Workday to populate compensation details on job requisitions.
Confidential Requisitions	No	You can display sensitive job requisitions to a set of users.
Create Evergreen Requisitions	No	You can create requisitions that remain constantly open.
Job Application business process	No	You can use Workday-delivered stages to configure the path that candidates follow during the recruiting process.

Feature	Available to Non-Recruiting Customers	Description
Job Postings	No	You can advertise open jobs on internal and external career sites. You can also use the Additional Job Description field on the Create Job Posting Template and Edit Job Posting Template tasks.
Mass Actions	Yes	You can close and freeze up to 10,000 unfilled job requisitions at the same time.
Questionnaires	No	You can send questionnaires to candidates, recruiters, and interviewers in Workday.

Concepts

Setup Considerations: Job Requisitions for Recruiting on page 214

Tasks

Steps: Set Up Job Requisitions on page 604

Reference: Default Job Requisition Data

Workday populates data on each section of the Create Job Requisition task based on your settings on the Edit Tenant Setup - HCM task and business process configuration.

When you use the Start Job Requisition task, Workday populates the fields not included on the task in the background, and displays them on the job requisition after it's created.

Job Requisition Section	Populated Data
Job Details	If you select Defaulting Behavior for Position Management Job Requirements, Workday uses the position restrictions or the most recent filled position for these fields: • Job Profile • Primary Location • Scheduled Weekly Hours • Time Type • Worker Sub-Type • Worker Type If you select the Default Job Description and Job Description Summary from Job Profile setting, Workday populates those fields from the job profile. Workday doesn't display the Recruiting Start Date field on the Start Job Requisition task, and populates the date in the background for: • New positions. Workday sets it to the date you're creating the job requisition.

Job Requisition Section	Populated Data
	• Existing positions. If the selected position is linked to a closed job requisition, Workday sets the Recruiting Start Date to 1 day after the close date of the job requisition. If the selected position was previously filled, Workday sets the Recruiting Start Date to 1 day after the last filled date for the position.
Compensation Details	Workday automatically populates these details when you configure: • Compensation on the position. • A *Request Requisition Compensation* step on the *Job Requisition* business process. Otherwise, Workday uses eligibility rules to populate this section.
Questionnaire	Workday automatically populates questionnaires using condition rules you create using the Maintain Job Requisition Questionnaire Defaults task. If you update any section of the job requisition before submitting it, Workday runs the condition rules again.
Assessments	Workday automatically populates assessments using condition rules you create using the Maintain Job Requisition Assessment Defaults task. If you update any section of the job requisition before submitting it, Workday runs the condition rules again.

Organization Data	Workday automatically populates these details when you select the Enable Organization Defaults on Create Job Requisition option. The source of this data depends on your staffing model:
	• Job Management: Workday uses data from the supervisory organization.
	• Position management: Workday uses data differently for new and existing positions:
	  • For new positions, Workday uses organization data and the resulting position restrictions from the supervisory organization.
	  • For existing positions, Workday uses organization data based on the Defaulting Behavior for Position Management Job Requisitions tenant setting.
	When you select:
	• Default from most recent filled position on Create Job Requisition, Workday populates data from the filled position.

Job Requisition Section	Populated Data
	• Default from Position Restriction on Create Job Requisition, Workday populates data from the unfilled position restrictions.

Related Information

Tasks

Create and Edit Job Requisitions on page 611

Reference

Reference: Default Organization Assignments on page 924

Reference: Edit Tenant Setup - HCM

2022R2 What's New Post: Sync Scheduled Weekly Hours Between Job Requisitions and Position Restrictions

Reference: Supervisory Organizations on Job Requisitions

Most job requisitions display the supervisory organization that you've created them for, including:

- Job requisitions for job management organizations.
- Confidential job requisitions for position management organizations.
- Nonconfidential job requisitions for position management organizations, if all positions are in the same supervisory organization.

When a nonconfidential job requisition has multiple positions in different supervisory organizations, Workday determines which supervisory organization to display using these conditions:

Condition	Supervisory Organization
Can you fill a position from the related actions menu of the job requisition?	Yes: Use the supervisory organization from the first available position, which has the lowest position restrictions ID. No: Go to next condition.
Does the job requisition have an open position that your organization has never filled?	Yes: Use the supervisory organization for that position. This position can be new or frozen. No: Go to next condition.
Does the job requisition have 1 or more positions that your organization has filled in the past?	Yes: Use the supervisory organization for the position with the latest hire date. Workday considers the organization for the most recent hire as the most likely one for the job requisition. No: Use the supervisory organization that you created the job requisition for.

Business Process Impacts

When the *Move Workers to New Manager* business process completes, Workday moves workers into the organization of their new manager. Workday displays the transaction as a *Move Worker (Supervisory)* event in the worker's history. Related job requisitions reflect the new supervisory organization for the workers.

Related Information

Tasks

Move Workers to New Managers on page 920

Example: Add Custom Fields to Job Requisitions

This example demonstrates how to add effective-dated custom fields to job requisitions.

Context

As an HR administrator, Bill needs to track the different types of job requisitions their organization creates during recruitment. Bill needs to create a custom list for the requisition types and add a custom field to the job requisition business process to display the different requisition types.

Steps

1. Access the Create Custom Field Type report.

   Click the List Custom Field Type.
2. On the Create Custom List page add these values:

Field	Value
Custom Field Type Name	Requisition Type List
Web Service Alias	(This field will populate automatically)

   On the List Values section, add 3 rows and enter these values to the List Value Name section:

   - Student
   - Professional
   - Executive
3. Click OK and Done.
4. Access the Create Custom Object task and enter these values:

Field	Value
Workday Object	*Job Requisition (Effective Dated)*
Custom Object Name	Requisition Type
5. Click OK.
6. Click Next.
7. In the Field Definitions section, click Add on the Proposed New Fieldsand enter these values:

Field	Value
Field Label	Requisition Type
Field Type	*Requisition Type List*
8. Click Next.
9. In the Permissions section, select the Domain *Job Requisition Data*.
10. Click Next.
11. Click OK and Done.
12. From the related actions menu of the *Job Requisition Data* domain, select Domain > Edit Security Policy Permissions.
13. In the Report/Task Permissions section, click the Modify check box for the *HR Administrator*.
14. Click OK and Done.
15. Click OK and Done.
16. Access the *Edit Job Requisition Additional Data* business process.

17. From the related actions menu of the *Edit Job Requisition Additional Data* business process, select Business Process Policy > Edit.
18. On the Who Can Start the Business Process section, add *HR Administrator* to the Security Groups for the *Edit Job Requisition Effective-Dated Custom Object* Initiating Action.
19. Access the Activate Pending Security Policy Changes task.

    Add a comment describing the security domain changes that you have made.
20. Click OK and Done.
21. From the related actions menu of the *Edit Job Requisition Additional Data* business process, select Business Process > Edit Definition.
22. Add a row to the Business Process Steps section and enter these values:

Field	Value
Type	*Edit Additional Data*
Specify	*Requisition Type*
Group	*HR Administrator*

23. Click OK and Done.
24. Access the *Job Requisition* and *Job Requisition Change* business processes, add a row to the Business Process Steps section, and enter the same values as in the preceding step.

Result

The HR administrator can now enter values for the Requisition Type field in 2 ways:

- When creating or editing a job requisition.
- By selecting Additional Data > Edit Effective-Dated Custom Object from the related actions menu of an existing job requisition.

Create Custom Lists

Pre-Hire Tracking

Steps: Set Up Pre-Hire Tracking

Prerequisites

Security: *Set Up: Pre-Hire Process* domain in the Pre-Hire Process functional area.

Context

A pre-hire is someone you track before employment. You can create pre-hire records, provide sourcing and contact information, and track the pre-hire process. All employees have an active pre-hire record after you've hired or terminated them. You can tie this pre-hire record to open positions for internal transfers or rehires.

If you want to use a different term for pre-hires, access the Maintain Custom Labels task to override this term.

Steps

1. Access the Maintain Pre-Hire Evaluation Methods task.

   These methods describe how you evaluate pre-hires for open positions. Example: *Reviewed Resume*, *Phone Interview*, *Final Interview*.
2. Access the Maintain Pre-Hire Evaluation Recommendations task.

   These recommendations describe the proposed next step to take for a pre-hire. Example: *Make Offer*, *Postpone*, *Decline*.
3. Maintain Recruiting Sources on page 272.

   Sources describe how a pre-hire came to the attention of the company. You define custom categories, and add as many sources to a category as you need. Example: Create an *Advertising* source category containing the *Internet*, *Newspaper*, and *Campus Fliers* sources.
4. Access the Maintain Pre-Hire Statuses task.

   Statuses display a person's current position in the pre-hire process, such as *Pre-Screen*, *Interview*, or *Make Offer*. The order controls the sequence in which each status occurs. Example: You could have a status of *Interview* from when an interview is scheduled until a recommendation is made.
5. (Optional) Hide or Require Optional Fields.

   Hide or require pre-hire contact information fields on the *Create Pre-Hire*, *Edit Pre-Hire*, *Hire*, and *Contract Contingent Worker* business processes. You can hide or require fields for each of the functional areas based on your organization's needs.

   If you don't require any of the pre-hire contact information fields, at least 1 address, phone number, or email address will be mandatory when your users create a pre-hire.

   To hide the pre-hire contact information fields while creating a pre-hire as part of the hire process, you need to hide the fields on the Hire functional area.

Next Steps

Workday provides a number of standard reports to help you manage pre-hires. For a list, access Workday Standard Reports and select the *Pre-Hire Process* category.

Concept: Rehire Eligibility on page 712

Tasks

Create Custom Labels

Steps: Manage Pre-Hire Tracking

Prerequisites

Set up pre-hire tracking.

Context

Create pre-hires, track their information, and associate them with open positions. If necessary, you can also delete pre-hire records from Workday.

Steps

1. Create Pre-Hires on page 626.

   Create pre-hires individually or load groups of pre-hires with a web service.
2. Consider Pre-Hires for Positions on page 628.

   Associate a pre-hire with a job or position, attach a resume, and assign a status to the application process.

3. Edit Personal and Contact Information for Pre-Hires on page 627.
4. Access the Manage Pre-Hires for Job task.

   View a list of all pre-hires for a particular job, including their status, the last comment added, and who made the comment. You can also update the status and add a comment.

   Security: *Manage Pre-Hire Process: Consider Pre-Hires* domain in the Pre-Hire Process functional area.
5. Access the Enter Interview Results for Pre-Hire task.

   Enter interview results for a pre-hire for a specific position. You can also view other interviewers' responses to the pre-hire.

   Security: *Manage Pre-Hire Process: View Pre-Hire Interviews* or *Manage Pre-Hire Process: Enter Pre-Hire Interviews* domain in the Pre-Hire Process functional area.
6. Steps: Set Up Background Checks for Pre-Hires and Workers on page 790.
7. (Optional) Access the Change Hire Eligibility Status task.

   Identify pre-hires who are ineligible for hire. These pre-hires won't display on the Contract Contingent Worker or Hire Employee tasks. You can view these pre-hires on the Pre-Hires Ineligible for Hire report.

   Security: *Manage Pre-Hire Process: Hire Eligibility Status Comment* domain in the Pre-Hire Process functional area.
8. Delete Pre-Hires on page 629.

Concepts

Concept: Rehire Eligibility on page 712

Tasks

Steps: Purge Person Privacy Data

Create Pre-Hires

Prerequisites

- Set up Pre-Hire tracking options. See: Steps: Set Up Pre-Hire Tracking.
- Security: *Manage Pre-Hire Process: Manage Pre-Hires* domain in the Pre-hire Process functional area.

Context

Before you can hire a worker, the person must exist as a pre-hire in Workday. You can create a pre-hire during the hire process. You can also create pre-hires earlier and track their progress through the process of interviews and evaluation.

Note: A separate integration bypasses this task, enabling you to load pre-hires from a spreadsheet with the Enterprise Interface Builder (EIB).

Steps

1. Access the Create Pre-Hire task or, as part of a hire, click Create a New Pre-Hire in the Hire Employee or Contract Contingent Worker tasks.

   The fields on the Address tab are country-specific. Example: The United States have a required State field and the United Kingdom has an optional County field.
2. Select a Source.

   To create a new source, access the Maintain Recruiting Sources task.
3. Select 1 or more workers in the Referred by field.

   You can only select workers who have Workday accounts.

4. (Optional) Select the Allow Duplicate Name check box to be able to create pre-hires with the same first and last name.

   Workday doesn't identify duplicate names if the pre-hires have different countries or aren't eligible for hire. Example: If a pre-hire is already hired or marked for deletion.
5. On the Legal Name Information tab, enter the pre-hire's country and legal name.

   You can optionally select Enter Western Script to enter the pre-hire's name in Western script if:

   - The pre-hire's country uses a local script.
   - Local script names and addresses are enabled and Western script names and addresses are optional for the pre-hire's country on the Edit Tenant Setup - Global task.
6. On the Contact Information tab, specify values for the required fields.

Next Steps

Access the:

- Edit Pre-Hire Profile task to edit the source, referral, pre-hire pool, or comment.
- Pre-Hire Names report to add a preferred name.

Edit Personal and Contact Information for Pre-Hires

Prerequisites

- Set up personal, contact, and ID information in Workday.
- In the Maintain Localization Settings task, enable pre-hire information tracking by country. Activate localizations in the *Personal Information* area:
  - The ID Info (Pre-Hire) localization makes the Edit ID Information for Pre-Hire task available for pre-hires in the selected countries.
  - The Personal Information (Pre-Hire) localization makes the Edit Personal Information for Pre-Hire task available for pre-hires in the selected countries.

Context

Add or update IDs, personal information, and contact information for pre-hires. Workday uses this information as the pre-hire's ID, personal, and contact information if you hire or contract them as a contingent worker. You can only edit personal information and IDs for a pre-hire if you consider them for 1 or more positions.

Note: Public contact information displays in directories and listings for all users. HR administrators can see all contact information even if it's not public. To see which security groups can view public and private contact information, check the domains in the Contact Information functional area.

Steps

1. Access the Edit Pre-Hire Contact Information task.

   Supply values for all the required fields when you create a pre-hire. After you create a pre-hire, use this task to edit their contact information.

   Security: *Pre-Hire Data: Contact Information* domain in the Pre-Hire Process functional area.
2. Access the Edit Personal Information for Pre-Hire task.

   Pre-hire personal information is used for regulatory and compliance reporting. You can track personal information for a pre-hire if:

   - Workday can determine the location of the considered position.
   - The Pre-Hire Personal Information localization is enabled for that country.

   Workday determines the position location from the primary location of the supervisory organization containing that position. If you're considering the pre-hire for multiple positions, Workday displays fields and values for all position locations.

   Security: *Pre-Hire Personal Data: Personal Information* domain in the Pre-Hire Process functional area.
3. Access the Edit ID Information for Pre-Hire task.

   Social Security Number is a national ID type. If you hire someone, you must enter a tax ID.

   Security: *Pre-Hire Personal Data: ID Information* domain in the Pre-Hire Process functional area.

Next Steps

After hiring, you can’t add or update personal information on the pre-hire record. Edit personal information on the employee record or access the Edit Personal Information task.

Consider Pre-Hires for Positions

Prerequisites

- Set up pre-hire tracking options.
- Create pre-hires.
- Security: *Manage Pre-Hire Process: Consider Pre-Hires* domain in the Pre-Hire Process functional area.

Context

Manage the pre-hire process by tracking information including:

- Organizations considering the pre-hire.
- Applicable jobs or positions within those organizations.

You can also designate interviewers and track the status of the pre-hire. Pre-hires can include current workers who are applying for other positions in your organization.

Steps

1. Access the Edit Pre-Hire Profile task.

2. As you complete the task, consider:

Option	Description
Considered for	Select the position you're considering the pre-hire for. You can consider pre-hires for multiple positions. You can select a position that includes a worker's name. Workday assumes that you're hiring a replacement for a current occupant who will vacate the position at a future date. Note: You don't have to hire into a listed position, but you can't delete a position from this list.
Interviewers	Select at least 1 interviewer. Workday sends interviewers a request to enter interview feedback.
Status	Specify the current position of the person in the pre-hire evaluation process. To view the status of 1 or more pre-hires for the same position, access the Manage Pre-Hires for Job task.

Related Information

Tasks

Steps: Set Up Pre-Hire Tracking on page 624

Delete Pre-Hires

Prerequisites

Security: *Manage Pre-Hire Data: Mark Pre-Hires for Deletion* and *Manage Pre-Hire Data: Delete Pre-Hires* domains in the Pre-Hire Process functional area.

Context

Deleting a pre-hire is irreversible and involves 2 separate tasks. You can filter the list of pre-hires by location, pre-hire pools, the positions for which they're being considered, statuses, and dates.

If you search for pre-hires by country or country region, Workday determines their location based on either the:

- Country of their home address.
- Primary location of the supervisory organization that contains the position for which they're being considered.

The location search results don't display pre-hires that:

- Aren't linked to positions.
- Have no home address listed.

Note: After a worker is hired, you can't delete that worker's pre-hire record.

Deleting pre-hires doesn't remove all of their information from Workday. To remove their personally identifiable information from Workday completely, you must use the Purge Person Data task to purge the terminated worker associated with the pre-hire record. You can't purge active workers.

Steps

1. Access the Mark Pre-Hires for Deletion task.

   Find the pre-hires you want to delete and select the Mark for Deletion check box. The task doesn't display pre-hire records if:

   - The worker was hired or contracted.
   - The worker was terminated or their contract ended.
   - The *Hire* or *Contract* event is in progress.
   - The pre-hire records were merged.
2. Access the Delete Pre-Hires task.

   Select the Delete check box for the pre-hires you want to delete.

Related Information

Steps: Set Up Pre-Hire Tracking on page 624
Steps: Purge Person Privacy Data

Reference: Security Groups for Pre-Hires

Workday provides these security groups that manage the onboarding process for pre-hires:

- Pre-Contingent Worker as Self
- Pre-Employee as Self

If you want users to view all unconstrained pre-hires on the Edit Pre-Hire Profile task and the View Pre-Hire report, provide them with access to the *View Pre-Hire* domain.

Workday also delivers these security groups that enable employees and contingent workers to access employee self-service:

- Contingent Worker as Self
- Employee as Self

Workday assigns future-dated completed hires to Pre-Employee as Self or Pre-Contingent Worker as Self instead of:

- All Contingent Workers
- All Employees
- Contingent Worker as Self
- Employee as Self

Access to Benefit Enrollment for Pre-Hires

You can configure access to benefit enrollment for your pre-hires:

Access	Action
No access to Workday before start date.	Add these security groups to the *Change Benefits for Life Event* business process. • Employee as Self • Contingent Worker as Self
Access to both Workday and benefit enrollment before start date.	Add these security groups to the *Change Benefits for Life Event*: • Contingent Worker as Self • Employee as Self • Pre-Contingent Worker as Self

Access	Action
	• Pre-Employee as Self
Access to Workday only.	Configure a step delay for enrollment to employee self-service benefits.

Convert Contingent Workers to Employees on page 735

Employment Agreements

Setup Considerations: Employment Agreements

You can use this topic to help make decisions when planning your configuration and use of employment agreements. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

In Workday, you can use employment agreements to outline and negotiate conditions of employment for internal and external candidates.

Business Benefits

You can easily track, report, and negotiate employment agreement details for candidates. Employment agreement details then populate during the *Hire*, *Change Job*, and *Additional Job* business processes. You can also autocomplete approved employment agreement data from job applications in relevant business processes.

Use Cases

You can use the employment agreement functionality to:

- Record and report on the expected duration of the candidate's contract.
- Record and report on conditions of the employment such as compensation, notice periods, probation periods, and collective agreements.
- Renegotiate the conditions of employment and track the renegotiation changes.
- Generate documents for the employment agreement.

If you use employment agreements as part of the Recruiting workflow, you can also:

- Complete employment agreements in bulk with Worksheets during high-volume times of recruitment.
- Autocomplete approved employment agreement data in other business processes.

Questions to Consider

Questions	Considerations
How can you complete employment agreement tasks in a guided view?	You can configure the *Employment Agreement* consolidated template to complete tasks in a guided view instead of completing them separately. When you consolidate the business process template, you must add validation rules for the subprocesses on the *Initiation* step of the *Employment Agreement* business process. You also can't add condition rules on any of the business process steps.
As a Recruiting customer, can you complete employment agreements from job applications in bulk?	You can configure task consolidation to complete employment agreement tasks in bulk using Worksheets by generating a workbook, enabling you to manage high-volume recruitment more flexibly. You can consolidate a maximum of 100 employment agreement events in a workbook.
How can you configure additional fields required in certain countries?	You can configure localized fields on the Maintain Localization Settings task for subprocesses of the *Employment Agreement* business process to: • Track additional fields in certain countries to comply with local regulatory requirements. • Enable rules for components such as notice periods and probation periods to populate data.
How can you populate employment agreement data?	You populate data in employment agreements by configuring eligibility rules for compensation, notice periods, and probation periods. Populating data can reduce manual effort and increase accuracy. Compensation data can populate differently from notice periods and probation periods. We recommend you review how compensation data populates in employment agreements. You can configure condition rules and data fields on the Maintain Staffing Field Defaults task to populate these fields on an employment agreement during recruiting: • Hire Date • Contract End Date
As a Recruiting customer, how can you autocomplete employment agreements?	You can configure the relevant business process definition to autocomplete approved employment agreement data from job applications on these business processes: • *Add Additional Job* • *Change Job*

Questions	Considerations
	• *Hire*
Do you want to send other documents to candidates together with the employment agreement?	You can configure the *Add Documents* step to the Offer business process. This action step enables you to attach documents before sending an employment agreements. Example: Terms and Conditions.
Do you want to make corrections to an Employment Agreement after a candidate accepts?	If you correct details on an Employment Agreement after a candidate has accepted, you can regenerate a new Employment Agreement document using the: • Regenerate Employment Agreement Documents task. • Related actions menu of a completed Employment Agreement event.

Recommendations

To populate data in the most efficient order, Workday recommends that you configure the steps on the *Employment Agreement* business process definition and consolidated template in this order:

- *Initiate Pre-Hire Contract Details*
- *Initiate Pre-Hire Collective Agreement Details*
- *Initiate Pre-Hire Probation Period Details*
- *Initiate Pre-Hire Notice Period Details*
- *Propose Compensation Offer/Employment Agreement*
- *Request Stock Grant Offer/Employment Agreement*
- *Request One-Time Payment Offer/Employment Agreement*

We also recommend that you complete these steps for employment agreements in this order.

When you configure the *Hire Employee* initiating action on the *Hire* business process, we recommend that you hire directly from the employment agreement. The employment agreement data then populates on the *Hire* business process.

To propose establishments in employment agreements, Workday recommends that you select the Allow Establishment on Employment Agreement/Offer check box on the Configure Establishment by Country task.

To keep data consistent, Workday recommends that you make any changes required to the employment agreement before initiating the *Hire* business process. If you change data during the *Hire* business process, these changes won't update the approved employment agreement.

Requirements

Employment agreements require a job requisition for the position and a pre-hire record.

Limitations

You can only consolidate review events in Worksheets for these subprocesses on the *Employment Agreement* business process:

- *Propose Compensation Offer/Employment Agreement*
- *Request One-Time Payment Offer/Employment Agreement*
- *Request Stock Grant Offer/Employment Agreement*

You can't consolidate any other approval or review events for employment agreements.

Tenant Setup

No impact.

Security

Domains	Considerations
Pre-Hire Data: Employment Agreement in the Pre-Hire Process and Recruiting functional area.	Users secured to this domain and its subdomains can view or modify these types of data: • Business Title • Collective Agreement • Employee Contract • End Date • Location • Notice Period • Probation Period • Scheduled Weekly Hours • Start Date
Add Compensation Plans in the Core Compensation functional area.	Users secured to this domain and its subdomains can view or modify compensation plan data.
Compensation Change: Guidelines in the Core Compensation functional area.	Users secured to this domain can view or modify compensation grade data, grade profile data, and step assignments.
Add Compensation Management Plans in the Advanced Compensation functional area.	Users secured to this domain and its subdomains can view or modify bonuses, merit plans, and stock plans.

Business Processes

Configure these business processes and business process policies:

Business Processes	Considerations
Employment Agreement	Enables you to maintain employment agreements for candidates as a standalone business process if you're not using employment agreements as part of the Recruiting workflow.
Job Application	You can configure *Employment Agreement* as a subprocess of the *Job Application* business process to maintain employment agreements for candidates as part of the Recruiting workflow.
Pre-Hire Collective Agreement Details	Enables you to maintain collective agreement details for the *Initiate Pre-Hire Collective Agreement Details* step on the *Employment Agreement* business process.
Pre-Hire Contract Details	Enables you to maintain contract details for the *Initiate Pre-Hire Contract Details* step on the *Employment Agreement* business process.

Business Processes	Considerations
Pre-Hire Notice Period Details	Enables you to maintain notice period details for the *Initiate Pre-Hire Notice Period Details* step on the *Employment Agreement* business process.
Pre-Hire Probation Period Details	Enables you to maintain probation period details for the *Initiate Pre-Hire Probation Period Details* step on the *Employment Agreement* business process.
Propose Compensation Offer/Employment Agreement	Enables you to maintain compensation details for the *Propose Compensation Offer/Employment Agreement* step on the *Employment Agreement* business process.
Request One-Time Payment Offer/Employment Agreement	Enables you to maintain one-time payment details for the *Request One-Time Payment Offer/Employment Agreement* step on the *Employment Agreement* business process.
Request Stock Grant Offer/Employment Agreement	Enables you to maintain stock grant details for the *Request Stock Grant Offer/Employment Agreement* step on the *Employment Agreement* business process.

Reporting

You can use the Find Employment Agreements report to display all employment agreements by supervisory organization.

Integrations

You can build an inbound EIB integration based on the *Employment Agreement* web service to upload employment agreement data from job applications in bulk.

Connections and Touchpoints

If you're using employment agreements as part of the Recruiting workflow, employment agreements interact with HCM Core and Compensation.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Setup Considerations: Autocomplete Staffing Events on page 519

Tasks

Steps: Set Up Task Consolidation for Employment Agreements on page 637

Reference

FAQ: Compensation Defaulting on page 1039

Steps: Set Up Employment Agreements

Context

Set up employment agreements to streamline your global pre-hire negotiation and hire processes. In addition to job requisition data, employment agreements can include these types of data:

- Collective agreement
- Compensation
- Contract details
- Establishment
- One-time payment
- Notice period
- Probation period
- Stock grant

Steps

1. Edit Domain Security Policies.

   Configure the security policies for the *Pre-Hire Data: Employment Agreement* domain and its subdomains in the Pre-Hire Process and Recruiting functional area.
2. Edit Business Process Security Policies.

   Configure the *Employment Agreement* business process policy.

   Configure the business process policies for the *Employment Agreement* subprocesses you want to configure:

   - *Pre-Hire Collective Agreement Details*
   - *Pre-Hire Contract Details*
   - *Pre-Hire Probation Period Details*
   - *Pre-Hire Notice Period Details*
   - *Propose Compensation Offer/Employment Agreement*
   - *Request One Time Payment Offer/Employment Agreement*
   - *Request Stock Grant Offer/Employment Agreement*

   You can only configure these subprocesses on the *Employment Agreement* business process.

   To initiate a hire from the related actions menu of an employment agreement, configure the *Hire Employee* initiating action for employment agreements on the *Hire* business process.
3. Edit Business Processes.
   a) Access the *Employment Agreement* business process.
   b) Add steps for the relevant subprocesses.
   c) (Optional) Configure the *Generate Document* and *Review Document* steps to generate and view employment agreement documents in PDF format.
   d) Add *Make Employment Agreement Decision* as the completion step.
4. (Optional) Access the View Business Process Template report.

   From the related actions of the Employment Agreement business process type, select Business Process > Configure Consolidated Template to start tasks from configured subprocesses at the same time.

   Security: These domains in the System functional area:

   - *Business Process Administration*
   - *Manage: Business Process Definitions*
5. If you configure any of these subprocesses, set up their components so that the appropriate data displays on the *Employment Agreement* business process.

Option	Description
Collective agreements	Steps: Manage Collective Agreements on page 647
Compensation	Steps: Set Up the Compensation Framework

Option	Description
Contract details	Steps: Set Up Employee Contracts on page 656
Probation Periods	Steps: Manage Probation Periods on page 671
Notice Periods	Steps: Manage Notice Periods on page 683
One-time payments	Create One-Time Payment Plans
Stock grants	Steps: Set Up Stock Plans

6. (Optional) Maintain Localization Settings on page 144.

   Configure these localized fields to display on the *Employment Agreement* business process:

   - *Paid FTE (Worker)*
   - *Working FTE (Worker)*
7. (Optional) Access the Configure Establishment by Countrytask.

   To display the Establishment prompt on the Details section of the *Employment Agreement* business process, select the Allow Establishment on Employment Agreement/Offer check box.

   If you propose an establishment in an employment agreement, the proposed establishment populates in applicable staffing events.
8. (Optional) Hide or Require Optional Fields.

   If you configured the Generate Document step, we recommend that you hide the *Document Language* field. The Generate Document step sets the document language based on the locale and language settings of the user. Hiding the *Document Language* field simplifies the user experience.
9. Activate Pending Security Policy Changes.

   Hide or require employment agreement fields by role in the Staffing and Pre-Hire Process functional areas.

Next Steps

Access the Template-Driven Business Process Security report to confirm that the *Employment Agreement* business process and domain security permissions are correct.

If you want employment agreements in your Workday Recruiting workflow, add the *Employment Agreement* business process as a step on the *Job Application* dynamic business process.

If you want to renegotiate an employment agreement on the *Job Application* business process, add the *Employment Agreement* business process a second time. Workday recommends that you use a label override to distinguish the initial employment agreement step from the renegotiate employment agreement step. Example: Employment Agreement and Renegotiate Employment Agreement.

Workday 2023R2 What's New Post: Establishment on Employment Agreement, Offer, and Staffing

Steps: Set Up Task Consolidation for Employment Agreements

Prerequisites

Configure the *Employment Agreement* business process and security policy in the Recruiting functional area.

Context

You can set up task consolidation for employment agreements from job applications. You can then consolidate employment agreement tasks from My Tasks to complete them at once.

Steps

1. Set up task consolidation for the *Employment Agreement* business process.

   If you've configured the relevant subprocesses for the *Employment Agreement* business process, set up task consolidation for these business process policies:

   - *Pre-Hire Collective Agreement Details*
   - *Pre-Hire Contract Details*
   - *Pre-Hire Notice Period Details*
   - *Pre-Hire Probation Period Details*

   See Steps: Set Up Task Consolidation.
2. (Optional) Set up task consolidation for Compensation subprocesses.

   See Set Up Task Consolidation for Compensation in Recruiting on page 1052.
3. Edit Domain Security Policies.

   Grant Modify access to security groups for these domains in the Recruiting functional areas:

   - *Pre-Hire Data: Business Title*
   - *Pre-Hire Data: Employment Agreement*
   - *Pre-Hire Data: End Date*
   - *Pre-Hire Data: Start Date and Location*

   If you've configured the relevant subprocesses, grant Modify access to security groups for these domains in the Recruiting functional areas:

   - *Employment Agreement: Collective Agreements*
   - *Employment Agreement: Employee Contracts*
   - *Employment Agreement: Notice Periods*
   - *Employment Agreement: Probation Period*
4. Activate Pending Authentication Policy Changes.

Result

You can now consolidate tasks in My Tasks for employment agreements from job applications into a workbook.

Next Steps

Access the Consolidate Tasks report to consolidate available tasks.

2020R1 What's New Post: Consolidated Tasks for Employment Agreements

Create Employment Agreements

Prerequisites

- Configure the *Employment Agreement* business process and security policy in the Staffing functional area.
- Security: *Pre-Hire Data: Employment Agreement* domain in the Pre-Hire Process functional area.
- Create job requisitions.

Context

You can create a detailed employment agreement for a pre-hire that includes:

- Collective agreements.
- Compensation.
- Contract details.
- Job requisition details.
- Notice Periods
- One-time payments.
- Probation periods.
- Stock grants.

If you've consolidated the *Employment Agreement* business process template, tasks from your configured subprocesses start at the same time and display in a streamlined, guided workflow. This workflow enables you to:

- Move easily between the components that make up the employment agreement.
- Review and approve all of the components of the employment agreement at once.

Steps

1. Access the Create Employment Agreement task.
2. (Optional) On the Start section, enter new values for the fields you want to change.

   If the job requisition has additional job profiles, the primary job profile populates in the employment agreement and you can select a different job profile. The Job Profile field is read-only if the job requisition only has 1 job profile.

   Changing the data on this section won't change the original data on the job requisition.
3. Complete the component tasks of the employment agreement.

Result

If you configured the *Generate Document* step on the *Employment Agreement* business process, you can now generate employment agreement documents.

Next Steps

- Hire the pre-hire.
- Renegotiate the approved employment agreement for a job application.

Related Information
Tasks
Create and Edit Job Requisitions on page 611

Example: Correct and Regenerate Employment Agreement Document

This example describes how to correct and regenerate an accepted employment agreement document.

Context

You send an employment agreement to a successful candidate with a start date of 2020-08-27. The job location is Munich. The candidate signs and returns the employment agreement document and you move the candidate to the *Hire* stage. The candidate later requests a start date of 2020-09-27 and a job location of Berlin. You need to make corrections and regenerate another employment agreement document. You want all the copies of the employment agreement documents to be accessible on the candidate profile.

Prerequisites

- Configure the *Regenerate Employment Agreement Documents* business process and security policy in the Recruiting functional area.
- Add the *Generate Document* step followed by the *Review Document* step to the *Regenerate Employment Agreement Documents* business process definition.
- Security:

  These domains in the Recruiting functional area:

  - *Candidate Data: Attachments*
  - *Candidate Data: Offer Details*
  - *Pre-Hire Data: Employment Agreement* in the Recruiting and Pre Hire Process functional areas.

Steps

1. Access the candidate profile.
2. Select Business Process > Business Process Event History from the related actions menu.
3. In the Job Application field, select the candidate job application.
4. Click OK.
5. On the Process tab of the View Recruiting Event page, select Business Process > Correct from the related actions menu on the *Employment Agreement* business process.
6. On the Correct Business Process page, make these changes:

Field	Option
Hire Date	*2020-09-27*
Location	*Berlin*

7. Enter a Comment to explain the update you have made to the employment agreement document.
8. Click Submit.
9. From the related actions menu of the *Employment Agreement* business process, select Business Process > Regenerate Employment Agreement Documents.
10. Click OK.
11. Click Open to review the regenerated employment agreement document.
12. Click Submit.

Result

When you regenerate an employment agreement document and you have the *Review Document* step configured:

- Workday displays the regenerated employment agreement document on the Employment Agreement Attachments tab of the candidate profile.
- The candidate receives a notification to alert them to review and acknowledge the new employment agreement document in Candidate Home.

Candidates can electronically sign the employment agreement document using Adobe Sign or DocuSign.

Contracts and Agreements

Collective Agreements and Unions

Setup Considerations: Collective Agreements

You can use this topic to help make decisions when planning your configuration and use of collective agreements. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

In Workday, you can assign collective agreements to employees to determine their workplace conditions and the duties of the employer as defined by union negotiations.

Business Benefits

To reduce manual effort and help you comply with regulatory requirements, you can use collective agreements to determine these conditions for an employee:

- Duration of notice periods and probation periods.
- Eligibility for allowances and benefits.
- Eligibility for time off and absence plans.
- Minimum weekly working hours.
- Minimum base pay.

You can configure eligibility rules that can help identify which collective agreements you can assign to employees. You can also schedule collective agreement reviews, streamlining the process of monitoring and updating employee collective agreement assignments.

You can save time and improve data accuracy by defaulting compensation on job requisitions and the communication of collective agreement details in job postings.

Use Cases

In addition to assigning collective agreements to each employee's position, you can:

- Define collective agreements on job requisitions and evergreen requisitions.
- End or update collective agreement assignments for employees when unions renegotiate collective agreements.
- Report on employees with collective agreements.
- Restrict collective agreements to certain countries or locations.
- Create eligibility rules that identify applicable collective agreements for the employee.
- Schedule collective agreement reviews.

Questions to Consider

Questions	Considerations
Do you want to restrict the collective agreement to a certain country or location?	You can restrict a collective agreement to a country or location when you create collective agreements to prevent inaccurate assignments.
What criteria determines an employee's collective agreement?	You can create eligibility rules to determine an employee's collective agreement based on factors such as an employee's job profile. If an employee is only eligible for 1 collective agreement, the collective agreement populates when you assign it. If an employee is eligible for more than 1 collective agreement, you can select an eligible collective agreement. If you use eligibility rules, we recommend that you also restrict collective agreements to countries or locations to prevent inaccurate assignments.
What factor options apply to the classification factors for each collective agreement?	You can configure factor option combinations for 5 classification factors to define conditions of employment. The classification factors include: • *Area* • *Class* • *Coefficient* • *Group* • *Level* • *Position* • *Professional Category* • *Rating* • *Step* Example: You configure *Blue Collar* for the *Professional Category* factor and *140* for the *Coefficient* factor. You also configure *Blue Collar* for the *Professional Category* and *145* for the *Coefficient* factor as another combination. If you select a factor option from a unique combination when assigning collective agreements, Workday populates the other factor options.
Do you want to use collective agreements in the *Change Job* business process guided view?	If you're using the consolidated template for the *Change Job* business process, you can configure the *Assign Collective Agreement (Consolidated Template)* step on the business process. This step enables you to update collective agreement data and populate compensation data in a guided view. To display the Assign Collective Agreement subprocess in the simplified Change Job user interface, on the Maintain Change Job Templates task, select the Enable Enhanced User Interface check box for templates that include the Assign Collective Agreement subprocess.

Questions	Considerations
	If you're not using the consolidated template for the *Change Job* business process, you can configure the *Assign Collective Agreement* step. Workday cancels the collective agreement event after you submit a job change for a worker with a collective agreement when you don't update the collective agreement information or change the collective agreement.
Do you want to use collective agreements in the *Employment Agreement* business process guided view?	You can configure the *Pre-Hire Collective Agreement Details* subprocess in the consolidated template for the *Employment Agreement* business process. This setup enables you to update collective agreement data and populate compensation, probation period, and notice period data in a guided view.
Do you want to autocomplete collective agreement assignments in staffing business processes?	If you're using Recruiting, you can configure the *Initiate Pre-Hire Collective Agreement Details* step on the *Employment Agreement* business process and enable autocomplete for the event. If you enable autocomplete for the event, the employee must meet an eligibility rule that populates the collective agreement to complete the event. You can configure the *End Collective Agreement Assignment* step on the *Termination* business process and enable autocomplete for the event. This step autocompletes if the termination date is the same as the collective agreement end date.
Do you want to schedule collective agreement reviews?	You can enable the Collective Agreement: Review field on the Staffing area in the Maintain Localization Settings task. You can then add security group to the Assign Collective Agreement on Collective Agreement Review Date initiating action on the Assign Collective Agreement business process policy to specify who should receive the Assign Collective Agreement task on the review date. If you enter a collective agreement review date when assigning a collective agreement to a worker and specify a security group on the Assign Collective Agreement business process policy, Workday automatically assigns an Assign Collective Agreement event to the members of the security group when the review date is reached. If you don't specify a security group on the Assign Collective Agreement business process policy, the Assign Collective Agreement event routing will go unassigned.

Recommendations

Workday recommends that:

- You configure the *Assign Collective Agreement* and *End Collective Agreement Assignment* steps on available business processes to streamline data.
- If you're not using eligibility rules, hide the Eligibility Rule field on collective agreement tasks to improve user experience.

Requirements

If you have collective agreements with classification factors, you must set up factor options.

Limitations

You can only add 5 classification factors to a collective agreement.

Tenant Setup

No impact.

Security

Domains	Considerations
Candidate Data: Offer Details in the Recruiting functional area.	Provides access to the offer details of a candidate.
Employment Agreement: Collective Agreement in the Pre-Hire Process and Recruiting functional areas.	Provides access to collective agreement data in employment agreements.
Pre-Hire Data: Employment Agreement in the Pre-Hire Process and Recruiting functional areas.	Provides access to Employment Agreement Data for Pre-Hires.
Self-Service: Collective Agreement Information in the Staffing functional area.	Provides users access to their own collective agreement data.
Set Up: Collective Agreement Rules in the Staffing functional area.	Provides access to collective agreement eligibility rules.
Set Up: Collective Agreements in the Staffing functional area.	Provides access to collective agreement setup.
Worker Data: Collective Agreements in the Staffing functional area.	Provides access to collective agreement data for employees.

Business Processes

Business Processes	Considerations
Assign Employee Collective Agreement	Enables you to assign a collective agreement to an employee. You can streamline collective agreement assignments by configuring the *Assign Collective Agreement* step on these business processes: • *Add Additional Job* • *Change Job* • *Hire*

Business Processes	Considerations
	If you're using the consolidated template for the *Change Job* business process, Workday recommends that you configure the *Assign Collective Agreement (Consolidated Template)* step instead. If you rescind or cancel an automatically generated Assign Collective Agreement event, Workday won't trigger a new event for that specific collective agreement assignment and review date.
End Collective Agreement Assignment	Enables you to end collective agreement assignments for an employee. You can configure the *End Collective Agreement Assignment* step on the *Termination* business process to end collective agreement assignments for employees you plan to terminate.
Pre-Hire Collective Agreement Details	Enables you to maintain collective agreement details for the *Initiate Pre-Hire Collective Agreement Details* step on the *Employment Agreement* business process. Enables you to specify collective agreements and factors when creating evergreen requisitions and job requisitions when made a subprocess of these business processes: • *Create Evergreen Requisition* • *Create Job Requisition* • *Edit Evergreen Requisition* • *Edit Job Requisition* The collective agreement information that you define on the job requisition will be flowed into the Collective Agreement step on subsequent staffing processes. Example: Employment Agreement.

Reporting

Reports	Considerations
Collective Agreement Report	Use to view a summary of the details for a collective agreement and the number of assignments. The effective date is based on the assignment date.
View Collective Agreement	Use to view details such as location restrictions and eligibility rules for a collective agreement.
View Collective Agreement Factor Options	Use to view the factor options for a classification factor.
Employees Covered by Collective Agreements	Use to view employees with collective agreement assignments.

You can use the All Collective Agreements report data source to create custom reports.

You can add a custom report to the *Approval* and *Review* steps on the *Assign Employee Collective Agreement* business process to provide additional data for users completing these steps.

Integrations

Use these web services to upload collective agreements, eligibility rules, and collective agreement assignments in bulk:

- *Assign Employee Collective Agreement Event*
- *End Collective Agreement Assignment*
- *Put Collective Agreement*
- *Put Global Staffing Eligibility Rule*

Use these web services to retrieve collective agreements and eligibility rules for collective agreements:

- *Get Collective Agreements*
- *Get Global Staffing Eligibility Rules*

Use these web services to specify collective agreements and factors when creating job requisitions and evergreen requisitions:

- *Create Evergreen Requisition*
- *Create Job Requisition*
- *Edit Evergreen Requisition*
- *Edit Job Requisition*

Connections and Touchpoints

Features	Considerations
Absence	You can configure absence rules and calculations based on collective agreements to determine the absence plan for employees. Workday recommends that you also consider collective agreements assigned midperiod for rules and calculations.
Benefits	You can configure benefit eligibility rules based on collective agreements to determine the benefit plan or rate for employees. When you change collective agreement assignments, benefit elections don't automatically change.
Compensation	You can configure base pay tables with compensation grade steps to determine base pay for a collective agreement assignment. You can also create compensation eligibility rules based on collective agreements to determine compensation for employees. When you change collective agreement assignments, compensation assignments don't automatically change.
Notice Periods Probation Periods	You can create eligibility rules based on collective agreements that determine probation periods and notice periods for employees.
Payroll (AUS)	If you use Workday Payroll for Australia, you can map collective agreement factor options with class report fields to create appropriate payroll

Features	Considerations
	calculations, reporting, and custom payslips for each employee.
Payroll (FRA)	If you use Workday Payroll France, you can map collective agreement factor options to DSN rubric values to identify appropriate payroll calculations and reporting for each employee.
Time Tracking	You can create eligibility rules based on collective agreements to determine how Workday calculates working time.
Unions	You can associate a collective agreement with a union.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Related Information

Concepts

Setup Considerations: Autocomplete Staffing Events on page 519

Reference

The Next Level: Understand Collective Agreements

Steps: Manage Collective Agreements

Prerequisites

- Configure these business processes and security policies in the Staffing functional area:
  - *Assign Employee Collective Agreement*
  - *End Collective Agreement Assignment*
- Security: These domains in the Staffing functional area:
  - *Set Up: Collective Agreements*
  - *Worker Data: Collective Agreements*

Context

You can set up collective agreement factors and options to comply with labor laws that apply to your business and employees. You can configure collective agreements as a stand-alone business process or as a subprocess of these business processes:

- *Add Additional Job*
- *Change Job*
- *Hire*
- *Termination*

You can create eligibility rules for collective agreements to reduce manual effort for assigning collective agreements to employees. You can also schedule collective agreement reviews to streamline the process of monitoring and updating employee collective agreement assignments.

Steps

1. Access the Maintain Collective Agreement Factor Options task.

   Configure the collective agreement factor options for your organization.

   Security: *Set Up: Collective Agreements* domain in the Staffing functional area.

2. (Optional) Access the Create Global Staffing Eligibility Rule task.

   Create eligibility rules for collective agreements.

   Security: *Set Up: Collective Agreement Rules* in the Staffing functional area.
3. Access the Create Collective Agreement task.

   Add a row for each combination of Classification Factor Values for the classification factors that you want to permit for the collective agreement.

   Example:

Factor 1 (Professional Category)	Factor 2 (Level)	Factor 3 (Step)	Factor 4 (Coefficient)
Blue Collar	I	1	140
Blue Collar	I	2	145
Blue Collar	I	3	155
White Collar	I	1	140
White Collar	I	2	145
White Collar	I	3	155

   If you created eligibility rules, you can select an eligibility rule for the collective agreement.

   Note: When you copy an existing collective agreement with an end date, Workday populates the Start Date of the new agreement to 1 day after the End Date of the existing agreement.

   Security: *Set Up: Collective Agreements* domain in the Staffing functional area.
4. (Optional) Set up *Assign Employee Collective Agreement* as a subprocess of the *Change Job* business process to update collective agreement and compensation data in a guided view.
   a. Configure the *Assign Collective Agreement (Consolidated Template)* initiating action as a step on the *Change Job* business process.
   b. Configure *Assign Employee Collective Agreement* as a subprocess of the *Change Job* business process consolidated template.
5. Maintain Localization Settings on page 144.

   Enable the Collective Agreement: Review field on the Staffing area.

   Security: *Set Up: Tenant Setup - Global* in the System functional area.
6. Add security groups to the Assign Collective Agreement on Collective Agreement Review Date initiating action on the Assign Collective Agreement business process policy to receive the Assign Collective Agreement event on the collective agreement review date.
7. (Optional) Hide or Require Optional Fields.

   Hide or require fields on these tasks and report :

   - Assign Collective Agreement
   - Create Collective Agreement
   - Edit Collective Agreement
   - View Collective Agreement

   To improve your user experience, Workday recommends hiding the Eligibility Rule field if you're not using eligibility rules for collective agreements.

   You can hide or require the *Worker Profile: Collective Agreement Review Date* field on the Collective Agreement for Current Position Worker Profile functional area to control the display of the Collective Agreement Review Date field on a worker's profile.

8. (Optional) Add Worklets to Business Processes on page 2969.

   To display information from your custom reports to help users complete the step, embed worklets on *Approval* or *Review* steps of the *Assign Employee Collective Agreement* business process.

Result

If you configured eligibility rules for collective agreements and an employee is only eligible for 1 collective agreement, Workday populates the Collective Agreement prompt on the Assign Collective Agreement task.

Workday displays the Collective Agreement Review Date on:

- The Assign Collective Agreement task.
- The End Collective Agreement Assignment task.
- An Employment agreement when you assign a collective agreement to an employment agreement.
- An offer letter when you assign a collective agreement to an offer.
- A Worker's profile.

Next Steps

Access the:

- Edit Collective Agreement task to change the terms of an existing collective agreement.
- Assign Collective Agreement task to assign a collective agreement to an employee.
- End Collective Agreement Assignment task to end a collective agreement assignment for an employee.

Tasks

Set Up Rule Based Consolidated Templates for Job Changes on page 859

Steps: Purge Person Privacy Data

Reference

The Next Level: Understand Collective Agreements

Steps: Manage Unions

Prerequisites

Security: *Set Up: Unions* domain in the Unions functional area.

Context

You can set up unions in Workday to:

- Define different types of union membership.
- Track workers membership in a union.

You can also use union membership information in eligibility rules to determine the eligibility of workers for deductions and benefits.

Steps

1. Edit Business Process Security Policies.

   Configure the *Union Membership Event* business process and security policy in the Unions functional area.
2. Configure the Union Profile.
3. Set Up Unions on page 650.
4. Create Union Membership Types on page 651.

5. (Optional) Hide or Require Optional Fields.

   Hide or require optional fields on the *Manage Union Membership* business process.
6. Manage Union Membership for Workers on page 651.
7. (Optional) Manage data purging for union membership.

   See ../../../../authentication-and-security/data-privacy/data-purging/lub1590696272749.dita.
8. (Optional) Create Custom Labels.
9. (Optional) Add Worklets to Business Processes on page 2969.

   To provide related information for unions and workers, add custom worklets to the business process steps.

Next Steps

Access the Workday Standard Reports report and select the *Set Up Labor Unions* and *Unions* categories to track unions and union membership types.

Set Up Unions

Prerequisites

Security: *Set Up: Unions* domain in the Unions functional area.

Context

Set up the unions that your employees belong to.

Steps

1. Access the Maintain Unions task.
2. Complete the task:

Option	Description
Union Name	Name of the union. Example: *Autoworkers - Local 1188*.
Union ID	Reference ID for web services that upload membership information.
Active Members	Number of workers associated with the union whose membership type has the Active Member check box selected.
Inactive Members	Number of workers associated with the union whose membership type doesn't have the Active Member check box selected.

3. Click OK and Done.

Next Steps

- Access the Maintain Union Membership Types task to define the different types of union membership, and link the unions to the applicable membership types.
- Use the Unions report to see all unions entered in Workday.

Related Information

Tasks

Steps: Manage Unions on page 649

Create Union Membership Types

Prerequisites

- Set up unions.
- Security: *Set Up: Unions* domain in the Unions functional area.

Context

You can create the types of union memberships available to workers. Examples: *Regular*, *Dues only*.

Steps

1. Access the Maintain Union Membership Types task.
2. Complete the task:

Option	Description
Membership Type	Identify the types of memberships, such as *Regular* or *Dues only*.
Active Member	Workers with this type of membership are active members and included in the *active* count. You can use active members in rules for Absence, Benefits, and Compensation.
Pays Dues	Workers with this type of membership pay membership dues.
Applicable Unions	Indicate which membership types are available to a worker.
Usage	Number of the union membership entries, current and past history, with this type of membership.

3. Click OK and Done.

Next Steps

- To add a union membership to a worker, access the Manage Union Membership task.
- To see all membership types entered in Workday, access the View Union Membership Types report.
- Delete a membership type if the Usage Count is zero.

Manage Union Membership for Workers

Prerequisites

Security: *Set Up: Unions* domain in the Unions functional area.

Context

Union membership determines the benefit and deduction eligibility for workers.

Example: Include union member information in worker eligibility rules so that all union members pay membership dues. You can also include union member information in worker benefit eligibility rules so that all union members are part of a benefit group.

You can streamline managing workers' union membership by configuring the *Manage Union Membership* step on these business processes:

- *Add Additional Job*

- *Change Job*
- *Edit Position*
- *End Additional Job*
- *Hire*
- *Termination*
- *Union Membership Event*

Example: Configure the *Manage Union Membership* step on the *Change Job* business process to assign a different union membership to workers as part of the job change workflow, so transferring workers initiates a change in benefits and thus a change in union membership.

You can enter multiple union membership activity records for workers.

Only members of supervisory organizations, not members of location hierarchies, can manage workers' union membership.

Steps

1. Access the Manage Union Membership task.
2. Complete the task:

Option	Description
Union Seniority Date	Select the date from which the worker is associated with the union.
Start Date	Select a start date after the end date of the previous union membership activity.
End Date	When you have more than 1 record of union membership activity, select an end date that's before the start date of the next union membership activity. You can leave the end date blank when there is no union membership activity record following this membership activity.

3. Click Submit .

Employee Contracts

Setup Considerations: Employee Contracts

You can use this topic to help make decisions when planning your configuration and use of employee contracts. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Employee contracts in Workday are a highly configurable way of managing details for fixed-term and open-ended employee contracts.

Business Benefits

You can easily maintain contracts for employees, generate documents for contracts, and report on contract details, enabling you to comply with regulatory requirements. You can also configure employee contracts to increase efficiency and reduce manual effort by:

- Configuring warnings to limit fixed-term contract renewals and duration for contracts.
- Populating a contract review date for fixed-term contracts.
- Populating a contract status in business processes.

Use Cases

You can use employee contracts to:

- Record and report on the expected duration of an employee's employment.
- Record additional data for your requirements through creating custom fields.
- Generate documents for contracts that employees can view on their worker profile.
- Review fixed-term contracts and renew or end the contract as required.
- Schedule a contract review date.
- Create rules for fixed-term contract renewals and maximum combined contract duration.

Questions to Consider

Questions	Considerations
Do you review and renew fixed-term employee contracts?	You can use the *Review Employee Contracts* business process to review and renew or end their contract. The *Review Employee Contracts* business process only initiates for employees who have a review date on their latest active employee contract. Workday doesn't require you to review and renew fixed-term contracts.
What are your criteria for fixed-term employee contracts rules?	You can set up rules to define a maximum combined contract duration, maximum number of renewals, and populate a contract review date for employees. If you set a maximum combined contract duration, Workday displays a warning message when you add a contract duration that exceeds the maximum. Workday doesn't require you to define rules for fixed-term contract reviews and renewals.
What actions do you want to take during the contract review?	You can: • Add an open-ended contract. • Add a fixed-term contract. • Change the employee's job to update job and contract details. • Extend the contract. • End the contract by terminating the employee.
Do you need to create contracts for contingent workers?	Employee contracts are only available to employees. You can configure the *Contract*

Questions	Considerations
	Contingent Workers business process to contract contingent workers.
What requirements do you have for contract IDs?	You can configure Workday to calculate employee contract IDs for new contracts. An employee contract ID doesn't change due to internal transfers or contract conversions. When you configure employee contract ID calculations, Workday: • Generates a new contract ID for contracts created with the *Hire* business process or related web service. • Copies the contract ID from the previous contract for contracts created outside of the *Hire* business process, but within the same employment. Example: *Change Jobs*. Copying contract IDs ensures continuity in contract IDs when producing regulatory reports, such as Déclaration Socials Nominative (DSN) reporting.

Recommendations

Workday recommends that you:

- Configure the *Maintain Employee Contract* step on available business processes to streamline updates.
- Configure the *Maintain Employee Contract* step on the *Termination* business process to end contracts and prevent overlapping contracts for rehires.
- Add 2 *Maintain Employee Contract* steps on the *Change Job* business process. The first step ends the existing employee contract and the second step adds a new employee contract.
- Configure country-specific localized fields in the Staffing area on the Maintain Localization Settings task to enable employee contract fields and components.
- Ensure that the contract is fixed-term before using contract reviews.
- Select days for a more accurate way to define a maximum combined contract duration. Example: Workday calculates 52 weeks as 364 days.
- Test eligibility rules for employee contract reviews and renewals with the Test Global Staffing Eligibility Rule report.

Requirements

To enable employee contract reviews and renewals, configure the *Employee Contract: Review* localized field.

Limitations

You can:

- Add contract review dates only for employees.
- Review each fixed-term contract or contract extension only once.
- Only select a contract review date on the *Maintain Employee Contracts* web service. The web service doesn't currently support populating review dates from contract rules.
- Configure only 1 active contract for a job at a time, based on the contract start and end date.

Tenant Setup

In the Maintain Localization Settings task, you can configure Workday to generate a contract ID for new contracts based on DSN requirements.

In the Edit Tenant Setup – HCM task, you can:

- Configure a sequence generator for employee contract IDs.
- Automatically update the End Employment Date field for fixed-term employees whose Contract End Date changes.

Security

Domains	Considerations
Employment Agreement: Employee Contracts in the Pre-Hire Process and Recruiting functional areas.	Users secured to this domain can view or modify employee contract data for pre-hires during the *Employment Agreement* business process.
Staffing Actions: Job Requisition Employee Contract Details in the Staffing functional area.	Users secured to this domain can view or modify employee contract details on job requisitions.
Set Up: Employee Contracts in the Staffing functional area.	Users secured to this domain can configure employee contract reasons and statuses.
Set Up: Employee Contract Rules in the Staffing functional area.	Users secured to this domain can configure employee contract rules.
Worker Data: Employee Contracts in the Staffing functional area.	Users secured to this domain can view or modify employee contract data for employees.

Business Processes

Business Processes	Considerations
Employee Contract	Enables you to add, edit, and extend employee contracts.
Edit Employee Contract Additional Data Event	Enables you to add custom fields for employee contracts.
Review Employee Contracts	Enables you to review and renew fixed-term employee contracts.
Termination	You can configure the *Terminate from Review Employee Contract* initiating action to terminate an employee during a contract review.

Reporting

Reports	Considerations
Employee Contracts	Displays all employee contract details for an employee.
Employees with Contracts	Displays employees with contracts and details such as location, job title, and contract type.
View Document Template Details	Displays document templates for employee contract created with Workday Docs.

Integrations

You can build inbound EIB integrations based on these web services to upload custom fields for employee contracts, maintain employee contracts, and upload contract rules:

- *Edit Employee Contract Additional Data*
- *Maintain Employee Contracts*
- *Put Global Staffing Eligibility Rule*
- *Put Maintain Employee Contract Rules for Country*

You can use these web services to retrieve employee contract rules:

- *Get Global Staffing Eligibility Rules*
- *Get Maintain Employee Contract Rules for Country*

Connections and Touchpoints

Workday uses employee contracts in Payroll (FRA) for payroll calculations and DSN reporting. For DSN reporting requirements:

- Workers must have a valid contract during their entire employment.
- The Contract ID for the contract must remain the same from hire to termination, even if the contract information changes.

Employee contracts interacts with Workday Docs to create document templates for contract documents.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Workday 33 What's New Post: Employee Contract Reviews

Steps: Set Up Employee Contracts

Prerequisites

- Configure the *Employee Contract* business process and business process policy in the Staffing functional area.
- Security: *Set Up: Employee Contracts* domain in the Staffing functional area.

Context

You can set up employee contracts by defining types, statuses, and reasons so you can report on hiring reasons and contract details within your organization. Optionally, you can set up renewals and reviews for fixed-term employee contracts. You can also create custom fields for employee contracts to track data according to your business requirements.

These contracts aren't the same as supplier contracts for contingent workers.

Steps

1. Access the Maintain Employee Contract Types task.

   Optionally, you can enter a Code to label the contract type for specific reporting purposes.

   Note: Use this field only if you're labeling the contract type for the MMO Preparation (France) report for the purpose of *recrutement sous CDD de 18 à 36 mois à objet défini (pour cadres et ingénieurs, loi n° 2008-596 du 25/06/2008)*.
2. Access the Maintain Employee Contract Statuses task.

   If you select a business process from the Default for Business Process prompt, Workday only populates the contract status in the final *Maintain Employee Contract* step.

   If you select Enable Autocomplete on the *Employee Contract* business process definition, you must populate a contract status in the relevant business processes to complete the *Maintain Employee Contract* step automatically.
3. Access the Maintain Employee Contract Reasons task.

   Set up employee contract reasons.

   You can create and select employee contract categories from the Employee Contract Category prompt.
4. (Optional) Maintain Localization Settings on page 144.

   Configure these localized fields in the Maintain Localization Settings task:

   - *Employee Contract: Maximum Weekly Hours*
   - *Employee Contract: Minimum Weekly Hours*

   These localized fields enable you to track minimum and maximum weekly contract hours for employees with primary positions in the countries you configured.
5. (Optional) Set up employee contract reviews for fixed-term contracts.

   See Steps: Set Up Employee Contract Reviews on page 657.
6. (Optional) Calculate Employee Contract IDs on page 658.
7. (Optional) Create custom fields for employee contracts.

   See Example: Add Custom Fields to Employee Contracts on page 664.
8. (Optional) Steps: Set Up Profiles and Profile Groups.

   To display a composite view of contract details, configure the Employee Contract profile and the Overview for Employee Contract profile group.
9. (Optional) Hide or Require Optional Fields for Employee Contracts.

Related Information

Concepts

Concept: Workday Docs

Tasks

Add Employee Contracts on page 660
Hire Employees on page 690
Display Additional Data in Profiles
Steps: Generate Dynamic Documents
Steps: Set Up Workday Docs

Steps: Set Up Employee Contract Reviews

Prerequisites

Security: *Set Up: Employee Contracts* domain in the Staffing functional area.

Context

You can set up contract reviews to renew or take other actions on fixed-term employee contracts. You can also configure rules to define the maximum number of renewals, maximum duration of combined contracts, and review date.

Steps

1. Edit Business Process Security Policies.

   Set up security for the:

   - Initiating actions on the *Review Employee Contracts* business process policy.
   - Initiating actions on the *Employee Contract* business process policy.
   - *Terminate from Review Employee Contract* initiating action on the *Termination* business process policy if you want to terminate an employee from a contract review.
2. Create Custom Business Processes.

   Configure the *Review Employee Contracts* business process.

   Ensure that you configure the relevant steps for actions you want to select during the contract review.
3. Maintain Localization Settings on page 144.

   Activate the *Employee Contract: Review* localized field.
4. (Optional) Set Up Employee Contract Rules on page 659.

   Define rules for contract renewals and reviews.
5. (Optional) Hide or Require Optional Fields for Employee Contracts.

Result

You can now:

- Select a Contract Review Date when you add or edit contracts with end dates.
- Manually initiate a review by clicking Start Review on the *Employee Contracts* report to select an action for the contract.

Related Information

Reference

Workday 33 What's New Post: Employee Contract Reviews

Calculate Employee Contract IDs

Context

You can configure Workday to calculate employee contract IDs for new contracts for new hires, helping ensure that an employee contract ID doesn't change due to internal transfers or contract conversions. This can help you when producing regulatory reports, such as Déclaration Sociale Nominative (DSN) reporting, by ensuring continuity in contract IDs.

When you configure employee contract ID calculations, Workday:

- Generates a new contract ID for contracts created with the *Hire* business process or related web service.
- Copies the contract ID from the previous contract for contracts created outside of the *Hire* business process, but within the same employment. Example: *Change Jobs*.

When configuring employee contract ID calculations, consider Workday:

- Doesn't calculate a contract ID when you create a new contract with a different employment. Example: *Add Additional Job*.

- Only calculates a contract ID for a subsequent hire or rehire when you use the *Hire* business process or subprocess to add the contract for the current employment.

Steps

1. Create ID Definitions and Sequence Generators.
2. Access the Edit Tenant Setup - HCM task.

   In the ID Sequence Generators section, select the ID definition you created from the ID Definition for Employee Contract ID prompt.

   You can't specify a different logic for generating contract IDs for different countries.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.
3. Access the Maintain Localization Settings task.

   From the Area prompt, select *Staffing*.

   Activate and configure the row for the Employee Contract: Generate Contract ID for each New Employment localized field.

   You can use this localized field outside France where the DSN reporting guidelines don't apply.

   Security: *Set Up: Tenant Setup - Global* domain in the System functional area.

Set Up Employee Contract Rules

Prerequisites

Security: *Set Up: Employee Contract Rules* in the Staffing functional area.

Context

You can set up rules for fixed-term contracts to:

- Define the maximum number of renewals.
- Define the maximum combined contract duration.
- Populate a contract review date.

Steps

1. Access the Maintain Employee Contract Rules for Country task.
2. Select *Create Global Staffing Eligibility Rule* from the Employee Contracts Eligibility Rule prompt.
3. Create an eligibility rule for the employee contract rule.
4. As you complete the task, consider:

Field	Description
Number of Employee Contract Renewals	If you enter a Maximum number of contract renewals, Workday displays a warning message when the contract renewal exceeds this number. If you select Do Not Allow, Workday displays a warning message when you renew the contract.

Field	Description
Count Extensions as Renewals	Select this check box to include contract extensions in the number of contract renewals.
Maximum Combined Employee Contract Duration	If you enter a maximum combined contract duration, Workday displays a warning message when the contract exceeds this duration. Workday calculates the combined contract duration by adding the duration of each fixed-term contract. Workday doesn't include gaps between contracts in this calculation.
Schedule Review (Time before contract end date)	If you want to populate a review date for the contract, enter an amount of time before the contract the end date.

Result

If you schedule a review, and specify a security group on the Review Employee Contracts business process policy, Workday automatically sends a task to My Tasks of the members of the security group when the review date is reached.

Workday 33 What's New Post: Employee Contract Reviews

Add Employee Contracts

Prerequisites

- Configure the *Employee Contract* business process and security policy in the Staffing functional area.
- Specify whether to synchronize employment and contract end dates for fixed-term employees in the Edit Tenant Setup - HCM task.

  Note: If there's a future *Contract* event, the End Employment Date synchronizes with the Contract End Date of the most future dated *Contract* event. Also, the Contract End Date displays the end date of the active contract.

Context

In some locations, you can have contracts for employees (as opposed to contingent workers). The Add Contract task doesn't include the contract terms, but it enables you to:

- Attach a copy of the contract.
- Track and report on the contract dates, effective dates, status, and type.

Optionally, you can add employee contracts as a subprocess by configuring the Maintain Employee Contract step when you edit business processes such as:

- *Add Additional Job*
- *Change Job*
- *Hire*
- *Termination*

When *Employee Contract* is a stand-alone business process and the contract start date is in the future, Workday sets the event effective date to the contract start date. If you synchronize these dates, Workday prevents the employee from seeing the event or any attached documents until that date.

Employees can have only one active contract for a job at a time, based on the contract start and end date. A contract can span multiple, nonconcurrent positions as an employee is transferred, promoted, or otherwise moved into new positions of the same type (primary or additional).

Steps

1. Access the Add Contract task.
2. Select the Worker and the Contract Start Date.

   If the employee has multiple jobs, also select the Job.
3. As you complete this task, consider:

Option	Description
Reason	Available if you configure reasons in the Maintain Employee Contract Reasons task. You can select a reason associated with the employee's country or a reason not restricted by country.
Contract Start Date	The start date can't be earlier than the employee's hire date.
Type	You can configure contract types in the Maintain Employee Contract Types task. You can select a type associated with the employee's location or a type not restricted by location.
Status	You can configure statuses in the Maintain Employee Contract Statuses task. You can select a status associated with the employee's location or a status not restricted by location.
Date Employee / Employer Signed	The Date Employer Signed can't be later than the contract date.
Contract End Date	This date displays in reports, but doesn't trigger any action on the date. If you enabled synchronization of employment and contract end dates, Workday automatically updates the employee's end employment date to match this date.
Maximum Weekly Hours	Available if the employee's primary position is located in a country that tracks maximum contract hours. You can configure this field for countries using the Maintain Localization Settings task.
Minimum Weekly Hours	Available if the employee's primary position is located in a country that tracks minimum contract hours. You can configure this field for countries using the Maintain Localization Settings task.

Option	Description
Contract Review Date Schedule Review Unit	If there's a Contract End Date, you can schedule a contract review. Select a Contract Review Date or enter an amount of time before the Contract End Date. These fields can populate from an employee contract rule that applies to the worker.

Next Steps

To view, edit, or review details on an employee contract, select Job Change > Employee Contracts from an employee's related actions menu.

To ensure that any changes you make to contract end dates process and display correctly on the worker's profile, select the Sync Employment/Contract End Dates check box in the Staffing section of the Edit Tenant Setup - HCM task.

To correct details on an employee contract, select Business Process > Correct from the related actions of the Contract event:

- You can only correct the Contract Start Date on the Contract event that created the contract.
- You can only correct the Effective Date on a *Contract* event that edited the contract.
- You can correct only the Effective Date of a *Contract* event to a date between the Effective Date of the first preceding or superseding *Contract* event.
- You can only correct contract dates so that the event doesn't overlap with other *Contract* events.

Hide or Require Optional Fields for Employee Contracts

Prerequisites

Security: *Set Up: Configure Optional Fields* domain in the System functional area.

Context

You can hide or require fields on the tasks that use these business processes to control what information you collect:

- *Employment Agreement*
- *Employee Contract*
- *Review Employee Contract*

Steps

1. Access the Configure Optional Fields task.
2. Select 1 of these options on the By Functional Area prompt:
    - *Employee Contract*
    - *Employee Contract Composite View*
    - *Pre-Hire Contract Details*
    - *Review Employee Contract*
    - *View Employee Contracts*
3. As you complete the task, consider:

Field	Description
Field	Select a field that you want to hide or require.

Field	Description
Criteria	Select Security Group to select the roles in Hidden For and Required For to hide or require the Field.
Enforce Required in Web Services	Select to enforce required fields on all web services within the functional area. Clearing this check box enables you to correct data without populating every field on the web service.
Hidden For	Select a role from which you want to hide the Field.
Required For	Select a role for which you want to require the Field.

Note: The localized fields that you hide or require in the Maintain Localization Settings task override any settings for the related optional fields in the Configure Optional Fields task. Example: If you hide the Maximum Weekly Hours optional field on the *Employee Contract* business process, but you require the Employee Contract: Maximum Weekly Hours localized field in the Maintain Localization Settings task for Germany, the field will be required for users managing employee contracts in Germany.

Related Information

Tasks

Hide or Require Optional Fields

Concept: Employee Contracts

Overview

You can use employee contracts to issue a contract for employees and record the expected duration and other details of employment. You can also track additional fields for employee contracts through:

- Activating localized fields for contracts in the Maintain Localization Settings task.
- Creating custom fields for your organization's requirements.

Employee Contract Reviews

Employee contract reviews enable you to review and perform actions to renew or end contracts for fixed-term workers. You can't correct *Employee Contract Review* events but you can rescind these events.

Workday enables you to renew a contract by either adding a new contract or extending the contract. You can only review a contract once for each contract or for each extension.

You can configure steps on the *Change Job* business process definition if you want to extend an existing contract, or end one contract and start a new one as part of a job change.

Employee Contract Rules

Some countries have regulations for the number of times you can renew fixed-term contracts and the total duration of employment for a fixed-term contract. Employee contract rules enable you to define:

- A maximum combined contract duration
- Maximum number of contract renewals.
- A default contract review date.

Example: You can create a rule that defines an employee can only have 4 contract renewals with a maximum combined contract length of 4 years.

Workday displays warnings when a contract exceeds a maximum combined contract duration or number of renewals. Workday also populates a default contract review date on employee contracts that you can override.

Example: Add Custom Fields to Employee Contracts

This example illustrates how to add an effective-dated custom field to employee contracts.

Context

You want to track whether employees signed a nonsolicitation clause in their employee contracts. You create a custom field on a custom object and add the custom object to the *Employee Contract* and *Edit Employee Contract Additional Data Event* business processes.

Prerequisites

Security: *Custom Object Management* domain in the System functional area.

Steps

1. Access the Create Custom Object task.
2. Enter these values:

Field	Value
Workday Object	*Employee Contract (Effective Dated)*
Custom Object Name	Additional Contract Details

3. Click OK.
4. In the Field Definitions section, click Add and enter these values:

Field	Value
Field Label	Nonsolicitation Clause
Field Type	*Boolean*

5. In the Permissions section, select the *Set Up: Employee Contracts* and *Worker Data: Employee Contracts* domains from the Domain prompt.
6. Click Next, then click OK.
7. Click OK, then click Done.
8. Access the *Set Up: Employee Contracts* domain. From the related actions menu of the *Set Up: Employee Contracts* domain, select Domain > Edit Security Policy Permissions.
9. Grant *HR Administrator* Modify access to the domain.
10. Access the *Worker Data: Employee Contracts* domain. From the related actions menu of the *Worker Data: Employee Contracts* domain, select Domain > Edit Security Policy Permissions.
11. Grant *HR Administrator* View access to the domain.
12. From the related actions menu of the *Edit Employee Contract Additional Data Event* business process, select Business Process Policy > Edit and click OK.
13. Add *HR Administrator* to the *Edit Employee Contract Additional Data Event* initiating action.
14. From the related actions menu of the *Edit Employee Contract Additional Data Event* business process, select Business Process Policy > Edit and click OK.

15. Add this step:

Field	Value
Type	*Edit Additional Data*
Specify	*Additional Contract Details*
Group	*HR Administrator*

16. From the related actions menu of the *Employee Contract* business process, select Business Process Policy > Edit and click OK.
17. Add this step:

Field	Value
Type	*Edit Additional Data*
Specify	*Additional Contract Details*
Group	*HR Administrator*

18. Access the Activate Pending Security Policy Changes task.
19. Enter I confirm these security changes in the Comment field and click OK.
20. Select the Confirm check box and click OK.

Result

HR administrators can now specify whether an employee signed a nonsolicitation clause in their employee contracts when:

- Creating or editing an employee contract.
- Selecting Additional Data > Edit Effective-Dated Custom Object from the related actions menu of a magnifying glass on the Employee Contracts report.

Concept: Updating Effective-Dated Custom Object Data

Tasks

Create Custom Field Types

Create and Edit Custom Object Definitions

Steps: Set Up Custom Objects

Example: Create Employee Contract Rules

This example illustrates how to create an employee contract rule for a fixed-term employee based on job profile and location.

Context

You want to specify a maximum of 2 contract renewals, and a maximum combined contract duration of 1 year for a consultant in Munich. You also want to schedule a review date 2 weeks before the contract ends.

Prerequisites

- Security: *Set Up: Employee Contract Rules* domain in the Staffing functional area.
- Security: *Set Up: Tenant Setup - Global* domain in the System functional area.

Steps

1. Access the Maintain Localization Settings task.
2. Select *Staffing* from the Area prompt.
3. Click OK.
4. For the Employee Contract: Review localized field, select *Germany* from the Allow for Countries or Regions prompt, and select the Active check box.
5. Click OK and Done.
6. Access the Create Global Staffing Eligibility Rule task.
7. Enter *Consultant in Munich* in the Description field.
8. Add these rows to create an eligibility rule for the location and job profile:

Source External Field or Condition Rule	Relational Operator	Comparison Value
Location (Global Staffing Eligibility)	*exact match with the selection list*	*Munich*
Job Profile (Global Staffing Eligibility)	*exact match with the selection list*	*Consultant*

9. Click OK.
10. Access the Maintain Employee Contract Rules for Country task.
11. Select *Germany* from the Country prompt.
12. Click OK.
13. Add this row to create an employee contract rule for Germany:

Field	Value
Employee Contracts Eligibility Rule	*Consultant in Munich*
Number of Employee Contract Renewals	Enter 2 for the Maximum field.
Count Extensions as Renewals	Select this check box to include contract extensions in the number of contract renewals.
Maximum Combined Employee Contract Duration	Enter 52 for the Duration field and select *Weeks(s)* from the Unit prompt.
Schedule Review (Time before contract end date)	Enter 2 for the Duration field and select *Week(s)* from the Unit prompt.

14. Click OK and Done.

Result

- Workday displays a warning message when:
  - You have more than 2 contract renewals.
  - The contract exceeds 52 weeks.
- When you set a rule to schedule a contract review, Workday populates the contract review date when you create a contract. The contract review date is based on the contract end date and the eligibility of the contract rule.

Next Steps

Add a new contract with a Contract End Date.

Troubleshooting: Start Review Button Doesn't Display Beside Contract

Cause: The *Employee Contract: Review* localized field isn't activated for the country.

Solution:

Steps

Security: *Set Up: Tenant Setup - Global* domain in the System functional area.

1. Access the Maintain Localization Settings task.
2. Activate the *Employee Contract: Review* localized field for the country.

Cause: The first *Contract* event doesn't have a contract end date.

Solution:

Steps

Security: *Worker Data: Employee Contracts* domain in the Staffing functional area.

1. Access the first *Contract* event.
2. From the related actions menu of the *Contract* event, select Business Process > Correct.
3. Enter a Contract End Date.
4. Access the most recent *Contract* event.
5. Verify that the Review Date is correct.

Probation Periods

Setup Considerations: Probation Periods

You can use this topic to help make decisions when planning your configuration and use of probation periods. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Probation periods in Workday are a highly configurable way of managing employee probation.

Business Benefits

You can easily track, report, and adjust probation periods to support varying needs, such as compliance with local regulatory requirements. You can also configure the feature to increase efficiency and reduce manual effort by:

- Populating probation period durations for employees.
- Automatically sending notifications for reviewing probation periods.
- Tracking the outcomes of probation periods.

Use Cases

You can use probation period functionality to:

- Extend probation periods for employees who don't meet the criteria for completing probation.
- Create rules to differentiate employee probation periods based on various factors.
- Efficiently evaluate probation reviews and manage outcomes.
- Record the evaluation of the probation reviews using attachments and questionnaires.
- Perform any necessary actions on the outcome of the probation period.

Questions to Consider

Questions	Considerations
Do you need to set up probation period rules?	You can create probation period rules for each country that requires probation periods but you don't need to enable rules for every country. Workday doesn't require you to set up probation period rules to manage probation periods.
Why should you set up probation period rules?	For increased efficiency and accuracy, you can use probation period rules to populate the duration and review date when you add probation periods for employees. Example: In France, you create a probation period rule to populate a duration of 6 months for fixed-term employees. You then create another probation period rule to populate a duration of 3 months for permanent employees. You can also use probation period rules to set a maximum probation period. If you configure a maximum probation period, a warning displays when you add a probation duration that exceeds the maximum length of the rule.
How do you manage probation period reviews for employees?	To review an employee's probation period, you can schedule a probation review date at a specific point during the probation period. Workday doesn't require you to set up probation period reviews to manage probation periods.
What outcomes can you configure for a probation period review?	You can configure different outcomes to indicate the evaluation of the probation period according to your requirements.
How do you take actions on the outcomes of probation reviews?	You can link review outcomes to particular actions in Workday. The action you select initiates the relevant task. Example: If the outcome of the probation review is unsuccessful, you can select whether to extend the probation period or terminate the employee.
How do you gather information from a questionnaire on the review?	You can configure questionnaires on the *Review Probation Period* business process to track information on the evaluation of the probation review.

Recommendations

Workday recommends that you:

- Configure the *Add Probation Period* step on available business processes to streamline probation updates.
- Configure country-specific localized fields in the Staffing area of the Maintain Localization Settings task to enable probation period fields and components.
- Hide or require fields by role on the *Manage Probation Period* and *Review Probation Period* business processes to streamline data entry.

Requirements

- To enable probation period rules, you must configure the *Probation Periods* localized field.
- To enable probation reviews, you must configure the *Probation Period: Review* localized field.

Limitations

- You can only schedule 1 probation review for employees using a probation period rule. However, you can manually initiate multiple reviews if no other probation reviews are in progress.
- You can't edit an extended probation period. Instead, you can either correct the probation period or extend it again.

Tenant Setup

No impact.

Security

Domains	Considerations
Employment Agreement: Probation Period in the Pre-Hire Process functional area	Users secured to this domain can view and modify probation period data for pre-hires during the *Employment Agreement* business process.
Set Up: Staffing in the Staffing functional area.	Users secured to this domain can configure probation period reasons and types.
Set Up: Probation Period Rules in the Staffing functional area	Users secured to this domain can configure probation period rules.
Worker Data: Probation Periods in the Staffing functional area	Users secured to this domain can view and modify probation period data for employees.

Business Processes

Business Processes	Considerations
Manage Probation Period	Enables you to add, edit, and extend probation periods. You can configure these initiating actions on the business process policy.
Review Probation Period	Enables you to schedule probation reviews.
Change Job	Enables you to use the *Change Job for Review Probation Period* action during the *Review Probation Period* business process.
Termination	You can configure the *Terminate for Review Probation Period* initiating action to use the

Business Processes	Considerations
	Terminate for Review Probation Period action in probation reviews.

Reporting

Reports	Considerations
Test Probation Period Eligibility Rules	Enables you to verify the eligibility rules that you create for probation period rules.
Workers with Probation Periods	Displays probation period details for employees with an active probation period on a specified date.
View Document Template Details	Displays document templates for probation letters created with Workday Docs.

Integrations

You can build inbound EIB integrations based on these web services to upload probation periods, rules, and outcomes in bulk:

- *Manage Employee Probation Periods Event*
- *Put Maintain Probation Periods For Country*
- *Put Probation Period Eligibility Rule*
- *Put Probation Period Outcomes*

You can retrieve probation period data and probation period configuration with these web services:

- *Get Probation Periods For Workers*
- *Get Probation Period Eligibility Rules*
- *Get Probation Period Eligibility Rules Without Dependencies*
- *Get Maintain Probation Periods For Country*
- *Get Probation Period Outcomes*

Connections and Touchpoints

Probation periods interact with these other features in Workday:

Features	Considerations
Adding Additional Jobs Job Changes Hiring	You can configure Workday to streamline probation updates during a hire, job change, or additional job. If you configure the *Add Probation Period* step and probation rules, Workday populates the employee's probation length and review date on these business processes: • *Add Additional Job* • *Change Job* • *Hire*
Employment Agreements	You can configure Workday to streamline probation updates for a pre-hire's employment agreement. If you configure the *Initiate Pre Hire Probation Period Details* step and probation rules,

Features	Considerations
	Workday populates these details for the pre-hire on the *Employment Agreement* business process: • Probation length. • Review date.
Workday Docs	You can configure Workday Docs to create document templates for probation letters.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Concept: Workday Docs

Tasks

Steps: Set Up Workday Docs

Reference

The Next Level: Notice and Probation Periods

Steps: Manage Probation Periods

Prerequisites

- Security: Configure these domains in the Staffing functional area:
  - *Set Up: Staffing*
  - *Worker Data: Probation Periods*
- Configure the *Manage Probation Period* business process and business process policy in the Staffing functional area.

Context

You can set up Workday to streamline probation period updates, enabling you to comply with local regulations and policies by:

- Creating probation period rules to calculate an employee's probation period automatically.
- Setting up probation period reviews to notify you to review an employee's probation period and initiate actions on the outcome.
- Configuring the *Add Probation Period* step on the *Hire*, *Change Job*, and *Add Additional Job* business processes.

Steps

1. Access the Maintain Employee Probation Period Types task.

   Create probation period types.
2. Access the Maintain Employee Probation Period Reasons task.

   You can restrict reasons to a probation period action in the Restricted to Actions prompt.

   Administrators and HR Partners have access to all reasons, including manager reasons. Managers only have access to the reasons that you specify as a Manager Reason.
3. (Optional) Set up probation period rules.

   See Steps: Set Up Probation Period Rules on page 672.
4. (Optional) Set up probation period reviews.

   See Steps: Manage Probation Period Reviews on page 673.

5. (Optional) Maintain Localization Settings on page 144.

   Hide or require probation period localized fields by country.
6. (Optional) Hide or Require Optional Fields.

   Hide or require probation period fields by role on the *Manage Probation Period* business process.
7. (Optional) Configure an alert for upcoming probation end dates.

   See Example: Configure a Probation Period Alert on page 675.
8. (Optional) Enable autocomplete on the *Manage Probation Period* business process definition.

   When you enable autocomplete on the *Manage Probation Period* business process, the *End Probation Period* step completes automatically only:

   - As a subprocess of *Termination*.
   - When the termination date is between the start and end date of the probation period.

Next Steps

You can manage an employee's probation period by selecting Job Change > Manage Probation Periods from an employee's related actions.

Concepts

Concept: Workday Docs

Tasks

Add Additional Jobs on page 879

Hide Employees on page 690

Configure Generated Documents

Steps: Set Up Workday Docs

Reference

The Next Level: Notice and Probation Periods

Steps: Set Up Probation Period Rules

Prerequisites

Security: Configure these domains in the Staffing functional area:

- *Set Up: Probation Period Rules*
- *Set Up: Staffing*

Context

You can create probation period rules that populate the probation length when you're adding probation periods to comply with local policies and regulations. You can also use probation period rules to set a maximum probation period for an employee.

Steps

1. Maintain Localization Settings on page 144.

   Activate the *Probation Periods* localized field to enable probation period rules for the countries you select in the Maintain Localization Settings task.

   We recommend that you configure country-specific localized fields when you select *Staffing* from the Area prompt to enable probation period fields and components.
2. Access the Create Probation Period Eligibility Rule task.

   Create eligibility rules for probation period rules.

3. Access the Maintain Probation Periods for Country task.

   Select a Probation Period Eligibility Rule and specify a Duration and Unit in the Probation Period column to determine the probation period length for the rule.

   (Optional) Specify a Duration and Unit for the Maximum Probation Period to display a warning message when you add or edit a probation period that exceeds this length for the rule.

   For information on scheduling a probation review with the Schedule Review (Time before probation end date) column, see Steps: Manage Probation Period Reviews on page 673.

Result

- When you add an employee's probation period, the probation period length automatically populates. You can override the rule by selecting a new Probation Duration and Unit for the probation period length.
- You can only schedule 1 probation review for employees using a probation period rule, but you can manually initiate multiple reviews if no other probation reviews are in progress.

Related Information

Examples

Example: Create Probation Period Rules on page 678

Steps: Manage Probation Period Reviews

Prerequisites

- Security: *Set Up: Staffing* domain in the Staffing functional area.
- Configure the *Manage Probation Period* business process.

Context

You can set up probation period reviews in Workday to:

- Manually schedule and initiate reviews for employees.
- Automatically schedule a review based on probation period rules.
- Automatically initiate related tasks based on the outcome and action that you select during the review.

Steps

1. Edit Business Process Security Policies.

   Set up security for the:

   - Initiating actions on the *Manage Probation Period* business process policy.
   - Initiating actions on the *Review Probation Period* business process policy.
   - (Optional) *Terminate for Review Probation Period* initiating action on the *Termination* business process policy.
2. Create Custom Business Processes.

   Set up the *Review Probation Period* business process.

   Ensure that you configure the relevant steps for actions you want to select during the probation review.

   Add the *Submit Probation Period Review* step to select an outcome and an action during the review.

   If you configure the *Complete Questionnaire* step before the *Submit Probation Period Review* step, you can view questionnaire responses on the *Submit Probation Period Review* step.

3. Maintain Localization Settings on page 144.

   Activate these localized fields in the *Staffing* area of the Maintain Localization Settings task to enable reviews, outcomes, and actions:

   - *Probation Period: Action*
   - *Probation Period: Review*
   - *Probation Period: Outcome*
   - *Probation Periods*
4. Access the Maintain Probation Period Outcomes for Country task.

   Create probation period outcomes and select the available actions.
5. (Optional) Access the Maintain Probation Periods for Country task.

   Specify if probation period rules automatically calculate a review date.

   Example: A probation period rule calculates a worker's probation end date as 2018-09-30. The worker's probation period rule also specifies 1 month in the Schedule Review (Time before probation end date) column. Workday calculates the worker's probation review date as 2018-08-30.

   See Steps: Set Up Probation Period Rules on page 672.

   Security: *Set Up: Probation Period Rules* in the Staffing functional area.
6. (Optional) Hide or Require Optional Fields.

   Hide or require probation review fields by role on these business processes:

   - *Manage Probation Period*
   - *Review Probation Period*
7. (Optional) Add *End Probation Period* as a substep of *Termination* to cancel or edit probation period reviews for employees with a future-dated termination.

   You can cancel reviews only if you:

   - Enable Probation Period: Review on the Maintain Localization Settings task.
   - Select the Disable Probation Review Date check box on the *End Probation Period* step.
8. Activate Pending Security Policy Changes.

Result

- Workday sends a task to My Tasks on the scheduled review date.
- When you initiate the *Review Probation Period* business process, you can select the:
  - Outcome of the probation period.
  - Available action you want to initiate from the outcome.

Next Steps

When you select Job Change > Manage Probation Periods from an employee's related actions, you can select:

- Add, to add a probation period with a review date or override the review date calculated by their probation period rule.
- Start Review, to initiate the *Review Probation Period* business process manually.
- Edit or Extend, to add a new review date.

Related Information

Concepts

Concept: Workday Docs

Tasks

Configure Generated Documents

Steps: Set Up Workday Docs

Concept: Probation Periods

Workday enables you to streamline probation periods according to local regulations and your organization's requirements. You can use probation period functionality to track, evaluate, and perform any necessary actions based on the outcome of the probation period. See: Setup Considerations: Probation Periods.

Probation Period Rules

You can create probation period rules that automatically calculate the length of an employee's probation period. The length of the probation period populates when you add a probation period.

If you configure the Add Probation Period step on these business processes, the rule also populates when you're hiring employee or when an employee changes job:

- *Change Job*
- *Hire*

Probation Period Reviews

You can use probation period reviews to decide on the outcome of an employee's probation period and complete any relevant actions. Workday can automatically calculate a review date for employees when you set up probation period rules.

You can manually initiate multiple reviews for an employee, but you must complete any existing *Review Probation Period* events for the employee before initiating a new review. If a probation rule schedules a review date for an employee with another in-progress *Review Probation Period* event, Workday still sends a task to My Tasks so you can initiate the review.

When you cancel the *Review Probation Period* business process, Workday:

- Cancels all *Review Probation Period* events and related events that are in progress.
- Doesn't rescind any *Review Probation Period* events or related events that are complete.

When you rescind the *Review Probation Period* business process, Workday:

- Rescinds all *Review Probation Period*, *Edit Probation Period*, and *Extend Probation Period* events.
- Doesn't rescind any *Change Job for Review Probation Period* or *Terminate for Review Probation Period* events.

Related Information
Reference
The Next Level: Notice and Probation Periods

Example: Configure a Probation Period Alert

This example illustrates how to set up an alert based on expiring probation periods.

Context

You want to inform managers in advance about a worker's probation period ending, so the manager can perform any necessary actions. You configure a weekly alert that provides a report listing workers with probation end dates occurring in the next 21 days.

Steps

1. Access the Create Calculated Field task.

   As you complete the task, consider:

Field Name	Business Object	Function	Lookup Field	Return Value
Worker for Probation Period	Employee Probation Period	Lookup Related Value	Position for Probation Period	Worker

2. Access the Create Custom Report task.

   As you complete the task, consider:

Option	Description
Report Name	Enter *Expiring Probation Periods*.
Report Type	Select *Advanced*.
Data Source	Select *Probation Periods for Workers*.
Temporary Report	Ensure this is clear.

3. On the Edit Custom Report task, select *Alerts* from the Report Tags prompt.
4. As you complete the Columns tab, add these rows:

Business Object	Field
Employee Probation Period	Worker for Probation Period
Employee Probation Period	Position at Probation Period Start
Employee Probation Period	Probation Start Date
Employee Probation Period	Probation End Date
Employee Probation Period	Probation Extended End Date

5. Create a calculated field for the report on the Filter tab:
   a. Select *Create > Create Calculated Field for Report* from the Field prompt.
   b. Enter *Current Date + 21 Days* in Field Name.
   c. Select *Increment or Decrement Date* from the Function prompt.
   d. On the Calculation tab, select *Current Effective Date* from the Date Field prompt.
   e. Select *21* from the Days to Add or Subtract prompt.
   f. Click OK.
6. Remove the row that Workday automatically populates in the Filter tab.
7. Add these rows on the Filter tab:

And/Or	(	Field	Operator	Comparison Type	Comparison Value	)
And	(	Probation End Date	less than or equal to	Value from another field	Current Date + 21 Days	
And		Probation End Date	greater than	Value from another field	Current Entry Date	)

And/Or	(	Field	Operator	Comparison Type	Comparison Value	)
Or	(	Probation Extended End Date	less than or equal to	Value from another field	Current Date + 21 Days	
And		Probation Extended End Date	greater than	Value from another field	Current Entry Date	)

8. To save the report, click OK.
9. Access the Configure Alert task.
10. As you complete the task, consider:

Option	Description
Report Name	Select *Expiring Probation Periods*.
Run Frequency	Select *Weekly Recurrence*.
Request Name	Enter a unique name for the alert. Example: Expiring Probation Periods Alert.

11. As you complete the Alert Configuration tab, consider:

Option	Description
Notification Type	Select *General Notifications*.
Effective Date	Select *Determine Value at Runtime* from the Value Type column and *Today* from the Value column.
Group(s)	Select the security Group(s) you want to receive this alert. Example: *Manager*.
Subject	Enter the subject for the alert. Example: Probation Periods Expiring.
Body	Enter a description for the alert. Example: The probation period for these workers is expiring in 21 days.
Details	Select the Field option and select the *Worker for Probation Period* calculated field from the prompt.

12. On the Schedule tab, consider:

Option	Description
Recurs Every x Week(s)	Enter 1.
Day(s) of the Week	Select the day of the week that you want to receive the alert. Example: *Monday*.
Start Time	Select a start time. Example: *9.00 AM*.
Time Zone	Select a time zone. Example: *GMT-08:00 Pacific Time (Los Angeles)*.
Start Date	Select the date when you want the alert to begin.
End Date	Select the date when you want the alert to end.

Result

Workday sends the alert to the *Manager* security group every week on Monday with a report of probation periods ending in 21 days. The alert displays in the *Alert Notification* category under Process Monitor.

Concepts
Concept: Alerts
Concept: Calculated Fields
Tasks
Create Custom Reports
Create Calculated Fields

Example: Create Probation Period Rules

This example illustrates how to create a probation period rule based on an employee type.

Context

You want to calculate a default probation period of 3 months automatically for regular employees in Germany. You also want to specify their maximum probation period as 6 months. You create a condition rule and define a default and maximum probation period.

Steps

1. Access the Maintain Localization Settings task.
2. Select *Staffing* from the Area prompt.
3. Click OK.
4. For the Probation Periods localized field, select *Germany* from the Allow for Countries or Regions prompt, and select the Active check box.
5. Click OK and Done.
6. Access the Create Probation Period Eligibility Rule task.

   Create this condition rule enclosed in parentheses:

Field	Value
Description	*Regular Employees*
Source External Field or Condition Rule	*Employee Type (Probation Period)*
Relational Operator	*in the selection list*
Comparison Value	*Regular*

7. Click OK.
8. Access the Maintain Probation Periods for Country task.
9. Select *Germany* from the Country prompt.
10. Click OK.
11. Add this row to create a probation period rule:

Field	Value
Probation Period Eligibility Rule	*Regular Employees (has exceptions)*
Probation Period	Enter 3 for the Duration field and select *Month(s)* from the Unit prompt for the default probation period.

Field	Value
Maximum Probation Period	Enter 6 for the Duration field and select *Month(s)* from the Unit prompt for the maximum probation period.

12. Click OK and Done.

Result

- When you add a probation period for regular employees in Germany, Workday automatically calculates their probation period as 3 months.
- Workday automatically adjusts the probation period based on your selection. Example: If the end of an employee's probation period is set as March 26 but you've selected an End of Month adjustment, Workday readjusts the final date of their probation period to March 31.
- If you add a probation period that's greater than 6 months, a warning message displays.

Steps: Set Up Probation Period Rules on page 672

Notice Periods

Setup Considerations: Notice Periods

You can use this topic to help make decisions when planning your configuration and use of notice periods. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

In Workday, you can define notice periods for employees and pre-hires to populate notice periods on a worker's profile and during a termination or resignation.

Business Benefits

You can easily maintain country-specific notice periods, helping you to comply with local regulatory requirements. You can increase efficiency and reduce manual effort by creating rules to populate notice periods for pre-hires and employees.

Use Cases

- Track and report on notice periods for employees and employers.
- Create different notice periods for employers and employees based on whether the termination reason is voluntary or involuntary.
- Populate notice periods for employees during a termination or resignation.

Questions to Consider

<table>
<tr><td>Questions</td><td>Considerations</td></tr>
<tr><td>What criteria in your organization do you use to determine a worker's notice period?</td><td>You can define country-specific periods to populate based on criteria in relevant business processes by:
Creating rules that populate the notice period.
Entering the notice period manually.
The employer notice period applies when the termination reason is involuntary. The employee notice period applies when the termination reason is voluntary.

If you create rules based on factors such as length of service, Workday automatically updates any new notice period rule that applies to the employee.

If you create notice period rules, you can override the rule at any time by entering a different notice period. If you override the notice period rule, Workday won't automatically update any new rules that the employee becomes eligible for.</td></tr>
<tr><td>Do you want to exclude certain employees from having a notice period?</td><td>If you have enabled notice periods for a country, you can exclude certain employees from having a notice period in that country. You can create a rule for the group of employees with the Has Notice Period check box cleared on the Maintain Notice Periods for Country task.</td></tr>
<tr><td>How do you want to calculate the employee's last day using the notice period?</td><td>You can define a notice period in days, weeks, or months. Workday calculates the employee's recommended last day based on:
The notice period start date and the employee's notice period, if you enabled Notice Period Start Date for the employee's work location country.
The notification date of the resignation or termination and the employee's notice period, if you haven't enabled Notice Period Start Date for the employee's work location country.
You can select a different termination date from the recommended termination date.</td></tr>
<tr><td>How is an employee's notice period calculated when you change the primary position of the employee?</td><td>Workday calculates an employee's notice period based on the country or country region of the primary position. If the eligibility changes with the change in the primary position, the notice periods will dynamically update unless you assign custom notice periods to the employee.</td></tr>
</table>

Questions	Considerations
Do you want to include the notification date within the notice period?	You can configure a localized field to include the notification date within the length of the notice period. Example: If the employee's notice period is 14 days and the notification date is September 1, Workday calculates the proposed termination date as September 14.
Do you need to adjust the notice period to a certain point in time, such as the end of month?	You can configure a localized field to adjust notice periods to a point in time, helping you to comply with certain regulatory requirements. Example: An employee has a notice period of 2 weeks with an adjustment that calculates the notice period length until the end of the month. If the employee resigns on September 1, their recommended last day of work is September 30.

Recommendations

Workday recommends that you:

- Configure the *Edit Notice Periods* step on available business processes to streamline updates to notice periods.
- If you're using employment agreement as part of the Recruiting workflow, configure the *Edit Notice Periods* step on the Hire and Change Job business processes to update a custom notice period from employment agreement to HCM Core.
- Configure the *Edit Notice Period* step before the *Completion* step on the *Hire* business process to enable notice periods for pre-hires with an in-progress hire event.
- Configure country-specific localized fields to enable notice periods and notice period fields.
- Place notice period rules that exclude employees from notice periods at the top of the grid in the Maintain Notice Periods for Country task. Workday then applies those rules to the employees first.

Requirements

Configure the *Notice Periods* localized field to use notice period functionality.

Limitations

You can't:

- Enable employees to view their own notice periods.
- Define notice periods for contingent workers.

Tenant Setup

No impact.

Security

Domains	Considerations
Employment Agreement: Notice Periods in the Pre-Hire Process and Recruiting functional areas.	Users secured to this domain can view or modify notice periods in employment agreements.

Domains	Considerations
Set Up: Notice Period Rules in the Staffing functional area.	Users secured to this domain can create and manage notice period rules.
Worker Data: Notice Periods in the Staffing functional area.	Users secured to this domain can view or modify notice period data for employees.
Staffing Actions: Termination Notice in the Staffing functional area.	Users secured to this domain can view or modify notice period information during a termination.

Business Processes

Business Processes	Considerations
Change Job *Hire*	You can add the *Edit Notice Periods* step to these business processes to streamline notice period updates for employees and pre-hires with an in-progress hire event.
Edit Notice Periods	Enables you to maintain notice period details for employees and pre-hires with an in-progress hire event as a standalone business process.
Pre-Hire Notice Period Details	Enables you to maintain notice period details for the *Initiate Pre-Hire Notice Period Details* step on the *Employment Agreement* business process.
Submit Resignation *Termination*	Workday calculates a recommended termination date or proposed termination date based on the notification date and employee's notice period.

Reporting

Reports	Considerations
Test Notice Period Eligibility Rule	Enables you to verify eligibility rules that you create for notice period rules.
View Notice Periods	Displays the notice period for an employee.
View Notice Periods for Country	Displays the notice period rules for a country.

You can use report fields for custom reports on these business objects:

- Employee
- Notice Period
- Notice Period Event

Integrations

You can use these web services to upload notice periods and notice period rules in bulk:

- *Put Edit Notice Period Event*
- *Put Maintain Notice Periods For Country*
- *Put Notice Period Eligibility Rule*

You can retrieve notice period data and notice period rules with these web services:

- *Get Notice Periods*

- *Get Maintain Notice Periods For Country*
- *Get Notice Period Eligibility Rules*
- *Get Notice Period Eligibility Rules Without Dependencies*

Connections and Touchpoints

Features	Considerations
Employment Agreements	If you use notice periods in employment agreements, you can manage notice periods for pre-hires.
Payroll	DSN reporting in Payroll (FRA) requires information on an employee's notice period to calculate the amount of paid and worked notice.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Related Information
Reference
The Next Level: Notice and Probation Periods

Steps: Manage Notice Periods

Prerequisites
Configure the *Edit Notice Periods* business process and business process policy in the Staffing functional area.

Context

You can set up Workday to add voluntary and involuntary notice periods for employees and add notice periods for pre-hires with an in-progress hire event. You can also streamline country-specific notice period updates to comply with local regulatory requirements by creating notice period rules. Notice period rules can be based on a range of milestones such as length of service or the employee's termination reason.

Steps

1. Maintain Localization Settings on page 144.

   Activate the *Notice Periods* localized field to enable notice periods.

   (Optional) Activate these localized fields:

   - *Notice Periods: Adjustments* to enable adjustments for notice periods that adjust the notice period to specific points in time.
   - *Notice Periods: Include Notification Date in Notice Period* to include the day that the notice is received in the notice period length.
   - *Notice Period Start Date* to include the day the notice period starts.
2. Edit Domain Security Policies.

   Configure these domains in the Staffing functional area:

   - *Worker Data: Notice Periods* domain for reporting on notice period details.
   - *Staffing Actions: Termination Notice* domain for access to notice periods in the *Termination* business process.

   Configure the *Employment Agreement: Notice Periods* domain in the Pre-Hire Process functional area.

3. ../../../../authentication-and-security/configurable-security/security-policies/dan1370796362110.dita.

   Configure the *Pre-Hire Notice Period Details* business process policy to maintain notice period details for the *Initiate Pre-Hire Notice Period Details* step on the *Employment Agreement* business process.
4. Activate Pending Security Policy Changes.
5. (Optional) Steps: Set Up Notice Period Rules on page 684.
6. ../../../../manage-workday/business-processes/customize-business-processes/dan1370797384762.dita.

   Configure the *Edit Notice Periods* step on the *Hire* and *Change Job* business processes. The Edit Notice Periods step has a condition rule that initiates the step when these requirements are met:

   - The country of the proposed location has an active *Notice Periods* localization.
   - An employee has an existing custom notice period.

   To assign notice periods for pre-hires with an in-progress hire event, configure the *Edit Notice Period* step on the *Hire* business process before the *Completion* step.

   Configure the *Initiate Pre-Hire Notice Period Details* step on the *Employment Agreement* business process.

Result

- You can maintain notice periods for an employee by selecting Job Change > Edit Notice Periods from an employee's related actions menu.
- Based on an employee's notice period and Notification Date, Workday calculates the:
  - Recommended Termination Date in the *Submit Resignation* business process.
  - Proposed Termination Date in the *Termination* business process.
- You can edit notice periods for pre-hires with an in-progress hire event, and the notice period will populate from an eligibility rule, if applicable.
- You can view or modify notice periods in employment agreements.

Related Information
Reference
The Next Level: Notice and Probation Periods

Steps: Set Up Notice Period Rules

Prerequisites

Security: Configure these domains in the Staffing functional area:

- *Set Up: Notice Period Rules*
- *Set Up: Staffing*

Context

You can create country-specific notice period rules that automatically determine a worker's notice period, enabling you to more efficiently comply with local policies and regulations.

Steps

1. Maintain Localization Settings on page 144.

   Activate the *Notice Periods* localized field to enable notice period rules for the countries in which you want to create notice period rules.
2. Access the Create notice Period Eligibility Rule task.

   Create eligibility rules for notice period.
3. Access the Maintain Notice Periods for Country task.

4. As you complete the task, consider:

Option	Description
Notice Period Eligibility Rule	Select an eligibility rule.
Has Notice Period	If you have enabled notice periods for a country, you can exclude certain employees from having a notice period in that country by clearing this check box. To create an exclusion rule for an employee, clear this check box and select the Employee (Voluntary) check box.
Employee (Voluntary) Employer (Involuntary)	Select if the eligibility rule applies to the Employee, Employer, or both. Workday evaluates the Employee and Employer notice period rules separately. Example: You create 2 rules: An exclusion rule for Employee and a notice period rule for Employer. When you edit an employee's notice period, Workday won't display the Employee Notice Period (Voluntary) section. Instead, the Employer Notice Period (Involuntary) section will display, and it populates values from the first rule that the employee is eligible for and applicable to the employer.
Duration	Enter the notice period duration.
Unit	Select a unit for the notice period duration.

Workday selects the first notice period rule from the grid that an employee is eligible for. Workday recommends that you arrange the rows with exclusion rules at the top of the grid.

Result

Workday automatically calculates your employee's proposed or recommended termination date from the notification date according to the employee's notice period rule when:

- Your employee resigns using the *Submit Resignation* business process.
- You terminate your employee using the *Termination* business process.

Example: Create Notice Period Rules

This example illustrates how to create a notice period rule based on the primary termination reason.

Context

You want to create a notice period rule that automatically calculates 1-week notice if the primary termination reason for an employee in France is poor job performance. You create a condition rule and define the notice period.

Prerequisites

Configure primary termination reasons.

Steps

1. Access the Maintain Localization Settings task.
2. Select *Staffing* from the Area prompt.

3. Click OK.
4. For the Notice Periods localized field, select *France* from the Allow for Countries or Regions prompt, and select the Active check box.
5. Click OK and Done.
6. Access the Create Notice Period Eligibility Rule task:

   Create this condition rule enclosed in parentheses:

Field	Value
Description	*Poor Job Performance*
Source External Field or Condition Rule	*Primary Termination Reason (Notice Period)*
Relational Operator	*in the selection list*
Comparison Value	*Terminate Employee > Involuntary > Poor Job Performance*

7. Click OK.
8. Access the Maintain Notice Periods for Country task.
9. Select *France* from the Country prompt.
10. Click OK.
11. Add this row to create a notice period rule:

Field	Value
Notice Period Eligibility Rule	*Poor Job Performance*
Employer (Involuntary)	Select this check box.
Duration	*1*
Unit	*Week(s)*

12. Click OK and Done.

Result

When you're terminating an employee with the Terminate Employee task and select *Involuntary > Poor Job Performance* from the Primary Reason prompt, Workday automatically calculates the notice period as 1 week after the Notification Date.

Example: Create a Notice Period Rule for Length of Service

This example illustrates how to create a notice period rule based on employee length of service.

Context

You want to calculate a 2-week notice automatically when the length of service for an employee in Germany is 36 months. You create a condition rule and define the notice period.

Prerequisites

Security:

- These domains in the Staffing functional area:
  - *Set Up: Notice Period Rules*
  - *Set Up: Staffing*
- *Set Up: Tenant Setup - Global* in the System functional area.

Steps

1. Access the Maintain Localization Settings task.
2. Select *Staffing* from the Area prompt.
3. Click OK.
4. For the Notice Periods localized field, select *Germany* from the Allow for Countries or Regions prompt, and select the Active check box.
5. Click OK and Done.
6. Access the Create Notice Period Eligibility Rule task.
7. For Description, enter *Length of Service*.
8. Create this condition rule:

Source External Field or Condition Rule	Relational Operator	Comparison Value
Length of Service in Months (Notice Period)	*equal to*	*36*

9. Click OK.
10. Access the Maintain Notice Periods for Country task.
11. Select *France* from the Country prompt.
12. Click OK.
13. Add this row to create a notice period rule:

Notice Period Eligibility Rule	Employer (Involuntary)	Duration	Unit
Length of Service	Select the check box.	*2*	*Week(s)*

14. Click OK and Done.

Result

When you terminate an employee with more than 36 months of service on the Terminate Employee task and select an involuntary Primary Reason, Workday automatically calculates the notice period as 2 weeks after the notification date.

Hire and Terminate

Steps: Hire Inactive Students and Inactive External Students

Prerequisites

- Create jobs or positions.
- Manage inactive student or inactive external student records.

Context

Workday enables you to hire these worker types using the Hire Employee task, enabling you to take advantage of their workforce potential:

- Inactive external students.
- Inactive students.

Steps

1. Edit Domain Security Policies.
    a) Select the Staffing functional area.
    b) Configure access to the *External Student Data: Student Public Reports* domain security policy.
    c) Select the Student Core functional area.
    d) Configure access to the *Student Data: Student Profile* domain security policy.
2. Edit Business Process Security Policies.

    Select the Staffing functional area. Configure any of these *Hire Employee* initiating actions on the *Hire* business process:

    - Search for pre-hires, former workers, inactive students, or inactive external students.
    - Hire an employee from the related actions menu of a pre-hire, former worker, inactive student, or inactive external student.
    - Search for existing pre-hires, former workers, inactive students, inactive external students, or create a new pre-hire.

Next Steps

Access the Hire Employee task to hire an inactive student or inactive external student.

Related Information
Steps: Hire Inactive Students and Inactive External Students

Steps: Set Up No Shows

Context

You can configure the *No Show* business process to enable users to report employees who don't come on their first day of work. Once reviewed, the *No Show* business process rescinds the *Hire* event of the worker. You can configure this business process to stop some downstream processes and integrations that are related to the worker's *Hire* event. The specific processes Workday is able to stop depends on:

- The configuration of your organization.
- How far along these processes are when you complete the *No Show* event.

The *No Show* event enables you to mark a worker as a *No Show* on their pre-hire record. Workday can automatically inform hiring managers when they attempt to hire a worker who was previously a no show. You can also mark the worker as a *No Show* directly on their pre-hire record without initiating the business process.

You can use the Maintain Event Categories and Reasons task to add a reason for the no show to the business process.

You can only use the *No Show* business process for employees, not contingent workers.

Steps

1. Edit Business Processes.

    Ensure that the *Review and Complete No Show* step is the *Complete* step on the *No Show* business process. Add any approval steps before the *Complete* step.

    You can configure the *No Show* business process to stop some downstream processes related to the worker within Workday. Use the *Hire Rescinded* integration attribute on the *Core Connector: Worker* integration to inform third-party processes. The ability to cancel events can depend on the frequency of integration updates, as well as how quickly you can report and complete the *No Show* event.
2. Maintain Localization Settings on page 144.

    Configure localization settings for the Mark as No Show field on the *No Show* business process.

3. Edit Domain Security Policies.

   Configure the No Show Event Detail report secured to the *Staffing Actions: No Show* domain.
4. (Optional) Add Dashboard Menus.

   You can add *No Show* events to the *My Team Management* dashboard. That enables managers to keep track of the no shows they report.
5. (Optional) Create Integration (Step).

   You can configure an integration step for the *No Show* business process that enables you to use integration events associated with no shows.

Steps: Set Up Hire

Context

You can hire a pre-hire or former worker into a job or position in your organization using the Hire Employee task.

Steps

1. (Optional) Hide or Require Optional Fields .

   Configure optional fields for the *Hire* business process so that they are hidden, view-only, or required for specific users and security groups.
2. Edit Business Process Security Policies.

   Configure the security policy for the *Hire* business process in the Staffing functional area. Any security groups that you assign to the initiating action can create a pre-hire, and hire a pre-hire or former worker. To track additional data for new hires, add custom fields to the business process.
3. Edit Business Processes.

   Configure the *Hire* business process in the Staffing functional area. To enable workers to access Workday tasks and objects in English when the tasks and objects aren't translated in the workers' preferred languages, enable Allow Mixed-Language Transactions when you configure the Create Workday Account service step in your business process. See ../../../authentication-and-security/accounts/workday-accounts/dan1370796453062.dita.
4. ../../../authentication-and-security/configurable-security/security-policies/dan1370797389950.dita.

   Set up the security policies for the Pre-Hire Data: Contact Information domain in the Pre-Hire Process functional area.
5. (Optional) Create a consolidated *Hire* experience.

   If you experience difficulty setting up this feature and its security, we recommend that you work with a Workday-certified implementer or contact your named Support contact to engage Professional Services.
6. (Optional) Hide or Require Optional Fields.

   Hide or require optional fields on the *Hire* business process.
7. (Optional) Create Custom Notifications.

   Set up email notifications to personal or work email addresses.

   You can override the email template. If you use Notification Designer, you can create a template and enable it for the *Custom Business Process* notification category. You can use the notification template to send notifications when using the *Hire* business process.

Related Information

Tasks

Set Up Security to Autocomplete Staffing Events on page 523
Steps: Set Up Custom Staffing Fields on page 539

Hire Employees

Prerequisites

- Select an ID definition, configure job requisitions, and specify whether to permit overrides of hiring restrictions on the Edit Tenant Setup - HCM task.
- Create jobs or positions.
- Create categories and reasons for hiring employees on the Maintain Event Categories and Reasons task.
- Configure optional fields for the Search for Person andSearch Results interfaces of the Hire Employee task:
    - Each field is secured through existing domain or security constraints.
    - Additional worker data is secured through terminated worker security. Terminated workers' information only displays if you're part of a security group that has access to terminated worker information. See: FAQ: Terminations on page 715.

Context

You can hire a pre-hire or former worker into a job or position in your organization. This position automatically becomes the worker's primary position.

If you use job requisitions, confirm that you have an open and approved job requisition.

When completing the hiring details, many of the fields populate with values defined on the job profile, position or job requisition. If you use job requisitions, you can't change those values; update the job requisition itself.

Steps

1. Access the Hire Employee task.
2. As you complete the task, consider:

Option	Description
Hire Date	Select a date that's on or after the: • Recruiting Start Date on the requisition if you use job requisitions. • Earliest Hire Date on the position if you don't use job requisitions.
Reason	Only reasons for the *Hire* event are available. If you're automating the benefit enrollment process for new employees, Workday suggests you select a hire reason in this field.
First Day of Work	Populates from the Hire Date, but you can change it. Correcting the Hire Date automatically corrects this date.
End Employment Date	Available when you assign the worker to a fixed-term employee type in the Employee Type field. If you configured your tenant to synchronize employment and contract end dates, Workday

Option	Description
	populates this date whenever the employee's end date for their contract changes.
Position	For position management organizations, select: • (If you use job requisitions), a position with an open, approved job requisition, and a Recruiting Start Date that's on or after the current date. • (If you don't use job requisitions), a position or job with an Availability Date that's on or after the current date.
Job Requisition	Based on selections on the Edit Tenant Setup - HCM task. If you selected: • Enable Job Requisitions for Job Management, select Job Management. • Require Job Requisitions for All Position Management staffing events, you must make a selection for Position Management. • Enable Job Requisitions for Position Management based on rules, make a selection based on exit conditions defined on the *Hire* business process. Requires a job requisition if defined on the *Hire* business process. Example: An exit condition requires job requisitions for all hiring in Canada, but not elsewhere.
Employee Type	If the type is for fixed-term employees, specify an End Employment Date.
Location	Select from the locations you specified on the Create Position or Set Hiring Restrictions task, or from the primary or additional locations on the job requisition.
Work Space	Select from the work spaces (such as building, floor, or cubicle) associated with the Location.
Job Profile	Select from the profiles you specified on the Create Position or Set Hiring Restrictions task, unless you allow overrides at the tenant level.
Job Title	Populates from the Job Profile.
Business title	Populates from the Job Title. You can control the display of business titles by enabling the *Worker Data: Business Title on Worker Profile* domain security policy in the Staffing functional area.
Pay Rate Type	Select from the pay rate types available for the country associated with the Location.

Option	Description
Job Category	Populates from the Job Profile.
Job Classifications	Populates from the Job Profile.
Management Level from Job Profile	Populates from the Job Profile.
Additional Job Classifications	Select classifications as needed.
Company Insider Types	Select from the types associated with the Job Profile. Define company insider types on the Maintain Company Insider Types task. Assign them to a job profile on the Edit Job Profile task.
Workers' Compensation Code from Job Profile	Populates from the Job Profile.
Workers' Compensation Code Override	Select an override for the compensation code.
Appointment Type	This field displays when you configure it on these tasks: • Maintain Appointment Type • Configure Optional Fields This functionality supports US Federal agency requirements for classifying positions. You can also use the field for organizations that aren't related to US Federal by configuring custom field values.
Employee Tenure	This field displays when you configure it on these tasks: • Maintain Employee Tenure • Configure Optional Fields This functionality supports US Federal agency requirements for classifying positions, and Personnel Action Request (PAR) processing. You can also use the field for organizations that aren't related to US Federal by configuring custom field values.
Annuitant Indicator	This field displays when you configure it on these tasks: • Maintain Annuitant Indicator • Configure Optional Fields This functionality supports US Federal agency requirements for classifying positions, and Personnel Action Request (PAR) processing. You can also use the field for organizations that aren't related to US Federal by configuring custom field values.
Time Type	Select from the types you specified on the Create Position or Set Hiring Restrictions task, unless you allow overrides at the tenant level.

Option	Description
	Populates from the value defined on the job profile.
Time Type Subtype	This field displays when you configure it on these tasks: • Maintain Time Type Subtype • Configure Optional Fields This functionality supports US Federal agency requirements for classifying positions, and Personnel Action Request (PAR) processing. You can also use the field for organizations that aren't related to US Federal by configuring custom field values.
Scheduled Weekly Hours	Populates from a rule when: • You've defined a working time rule. • The data populated on the task applies the rule. Populates from the Default Weekly Hours if there's no working time rule. Populates based on the position restrictions when: • You select the Enable FTE for Position Restriction check box on the Edit Tenant Setup – HCM task. • There's no work hours profile or job requisition for the position.
Location Weekly Hours	Displays the standard weekly hours associated with the Location.
Default Weekly Hours	Populates from a rule when: • You've defined a working time rule. • The data populated on the task applies the rule. Populates from the Location Weekly Hours field if there's no working time rule. Populates based on the position restrictions when: • You select the Enable FTE for Position Restriction check box on the Edit Tenant Setup – HCM task. • There's no work hours profile or job requisition for the position.
FTE	Calculated by dividing the Scheduled Weekly Hours by the Default Weekly Hours. This value displays as a percentage.
Specify a Paid FTE	Available when you enable Paid FTE on the Maintain Localization Settings task.

Option	Description
Paid FTE %	You can enter a percentage that overrides the FTE field for use in your Workday Compensation and Workday Payroll calculations. Available when you enable Paid FTE on the Maintain Localization Settings task.
Specify a Working FTE	Available when you enable Working FTE on the Maintain Localization Settings task. For use in custom reporting.
Working FTE %	Used in custom reporting. Available when you enable Working FTE on the Maintain Localization Settings task. For use in custom reporting.
Work Shift	Available when you enable Work Shift on the Maintain Localization Settings task. Available when you select the Work Shift Required check box on the job profile. Define the work shifts for a location using the Maintain Work Shifts task.
Frequency	Select from the working time frequencies you specified on the Maintain Frequencies task. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Unit	Select from the preconfigured options of hours or days. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Value	Enter the duration of the working time in selected units. Automatically populates to zero. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Continuous Service Date	Populates from the Hire Date, but you can change it. Correcting the Hire Date automatically corrects this date.
Benefits Service Date	Enables you to track length of service for benefit programs. Example: Workers become eligible for insurance after a 3-month probation period. Available for use in user-defined calculations and eligibility rules. Workday empties the field during rehire.

Option	Description
	This service date only applies to employees.
Company Service Date	Enables you to track an additional service date, such as date of acquisition. Available for use in user-defined calculations and eligibility rules. Workday empties the field during rehire. This service date only applies to employees.

Result

Workday:

- Assigns the *Employee as Self* and *All Employees* security groups to the employee. If the Hire Date is in the future, Workday places the employee into the *Pre-Employee as Self* security group until the hire date.
- Displays results for workers that:
  - Have a future contract date.
  - Have a future hire date.
  - Have an in-progress contract or hire date.
  - Are not eligible for hire.
- Filters out active workers who don't have a termination date, and limits the results to 100.
- Prevents you from selecting the check box for workers who aren't eligible for hire and provides additional help text.
- Sets the status of the position and job requisition (if applicable) to *Filled*.

Next Steps

You can assign a worker to additional jobs or positions on the Add Job task. Worker-related events, such as paychecks and time off, are based on the primary job or position. You can change the worker's primary job or position on the Switch Primary Job task.

If you can access the *Worker Data: Current Staffing Information* domain, you can only see workers whose Hire Date is in the future .

Correct or reverse a hire. From the employee's related actions menu, select Worker History > View Worker History, and select either Correct or Rescind from the related actions menu of the *Hire* event. If the worker's position had a job requisition, it reopens when you rescind the event.

If you rehire a former employee and that employee still has an active user account, Workday doesn't automatically disable that former employee's Workday account if you rescind a hire event for them.

You can also correct the Hire Date and Reason for multiple employees using the Mass Correct of Hire task.

If necessary, correct or remove the status of a rehired employee. Examples:

- You terminated Maria while she was on a leave of absence. Because the leave type inactivates the employee, Maria's rehire employee status is also inactive.
- Tom is a retiree, but no longer eligible for retiree status. Correct the status on the Remove Retiree Status task.

We use the Hire Date to calculate the Next Anniversary date on the Anniversaries for this week and next report.

Add Additional Jobs on page 879
Steps: Set Up Worker Onboarding on page 746
Correct Hire Date and Reason for Multiple Employees on page 940
Hide or Require Optional Fields

Steps: Set Up Employee Resignation

Context

You can configure Workday to provide field level guidance to employees as they submit their resignation through self-service and without the need for additional support. Users can access the Worker Information side panel on resignation tasks as they review or approve a resignation for their organization.

If you enable notice periods for employees' work location country, then you can track their resignation notification dates and applicable notice periods. Workday uses this information to suggest a proposed termination date.

Workday enables you to track employee resignation reasons and termination reasons separately.

Contingent workers can't submit a resignation.

Steps

1. Access the Maintain Event Categories and Reasons task.

   Configure reasons for the *Worker Resignation* business process.

   Security: *Set Up: Staffing* domain in the Staffing functional area.
2. Create Custom Business Processes.

   Configure the *Submit Resignation* business process in the Staffing functional area. If the reason is confidential or a management issue, you can add a condition rule on the business process approval step that routes to the HR Partner.
3. Edit Business Process Security Policies.

   - Configure the *Submit Resignation* business process security policy in the Staffing functional area. Add the Employee as Self security group to the Submit Resignation initiating action.
   - Update the *Termination* business process security policy by adding security groups to the Terminate from Submit Resignation initiating action. Only the roles listed in this group receive the *Review Worker-Initiated Termination* step when the termination is due to a resignation.
4. (Optional) Hide or Require Optional Fields.

Result

Employees can resign by selecting Job Change > Resign from the related actions menu of their worker profile. When the *Submit Resignation* business process completes, Workday initiates the *Termination* business process.

Related Information

Tasks

Terminate Employees on page 699

Steps: Manage Notice Periods on page 683

Steps: Set Up Termination

Context

Complete the necessary configuration steps before initiating the termination process.

Steps

1. Create Custom Business Processes.

   Configure the *Termination* business process in the Staffing functional area. Example: You can synchronize termination and return from leave dates for employees terminated while on leave. Add a *Service* step after the completion step and specify Automated Leave Processing.
2. Edit Domain Security Policies.

   Set up the security policies for these domains in the Staffing functional area:

Option	Description
Staffing Actions: Termination Details	Provides access to termination dates and reasons.
Staffing Actions: Termination Notice	Provides access to information relating to notice periods.
Staffing Actions: Termination Regrettable	Provides access to information about whether the termination of an employee is regrettable for your organization. You can use the Configure Optional Fields and the Maintain Localization Settings tasks to hide or require the field.
Staffing Actions: Termination Rehire Eligibility	Provides access to an employee's rehire eligibility status upon termination.
Staffing Actions: Termination Additional Details	Provides access to additional details, usually entered by the administrator. These details can include resignation, severance, and ROE details.
Staffing Actions: Termination Position Details	Provides access to information about whether: • A position closes upon an employee's termination. • The position is available for overlap.

3. Edit Business Process Security Policies.

   If you want to allow employees to resign, add security groups to the Terminate from Submit Resignation initiating action.

4. Access the Maintain Termination Categories task.

   Define categories and reasons for terminating employment.

   You can select an option from the Eligible for Rehire column to populate the Eligible for Rehire field based on the termination reason during the *Termination* business process.

   Security: *Set Up: Staffing* domain in the Staffing functional area.
5. (Optional) Enable managers to enter local reasons for terminating employment when completing the *Termination* business process.
   a) Access the Maintain Local Termination Reasons task.

      Create local termination reasons by country.

      Security: *Set Up: Staffing* domain in the Staffing functional area.
   b) Maintain Localization Settings on page 144

      Allow and require the *Local Termination Reason (Worker)* field for the selected countries. To activate your settings, select the Active check box.

      Example: You make the *Local Termination Reason* field:

      - Required for workers terminated in Canada.
      - Optional for USA workers.

      Security: *Set Up: Tenant Setup - Global* domain in the System functional area.
6. (Optional) Set up notice periods for employees.

   See Steps: Manage Notice Periods on page 683.
7. (Optional) Add the *End Payroll Inputs* business process on the *Termination* business process to enable ending ongoing payroll inputs when terminating workers.

   See Steps: Set Up End Payroll Inputs for Terminated Workers.
8. (Optional) Enable people other than payroll administrators (such as HR partners) to provide final payslips to workers.

   See Steps: Set Up Decentralized Processing for On-Demand Payments.
9. (Optional) Enable autocomplete on the *Employee Contract* business process definition.

   For employees with existing contracts, ensure you populate a contract status for the *Termination* business process to complete the *Maintain Employee Contract* step on the termination date.

   See Steps: Set Up Employee Contracts on page 656.
10. (Optional) Enable autocomplete on the *End Collective Agreement Assignment* business process definition.

    Workday automatically completes the *End Collective Agreement Assignment* step on the termination date if the employee has an existing collective agreement.
11. (Optional) Enable autocomplete on the *Manage Probation Period* business process definition.

    Workday automatically completes the *End Probation Period* step on the termination date if the termination date is between the start and end date of a probation period.
12. (Optional) Set up job overlap for vacating positions.

    Steps: Set Up Job Overlap on page 907.

Next Steps

Access the Template-Driven Business Process Security report to confirm that you've aligned the *Termination* business process and domain security permissions.

Concepts

Concept: Workday Docs

Terminate Employees

Prerequisites

- Configure the *Termination* business process and security policy in the Staffing functional area.
- End additional jobs or positions.
- If you want to pay out a severance package with Workday Payroll, set up and assign severance packages.
- You can hide or require optional fields on the *Termination* business process.

Context

End an employee's primary job or position within an organization.

If you want to track additional data for terminations, you can add custom fields to the business process.

You can track the termination notification date and applicable notice period if you enabled notice periods for the employee's work location country. Workday recommends a termination date that meets notice period guidelines using this information.

Steps

1. Access the Terminate Employee task.
2. Complete the Reason section:

Option	Description
Primary Reason	Select from the termination reasons you defined on the Maintain Termination Categories task.
Secondary Reasons	Select from the termination reasons you defined on the Maintain Termination Categories task.
Local Termination Reasons	Select from the local termination reasons you defined on the Maintain Local Termination Reasons task. The field displays as optional or required based on the countries you configured on the Maintain Localization Settings task.

3. Complete the Notice Period section.

   This section only displays if you enabled notice periods for the employee's work location country.

Option	Description
Notification Date	Enter the date that the employee notified you of their resignation or the date you notified the employee of their termination. Populates when the employee's resignation initiates the termination. For Workday Payroll for France, you must enter the date the notice period starts because Workday uses this date for statutory payroll calculations and in regulatory reporting.
Notice Period Start Date	Available when you enable Notice Period Start Date for the employee's work location country. If you leave this field empty, the value populates from the Notification Date. You can't hide but only require this field on the Configure Optional Fields task.

Option	Description
Notice Period	If you enable Notice Period Start Date, this field displays the notice period in effect as of the Notice Period Start Date. If you don't enable Notice Period Start Date, this field displays the notice period in effect as of the Notification Date. This field is the employee's notice period if the termination reason is voluntary or if the employer's notice period is for involuntary termination reasons. If the employee doesn't have a notice period, displays 0 day(s).
Recommended Termination Date	If you enable Notice Period Start Date, this field is Notice Period Start Date plus the Notice Period. If you don't enable Notice Period Start Date, this field is Notification Date plus the Notice Period. If both Notice Period Start Date and Notice Period don't exist, it's the Notification Date.

4. Complete the Details section:

Option	Description
Termination Date	Select the effective date of the termination. Automatically populates from the Recommended Termination Date if one exists. The date must be after or same as the Notice Period Start Date. If the employee has a completed severance package, the termination date automatically populates from the date on the severance package. You can't change the date.
Last Day of Work	Automatically populates from the Termination Date, Recommended Termination Date, or the date on the severance package. If the severance package is complete, you can't change the date.
Pay Through Date	This date refers to severance pay that continues past the termination date. It automatically populates from the Termination Date, Recommended Termination Date, or the date on the severance package. If the severance package is complete, you can't change the date.
Resignation Date	Automatically populates when the employee's resignation initiates the termination.
Agreement Signature Date	Available when you enable Agreement Signature Date for the employee's work location country. The date must be before or same as the Termination Date.
Dismissal Process Start Date	Available when you enable Dismissal Process Start Date for the employee's work location country. The date must be before or same as the Termination Date.

5. Use the Regrettable section to specify whether the termination is a loss to the organization, regardless of the reason.

6. Use the Eligibility section to indicate whether the employee is available for rehire.

   Depending on your configuration, the Eligible for Rehire field can populate based on the termination reason you select.
7. Complete the Severance Details section.

   This section only displays if the employee has an assigned severance package with a start date after the hire date.
8. For positions in Canada only, complete the ROE Details section:

Option	Description
Last Date for Which Paid	Automatically populates from the Pay Through Date.
Expected Date of Return	The date must be equal to or greater than the Last Day of Work.
Not Returning	Unavailable if you entered the Expected Date of Return or selected Return Unknown.
Return Unknown	Unavailable if you entered the Expected Date of Return or selected Not Returning.

9. Complete the Position Details section:

Option	Description
Close Position	Select this check box to close the position in the employee's former organization. You can't close positions with an open job requisition. This field is only available in position organizations. With job management, you can't open or close individual jobs.
Is this position available for overlap?	Specify whether another worker can fill the position before the incumbent departs. Available for position management organizations when you enable job overlap on the Edit Tenant Setup - HCM task.

10. Add one or more attachments in the Attachments section.

Result

If you didn’t close the position, Workday sets its status to *Open*:

- If you use job requisitions, the position is available as soon as you have an open requisition.
- If you don’t use job requisitions, the position is available the next day.

If you use severance packages, Workday automatically creates and completes a severance compensation event in these cases:

- For a one-time payment.
- For post-termination severance payments that cause a change in the defined salary plan of an employee.

Next Steps

You can correct or reverse an employee termination. From the related actions menu of an employee, select Worker History > View Worker History. Then select either Correct or Rescind as a related action on the *Terminate* event.

When rescinding a termination, if the position has an open job requisition:

- With no candidate applications: Rescind the job requisition before rescinding the termination.

- With candidate applications: You can rescind the termination and preserve the posting and applications.

We recommend that you close the job requisition upon rescinding the termination.

When you terminate an employee, the employee can still access the tasks in My Tasks in the Save for Later status. To reassign or cancel business process steps automatically, Workday recommends that you configure the *Auto-Manage Business Processes* service step.

For best practice, we strongly recommend that you disable accounts for terminated employees once you view them as no longer required.

Examples

Concept: Termination Dates for DSN Reporting (FRA)

Steps: Set Up End Jobs

Prerequisites

Set up the *Termination* business process.

Context

Set up the End Jobs task, enabling managers to end 1 or more jobs and terminate workers with multiple jobs.

Steps

1. Edit Domain Security Policies.

   Configure security for the *Staffing Actions: End Jobs* domain.

   On the *End Additional Job* business process security policy:

   - Update security permissions for the End Job initiating action.
   - Configure these new initiating actions:
     - End Job (initiates *End Additional Job* as a subprocess of *Termination*).
     - End Additional Job from End Jobs.

   On the *Termination* business process, configure security for the Termination from End Jobs initiating action.

   To terminate workers using the End Jobs task, users must have permission for both of these initiating actions:

   - End Additional Jobs from End Jobs
   - Termination from End Jobs

2. Edit Business Processes.

   Configure the *End Additional Job* business process as a subprocess of the *Termination* business process. Ensure that the *End Additional Job* subprocess step is:

   - After the *Review* step and before the *Completion* step.
   - Required and has no entry conditions. This configuration ensures that all jobs can end.

   You can add a *Termination Review* step to the *End Additional Job* business process. This review step ensures that all required fields have a value, such as fields that aren't part of the End Jobs task.

   Note: When you enable *End Additional Job* as a subprocess of *Termination*, Workday ends all jobs during all terminations and resignations. Resignations continue to route through Termination.

   Configure the *Switch Primary Job* business process as a subprocess of the *End Additional Job* business process. Ensure that the *Switch Primary Job* subprocess step is:

   - After the *Review* step and before the *Completion* step.
   - Required and has no entry conditions. This configuration ensures that the worker has a primary job.

   Note: When you add *Switch Primary Job* as a subprocess of *End Additional Job*, you can no longer correct *End Additional Job* events. Corrections might remove the worker's primary job.
3. Access the Maintain End Additional Job Categories task.

   Define categories and reasons for the *End Additional Job* task.

   Example: You create a *Voluntary* category with the *Other Employment* and *Unknown* reasons. You create an *Involuntary* category with the *Workforce Reduction* and *Job Reclassification* reasons.

   Security: *Set Up: Staffing* domain in the Staffing functional area.
4. (Optional) Hide or Require Optional Fields.

   Access Configure Optional Fields task to control the display of optional fields on the Terminate Employee section. From the By Functional Area prompt, you can select *End Jobs* to access the fields. The fields display in the Additional Information for Terminate Employee section.
5. (Optional) Enable autocomplete on the *End Additional Job* and *Switch Primary Job* business process definitions.

   Enabling autocomplete on the *Switch Primary Job* business process definition also enables autocomplete when *Switch Primary Job* is a subprocess of these business process definitions:

   - *Add Additional Job*
   - *Change Job*

   To specify when you want to autocomplete, use rule-based business process configurations.

   When you enable autocomplete on the *End Additional Job* business process, *End Additional Job* events automatically complete only:

   - As a subprocess of *Termination*.
   - When initiated by the End Jobs task.

   See Set Up Security to Autocomplete Staffing Events on page 523.
6. (Optional) Access the Maintain Staffing Field Defaults task and configure these fields for *Switch Primary Job*:

   - Proposed Primary Job
   - Reason

   See Set Up Recruiting to Staffing Field Defaults on page 205.
7. (Optional) Enable the End Jobs task on the My Team Management dashboard so that managers can more easily access the task.

8. (Optional) Set up job overlap for vacating positions.

   Steps: Set Up Job Overlap on page 907.

Result

Managers can use the End Jobs task to end 1 or more jobs for a worker, or terminate a worker with 1 or more jobs.

Next Steps

To simplify access for managers, remove security for the existing End Job and Termination tasks. This security configuration ensures that users can only access the End Jobs task.

Troubleshooting: End Jobs Task Can't Terminate on page 721

Steps: Automate Initiation of Termination

Context

You can determine how you want to initiate the *Termination* business process for up to 500 fixed-term employees. The Mass Operation Management (MOM) task enables you to either:

- Automatically initiate the business process.
- Use a Mass Actions workbook to process fixed-term employees in bulk.

If you want to initiate the *Termination* business process automatically, Workday enables this initiation through a background job. Alternatively, you can review and verify the data before initiating termination by enabling the Mass Actions workbook. You don’t need to set up a Mass Actions workbook to initiate the business process automatically.

Steps

1. (Optional) Set up the Mass Actions workbook.

   See Steps: Set Up Mass Actions.
2. Edit Business Process Security Policies.

   Add appropriate security groups to the *Terminate from Launch Mass Action Event* initiating action.

   Ensure that these security groups are also on the *Mass Action Event* business process security policy.

   Configure the *Termination* business process security policy in the Staffing functional area.
3. Create a Segment-Based Security Group for Mass Operations.

   Create a segment-based security group with the *Initiation of Termination* segment.
4. Edit Domain Security Policies.

   Add your segment-based security group and grant View and Modify permissions.

   Security: *Mass Operation Management* domain in the System functional area.

5. Create Custom Reports.

   Create or edit an existing custom report. Ensure you use the:

   - Indexed All Workers report data source.
   - Worker report field on the Columns tab.
   - End Employment Date report field on the Filter tab.
6. Access the Mass Operation Management task.

   As you complete the task, consider:

Option	Description
Input Report	Select the custom report that you created.
Primary Reason	Select the primary reason for initiating the *Termination* business process for fixed-term employees.
Close Position	(Optional) Select this check box to close positions associated with fixed-term employees who are part of a position management organization.
Is this position available for overlap?	(Optional) Select this check box to set the fixed-term employee's position for overlap who is part of a position management organization.
Termination	If you select this check box, the Mass Operation Management task automatically initiates a *Termination* event for fixed-term employees in the custom report that: • Are active. • Don't have blocking transactions. • Have an end employment date. If you don't select the Termination check box, the Mass Operation Management task creates an entry in the Mass Actions workbook for fixed-term employees that: • Are active. • Have an end employment date. When the background job completes, you'll receive a notification. Access My Tasks and click the Open Workbook button to view your workbook. Click the Begin Error Validation button to ensure that there are no errors. After verifying, submit the Mass Actions workbook to initiate the *Termination* business process in bulk for all valid fixed-term employees.

7. (Optional) Access the Scheduled Future Processes report.

   Use this report to change the run frequency or schedule. If you need to change any other Mass Operation Configuration parameters, you must delete it and create a new one.

Next Steps

View the status of the background job for the *Termination* events using the Mass Operation Management Runs report.

You can also manually initiate the *Termination* business process in bulk using workbooks for employees.

2020R2 What's New Post: Mass Actions in Workbooks for Termination and End Contingent Worker Contract

Steps: Set Up Mass Action Workbooks to Initiate Termination

Prerequisites

Configure the *Termination* business process and business process security policy.

Context

You can set up a Mass Action workbook to initiate the *Termination* business process manually in bulk for employees.

Steps

1. Set up Mass Action workbooks.

   See Steps: Set Up Mass Actions.
2. Edit Business Process Security Policies.

   Configure security permissions for the *Terminate from Launch Mass Action Event* initiating action on the *Termination* business process.

   Ensure that these security groups are also on the *Mass Action Event* business process security policy.
3. (Optional) Add additional facets to the Launch Mass Termination report. To add additional facets, copy the delivered Launch Mass Termination report to a custom report and add any additional filters in the report definition.
4. (Optional) Create Custom Reports.

   Create or edit a custom report to use in the Launch Mass Action Event task to identify active employees to populate in the workbook.

   Workday won't generate a workbook if the selected report includes more than 500 employees. You can set up filter options on a custom report to filter the employees you want to include.
5. (Optional) Create or edit a search report to use to access the Launch Mass Action Event task.

   Ensure that you select *Launch Mass Action Event* from the Mass Action column on the Advanced tab of the search report.

   See Steps: Create Search Reports.

Next Steps

Access the Launch Mass Action Event task to initiate the *Termination* business process manually in a workbook.

2020R2 What's New Post: Mass Actions in Workbooks for Termination and End Contingent Worker Contract

Initiate Termination in Mass Action Workbooks

Prerequisites

- Configure the *Termination* business process and business process security policy.
- Set up mass action workbooks for terminations.
- End additional jobs or positions for the relevant employees.
- Security: *Mass Action Events* domain in the System functional area.

Context

You can initiate the *Termination* business process for employees in bulk with a Mass Actions workbook.

You can add employees to a workbook by:

- Using the Launch Mass Termination report.
- Selecting a report in the Launch Mass Action Event task.
- Using a search report to access the Launch Mass Action Event task.
- Adding them manually.

The Mass Operation Management (MOM) task also enables you to use a Mass Actions workbook to process fixed-term employees in bulk.

Workday recommends that HR administrators complete fields in the workbook from left to right so data can populate efficiently.

Steps

1. Access the Launch Mass Action Event task.
2. As you complete the task, consider:

Option	Description
Mass Action	Select *Termination*.
Report	To populate the workbook, select a standard report or a custom report that includes up to 500 employees. You can filter the population by report definition parameters, if you select a custom report with configured parameters.

3. After the workbook generates, select Open Workbook.
4. As you complete the workbook, consider:

Field	Description
Share	You can share the workbook with other individuals or security groups. Members can't edit the workbook if they're only granted access to the *Complete Mass Action Event* step on the *Mass Action Event* business process policy. You can share mass action worksheets with constraint security groups but view and edit access to mass action worksheets depends on the position and domain security settings that you apply to the profiles.

Field	Description
Employee	If you select a report on the Launch Mass Action Event task, the number of employees in the workbook can differ from the report. Workday automatically removes inactive employees, future employees, and contingent workers from the workbook.
Notification Date	This field can populate the Notice Period field based on the Primary Reason you select if the employee doesn't have a severance package.
Recommended Termination Date	This field can populate based on the Notice Period and Notification Date fields.
Termination Date Last Day of Work Pay Through Date	These fields populate if you select a Termination Date on the Launch Mass Action Event task or in the workbook. Employees can have different termination dates in the same workbook.
Assigned Severance Package	This read-only field populates if the employee has an assigned severance package.
Begin Error Validation	Select this button to resolve any errors and submit the workbook.

Result

The *Termination* business process initiates for employees in the workbook. Any other steps on the business process route for completion.

2020R2 What's New Post: Automate Initiation of Termination

Hire and Terminate Concepts

Concept: Hire Employee Initiating Actions

The *Hire* business process offers multiple Hire Employee initiating actions to suit the needs of your organization. When configuring the business process, you can decide which initiating actions are most appropriate for your security groups. For more information on initiating actions, see Concept: Action Stepand Setup Considerations: Business Processes. Workday recommends that your users have access to only 1 version of the Hire Employee task from Workday global search. The main differences between the Hire Employee initiating actions are the ability to:

- Use additional search fields and view staffing information in search results.
- Create pre-hires.
- Hire directly from an employment agreement.

If your organization prioritizes preventing creation of duplicate person records, Workday recommends using 1 of the initiating actions with additional search capabilities. These versions of the Hire Employee task make it easier for you to find existing person records. In addition to the pre-hires and former workers, your search results include:

- Pre-hires marked ineligible for hire.
- Active students with a pre-hire record.
- Inactive students and inactive external students without a pre-hire record.
- Terminated workers marked ineligible for rehire.

Note: We filter out active workers who don't have a termination date and limit the results to 100.

If you want to use an enhanced Pre-Hire Search experience, you can change the Hire Employee initiating action by updating the business process policy to provide access to either of these options:

- Hire Employee Description: Search for Pre-Hires, former workers, inactive students, or inactive external students and hire them into an open position. Also enables hiring from the related actions menu of a job requisition, supervisory organization, or an unfilled position.
- Hire Employee Description: Search for existing Pre-Hires, former workers, inactive students, inactive external students, or create a new Pre-Hire and hire them into an open position. Also enables hiring from the related actions menu of a job requisition, supervisory organization, or an unfilled position.

Related Information
Reference

2024R2 Feature Release Note: Enhanced Pre-Hire Search

2020R1 What's New Post: Prevent Duplicate Records During Hiring and Contracting

Concept: End Jobs

The End Jobs task enables users to:

- End 1 job for a worker.
- End multiple jobs for a worker.
- Terminate a worker with 1 or more jobs.

End Jobs Grid

The End Jobs task grid displays jobs as of the worker's latest staffing event, including events or changes that are effective on a future date. When you schedule a job to end on a future date, that job doesn't display in the grid. Example: A job is active today, January 1, but has an *End Additional Job* event effective on February 1. The job doesn't display in the End Jobs task today because the future-dated *End Additional Job* event is the latest event for that job.

When a worker has a future *Add Additional Job* event, you can't end that job or terminate the worker from the End Jobs task. To terminate the worker, you must first cancel or rescind the future *Add Additional Job* event.

The End Jobs task only displays jobs that you have permission to see. The task also respects localization settings for additional job classifications.

Subprocesses

The End Date for the End Jobs task automatically populates into the initiation of both subsequent *Termination* and *End Additional Job* subprocesses. Example: You select an End Date of January 31 on the End Jobs task. January 31 automatically populates in both the *Termination* and *End Additional Job* events. When you change the End Date to February 15 on the *Termination* event, the *End Additional Job* event still automatically populates an End Date of January 31.

2021R1 What's New Post: End Jobs and Terminate Workers

Concept: Worker Data Streams

Organizations with complex structures that function like separate entities can use worker data streams to report on information across their businesses while maintaining separation at the business entity level. When moving regular or contingent workers between subsidiary structures, you can terminate them and rehire or recontract them in the new organization, rather than transferring them directly. Through this process, Workday enables you to preserve workers' work-related information while keeping it hidden from the worker and the new organization.

When you rehire or recontract a worker, use the *Assign Worker Record* step on the *Hire Employee* and *Contract Contingent Worker* business processes to either select an existing worker record or create a new one. Prehires can only have 1 active worker record at a time. To see if workers have more than 1 active worker record, access the Worker Data Streams Audit report.

To configure the *Assign Worker Record* step, Workday recommends you work with Workday Professional Services or a Workday Consulting Partner. Once configured, the *Assign Worker Record* step displays whenever you rehire or recontract a worker without changing their worker type (employee or contingent worker). If you change a worker's worker type during the termination and rehiring or recontracting process, Workday automatically generates a new worker record.

New worker records include all previous personal information but exclude all work-related information, such as:

- Absence calendar.
- Benefits.
- Custom objects.
- Employee calendar.
- I-9 data.
- Job data.
- Performance reviews.
- Time tracking.
- Time entry.

Concept: Termination Impact

Employee terminations have a broad impact in Workday. It affects areas such as staffing, compensation, benefits, security, reports, and integrations.

Note: The *Termination* business process definition for your organization might include some of these actions by default.

General	• Complete the Termination business process. • Document the results of an exit interview with the Create Exit Interview task. The *Termination* business process doesn't support this task as an allowed action. You can configure it as a To Do step. • Deactivate the employee's Workday account. You can also automate this process. • Grant access to payslips, tax documents, and contact information in Workday. • Change the employee's security groups. To see the current security group assignments, select from Security Profile > View Security Groups the employee's related actions menu.

	• Reassign roles held by the terminated employee to prevent tasks from becoming unassigned. • Enter the date of death on the Edit Personal Information task if a termination is involuntary because of death.

Tasks, Reports, and Integrations	• Reassign My Task items, business processes, and delegations. Configure the *Auto-Manage Business Processes* service step on business processes to reassign or cancel business process steps that are in Save for Later status automatically.
	• Transfer ownership of custom reports to another worker. From the employee's related actions menu, select Security Profile > View Custom Reports. Access the Transfer Ownership of Custom Reports task. The intended new owner must be in:
	    • The Report Writer security group.
	    • One or more security groups that are associated with the data source accessed in the report.
	• Transfer ownership of background processes to another worker.

Financial	• Reassign business assets. • Submit a final expense report for the terminated employee.
Benefits and Compensation	• Discontinue Benefits on Termination on page 1361. • Review COBRA eligibility. • Request One-Time Payments for Employees on page 1129. • Initiate Compensation Review Processes on page 1205. • Concept: Pay for Terminated Workers and set up payroll input. • Steps: Add or Remove Employees to or from Compensation Reviews on page 1208.
Staffing and Talent	• Review and update service dates. • Review union membership. • Assign retiree status. • Steps: Set Up Talent Data Removal for Terminated Workers on page 1813. • Cancel or complete in-progress employee reviews. You can also manually advance a review to the completion step. • Steps: Set Up Auto-Manage Business Processes Service Step to take action on business processes and tasks in My Tasks for a person automatically.

- End any active collective agreement assignments without an end date.

Steps: Manage Collective Agreements on page 647

Reference

FAQ: Terminations on page 715

Concept: Rehire Eligibility

While completing a termination, Workday includes the Eligible for Rehire prompt on the *Termination* business process and the Exit Interview tasks. Workday also includes this prompt on the *No Show* business process. You can use the Configure Optional Fields and the Maintain Localization Settings tasks to hide or require the prompt.

You can configure a default value for the Eligible for Rehire field based on the termination reason using the Maintain Termination Categories task. Workday populates the default value after you select a termination reason on the *Termination* business process.

Your selection during the *Termination* or *No Show* business processes or Exit Interview tasks automatically updates the field on a pre-hire's profile. If you make conflicting Yes and No selections between the business process and the tasks, then the value on the pre-hire's profile is No. If you make Yes and blank selections, then the value on the pre-hire's profile is Yes.

Note: You can use the Change Hire Eligibility Status task on a worker's pre-hire profile. However, doing so doesn't automatically populate the Eligible for Rehire prompts on the *Termination* or *No Show* business processes or Exit Interview tasks.

Related Information

Tasks

Terminate Employees on page 699

Reference: No Shows and Terminations Comparisons

The *No Show* and *Termination* business processes provide different levels of control when a worker has not shown up for the first day of work. Use the *Termination* business process when you've run payroll for a worker. Otherwise, you can compare the 2 business processes.

	No Shows	Hire Rescind	Terminations
Runs a payroll event against the worker?	No	No	Yes
Usable when you've paid the worker?	No	No	Yes
Usable when the worker has benefit events?	No	No	Yes
Unhires the employee and rescinds the hire event so that the worker goes back to being a pre-hire?	Yes	Yes	No

	No Shows	Hire Rescind	Terminations
Displays workers in your headcount and attrition rate reports?	No	No	Yes
Reports on workers who don't arrive on their first day of work?	Yes	No	Yes, if you create a reason for the termination to mark them as not showing up. This reason doesn't display on the pre-hire record for the worker.
Marks the worker as a *No Show* on their pre-hire record, and when you go to rehire the worker?	Yes	No	No

FAQ: Hire Employee Redesign and Consolidation Experience

Is the new ***Hire*** experience automatically available?	Yes, this feature is automatically available for Production environments.
Can I hide the banner display on the Hire Employee task?	If you've enabled the branding banner on your homepage, it automatically displays on the Hire Details page of the Hire Employee task. We're working on an enhancement that enables you to display or hide the banner on the task.
Can anyone in my organization set up the consolidated ***Hire*** experience?	Yes but if you experience difficulty setting up this feature and its security, we recommend that you work with a Workday-certified implementer or contact your named Support contact to engage Professional Services. During setup on the *Hire* business process type, ensure that you select the relevant initiating actions for your organization and update the security groups accordingly.
How do I access the Configure Business Process Consolidated Template task?	Some organizations restrict access to this task. If you experience difficulty accessing the task to set up this feature and its security, we recommend that you work with a Workday-certified implementer or contact your named Support contact to engage Professional Services. Follow these steps to check your access to the task: 1. Run the Business Process Configuration Options report. 2. Search for the *Hire* business process in the prompt. 3. From the related actions, select Business Process > Configure Consolidated Template. You must also have access to these domains in the System functional area: • *Business Process Administration*

- *Manage: Business Process Definitions*

Can I change the sub business process order in the Configure Business Process Consolidated Template task?

The order in which the sub business processes appear in the task is predefined by Workday and can't be changed by the user in the consolidated template or in the business process definition.

How can I best manage sub business processes in the Configure Business Process Consolidated Template task?

Ensure that the sub business processes in your consolidated template match the sub business processes that are in your *Hire* business process definition.

Example: If you select *Government IDs* and *Service Dates* as the only values for Sub Business Processes for your consolidated template, then you must include *Government IDs* and *Service Dates* in your *Hire* business process definition. Contact Support if this doesn't solve the issue.

How can I make the sub business processes display in the consolidated template?

Grant users *View* and *Modify* access to the relevant sub business process domains:

Sub Business Process	Domain
Assign Pay Group	*Worker Data: Payroll* (Pay Group Specific) Alternative: *Worker Data: Payroll Interface* (Pay Group Specific)
Collective Agreement	*Worker Data: Collective Agreements*
Government IDs	*Person Data: Government IDs*
Organization Assignments	*Staffing Organizations: Header*
Payment Elections	*Worker Data: Payroll* (Payment Elections) Alternatives: • *Manage: Payment Election* • *Worker Data: Payroll Interface* (Pay Group Specific)
Propose Compensation Hire	*Set Up: Compensation Change Templates*
Service Dates	*Worker Data: Service Dates*

FAQ: How do I import worker IDs during a hire?

To import third-party worker IDs as part of a *Hire* event, configure these steps:

- *Verify Proposed Contingent Worker ID* step on the *Contract Contingent Worker* business process.
- *Verify Proposed Employee ID* step on the *Hire* business process.

These steps enable you to pull in a worker ID from the *Put Hire Event Proposed Worker ID* web service.

FAQ: Terminations

- What is the difference between terminating an employee and ending a contingent worker's contract?
- What time of day does a termination take effect?
- How do I handle organization assignments for terminated workers?
- How can I prevent a terminated worker from accessing and submitting certain tasks in My Tasks?
- How do I enable terminated workers to access their personal, compensation, and benefits information in Workday?
- How do I grant bonuses to terminated employees?
- Which domains provide access to terminated workers?
- How can I view terminated workers in active organizations?
- Which data sources return terminated workers?
- Why do reports display different addresses for terminated workers?
- Which email address does Workday use for terminated workers?
- What if a performance review is in progress for a terminated worker?
- Can terminated employees receive payments through Workday Payroll?
- Can a nonpayroll administrator end ongoing payroll inputs for terminated workers? on page 719
- Can a nonpayroll administrator terminate a worker and pay them on the day you terminate them or any other day? on page 719
- What if the employee has an active collective agreement assigned? on page 719

What is the difference between terminating an employee and ending a contingent worker's contract?	The *Termination* and *End Contingent Worker Contract* business processes are similar, except for the steps related to benefits and compensation. The *Termination* business process can include: • *Change Benefit Elections* • *Create Change Benefits Event* • *Edit Service Dates* • *Request One-Time Payment* • *Review COBRA Eligibility* The *End Contingent Worker Contract* business process only allows a *Create Change Order from Contract Contingent Worker* step. You can customize these 2 business processes to meet the needs of different organizations.
What time of day does a termination take effect?	Terminations are effective at the end of the termination date, based on the time zone of the position location.
How do I handle organization assignments for terminated workers?	You have several options:

	• Keep terminated workers in their current, active organizations.
	  ◦ Pros: Role assignments and inheritance don't change.
	  ◦ Cons: Staffing reports include the terminated workers.
	• Move terminated workers into a separate organization specifically for terminated workers.
	  ◦ Pros: Role assignments require less maintenance and inheritance is available. However, if you inactivate the organization later, role inheritance remains available if you keep the organization in the hierarchy.
	  ◦ Cons: You can't restrict access to specific terminated workers. Anyone who has permission to access the organization can access all of the terminated workers. Also, the organization is available for selection in prompts even though it's not a valid choice.
	• Inactivate the organizations that terminated workers belong to. Inactive organizations remain in their respective hierarchies and inherited roles remain in the inactive organization. This behavior applies unless you explicitly select the Remove from Hierarchy option when inactivating an organization. The best way to ensure that you continue to have visibility into inactive organizations and to maintain role inheritance within them is to accept the default behavior (to keep inactive organizations within their associated hierarchies).

How can I prevent a terminated worker from accessing and submitting certain tasks in My Tasks?	For *Action* and non-*Action* step types, Workday recommends that you reassign tasks when the worker is no longer in their role. You can reassign their tasks by using the: • *Auto-Manage Business Processes* service step. • Manage Business Processes for Worker task. For *Action* steps only, Workday displays Action no longer available when accessing the step in My Tasks. The worker might still be able to take action on other step types even though they no longer have the security permissions. Example: *To Do* steps.
How do I enable terminated workers to access their personal, compensation, and benefits information in Workday?	Assign the terminated workers to the *Terminee as Self* security group and add this group to the domains that control access to the tasks:

	• *Landing Page - Home* • *Self-Service: Contact Information* • *Self-Service: Device Tokens* • *Self-Service: Add Worker Documents* • *Self-Service: Edit and Delete Worker Documents* • *Self-Service: Emergency Contacts* • *Self-Service: Government IDs* • *Self-Service: Home Contact Information* • *Self-Service: ID Information* • *Self-Service: Legal Name* • *Self-Service: Licenses* • *Self-Service: Name* • *Self-Service: Other IDs* • *Self-Service: Passports and Visas* • *Self-Service: Payroll (My Payslips)* • *Self-Service: Payroll (My Tax Documents) - USA* • *Self-Service: Personal Data* • *Self-Service: Personal Information* • *Self-Service: Work Contact Information* The primary domains are: • *Self-Service: Benefits* or *Self Service: Benefits and Pay Hub* to access benefits information. • *Self-Service: Compensation* to access compensation information. • *Self-Service: Personal Information* to access personal information.
How do I grant bonuses to terminated employees?	You can select the Include Employees Terminated During Process Period check box on the Initiate Compensation Review Process task. Workday includes terminated employees subject to the rules configured on the bonus plan.
Which domains provide access to terminated workers?	You must be in a security group that has permission on the *Worker Data: Public Worker Reports* domain, which enables you to search for employees, and have permission on at least one of these additional domains: • *Person Data: Birth Place* • *Person Data: Emergency Contacts* • *Person Data: Gender* • *Person Data: Home Contact Information* • *Person Data: ID Information* • *Person Data: Military Status* • *Person Data: Personal Information* • *Self-Service: Benefit Elections* • *Self-Service: Business Assets* • *Self-Service: Compensation* • *Self-Service: Credit Card* • *Self-Service: Current Staffing Information* • *Self-Service: Emergency Contacts*

	• *Self-Service: Home Contact Information* • *Self-Service: ID Information* • *Self-Service: Personal Information* • *Self-Service: Time Off* • *Worker Data: Benefit Elections* • *Worker Data: Business Assets* • *Worker Data: Compensation by Organization* • *Worker Data: Credit Card* • *Worker Data: Current Staffing Information* • *Worker Data: Leave of Absence* • *Worker Data: Time Off (Time Off Balances)*
How can I view terminated workers in active organizations?	Inactive organizations automatically remain in any of their respective hierarchies and they maintain any inherited roles in the inactive organization. This behavior applies unless you explicitly select the Remove from Hierarchy option when inactivating an organization. The best way to maintain visibility and role inheritance in inactive organizations is to accept the default behavior, keeping them within their associated hierarchies. If you select the Remove from Hierarchy option, then you must have a role in the inactive organization. You can assign all inherited roles directly when you inactivate an organization by selecting the Keep All Role Assignments check box. If an organization isn't part of a hierarchy, you can assign a superior to add it back to a hierarchy so that role inheritance is available.
Which data sources return terminated workers?	Some of the most common data sources returning terminated workers include: • All Active and Terminated Workers • All Contingent Workers • All Terminated Employees • All Workers • Terminations The All Active and Terminated Workers, All Workers, and Terminations data sources return both employees and contingent workers. A key difference between these data sources is how they handle effective-dated information. In reports that don't have an effective date: • The All Active and Terminated Workers data source returns data for terminated workers as of their last day of work. Use this data source to report on effective-dated position and compensation data. • The All Workers and All Contingent Workers data sources include rows for terminated workers, but return blank fields for effective-dated information. Use these data sources to

	report on other information that isn't effective-dated, such as personal information. Refer to the data source descriptions in Workday for additional information. The descriptions specify if the data sources return terminated workers.
Why do reports display different addresses for terminated workers?	The address depends on the report data source that you use: • Reports using the All Active and Terminated Workers data source return the address that was effective as of the worker's termination date. • Reports using the All Workers data source return the terminated worker's address as of the report date.
Which email address does Workday use for terminated workers?	Once the termination process is complete, Workday sends email messages to the worker's primary home email address. If there's no primary home email for the terminated worker, Workday will use these emails for the worker in this order: • Work. • Home. • Business.
What if a performance review is in progress for a terminated worker?	Cancel the performance review: 1. As a related action on the worker, select Talent > View Employee Reviews. 2. Locate the review in the In Progress table, then select Business Process > Cancel from the related actions menu.
Can terminated employees receive payments through Workday Payroll?	Yes, if you configure the run category associated with the employee's pay group to process terminated employees who either: • Are on salary continuance. • Have payroll input. • Have a one-time payment or a bonus payment from Workday Compensation.
Can a nonpayroll administrator end ongoing payroll inputs for terminated workers?	Yes. Configure the *End Payroll Inputs* business process on the *Termination* business process.
Can a nonpayroll administrator terminate a worker and pay them on the day you terminate them or any other day?	Yes. Configure the *On Demand Event* business process on the *Termination* business process.
What if the employee has an active collective agreement assigned?	You can configure the End Collective Agreement Assignment step on the *Termination* business process. Doing so ends any active collective agreement assignments without an end date during the termination.

Troubleshooting: Configure Business Process Consolidated Template

Users can't access the Configure Business Process Consolidated Template task.

Cause: They don't have security access to the task's domains.

Solution: Some organizations restrict access to the Configure Business Process Consolidated Template task. If you experience difficulty accessing the task to set up this feature and its security, we recommend that you work with a Workday-certified implementer or contact your named Support contact to engage Professional Services.

Users can't find the Configure Business Process Consolidated Template task.

Cause: The task doesn't display in global Search.

Solution: Security: These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

Steps

1. Access the View the Business Process Type report.
2. Search for the *Hire* business process in the prompt.
3. From the related actions, select Business Process > Configure Consolidated Template.

Users can't view the Configure Business Process Consolidated Template task.

Cause: The task doesn't display in global Search.

Solution: Security: These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

Steps

1. Search for the *Hire* business process.
2. From the related actions, select Business Process Policy > View.
3. From the Business Process Policy related actions, select Business Process > Configure Consolidated Template.

Users don't receive a consolidated experience for Review or Approve.

Cause: Review or Approve is not set to Step (b) on the *Hire* business process definition, or the reviewer or approver doesn't have the necessary security domain access to the sub business processes.

Solution: Security: These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

Steps

1. From the *Hire* business process related actions, select Business Process > Edit Definition.
2. Set Review or Approve to Step (b) on your *Hire* business process.
3. Ensure that the reviewer or approver has access to the sub business process domains.

The sub business processes don't display in the consolidated template.

Cause: Users don't have *View* and *Modify* access to the relevant sub business process domains.

Solution: Grant users *View* and *Modify* access to the relevant sub business process domains:

Sub Business Process	Domain
Assign Pay Group	*Worker Data: Payroll* (Pay Group Specific) Alternative: *Worker Data: Payroll Interface* (Pay Group Specific)
Collective Agreement	*Worker Data: Collective Agreements*
Government IDs	*Person Data: Government IDs*
Organization Assignments	*Staffing Organizations: Header*
Payment Elections	*Worker Data: Payroll* (Payment Elections) Alternatives: • *Manage: Payment Election* • *Worker Data: Payroll Interface* (Pay Group Specific)
Propose Compensation Hire	*Set Up: Compensation Change Templates*
Service Dates	*Worker Data: Service Dates*

Troubleshooting: End Jobs Task Can't Terminate

When you attempt to end all jobs and terminate a worker, Workday returns a message indicating that your organization doesn't enable you to end all jobs at once. Contact your system administrator or end each job individually.

Cause: The *End Additional Job* business process isn't correctly configured as a subprocess of the *Termination* business process.

Solution: Ensure that *End Additional Job* is correctly configured as a step on the *Termination* business process definition.

Steps

Security: *Business Process Administration* and *Manage: Business Process Definitions* domains in the System functional area.

1. Access the *Termination* business process definition.

2. Configure the *End Additional Job* business process as an Action step.

   The *End Additional Job* subprocess step must be:

   - After the *Review* step and before the *Completion* step.
   - Required and have no entry conditions. This configuration ensures that the task can end all jobs.

Contingent Worker Staffing

Steps: Set Up Contingent Workers

Context

Complete the necessary configuration steps before hiring contingent workers to simplify the hiring workflow and set up the proper defaulting of fields.

Steps

1. Create hiring restrictions or positions.

   See Create Hiring Restrictions on page 591 or Create Positions on page 595.
2. Access the Edit Tenant Setup - HCM task.

   Select an ID definition, configure job requisitions, and optionally allow overrides of hiring restrictions.

   See Reference: Edit Tenant Setup - HCM.
3. Access the Maintain Event Categories and Reasons task.

   Create categories and reasons for hiring contingent workers.

   Security: *Set Up: Staffing* domain in the Staffing functional area.
4. Create Contingent Worker Types on page 532.

   Select the Require Cost Information on Job Requisition check box to copy information from job requisitions to contracts and purchase orders automatically.
5. Access the Edit Government IDs task.

   Specify a government ID for the contingent worker.

   Security: *Edit Government IDs* domain in the Personal Data functional area.

   To restrict access to a government ID, use the *Person Data: Add Government IDs* domain. This domain provides access to enter a person's national and government IDs in the *Edit Government IDs* and *Edit IDs* subprocesses of the *Hire* and *Contract Contingent Worker* business processes. Users with access to this domain can't view or modify the IDs after they complete the subprocess.

   Security: *Person Data: Add Government IDs* domain in the Personal Data functional area.
6. ../../../authentication-and-security/configurable-security/security-policies/dan1370797389950.dita.

   Set up the security policies for the *Pre-Hire Data: Contact Information* domain in the Pre-Hire Process functional area.
7. (Optional) Hide or Require Optional Fields.

   Hide or require optional fields on the *Contract Contingent Worker* business process.

Next Steps

Contract and manage contingent workers for your organization.

Contract Contingent Workers

Prerequisites

- Configure the *Contract Contingent Worker* business process and security policy in the Staffing functional area. If you want to track additional data for contingent workers, add custom fields to the business process.
- If you use job requisitions, confirm that you have an open and approved job requisition.

Context

Hire contingent workers into open positions and optionally create purchase orders.

Steps

1. Access the Contract Contingent Worker task.
2. Complete the contract information.

   Workday populates many of the Job Details fields automatically with values defined on the position or job requisition. If you use job requisitions, you can't change those values. Rather, update the job requisition itself.

Option	Description
Contract Start Date	The Contract Start Date must be equal to or greater than: • The Recruiting Start Date on the requisition if you use job requisitions. • The Earliest Hire Date on the position if you don't use job requisitions.
Reason	Only the reasons for the *Contract Contingent Worker* event are available.
Position	Select the position. Workday doesn't display this field for organizations that use job management as the staffing model. • If you use job requisitions, Workday lists positions with an open, approved job requisition, and a Recruiting Start Date that's on or after the current date. • If you don't use job requisitions, Workday lists positions or jobs with an Availability Date that's on or after the current date.

Option	Description
Job Requisition	Available for job management and position management organizations based on tenant settings. Job Management: Available if Enable Job Requisitions for Job Management is selected. Position Management: • Required if Require Job Requisitions for All Position Management staffing events is selected. • Available if Enable Job Requisitions for Position Management based on rules is selected. Exit conditions defined on the *Contract Contingent Worker* business process determine whether a job requisition is required. Example: You can add an exit condition that requires job requisitions for all hiring in Canada, but not elsewhere.
Contingent Worker Type	Select from the types you defined in the Maintain Contingent Worker Types task.
Job Profile	Select from the profiles you specified in the Create Position or Set Hiring Restrictions task, unless your tenant allows overrides.
Time Type	Select from the types you specified in the Create Position or Set Hiring Restrictions task, unless your tenant allows overrides. Automatically populates the value defined on the job profile.
Location	Select from the locations you specified in the Create Position or Set Hiring Restrictions task, or from the primary or additional locations on the job requisition.
Work Space	Select from the work spaces (such as building, floor, or cubicle) associated with the Location.

3. If you capture cost information on contingent worker job requisitions, Workday automatically transfers the cost details to the Contract Details section. You can override these values.

Option	Description
Create Purchase Order	Available if you configured this business process to add the *Create Purchase Order From Contract Contingent Worker* action after the completion step. Select this check box if you want Workday to create the purchase order automatically from the Contract Details information.

Option	Description
	Note: Purchase orders created from this business process aren't available for approval in supplier collaboration.
Supplier	Select if this worker is contracting through a Supplier. When you select a supplier, Workday clears the Independent Contingent Worker check box. Workday displays fully defined suppliers and basic supplier worktags. However, if you previously set up Procurement and the subprocess to create purchase orders, then only fully defined suppliers display.
Default Payment Terms	If you didn't specify a supplier, select the payment terms.
Contract End Date	Required if you created a purchase order.
Contract Pay Rate	Required if you created a purchase order.
Currency	Select the currency associated with the pay rate.
Frequency	Select Hourly if you adjusted this task to create a purchase order.
Contract Amount	Specify the contract amount.
Assignment Details	Enter contract details, such as the tax ID type or extension parameters.

4. Complete the Working Time section.

   Workday initially populates many of these fields with values from the position or job requisition. As you complete the task, Workday updates the values.

Option	Description
Scheduled Weekly Hours	Populates from a rule when: • You've defined a working time rule. • The data populated on the task applies the rule. Populates from the Default Weekly Hours if there's no working time rule. Populates based on the position restrictions when: • You select the Enable FTE for Position Restriction check box on the Edit Tenant Setup – HCM task. • There's no work hours profile or job requisition for the position.
Location Weekly Hours	Displays the standard weekly hours associated with the Location.
Default Weekly Hours	Populates from a rule when:

Option	Description
	• You've defined a working time rule. • The data populated on the task applies the rule. Populates from the Location Weekly Hours field if there's no working time rule. Populates based on the position restrictions when: • You select the Enable FTE for Position Restriction check box on the Edit Tenant Setup – HCM task. • There's no work hours profile or job requisition for the position.
FTE	Calculated by dividing the Scheduled Weekly Hours by the Default Weekly Hours. This value displays as a percentage.
Specify a Paid FTE	Select the check box to specify paid full-time equivalent for a worker. Available when you enable Paid FTE on the Maintain Localization Settings task.
Paid FTE %	You can enter a percentage that overrides the FTE field for use in your Workday Compensation and Workday Payroll calculations. Available when you enable Paid FTE on the Maintain Localization Settings task.
Specify a Working FTE	Select the check box to specify working full-time equivalent for a worker. Available when you enable Working FTE on the Maintain Localization Settings task. For use in custom reporting.
Working FTE %	Enter a working full-time equivalent percentage. Used in custom reporting. Available when you enable Working FTE on the Maintain Localization Settings task. For use in custom reporting.
Work Shift	Available when you enable Work Shift on the Maintain Localization Settings task. Available when you selecte the Work Shift Required check box on the job profile. Define the work shifts for a location using the Maintain Work Shifts task.
Frequency	Select from the working time frequencies you specified on the Maintain Frequencies task.

Option	Description
	Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Unit	Select from the preconfigured options of hours or days. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Value	Enter the duration of the working time in selected units. Automatically populates to zero. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.

5. Add any Additional Information.

Option	Description
Job Title	Automatically populates from the Job Profile.
Business Title	Automatically populates from the Job Title. You can control the display of business titles by enabling the *Worker Data: Business Title on Worker Profile* domain security policy in the Staffing functional area.
Job Category	Automatically populates from the Job Profile.
Job Classifications	Automatically populates from the Job Profile.
Additional Job Classifications	Select classifications as needed.
Company Insider Types	Select from the types associated with the Job Profile. Define company insider types with the Maintain Company Insider Types task. Assign them to a job profile with the Edit Job Profile task.
First Day of Work	Automatically populates from the Contract Start Date.
Conversion Position Start Date	Available if you imported the worker data.

Result

- Workday sets the status of the position and job requisition, if applicable, to *Filled*.
- Workday assigns the *Contingent Worker as Self* and *All Contingent Workers* security groups to the worker. If the Contract Start Date is in the future, the worker is placed into the *Pre-Contingent Worker as Self* security group until the start date.

Next Steps

- You can correct or reverse a contingent worker's contract. From the contingent worker's related actions menu, select Worker History > View Worker History. Then select either Correct or Rescind as a related action on the *Contract* event:
  - You can make corrections only if you didn't create a purchase order when you first contracted this worker.
  - If the position had a job requisition, it reopens when you rescind the event.
- Assign National IDs and Government IDs for independent contingent workers with the Edit Government IDs task.
- Select the Tax Authority Form Type for independent contingent workers with the Assign Tax Authority Form Type to Contingent Worker task.

Create Contingent Worker Types on page 532
Steps: Set Up Worker Onboarding on page 746
Steps: Request and Contract Contingent Workers
Steps: Set Up Workday Docs

Steps: Contract Inactive and Inactive External Students

Prerequisites

- Create jobs or positions.
- Manage inactive student or inactive external student records.

Context

Workday enables you to contract these worker types using the Contract Contingent Worker task, enabling you to take advantage of their workforce potential:

- Inactive external students.
- Inactive students.

Steps

1. Edit Domain Security Policies.
   a) Select the Staffing functional area.
   b) Configure access to the *External Student Data: Student Public Reports* domain security policy.
   c) Select the Student Core functional area.
   d) Configure access to the *Student Data: Student Profile* domain security policy.

2. Edit Business Process Security Policies.

   Select the Staffing functional area. Configure any of these *Contract Contingent Worker* initiating actions on the *Contract Contingent Worker* business process:

   - Contract a contingent worker from the related actions menu of a pre-hire, former worker, inactive student, or inactive external student.
   - Search for existing pre-hires, former workers, inactive students, inactive external students, or create a new pre-hire.

Next Steps

Access the Contract Contingent Worker task to contract an inactive student or inactive external student.

Change Contingent Worker Details

Prerequisites

Complete the setup procedure in Steps: Set Up Job Changes on page 844.

Context

You can use this task to change a contingent worker's existing contract term, pay rate, or assignment details, but not to start or end a contract:

- Change Contingent Worker Details is an initiating action for the *Change Job* business process that displays only relevant fields in the Start and Details sections.
- The Job and Organizations sections are hidden, even if you configured a consolidated template. (The Compensation section is always hidden for contingent workers.)

Steps

1. As a related action on a contingent worker, select Job Change > Change Contingent Worker Details.
2. In the Start section, select the effective date and reason for the change.
   - Reasons are defined in the Maintain Event Categories and Reasons task and are designated for contingent workers.
   - You can't change the manager or supervisory organization.
3. In the Details section, specify the new contract terms or contract assignment details.

   You can't use this task to change a contingent worker's supplier. You need to correct the contract event to change the supplier.

Result

Workday adds the *Data Change* event to the worker's history.

End Contingent Worker Contracts

Prerequisites

- Configure the *End Contingent Worker Contract* business process and security policy in the Staffing functional area. If you want to track additional data for contract terminations, you can add custom fields to the business process.
- Define categories and reasons for ending contracts with the Maintain Termination Categories task. If you want to track local termination reasons, you can configure them on the Maintain Local Termination Reasons.
- Verify that the contingent worker has no pending or completed staffing or organization changes with effective dates after the contract end date.

Context

Terminate a contingent worker's contract.

Steps

1. Access the End Contingent Worker Contract task and select the Contingent Worker.
2. Complete the termination details:

Option	Description
Contract End Date	Select the date when the contract ends, typically the last day of work.
Reason	Select from the reasons you defined in the Maintain Termination Categories task.
Close Position	Leave blank if you want to keep the position open for staffing. You can't close a position that has an open job requisition.
Is this position available for overlap?	Specify whether another worker can fill the position before the incumbent departs. Available in position management organizations when you enable job overlap in the Edit Tenant Setup - HCM task.
Local Termination Reason	Select from the local termination reasons you defined on the Maintain Local Termination Reasons task. The field displays as optional or required based on the countries you configured for the *Local Termination Reason (Worker)* field on the Maintain Localization Settings task.
Last Day of Work	Automatically populates to the Contract End Date, but you can change it.
Notify Worker By	Automatically populates to the Contract End Date, but you can change it.
Regrettable	Specify whether the termination is a loss to the organization, regardless of the reason. You can use the Configure Optional Fields and the Maintain Localization Settings tasks to hide or require the field.

Next Steps

You can correct or cancel the contract termination. From the contingent worker's related actions menu, select Worker History > View Worker History; then select either Correct or Rescind as a related action on the *End Contract* event. If the position has an open job requisition, you can't rescind the event.

Concept: Workday Docs

Tasks

Steps: Set Up Contingent Worker Spend

Initiate End Contingent Worker Contract in Mass Action Workbooks on page 733

Steps: Set Up Job Overlap on page 907

Steps: Set Up Workday Docs

Steps: Automate Initiation of Ending Contingent Worker Contracts

Context

You can determine how you want to initiate the *End Contingent Worker Contract* business process for up to 500 contingent workers. The Mass Operation Management (MOM) task enables you to either:

- Automatically initiate the business process.
- Use a Mass Actions workbook to process contingent workers in bulk.

Through a background job, Workday enables you to initiate the *End Contingent Worker Contract* business process automatically. Alternatively, you can review and verify the data before initiating termination by enabling the Mass Actions workbook. You don't need to set up a Mass Actions workbook to initiate the business process automatically.

Steps

1. (Optional) Set up the Mass Actions workbook.

   See Steps: Set Up Mass Actions.
2. Edit Business Process Security Policies.

   Configure the *End Contingent Worker Contract* business process security policy in the Staffing functional area.

   Add appropriate security groups to this initiating action: *End Contingent Worker Contract from Launch Mass Action Event*.

   Ensure that the security groups you configured are also on the *Mass Action Event* business process security policy.
3. Create a Segment-Based Security Group for Mass Operations.

   Create a segment-based security group with the *Initiation of End Contingent Worker Contract* segment.
4. Edit Domain Security Policies.

   Add your segment-based security group and grant View and Modify permissions.

   Security: *Mass Operation Management* domain in the System functional area.
5. Create Custom Reports.

   Create or edit an existing custom report. Ensure you use the:

   - Indexed All Workers report data source.
   - Worker report field on the Columns tab.
   - Contract End Date report field on the Field tab.

6. Access the Mass Operation Management task.

   As you complete the task, consider:

Option	Description
Primary Reason	Select the primary reason for initiating the *End Contingent Worker Contract* business process for contingent workers.
Close Position	(Optional) Select this check box to close positions associated with contingent workers who are part of a position management organization.
Is this position available for overlap?	(Optional) Select this check box to set the contingent worker's position for overlap who is part of a position management organization.
End Contingent Worker Contract	If you select this check box, the Mass Operation Management task automatically initiates a *End Contract* event for contingent workers in the custom report that: • Are active. • Don't have blocking transactions. • Have a contract end date. If you don't select the End Contingent Worker Contract check box, the Mass Operation Management task creates an entry in the Mass Actions workbook for contingent workers that: • Are active. • Have a contract end date. When the background job completes, you'll receive a notification. Access My Tasks and click the Open Workbook button to view your workbook. Click the Begin Error Validation button to ensure that there are no errors. After verifying, submit the Mass Actions workbook to initiate the *End Contingent Worker Contract* business process in bulk for all valid contingent workers.

7. (Optional) Access the Scheduled Future Processes report.

   Use this report to change the run frequency or schedule. If you need to change any other Mass Operation Configuration parameters, you must delete it and create a new one.

Next Steps

View the status of the background job for the *End Contract* events using the Mass Operation Management Runs report.

You can also manually initiate the *End Contingent Worker Contract* business process in bulk using workbooks.

2020R2 What's New Post: Mass Actions in Workbooks for Termination and End Contingent Worker Contract

Steps: Set Up Mass Action Workbooks to Initiate End Contingent Worker Contract

Prerequisites

Configure the *End Contingent Worker Contract* business process and business process policy.

Context

You can set up a Mass Action workbook to initiate the *End Contingent Worker Contract* business process manually in bulk.

Steps

1. Set up Mass Action workbooks.

   See Steps: Set Up Mass Actions.
2. Edit Business Process Security Policies.

   Configure security for the *End Contingent Worker Contract from Launch Mass Action Event* initiating action on the *End Contingent Worker Contract* business process policy.

   Ensure that these security groups are also on the *Mass Action Event* business process security policy.
3. (Optional) Copy facets to a custom report and add any additional filters in the report definition to add additional facets to the Launch Mass End Contingent Worker Contract report.
4. (Optional) Create Custom Reports.

   Create or edit a custom report to use in the Launch Mass Action Event task to identify active contingent workers to populate in the workbook.

   Workday won't generate a workbook if the selected report includes more than 500 contingent workers. You can set up filter options on a custom report to filter the contingent workers you want to include.
5. (Optional) Create or edit a search report to use to access the Launch Mass Action Event task.

   Ensure that you select *Launch Mass Action Event* from the Mass Action column on the Advanced tab of the search report.

   See Steps: Create Search Reports.

Next Steps

Access the Launch Mass Action Event task to initiate the *End Contingent Worker Contract* business process manually in a workbook.

2020R2 What's New Post: Mass Actions in Workbooks for Termination and End Contingent Worker Contract

Initiate End Contingent Worker Contract in Mass Action Workbooks

Prerequisites

- Configure the *End Contingent Worker Contract* business process and security policy.

- Set up Mass Action workbooks for ending contingent worker contracts.
- Ensure that the relevant contingent workers don't have any pending or completed staffing or organization changes effective after the contract end date.
- Security: *Mass Action Events* domain in the System functional area.

Context

You can initiate the *End Contingent Worker Contract* business process for contingent workers in bulk with a Mass Actions workbook.

You can add contingent workers to a workbook by:

- Using the Launch Mass End Contingent Worker Contract report.
- Selecting a report in the Launch Mass Action Event task.
- Using a search report to access the Launch Mass Action Event task.
- Adding them manually.

The Mass Operation Management (MOM) task also enables you to use a Mass Actions workbook to process contingent workers in bulk.

Steps

1. Access the Launch Mass Action Event task.
2. As you complete the task, consider:

Option	Description
Mass Action	Select *End Contingent Worker Contract*.
Report	To populate the workbook, select a standard report or a custom report with up to 500 contingent workers. You can filter the population by report definition parameters, if you select a custom report with configured parameters.

3. After the workbook generates, select Open Workbook.
4. As you complete the workbook, consider:

Option	Description
Share	You can share the workbook with other individuals or security groups. Members can't edit the workbook if they're only granted access to the *Complete Mass Action Event* step on the *Mass Action Event* business process policy. You can share mass action worksheets with constraint security groups but view and edit access to mass action worksheets depends on the position and domain security settings that you apply to the profiles.
Contingent Worker	If you select a report on the Launch Mass Action Event task, the number of contingent workers in the workbook can differ from the report. Workday automatically removes

Option	Description
	inactive workers, future workers, and employees in the report from the workbook.
Contract End Date	This field populates if the contingent worker has an existing contract end date. If you manually add or change a contingent worker, this field can repopulate after you update the Reason field.
Last Day of Work Notify Worker By	These fields populate from the Contract End Date field.
Begin Error Validation	Select this button to resolve any errors and submit the workbook.

Result

The *End Contingent Worker Contract* business process initiates for contingent workers in the workbook. Any other steps on the business process route for completion.

Convert Contingent Workers to Employees

Prerequisites

- Configure the *Hire* business process and security policy in the Staffing functional area.
- Define categories and reasons for ending contracts with the Maintain Termination Categories task.
- Create a position or hiring restrictions for the hiring organization.

Context

The Convert to Employee task enables you to hire a contingent worker with an active contract and no future *End Contingent Worker Contract* and *Hire* event. If you have an *End Contingent Worker Contract* or *Hire* event, you must rescind them before you can use the Convert to Employee task. You can specify the details for ending the current contract and then hire the worker into the same position or a different position.

Steps

1. Access the Worker. From their related actions, select Job Change > Convert to Employee to access the task.
2. Select the Supervisory Organization.
3. Specify the Hire Date and select a Reason.

4. As you complete the task, consider:

   Workday automatically populates many of the fields with values defined on the job profile, position or job requisition. If you use job requisitions, you can't change those values; update the job requisition itself.

Option	Description
Hire Date	Select a date that's on or after the: • Recruiting Start Date on the requisition if you use job requisitions. • Earliest Hire Date on the position if you don't use job requisitions.
Reason	Only reasons for the *Hire* event are available. If you're automating the benefit enrollment process for new employees, Workday suggests you select a hire reason in this field.
First Day of Work	Automatically populates from the Hire Date, but you can change it. Correcting the Hire Date automatically corrects this date.
End Employment Date	Available when you assign the worker to a fixed-term employee type in the Employee Type field. If you configured your tenant to synchronize employment and contract end dates, Workday populates this date whenever the employee's end date for their contract changes.
Current Job	Automatically populates from the worker's contract.
Contract End Date	This date must be earlier than the Hire Date.
Last Day of Work	Automatically populates from the Contract End Date, but you can change it. Correcting the Contract End Date automatically corrects the Last Day of Work.
Reason	Select from the reasons you defined in the Maintain Termination Categories task.
Secondary Reasons	Select from the reasons you defined in the Maintain Termination Categories task.
Close Position	Leave blank if you want to keep the position open for staffing. You can't close a position that has an open job requisition.
Is this position available for overlap?	Specify whether another worker can fill the position before the incumbent departs. Available in position management organizations if Enable Job Overlap for Vacating Positions is enabled in the Edit Tenant Setup - HCM task.

Option	Description
Position	For position management organizations, select: • (If you use job requisitions), a position with an open, approved job requisition, and a Recruiting Start Date that's on or after the current date. • (If you don't use job requisitions), a position or job with an Availability Date that's on or after the current date.
Job Requisition	Available for job management and position management organizations based on tenant settings. Job Management: Available if Enable Job Requisitions for Job Management is selected. Position Management: • Required if Require Job Requisitions for All Position Management staffing events is selected. • Available if Enable Job Requisitions for Position Management based on rules is selected. Exit conditions defined on the Contract Contingent Worker business process determine whether a job requisition is required. Example: You can add an exit condition that requires job requisitions for all hiring in Canada, but not elsewhere.
Employee Type	Select from the types you defined in the Maintain Employee Types task.
Location	Select from the locations you specified on the Create Position or Set Hiring Restrictions task, or from the primary or additional locations on the job requisition.
Work Space	Select from the work spaces (such as building, floor, or cubicle) associated with the Location.
Job Profile	Select from the profiles you specified on the Create Position or Set Hiring Restrictions task.
Job Title	Populates from the Job Profile.
Business title	Populates from the Job Title. You can control the display of business titles by enabling the *Worker Data: Business Title on Worker Profile* domain security policy in the Staffing functional area.
Pay Rate Type	Select from the pay rate types available for the country associated with the Location.

Option	Description
Job Category	Populates from the Job Profile.
Job Classifications	Populates from the Job Profile.
Management Level from Job Profile	Populates from the Job Profile.
Additional Job Classifications	Select classifications as needed.
Company Insider Types	Select from the types associated with the Job Profile. Define company insider types on the Maintain Company Insider Types task. Assign them to a job profile on the Edit Job Profile task.
Workers' Compensation Code from Job Profile	Populates from the Job Profile.
Workers' Compensation Code Override	Select an override for the compensation code.
Time Type	Select from the types you specified on the Create Position or Set Hiring Restrictions task, unless you allow overrides at the tenant level. Populates from the value defined on the job profile.
Time Type Subtype	This field displays when you configure it on these tasks: • Maintain Time Type Subtype • Configure Optional Fields This functionality supports US Federal agency requirements for classifying positions, and Personnel Action Request (PAR) processing. You can also use the field for organizations that aren't related to US Federal by configuring custom field values.
Scheduled Weekly Hours	Populates from a rule when: • You've defined a working time rule. • The data populated on the task applies the rule. Populates from the Default Weekly Hours if there's no working time rule. Populates based on the position restrictions when: • You select the Enable FTE for Position Restriction check box on the Edit Tenant Setup – HCM task. • There's no work hours profile or job requisition for the position.
Location Weekly Hours	Displays the standard weekly hours associated with the Location.
Default Weekly Hours	Populates from a rule when: • You've defined a working time rule.

Option	Description
	• The data populated on the task applies the rule. Populates from the Location Weekly Hours field if there's no working time rule. Populates based on the position restrictions when: • You select the Enable FTE for Position Restriction check box on the Edit Tenant Setup – HCM task. • There's no work hours profile or job requisition for the position.
FTE	Calculated by dividing the Scheduled Weekly Hours by the Default Weekly Hours. This value displays as a percentage.
Specify a Paid FTE	Available when you enable Paid FTE on the Maintain Localization Settings task.
Paid FTE %	You can enter a percentage that overrides the FTE field for use in your Workday Compensation and Workday Payroll calculations. Available when you enable Paid FTE on the Maintain Localization Settings task.
Specify a Working FTE	Available when you enable Working FTE on the Maintain Localization Settings task. For use in custom reporting.
Working FTE %	Used in custom reporting. Available when you enable Working FTE on the Maintain Localization Settings task. For use in custom reporting.
Work Shift	Available when you enable Work Shift on the Maintain Localization Settings task. Available when you select the Work Shift Required check box on the job profile. Define the work shifts for a location using the Maintain Work Shifts task.
Frequency	Select from the working time frequencies you specified on the Maintain Frequencies task. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Unit	Select from the preconfigured options of hours or days. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.

Option	Description
Value	Enter the duration of the working time in selected units. Automatically populates to zero. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Appointment Type	This field displays when you configure it on these tasks: • Maintain Appointment Type • Configure Optional Fields This functionality supports US Federal agency requirements for classifying positions. You can also use the field for organizations that aren't related to US Federal by configuring custom field values.
Employee Tenure	This field displays when you configure it on these tasks: • Maintain Employee Tenure • Configure Optional Fields This functionality supports US Federal agency requirements for classifying positions, and Personnel Action Request (PAR) processing. You can also use the field for organizations that aren't related to US Federal by configuring custom field values.
Annuitant Indicator	This field displays when you configure it on these tasks: • Maintain Annuitant Indicator • Configure Optional Fields This functionality supports US Federal agency requirements for classifying positions, and Personnel Action Request (PAR) processing. You can also use the field for organizations that aren't related to US Federal by configuring custom field values.
Annual Work Period	The period of time during which a contingent worker earns an annual salary.
Work Period Percent of Year	Available if you selected Annual Work Period. Enter a percentage up to 100%. This is used to appropriately prorate the contingent worker's compensation rate.
Disbursement Plan Period	The period of time during which a contingent worker receives the annual compensation.
Continuous Service Date	Populates from the Hire Date, but you can change it.

Option	Description
	Correcting the Hire Date automatically corrects this date.
Benefits Service Date	Enables you to track length of service for benefit programs. Example: Workers become eligible for insurance after a 3-month probation period. Available for use in user-defined calculations and eligibility rules. Workday empties the field during rehire. This service date only applies to employees.
Company Service Date	Enables you to track an additional service date, such as date of acquisition. Available for use in user-defined calculations and eligibility rules. Workday empties the field during rehire. This service date only applies to employees.

Result

Workday initiates an *End Contingent Worker Contract* event that completes upon completion of the *Hire* event. The contingent worker record inactivates when the contingent worker contract ends, and the employee record activates on the hire date.

Workday assigns the *Pre-Employee as Self* security group to the worker until the Hire Date. Then Workday transfers the worker to the *Employee as Self* and *All Employees* security groups.

Next Steps

If you're converting a contingent worker whose position has a purchase order, update the purchase order manually to reflect changes resulting from the conversion. Example: If you have an existing purchase order and the contract end date changes during conversion, Workday reminds you to create a change order manually.

Related Information
Tasks

End Contingent Worker Contracts on page 730

Hire Employees on page 690

Create Hiring Restrictions on page 591

Concept: Contingent Worker Purchase Orders

You can create purchase orders or change orders as part of the staffing events for contingent workers by adding steps to some of the business processes.

Contract Contingent Worker	Add the *Create Purchase Order From Contract Contingent Worker* action after the completion step in the *Contract Contingent Worker* business process. This configuration ensures that the hire is complete before creating a purchase order. The contract details in the purchase order come from the worker's position.

	You can't generate a change order by correcting the *Contract Contingent Worker* event. However, if you configured the *Contract Contingent Worker* business process to create purchase orders, you can create one during correction.
Edit Position	Add the *Create Change Order From Contract Contingent Worker* action after the completion step in the *Edit Position* business process. This configuration ensures that any changes to the position that affect the purchase order initiate a change order after the position edit is complete.
Change Job	Add the *Create Change Order From Contract Contingent Worker* action after the completion step in the *Change Job* business process.
End Contingent Worker Contract	Add the *Create Change Order From Contract Contingent Worker* action after the completion step in the *End Contingent Worker Contract* business process. The event effective date can't be earlier than any time logged against the purchase order.
Convert to Employee	You can't add a change order step to the *Convert to Employee* business process. However, if you have an existing purchase order and the contract end date changes during conversion, Workday reminds you to create a change order manually.

Some staffing events require a manual change order because the business process step doesn't trigger automatically. You can use the Purchase Orders out of sync with HCM data source in a custom report to monitor your contingent worker purchase orders.

Concept: Contract Contingent Worker Initiating Actions

The *Contract Contingent Worker* business process offers multiple Contract Contingent Worker initiating actions to suit the needs of your organization. When configuring the business process, you can decide which initiating actions are most appropriate for your security groups. Workday recommends that your users have access to only 1 version of the Contract Contingent Worker task from Workday global search. The main differences between the Contract Contingent Worker initiating actions are the ability to:

- Use additional search fields and view staffing information in search results.
- Create pre-hires.

If your organization prioritizes preventing creation of duplicate person records, Workday recommends using 1 of the initiating actions with additional search capabilities. These versions of the Contract Contingent Worker task make it easier for you to find existing person records. In addition to the pre-hires and former workers, your search results include:

- Active workers.
- Pre-hires marked ineligible for hire.
- Active students with a pre-hire record.
- Inactive students and inactive external students without a pre-hire record.
- Terminated workers marked ineligible for rehire.

Troubleshooting: Missing Onboarding Dashboard Items for Hired Contingent Workers

Cause: Though you terminate a contingent worker and assign a future hire date, the condition rule framework returns the former contingent worker, instead of returning a future worker.

Solution: Create calculated fields to return the hire date of future workers, and sort them in ascending order.

Steps

Security: *Custom Field Management* domain in the System functional area.

1. Create a calculated field that returns workers who you haven't terminated.
   a) Access the Create Calculated Field task.
   b) Enter these values:

Field	Value
Field Name	*Worker isn't terminated*
Business Object	*Worker*
Function	*True/False Condition*

   c) Click OK and enter these values:

Field	Value
Field	*Terminated*

Field	Value
Operator	*equal to*
Comparison Type	*Value specified in this filter*
Comparison Value	*Checked*

2. Create a calculated field that returns workers from person.
    a) Click Create Another Calculation.
    b) Enter these values:

Field	Value
Field Name	*Workers from Worker*
Business Object	*Worker*
Function	*Look Up Related Value*

    c) Click OK and enter these values:

Field	Value
Lookup Field	*Person*
Return Value	*Person*

3. Create another calculated field that returns workers from person.
    a) Click Create Another Calculation.
    b) Enter these values:

Field	Value
Field Name	*Workers from Person*
Business Object	*Worker*
Function	*Lookup Related Value*

    c) Click OK and enter these values:

Field	Value
Lookup Field	*Workers from worker*
Return Value	*Workers*

4. Create a calculated field that returns the first occurrence of a future worker in ascending order.
    a) Click Create Another Calculation.
    b) Enter these values:

Field	Value
Field Name	*Future Worker*
Business Object	*Worker*
Function	*Extract Single Instance*

    c) Click OK and enter these values:

Field	Value
Source Field	*Workers from Person*

Field	Value
Condition	*Worker is not terminated*
Sort Field	*Hire Date*
Sort Direction	*Ascending (A to Z)*
Instance to be Returned	*First occurrence*

5. Create a calculated field that returns the hire date of a future worker who you haven't terminated.
   a) Click Create Another Calculation.
   b) Enter these values:

Field	Value
Field Name	*Future hire's hire date*
Business Object	*Worker*
Function	*Look Up Related Value*

   c) Click OK and enter these values:

Field	Value
Lookup Field	*Future Worker*
Return Value	*Hire Date*

6. Click OK and click Done.

Onboarding

Onboarding Dashboard

Steps: Set Up Worker Onboarding

Context

Onboarding provides a set of tools to help you engage new workers into your organization more effectively. You can:

- Display welcome messages.
- Build lists of people and helpful contacts to meet.
- Guide workers through their onboarding tasks.
- Give workers a convenient and effective way to monitor their onboarding tasks with a visual progress indicator.
- Communicate relevant corporate and job-related information.

Onboarding also enables HR productivity. You can:

- Create electronic Forms I-9 for U.S. employment verification.
- Distribute documents to new hires and track acknowledgments or electronic signatures.
- Retrieve completed documents that new hires upload.

You can use onboarding for new hires, new contingent workers, and workers transitioning from another part of your organization. You can start the onboarding process before a worker's hire or start date, or on the first day of work.

A worker can have only 1 onboarding process in progress at a time. If a worker is already in an onboarding process, then Workday doesn't launch any other onboarding events.

Steps

1. Create Onboarding Setup Templates on page 752.
2. Access the Maintain Onboarding Reasons task.

   Create reasons for onboarding workers.

   Security: *Set Up: Onboarding* domain in the Onboarding functional area.
3. Configure the Onboarding business process.

   See Steps: Set Up Onboarding Business Process on page 747.
4. Steps: Set Up Security for Onboarding on page 749.
5. (Optional) Configure and View Alerts.

   Configure alerts to remind managers to complete the *Onboarding Setup* step.

   Copy the Onboarding Setup Events Qualified for Alerts standard report to use as the input report on the Configure Alert task.
6. (Optional) Set up an electronic Form I-9.

   See Steps: Set Up Electronic Form I-9 on page 759.
7. (Optional) Create Bulletin Worklet for Onboarding on page 754.
8. Configure Dashboard Content.

   Configure the Onboarding dashboard.
9. (Optional) Mass Advance Onboarding Setup Events on page 756.

Next Steps

You can run the Onboarding Setup Template Coverage report to ensure that each template covers the correct group of workers.

The Onboarding Status Summary report displays workers onboarded within the last 90 days. Administrators and managers can view details about the hires and their onboarding progress.

Concepts

Concept: Adoption Navigator: Onboarding Dashboard

Tasks

Contract Contingent Workers on page 723

Hire Employees on page 690

Reference

The Next Level: Onboarding Beyond Hire

Steps: Set Up Onboarding Business Process

Prerequisites

- Configure the *Onboarding Setup* business process in the Onboarding functional area.
- Security: *Business Process Administration* or *Manage: Business Process Definitions* domain in the System functional area.

Context

You can initiate *Onboarding* for new hires and contingent workers and existing workers using the Launch Onboarding task. You can also initiate the Launch Onboarding task as a subprocess of these business processes:

- *Add Additional Job*
- *Change Job*
- *Contract Contingent Worker*
- *Hire*
- *Start International Assignment*

You can configure the Onboarding dashboard with worklets. These worklets communicate important information to new workers and prompt them to complete tasks related to their Onboarding. The *Onboarding* business process uses the worklet configuration from the *Onboarding Setup* business process step when both steps are subprocesses of a staffing event. However, when you launch *Onboarding* as a standalone business process, Workday uses the setup information from the last completed *Onboarding Setup* event.

Steps

1. Edit Business Processes.

   Configure the *Onboarding* business process. You can define the order that parallel steps display in My Tasks.
2. Add *Tasks* steps.

   Add 1 or more *Tasks* steps to enable workers to update their personal and contact information. You can combine *Contact Change*, *Name Change*, *Preferred Name Change*, and *Personal Information Change* into 1 step or split the tasks into separate, parallel steps.

   You can identify a task in the worker's My Tasks by entering a label in the Checklist Label field (Example: *Enter Personal Information*).

   See Concept: Tasks Step.
3. (Optional) Configure condition rules to skip approvals when a worker submits personal and contact information updates without making changes.

   See Concept: Step Conditions.
4. (Optional) Configure employment eligibility compliance with Form I-9.
   a) Add the *Manage Form I-9 Assignment* step before the *Complete Form I-9 Assignment* step.
   b) Add the *Complete Form I-9* step after the *Onboarding Completion* step.

   Workday doesn't initiate the *Complete Form I-9* step when *Onboarding* is a subprocess of the *Start International Assignment* business process.

   See Concept: Manage Form I-9 Assignments on page 771.
5. Add the *Change Benefit Elections* step after the *Onboarding Completion* step.
6. Add *To Do* steps for other tasks you want new hires to complete.
7. (Optional) Add the *Edit Licenses* subprocess as an action to enable all *Edit IDs* business processes to be available as a part of the *Onboarding* business process. Update the security policy for the *Edit Licenses* subprocess before adding it.
8. (Optional) Add the *Review Documents* step.

   Enable workers to acknowledge, electronically sign, or upload documents. You can include multiple documents in a single step or add separate steps for more granular tracking. You can control access to documents by creating security segments that limit the document categories that are visible to a role.

   See Steps: Maintain Access to Documents.

9. (Optional) Select Business Process > Maintain Step Delay from the related actions menu of the business process step.

   When you enable pre-hire workers to complete Onboarding steps before their start date, add a step delay to the steps that workers complete after their start date.

   Security: These domains in the System functional area:

   - *Business Process Administration*
   - *Manage: Business Process Definitions*
10. (Optional) Create Custom Notifications.

    Set up Onboarding email notifications to personal or work email addresses.

    You can override the email template. If you use Notification Designer, you can create a template and enable it for the *Custom Business Process* notification category. You can use the notification template to send notifications when using the *Onboarding* business process.
11. Add the *Onboarding Setup* and *Onboarding* actions to your existing *Hire*, *Contract Contingent Worker*, *Add Additional Job*, *Change Job*, or *Start International Assignment* business processes.

    When adding the *Onboarding Setup* and *Onboarding* actions to your existing business processes, consider:

    - The *Onboarding Setup* step must be 1 step before the *Onboarding* step.
    - The *Onboarding* action must come after both the completion step and the *Create Workday Account* step.
    - Don't assign security groups to the *Onboarding* action. Workday secures each step in the *Onboarding* business process separately.
    - If *Change Benefit Elections* is part of the *Onboarding* business process, remove it from the *Hire* and *Contract Contingent Worker* business processes.
    - If *Personal Information Change* and *Onboarding* are both part of the *Hire* or *Contract Contingent Worker* business processes, don't run them as parallel steps.
12. (Optional) Configure Rule-Based Business Processes.

    You can configure different *Onboarding* business process definitions for: *Add Additional Job*, *Contract Contingent Worker*, *Change Job*, *Hire*, and standalone *Onboarding*.

Next Steps

If you include a *Tasks* step in the *Onboarding* business process, provide custom instructions for workers to update their name, personal, and contact information. Use the View Business Process Template report to override the default help text for each section. You can view the Task Security tab in this report to ensure that you've synchronized your business process and domain security policies.

Tasks
Create Custom Business Processes

Steps: Set Up Security for Onboarding

Prerequisites

Security: *Security Configuration* domain in the System functional area.

Context

Set up security for workers to complete each step of their Onboarding process. To ensure that workers can complete their Onboarding tasks, synchronize the business process and domain security policies. Business process security policies provide access to actions in the *Onboarding* business process. Domain security policies provide access to view and modify data within those actions.

Steps

1. Configure security permissions on the *Set Up: Onboarding* domain in the Onboarding functional area.

   This domain provides access to various tasks to set up Onboarding rules and templates. Restrict access on this domain to only administrators.
2. Edit Business Process Security Policies.
   a) Set up security for the *Onboarding Setup* business process.
   b) Set up security for the *Onboarding* business process.
   c) Set up security for the subprocesses that you include in the *Onboarding* business process.

      You can enable pre-hire workers to complete Onboarding steps before their start date, like pre-hire state withholding elections. Under Who Can Start the Business Process, include the *Pre-Employee as Self* and *Pre-Contingent Worker as Self* security groups.

      Under Who Can Do Actions on Entire Business Process, grant permissions to the *HR Partner*, *HR Administrator*, or other relevant HR roles in your organization. Grant *View Completed Only* permission to the same groups that have permission on the initiating action. Any pre-hire security groups with *View Completed Only* permission can see future dated events.
3. Edit Domain Security Policies.

   Set up security for the *Onboarding* business process.

Functional Area	Onboarding Action	Self-Service Domains	Worker Data Domains
Benefits	Change Benefit Elections	*Self-Service: Benefits*	*Worker Data: Benefits*
CAN Payroll	Complete Federal Withholding Elections	*Self-Service: Payroll (My Withholding Elections) - CAN*	
Contact Information	Change Emergency Contacts	*Self-Service: Emergency Contacts*	*Person Data: Emergency Contacts*
Contact Information	Contact Change	• *Self-Service: Home Contact Information* (plus subdomains) • *Self-Service: Work Contact Information* (plus subdomains)	• *Person Data: Home Contact Information* (plus subdomains) • *Worker Data: Work Contact Information* (plus subdomains)
Contact Information	Name Change	*Self-Service: Legal Name*	*Person Data: Legal Name*
Contact Information	Preferred Name Change	*Self-Service: Preferred Name*	*Person Data: Preferred Name*
Onboarding	Complete Form I-9	*Self-Service: I-9 Forms*	*Worker Data: I-9 Forms*
Personal Data	Change Self-Identification of Disability	*Self-Service: Self-Identification of Disability - USA*	*Worker Data: Self-Identification of Disability - USA*
Personal Data	Edit Government IDs	*Self-Service: Government IDs*	*Person Data: Government IDs*

Functional Area	Onboarding Action	Self-Service Domains	Worker Data Domains
Personal Data	Edit Licenses	*Self-Service: Licenses*	*Person Data: Licenses*
Personal Data	Personal Information Change	*Self-Service: Personal Data* (plus subdomains)	*Person Data: Personal Data* (plus subdomains)
USA Payroll	Complete Federal Withholding Elections	*Self-Service: Payroll (My Withholding Elections) - USA*	
USA Payroll	Manage Payment Elections	• *Self-Service: Payment Election* • *Self-Service: Payroll (My Payment Elections)* • *Self-Service: Payroll Interface (Payment Elections)*	• *Worker Data: Payroll (Payment Elections)* • *Worker Data: Payroll Interface (Payment Elections)*

On the self-service security domains, grant modify permission to the same security groups you assigned to the initiating actions. These groups include:

- *Contingent Worker as Self*
- *Employee as Self*
- *Pre-Contingent Worker as Self*
- *Pre-Employee as Self*

On the worker data domains, grant view permission, at a minimum, to the same roles you assigned to other business process actions. These roles can include *HR Administrator*, *HR Partner*, and more.

You can hide specific types of contact information (such as instant messenger or web address) by not assigning security groups to those domains.

4. Activate Pending Security Policy Changes.

Example

Secure the Contact Change task in the *Onboarding* business process so that workers can view and update only their home address, personal email address, and phone number. Add the *Employee as Self* security group to the:

- Contact Change task in the *Onboarding* business process.
- *Contact Change* business process security policy.
- *Self-Service: Home Address*, *Self-Service: Home Email*, and *Self-Service: Home Phone* domain security policies.

Don't assign the *Employee as Self* security group to the *Self-Service: Work Contact Information* domain, or to any other *Self-Service: Home Contact Information* subdomain.

Concept: Worker Tax Elections (USA)

Create Onboarding Setup Templates

Prerequisites

- Configure condition rules on the Create Onboarding Setup Rule task.
- Security: *Set Up: Onboarding* domain in the Onboarding functional area.

Context

Streamline the Onboarding process by creating Onboarding setup templates for different organizations and worker types. Managers use Onboarding setup templates to populate worklets on the Onboarding dashboard. Onboarding setup templates save your organization time and enable a consistent Onboarding experience among like workers.

Steps

1. Access the Maintain Onboarding Setup Template task.
2. As you complete the task, consider:

Option	Description
Template Name	Enter a unique name that identifies what workers this template might apply to. Example: *Onboarding Setup Template Employees - HR Auditor Job Profile - Country USA*.
Inactive	Select to inactivate a template.
Condition Rule Applied	Set condition rules for each template so Workday automatically populates the correct template in the manager's My Tasks.
From My Manager	In the Memo field, you can write a welcome message to the new worker.
People to Meet	Select important people for the new worker to meet, such as mentors and coworkers, from these fields: • Select People. The people you select here take precedence over the Select Role and Select Intersection Security Group fields. • Select Role. You can only select roles assigned to supervisory organizations. • Select Intersection Security Group. Selects the people assigned to the security group. • Select Worker's Team. Selects and displays all the new worker's colleagues who are in the same supervisory organization. Workday recommends that you select up to 10 people. However, there's no limit to the number of people you select. You can use these fields to set up a notification to encourage the People to Meet to welcome the new worker:

Option	Description
	• Notify. The check box always displays on the Onboarding Setup task. Your configuration determines whether or not Workday automatically selects the check box when the manager accesses the template on the Onboarding Setup task • Notification Subject. • Notification Message. The notification will display in the worker's Notifications page.
Helpful Contacts	Select people who could be helpful contacts for the new worker, such as benefits and HR partners, from these fields: • Select People. The people you select here take precedence over the Select Role and Select Intersection Security Group fields. • Select Role. You can only select roles assigned to supervisory organizations. • Select Intersection Security Group. Selects the people assigned to the security group. • Select Worker's Team. Selects and displays all the new worker's colleagues who are in the same supervisory organization. Workday recommends that you select up to 10 people. However, there's no limit to the number of people you select. You can use these fields to set up a notification to encourage the Helpful Contacts to welcome the new worker: • Notify. The check box always displays on the Onboarding Setup task. Your configuration determines whether or not Workday automatically selects the check box when the manager accesses the template on the Onboarding Setup task • Notification Subject. • Notification Message. The notification will display in the worker's Notifications page.

Result

Managers receive the Onboarding Setup task in My Tasks with the Onboarding setup template. The manager can further customize the content of the template to satisfy their needs, such as adding or removing people from the People to Meet and Helpful Contacts sections, and selecting the Notify check box.

Next Steps

(Optional) Create condition rules for announcing the Onboarding dashboard on the Create Announcement Rule task.

Create the Onboarding dashboard. The new worker will see the *People to Meet* and *Helpful Contacts* on a worklet on the dashboard.

(Optional) If you want to notify the new worker about their *People to Meet* and *Helpful Contacts*, you can create a custom notification on the *Onboarding* business process.

Create Bulletin Worklet for Onboarding

Prerequisites

Security: *Set Up: Announcements and Bulletin Worklet* domain in the System functional area.

Context

Create bulletin worklets to deliver tailored messages to different groups of workers. Although this worklet is optional, it can be a valuable part of the onboarding process by introducing new workers to the organization. Examples:

- A welcome message from the CEO.
- Messages:
    - That describe the values and culture of the company.
    - About benefits with a link to your company intranet.
    - About training with a link to an external learning management system.

You can associate a condition rule with each message to determine who receives the message. To identify the target audience for messages, use the Create Announcement Rule task. Workday currently doesn't support the Service Center Representatives worker group.

Messages are static text and aren't tied to specific onboarding tasks. To organize and manage messages more easily, you can create as many bulletin worklets as you need.

Steps

1. Access the Create Bulletin Worklet task.
2. Enter a Name for the worklet.

   Workday displays this name in prompts when you view or edit the worklet.
3. Enter a Label for the worklet.

   Workers see this label on the Onboarding dashboard.
4. Select the Onboarding option from the Landing Pages for Bulletin Worklet prompt.

   You can use the Maintain Dashboards task to change the default dashboard name from Onboarding.
5. Add a row for each message and enter details.

Option	Description
Rule	Select a condition rule that identifies the message recipients. If you leave this field blank, all workers see this message.
Message From / Message Title	Specify who the message is from, or enter a message title.
Show Current Photo / Upload Custom Image	Display the message sender's worker profile photo or a custom image, such as a logo.

Option	Description
	If the message sender doesn't have a photo, Workday displays a gray silhouette. Custom images must conform to the file size limit and permitted file types for your tenant. To select an existing image or create an image, select Upload Custom Image. Because Workday crops the images in bulletin worklets into circles, use square images for best results. Images in any other shape don't fit properly, resulting in white spaces in the circular area. Workday recommends 150 x 150 pixels for images. If you select None of the above, Workday displays a gray silhouette for messages from senders. For messages with titles only, Workday displays a stock image of paper and eyeglasses.
Message	Enter the message. Click Format Text to open a larger field with a rich text editor.
Video	Specify a title and description then select a preview image and enter the URL for the video (hosted outside of Workday). Videos open in separate browser tabs.

Example

Rule	Message From / Message Title	Show Current Photo / Upload Custom Image	Message
Active Employees	Our Company Culture	Tenant Logo	Our culture comes from the passion, creativity, and positive attitude of our employees. We believe in an open and honest approach to business, where everyone can contribute and make a difference.
Active Employees in U.S.	Maria Cardoza	Current Photo	Your satisfaction with your benefits program is as important to us as it is to you. We work diligently to provide you with a benefit package that helps keep you healthy and meets the needs of your family. Learn more about your

Rule	Message From / Message Title	Show Current Photo / Upload Custom Image	Message
			benefit plans by visiting our company intranet.

Tasks

Steps: Set Up Worker Onboarding on page 746

Mass Advance Onboarding Setup Events

Prerequisites

- Initiate the *Onboarding Setup* subprocess as part of a staffing business process.
- Security: *Custom Report Creation*and *Mass Operation Management* domains in the System functional area.

Context

If managers are busy, they might not complete the *Onboarding Setup* step, which means the *Onboarding* subprocess isn't initiated. You can ensure that the Onboarding dashboard is available for new workers in a timely manner by mass advancing incomplete *Onboarding Setup* events to completion.

Steps

1. Access the Copy Standard Report to Custom Report task.

   Create a custom report based on the Onboarding Setup Events Qualified for Auto Advance standard report to identify the *Onboarding Setup* events you want to advance to completion.
2. Access the Mass Operation Management task.

   As you complete the task, select:

Option	Description
Mass Operation Type	Select *Advance Business Process*.
Input Report	Select the custom report you just created.
Run Frequency	Select a run frequency.
3. On the Mass Operation Configuration tab, select the Send to Completion check box to ensure that the mass operation automatically advances the *Onboarding Setup* events to completion.

Result

When the mass operation successfully completes:

- The in progress *Onboarding Setup* subprocesses that meet the input report criteria complete.
- Workday initiates the next step in the parent process definition, which should be *Onboarding*.

Set Up Mass Operations

Onboarding Landing Page

Set Up Onboarding Landing Page

Prerequisites

Note: We plan to retire the Onboarding landing page and campaigns worklets in a future update. Workday recommends that you configure the Onboarding dashboard and worklets for a more personalized onboarding experience.

- Create a campaigns worklet for onboarding.
- If you want to deliver messages to new hires, create 1 or more bulletin worklets for onboarding.
- Security: *Set Up: Tenant Setup - Worklets* domain in the System functional area.

Context

Set up the Onboarding landing page to welcome new workers to your organization and coordinate their onboarding activities. Create a custom page title, provide instructional text that explains the onboarding process, and select the worklets that the landing page displays.

Steps

1. Access the Maintain Dashboards report.
2. In the Home row, click Edit.
3. In the Worklets section on the Content tab, add the campaigns worklet for onboarding.

   This worklet navigates workers from the Home page to the Onboarding landing page. The selection list displays the worklet Name that you defined in the Create Campaigns Worklet task.

   Landing pages display up to 12 worklets. If you have more than 12 worklets, adjust your configuration to ensure that the campaigns worklet displays on your landing page.
4. Click Done.
5. In the Onboarding Landing Page (Do Not Use) row, click Edit.
6. Click Add.
7. In the Worklets section on the Content tab, add the Your Onboarding Checklist worklet to the grid.

   This worklet directs new hires to My Tasks to complete the actions and *To Do* tasks that you defined in the *Onboarding* business process.
8. Add bulletin and custom worklets to the grid.

   You can't personalize the Onboarding landing page. It requires all worklets.

Result

New hires see the campaigns worklet on the Home page every time they sign in to Workday. They can click Take Me There to navigate to the Onboarding landing page, which displays how many onboarding tasks they must complete. The landing page also displays any bulletin worklets or custom worklets that you set up.

The Checklist has a Go to My Tasks button for workers to access their onboarding tasks. When they're finished, access to the Onboarding landing page ends and the campaigns worklet disappears.

Example

Onboarding Dashboard

Dashboard	Description
Welcome!	We're excited you are now part of our company! Here is your Checklist of onboarding tasks. Check out the Getting Started announcements for information to help guide you during your first few weeks with us. Our culture is one of the main reasons that our employees join us and thrive. Our Company Experience tells you more.

Required Worklets

Worklet	Required for Groups
Your Onboarding Checklist	*Contingent Worker as Self* *Employee as Self* *Pre-Contingent Worker as Self* *Pre-Employee as Self*
Getting Started	*All Users*
Our Company Experience	*All Users*

Create Campaigns Worklet for Onboarding

Prerequisites

Note: We plan to retire the Onboarding landing page and campaigns worklets in a future update. Workday recommends that you configure the Onboarding dashboard and worklets for a more personalized onboarding experience.

Security: *Set Up: Campaigns Worklet* domain in the System functional area.

Context

Create a campaigns worklet to highlight the onboarding process and guide new hires to the Onboarding landing page. This worklet displays on the Home landing page until workers complete the steps in the *Onboarding* business process.

Steps

1. Access the Create Campaigns Worklet task.
2. Specify a Name for the worklet, such as *Onboarding*.
   Workday displays this name in prompts when you view or edit the worklet.
3. Create a Label for the worklet, such as *Getting Started*.
   Workers see this label next to the worklet bubble on the Home landing page.
4. At the Landing Pages for Campaigns Worklet prompt, select *Home*.
5. In the Campaign grid, add a row and specify campaign details:

Option	Description
Title Text	The title displays at the top of the worklet.
Message	The message displays above the image on the worklet.
Image	The image (such as your company logo) displays at the center of the worklet. The logo must be in BMP, GIF, JPEG, or PNG format with a recommended size of 500 x 500.
Campaign Type	Select *Onboarding*.

Example

Title Text	Message	Image	Campaign Type
Welcome!	Here is a quick To Do list for your first week on the job.	company_logo.jpg	Onboarding

Next Steps

(Optional) Create a bulletin worklet for onboarding. Then, set up the Onboarding landing page and add the campaigns worklet to the Home page.

Form I-9

Steps: Set Up Electronic Form I-9

Prerequisites

Confirm your Form I-9 compliance requirements and processes before enabling this functionality. Workday enables you to create a legal Form I-9, but doesn't assume responsibility for compliance.

Context

The Workday electronic Form I-9 and optional *E-Verify* integration streamlines employment authorization, reduces paperwork, and minimizes manual data entry. You can use the electronic Form I-9 for newly hired and rehired employees who work in the U.S.

Note: Workday applies a version and date stamp to each official update of the Form I-9. All Workday tasks, reports, printing, and web service functions use the correct version of the Form I-9 based on the date it was created. Example: If you compare a Form I-9 created 1/1/2015 with another created on 8/2/2023, the layouts differ because an updated Form I-9 went into effect on 8/1/2023.

Steps

1. Configure the *Complete Form I-9* business process in the Onboarding functional area.
   See Steps: Set Up Complete Form I-9 Business Process on page 762.
2. Configure the *Amend Form I-9* business process in the Onboarding functional area.
   See Steps: Set Up Amend Form I-9 Business Process on page 765.
3. Configure the *Internal Audit Form I-9* business process in the Onboarding functional area.
   Add the *Initiation* step on the *Internal Audit Form I-9* business process definition.
4. Configure the *Complete Form I-9 Section 3* business process in the Personal Data functional area.
   Add the *Initiation* step on the *Complete Form I-9 Section 3* business process definition.
5. Set up security policies for electronic Form I-9 domains and business processes.
   See Steps: Set Up Security for Electronic Form I-9 on page 760.
6. (Optional) Maintain Form I-9 Settings on page 768.
7. (Optional) Complete Set Up and Upgrade Prerequisites for E-Verify Integration.

Result

You can create and complete electronic Forms I-9 to verify that your employees are eligible to work in the U.S.

Next Steps

- Add the Form I-9 Process Status worklet to the Home landing page for tracking purposes.
- From the main menu, select Sitemap > Personal Data for a list of Form I-9 tasks and reports.

Related Information

Concepts

Concept: Electronic Form I-9 Workflow on page 775

Concept: Electronic Form I-9 and Retry Button Limitations on page 777

Concept: Purging Electronic Forms I-9 on page 778

Tasks

Steps: Set Up Worker Onboarding on page 746

Steps: Manage Electronic Form I-9 on page 766

Steps: Set Up Security for Electronic Form I-9

Prerequisites

Security: *Security Configuration* domain in the System functional area.

Context

Set up security for the electronic Form I-9 so that employees can complete the form and support partners can review and verify the data.

Note: Workday enables you to create a legal Form I-9, but doesn't assume responsibility for compliance.

Steps

1. Edit Business Process Security Policies.

   Configure these Form I-9 business processes in the Onboarding and Personal Data functional areas and assign security groups to actions. As you complete this task, consider:

Business Process	Suggested Security Groups
Complete Form I-9	Grant permission on the *Complete Form I-9* initiating action to the *Employee as Self* security group. If you have pre-hire workers, add the *Pre-Employee as Self* security group on the initiating action so that they can complete the Form I-9 before their start date. Workday recommends that you grant *View All* permission to the security groups that have permission on the initiating action.
Amend Form I-9	Grant permission on the *Form I-9 Section 1 - Amend* action to the *Employee as Self* security group. Grant *View All* permission to the *Employee as Self* security group in addition to the security groups that have permission on the initiating actions.
Manage Form I-9 Assignment	Assign the relevant security groups to actions on the business process, such as *HR Administrator*, *HR Partner*, or other relevant roles.
Internal Audit Form I-9	Assign the relevant security groups to actions on the business process, such as *HR Administrator*, *HR Auditor*, or other relevant roles.
Complete Form I-9 Section 3	Assign the relevant security groups to actions on the business process, such as *HR Administrator*, *HR Auditor*, or other relevant roles.

2. Edit Domain Security Policies.

   Configure these domains in the Onboarding functional area. Grant domain security permissions for viewing Forms I-9, worker IDs, and Form I-9 attachments, as well as for E-Verify resubmission.

Domain	Suggested Security Groups	Permission
Process: I-9 Forms	*HR Administrator* *HR Partner*	View
Process: Resubmit: Form I-9	*HR Administrator* *HR Partner*	View and Modify
Self-Service: Form I-9 Attachments in View	*Employee as Self* *Pre-Employee as Self*	View

Domain	Suggested Security Groups	Permission
Self-Service: I-9 Forms	*Employee as Self* *Pre-Employee as Self*	View
Worker Data: Form I-9: Additional Information	*HR Administrator* *HR Partner*	View and Modify
Worker Data: Form I-9 Attachments	*HR Administrator* *HR Partner*	View
Worker Data: I-9 Forms	*HR Administrator* *HR Partner*	View and Modify

The *Worker Data: I-9 Forms* domain secures the Form I-9 Process Status report. The *Process: I-9 Forms* domain secures additional Form I-9 reports and *E-Verify* integration details.

Workday doesn't recommend configuring the *Self-Service: Form I-9 Attachments in Events* domain. You can potentially expose a worker's personal data if you attach the wrong document to another worker's Form I-9. Even when you delete the wrong attachment, it's still included and displayed in event views.

3. Activate Pending Security Policy Changes.

Steps: Set Up Complete Form I-9 Business Process

Prerequisites

- To use the *E-Verify* integration, create the integration before you configure the integration steps on the *Complete Form I-9* business process.
- Security: These domains in the System functional area:
  - *Business Process Administration*
  - *Manage: Business Process Definitions*

Context

You can set up the *Complete Form I-9* business process so employees can create an electronic Form I-9 to verify U.S. employment eligibility. You can use the *Complete Form I-9* business process independently or as an action on the *Onboarding* business process. You can include integration steps on the *Complete Form I-9* business process to submit employee data to the *E-Verify* integration for work authorization.

When it's part of the *Onboarding* business process, the *Complete Form I-9* action step must come after the:

- *Name Change* and *Contact Change* tasks complete. When you prepopulate the Form I-9, Workday makes the employee's name and home address available for the Form I-9.
- *Completion* step on the *Onboarding* business process, for faster employment verification, as the integration pauses until *Onboarding* is complete.

Note: Workday enables you to create a legal Form I-9 but doesn’t assume responsibility for compliance.

Steps

1. Edit Business Processes.

   Configure the *Complete Form I-9* business process in the Onboarding functional area.

   Use this business process step order:

   - When you use the *E-Verify* integration, include steps *a* - *j*.
   - When you enter data into the E-Verify website manually or you don't use E-Verify, include steps *a*, *b*, and *j*.

Order	If	Type	Specify
a		Initiation	
b		Action	Review Form I-9
c	U.S. Employment Not Already Authorized? (Workday Owned)	Service	E-Verify Initial or Reverification
d	E-Verify identifies cases with the same SSN in last 365 days? (Workday Owned)	Action	E-Verify Duplicate Case Check
e	Close duplicate cases and create a new case at E-Verify? (Workday Owned)	Service	E-Verify Close Duplicate and Create New Case
f	Case is queued? (Workday Owned)	Service	E-Verify Queued Case
g	Case requires a photo match? (Workday Owned)	Action	E-Verify Photo Match
h	Case requires a photo match? (Workday Owned)	Service	E-Verify Confirm Photo
i	Case requires review of potentially incorrect data? (Workday Owned)	Service	Create New I-9 Event for E-Verify Reverification
j	U.S. employment eligibility status pending? (Workday Owned)	Action	Final U.S. Employment Verification Status

   (Optional) Add an *Approval* step after *b* and before *c* for an additional review of Form I-9 supporting documents.

   The *Completion* step must be step *b* or the optional *Approval* step. Make the *Approval* step the business process *Completion* step.

2. (Optional) Select Business Process > Maintain Step Conditions from the related actions menu of step *b*.

   To require a Social Security Number on Section 1 of the Form I-9, add a row on the Validation Conditions tab and select *Create Condition Rule* on the Rule prompt.

   Build a condition rule based on this Workday-delivered report field for IDs:

Source External Field for Condition Rule	Relational Operator	Comparison Type	Comparison Value
Is Social Security Number Available on Form I-9 Event	equal to	Value specified in this filter	No

3. Select Business Process → Maintain Advanced Routing from the related actions menu of the *Review Form I-9* step.

   Add a routing restriction to ensure that HR partners aren't assigned to the step for their own Form I-9.
4. (Optional) Select Business Process → Maintain Help Text from the related actions menu of the business process.

   Add help text for E-Verify by providing instructions for step *b*.

   In the Help Text column, enter this message: *When using E-Verify, any document presented for Type B must have a photograph that matches the employee.*
5. (Optional) From the related actions menu of the business process, select Business Process → Edit Definition.

   When you use E-Verify, click these buttons to configure the integration:

   - Configure E-Verify Initial or Reverification
   - Configure E-Verify Close Duplicate and Create New Case
   - Configure E-Verify Confirm Photo

   On the Configure E-Verify Event Service page, select the same *E-Verify* integration system.
6. (Optional) Select Business Process → Maintain Step Label Override from the related actions menu for steps *g* and *j*.

   When you use E-Verify, specify these step label overrides:

   - Step *g*: Photo Match
   - Step *j*: Finalize
7. (Optional) Create Custom Notifications.

   For E-Verify, inform an HR partner when an employee doesn't have authorization to work. Use the U.S. Employment Verification Status report field to create a notification rule.

Steps: Set Up Amend Form I-9 Business Process

Prerequisites

- If you plan on using the *E-Verify* integration to update Form I-9 receipts, create the integration system before you configure the integration steps on the *Amend Form I-9* business process.
- Security: These domains in the System functional area:
    - *Business Process Administration*
    - *Manage: Business Process Definitions*

Context

Set up the *Amend Form I-9* business process so that you can:

- Send back Section 1 of the Form I-9 to an employee so they can correct it.
- Make changes to Section 2 of an employee's Form I-9.
- Add, delete, or update any attachments on an employee's Form I-9.
- Use the Update Form I-9 Receipts task to update an employee's Form I-9 once you receive the document they initially presented a receipt for.

If you want to submit an employee's Form I-9 to E-Verify once you receive the document that they initially presented a receipt for, you can include integration steps on the *Amend Form I-9* business process.

You can also configure advanced routing fields on the *Amend Form I-9* business process when you use multiple *E-Verify* integrations.

Forms will only be sent to E-Verify through the *E-Verify* integration using the Update Form I-9 Receipts task.

Note: You can't amend Section 3 data after you submit the task in Workday.

Steps

1. Edit Business Processes.

   Configure the *Amend Form I-9* business process in the Onboarding functional area.

   Order the business process steps as shown. When you use the *E-Verify* integration, include steps *c* - *h*. The *Completion* step must be on or after step *b*, and before step *g* or step *i*.

Order	If	Type	Specify
a		Initiation	
b	Amend Section 1? (Workday Owned)	Action	Form I-9 Section 1 - Amend
c	Update Form I-9 Receipts? (Workday Owned)	Service	E-Verify Initial or Reverification
d	E-Verify identifies cases with the same SSN in last 365 days? (Workday Owned)	Action	E-Verify Duplicate Case Check - Amend
e	Close duplicate cases and create a new case at E-Verify? (Workday Owned)	Service	E-Verify Close Duplicate and Create New Case

Order	If	Type	Specify
f	Case is queued? (Workday Owned)	Service	E-Verify Queued Case
g	Case requires a photo match? (Workday Owned)	Action	E-Verify Photo Match - Amend
h	Case requires a photo match? (Workday Owned)	Service	E-Verify Confirm Photo
i	U.S. employment eligibility status pending? (Workday Owned)	Action	Final U.S. Employment Verification Status - Amend

2. (Optional) From the related actions menu of the business process, select Business Process → Edit Definition.

   When you use E-Verify, click these buttons to configure the integration:

   - Configure E-Verify Initial or Reverification
   - Configure E-Verify Close Duplicate and Create New Case
   - Configure E-Verify Confirm Photo

   On the Configure E-Verify Event Service page, select the same *E-Verify* integration system.
3. (Optional) Select Business Process → Maintain Step Label Override from the related actions menu for steps *g* and *i*.

   When you use E-Verify, specify these step label overrides:

   - Step *g*: Photo Match
   - Step *i*: Finalize
4. (Optional) Create Custom Notifications.

   For E-Verify, inform an HR partner when an employee doesn't have authorization to work. Use the U.S. Employment Verification Status report field to create a notification rule.
5. (Optional) Maintain Form I-9 Settings on page 768.

   When you use E-Verify, select the Collect advanced routing fields when Updating Form I-9 Receipts check box.

Steps: Manage Electronic Form I-9

Prerequisites

Set up the electronic Form I-9 business processes, security policies, and optional *E-Verify* integration.

Context

Use these tasks and reports as needed to ensure that Forms I-9 for your employees are accurate and up-to-date.

Steps

1. Access the Form I-9 Internal Audits report.

   Review a list of completed Forms I-9, including the latest audit date and whether the audit is current. You can audit a Form I-9 for an employee as often as needed. Select a form to verify that the information is accurate, and finalize the audit when it's complete.

   Security: *Audit: I-9 Forms* domain in the Personal Data functional area.
2. Access the Form I-9 Audit Trail report.

   Review Form I-9 activity, including records of external Form I-9, for a specified time period. You can filter by organization, establishment, employee, or location. You can view the business process history and status for these business processes:

   - *Amend Form I-9*
   - *Audit Form I-9*
   - *Complete Form I-9*
   - *Complete Form I-9 Section 3*
   - *Manage Form I-9 Assignment*

   Security: *Audit: I-9 Forms* domain in the Personal Data functional area.
3. Access the Form I-9 Audit Trail Details report.

   Review granular details about a single Form I-9, including ones completed through the remote hire process.

   You can access this report by using the:

   - View Audit Trail button when viewing an employee's latest Form I-9.
   - Related action off of the *Complete Form I-9* or *Complete Form I-9 Section 3* business process in the View Worker History report.

   Security: *Audit: I-9 Forms* domain in the Personal Data functional area.
4. Access the Amend Form I-9 task.

   Make changes to a completed Form I-9. For Section 1 changes, specify those items on the Instructions for Employee field and send the form back to the employee. For changes to Section 2 or an attachment, you must edit the form. Any changes made by you or the employee display on the Form I-9 Amended Data table when you view their Form I-9. You can amend any Form I-9 with an *Employment Authorized* status.

   Configure the *Amend Form I-9* business process and security policy in the Onboarding functional area.
5. Track Form I-9 Receipts.

   Record when an employee submits a Form I-9 receipt instead of an original document to verify their U.S. employment eligibility status.
6. Access the Complete Form I-9 Section 3 task.

   Reverify the U.S. employment eligibility status for an employee, update their Form I-9 when they have a legal name change, or enable the rehire process.

   Configure the *Complete Form I-9 Section 3* business process and security policy in the Personal Data functional area.

Next Steps

View and print Forms I-9 with attachments.

Maintain Form I-9 Settings

Prerequisites

Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

Context

Configure how the electronic Form I-9 displays on your Workday tenant.

Steps

1. Access the Maintain Form I-9 Settings task.
2. As you complete the task, consider:

Option	Description
Default HR Employee Data into Section 1 of Form I-9	Automatically populates these contact and personal information fields on Section 1 if the data exists on the employee's HR record in Workday: • Name • Address • Date of birth • SSN • Phone number • Email address
Default HR Employer Name and Title Data into Form I-9	Automatically populates these employer fields on Sections 2 and 3 if the data exists on the employee's HR record in Workday: • Section 2: First name, last name, and title of employer or authorized representative. • Section 3: Name of employer or authorized representative.
Override employee profile Date of Birth and SSN with Form I-9 data	Automatically populates date of birth and SSN from an employee's *Complete Form I-9* event to their profile. Note: Assess the impact of selecting this check box. Workday automatically updates employee SSN and date of birth values without notifications or requiring confirmation.
Electronic Form I-9 Section 2 Business Name and Address	If you select an option from the Default Business Name and Address prompt, Workday automatically populates this information into Section 2. If you configure values on the Select Business Name and Address from List grid and select a default, Workday automatically populates this information into Section 2.

Option	Description
Remote Form I-9 Section 2 Business Name and Address	If you don't configure this section, Workday automatically populates the authorized representative's company address into Section 2. Note: For Remote Forms I-9, the authorized representative refers to the user or role that you configured on the Manage Remote Form I-9 shared participation step in the *Complete Form I-9* business process.
Form I-9 Internal Audit Data	Include the Internal Audit Reason and Internal Audit Conclusion fields. You can optionally display, hide, or require these fields.
Manage Form I-9 Assignment	Create reasons for assigning or not assigning a Form I-9 to an employee who already has 1 in Workday.
Manage Remote Form I-9 Process	Select HR roles select authorized representative to give HR roles the ability to designate an external authorized representative who can complete Section 2 of the Form I-9. By default, Workday automatically enables employees to designate their own external authorized representative.
Authorized Representative Relationships for Remote Employees	Configure options that employees can select as an authorized representative to complete their Form I-9.
Remote Form I-9 Attestation Text	Create custom attestation text that authorized representative must attest to before completing Section 2 of the Form I-9.
Remote Form I-9 Attachment Instructions	Create custom instructions that display when an authorized representative attaches documents to Section 2 of the Form I-9.
Remote Form I-9 Email Notification Text	Create custom text that displays in the email sent to an authorized representative to complete Section 2 of the Form I-9.
Manage E-Verify Duplicate Case Reasons	Create reasons for submitting duplicate cases to E-Verify. Note: This field is only available to customers who are on E-Verify v30.
Form I-9 Default Overdue Reason	Configure the overdue reason that automatically populates on the *E-Verify - Employment Verification* integration template when you mass resubmit Forms I-9 to E-Verify.
Advanced Routing for Amend Form I-9 Business Process	Select the Collect advanced routing fields when Updating Form I-9 Receipts check box to add the Organization and Company fields to the Update Form I-9 Receipts task.

Option	Description
	Configure these fields on the *Amend Form I-9* business process to route a Form I-9 correctly to E-Verify. When you've 2 or more *E-Verify* integrations, the check box enables you to send Form I-9 data to the correct *E-Verify* integration.
Form I-9 Attachment Options	You can print Forms I-9 and attachments. Select: • *Ask Before Printing Form I-9 Attachments* • *Always Print Form I-9 Attachments*. This option also enables you to print attachments when you click the print icon while viewing a worker's Form I-9. Note: The maximum number of Form I-9 documents that you can print at one time is 100.
Form I-9 Language Options in Puerto Rico	Specifies how the electronic Form I-9 displays for workers located in Puerto Rico. Workday displays the Form I-9 in the language that you select, regardless of the employee's preference. Sections 2 and 3, the View Form I-9 for Worker report, and the Print Form I-9 task also display in the language you select. When you enable employees to select their language for the Form I-9, you must complete Sections 2 and 3 in their selected language, regardless of your preference.

Track Form I-9 Receipts

Prerequisites

- If you use the *E-Verify* integration, add integration steps on the *Amend Form I-9* business process.
- Configure the *Complete Form I-9* and *Amend Form I-9* business processes and security policies in the Onboarding functional area.

Context

Record any of these receipts on an employee's Form I-9 to indicate that they’re temporarily authorized to work in the United States:

- A receipt showing that they've applied to replace a lost, stolen, or damaged List A, B, or C document.
- The arrival portion of Form I-94 or I-94A with a temporary I-551 stamp (with photo).
- The departure portion of Form I-94 or I-94A.

You can also:

- View who has Forms I-9 with receipts and when those receipts expire.
- Update an employee's Form I-9 when you receive the document that they initially presented a receipt for.

Steps

1. Access My Tasks and select the Form I-9 of the employee that you want to record a receipt for.
   a) On Section 2 of the Form I-9, select the Document presented is a receipt check box on List A, B, or C.

      When you select an I-94 or I-94A document, Workday automatically selects the Document presented is a receipt check box.
   b) Enter the Document # and Expiration Date of the receipt.
2. (Optional) Access the Audit Form I-9 Receipts report to view employee Forms I-9 with receipts.
3. Access the Update Form I-9 Receipts task to update an employee's Form I-9 when you receive the document that they initially presented a receipt for.
   a) If the Organization and Company fields display, select the organization and company that are most closely associated with the employee's Form I-9. These fields only display if:
      - You select the Collect advanced routing fields when Updating Form I-9 Receipts check box on the Maintain Form I-9 Settings task.
      - You configure security access on the *Worker Data: Form I-9: Additional Information* domain.
   b) Clear the Document presented is a receipt check box.
   c) Update the Document # and Expiration Date fields with the document number and expiration date of the actual document.

   You must have permission on the *Update Form I-9 Receipts* initiating action on the *Amend Form I-9* business process security policy.

Result

The employee's Form I-9 no longer displays on the Audit Form I-9 Receipts report.

When you configure the *E-Verify* integration in your tenant, Workday sends an employee's Form I-9 to E-Verify when it meets these conditions:

- The Form I-9 was amended through the *Update Form I-9 Receipts* initiating action.
- The Form I-9 doesn't have an E-Verify case number.

Note: Form I-94 or I-94A documents are sent to E-Verify as part of the *Complete Form I-9* business process. When you update these receipts on an employee's Form I-9, their form won't be sent to E-Verify again.

Related Information
Tasks
Steps: Set Up Amend Form I-9 Business Process on page 765
Maintain Form I-9 Settings on page 768

Concept: Manage Form I-9 Assignments

You can assign a Form I-9 to a worker who has an existing 1 in Workday using the:

- *Manage Form I-9 Assignment* business process.
- Manage Form I-9 Assignment for Worker task.

Manage Form I-9 Assignment Business Process

The *Manage Form I-9 Assignment* business process enables you to determine if a worker requires an additional form. You can assign another Form I-9 as part of an Onboarding action, which includes a step for the Complete Form I-9 task.

To use the *Manage Form I-9 Assignment* business process, you must:

- Configure it on the *Onboarding* business process before the *Complete Form I-9* action.
- Apply all of these condition rules:
    - There's a Form I-9 already in Workday.
    - The Form I-9 has a status of *Employment Authorized*.
    - Onboarding is a subprocess of the *Add Additional Job* or *Change Job* business process.
    - The position for *Add Additional Job* or *Change Job* is in the United States.

You can create reasons for assigning or not assigning a Form I-9 in the Manage Form I-9 Assignment section on the Maintain Form I-9 Settings task.

If you use 2 or more *E-Verify* integrations, select the Collect advanced routing fields when Updating Form I-9 Receipts check box from the Maintain Form I-9 Settings task.

Manage Form I-9 Assignment for Worker Task

You can use the Manage Form I-9 Assignment for Worker task to assign a Form I-9 to a worker outside of the *Onboarding* business process. To assign a Form I-9, you must add a Complete Form I-9 action to the *Manage Form I-9 Assignment* business process.

You can create reasons to assign a Form I-9 in the Manage Form I-9 Assignment section on the Maintain Form I-9 Settings task. When you assign Forms I-9 with this task, Workday doesn't send them to E-Verify.

Note: This task enables you to assign a Form I-9 to an employee, not a pre-employee.

The Organization prompt on the Manage Form I-9 Assignment for Worker task only lists supervisory organizations. The HR partner by location must exist in the supervisory organization and not just on the location.

Concept: Electronic Form I-9 Section 3

You can use the Complete Form I-9 Section 3 task to complete a Section 3 for:

- Updating an employee's legal name.
- Rehires.
- Reverifying expiring documents.

When you complete Section 3, you can add attachments. To delete attachments, you can access the Amend Form I-9 task.

Note: You can't amend Section 3 data after you submit the task in Workday.

Form I-9 Section 3 for Rehires

You can assign relevant security groups to the *Complete Form I-9 Section 3 as Sub of Hire* initiating action on the *Complete Form I-9 Section 3* business process security policy.

You can enable rehires to complete Section 3 by adding the:

- *Complete Form I-9* action step on the *Onboarding* business process.
- *Complete Form I-9 Section 3* action step on the *Hire* business process.

When you add the *Complete Form I-9 Section 3* action step on the *Hire* business process, this automatically includes the Workday owned *Form I-9 Rehire* condition rule. If you don't configure the *Complete Form I-9 Section 3* action step on the *Hire* business process, the Complete Form I-9 task always initiates and assigns a new Form I-9 to rehire employees.

The *Form I-9 Rehire* condition rule applies when:

- You rehire employees within 3 years of completing their original Form I-9. Workday uses the employer or authorized representative's signature date as the completion date.
- Complete their original form using the Workday electronic Form I-9, revision 2013 or later, or have a Record of External Form I-9.
- Employees have a U.S. employment eligibility status of *Employment Authorized* or *External Record*.

Form I-9 Section 3 for Reverification of Expiring Documents

You can reverify expiring documents for employees who have:

- An existing electronic Form I-9 in Workday.
- A U.S. employment eligibility status of *Employment Authorized* or *External Record*.

If you’re reverifying an expiring Form I-9 document for an employee who presents you with a receipt, you can select the Document presented is a receipt check box. When you receive the actual document, you must complete the Complete Form I-9 Section 3 task for them again.

To view employees and their Form I-9 documents with expiration dates, you can access the U.S. Employees with Form I-9 Expiring Documents report.

Revisions of Form I-9 Section 3

The information that Workday displays when you complete or view a Form I-9 Section 3 depends upon the Form I-9 and the Form I-9 Section 3 revisions. This table explains what you see in Workday based on the Form I-9 revision year.

Form I-9 Revision	Form I-9 Section 3 Revision Year	Complete Form I-9 Section 3 Task	View Form I-9 for Worker Task
2009	N/A	N/A	N/A
2013	2016	N/A	Workday displays the 2016 Form I-9 with a: • Blank Section 1 and Section 2. • Completed Section 3. • Link to the 2013 Form I-9.

Related Information

Tasks

Steps: Set Up Electronic Form I-9 on page 759
Steps: Manage Electronic Form I-9 on page 766

Concept: Electronic Form I-9 Workflow

An employee can complete an electronic Form I-9 when the:

- Employee has no other *Complete Form I-9* events in progress.
- Hire process is complete.
- Position is based in the U.S.

The electronic Form I-9 includes fields that don't display on the printed Form I-9 to:

- Enable *E-Verify* integration.
- Progress the Form I-9 through Workday business processes.

The electronic Form I-9 displays the same information as the paper form and provides a link to the full Form I-9 instructions at the U.S. Citizenship and Immigration Services (USCIS) website.

Employees can access the self-service task to initiate the *Complete Form I-9* business process. Regardless of how the Form I-9 initiates, employees electronically sign the Form I-9.

Section 1. Employee Information and Attestation

- The employee fills out the form, provides any required or optional data, and selects the appropriate check boxes.
- When you want the date of birth and SSN data from the Complete Form I-9 task to override the employee's profile information, you can select the Override employee profile Date of Birth and SSN with Form I-9 data check box on the Maintain Form I-9 Settings task. When the employee submits the Form I-9, Workday overrides the SSN and date of birth from the Form I-9 to replace the SSN and date of birth on their HR record.

  Note: Selecting this check box doesn't send notifications or acknowledgments of this change.
- When you rescind the *Complete Form I-9* business process, these processes are also rescinded.

Preparer and/or Translator Certification

Employees can add up to 5 preparers or translators.

Employers:

- Can't add preparers or translators in Section 2.
- Can send back the Form I-9 to the employee to add or remove preparers or translators.

Section 2. Employer or Authorized Representative Review and Verification

- Enter documents from List A, or List B and List C, then provide the necessary document details.

  Workday filters the selection lists in prompts for Lists A, B, and C based on the citizenship or immigration status the employee selects and provides a validation to ensure accurate data entry.
- When the employee provides a Social Security card as a List C document, you must enter the number in List C manually.
- When Workday selects the issuing authority that corresponds to a document, you can override this value.
- You can send the form back to the employee to enter missing data or make corrections.
- Select the I Agree check box, which serves as an electronic signature.
- You can configure Workday to populate the employer name, title, organization, and address in this section. Workday adds the current date stamp before you approve the form.
- If necessary, you can select an Overdue Reason.

(Optional) E-Verify Integration

- You can configure Workday to send the employee Form I-9 data to E-Verify automatically.
- When the original Form I-9 has questionable data, E-Verify requests reverification. Workday displays customized instructions on the *Form I-9 Data Verification* event indicating which items are in question. You can correct supporting document information, but corrections to Section 1 must come from the employee.
- You can configure Workday to:
  - View cases created for an employee in the last 365 days. You can close a duplicate case before creating a new one at E-Verify.
  - Sync updated case statuses from E-Verify on a recurring basis.
- Depending on the documents provided by the employee, E-Verify returns an employee photo for you to verify. E-Verify determines requirements for photo matching. If a photo is missing or doesn't match, you must upload images of your employee's document.
- E-Verify might request that you upload front and back images of a document without requiring you to confirm if the photo matches or is missing.
- Workday resubmits the information, and E-Verify returns the employment authorization status. When the authorization is:
  - Successful, Workday closes the E-Verify case and automatically completes the finalization step on the Workday business process.
  - Unsuccessful, Workday maintains the E-Verify case number so you can resolve the case manually on the E-Verify website. If you configure the integration to sync case statuses and you receive a *U.S. Employment Verification Status* from E-Verify, Workday automatically completes the *Final U.S. Employment Verification Status* step on the business process.
- If the E-Verify connection fails, Workday displays a status of *Awaiting E-Verify Submission*. You can click Retry to resubmit the information if you have permission on the *Process: Resubmit: Form I-9* domain. If the Form I-9 is overdue, you can enter an overdue reason before you retry the E-Verify submission.

Manual Entry of Final U.S. Employment Verification Status

- You can use the *Final U.S. Employment Authorization Status* step to enter employment eligibility details.
- When not using E-Verify, you can make an eligibility determination and enter it here.
- When E-Verify doesn't immediately return an authorization, Workday pauses the *Complete Form I-9* business process on this step. Workday also displays information from E-Verify so you can manually

progress the Form I-9 at the E-Verify website. After resolution is reached with E-Verify, you can record the eligibility status and any additional information here. You can then submit the *Complete Form I-9* business process.
- When you select a status of *Employment Not Authorized* or *Verification Not Determined*, Workday automatically rescinds the *Edit ID Information* business process and removes the SSN and Form I-9 List A, B, and C document IDs from the worker record.
- When you enter an incorrect eligibility status or E-Verify case number and no steps remain in the *Complete Form I-9* business process, you can change the status or case number using the Correct action on the business process.

Forms I-9 with Unsuccessful Verifications

When an employee's previous Form I-9 has a status of *Verification Not Determined* or *Employment Not Authorized*, you can relaunch the *Complete Form I-9* business process and create a new Form I-9.

Reference

Reference: E-Verify Case Statuses on page 779

U.S. Citizenship and Immigration Services (USCIS)

Concept: Electronic Form I-9 and Retry Button Limitations

Electronic Form I-9

The electronic Form I-9 in Workday doesn't support:

- Completion of the form by federal contractors who are subject to the Federal Acquisition Regulation (FAR) E-Verify clause.
- Special Placement signatures for employees with disabilities.

According to the Federal Acquisition Regulation (FAR) E-Verify rule, federal contractors must complete E-Verify either:

- As part of their hire process.
- Upon assignment to a federal contract, if they're existing employees.

When you use the electronic Form I-9, you can only add the *Complete Form I-9* subprocess to the *Onboarding* business process.

When a Form I-9 reaches its retention period, you can only view the *Complete Form I-9* event when you select Worker History by Category > Personal Data.

E-Verify Integration Retry Button

When you use the Workday *E-Verify* integration, the Retry button is unavailable:

- On the Update Form I-9 Receipts task.
- When you have a read time-out.

If you have a read time-out, check for an open case on the E-Verify website. If there's no case, you can manually submit the information at E-Verify.

If you use Retry button to submit a case that requires a photo match or information confirmation, you can only progress the case on the E-Verify website.

Once you complete the case in E-Verify, you can record the *U.S. Employment Verification Status* and Final E-Verify Case Number in Workday.

Tasks

Steps: Set Up Electronic Form I-9 on page 759

Concept: Purging Electronic Forms I-9

You can purge an electronic Form I-9 for a terminated worker after it meets the U.S. Citizenship and Immigration Services (USCIS) retention requirements.

Note: You can't reverse a purge. We recommend that you consult with your legal counsel before purging data.

There are 2 tasks you can use to purge electronic Forms I-9: Purge Person Data and Create Purge Plan.

You can use the Create Purge Plan task to create a purge plan. A purge plan consists of the privacy purge custom report you created, along with the data types you want to purge. You can determine if you want to include a purge plan when you access the Purge Person Data task.

Task	Result
Purge Person Data with a purge plan	You can purge a terminated employee's Form I-9, but not their personal data. Workday doesn't purge their Forms I-9 if the forms haven't met the retention requirements.
Purge Person Data without a purge plan	You can purge a terminated employee's Form I-9 and their personal data. When you purge a terminated employee, Workday either: • Permanently removes all personal data and their Forms I-9. • Permanently removes all personal data, but Forms I-9 remain viewable if they haven't met the USCIS retention requirements. You can later purge the Form I-9 data for a purged terminated employee, after it meets USCIS retention requirements.

Steps: Schedule Privacy Purge Operations

Reference: Printing Electronic Forms I-9

On the Form I-9 Attachments section of the Maintain Form I-9 Settings task, you can select *Always Print Form I-9 Attachments* or *Ask Before Printing Form I-9 Attachments* to print Forms I-9 with attachments. You can view and print Forms I-9 with attachments with these tasks and reports:

Domain	Task
• *Print: I-9 for Workers* • *Print: I-9 Self Service*	Print Form I-9
• *Self-Service: I-9 Forms* • *Worker Data: I-9 Forms*	Print Form I-9 for Workers

Domain	Report
Worker Data: I-9 Forms	Mass Print Form I-9 for Workers
Audit: I-9 Forms	View Form I-9 for Worker

For the Mass Print Form I-9 for Workers report, you can filter the report by selecting the True check box on the Worker has Form I-9 facet. When you print your selected forms, Workday:

- Consolidates them according to language and revision number.
- Delivers them as PDFs to My Reports.

Reference: E-Verify Case Statuses

If you use the Workday *E-Verify* integration, you might receive these case statuses after you submit Forms I-9 for your employees:

Case Status	Description
MANUAL_REVIEW	The case requires a manual review by the Department of Homeland Security (DHS). When you receive this status, access the E-Verify website to view the results of the manual review and progress the case. You need to bring the final status back into Workday to complete it.
PENDING_REFERRAL	The case receives a Tentative Nonconfirmation (TNC). When you receive this status, access the E-Verify website to refer the TNC to DHS, Social Security Administration (SSA), or both, to complete the case. You need to bring the final status back into Workday to complete it.
QUEUED	E-Verify is processing the case. Access the E-Verify website to view the updated case status and progress the case. You need to bring the final case status into Workday to complete it.
REFERRED	The case is a referral. You need to bring the final status back into Workday to complete it.
SCAN_AND_UPLOAD	Upload images of the front and back of the employee's photo document.
UNCONFIRMED_DATA	Some case information is potentially incorrect. Review and update the identified fields.

You can automate updating case statuses and the closure of the *Final U.S. Employment Verification Status* step in Workday if you configure the:

- *E-Verify Company* attribute on the *E-Verify - Employment Verification* integration template. Ensure that the company is valid and includes any workers with possible new or updated Forms I-9.
- *SyncCaseStatus* option on the Launch/Schedule integration task.

The automation eliminates the need to access the E-Verify website to bring the final case status into Workday manually to complete it.

FAQ: Electronic Form I-9

- Is the Social Security Number (SSN) optional?
- Does the Form I-9 in Workday meet USCIS guidelines?
- Can I attach identification documents to the Form I-9 in Workday?
- Why can't I see documents that I attached on a Form I-9?
- Can I delete Form I-9 data from Workday?
- How do I know if an employee needs to complete a new Form I-9 when adding or changing jobs?
- Can I correct a worker's U.S. Employment Verification Status after submission?

Is the Social Security Number (SSN) optional?	If an employer participates in E-Verify, employees must provide the SSN. It is the decision of your company to make the SSN required. If you participate in E-Verify, Workday recommends that you add a validation condition to the *Complete Form I-9* business process. The validation ensures that the U.S. Social Security Number field isn't blank when the employee submits their information. For more information, see U.S. Citizenship and Immigration Services.
Does the Form I-9 in Workday meet USCIS guidelines?	Yes. The electronic Form I-9 satisfies United States Citizenship and Immigration Services (USCIS) requirements. Workday continues to track the USCIS guidance published in the Handbook for Employers (M-274). Note: Confirm your Form I-9 compliance requirements and processes before enabling electronic Form I-9 business processes. Workday enables you to create a technically compliant Form I-9 and adheres to legal requirements for an electronic Form I-9. However, your organization is ultimately responsible for its Form I-9 compliance.
Can I attach identification documents to the Form I-9 in Workday?	Yes, you can attach documents to: • Section 2 of the Form I-9 until you submit it. • The *Complete Form I-9 Section 3* business process. You can use the *Amend Form I-9* business process to add or delete any attachments to the Form I-9. When you add or delete attachments through the *Amend Form I-9* business process, the Form I-9 Amended Data table indicates that a change occurred. It doesn't record specific details. If you want to record additional information, Workday recommends that you enter it in the Reason for Change field.

Why can't I see documents that I attached on a Form I-9?	To view Form I-9 attachments, you must be secured to the *Worker Data: Form I-9 Attachments* domain. You can enable workers to view attachments on their Form I-9 by securing them on the *Self-Service: Form I-9 Attachment in View* domain.
Can I delete Form I-9 data from Workday?	Workday doesn't delete Form I-9 data. Workday provides access to electronic Forms I-9 for all current, active employees. For terminated employees, we keep Forms I-9 for either: • 3 years after the hire date when the employee works less than 3 years. • 1 year after the termination date when the employee works more than 3 years. Once a Form I-9 for a terminated employee exceeds this period, the form is inactive, but you can search for or view inactive forms in Workday. Once a Form I-9 reaches its retention, you can purge the Form I-9 data from Workday.
How do I know if an employee needs to complete a new Form I-9 when adding or changing jobs?	Workday delivers a condition rule on the *Complete Form I-9* step of the *Onboarding* business process that checks if an employee: • Has their primary job located in the United States or U.S. territories. • Doesn't have an in-progress or completed Form I-9. Employees who meet these conditions receive the Complete Form I-9 task when *Onboarding* is a subprocess for these business processes: • *Add Additional Job*. • *Change Job*.
Can I correct a U.S. Employment Verification Status for a worker after submission?	Yes. You can only correct the U.S. Employment Verification Status when no steps are left in the *Complete Form I-9* business process. You must have permission on the *Correct* action on the *Complete Form I-9* business process security policy.

Form I-9 for Remote Hire

Setup Considerations: Form I-9 for Remote Hire

You can use this topic to help make decisions when planning your configuration and use of Forms I-9 for remote hire. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirement and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

With Form I-9 for Remote Hire, you can enable remote employees to designate an external authorized representative to complete Section 2 of the Form I-9, streamlining the remote hiring process.

Business Benefits

- Greater flexibility managing and completing Forms I-9 for remote employees.
- Employees can designate an external authorized representative to complete Section 2 of the Form I-9.

Use Cases

- HR partners or administrators can configure the remote hire process to determine who can specify an external authorized representative to complete Section 2 of the Form I-9.
- Employees can specify who will be their external authorized representative.

Questions to Consider

Questions	Considerations
Do you need separate *Complete Form I-9* business processes for remote and in-person employees? What if you use the *E-Verify* integration?	When you use the *E-Verify* integration, determine whether you want to create a single *Complete Form I-9* business process for in-person and remote employees. You'll also need to use condition rules to differentiate between the 2 groups of employees. If you use E-Verify, you'll need to have condition rules to determine if a Form I-9 requires data verification for E-Verify. You can also create 2 separate business processes: One for remote employees and 1 for in-person employees. Your business process for remote employees will also need to use condition rules to determine if a Form I-9 requires data verification for E-Verify.
Who do you want to help guide the remote hiring process?	Workday enables you to determine the external authorized representative relationships that employees can select to complete Section 2 of the Form I-9. Authorized representatives must be external to your organization. Example: Family member, friend, notary. You can also determine a role, such as an HR partner, who can review Section 1 and Section 2 of the Form I-9. This person can edit the external authorized representative's information, send back the form for correction, resend the link, and submit the Form I-9.

Questions	Considerations
Who do you want to enable to select an external authorized representative to complete the Form I-9 for Remote Hire?	You can select the HR Roles Select Authorized Representative check box on the Maintain Form I-9 Settings task to enable HR roles to designate an external authorized representative who can complete Section 2 of Form I-9. Settings apply to all your Remote Forms I-9: • If you select the check box, HR roles can designate external authorized representatitves. • If you clear the check box, Workday automatically enables employees to designate their own external authorized representative.

Recommendations

When you use the *E-Verify* integration, create a condition rule on your *Complete Form I-9* business process that uses the E-Verify Event Created by report field. The condition rule determines if the Form I-9 requires data verification for E-Verify.

Requirements

No impact.

Limitations

You can only configure the relationship options the employee can select to designate their external authorized representative. When you want employees to use a specific person to complete the employee's Section 2, you can provide that person's information. The employee can enter that person's information when they designate their external authorized representative.

Tenant

No impact.

Security

Domain	Considerations
Process: Remote Form I-9 in the Onboarding functional area.	Provides users access to tasks related to completing a Form I-9 for remote hire.
Purge Person Data in the System functional area.	Provides access to tasks that enable you to purge Form I-9 data and the authorized representative's information.
Set Up: Configure Optional Fields in the System functional area.	Provides access to hide or require select fields on the Form I-9 for remote hire.
Set Up: System in the System functional area.	Secures the task that enables you to create the email template used for the email sent to the external authorized representative.
Set Up: Tenant Setup - BP and Notifications in the System functional area.	Secures the notification settings for email sent to the external authorized representative.

Domain	Considerations
Set Up: Tenant Setup - HCM in the System functional area.	Secures tasks that enable you to configure external authorized representative relationships, email notification text, attestation text, and the Section 2 business name and address.
Worker Data: I-9 Forms in the Onboarding functional area.	Provides access to report fields you can use in custom reports.

Business Processes

You can configure the *Manage Remote Form I-9* shared participation step on the *Complete Form I-9* business process. If you use multiple *Manage Remote Form I-9* and *Review Form I-9* steps, the steps must come before your completion step.

Reporting

No impact.

Integrations

The *E-Verify* integration enables you to:

- Submit Form I-9 data to the E-Verify service for employment eligibility verification.
- Receive results for employment eligibility verification, including photos. Department of Homeland Security (DHS) and Social Security Administration (SSA) databases provide some of these results.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Electronic Form I-9 for Remote Hire

Context

You can configure Workday so that remote employees can create an electronic Form I-9 to verify U.S. employment eligibility. You can enable remote hires to designate an external authorized representative to complete Section 2 of the Form I-9, streamlining the remote hiring process.

Note: Workday enables you to create a Form I-9, but doesn't assume responsibility for compliance.

Steps

1. Edit Domain Security Policies.

   Configure security for the *Process: Remote Form I-9* domain in the Onboarding functional area. Workday recommends that you grant the Employee as Self security group View and Modify permissions.
2. Edit Business Process Security Policies.

   Configure the *Complete Form I-9* business process security policy in the Onboarding functional area.
3. Edit Business Processes.

   Configure the *Complete Form I-9* business process in the Onboarding functional area.
   a) Add the *Manage Remote Form I-9* shared participation step.

      When you have multiple *Manage Remote Form I-9* or *Review Form I-9* steps, you must set the last step as the completion step.
4. Activate Pending Security Policy Changes.

5. Maintain Form I-9 Settings on page 768.

   Configure these sections:

   - Authorized Representative Relationships for Remote Employees
   - Remote Form I-9 Attestation Text
   - Remote Form I-9 Attachment Instructions
   - Remote Form I-9 Email Notification Text
   - Remote Form I-9 Section 2 Business Name and Address
6. Access the Edit Tenant Setup - Notifications task.

   On the HCM tab in the Notification Delivery Settings section, access the *Remote Form I-9 Authorized Representative Notification* notification type.

   Select the Override Parent Notification Type Settings check box.

   Create a notification routing rule that uses:

   - *Email* as the notification channel.
   - *Immediately* as the default frequency.

   See Reference: Edit Tenant Setup - Notifications.
7. Create Email Templates.

   Select the *Remote Form I-9 Authorized Representative Email Template Behaviour* option.
8. (Optional) Hide or Require Optional Fields.

   In the By Functional Area prompt, select Onboarding → Remote Form I-9.

   Consider the criteria that you want for these fields:

   - Authorized Representative Government ID
   - External Site Link
   - Section 2 Attachments

2021R2 What's New Post: Form I-9 for Remote Hire - Business Process

2021R2 What's New Post: Form I-9 for Remote Hire - External Site

Example: Set Up Complete Form I-9 Business Process for Remote Hire

This example illustrates 1 way to configure the *Complete Form I-9* business process when you use the *E-Verify* integration and want a single business process for your in-person and remote employees.

Context

Your company is located in Chicago and supports both in-person employees and remote employees. You don't want to create multiple *Complete Form I-9* business processes for each group of employees. Your company also uses the *E-Verify* integration, so you want to ensure that Workday routes the employees' Form I-9 to E-Verify properly.

You decide that in order to distinguish between your in-person and remote employees, you'll create condition rules based on location. You also decide to add condition rules to determine if a Form I-9 requires an *E-Verify Data Verification*.

Prerequisites

Security: These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

Steps

1. Access the *Complete Form I-9* business process in the Onboarding functional area.
2. Use this business process step order:

Order	Type	Specify	Group
a	Initiation		
b	Action	Review Form I-9	HR Partner
b	Shared Participation	Manage Remote Form I-9	HR Partner
b	Action	Review Form I-9	HR Partner
c	Service	E-Verify Initial or Reverification	
d	Action	E-Verify Duplicate Case Check	HR Partner
e	Service	E-Verify Close Duplicate and Create New Case	
f	Action	E-Verify Photo Match	HR Partner
g	Service	E-Verify Confirm Photo	
h	Service	Create New I-9 Event for E-Verify Reverification	
i	Service	Final U.S. Employment Verification Status	HR Partner

3. As a related action off of the first *Review Form I-9* action step, select Business Process → Create Condition Rule.

   Enter these values:

Description	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
In-Person Location	Location - Proposed	in the selection list	Value specified in this filter	Chicago

4. As a related action off of the *Manage Remote Form I-9* shared participation step, select Business Process → Create Condition Rule.

   Enter these values:

Description	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
Remote Location	Location - Proposed	not in the selection list	Value specified in this filter	Chicago

Description	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
Not E-Verify Data Verification	E-Verify Event Created by	is empty		

5. As a related action off of the *Review Form I-9* action step associated with the *Manage Remote Form I-9* step, select Business Process → Create Condition Rule.

   Enter these values:

Description	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
Remote Location	Location - Proposed	not in the selection list	Value specified in this filter	Chicago
E-Verify Data Verification	E-Verify Event Created by	is not empty

Record of External Form I-9

Setup Considerations: Record of External Form I-9

You can use this topic to help make decisions when planning your configuration and use of records of external Form I-9. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirement and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

You can import critical data and attachments from Forms I-9 created outside of Workday, creating a record of external Form I-9. You can use these records to view important data, making it easier to meet compliance goals. Records of external Form I-9 always have a U.S. Employment Verification status of *External Record*.

Business Benefits

- Upload paper Forms I-9 and Forms I-9 from legacy systems into Workday, providing greater visibility of data.
- Flexibility in entering and uploading external Form I-9 data through tasks or web services.

Use Cases

You have Forms I-9 from these sources and need to transfer the data into Workday:

- Paper.
- Legacy systems.

Questions to Consider

Question	Considerations
Is it preferable to use the tasks or web services to import data from Forms I-9 created outside of Workday?	It depends on the quantity of Forms I-9 you have. Web services are more suitable for inputting data in bulk, whereas the tasks are more suitable for smaller quantities.

Recommendations

No impact.

Requirements

You need to configure these initiating actions on these business process security policies:

- *Complete Record of External Form I-9* on the *Complete Form I-9* business process.
- *Complete Record of External Form I-9 Section 3* on the *Complete Form I-9 Section 3* business process.

Limitations

You can't amend records of external Form I-9, but you can correct these events:

- *Complete Form I-9 - External Record*
- *Complete Form I-9 Section 3 - External Record*

Tenant

No impact.

Security

These domains in the Onboarding functional area:

Domain	Considerations
Audit: I-9 Forms	Provides access to these reports: • Form I-9 Audit Trail • U.S. Employees with Form I-9 Expiring Documents
Worker Data: I-9 Forms	Provides access to the View U.S. Employment Verification Status report.

Business Processes

These business processes in the Onboarding functional area:

Business Process	Considerations
Complete Form I-9 in the Onboarding functional area.	Secures a task that enables you to enter critical Section 1 and Section 2 information manually from Forms I-9 created outside of Workday.
Complete Form I-9 Section 3 in the Personal Data functional area.	Secures a task that enables you to enter critical Section 3 information manually from Forms I-9 created outside of Workday.

Reporting

Records of external Form I-9 display in reports such as:

Report	Considerations
Form I-9 Audit Trail	View the audit trail of Form I-9 business processes for 1 or more organizations, locations, establishments, or workers. Details include the business process initiation date, initiator, and status of individual business processes.
U.S. Employees with Expiring Form I-9 Documents	View U.S. employees with expiring Section 2 and Section 3 documents that require renewal.
View U.S. Employment Verification Status	View the employment verification status of employees.

Integrations

Web Service	Considerations
Correct Record of External Form I-9	Enables you to correct a record of external Form I-9. To add an attachment using the web services for correcting information, you must use a partial data sync. To replace or delete attachments, you must use a full data sync.
Correct Record of External Form I-9 Section 3	Enables you to correct a record of external Form I-9 Section 3. To add an attachment using the web services for correcting information, you must use a partial data sync. To replace or delete attachments, you must use a full data sync.
Get External Form I-9	Retrieves the records of external Form I-9.
Get External Form I-9 Section 3	Retrieves the records of external Form I-9 Section 3.
Get External Form I-9 Source	Retrieves the source of the records of external Form I-9.
Put External Form I-9	Creates or updates the record of external Form I-9.
Put External Form I-9 Section 3	Creates or updates the record of external Form I-9 Section 3.
Put External Form I-9 Source	Creates or updates the source of the record of external Form I-9.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Record of External Form I-9

Context

You can import critical data and attachments from Forms I-9 created outside of Workday, creating a record of external Form I-9. You can use these records to view important data, making it easier to meet compliance goals.

Steps

1. Edit Business Process Security Policies.

   Configure these initiating actions:

   - *Complete Record of External Form I-9* on the *Complete Form I-9* business process in the Onboarding functional area.
   - *Complete Record of External Form I-9 Section 3* on the *Complete Form I-9 Section 3* business process in the Personal Data functional area.
2. Edit Business Processes.

   Configure these business processes:

   - *Complete Form I-9* in the Onboarding functional area.
   - *Complete Form I-9 Section 3* in the Personal Data functional area.
3. (Optional) Access the Complete Record of External Form I-9 task.

   Complete a record of external Form I-9 for an employee.
4. (Optional) Access the Complete Record of External Form I-9 Section 3 task.

   Complete a record of external Form I-9 Section 3 for an employee.

Background Checks

Steps: Set Up Background Checks for Pre-Hires and Workers

Context

You can track background checks in 2 ways:

- At an overall pass or fail level, for the background check.
- At an overall pass or fail level, and the individual test level in the background check packages.

To track a background check at the individual test level, you must use the *Core Connector: Background Check Inbound* integration.

Background checks can be for:

- Pre-hires who undergo pre-employment screening or whose employment offers or contracts are contingent on passing a background check.
- New hires who start work before their background checks complete.
- Workers who are subject to periodic background checks.
- Contingent workers who are converting to full-time employees.

Depending on your requirements, you can submit status changes for approval by using the *Background Check* process as a stand-alone business process. You can use the *Background Check* process as a stand-alone business process when there's no active background check package.

You can also use the *Background Check* process as a subprocess for the *Hire* business process. Alternatively, you can update the background check status for pre-hires by using the related actions menu.

After a pre-hire becomes a worker, you can only update the status on the worker record.

Steps

1. Edit Domain Security Policies.

   Define the security policies for these domains:

   - *Pre-Hire Data: Background Check Status* in the Pre-Hire Process functional area.
   - *Worker Data: Background Check Status* in the Personal Data functional area.
2. Edit Business Process Security Policies.

   Configure the *Background Check* business process and security policy in the Personal Data functional area.
3. (Optional) Set up the integration with your third-party vendor using the *Core Connector: Background Check Order* integration.

   See Steps: Set Up Core Connector: Background Check Order Integrations.
4. Access the Maintain Background Check Statuses task.

   Restrict usage of your statuses by mapping them to Workday-delivered statuses.

   Security: *Set Up: Background Checks* domain in the Pre-Hire Process functional area.
5. (Optional) Access the Maintain Background Check Packages task.

   You can track specific background check packages and the tests that make up the packages.

   Security:

   - *Set Up: Background Checks* domain in the Pre-Hire Process functional area.
   - *Set Up: Recruiting* domain in the Recruiting and Talent Pipeline functional areas.

Result

You can manage background check statuses from these related actions:

- For pre-hires, select Recruiting > Change Background Check Status.
- For workers, select Personal Data > Change Background Check Status.

If you create background check packages, access background checks from the Select Background Check Package task or these related actions:

- For pre-hires, select Recruiting > Start Background Check.
- For workers, select Personal Data > Start Background Check.

The Status Date normally populates with the current date. If you initiate the background check from the *Hire* business process, it populates with the hire date. If the hire date is in the future, it populates with the future date. Corrections to the hire date don't change the status date.

Next Steps

- View the status change history from the:
  - Related actions menu of a pre-hire or worker.
  - Personal profile group on worker profiles.
- Use the Hire Employee or Maintain Worker Documents task to attach background check documentation.
- Use the Pre-Hire Background Check Status Summary report to view the total pre-hires with statuses updated within the last 90 days. This report includes both individual pre-hires, and pre-hires with in-progress or completed hire events.

  Note: Assigning an unconstrained, role-based security group to the *Pre-Hire Data: Background Check Status* domain provides access to pre-hire information, but limits the visibility of employee data.
- Use the Worker Background Check Status Summary report to view the employees and contingent workers with statuses updated within the last 90 days. This report includes in-progress and

completed status changes from *Background Check* events that are stand-alone processes or part of hire events. Drill down to see employee and event details.
- You can customize these reports and change the date range, group workers by different criteria, or limit specific statuses.

Create Role-Based Security Groups

Change Job

Legacy Change Job

Setup Considerations: Job Changes

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

You can use this topic to help make decisions when planning your configuration and use of the *Change Job* business process. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

You can set up job change workflows by configuring and combining tasks and business processes. Example: Transferring a worker initiates a change in benefits and requires the approval of an HR administrator.

The main process to consider is the *Change Job* business process, which controls most job changes between a worker's *Hire* and *Termination* events, including:

- Demotions.
- Job data changes.
- Lateral moves.
- Location changes.
- Promotions.
- Transfers between managers and organizations.

You can enable the *Change Job* business process to use machine learning to provide recommendations for common fields when a user is completing a job change.

Business Benefits

Change Job is intuitive and configurable, enabling you to:

- Minimize manual error.
- Limit the training required for users to perform job changes.

- Configure related events as subprocesses.

You can modify the overall process to suit the needs of your organization. Example: Requiring specific tasks or skipping unnecessary fields based on the job change reason. You can also add a range of nonstaffing tasks as subprocesses that can display and route differently based on many factors, including:

- Who initiates
- How users initiate
- Location
- Organization or manager
- Reason
- Worker type

Once you set up the *Change Job* business process, Workday enables the appropriate users to access and complete the steps.

Use Cases

- Converting individual contributors into managers by assigning other workers to their supervisory organizations.
- Creating and managing internal job requisitions and applications.
- Initiating processes such as compensation changes, location changes, and onboarding new hires.
- Changing an employee's job to a domestic assignment.
- Moving managers or whole teams between organizations.
- Moving workers from 1 manager to another.

Questions to Consider

Question	Considerations
What does your ideal process look like for job changes?	Consider the current or planned job change processes for your organization. Decide what works and what you'd like to change. Plan your processes and changes before configuring them in Workday. Having a thorough understanding of your ideal workflow can help you make decisions regarding configuration.
Which of your organizations do job changes affect, and how do their requirements differ?	You can configure separate *Change Job* business process definitions for different organizations. Examples: • You can create a definition for U.S.-based workers and a separate definition for workers based in the UK. • You can create a definition for managers that includes the *Approval* step and a separate definition for HR Administrator roles that skips the *Approval* step. You can also use condition rules to modify the workflow for each definition. Rule-based definitions are more efficient for high-volume transactions than definitions with the same condition repeated for multiple steps. Example: You can create a rule-based definition that evaluates workers for full-time status, instead of

Question	Considerations
	creating multiple steps requiring workers to be full-time employees. You can also configure rule-based consolidated templates to enable initiators to complete some subprocesses during a job change based on condition rules.
What other steps do you want to include when you make job changes?	You can add tasks as steps on the *Change Job* business process, including: • Assign Pay Group • Onboarding • Propose Compensation Change Access the Business Process Configuration Options report to find a full list of tasks that you can add to initiate subprocesses on the *Change Job* business process.
How do you want to be able to initiate job changes?	Workday enables you to decide which roles can initiate and approve job changes and which roles those changes affect. Users with access can initiate job changes from: • Dashboards • Global search • REST API • Worker Profile
How far in the past do you want each role to be able to make job changes?	Retroactive job changes can affect other processes, including Staffing tasks, Payroll processes, and downstream integrations. You can configure a maximum date in the past to apply retroactive job changes. Example: You create a custom validation to ensure that managers can only make job changes up to a month in the past. However, you enable HR administrators to make job changes as far back as they need to.
What should your users be able to see and do when completing job changes?	You can create simplified job changes for initiators, reviewers, and approvers using the Maintain Change Job Templates task. These templates enable you to control what information is visible and editable when users access the *Start Job Change* initiation, review, and approval steps. You can also enable an enhanced user interface for templates to simplify the user experience. You can also configure a variety of tools to help people complete job changes, such as: • Custom help text on certain tasks. • Custom validation rules that ensure users enter data accurately.

Question	Considerations
	• Dynamically updating default values for certain fields based on changes users make to other fields • Embedded analytics worklets to display additional data. • Guided tours. • Quick tips.
Do you want to provide machine learning recommendations for users when they complete job changes?	You can opt in to share data categories with Workday. Once you opt in, it takes approximately 2 weeks for Workday to process your data and present recommendations. To use the most relevant data, we recommend that you enable this feature in your production tenant. The recommendations depend on the volume of your contributed data. We recommend that you have historical data before you use this feature.

Recommendations

- Create change job templates to help users complete job changes more efficiently. You can configure templates based on job change scenarios for your organization.
- We recommend that you plan for all possible job change scenarios. Consider what you want job changes to look like within your organization and what scenarios you want to prevent.
- The *Change Job* default definition includes all required steps in the correct order. Modify the default definition only as much as necessary to accomplish your business needs. Test often during configuration to reduce errors.
- Revisit your job change configurations whenever you implement new tools and business processes in Workday
- Create change job templates to help users complete job changes more efficiently.

Requirements

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

You need to set up the *Change Job* business process to manage workers in Workday.

Limitations

We don't support translations for the Machine Learning Recommendations for Change Job feature.

Tenant Setup

You can specify what options automatically populate on a job change, including:

- Headcount options.
- Organizations for job management.

You can also specify whether you want to enable job overlap when assigning workers to positions.

You can view tenant setup options that impact *Change Job* in these sections of the Edit Tenant Setup - HCM task:

- Staffing
- Job Requisitions

- Leave of Absence

Security

The security domain policies for these events affect which security groups can access the related sections on the *Change Job* business process:

- *Change Job*
- *Change Organization Assignments*
- *Propose Compensation Change*

Anyone with access to the *Staffing Actions: Compensation for All Job Profiles* domain can view the compensation ranges of all job profiles.

The initiator's access to a Supervisory Organization determines the visibility of many Change Job fields. As a result, Workday might dynamically hide fields and sections from a user.

Note: The enhanced user interface doesn't apply domain security configurations for all Staffing Actions security domains except *Staffing Actions: Change Job Date and Reason*. Instead, the interface uses a combination of business process security policy, template configuration, and configuration of optional fields to determine the change job information displayed to a user.

Business Processes

Your job change setup can affect downstream events, such as the:

- *Assign Pay Group* business process.
- *Change Benefit Elections* business process.
- *Change Organization Assignments for Worker* business process.
- Maintain Employee Contract task.
- *Onboarding* business process.
- *Propose Compensation Change* business process.
- Third-party integrations.
- Job Profile

In-progress *Change Job* events can block a worker's processes from initiating or completing.

Some business processes initiate *Change Job* and might require specific business process definitions to function. Example: *Swap Positions*.

Reporting

Add the Change Job task to the My Team Management dashboard to help managers track and manage job changes and time-sensitive tasks for their teams.

Add the Start Job Change report to the worker profile to enable users to launch relevant job changes for a specific worker.

You can use the View Document Template Details report to view document templates created with Workday Docs.

Integrations

- You can use the `jobChanges` REST API to start and submit job changes. You can update worker information, such as:
    - Location.
    - Business Title.
    - Job Profile.
    - Position.
    - Job Classification.

Connections and Touchpoints

Change Job events can touch many other functional areas in Workday, including:

Features	Consideration
Benefits	
Compensation	
Onboarding	
Payroll	Job changes enable you to change a worker's information which can affect their payroll and benefits processing. Some examples of job changes that impact payroll include position, location, organization, and compensation changes.
Time Tracking	When you change the worker's position using the *Change Job* business process, Workday adds the new position to time blocks from the effective date of the change.
Recruiting	Recruiting transactions for internal candidates route to Change Job once the worker reaches the*Ready to Hire*phase.
Workday Docs	You can create document templates in Workday Docs to include on generate document steps for Change Job.

Example: When you transfer a worker to another country, the location change can affect their benefits, compensation, and onboarding information.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Improve the Change Job Experience for Managers

2024R1 What's New Post: Change Job Templates New User Experience for Consolidated Templates

2024R1 What's New Post: Change Job Templates New User Experience

Reference: Change Job Initiation on page 832

Steps: Set Up Job Changes

Prerequisites

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

Review setup considerations for the *Change Job* business process.

Context

Set up the *Change Job* business process to make staffing changes for employees and contingent workers, including:

- Contract changes.
- Demotions.
- Lateral job changes.
- Location changes.
- Promotions.
- Transfers.

Steps

1. Set Up Security for Job Changes on page 801.
2. Set Up Reasons for Job Changes on page 805.
3. (Optional) Access the Edit Tenant Setup - HCM task to configure these Staffing options:
    - Change Job Default Headcount Option
    - Change Job Use Default Organizations for Job Management
    - Change Job Default for Move Team with Manager
    - Enable Job Overlap for Vacating Positions
    - Automatically Select Is This Position Available for Overlap on Vacating Events
    - Enable Job Overlap on Position Restrictions
    - Allow Override of Restrictions on Staffing Events
4. Configure the *Change Job* business process in the Staffing functional area.

    For a list of allowed actions and approval options in *Change Job*, access the Business Process Configuration Options report.

    To ensure correct routing for the Request Transfer initiating action, include review steps for both the current and receiving manager.

    Assign a review step to an HR Partner or other role that has security access to all sections in the *Change Job* business process. This step ensures that someone reviews all job changes, including details which managers might not be able to view.

    See Steps: Configure Business Process Definitions.

5. (Optional) Access the View Business Process Template report.

   From the related actions of the Change Job business process type, select Business Process > Configure Consolidated Template to start tasks from configured subprocesses at the same time. Ensure that:

   - *Change Job* is first in the process order.
   - Each consolidated subprocess is an action step on the *Change Job* business process definition. Workday recommends you add these steps before the completion step.
   - *Propose Compensation Change* is last in the process order.
   - There's a review step for *Propose Compensation Change* in the *Change Job* business process definition to prevent unreviewed compensation changes.

   The approval step for the *Change Job* event includes all consolidated subprocesses. You receive all events on the template as 1 task in My Tasks. Consolidated templates might enable workers to see events that:

   - Aren't relevant to them.
   - Are only relevant for workers based in other locations.

   You can set up an additional *Consolidated Approval* step, for subprocesses not part of the consolidated template.

   Some action steps have Workday delivered condition rules. Example: You create an action step for *Change Superior Organization*. Workday applies the following condition rule: *Is Move Manager's Team selected or if it is a web service request, and if there are subordinate organizations to be moved.*

   Security: These domains in the System functional area:

   - Business Process Administration
   - Manage: Business Process Definitions
6. (Optional) Set Up Rule Based Consolidated Templates for Job Changes on page 807 .
7. (Optional) Set Up Change Job Templates on page 808.
8. (Optional) Steps: Set Up Defaults for Change Job Fields on page 803.
9. (Optional)Steps: Enable Machine Learning Recommendations for Change Job on page 817.
10. (Optional) Enable autocomplete on the *Change Job* business process definition.

    See Set Up Security to Autocomplete Staffing Events on page 523.
11. (Optional) Set up Workday Assistant for Staffing.

    You can initiate job changes through the Workday Assistant chatbot in:

    - Your Workday tenant.
    - Workday for Microsoft Teams.
    - Workday for Slack.

    See Steps: Set Up Workday Assistant for Staffing on page 524.
12. (Optional) Hide or Require Optional Fields.

    These functional areas are available for the *Change Job* business process:

    - *Change Job*.
    - *Change Organization Assignments for Worker (Enhanced User Interface Subprocesses only)*.

    Workday only requires or hides the field if your template configuration includes the field. Example: You require the Employee Type field. Your change job template configuration hides the Administrative Details section. The initiator doesn't see the Employee Type field, because that section is hidden.

    If you hide the Close the current position? field using the Configure Optional Fields task, it will still display in the enhanced user interface. To hide the field, you must remove the Opening section from the Sections to Display field on the Maintain Change Job Templates task.

13. (Optional) Create Custom Notifications.

    Set up email notifications to personal or work email addresses.

    You can override the email template. If you use Notification Designer, you can create a template and enable it for the *Custom Business Process* notification category. You can use the notification template to send notifications when using the *Change Job* business process.
14. (Optional) Maintain Localization Settings on page 144.

    These fields use the proposed location instead of the current location for any staffing transaction:

    - Additional Job Classifications
    - Work Shift
    - Work Space
15. (Optional) Create Help Text for Change Job on page 820.
16. (Optional) Set up countries tracking working time.

    See Steps: Set Up Working Time Localized Fields on page 550.
17. (Optional) Add Worklets to Business Processes.

    Configure embedded worklets to display when users complete a *Change Job* business process, including on subprocess steps.
18. (Optional) ../../../../financial-management/common-financial-components/custom-validations/kev1380041065601.dita.

    When a user triggers a custom validation or alert on a Change Job template with the Enable Enhanced UI for this Template check box selected, Workday jumps to the first page of the template so that the user can address the issue.
19. (Optional) Edit the Supervisory Organization field on these tasks so that you can select the correct supervisory organization when transferring workers to a new manager:

    - Review Change Job
    - Review: Receiving Manager

    Workday limits the permissions of this field when the review step is routed to the current manager. Supervisory organization options are restricted to those that the manager has access to, but are not limited to subordinates. This restriction doesn't apply to the Review: Current Manager task, as doing so would disrupt the request transfer flow and make the supervisory organization non-editable.

Result

View job changes on worker profiles and in Workday standard reports.

- Job changes display the reason type in a worker's history.
- Staffing reports filter *Change Job* events by the reason type.

Next Steps

You can cancel, rescind, or correct *Change Job* events. To make out-of-order corrections, use the *Edit Position* business process.

The access that the initiator has to a Supervisory Organization determines the visibility of many *Change Job* fields. As a result, Workday might dynamically hide fields and sections from the initiator.

Managers can initiate job changes across Workday. They can track the progress of job changes using the My Team Management dashboard.

2024R1 What's New Post: Change Job Templates New User Experience for Consolidated Templates

2024R1 What's New Post: Change Job Templates New User Experience

Reference: Change Job Initiation on page 832

Set Up Security for Job Changes

Prerequisites

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

Security: *Business Process Administration* or *Manage: Business Process Definitions*, and *Security Configuration* domains in the System functional area.

Context

Set up security to give managers and administrators access to the *Change Job* business process and each of its content areas.

- The business process security policy specifies who can start or complete actions in the *Change Job* business process.
- Domain security policies give you field-level control over who can view or modify data in each content area.

Steps

1. Enable these domain security policies:

Option	Description
Staffing functional area	*Staffing Actions* *Staffing Organizations* (for consolidated templates)
Advanced Compensation functional area (for consolidated templates)	*Add Compensation Management Plans* *Change Compensation Management Plans*

2. Access the View Business Process Template report.
3. Select the *Change Job* business process type.
4. Edit the business process security policy:
   a) Under Attachment Settings, define attachments security to restrict who can add, edit, and view attachments in business process events.
   b) Select Business Process Policy > Edit from the related actions menu of the business process type.
   c) Under Who Can Start the Business Process, select the security groups you want to grant access to for each initiating action.
   Since the *Change Job* business process has multiple initiating actions, you can limit the types of job changes available to different roles. Example: You can restrict access to the Change

Contingent Worker Details task, but provide broader access to the Change Location and Request Transfer tasks.

To hide tasks that aren't relevant, leave the security groups empty.

d) Under Who Can Do Action Steps in the Business Process, select the security groups you want to be able to complete review steps in the business process.

Ensure that you grant permissions to the same groups that you assigned to the review steps in the business process definition.

e) Under Who Can Do Actions on Entire Business Process, grant permissions to the *HR Partner*, *HR Administrator*, or other relevant HR role in your organization.

To ensure that business process validations run, you must also grant *View All* permission to the roles that can initiate the business process.

f) Select OK, then Done to return to the View Business Process Template report.

5. On the Section Groups tab, review the template sections and their task dependencies to decide which roles need access to each section.
6. Select the Task Security tab to grant security permissions on each domain:

a) Select Domain > Edit Security Policy Permissions from the related actions menu of a domain.

b) Grant access to the domain by selecting security groups and specifying whether they have permission to view or modify data.

To prevent problems caused by incomplete data, grant permissions on domains that contain required fields:

Staffing Actions: Administrator

Staffing Actions: Change Job Date and Reason

Staffing Actions: Job Profile

Staffing Actions: Location

Staffing Actions: Select or Create Position (for position management organizations)

Staffing Actions: Move Manager's Team (for job changes that move a manager to a different organization)

Staffing Organizations: Grant, Fund, Program, Gift (for required costing organizations)

Note: Your domain security policy configuration for the Staffing Actions domains doesn’t apply to Change Job templates that use the enhanced user interface.

c) Select OK, then Done to return to the View Business Process Template report.

7. (Optional) If you consolidated *Change Job* with *Assign Employee Collective Agreement*, *Change Organization Assignments for Worker*, and *Propose Compensation Change*, set up security for these processes.

To retain a simplified workflow, Workday doesn't display the Compensation section to role-based security groups for these initiating actions:

- Change Contingent Worker Details
- Change Location
- Request Transfer

If you're consolidating *Change Job* with *Assign Employee Collective Agreement*, ensure that you also grant security permissions to the *Worker Data: Collective Agreements* domain.

8. Access the Activate Pending Security Policy Changes task to confirm your changes.

Example

The table lists the recommended security domains for managers:

Domain	Secures These Actions
Staffing Actions: Change Job Date and Reason	Effective date, reason, proposed manager, proposed organization, headcount options
Staffing Actions: Select or Create Position	Existing or new position (for position management organizations)
Staffing Actions: Job Profile	Job profile, job title
Staffing Actions: Business Title	Business title
Staffing Actions: Location	Location, scheduled hours, work hours profile, work shift, work space
Staffing Actions: Contract Details	Purchase order, supplier, contract end date, pay rate, currency, frequency, assignment details
Staffing Actions: Attachments	Document link, category, comment
Staffing Organizations: Cost Center	Cost center
Staffing Organizations: Move Manager's Team	Move team or keep team in current organization

Next Steps

Access the Template-Driven Business Process Security report to confirm that the *Change Job* business process and domain security permissions are aligned.

Concept: Business Process Templates

Tasks

Activate Pending Security Policy Changes

Steps: Change Organization Assignments for Worker on page 912

Steps: Propose Compensation for Employees or Positions on page 1032

Steps: Set Up Job Changes on page 798

Steps: Manage Collective Agreements on page 647

Steps: Set Up Defaults for Change Job Fields

Prerequisites

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

Configure the *Change Job* business process and security policy in the Staffing functional area.

Security: *Set Up: Staffing* domain in the Staffing functional area.

Context

You can set up defaulting for these fields on the *Change Job* business process:

- Business Title
- Job Title
- Time Type
- Work Shift

Based on your configuration, the defaults in the fields will update as the user edits other fields in the business process.

You can use these web services to load and retrieve the data in bulk:

- *Get Staffing Field Defaults*
- *Put Staffing Field Defaults*
- *Get Staffing Field Defaults Condition Rules*
- *Put Staffing Field Defaults Condition Rules*

Steps

1. Access the Create Change Job (All) Defaults Condition Rule task.

   Create a set of condition rules that you can use to determine when to populate a specific change job field.

   Example: You want to default the Job Title field based on what the user enters in the Job Profile field. You create a condition rule using the *Job Profile - Proposed* field.
2. (Optional) Create Calculated Fields.

   Create custom fields to use in staffing field defaults. Select these values on the calculated field:

Field	Value
Business Object	*Change Job*
Authorized Usage	*Staffing Field Defaults - Change Job*
3. Access the Maintain Staffing Field Defaults task.
4. Select the Change Job (All) tab.

   Create a row for each field that you want to create defaulting rules for.
5. Access the Create Change Job (All) Defaults Condition Rule task from the Condition Rule prompt.

   Create a set of condition rules that determine when to populate a specific change job field.

   Example: You want to default the Job Title field based on what the user enters in the Job Profile field. You create a condition rule using the *Job Profile - Proposed* field.
6. Associate 1 or more condition rules for specific staffing fields in the business process and define the value that populates that field.

   As you complete this task, consider:

   - Defaulting applies to all change job initiating actions, and the review and approval steps. Defaulting doesn't apply when you correct a *Change Job* event.
   - Workday processes rules in the order they display in the grid. Once a field meets the conditions for a rule, Workday ignores any remaining rules for that field.
   - Users can override field defaults when completing the *Change Job* event.

   Security: *Set Up: Staffing* domain in the Staffing functional area.
7. (Optional) Configure calculated fields in the Report Field.

   Note: You can't use calculated fields that contain sensitive data. Example: *Date of Birth*.

Result

During a *Change Job* event, Workday evaluates condition rules and applies defaults dynamically while users make changes to these fields:

- Employee Type
- Job Profile
- Location
- Position
- Scheduled Weekly Hours

Example

You want to default the Time Type field based on what the user enters in the Scheduled Weekly Hours field.

1. On the Maintain Staffing Field Defaults task, access the Change Job (All) tab.
2. Select the Add button.
3. Select *Time Type* as the Field.
4. Create a new row.
5. Access the Create Change Job (All) Defaults Condition Rule task from the Condition Rule prompt.
6. Click OK.
7. Enter *Scheduled Weekly Hours Less Than 35* in the Description field.
8. Select these values in the Rule Conditions grid:

And/Or	(	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value	)
And		*Scheduled Hours - Proposed*	less than or equal to	Value specified in this filter	*35*	

9. Click OK.
10. Return to the Change Job (All) tab on the Maintain Staffing Field Defaults task.
11. Select *Scheduled Weekly Hours Less Than 35* in the Condition Rule column.
12. In the Value column, select *Part time* as the Specific Value.

2023R2 What's New Post: Configurable Change Job Defaulting

Tasks

Steps: Set Up Job Changes on page 798
Set Up Recruiting to Staffing Field Defaults on page 205

Set Up Reasons for Job Changes

Prerequisites

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

Security: *Set Up: Staffing* domain in the Staffing functional area.

Context

Create custom reasons for job changes and map them to these Workday-owned change job types:

- *Data Change*
- *Demotion*
- *Lateral Move*
- *Promotion*
- *Transfer*
- *Swap Positions*

Workday uses the change job type to create a Display ID for the change job event. This Display ID displays in change job-related tasks when you submit a change job event, such as on My Tasks or Worker History.

It provides additional context on the reason for the change. Example: *Data Change: John Smith*, *Lateral Move: Janet Smith*.

You can move a worker to a different manager or supervisory organization using any reason type.

Workday filters reasons based on worker type and whether a manager starts the process. You can designate reasons for managers and nonmanagers to control which types of job changes either role can make. Everyone in the management chain of a supervisory organization can access manager reasons.

Categories display in prompts to help organize reasons on the *Change Job* business process. Although you can create as many reasons and reason categories as you need, we recommend keeping the list short to make selection easier.

Steps

1. Access the Maintain Event Categories and Reasons task.
2. Select the *Change Job* event.
3. Create and organize reasons:
   a) Create a Reason Category.
   b) Create a Reason to display in selection lists.
   c) Map the reason to a Change Job Type:
      - *Data Change*
      - *Demotion*
      - *Lateral Move*
      - *Promotion*
      - *Transfer*
      - *Swap Positions*

   d) Specify whether the reason applies to employees or contingent workers, and whether to display the reason to managers.
   e) Create additional reasons and categories as needed.
4. Select OK.
   Workday displays the view page for the Maintain Event Categories and Reasons.
5. (Optional) View the audit trail for the task.
   a. Access the related actions menu for *Change Job* on the view page for the Maintain Event Categories and Reasons task.
   b. Select Audits > View Audit Trail.

Example

Reason Category	Reason	Change Job Type	For Employee	For Contingent Worker	Manager Reason
Demotion	Decrease in Responsibility	Demotion	X		
Data Change	Change Location	Data Change	X	X	X
	Change Job Details	Data Change	X	X	X
	Change Contract Details	Data Change		X	X
Lateral Move	Move to Another Position on My Team	Lateral Move	X	X	X
Promotion	Increase in Responsibility	Promotion	X		X

Reason Category	Reason	Change Job Type	For Employee	For Contingent Worker	Manager Reason
Transfer	Move to Another Manager	Transfer	X	X	X
Swap Positions	Training	Swap Positions	X	X	X
	Reorganization	Swap Positions	X	X	X

Related Information

Tasks

Steps: Set Up Job Changes on page 798

Set Up Rule Based Consolidated Templates for Job Changes

Prerequisites

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

Set up the *Change Job* business process.

Security: *Business Process Administration* or *Manage: Business Process Definitions* domain in the System functional area.

Context

You can create multiple consolidated templates with condition rules for the *Change Job* business process.

Example: You want *Assign Employee Collective Agreement* to be a subprocess of *Change Job* only for workers based in the Netherlands. You create a condition rule that makes *Assign Employee Collective Agreement* only available to workers in the Netherlands. When a manager from Amsterdam initiates *Change Job*, the manager sees the employee collective agreement step.

Steps

1. Access the Configure Rule Based Consolidated Template task.
2. As you complete this task, consider:

Option	Description
Rule	You can only create rules that relate to the: • *Change Job* event. • Position. • Worker. Workday uses the first Rule Based Consolidated Template condition that applies. When no rules apply, Workday uses the default *Change Job* business process definition. Note: Ensure that condition rules reflect your requirements. Test all combinations of Change Job Templates, Rule Based Consolidated Templates, and *Change Job* business process definitions to validate expected outcomes.
Business Process Type	The order of these business process types dictates the order that Workday completes the subprocesses.

Option	Description
	For every business process type you select, ensure that the relevant subprocess is a step on the *Change Job* business process definition. The order of business process types in the consolidated template must match the order of subprocesses in the business process definition.

Result

On consolidated *Change Job* templates, the subprocesses start automatically but cancel if you make no changes.

Worker history displays subprocesses as *Canceled*, but the *Change Job* process history displays different statuses for individual steps:

- Initiation: *Automatic Complete*.
- Review: *Manually Skipped*.
- Completion: *Automatic Cancel*.

Concepts
Concept: Condition Rules for Job Changes on page 870
Tasks
Steps: Set Up Job Changes on page 798

Set Up Change Job Templates

Prerequisites

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

Configure the *Change Job* business process.

Set up consolidated templates for the *Change Job* business process.

Security: *Set Up: Staffing* domain in the Staffing functional area.

Context

Set up simplified job change templates that users such as managers can access through these initiating actions:

- Change Contingent Worker Details
- Change Job
- Change Location
- Request Transfer
- Start Job Change

You can specify the sections of the *Change Job* business process that certain security groups can view and edit when initiating through a Change Job template.

Steps

1. Access the *Change Job* business process security policy to assign security groups to the initiating actions.

   You can remove security groups from some *Change Job* initiating actions to ensure that people in those groups can only initiate the simplified job changes.

   Example: You create a Change Location template. When you add managers to the Start Job Change initiating action, you also remove them from the initiating action for Change Location. This security change ensures that managers can only access the simplified version of location changes.
2. (Optional) Access the Maintain Custom Labels task to customize the Start Job Change task and report labels.
3. Access the Maintain Change Job Templates task.
4. As you complete this task, consider:

Option	Description
Template Name	You'll see this name in the What do you want to do? prompt when you initiate the job change. Only active templates display to initiators. You can inactivate any template, but you can't remove a template that's *In Use*. The template name determines what displays when you configure the Start Job Change report on the Worker Profile. There's a text limit of 30 characters for what displays on the button. Once you exceed 30 characters, Workday cuts the text off. You can also search for the template name directly through global search.
Template Order	Configure the order of the change job templates based on how relevant they are for your organization. Users will see these templates in the order you configure when they launch a job change. The order determines which templates display when you configure the Start Job Change report on the Worker Profile. Workday displays the first 5 change job templates as buttons.
Select Reason for Template	For templates without the Enable Enhanced UI for this Template check box selected, the user can see the reason that you select in the Why are you making this change? field, but can't edit. For templates with the Enable Enhanced UI for this Template check box selected, you can configure multiple reasons. Users can select one of those reasons from theWhy are you making this change?field. If there's only 1 reason for a template, the field doesn't display. When you configure the event categories and reasons for *Change Job*, ensure that the changes you make don't affect the Change Job templates.

Option	Description
	Select reasons that apply to your intended initiators. Example: You want to use this template for both Employees and Contingent Workers. You select the Data Change reason because you configured it on the Maintain Event Categories and Reasons task for both employees and contingent workers.
Template Help Text	This text displays beneath the What do you want to do? prompt when a user selects a template. You can translate as needed.
Enable Enhanced UI for this Template	Select to display an enhanced interface for a template. This selection will change the layout of Change Job fields and present a simplified user experience. The enhanced user interface doesn't support: • Templates with Location after Change configured in Select Editable Fields for Start Page. • Evaluating security configurations for Staffing Actions security domains besides *Staffing Actions: Change Job Date and Reason*. Workday automatically selects the Enable Enhanced UI for this Template check box for any templates that include these initiating actions: Change Contingent Worker Details, Change Job , Change Location, and Request Transfer. For those initiating actions: • Inactivate or delete the template to no longer use the enhanced user experience. • Your existing security and condition rule configurations on the *Change Job* business process will apply to any templates you configure. Workday recommends that you review that configuration on the *Change Job* business process using the Edit Business Process Security Policy task. You can initiate a *Change Job* or *Request Transfer* from multiple places, such as the *Hire* business process from Recruiting, or a *Job Change* initiated from Org Studio. Any templates you configure for *Change Job* and *Request Transfer* will apply across Workday.
Apply this Template to Review and Approve Steps	Select to apply your template configuration to display on review and approval steps. This selection enables reviewers and approvers

Option	Description
	to see the same simplified template view as initiators. When selected, your configuration in the Fields to Display field will also apply to review and approval steps. This feature isn't available on Android.
Make this Template Inactive	Select to inactivate the template. You can't inactivate a template that's part of any in-progress change job events. You need to complete or cancel those events to inactivate the template.
Select Initiating Actions	You can specify where initiators can access specific templates, such as when: • Completing mass actions. • Using the Start Job Change task. • Using the Workday Assistant chat box. • Using a REST API. You can create templates for these initiating actions: Change Contingent Worker Details, Change Job , Change Location, and Request Transfer. For those initiating actions, Workday automatically selects the Enable Enhanced UI for this Template check box. Inactivate or delete the template to no longer use the enhanced user experience.
Select Condition Rules	Create or add existing condition rules to a Change Job template. The condition rules are based on the current position of the worker. The template displays when that current position meets all the condition rules.
Select Security Groups	Select security groups to initiate job changes through a Change Job template. The template displays for initiators with access to at least 1 security group.
Select Editable Fields for Start Page	Available on templates without the Enable Enhanced UI for this Template check box selected. Select the information that you want initiators to edit in the Start section of the template. Example: When you include *Location after Change*, initiators can edit the Where will this person be located after this change? field. When you leave this section blank, the initiator still sees these fields: • When do you want this change to take effect? • Why are you making this change?

Option	Description
	The enhanced user interface doesn't support the Location after Change field. To select the Enable Enhanced UI for this Template check box, you must deselect the Location after Change field.
Select Sections for Template	Select the sections of the *Change Job* business process that you want the user to see. Workday hides all other sections from the user. Subsequent steps in the business process definition will display normally and respect rules. When selecting these sections, consider how populating values might affect your job changes. Reviewers and approvers will see additional sections when information has changed. Example: You select *Location After Change* in the Select Editable Fields for Start Page prompt, but don't select *Location Details* in Select Sections for Template. The initiator doesn't see the Location Details section, but the Scheduled Weekly Hours still populates automatically based on the Time Profile of the proposed location. The reviewers and approvers see the Location Details section. Ensure that the sections and subprocesses that you select match the associated consolidated template. Example: You select *Cost Center* to display in the Change Job Template. You ensure that the *Change Organization Assignments for Worker* subprocess is on the associated consolidated template.
Fields to Display	You can configure different fields for different sections based on whether you have theEnable Enhanced UI for this Template check box selected. Select the fields that you want to display. These fields display even when you don't configure them in the Fields to Display column: • End Employment Date, when it's empty for a fixed term employee. • Work Shift, when it's empty and you've configured it as required on the job profile. This feature doesn't apply to templates with Mass Actions configured in the Select Initiating Actions column.
Select Subprocesses for Template	Select the subprocesses that you want the user to be able to view.

Option	Description
	Reviewers and approvers only see changed subprocess information when you configure the subprocesses on the template. When you configure multiple subprocesses using the enhanced user interface, Workday doesn't use the subprocess order that you configure on the Configure Consolidated Template task, which you can access when you select Business Process > Configure Consolidated Template from the related actions menu on the Change Job business process type. Instead, we display each subprocess in this order when configured: • Change Job • Change Organization Assignment • Propose Compensation Change Note: When you exclude the *Propose Compensation* subprocess from a template, ensure you include a review step for *Propose Compensation* in the business process definition. This step prevents unreviewed compensation changes.

5. (Optional) Access the Configure Profile Summary task to enable users to initiate a job change directly from a worker profile.

   Configure the Start Job Change report on Worker Profile.

   Security: *Staffing Actions: Change Job Date and Reason* domain in the Staffing functional area.

   Workday displays the first 30 characters of the first 5 templates you configured on the Maintain Change Job Templates task as buttons on the worker profile.
6. (Optional) Access the Configure Optional Field task to configure fields as hidden, view-only, or required.

   The Change Job business process is available for these functional areas:

   - Change Job
   - Change Organization Assignments for Worker (Enhanced User Interface Subprocesses only)

   Workday only requires or hides the field if your template configuration includes the field. Example: You require the Employee Type field. Your change job template configuration hides the Administrative Details section. The initiator doesn’t see the Employee Type field, because that section is hidden.

   If you hide the Close the Current Position? field using the Configure Optional Fields task, it will still display in the enhanced user interface. To hide this field, you must remove the Opening section from the Sections to Display field on the Maintain Change Job Templates task.

Result

After you submit your changes on the Maintain Change Job Templates task, Workday displays a View Change Job Templates report that you can use to view templates, and download them to PDF.

For templates that select the Enable Enhanced UI for this Template check box, users will see the:

- *Change Job* fields display in the new format and some field label changes.

- Enhanced user interface on Change Job workflow steps, including:
  - *Initiation*, *Save for Later*, *Send Back*.
  - Review steps (including *Review Change Job*, *Review: Receiving Manager*, *Review: Current Manager*).
  - Approve steps.
- Worker's current information displayed on the side panel on editable workflow steps. When they select an effective date, the side panel displays the worker's information as of that effective date.
- Enhanced user interface displayed on mobile devices.
- Make Changes button on editable review steps that leads to a change job workflow. When there is missing or invalid information, Workday displays an error message and Make Changes is the only option. When no changes or corrections are required on editable review steps, users can select Make Changes, Approve, or Send Back.

Next Steps

Users can delegate the Start Job Change initiating action. They can also access the initiating action on the My Team Management dashboard.

You can create reports and condition rules based on Change Job templates.

Steps: Set Up Swap Positions

Context

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

You can set up a single business process to swap workers between positions, ensuring that job and organization assignment changes occur simultaneously and without error. This business process enables you to swap multiple workers at once for mass reorganizations or worker rotation.

Steps

1. Set Up Reasons for Job Changes on page 857.

   Create reasons on the Maintain Event Categories and Reasons task.

   a. Select *Change Job* in the Event field.
   b. Create reasons with *Swap Positions* selected in the Change Job Type column.

   To use the Swap Positions task, you must configure at least 1 reason with the *Swap Positions* Change Job Type.

2. Configure Rule-Based Business Processes.

   Configure these business processes and security policies in the Staffing functional area:

   - *Change Job*
   - *Change Organization Assignments for Worker*
   - *Swap Positions*

   When the Change Organization Assignments task is on the *Change Job* consolidated template, it must be the *Complete* step on the *Change Job* business process definition.

   When these events are on the *Change Job* consolidated template, they must be after the *Complete* step on the *Change Job* business process definition:

   - *Employee Collective Agreement*
   - *Propose Compensation*

   When you include the *Review: Receiving Manager* step on the *Change Job* business process definition, it must:

   - Be before the *Complete* step.
   - Have this Workday-owned If condition: *Initiating User isn't the same as the Processing User or Initiated by Request Transfer Task or Swap Positions?*

   The *Change Organization Assignments for Worker* business process definition must have the *Initiation* step as the *Complete* step.

   Don't place exit validations on the *Change Job* or *Change Organization Assignments* business processes, as they can prevent the position swaps from completing simultaneously.
3. Create Custom Business Processes.

   Configure the *Swap Positions* business process definition to include only an initiation step and review steps. Include the optional *Review Swap Positions* step to route to an approver before the swap completes. If you specify a role-based security group on the *Review Swap Positions* step, select the All check box, ensuring that all swaps within a list are approved simultaneously.

   You can enable managers to request position swaps for their workers with the Request Swap initiating action. Configure the *Swap Positions* business process definition to include the *Review Swap Positions: Current Manager* step and select the *Current* option in the Routing Modifier column. This setting ensures that the managers of both employees can approve the swap before it occurs.

   To ensure that swap requests, ignore the *Review Swap Positions* step, create an entry condition rule using the Initiated from Request Swap report field.

   We recommend that you create only 1 *Swap Positions* business process definition per tenant. This practice ensures that position swaps can complete across all organizations.
4. (Optional) Embed a worklet on the initiating action of the *Swap Positions* business process to include position data from custom reports in position swap events.

   Configure the worklet prompt to include the Position field on the *Swap Positions Task* business object. This configuration enables the worklet to display the positions included during initiation of the swap, as well as information related to those positions. The worklet displays on the second page of the Swap Positions task.

   See Add Worklets to Business Processes on page 2969.

5. Edit Domain Security Policies.

   The *Staffing Actions: Swap Positions - View Events* domain controls access to the View Swap Positions Events report.

   The *Swap Positions - List* domain controls access to these tasks and reports:

   - Create Swap Positions List task.
   - Edit Swap Positions List task.
   - Find Workers for Swap Positions report.
   - View Swap Positions List report.

Next Steps

Access the Create Swap Positions List task to select workers and add them to lists for future position swaps. Use these lists to prepare for mass position swaps ahead of time. Anyone with access to a list can swap the workers in that list, including workers that they don't otherwise have permission to view.

Access the Swap Positions task to perform position swaps. Each time you initiate a position swap, you can either select a previously created list or select workers individually within the task.

Steps: Set Up Mass Action Workbooks to Initiate Change Job

Context

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

You can set up mass actions to initiate the *Change Job* business process in bulk for up to 1000 workers.

Steps

1. Set up mass action workbooks.

   Steps: Set Up Mass Actions.
2. Edit Business Process Security Policies.

   Configure security permissions for the *Change Job* and *Change Job (Mass Action)* initiating action on the *Change Job* business process policy.

   Configure security permissions for the *Change Organization Assignments for Worker (Mass Action)* and *Change Organization Assignment (REST)* initiating actions on the *Change Organization Assignments for Worker* business process policy.

   Ensure that these security groups are also on the *Mass Action Event* business process security policy.

   Ensure that you add the *Complete Mass Action Event* step and mark it as the completion step.
3. (Optional) Add additional facets to the Launch Mass Change Job report. To add additional facets, copy the delivered Launch Mass Change Job standard report to a custom report, and add any additional filters to the report definition.
4. (Optional) Create Custom Reports.

   Create or edit a custom report that has a data source containing positions or position restrictions. You can use the report or report filter to populate up to 1000 workers in the workbook using the Launch Mass Action Event task.

5. (Optional) Create or edit a search report that has a data source containing positions or position restrictions. You can select workers in the search report to populate up to 1000 workers in the Launch Mass Action Event task.

   Ensure that you select *Launch Mass Action Event* from the Mass Action column on the Advanced tab of the search report.

   See Steps: Create Search Reports.

Next Steps

Access the Launch Mass Change Job report, the Launch Mass Action Event task, or a configured search report to initiate the *Change Job* business process in bulk.

2022R2 What's New Post: Mass Actions in Workbooks for Change Job

Steps: Enable Machine Learning Recommendations for Change Job

Prerequisites

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Context

You can enable the *Change Job* business process to use machine learning and automatically provide relevant recommendations for these fields:

- Change Job Reason
- Compensation Plan
- Cost Center

- Job Profile
- Location

Once you opt in, it takes approximately 2 weeks for Workday to process your data and present recommendations. During this time, the Recommendations folder on the Job Profile field might be empty. To use the most relevant data, we recommend that you enable this feature in your production tenant. This feature might not give good recommendations for workers with limited job change history, or a new cost center, job profile, or location.

We don't support translations for this feature.

Steps

1. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   a. Access the Innovation Services Opt-In task.
   b. Navigate to the Cross Application Services category.
   c. Select the Intelligent Core Generally Available Features check box.
   d. Click OK.
   e. Access the Maintain Innovation Services Data Selection Opt-In task.
   f. In the Innovation Services Valid for Maintain Data Opt-In field, select the Cross Application Services Intelligent Core Generally Available Features category.
   g. Click OK.
   h. In the View Data Categories for Feature field, select *Machine Learning Recommendations for Change Job*.
   i. Opt-in to the relevant categories.
   j. Click OK.
2. Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality. The default region for data processing is the U.S.

   Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.
3. (Optional) Hide machine learning suggestions for specific fields.

   Access the *Change Job* business process type on the Maintain Functionality for Staffing Transactions task.

   Example: You want to hide machine learning suggestions in production while Workday processes your data.

Result

Workday will begin using machine learning to display and suggest relevant values when users complete a job change.

Initiate Change Job in Mass Action Workbook

Prerequisites

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

- Configure the *Change Job* business process.
- Set up mass action workbooks for changing jobs.
- Security: *Mass Action Events* domain in the System functional area.
- (Optional) Enable change job templates for mass actions in the Maintain Change Job Templates task.

Context

You can initiate the *Change Job* business process in bulk with a mass action workbook. Mass change job also includes *Change Organization Assignments for Worker* as a subprocess.

You can add up to 1000 contingent workers and employees to the workbook by:

- Using the Launch Mass Change Job report.
- Selecting a report in the Launch Mass Action Event task.
- Using a search report to access the Launch Mass Action Event task.
- Adding them manually in the workbook.

Note: Even if certain fields such as Job Classification, Work Shift, or Work Space are displayed in a workbook, they respect the configuration in Maintain Localization Settings. Example: If you require Work Shift in Configure Optional Fields but disable in Maintain Localization Settings, you can't enter values for Work Shift in workbooks. Similarly, if you hide Work-Study in Configure Optional Fields and require for a job profile, you can't enter values for Work-Study in workbooks.

Steps

1. Access the Launch Mass Change Job report.
2. Select the population intended for mass change job and click Launch Mass Action.
3. Access the Launch Mass Action Event task.
4. As you complete the task, consider:

Option	Description
Effective Date	Select the date when mass change job takes effect.
Do you want to use the next pay period?	If selected, this field takes priority over Effective Date.
Change Job Template	For constrained security groups, Workday displays templates based on access permissions.

5. After the workbook generates, click Open Workbook.
6. Complete the details in the workbook using the prompts and validation messages.

   You can update and enter specific fields for workers, if needed. Example: You enter a Proposed Supervisory Organization for the workers.
7. Click Validate All.
8. Resolve errors and submit the workbook.

   You can submit a workbook with errors. Any rows with errors remain in the workbook instead of initiating the *Change Job* business process. You can access the workbook later to resolve and submit the remaining rows.

   Note: Mass actions using workbooks can't apply the Start Page Editable Fields and Condition Rules Applied options of change job templates configuration.

Result

The *Change Job* business process initiates for the relevant workers in the workbook. Any other steps on the business process route for completion.

Create Help Text for Change Job

Prerequisites

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

Security:

- *Business Process Administration* or *Manage: Business Process Definitions* domain in the System functional area.
- *Set Up: Guidance Workspace* security domain in the User Success Platform functional area.

Context

You can provide 3 types of help text for the *Change Job* business process:

- Step help. In the initiation, review, and approval steps, you see this text on all pages of the Guided Editor, and at the top of the Summary Editor. This text also displays on the page where you select the Worker or Job if:
  - You access the Change Job, Change Location, or Request Transfer tasks through search.
  - A worker has multiple jobs.
- Section group help. You only see this text in the Guided Editor, below the step help text in each section.
- Quick tips using Guidance Workspace. You can create customized field-level support text in the UI.

If you consolidate *Change Job* with *Propose Compensation Change* and *Change Organization Assignments for Worker*:

- The Organizations and Compensation sections display Section Group help text only.
- Help text for the initiation step isn't available.

You can also configure a guided tour as field-level help text to guide users through the change job process using the Configure Guided Tours task.

Steps

1. Define step help text:
   a) Access the default definition of the *Change Job* business process.
   b) As a related action on a step, select Business Process > Maintain Step Help-Text.
2. Define help text for the section group.
   a) Access the View Business Process Template report.
   b) Select *Change Job*.
   c) On the Section Groups tab, click Configure Help Text in the Configure Section Group column.

   Note: Workday only displays help text defined at the section group level. You can copy existing section-level help text to the section group level by clicking Configure Help Text in the Configure

Section column. If you defined Summary Page help text on the Instructional Text tab, you can copy this text to the initiation step help in the *Change Job* business process.

Repeat this procedure for the *Propose Compensation Change* and *Change Organization Assignments for Worker* business processes. The Guided Editor displays this help text in the Organizations and Compensation sections of the consolidated processes.

3. Steps: Set Up and Manage the Guidance Workspace.

   Define field-level help text to guide users through the change job process using the Guidance Workspace tool.

   Select from these Change Job initiating actions in the Tasks report.

   - *Change Job*
   - *Start Job Change*

   Any user that accesses the task sees your guidance.

Concept: Business Process Templates

Tasks

Steps: Set Up Job Changes on page 798

Set Up Guided Tours

Transfer, Promote, or Change Job

Prerequisites

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

- Configure the *Change Job* business process and security policy in the Staffing functional area.
- If you want to transfer a worker to a new manager, verify that the new manager's organization exists and the manager role is assigned.

Context

Perform job changes for employees or contingent workers, ranging from staffing events such as transfers and promotions to simple data changes.

If you're promoting someone into a managerial role, you can also create their supervisory organization as part of the promotion.

Steps

1. Access the Change Job task and select a Worker.
2. In the Start section, select the date, reason, manager, supervisory organization, and location.
   - If you have pay groups configured, you can select the next pay period to align the start date with your pay cycle.
   - Access the Maintain Event Categories and Reasons task to define the reasons.
3. Complete each section.

   Workday displays sections based on your security permissions and the *Change Job* business process configuration.

   Workday displays fields based on the type of change job template you select:

   - For change job templates with an enhanced user interface, Workday only shows fields that are relevant to you and that you can edit. Fields are dynamically displayed based on security access and your tenant configuration. Example: You initiate a Change Job transaction. You can see the Position field. You edit the Supervisory Organization to an organization that you don't have a role on. Workday dynamically hides the Position field.

- For change job templates:
  - Without an enhanced user interface, Workday displays the Position field even if there are not open positions for the supervisory organization.
  - With an enhanced user interface, Workday defaults the current position and doesn't display the Position field.

Use the navigation bar to move between sections or click Summary to complete all sections on 1 page.

Option	Description
Move	Displays when you're moving a worker to a new supervisory organization. In the Opening section, specify whether you plan to backfill, move, or close the headcount: • Workday automatically populates Move when you move workers between job management organizations. • A tenant setting determines which headcount option automatically populates for position management organizations, but you can change it. • If you plan to backfill the position, specify whether to make it available for overlap before the incumbent departs. This option displays when you enable your Workday tenant for job overlap and the position is in an organization that uses the position management staffing model. Move Team. If you're moving a manager to a new organization, specify whether to move the manager's teams or keep them in their current organization.
Job	If you're moving a worker within the same organization, you can select the position for overlap or close it. If you restrict job profiles by country, the proposed location determines which job profiles you can select.
Details, Organizations, Compensation, Collective Agreement	HR administrators typically complete these sections. The Organizations section only displays when the worker is directly assigned to an organization. If the current organization was assigned using a membership rule, the Organizations section doesn't display.

Result

Workday adds the event to the worker's history, labeled as a *Transfer*, *Promotion*, *Lateral Move*, *Demotion*, or *Data Change* depending on the reason type you selected.

When you report on job changes, the *Move Position* report field returns true when you keep the worker in the same position as before, and false when you move the worker to a different position but keep the position in the same organization.

Concept: Promoting Workers to Managers on page 829

Concept: Move Manager's Team on page 825

Setup Considerations: International and Domestic Assignments on page 893

Tasks

Steps: Set Up Job Changes on page 798

Request Transfer

Prerequisites

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

Configure the *Change Job* business process and security policy in the Staffing functional area.

Context

Request a transfer for any worker outside your current organization. The request routes to the worker's current manager for approval, then comes back to you so you can enter job details and other relevant information.

When you use Request Transfer to initiate the *Change Job* business process, Workday hides everything except the Start and Move sections. After the worker's current manager approves the transfer, the new manager completes the fields in the rest of the sections, including Job, Location, Details, and Attachments, and Organizations, Compensation, and Collective Agreement if you have a consolidated template.

You can only secure the Request Transfer initiating action to constrained role-based security groups. Request Transfer is only available to roles that don't have access to the Change Job task for the selected worker. Because HR Administrators can access all workers with Change Job, they don’t need access to the Request Transfer initiating action. Example: You and Peter Smith are in Organization A. You manage Peter Smith, and want to move him to Organization B. You initiate aChange Jobfor Peter Smith. You want to bring Alisha Vargas into your organization from Organization B. You can't initiate aChange Jobbecause she isn't in your organization. You initiate a Request Transfer instead.

Steps

1. From the related actions menu of a worker, select Job Change > Request Transfer.
2. In the Start section, select the date, reason, manager, supervisory organization, and location.
    - If you have pay groups in Workday, you can select the next pay period to align the start date with your pay cycle.
    - You can define job change reasons by accessing the Maintain Event Categories and Reasons task.
    - If you're a manager, Workday automatically populates your name and organization. If you manage multiple organizations, you can select a different organization.
    - If you have another role, the proposed manager automatically populates from the highest organization you support, but you can select a different manager.
    - When you restrict job profiles by country, the proposed location determines which job profiles you can select in the Job section.

3. In the Move section, specify whether to move a manager's teams or keep them in their current organization.

   Note: You only see the Move section if the worker is a manager.
4. On the Summary page, click Submit.

   Workday sends the request to the worker's current manager, who can take these actions before approving the request:

   - Change the effective date and reason.
   - Specify whether to backfill, move, or close the headcount.
   - Specify whether the position is available for overlap before the worker transfers. This option is available when the manager plans to backfill the position, the transfer date is in the future, your Workday tenant is enabled for job overlap, and the organization uses the position management staffing model.
5. Go to My Tasks to complete the rest of the transfer details.

   The information you need to provide depends on your security permissions and the *Change Job* business process configuration. You can click Guide Me to complete the sections individually.

Result

Workday adds the *Transfer* event to the worker's history.

Change Location

Prerequisites

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

Configure the *Change Job* business process and security policy in the Staffing functional area.

Context

Change the work location for an employee or a contingent worker.

- Change Location is an initiating action for the *Change Job* business process that displays only relevant fields in the Start, Location, and Details sections.
- The Job and Organizations sections are hidden, even in review and approval steps.
- If you consolidate the *Change Job* business process with *Assign Employee Collective Agreement* and *Propose Compensation Change*, these sections are also hidden:

  - Collective Agreement
  - Compensation

  You may need to configure a consolidated template override to hide the Compensation section for all security groups. From the related actions menu on the *Change Job* business process type, select Business Process > Configure Business Process Consolidated Template Override. Configure the *Change Location (Change Location)* initiating action.

To change a work space location without initiating any other staffing transactions, use the *Change Work Space* business process.

Steps

1. As a related action on a worker, select Job Change > Change Location.

2. In the Start section, select the date, reason, and new location.
    - If you have pay groups in Workday, you can select the next pay period to align the start date with your pay cycle.
    - Access the Maintain Event Categories and Reasons task to define reasons.
    - You can't change the manager or supervisory organization.
3. Complete the Location and Details sections individually, or click Summary to complete everything on 1 page.

Result

Workday adds the *Data Change* event to the worker's history.

Concept: Move Manager's Team

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

When you use the *Change Job* business process to move a manager to a new organization, you can also move the teams that report to that manager. Workday displays the:

- Teams that are eligible to move.
- Teams that are ineligible to move due to a future-dated change.
- Person who will manage the teams if you don't move them.

You either can move all eligible teams or leave all teams behind. You can't pick teams or individual team members that you want to move.

Moved teams retain their current:

- Headcounts.
- Job openings.
- Job requisitions.
- Subordinate organizations.

After you submit the job change, Workday initiates 1 *Assign Superior* subprocess for each eligible team, with its own workflow and approvals. You can cancel, rescind, or correct the individual *Assign Superior* subprocesses as needed. However, you can't reverse the original decision to move, or not move, a manager's teams by correcting *Change Job* events. To reverse that decision, you would have to cancel or rescind the *Change Job* business process and start again.

You don't see the option to move teams when you:

- Move a worker who isn't a manager.
- Keep a manager in the same supervisory organization.
- Move a manager who also manages an organization that is a superior of the proposed organization.
- Move a manager whose supervisory organization has an organization hierarchy event in progress. Example: An in-progress *Create Subordinate* event.
- Move a manager whose team is in a subordinate organization that isn't part of their supervisory hierarchy. Example: The manager is part of Supervisory Organization 1, which has Subordinate Organizations A, B, and C. However, the manager's team is part of Subordinate Organization D.

To set up the option to move teams:

- Add roles to the *Staffing Actions: Move Manager's Team* domain. This domain inherits its initial security policy from the *Staffing Actions* domain.
- Modify the default definition for the *Change Job* business process to include 2 additional steps: *Assign Roles - Change Assignments for Worker* and *Change Superior Organization*. Both steps must come after the *Change Job* completion step.

Step	Details
(Optional) *Assign Roles - Change Assignments for Worker*	Ensures that the worker has the manager role before you move the manager's teams. All of the worker's previous roles automatically populate, including the manager role. You can remove the default role assignments, add new roles, or reassign roles as needed. Alternatively, you can use the *Copy Role Assignments* step for Job Management organizations when you have the Change Job Use Default Organizations for Job Management check box enabled. Both *Assign Roles - Change Assignments for Worker* and *Copy Role Assignments* must come before the *Change Superior Organization* step.
Change Superior Organization	Workday suggests that you include an approval step in the *Assign Superior* business process definition; otherwise the step completes automatically as part of the *Change Job* workflow. Ensure that you grant permission on the *Approve* action for the *Assign Superior* business process as well.

To populate *Yes* automatically on the This person is a manager. Do you want to move their teams with them? field, you can select the Change Job Default for Move Team with Manager check box on the Edit Tenant Setup - HCM task.

Concept: Access to Job Profiles

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

The *Change Job* business process provides access to job profiles and related compensation data based on these considerations.

Availability of Hiring Restrictions

When you use the stand-alone *Change Job* business process, you can access job profiles if restrictions exist, and you meet those restrictions. If restrictions don't exist, you can access job profiles only if:

- A worker remains in the same position.
- You move a worker to a new position, and you select the Allow Override of Restrictions on Staffing Events check box in the Edit Tenant Setup - HCM task.
- There aren't any restrictions, in which case, you can access all job profiles.

Compensation Details

Because compensation eligibility rules are often linked to job profiles, Workday enables you to restrict access to compensation data by creating hiring restrictions. If you consolidate *Change Job* with *Propose Compensation Change*, you can view compensation details if you meet at least one of these conditions:

- Hiring restrictions don't exist.
- Hiring restrictions exist and you select a job profile that meets those restrictions.
- Hiring restrictions exist and you have permission on the *Staffing Actions: All Job Profiles with Compensation* domain.

When you configure compensation details to display based on supervisory organization, Workday only uses the proposed supervisory organization.

Job Requisitions

If you use job requisitions, you can't select a different job profile for a worker who remains in the same position. Update the job requisition or the hiring restrictions to include the additional job profile before you launch the Change Job task:

- If the worker's position has an open job requisition, use the Edit Job Requisition task to add other job profiles to the requisition.
- If the worker's position doesn't have an open job requisition, use the Edit Position Restrictions task to add other job profiles to the hiring restrictions.

Optionally, you can select the Allow Override of Restrictions on Staffing Events check box in the Edit Tenant Setup - HCM task. This setting enables you to access job profiles that aren't part of the hiring restrictions on the job requisition.

Concept: Worker Transfers

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

You can use the *Change Job* business process to transfer a worker to a different organization. The *Change Job* business process combines steps into a single workflow to:

- Route the business process steps.
- Determine organization roles who're responsible for those steps.
- Assign default organizations to the worker.

Route Business Process Steps

When editing steps on the *Change Job* business process definition, administrators can use specific group routing to specify whether the security group is for the organization of the current or proposed position. When you don't provide specific group routing instructions for steps in the *Change Job* business process, Workday automatically routes the business process steps to roles in the worker's proposed organization.

You can consolidate subprocesses within the *Change Job* business process type so that tasks from the consolidated subprocesses initiate at the same time. When you consolidate the subprocesses, Workday:

- Uses the specific group routing that you configure directly on the subprocesses.
- Doesn't apply the specific group routing that you configured on the *Change Job* business process to the subprocesses.

- Uses the specific group routing that you configured on the *Change Job* business process for the *Change Job* web service.

Organization Roles

When you transfer a worker to a different organization, Workday routes the business process steps to the organization roles based on information included in the *Change Job* business process.

Business Process Details	Step Routing
The *Change Job* business process includes the Proposed Supervisory Organization.	Workday routes the business process steps to the: • Default organizations associated with the proposed supervisory organization. • Location hierarchy associated with the primary location of the proposed supervisory organization.
The *Change Job* business process includes the: • Proposed Supervisory Organization • Position	Workday routes the business process steps to the: • Organizations associated with the proposed position. • Location hierarchies associated with the location hiring restrictions of the proposed position.
The *Change Job* business process includes the: • Proposed Supervisory Organization • Position • Location	Workday routes the business process steps to the: • Organizations associated with the proposed position. • Location hierarchy associated with the proposed location.
The *Change Job* business process includes the: • Proposed Supervisory Organization • Position • Location • Organization Assignments	Workday routes the business process steps to: • All proposed organizations. • The location hierarchy associated with the proposed location.

Organization Assignments

When you run the *Change Job* business process, the *Change Organization Assignments for Worker* subprocess assigns default organizations differently for each staffing model. Organization assignments in both the job management and position management staffing models populate from the job requisition when available. Otherwise, organization assignments:

- In job management populate from the current job or from the proposed supervisory organization, based on whether you selected the Change Job Use Default Organizations for Job Management check box on the Edit Tenant Setup - HCM task.

- In position management populate based on whether you're creating a new position.
    - If you're creating a new position, the organization assignments populate from the proposed supervisory organization if available. When a proposed supervisory organization isn't available, the organization assignments populate from the current position.
    - If you aren't creating a new position, the organization assignments populate from the proposed position restriction. When a proposed supervisory organization isn't available, the organization assignments populate from the current position.

When you consolidate *Change Job* with *Change Organization Assignments for Worker*, each time you modify the proposed supervisory organization, Workday re-evaluates the default organizations. When you run the *Change Organization Assignments for Worker* business process independent of the consolidated template, the default organizations don't change after initial selection.

Steps: Set Up Job Changes on page 798

Concept: Position Swaps

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

A position swap in Workday enables you to select 2 or more workers and then move them into each other's positions by initiating a single business process transaction. You can use position swaps for company reorganization, worker rotation, and businesses that consistently move workers between locations. Example: Moving retail managers from 1 store to another.

You can only swap position management positions. If a worker has multiple positions, you can select which position to swap. You can select a worker multiple times in 1 swap to include several of their positions in the swap.

You can only swap workers with matching worker types. Example: You can't swap a contingent worker into an employee position.

You can't swap a position that uses internal Workday pay groups with a position that uses external pay groups.

Business Processes

The *Swap Positions* business process initiates the *Change Job* business process to perform the job changes for the swapped workers. When you swap workers between organizations, the *Change Job* business process also initiates the *Change Organization Assignments for Worker* business process.

Workday automatically completes the *Change Job* business process based on the information from each filled position. Workday also provides validations to ensure that all positions swap at the same time. When 1 position can't swap, no part of the transaction can complete.

Reports

Position swaps display in worker histories as job and organization assignment changes. You can view changes using the View Swap Positions Events report.

Steps: Set Up Job Changes on page 798

Concept: Promoting Workers to Managers

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

You can promote a worker into a managerial role and automatically create their supervisory organization using the *Change Job* business process. The worker must belong to an organization that uses the job management or position management staffing model. To set up this option:

- Add a *Create Subordinate* step after the completion step in the *Change Job* business process.
- Add a condition rule that determines when to initiate the step. Example: Change Job Reason = *Promotion*.
- Assign the step to an HR role.

After the *Create Subordinate* subprocess completes, Workday:

- Creates a supervisory organization as a subordinate to the worker's current organization.
- Assigns the worker to the Manager role.
- Applies hiring restrictions from the parent organization (job management staffing model only).

If you rescind the *Change Job* business process, Workday doesn't rescind these subprocesses:

- *Create Subordinate*
- *Assign Roles*
- *Hiring Restrictions*

If you don't want to keep the new organization, inactivate it. Rescinding the *Create Subordinate* subprocess only removes it from the organization hierarchy.

Note: You can also use *Change Job* to launch the *Move to New Manager* business process. Use this option to create a supervisory organization and transfer a worker to a nonmanager in another organization without changing the nonmanager's current job or position.

Transfer, Promote, or Change Job on page 821

Concept: Condition Rules for Job Changes

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

You can add condition rules to the *Change Job* business process to determine which subprocesses can be initiated during a job change. Workday evaluates the condition rules based on data entered on the Start Details page.

Example

You add *Change Organization Assignments* as a subprocess to the *Change Job* business process. You create a condition rule for the *Change Organization Assignments* step to run only when a worker's location changes:

And/Or	Source External Field	Relational Operator	Comparison Type	Comparison Value
And	Location - Proposed	NOT exact match with the selection list	Value from another field	Location - Current

The implications of this condition rule:

1. Teresa's manager, Steve, accesses the Change Job task and changes Teresa's location on the Start Details page.
2. Steve reviews the Organizations section, changes Teresa's cost center, and submits the changes.

3. The condition rule on the *Change Organization Assignments* step determines that Teresa's location changed.
4. The process routes to an HR administrator for review, and the administrator approves the change.
5. Workday updates Teresa's location. Based on the condition rule on the *Change Organization Assignments* step, Workday also updates Teresa's cost center.

Create Business Process Condition Rules

Concept: Employee Contracts in Change Job Events

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

You can end an employee's existing contract and start a new contract in a single *Change Job* event. Add 2 consecutive *Maintain Employee Contract* steps to the *Change Job* business process definition. The Order of these steps must be consecutive. Example: You add two rows for the *Maintain Employee Contract* subprocess to the *Change Job* business process definition. You enter *a* in the Order field for the first row, and *b* in the other one.

This approach provides flexibility when you use the *Change Job* business process to transfer an employee to another position. A position can have only 1 active contract at a time, as determined by the contract end date. If the employee has an existing contract, you can end that contract and start a new one. The new contract reflects the changes to the employee's position, job profile, or location.

Maintain Employee Contract Steps

Workday displays the first *Maintain Employee Contract* step based on details from the worker's existing contracts:

Existing Employee Contract	Description
Status	If there's an existing employee contract that's: • Active, Workday updates the current contract. • Inactive, Workday starts a new contract.
Date	If the existing contract end date is before the effective date of the *Change Job* event, the contract details won't populate because the contract has ended. You can add a new employee contract in the *Maintain Employee Contract* step. The effective date of the contract populates from the *Change Job* effective date. If you select a contract end date that's before the *Change Job* effective date, Workday updates the contract effective date to the same date.

Workday runs the second *Maintain Employee Contract* step when the:

- Order field is properly configured on the business process definition. This business process step must be after the previous one, and not parallel to it.
- *Change Job* process has an in-progress or completed *Maintain Employee Contract* subprocess.
- Contract in the first *Maintain Employee Contract* step has an end date that is before the effective date of the *Change Job* event.

When the Workday-owned condition rule is met, the step starts a new contract.

Web Service

The *Change Job* web service supports only 1 *Maintain Employee Contract* subprocess. If you use the web service to upload job changes that end existing employee contracts, create the contracts manually using the Add Contract task. The *Change Job* business process sends the second *Maintain Employee Contract* step to the assigned person's My Tasks.

Reference: Change Job Initiation

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

Workday enables you to decide how you want administrators to initiate the *Change Job* business process for a worker. This discoverability enables you to make starting a job change more intuitive for users.

Option	Description
Global Search	Users can initiate the business process from these initiating actions through global search: • Change Contingent Worker Details • Change Job • Change Location • Request Transfer • Start Job Change Users can search for change job templates and launch the Start Job Change initiating action automatically from global search on desktop and mobile. Workday displays the change job template in global search when the user has access to the template.
Worker Profile	Enable users to launch change job templates from a worker profile by setting up the Start Job Change report as a profile card.
Dashboards	Add the Change Job task to the My Team Management dashboard to help managers track and manage job changes and time-sensitive tasks for their teams. Enable users to launch change job templates from dashboards on desktop by setting up the Start Job Change report as a worklet on these dashboards: • My Team Management. You can make it required on the Maintain Dashboards task. • Your custom dashboards. Go to the Enable Worklet for Dashboard task and select Start Job Change to enable it for the custom dashboards you choose. Then, you can add the Start Job Change worklet to the

Option	Description
	configured dashboards on the Maintain Dashboards task.
REST API	Use the `jobChanges` REST API to start and submit job changes. You can update worker information, such as: • Location. • Business Title. • Job Profile. • Position. • Job Classification.

Reference: Hiring Restrictions in Change Job

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

Workday determines when to apply hiring restrictions in the *Change Job* business process by considering:

- How the tenant is configured for staffing.
- If the worker is moving to a different supervisory organization.
- If the proposed organization has a different staffing model.

Workday then decides whether to move the worker and position together, or to apply hiring restrictions against a new position.

Optionally, you can loosen restrictions on job profiles, locations, time types, and worker types by selecting the Allow Override of Restrictions on Staffing Events check box in the Edit Tenant Setup - HCM task.

Job Management

You can control whether workers get new positions when they move between job management organizations that have the same staffing model. In the Edit Tenant Setup - HCM task, select the Change Job Use Default Organizations for Job Management check box to place workers into new positions. Leave it unchecked to move workers and positions together.

If a worker stays in the same organization, Workday always keeps the same position regardless of the tenant setting.

Workday uses these criteria to apply hiring restrictions in job management organizations:

Tenant Setup: Change Job Use Default Organizations for Job Management	Organization Change?	Staffing Model Change?	Move Position?	Apply Hiring Restrictions?
Yes	No	No	Yes (based on same organization)	No
Yes	Yes	No	No (based on tenant setting)	Yes

Tenant Setup: Change Job Use Default Organizations for Job Management	Organization Change?	Staffing Model Change?	Move Position?	Apply Hiring Restrictions?
Yes	Yes	Yes	No (based on staffing model change)	Yes
No	No	No	Yes (based on same organization)	No
No	Yes	No	Yes (based on tenant setting)	No
No	Yes	Yes	No (based on staffing model change)	Yes

Position Management

In position management organizations, Workday applies hiring restrictions as shown.

Organization Change?	Staffing Model Change?	Move Position?	Apply Hiring Restrictions?
No	No	Yes	No
Yes	No	Yes	No
Yes	Yes	No	Yes

FAQ: Change Job

Note: This topic is relevant to the legacy change job experience. We plan to retire this topic in a future release.

- What happens if I don't uptake the new enhanced user interface for change job templates? on page 835
- Why is the Enable Enhanced UI for this Template check box grayed out? on page 835
- Why doesn't the Position field show up on templates with the enhanced user interface enabled? on page 835
- Where is the Attachments section? on page 836
- Why is the old experience showing up when I start a job change through Workday Recruiting? on page 836
- What security configuration should I have for the new user experience? on page 836
- What type of help text can I configure on Change Job? on page 838

Enhanced User Interface for Change Job

What happens if I don't uptake the new enhanced user interface for change job templates?	We made the decision to make the Change Job enhanced user interface the single default experience for all users because the new experience not only matches current functionality but it significantly extends job change capabilities. The new Change Job experience is a much more seamless and user-friendly experience and it streamlines the entire process from start to finish. We've seen that the new user experience has proven to both reduce time to transact and increase completion rates. For customers who have: • Not adopted Change Job Templates: Workday will automatically migrate your current *Change Job* business process into the necessary change job templates configured with the new user experience. Certain domain security configurations will be automatically converted. Additional review by your Administrator will be required to ensure capabilities meet current security requirements. • Adopted Change Job Templates but have not adopted the new user experience: Workday will automatically convert existing templates to use the new user experience. Customers will need to evaluate their security setup to make changes that align with their business needs.
Why is the Enable Enhanced UI for this Template check box grayed out?	On the Maintain Change Job Templates task, you either need to: • Select an initiating action. • Remove Location after Change from the Select Editable Fields for Start Page prompt.
Why doesn't the Position field show up on templates with the enhanced user interface enabled?	In the enhanced user interface for Change Job, we only display the Position field when you can edit it. The Position field is visible when: • The Position field is included in the change job template. • There's an open position in the supervisory organization. • The initiator has access to the proposed supervisory organization, such as through the Manager or Cost Center Manager roles. • The Move Position check box isn't selected. If these conditions aren't met, then Workday defaults the current position and doesn't display the Position field. For change job templates without an enhanced user interface, Workday displays the Position field even if there are no open positions for the supervisory organization.

Where is the Attachments section?	Change Job no longer has an Attachments section because it follows the standard business process framework. Any existing Change Job templates that you'd created that only contained the Documents section are no longer accessible. You must configure the Attachment Settings in BP Toolbar in order to include attachments in your Change Job transactions. See ../../../../manage-workday/business-processes/manage-business-processes/ala1404761315058.dita.
Why is the old experience showing up when I start a job change through Workday Recruiting?	If an internal candidate is moving to a new supervisory organization, Workday uses the *Request Transfer* initiating action. If you haven't configured a change job template for *Request Transfer* with the enhanced user interface enabled, Workday uses the old Change Job experience. If the internal candidate is moving within your own supervisory organization, we use the *Change Job* initiating action. If you haven't configured a change job template for Change Job with the enhanced user interface enabled, Workday uses the old Change Job experience.
What security configuration should I have for the new user experience?	For the new user experience, the Change Job business process uses a combination of the following to determine the change job information displayed to a user: • Business process security policy. • Template configuration. • Access to proposed supervisory organization. • Configuration of optional fields. • Localization settings.

- Security domain configuration for these domains, including view and modify access:
  - *Staffing Actions: Change Job Date and Reason*.
  - *Staffing Organizations: Header* for the *Change Organization Assignments* business process.
  - *Worker Data: Collective Agreements* for the *Assign Employee Collective Agreement* business process
  - These compensation domains for the *Propose Compensation* business process:
    - *Add Compensation Plans: Add Allowance*
    - *Add Compensation Plans: Add Bonus*
    - *Add Compensation Plans: Add Calculated*
    - *Add Compensation Plans: Add Commission*
    - *Add Compensation Plans: Add Hourly*
    - *Add Compensation Plans: Add Merit*
    - *Add Compensation Plans: Add Period Salary*
    - *Add Compensation Plans: Add Salary*
    - *Add Compensation Plans: Add Stock*
    - *Add Compensation Plans: Add Unit Salary*
    - *Compensation Change: Allowance*
    - *Compensation Change: Bonus*
    - *Compensation Change: Calculated*
    - *Compensation Change: Commission*
    - *Compensation Change: Compensation Basis Details*
    - *Compensation Change: Future Changes*
    - *Compensation Change: Guidelines*
    - *Compensation Change: Hourly*
    - *Compensation Change: Manage Compensation Basis*
    - *Compensation Change: Merit*
    - *Compensation Change: Period Salary*
    - *Compensation Change: Salary*
    - *Compensation Change: Stock*

	• *Compensation Change: Total Base Pay* • *Compensation Change: Unit Salary*
What type of help text can I configure on Change Job?	You can configure business process step help text, and QuickTips through the Guidance Workspace report. You can't configure help text for section groups, because section groups don't exist on the new change job experience. We plan to retire the Change Job template on the View Business Process Template report in a future update. We recommend that you use one of the other methods for configuring help text for Change Job. See Steps: Set Up and Manage the Guidance Workspace.

Article: Get Ready for the Enhanced Change Job Experience with 2025R2

Next Level: Preparing for the New Change Job User Interface

New Change Job

Setup Considerations: Job Changes

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

You can use this topic to help make decisions when planning your configuration and use of the *Change Job* business process. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

You can set up job change workflows by configuring and combining tasks and business processes. Example: Transferring a worker initiates a change in benefits and requires the approval of an HR administrator.

The main process to consider is the *Change Job* business process, which controls most job changes between a worker's *Hire* and *Termination* events, including:

- Demotions.
- Job data changes.
- Lateral moves.
- Location changes.
- Promotions.
- Transfers between managers and organizations.

You can enable the *Change Job* business process to use machine learning to provide recommendations for common fields when a user is completing a job change.

Business Benefits

Change Job is intuitive and configurable, enabling you to:

- Minimize manual error.
- Limit the training required for users to perform job changes.
- Configure related events as subprocesses.

You can modify the overall process to suit the needs of your organization. Example: Requiring specific tasks or skipping unnecessary fields based on the job change reason. You can also add a range of nonstaffing tasks as subprocesses that can display and route differently based on many factors, including:

- Who initiates
- How users initiate
- Location
- Organization or manager
- Reason
- Worker type

Once you set up the *Change Job* business process, Workday enables the appropriate users to access and complete the steps.

Use Cases

- Converting individual contributors into managers by assigning other workers to their supervisory organizations.
- Creating and managing internal job requisitions and applications.
- Initiating processes such as compensation changes, location changes, and onboarding new hires.
- Changing an employee's job to a domestic assignment.
- Moving managers or whole teams between organizations.
- Moving workers from 1 manager to another.
- Changing the details for a contingent worker.

Questions to Consider

Question	Considerations
How do you want to customize your change job workflow?	You can configure separate Change Job business process definitions for different organizations. Examples: • You can create a definition for U.S.-based workers and a separate definition for workers based in the UK. • You can create a definition for managers that includes the Approval step and a separate definition for HR Administrator roles that skips the *Approval* step. You can also use condition rules to modify the workflow for each definition. Rule-based definitions are more efficient for high-volume transactions than definitions with the same condition repeated for multiple steps. Example: You can create a rule-based definition that evaluates workers for full-time status, instead of creating multiple steps requiring workers to be full-time employees.

<table>
<tr><th>Question</th><th>Considerations</th></tr>
<tr><td></td><td>You can also configure rule-based consolidated templates to enable initiators to complete some subprocesses during a job change based on condition rules.</td></tr>
<tr><td>What other tasks or subprocesses do you want to include when you make job changes?</td><td>You can add tasks as steps on the Change Job business process, such as:
Assign Pay Group
Change Benefit Elections
Onboarding
Generate Document
Access the Business Process Configuration Options report to find a full list of tasks that you can add to initiate subprocesses on the Change Job business process.

You can also configure some subprocesses as a consolidated template, which enables the initiator to access them when completing a change job.</td></tr>
<tr><td>What should your users be able to see and do when completing job changes?</td><td>You need to create simplified job changes for initiators, reviewers, and approvers using the Maintain Change Job Templates task. These templates enable you to control what information is visible and editable when users access the initiation, review, and approval steps of a job change.

You can also configure a variety of tools to help people complete job changes, such as:
QuickTips that you can configure using Guidance Workspace.
Custom validation rules that ensure users enter data accurately.
Configuring optional fields that are hidden, required, or view-only.
Dynamically updating default values for certain fields based on changes users make to other fields.
Embedded analytics worklets to display additional data.</td></tr>
<tr><td>Do you want to provide machine learning recommendations for users when they complete job changes?</td><td>You can opt in to share data categories with Workday. Once you opt in, it takes approximately 2 weeks for Workday to process your data and present recommendations. To use the most relevant data, we recommend that you enable this feature in your production tenant.

The recommendations depend on the volume of your contributed data. We recommend that you have historical data before you use this feature.</td></tr>
</table>

Recommendations

- Plan for all possible job change scenarios. Consider what you want job changes to look like within your organization and what scenarios you want to prevent.
- The *Change Job* default definition includes all required steps in the correct order. Modify the default definition only as much as necessary to accomplish your business needs. Test often during configuration to reduce errors.
- Revisit your job change configurations whenever you implement new tools and business processes in Workday
- If you have pay groups configured, you can select the next pay period to align the start date with your pay cycle.

Requirements

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

You need to set up the *Change Job* business process to manage workers in Workday. You must add *Change Organization Assignment* and *Propose Compensation Change* as subprocesses on the *Change Job* business process definition.

In order to use these initiating actions, you need to set up templates for them on the Maintain Change Job Templates task:

- Start Job Change
- Change Job
- Change Location
- Request Transfer
- Change Contingent Worker Details

Limitations

No impact.

Tenant Setup

You can view tenant setup options that impact *Change Job* in these sections of the Edit Tenant Setup - HCM task:

- Staffing
- Job Requisitions
- Leave of Absence

Security

The Change Job business process uses a combination of the following to determine the change job information displayed to a user:

- Business process security policy for the relevant business processes.
- Domain security policy for the relevant domains, including view and modify access.
- Template configuration.
- Access to proposed supervisory organization.
- Configuration of optional fields.
- Localization settings.

The initiator’s access to a proposed Supervisory Organization determines the visibility of many Change Job fields. As a result, Workday might dynamically hide fields and sections from a user.

Security	Considerations
Business Process Administration Manage: Business Process Definitions	Enables you to set up the *Change Job* business process definition.
Change Job business process security policy.	The security groups you configure here can access the *Change Job* business process.
View and modify access to the Staffing Actions: Change Job Date and Reason domain.	Enables you to access the Change Job step and initiating action.
Change Organization Assignments business process security policy. View and modify access to the *Staffing Organizations: Header* domain.	Enables you to access the *Change Organization Assignments* business process, including when it's a subprocess on Change Job. Users with access to this domain can see any organization fields configured on the Change Job template. Example: Company, Cost Center, and Business Unit.
Assign Collective Agreement business process security policy. View and modify access to the *Worker Data: Collective Agreements* domain.	Enables you to access the *Assign Collective Agreement* business process, including when it's a subprocess on Change Job. Users with access to this domain can see all collective agreement fields on the Change Job template.

Propose Compensation business process security policy.
 	
View and modify access to these domains:
 	
• Core Compensation functional area:
    • Add Compensation
    • Compensation Change
• Advanced Compensation functional area:
    • Add Compensation Management Plans
    • Change Compensation Management Plans
	Enables you to access the *Propose Compensation* business process, including when it's a subprocess on Change Job.
	
	Users with access to these domains can see compensation fields on the Change Job template.

Business Processes

Your job change setup can affect downstream events, such as the:

- *Assign Pay Group* business process.
- *Change Benefit Elections* business process.
- *Change Organization Assignments for Worker* business process.
- *Employee Contract* business process.
- *Onboarding* business process.
- *Propose Compensation Change* business process.
- Third-party integrations.

In-progress *Change Job* events can block a worker's processes from initiating or completing.

Some business processes initiate *Change Job* and might require specific business process definitions to function. Example: *Swap Positions*.

Reporting

Add the Change Job task to the My Team Management dashboard to help managers track and manage job changes and time-sensitive tasks for their teams.

Add the Start Job Change report to the worker profile to enable users to launch relevant job changes for a specific worker.

You can use the View Document Template Details report to view document templates created with Workday Docs.

Integrations

- You can use the `jobChanges` REST API to start and submit job changes. You can update worker information, such as:
  - Location.
  - Business Title.
  - Job Profile.
  - Position.
  - Job Classification.
- You can use the *Change Job* EIB to perform a job change on an employee or contingent worker. This can include changing worker-related information such as organization assignments, compensation changes, pay groups and locations. When you view a change job event created by the EIB, the event displays based on your configuration on the Change Job template with the Change Job initiating action.

Connections and Touchpoints

Change Job events can touch many other functional areas in Workday, including:

Features	Consideration
Benefits	Changes to a worker’s position could trigger the *Change Benefit Elections* business process.
Compensation	Changes to a worker's position, location, job profile, or other position attributes may impact compensation. This includes modifications to Compensation Grade, Grade Profile, or the addition or update of Compensation Plans.
Onboarding	You can initiate internal onboarding events when you make a job change to a worker’s position attributes, such as location or company.
Payroll	Job changes enable you to change a worker's information which can affect their payroll and benefits processing. Some examples of job changes that impact payroll include position, location, organization, and compensation changes.
Time Tracking	When you change the worker's position using the *Change Job* business process, Workday adds the new position to time blocks from the effective date of the change.

Features	Consideration
Recruiting	Recruiting transactions for internal candidates route to Change Job once the worker reaches the*Ready to Hire*phase. If an internal candidate is moving to a: • Different supervisory organization, Workday uses the template with Request Transfer as the initiating action. • Within their own supervisory organization, Workday uses the template with Change Job as the initiating action.
Workday Docs	You can create document templates in Workday Docs to include on generate document steps for Change Job.

A Change Job event can impact multiple functional areas at once. Example: When you transfer a worker to another country, the location change can affect their benefits, compensation, and onboarding information.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

2024R1 What's New Post: Change Job Templates New User Experience for Consolidated Templates

2024R1 What's New Post: Change Job Templates New User Experience

Steps: Set Up Job Changes

Prerequisites

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

Review setup considerations for the *Change Job* business process.

Context

Set up the *Change Job* business process to make staffing changes for employees and contingent workers, including:

- Contract changes.
- Demotions.
- Lateral job changes.
- Location changes.
- Promotions.
- Transfers.

Steps

1. Steps: Set Up Security for Change Job on page 853.
2. Set Up Reasons for Job Changes on page 857.
3. Set Up Change Job Templates on page 849 .

   You can configure compensation templates that map to a Change Job reason. Workday uses that template on the Change Job template.
4. (Optional) Access the Edit Tenant Setup - HCM task to configure these Staffing options:

   - Change Job Default Headcount Option
   - Change Job Use Default Organizations for Job Management
   - Change Job Default for Move Team with Manager
   - Enable Job Overlap for Vacating Positions
   - Automatically Select Is This Position Available for Overlap on Vacating Events
   - Enable Job Overlap on Position Restrictions
   - Allow Override of Restrictions on Staffing Events

   See ../../../../manage-workday/tenant-configuration/tenant-setup/dan1370797339945.dita.
5. Configure the *Change Job* business process in the Staffing functional area.

   For a list of allowed actions and approval options in *Change Job*, access the Business Process Configuration Options report. Your business process steps must follow a specific order to avoid errors. Ensure that:

   - *Change Job* is first in the process order.
   - Each consolidated subprocess is an action step on the *Change Job* business process definition, including the *Change Organization Assignment* step. You must add these steps before the completion step.
   - *Propose Compensation Change* is last in the process order.
   - There's a review step for *Propose Compensation Change* in the *Change Job* business process definition to prevent unreviewed compensation changes.
   - To ensure correct routing for the *Request Transfer* initiating action, include review steps for both the current and receiving manager. Assign a review step to an HR Partner or other role that has security access to all sections in the *Change Job* business process. This step ensures that someone reviews all job changes, including details which managers might not be able to view.

   Some action steps have Workday delivered condition rules. Example: You create an action step for *Change Superior Organization*. Workday applies the following condition rule: *Is Move Manager's Team selected or if it is a web service request, and if there are subordinate organizations to be moved.*

   See Steps: Configure Business Process Definitions.
6. (Optional) Set up consolidated templates if you want to initiate the configured subprocesses as part of the Change Job workflow.

   - From the related actions of the Change Job business process type, select Business Process> Configure Consolidated Template. You can configure Assign Employee Collective Agreement, Change Job, Change Organization Assignments for Worker, and Propose Compensation Change. Ensure that:

- Change Job is first in the process order.
- If you configure Propose Compensation Change, ensure that it's last in the process order.

- On the *Change Job* business process definition, ensure that:
    - Each consolidated subprocess is an action step on the *Change Job* business process definition. You must add these steps before the completion step.
    - There's a review step for *Propose Compensation Change* in the *Change Job* business process definition to prevent unreviewed compensation changes.
    - You use the Business Process > Configure Consolidated Approval related action from the step to create a single approval step. The Consolidated Approval step comes after the last subprocess that's included in the consolidated approval.

Security: These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

You can initiate the configured subprocess as part of the Change Job workflow. The approval step for the Change Job event includes all consolidated subprocesses. You receive all events on the template as 1 task in My Tasks. Consolidated templates might enable workers to see events that:

- Aren’t relevant to them.
- Are only relevant for workers based in other locations.

7. (Optional) Set Up Rule Based Consolidated Templates for Job Changes on page 859.

    You can create multiple consolidated templates with condition rules for the *Change Job* business process.
8. (Optional)../../../../manage-workday/business-processes/manage-business-processes/ala1404761315058.dita.

    You can enable attachments on the *Change Job* business process so that you can attach documents to Initiation and Action steps.
9. (Optional) Steps: Set Up Defaults for Change Job Fields on page 855.
10. (Optional) Steps: Enable Machine Learning Recommendations for Change Job on page 863.
11. (Optional) Enable autocomplete for subprocesses for the *Change Job* business process definition.

    Workday recommends that you don’t enable autocomplete on the default definition for the *Change Job* business process. Example: The *Change Job* is coming through a Recruiting event.

    See Set Up Security to Autocomplete Staffing Events on page 523.
12. (Optional) Set up Workday Assistant for Staffing.

    You can initiate job changes through the Workday Assistant chatbot in:

    - Your Workday tenant.
    - Workday for Microsoft Teams.
    - Workday for Slack.

    See Steps: Set Up Workday Assistant for Staffing on page 524.
13. (Optional) Set optional fields as hidden, required, or not enterable on the Change Job template.

    These functional areas are available for the *Change Job* business process:

    - Change Job
    - Change Organization Assignments for Worker

    Workday only requires or hides the field if your template configuration includes the field. Example: You require the Employee Type field. Your change job template configuration hides the

Administrative Details section. The initiator doesn't see the Employee Type field, because that section is hidden.

If you hide the Close the current position? field using the Configure Optional Fields task, it will still display in the enhanced user interface. To hide the field, you must remove the What Do You Want To Do With This Person's Current Position? field from the Position Fields to Display field on the Maintain Change Job Templates task.

See Hide or Require Optional Fields.

14. (Optional) Create Custom Notifications.

    Set up email notifications to personal or work email addresses.

    You can override the email template. If you use Notification Designer, you can create a template and enable it for the *Custom Business Process* notification category. You can use the notification template to send notifications when using the *Change Job* business process.

15. (Optional) Maintain Localization Settings on page 144.

    These fields use the proposed location instead of the current location for any staffing transaction:

    - Additional Job Classifications
    - Work Shift
    - Work Space

16. (Optional) Configure help text for change job.

    You can create:

    - Field-level support text in the UI using QuickTips. See../../../../manage-workday/guidance-workspace/steps--manage-the-guidance-workspace.dita.
    - Help text for specific steps. As a related action on a Change Job business process step, select Business Process > Maintain Step Help-Text. When a user accesses a Change Job, they'll see this text at the top of the page for the applicable step. Select a condition rule to display different help text to different audiences.

17. (Optional) Set up countries tracking working time.

    See Steps: Set Up Working Time Localized Fields on page 550.

18. (Optional) Add Worklets to Business Processes.

    Configure embedded worklets to display when users complete a *Change Job* business process, including on subprocess steps.

19. (Optional) Steps: Set Up Swap Positions on page 814.

20.

Result

View job changes on worker profiles and in Workday standard reports.

- Job changes display the reason type in a worker's history.
- Staffing reports filter *Change Job* events by the reason type.

Next Steps

You can cancel, rescind, or correct *Change Job* events. To make out-of-order corrections, use the *Edit Position* business process.

The access that the initiator has to a Supervisory Organization determines the visibility of many *Change Job* fields. As a result, Workday might dynamically hide fields and sections from the initiator.

Managers can initiate job changes across Workday. They can track the progress of job changes using the My Team Management dashboard.

Set up out of order insertions for the *Change Job* business process.

2024R1 What's New Post: Change Job Templates New User Experience for Consolidated Templates

2024R1 What's New Post: Change Job Templates New User Experience

Set Up Out of Order Insertion for Job Changes

Prerequisites

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

Set up the *Change Job* business process.

Context

You can configure the *Change Job* business process so that you can insert position and job change events before other completed staffing and end-employment events and their respective subprocesses.

Note: Review information about out of order insertions for job changes before setting up.

See: Concept: Out of Order Insertions for Job Changes

You can use the *Put Functionality for Staffing Transactions* web service to opt-in or opt-out of out of order *Change Job* functionality. You can use the *Get Functionality for Staffing Transactions* web service to retrieve the opt-in or opt-out status.

Steps

1. Access the Maintain Functionality for Staffing Transactions task.

   Security: Set Up: *Staffing* domain in the Staffing functional area.
2. Select *Change Job* in the Business Process Type field.
3. As you complete the task, consider:

Option	Description
Functionality	Add rows for the Insert Out of Order Events and Insert Out of Order Events (Web Services) options.
Enabled for	The All Security Groups option enables access to every security group configured on the business process security policy, for the relevant action. The Restricted Security Groups option enables you to select any security group in the Security Groups column. Workday only grants access to the security groups that are on the

Option	Description
	corresponding action on the business process security policy.
Security Groups	Workday recommends that you select security groups with: • Full access to workers' event history. • Permissions on the Start Change Job initiating action on the *Change Job* business process security policy.

4. Access the Maintain Change Job Template task.

   Workday recommends adding a new *Change Job* template for out of order insertions that exposes all fields. This ensures that you can easily review and update all fields to match your specified effective date. Workday recommends selecting Apply this Template to Review and Approve Steps.

Result

You can initiate out of order *Change Job* events by selecting the Start Job Change task from the related actions menu of the relevant job or position. You can find a list of jobs or positions on the Worker's History by Category or Job History tab on the worker profile.

When an out of order insertion vacates a job, position, or supervisory organization, initiate it from the related actions menu of the job or position that precedes the one that you're inserting.

Next Steps

Access the Out of Order Job Changes report to audit out of order changes and their downstream impacts.

Reference

2025R2 Feature Release Note: Out of Order Change Job

Set Up Change Job Templates

Prerequisites

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

- Configure the *Change Job* business process.
- Set up consolidated templates for the *Change Job* business process.
- Security: *Set Up: Staffing* domain in the Staffing functional area.

Context

Set up simplified job change templates that users such as managers can access through these initiating actions:

- Change Contingent Worker Details
- Change Job
- Change Location
- Request Transfer
- Start Job Change

You can specify the sections of the *Change Job* business process that certain security groups can view and edit when initiating through a Change Job template.

Steps

1. Access the *Change Job* business process security policy to assign security groups to the initiating actions.
   - Start Job Change: Enables users to initiate a change job for a worker. You can create multiple Change Job templates for this initiating action.
   - Change Job: Enables users to initiate a change job for a worker. You can create one Change Job template for this initiating action. This template is used when Change Job is initiated as a subprocess from other staffing transactions, such as Recruiting, and there's no organization change.
   - Change Contingent Worker Details: Enables users to change contract details for a contingent worker, such as editing their contract end date.
   - Change Location: Enables users to initiate a location change for a worker. To change a work space location without initiating any other staffing transactions, use the standalone *Change Work Space* business process instead.
   - Request Transfer: Enables users to initiate a transfer for a worker, such as when a manager is initiating a transfer for a worker in a different supervisory organization. Workday uses this template when Change Job is initiated as a subprocess from other staffing transactions, such as Recruiting, and there's an organization change.

     Example: The proposed manager can't initiate a Change Job for a worker outside of their organization, so instead they initiate Request Transfer. The request routes to the worker's current manager first, then comes back to the proposed manager to complete it.
2. Access the Maintain Change Job Templates task.
3. As you complete this task, consider:

Option	Description
Template Name	You'll see this name in: • The What do you want to do? prompt when you initiate the job change. • The Start Job Change report on the Worker Profile. Global search. .*In Use*You can inactivate any template, but you can't remove a template that's
Template Order	Configure the order of the change job templates based on how relevant they are for your organization. Users will see these templates in the order you configure when they launch a job change. Workday displays the first 5 change job templates as buttons on the Start Job Change report on the worker profile.
Select Reason for Template	You can configure one or more reasons for a template. When you configure multiple reasons, users can select one from the Why are you making this change? field. Based on your configuration, initiators might not see all the reasons. Example: You configured the Data Change reason on the Maintain Event Categories and Reasons task for Managers. You haven't configured the Demotion reason for Managers. You add both the Data Change and Demotion

Option	Description
	reasons on the template. When a manager accesses the template, they can only use the Data Change reason.
Template Help Text	This text displays beneath the What do you want to do? prompt when a user selects a template.
Apply this Template to Review and Approve Steps	Select to apply your template configuration to display on review and approval steps. This selection enables reviewers and approvers to see any fields that: • You've configured to display on the template. • Have changed in the background, even if they're not configured to display on the template. Example: You select Work Location in the Select Sections for Template prompt, and display the Location field. You don't select the Worker Time section (which contains the Scheduled Weekly Hours field). The initiator selects a Location with a different default Scheduled Weekly Hours. The Scheduled Weekly Hours field is updated in the background, and the reviewers and approvers see the updated field. If it's not selected, they'll see all Change Job fields.
Make this Template Inactive	Select to inactivate the template. You can't inactivate a template that's part of any in-progress change job events. You need to complete or cancel those events to inactivate the template.
Select Initiating Actions	You can specify where initiators can access specific templates: • Start Job Change • Change Contingent Worker Details • Change Job • Change Location • Mass Actions • Request Transfer • Workday Assistant / REST API
Select Condition Rules	Create or add existing condition rules to a Change Job template. The template displays if all condition rules are met when validated against the worker's current position.
Select Security Groups	Select the security groups that can initiate job changes through this template. The template

Option	Description
	displays for initiators with access to at least 1 security group.
Select Sections for Template	Select the sections of the *Change Job* business process that you want the user to see. Workday hides all other sections from the user. Subsequent steps in the business process definition will display normally and respect rules. Workday recommends if you select the Position section, you also select one of these fields from the Fields to Display section: Create Position, Position, or Select a Job Requisition for this change fields.
Fields to Display	Select the fields that you want to display. This feature doesn't apply to templates with Mass Actions configured in the Select Initiating Actions column.
Select Subprocesses for Template	Select the subprocesses that you want the user to be able to access Reviewers and approvers only see changed subprocess information when you configure the subprocesses on the template. When you configure multiple subprocesses, Workday doesn't use the subprocess order that you configure on the Configure Consolidated Template task. Instead, we display each subprocess in this order when configured: • *Assign Collective Agreement* • *Change Organization Assignment* • *Propose Compensation Change* Note: When you exclude the *Propose Compensation* subprocess from a template, ensure you include a review step for *Propose Compensation* in the business process definition. This step prevents unreviewed compensation changes.

4. (Optional) Access the Configure Profile Summary task to enable users to initiate a job change directly from a worker profile.

   Configure the Start Job Change report on Worker Profile.

   Security: *Staffing Actions: Change Job Date and Reason* domain in the Staffing functional area.

   Workday displays the first 30 characters of the first 5 templates you configured on the Maintain Change Job Templates task as buttons on the worker profile.

5. (Optional) Access the Configure Optional Field task to configure fields as hidden, view-only, or required.

   The *Change Job* business process is available for these functional areas:

   - Change Job
   - Change Organization Assignments for Worker

   If you hide the Close the Current Position? field using the Configure Optional Fields task, it will still display. To hide this field, you must remove the Opening section from the Sections to Display field on the Maintain Change Job Templates task.
6. (Optional) Access the Maintain Custom Labels task to customize the Start Job Change task and report labels.

Result

After you submit your changes on the Maintain Change Job Templates task, Workday displays a View Change Job Templates report that you can use to view templates, and download them to PDF.

Users will see the Make Changes button on review steps that lead to a change job workflow. Users can select Make Changes, Approve, or Send Back if there are no errors. If there are errors, Make Changes is the only option.

Next Steps

Users can delegate the Start Job Change initiating action. They can also access the initiating action on the My Team Management dashboard.

You can create reports and condition rules based on Change Job templates.

2024R2 Feature Release Note: Change Job New User Experience for Workflow Steps

2024R2 Feature Release Note: Change Job Templates New User Experience for Initiating Actions and Multiple Reasons

Steps: Set Up Security for Change Job

Prerequisites

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

Security: *Business Process Administration* or *Manage: Business Process Definitions*, and *Security Configuration* domains in the System functional area.

Context

Set up security to give managers and administrators access to the *Change Job* business process and subprocesses. The business process security policy specifies who can start or complete actions in the *Change Job* business process.

Steps

1. Edit Domain Security Policies.

   Enable these domain security policies:

Option	Description
Staffing functional area	*Staffing Actions* *Staffing Organizations* (for consolidated templates)
Advanced Compensation functional area (for consolidated templates)	*Add Compensation Management Plans* *Change Compensation Management Plans*

2. Access the View Business Process Template report.
3. Access the Edit Business Process Security Policy task.
4. Select the *Change Job* business process type.
5. Edit the business process security policy:
   a) Under Who Can Start the Business Process, select the security groups you want to grant access to for each initiating action.
      Since the *Change Job* business process has multiple initiating actions, you can limit the types of job changes available to different roles. Example: You can restrict access to the Change Contingent Worker Details task, but provide broader access to the Change Location and Request Transfer tasks.

      To hide tasks that aren't relevant, leave the security groups empty.

      You can only secure the Request Transfer initiating action to constrained role-based security groups because it’s only available to roles that don’t have access to the Change Job task for the selected worker.
   b) Under Who Can Do Action Steps in the Business Process, select the security groups you want to be able to complete review steps in the business process.
   c) Under Who Can Do Actions on Entire Business Process, grant permissions to the *HR Partner*, *HR Administrator*, or other relevant HR role in your organization.

      To ensure that business process validations run, you must also grant *View All* permission to the roles that can initiate the business process.
   d) Under Attachment Settings in BP Toolbar, define attachment security to restrict who can add, edit, and view attachments in business process events.
6. Grant security permissions to the *Staffing Actions: Change Job Date and Reason* domain.

   - Select Domain > Edit Security Policy Permissions from the related actions menu of the domain.
   - Grant access to the domain by selecting security groups and specifying whether they have permission to view or modify data.

7. (Optional) If you consolidate *Change Job* with *Assign Employee Collective Agreement*, *Change Organization Assignments for Worker*, and *Propose Compensation Change*, set up security for these processes.

   If you're consolidating Change Job with:

   - *Assign Employee Collective Agreement*, also grant security permissions to the *Worker Data: Collective Agreements* domain.
   - *Change Organization Assignments for Worker*, also grant security permissions to the *Staffing Organizations: Header* domain.
   - *Propose Compensation*, also grant security permissions to these domains:
     - *Add Compensation* and *Compensation Change* in the Core Compensation functional area.
     - *Add Compensation Management Plans* and *Change Compensation Management Plans* in the Advanced Compensation functional area.
8. Access the Activate Pending Security Policy Changes task to confirm your changes.

Next Steps

Access the Template-Driven Business Process Security report to confirm that the *Change Job* business process and domain security permissions arealigned.

Related Information
Concepts
Concept: Business Process Templates
Tasks
Activate Pending Security Policy Changes
Steps: Change Organization Assignments for Worker on page 912
Steps: Propose Compensation for Employees or Positions on page 1032
Steps: Set Up Job Changes on page 844
Steps: Manage Collective Agreements on page 647

Steps: Set Up Defaults for Change Job Fields

Prerequisites

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

Configure the *Change Job* business process and security policy in the Staffing functional area.

Security: *Set Up: Staffing* domain in the Staffing functional area.

Context

You can set up defaulting for these fields on the *Change Job* business process:

- Business Title
- Job Title
- Time Type
- Work Shift

Based on your configuration, the defaults in the fields will update as the user edits these fields in the business process:

- Employee Type
- Job Profile
- Location
- Position

- Scheduled Weekly Hours

You can use these web services to load and retrieve the data in bulk:

- *Get Staffing Field Defaults*
- *Put Staffing Field Defaults*
- *Get Staffing Field Defaults Condition Rules*
- *Put Staffing Field Defaults Condition Rules*

Steps

1. Access the Create Change Job (All) Defaults Condition Rule task.

   Create a set of condition rules that you can use to determine when to populate a specific change job field.

   Example: You want to default the Job Title field based on what the user enters in the Job Profile field. You create a condition rule using the *Job Profile - Proposed* field.
2. (Optional) Create Calculated Fields.

   Create custom fields to use in staffing field defaults. Select these values on the calculated field:

Field	Value
Business Object	*Change Job*
Authorized Usage	*Staffing Field Defaults - Change Job*
3. Access the Maintain Staffing Field Defaults task.
4. Select the Change Job (All) tab.

   Create a row for each field that you want to create defaulting rules for.
5. Select the condition rules you created in the Condition Rule prompt.
6. Associate 1 or more condition rules for specific staffing fields in the business process and define the value that populates that field.

   As you complete this task, consider:

   - Defaulting applies to all change job initiating actions, and the review and approval steps. Defaulting doesn't apply when you correct a *Change Job* event.
   - Workday processes rules in the order they display in the grid. Once a field meets the conditions for a rule, Workday ignores any remaining rules for that field.
   - Users can override field defaults when completing the *Change Job* event.

   Security: *Set Up: Staffing* domain in the Staffing functional area.
7. (Optional) Configure calculated fields in the Report Field.

   Note: You can't use calculated fields that contain sensitive data. Example: *Date of Birth*.

Result

During a *Change Job* event, Workday evaluates condition rules and applies defaults dynamically while users make changes to these fields:

- Employee Type
- Job Profile
- Location
- Position
- Scheduled Weekly Hours

Example

You want to default the Time Type field based on what the user enters in the Scheduled Weekly Hours field.

1. On the Maintain Staffing Field Defaults task, access the Change Job (All) tab.
2. Select the Add button.
3. Select *Time Type* as the Field.
4. Create a new row.
5. Access the Create Change Job (All) Defaults Condition Rule task from the Condition Rule prompt.
6. Click OK.
7. Enter *Scheduled Weekly Hours Less Than 35* in the Description field.
8. Select these values in the Rule Conditions grid:

And/Or	(	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value	)
And		*Scheduled Hours - Proposed*	less than or equal to	Value specified in this filter	*35*	

9. Click OK.
10. Return to the Change Job (All) tab on the Maintain Staffing Field Defaults task.
11. Select *Scheduled Weekly Hours Less Than 35* in the Condition Rule column.
12. In the Value column, select *Part time* as the Specific Value

 Click OK.

 .

Set Up Reasons for Job Changes

Prerequisites

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

Security: *Set Up: Staffing* domain in the Staffing functional area.

Context

Create custom reasons for job changes and map them to these Workday-owned change job types:

- *Data Change*
- *Demotion*
- *Lateral Move*
- *Promotion*
- *Transfer*
- *Swap Positions*

Based on your configuration, Workday filters the reasons that are available to the initiator depending on:

- Whether or not the initiator is a manager.
- What the worker type is of the person you are doing the change job for.

Workday uses the change job type to create a Display ID for the change job event. This Display ID displays in change job-related tasks when you submit a change job event, such as on My Tasks or Worker History. It provides additional context on the reason for the change. Example: *Data Change: John Smith*, *Lateral Move: Janet Smith*.

Steps

1. Access the Maintain Event Categories and Reasons task.
2. Select the *Change Job* event.
3. Create and organize reasons:
    a) Create a Reason Category. Categories display in prompts to help organize reasons on the *Change Job* business process.
    b) Create a Reason to display in selection lists.
    c) Map the reason to a Change Job Type:
        - *Data Change*
        - *Demotion*
        - *Lateral Move*
        - *Promotion*
        - *Transfer*
        - *Swap Positions*
    d) Select one or both of these check boxes to indicate that the reason applies to employees or contingent workers:
        - For Employees
        - For Contingent Worker
    e) Select Manager Reason if you want to display the reason to everyone in a manager role.
    f) Create additional reasons and categories as needed. We recommend keeping the list short to make selection easier.

Example

Reason Category	Reason	Change Job Type	For Employee	For Contingent Worker	Manager Reason
Demotion	Decrease in Responsibility	Demotion	X		
Data Change	Change Location	Data Change	X	X	X
	Change Job Details	Data Change	X	X	X
	Change Contract Details	Data Change		X	X
Lateral Move	Move to Another Position on My Team	Lateral Move	X	X	X
Promotion	Increase in Responsibility	Promotion	X		X
Transfer	Move to Another Manager	Transfer	X	X	X
Swap Positions	Training	Swap Positions	X	X	X
	Reorganization	Swap Positions	X	X	X

Concept: Condition Rules for Job Changes on page 870

Tasks

Steps: Set Up Job Changes on page 844

Set Up Rule Based Consolidated Templates for Job Changes

Prerequisites

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

Set up the *Change Job* business process.

Security: *Business Process Administration* or *Manage: Business Process Definitions* domain in the System functional area.

Context

You can create multiple consolidated templates with condition rules for the *Change Job* business process.

Example: You want *Assign Employee Collective Agreement* to be a subprocess of *Change Job* only for workers based in the Netherlands. You create a condition rule that makes *Assign Employee Collective Agreement* only available to workers in the Netherlands. When a manager from Amsterdam initiates *Change Job*, the manager sees the employee collective agreement step.

Steps

1. Access the Configure Rule Based Consolidated Template task.
2. As you complete this task, consider:

Option	Description
Rule	You can only create rules that relate to the: • *Change Job* event. • Position. • Worker. Workday uses the first Rule Based Consolidated Template condition that applies. When no rules apply, Workday uses the default *Change Job* business process definition. Note: Ensure that condition rules reflect your requirements. Test all combinations of Change Job Templates, Rule Based Consolidated Templates, and *Change Job* business process definitions to validate expected outcomes.
Business Process Type	The order of these business process types dictates the order that Workday completes the subprocesses. For every business process type you select, ensure that the relevant subprocess is a step on the *Change Job* business process definition. The order of business process types in the consolidated template must match the order

Option	Description
	of subprocesses in the business process definition. Ensure that: • Change Job is first in the process order. • If you configure Propose Compensation Change, ensure that it's last in the process order.

Result

On consolidated *Change Job* templates, the subprocesses start automatically but cancel if you make no changes.

Worker history displays subprocesses as *Canceled*, but the *Change Job* process history displays different statuses for individual steps:

- Initiation: *Automatic Complete*.
- Review: *Manually Skipped*.
- Completion: *Automatic Cancel*.

Tasks
Steps: Set Up Job Changes on page 844

Steps: Set Up Swap Positions

Context

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

A position swap in Workday enables you to select 2 or more workers and then move them into each other's positions by initiating a single Swap Positions business process transaction.

When completing a swap position, users can:

- Swap multiple workers at once, such as for mass reorganizations or worker rotation. Example: Moving retail managers from 1 store to another.
- Only swap position management positions.
- Select which positions to swap, if a worker has multiple positions.
- Select a worker multiple times in 1 swap to include several of their positions in the swap.
- Only swap workers with matching worker types. Example: You can't swap a contingent worker into an employee position.
- Not swap a position that uses internal Workday pay groups with a position that uses external pay groups.

Steps

1. Set Up Reasons for Job Changes on page 857.

   Create reasons on the Maintain Event Categories and Reasons task.

   a. Select *Change Job* in the Event field.
   b. Create reasons with *Swap Positions* selected in the Change Job Type column.

   To use the Swap Positions task, you must configure at least 1 reason with the *Swap Positions* Change Job Type.

2. Configure Rule-Based Business Processes.

   Configure these business processes and security policies in the Staffing functional area:

   - *Change Job*
   - *Change Organization Assignments for Worker*
   - *Swap Positions*

   When the Change Organization Assignments task is on the *Change Job* consolidated template, it must be the *Complete* step on the *Change Job* business process definition.

   When these events are on the *Change Job* consolidated template, they must be after the *Complete* step on the *Change Job* business process definition:

   - *Employee Collective Agreement*
   - *Propose Compensation*

   When you include the *Review: Receiving Manager* step on the *Change Job* business process definition, it must:

   - Be before the *Complete* step.
   - Have this Workday-owned If condition: *Initiating User isn't the same as the Processing User or Initiated by Request Transfer Task or Swap Positions?*

   The *Change Organization Assignments for Worker* business process definition must have the *Initiation* step as the *Complete* step.

   Don't place exit validations on the *Change Job* or *Change Organization Assignments* business processes, as they can prevent the position swaps from completing simultaneously.
3. Create Custom Business Processes.

   Configure the *Swap Positions* business process definition to include only an initiation step and review steps. Include the optional *Review Swap Positions* step to route to an approver before the swap completes. If you specify a role-based security group on the *Review Swap Positions* step, select the All check box, ensuring that all swaps within a list are approved simultaneously.

   You can enable managers to request position swaps for their workers with the Request Swap initiating action. Configure the *Swap Positions* business process definition to include the *Review Swap Positions: Current Manager* step and select the *Current* option in the Routing Modifier column. This setting ensures that the managers of both employees can approve the swap before it occurs.

   To ensure that swap requests, ignore the *Review Swap Positions* step, create an entry condition rule using the Initiated from Request Swap report field.

   We recommend that you create only 1 *Swap Positions* business process definition per tenant. This practice ensures that position swaps can complete across all organizations.
4. (Optional) Embed a worklet on the initiating action of the *Swap Positions* business process to include position data from custom reports in position swap events.

   Configure the worklet prompt to include the Position field on the *Swap Positions Task* business object. This configuration enables the worklet to display the positions included during initiation of the swap, as well as information related to those positions. The worklet displays on the second page of the Swap Positions task.

   See ../../../worklets-and-reports-for-human-capital-management/dan1370796491407.dita.

5. Edit Domain Security Policies.

   The *Staffing Actions: Swap Positions - View Events* domain controls access to the View Swap Positions Events report.

   The *Swap Positions - List* domain controls access to these tasks and reports:

   - Create Swap Positions List task.
   - Edit Swap Positions List task.
   - Find Workers for Swap Positions report.
   - View Swap Positions List report.

Result

The *Swap Positions* business process initiates the Change Job business process to perform the job changes for the swapped workers. When you swap workers between organizations, the *Change Job* business process also initiates the *Change Organization Assignments for Worker* business process.

Next Steps

Access the Create Swap Positions List task to select workers and add them to lists for future position swaps. Use these lists to prepare for mass position swaps ahead of time. Anyone with access to a list can swap the workers in that list, including workers that they don't otherwise have permission to view.

Access the Swap Positions task to perform position swaps. Each time you initiate a position swap, you can either select a previously created list or select workers individually within the task.

Workday automatically completes the *Change Job* business process based on the information from each filled position. Workday also provides validations to ensure that all positions swap at the same time. When 1 position can't swap, no part of the transaction can complete.

Position swaps display in worker histories as job and organization assignment changes. You can view changes using the View Swap Positions Events report.

Steps: Set Up Mass Action Workbooks to Initiate Change Job

Context

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

You can set up mass actions to initiate the *Change Job* business process in bulk for up to 1000 workers.

Steps

1. Set up mass action workbooks.

   Steps: Set Up Mass Actions.
2. Edit Business Process Security Policies.

   Configure security permissions for the *Change Job* and *Change Job (Mass Action)* initiating action on the *Change Job* business process policy.

   Configure security permissions for the *Change Organization Assignments for Worker (Mass Action)* and *Change Organization Assignment (REST)* initiating actions on the *Change Organization Assignments for Worker* business process policy.

   Ensure that these security groups are also on the *Mass Action Event* business process security policy.

   Ensure that you add the *Complete Mass Action Event* step and mark it as the completion step.
3. (Optional) Add additional facets to the Launch Mass Change Job report. To add additional facets, copy the delivered Launch Mass Change Job standard report to a custom report, and add any additional filters to the report definition.

4. (Optional) Create Custom Reports.

   Create or edit a custom report that has a data source containing positions or position restrictions. You can use the report or report filter to populate up to 1000 workers in the workbook using the Launch Mass Action Event task.
5. (Optional) Create or edit a search report that has a data source containing positions or position restrictions. You can select workers in the search report to populate up to 1000 workers in the Launch Mass Action Event task.

   Ensure that you select *Launch Mass Action Event* from the Mass Action column on the Advanced tab of the search report.

   See Steps: Create Search Reports.

Next Steps

Access the Launch Mass Change Job report, the Launch Mass Action Event task, or a configured search report to initiate the *Change Job* business process in bulk.

Setup Considerations: Job Changes on page 838

Reference

Steps: Set Up Job Changes on page 844

Steps: Enable Machine Learning Recommendations for Change Job

Prerequisites

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Context

You can enable the *Change Job* business process to use machine learning and automatically provide relevant recommendations for these fields:

- Change Job Reason

- Compensation Plan
- Cost Center
- Job Profile
- Location

Once you opt in, it takes approximately 2 weeks for Workday to process your data and present recommendations. During this time, the Recommendations folder on the Job Profile field might be empty. To use the most relevant data, we recommend that you enable this feature in your production tenant. This feature might not give good recommendations for workers with limited job change history, or a new cost center, job profile, or location.

We don't support translations for this feature.

Steps

1. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   a. Access the Innovation Services Opt-In task.
   b. Navigate to the Cross Application Services category.
   c. Select the Intelligent Core Generally Available Features check box.
   d. Click OK.
   e. Access the Maintain Innovation Services Data Selection Opt-In task.
   f. In the Innovation Services Valid for Maintain Data Opt-In field, select the Cross Application Services Intelligent Core Generally Available Features category.
   g. Click OK.
   h. In the View Data Categories for Feature field, select *Machine Learning Recommendations for Change Job*.
   i. Opt-in to the relevant categories.
   j. Click OK.
2. Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality. The default region for data processing is the U.S.

   Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.
3. (Optional) Hide machine learning suggestions for specific fields.

   Access the *Change Job* business process type on the Maintain Functionality for Staffing Transactions task.

   Example: You want to hide machine learning suggestions in production while Workday processes your data.

Result

Workday will begin using machine learning to display and suggest relevant values when users complete a job change.

Initiate Change Job in Mass Action Workbook

Prerequisites

- Configure the *Change Job* business process.
- Set up mass action workbooks for changing jobs.
- Security: *Mass Action Events* domain in the System functional area.
- (Optional) Enable change job templates for mass actions in the Maintain Change Job Templates task.

Context

You can initiate the *Change Job* business process in bulk with a mass action workbook. Mass change job also includes *Change Organization Assignments for Worker* as a subprocess.

You can add up to 1000 contingent workers and employees to the workbook by:

- Using the Launch Mass Change Job report.
- Selecting a report in the Launch Mass Action Event task.
- Using a search report to access the Launch Mass Action Event task.
- Adding them manually in the workbook.

Note: Even if certain fields such as Job Classification, Work Shift, or Work Space are displayed in a workbook, they respect the configuration in Maintain Localization Settings. Example: If you require Work Shift in Configure Optional Fields but disable in Maintain Localization Settings, you can't enter values for Work Shift in workbooks. Similarly, if you hide Work-Study in Configure Optional Fields and require for a job profile, you can't enter values for Work-Study in workbooks.

Steps

1. Access the Launch Mass Change Job report.
2. Select the population intended for mass change job and click Launch Mass Action.
3. Access the Launch Mass Action Event task.
4. As you complete the task, consider:

Option	Description
Effective Date	Select the date when mass change job takes effect.
Do you want to use the next pay period?	If selected, this field takes priority over Effective Date.
Change Job Template	For constrained security groups, Workday displays templates based on access permissions.

5. After the workbook generates, click Open Workbook.
6. Complete the details in the workbook using the prompts and validation messages.

   You can update and enter specific fields for workers, if needed. Example: You enter a Proposed Supervisory Organization for the workers.
7. Click Validate All.

8. Resolve errors and submit the workbook.

   You can submit a workbook with errors. Any rows with errors remain in the workbook instead of initiating the *Change Job* business process. You can access the workbook later to resolve and submit the remaining rows.

   Note: Mass actions using workbooks can't apply the Condition Rules Applied options of change job templates configuration.

Result

The *Change Job* business process initiates for the relevant workers in the workbook. Any other steps on the business process route for completion.

Steps: Set Up Mass Action Workbooks to Initiate Change Job on page 862

Concept: Move Manager's Team

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

When you use the *Change Job* business process to move a manager to a new organization, you can also move the teams that report to that manager. Workday only displays the teams that are eligible to move. You either can move all eligible teams or leave all teams behind. You can't pick teams or individual team members that you want to move.

Moved teams retain their current:

- Headcounts.
- Job openings.
- Job requisitions.
- Subordinate organizations.

After you submit the job change, Workday initiates 1 *Assign Superior* subprocess for each eligible team, with its own workflow and approvals. You can cancel, rescind, or correct the individual *Assign Superior* subprocesses as needed. However, you can't reverse the original decision to move, or not move, a manager's teams by correcting *Change Job* events. To reverse that decision, you would have to cancel or rescind the *Change Job* business process and start again.

You don't see the option to move teams when you:

- Don’t configure the *Change Superior Organization* step on the *Change Job* business process.
- Move a worker who isn't a manager.
- Keep a manager in the same supervisory organization.
- Move a manager who also manages an organization that is a superior of the proposed organization.
- Move a manager whose supervisory organization has an organization hierarchy event in progress. Example: An in-progress *Create Subordinate* event.
- Move a manager whose team is in a subordinate organization that isn't part of their supervisory hierarchy. Example: The manager is part of Supervisory Organization 1, which has Subordinate Organizations A, B, and C. However, the manager's team is part of Subordinate Organization D.

To set up the option to move teams modify the default definition for the *Change Job* business process to include 2 additional steps:

-
- *Assign Roles - Change Assignments for Worker*
- *Change Superior Organization*

Both steps must come after the *Change Job* completion step.

Step	Details
(Optional) *Assign Roles - Change Assignments for Worker*	Ensures that the worker has the manager role before you move the manager's teams. All of the worker's previous roles automatically populate, including the manager role. You can remove the default role assignments, add new roles, or reassign roles as needed. Alternatively, you can use the *Copy Role Assignments* step for Job Management organizations when you have the Change Job Use Default Organizations for Job Management check box enabled. Both *Assign Roles - Change Assignments for Worker* and *Copy Role Assignments* must come before the *Change Superior Organization* step.
Change Superior Organization	Workday suggests that you include an approval step in the *Assign Superior* business process definition; otherwise the step completes automatically as part of the *Change Job* workflow. Ensure that you grant permission on the *Approve* action for the *Assign Superior* business process as well.

To populate *Yes* automatically on the This person is a manager. Do you want to move their teams with them? field, you can select the Change Job Default for Move Team with Manager check box on the Edit Tenant Setup - HCM task.

Concepts

Concept: Assign Roles

Reference

Steps: Set Up Job Changes on page 844

Concept: Access to Job Profiles

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

The *Change Job* business process provides access to job profiles and related compensation data based on these considerations.

Availability of Hiring Restrictions

When you use the stand-alone *Change Job* business process, you can access job profiles if restrictions exist, and you meet those restrictions. If restrictions don't exist, you can access job profiles only if:

- A worker remains in the same position.
- You move a worker to a new position, and you select the Allow Override of Restrictions on Staffing Events check box in the Edit Tenant Setup - HCM task.
- There aren't any restrictions, in which case, you can access all job profiles.

Compensation Details

Because compensation eligibility rules are often linked to job profiles, Workday enables you to restrict access to compensation data by creating hiring restrictions. If you consolidate *Change Job* with *Propose Compensation Change*, you can view compensation details if you meet at least one of these conditions:

- Hiring restrictions don't exist.
- Hiring restrictions exist and you select a job profile that meets those restrictions.
- Hiring restrictions exist and you have permission on the *Staffing Actions: All Job Profiles with Compensation* domain.

When you configure compensation details to display based on supervisory organization, Workday only uses the proposed supervisory organization.

Job Requisitions

If you use job requisitions, you can't select a different job profile for a worker who remains in the same position. Update the job requisition or the hiring restrictions to include the additional job profile before you launch the Change Job task:

- If the worker's position has an open job requisition, use the Edit Job Requisition task to add other job profiles to the requisition.
- If the worker's position doesn't have an open job requisition, use the Edit Position Restrictions task to add other job profiles to the hiring restrictions.

Optionally, you can select the Allow Override of Restrictions on Staffing Events check box in the Edit Tenant Setup - HCM task. This setting enables you to access job profiles that aren't part of the hiring restrictions on the job requisition.

Steps: Set Up Job Changes on page 844

Reference: Hiring Restrictions in Change Job on page 873

Concept: Worker Transfers

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

You can use the *Change Job* business process to transfer a worker to a different organization. The *Change Job* business process combines steps into a single workflow to:

- Route the business process steps.
- Determine organization roles who're responsible for those steps.
- Assign default organizations to the worker.

Business Process Step Routing

When editing steps on the *Change Job* business process definition, administrators can use specific group routing to specify whether the security group is for the organization of the current or proposed position. When you don't provide specific group routing instructions for steps in the *Change Job* business process, Workday automatically routes the business process steps to roles in the worker's proposed organization.

You can consolidate subprocesses within the *Change Job* business process type so that tasks from the consolidated subprocesses initiate at the same time. When you consolidate the subprocesses, Workday:

- Uses the specific group routing that you configure directly on the subprocesses.
- Doesn't apply the specific group routing that you configured on the *Change Job* business process to the subprocesses.
- Uses the specific group routing that you configured on the *Change Job* business process for the *Change Job* web service.

Step Routing to Organization Roles

When you transfer a worker to a different organization, Workday routes the business process steps to the organization roles based on information included in the *Change Job* business process.

Business Process Details	Step Routing
The *Change Job* includes routing modifiers on specific steps.	You can select whether the step routes to the Current or Proposed role, such as the current HR Partner.
The *Change Job* includes the Proposed Supervisory Organization.	Workday routes the business process steps to the: • Default organizations associated with the proposed supervisory organization. • Location hierarchy associated with the primary location of the proposed supervisory organization.
The *Change Job* includes the: • Proposed Supervisory Organization • Position	Workday routes the business process steps to the: • Organizations associated with the proposed position. • Location hierarchies associated with the location hiring restrictions of the proposed position.
The *Change Job* includes the: • Proposed Supervisory Organization • Position • Location	Workday routes the business process steps to the: • Organizations associated with the proposed position. • Location hierarchy associated with the proposed location.
The *Change Job* includes the: • Proposed Supervisory Organization • Position • Location • Organization Assignments	Workday routes the business process steps to: • All proposed organizations. • The location hierarchy associated with the proposed location.

Default Organization Assignments

When you run the *Change Job* business process, the *Change Organization Assignments for Worker* subprocess assigns default organizations differently for each staffing model. Organization assignments in both the job management and position management staffing models populate from the job requisition when available. Otherwise, organization assignments:

- In job management populate from the current job or from the proposed supervisory organization, based on whether you selected the Change Job Use Default Organizations for Job Management check box on the Edit Tenant Setup - HCM task.
- In position management populate based based on availability, in this hierarchy:
    - Proposed job requisition, if it's different from the current job requisition.
    - Proposed position, if it's different from the current position.
    - Proposed supervisory organization, if it's different from the current supervisory organization.
    - Current position.

When you consolidate *Change Job* with *Change Organization Assignments for Worker*, each time you modify the proposed supervisory organization, Workday re-evaluates the default organizations. When you run the *Change Organization Assignments for Worker* business process independent of the consolidated template, the default organizations don't change after initial selection.

Reference
Steps: Set Up Job Changes on page 844

Concept: Promoting Workers to Managers

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

You can promote a worker into a managerial role and automatically create their supervisory organization using the *Change Job* business process. The worker must belong to an organization that uses the job management or position management staffing model. To set up this option:

- Add a *Create Subordinate* step after the completion step in the *Change Job* business process.
- Add a condition rule that determines when to initiate the step. Example: Change Job Reason = *Promotion*.
- Assign the step to an HR role.

After the *Create Subordinate* subprocess completes, Workday:

- Creates a supervisory organization as a subordinate to the worker's current organization.
- Assigns the worker to the Manager role.
- Applies hiring restrictions from the parent organization (job management staffing model only).

If you rescind the *Change Job* business process, Workday doesn't rescind these subprocesses:

- *Create Subordinate*
- *Assign Roles*
- *Hiring Restrictions*

If you don't want to keep the new organization, inactivate it. Rescinding the *Create Subordinate* subprocess only removes it from the organization hierarchy.

Note: You can also use *Change Job* to launch the *Move to New Manager* business process. Use this option to create a supervisory organization and transfer a worker to a nonmanager in another organization without changing the nonmanager's current job or position.

Steps: Set Up Job Changes on page 844
Move Workers to New Managers on page 920

Concept: Condition Rules for Job Changes

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

You can add condition rules to the *Change Job* business process to determine which subprocesses can be initiated during a job change. Workday evaluates the condition rules based on the data you submit on the initiating page. Workday looks at the rules based on this order:

1. Condition rules.
2. Business process definition.
3. Your configuration on the Maintain Change Job Templates task.
4. Change job consolidated template.

Example: Condition Rule Setup

You add *Change Organization Assignments* as a subprocess to the *Change Job* business process. You create a condition rule for the *Change Organization Assignments* step to run only when a worker's location changes:

And/Or	Source External Field	Relational Operator	Comparison Type	Comparison Value
And	Location - Proposed	NOT exact match with the selection list	Value from another field	Location - Current

The implications of this condition rule:

1. Teresa's manager, Steve, accesses the Change Job task and changes Teresa's location on the on the initiating page. The template doesn’t include the *Change Organization Assignments* subprocess.
2. The condition rule on the *Change Organization Assignments* step determines that Teresa's location changed.
3. Steve reviews the Organizations section, changes Teresa's cost center, and submits the changes.
4. The process routes to an HR administrator for review, and the administrator approves the change.
5. Workday updates Teresa's location. Based on the condition rule on the *Change Organization Assignments* step, Workday also updates Teresa's cost center.

Tasks
Steps: Set Up Job Changes on page 844
Create Business Process Condition Rules

Concept: Employee Contracts in Change Job Events

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

You can end an employee's existing contract and start a new contract in a single *Change Job* event. Add 2 consecutive *Maintain Employee Contract* steps to the *Change Job* business process definition. The Order of these steps must be consecutive. Example: You add two rows for the *Maintain Employee Contract* subprocess to the *Change Job* business process definition. You enter *a* in the Order field for the first row, and *b* in the other one.

This approach provides flexibility when you use the *Change Job* business process to transfer an employee to another position. A position can have only 1 active contract at a time, as determined by the contract end date. If the employee has an existing contract, you can end that contract and start a new one. The new contract reflects the changes to the employee's position, job profile, or location.

Maintain Employee Contract Steps

Workday displays the first *Maintain Employee Contract* step based on details from the worker's existing contracts:

Existing Employee Contract	Description
Status	If there's an existing employee contract that's: • Active, Workday updates the current contract. • Inactive, Workday starts a new contract.
Date	If the existing contract end date is before the effective date of the *Change Job* event, the contract details won't populate because the contract has

Existing Employee Contract	Description
	ended. You can add a new employee contract in the *Maintain Employee Contract* step. The effective date of the contract populates from the *Change Job* effective date. If you select a contract end date that's before the *Change Job* effective date, Workday updates the contract effective date to the same date.

Workday runs the second *Maintain Employee Contract* step when the:

- Order field is properly configured on the business process definition. This business process step must be after the previous one, and not parallel to it.
- *Change Job* process has an in-progress or completed *Maintain Employee Contract* subprocess.
- Contract in the first *Maintain Employee Contract* step has an end date that is before the effective date of the *Change Job* event.

When the Workday-owned condition rule is met, the step starts a new contract.

Web Service

The *Change Job* web service supports only 1 *Maintain Employee Contract* subprocess. If you use the web service to upload job changes that end existing employee contracts, create the contracts manually using the Add Contract task. The *Change Job* business process sends the second *Maintain Employee Contract* step to the assigned person's My Tasks.

Steps: Set Up Job Changes on page 844

Reference: Change Job Initiation

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

Workday enables you to decide how you want administrators to initiate the *Change Job* business process for a worker. This discoverability enables you to make starting a job change more intuitive for users.

Option	Description
Global Search	Users can initiate the business process from these initiating actions through global search: • Change Contingent Worker Details • Change Job • Change Location • Request Transfer • Start Job Change Users can search for change job templates and launch the Start Job Change initiating action automatically from global search on desktop and mobile. Workday displays the change job template in global search when the user has access to the template.

Option	Description
Worker Profile	Users can launch change job templates from a worker profile by setting up the Start Job Change report as a profile card.
Related Actions	Users can initiate a Change Job from the related actions on the worker or position.
Dashboards	Add the Change Job task to the My Team Management dashboard to help managers track and manage job changes and time-sensitive tasks for their teams. Enable users to launch change job templates from dashboards on desktop by setting up the Start Job Change report as a worklet on these dashboards: • My Team Management. You can make it required on the Maintain Dashboards task. • Your custom dashboards. Go to the Enable Worklet for Dashboard task and select Start Job Change to enable it for the custom dashboards you choose. Then, you can add the Start Job Change worklet to the configured dashboards on the Maintain Dashboards task.
REST API	Use the `jobChanges` REST API to start and submit job changes. You can update worker information, such as: • Location. • Business Title. • Job Profile. • Position. • Job Classification.

2023R2 What's New Post: Launch Change Job Templates From Dashboards

Reference: Hiring Restrictions in Change Job

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

Workday determines when to apply hiring restrictions in the *Change Job* business process by considering:

- How the tenant is configured for staffing.
- If the worker is moving to a different supervisory organization.
- If the proposed organization has a different staffing model.

Workday then decides whether to move the worker and position together, or to apply hiring restrictions against a new position.

Optionally, you can loosen restrictions on job profiles, locations, time types, and worker types by selecting the Allow Override of Restrictions on Staffing Events check box in the Edit Tenant Setup - HCM task.

Job Management

You can control whether workers get new positions when they move between job management organizations that have the same staffing model. In the Edit Tenant Setup - HCM task, select the Change Job Use Default Organizations for Job Management check box to place workers into new positions. Leave it unchecked to move workers and positions together.

If a worker stays in the same organization, Workday always keeps the same position regardless of the tenant setting.

Workday uses these criteria to apply hiring restrictions in job management organizations:

Tenant Setup: Change Job Use Default Organizations for Job Management	Organization Change?	Staffing Model Change?	Move Position?	Apply Hiring Restrictions?
Yes	No	No	Yes (based on same organization)	No
Yes	Yes	No	No (based on tenant setting)	Yes
Yes	Yes	Yes	No (based on staffing model change)	Yes
No	No	No	Yes (based on same organization)	No
No	Yes	No	Yes (based on tenant setting)	No
No	Yes	Yes	No (based on staffing model change)	Yes

Position Management

In position management organizations, Workday applies hiring restrictions as shown.

Organization Change?	Staffing Model Change?	Move Position?	Apply Hiring Restrictions?
No	No	Yes	No
Yes	No	Yes	No
Yes	Yes	No	Yes

FAQ: Change Job

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

Enhanced User Interface for Change Job

What happens if I don't uptake the new enhanced user interface for change job templates?	We made the decision to make the Change Job enhanced user interface the single default experience for all users because the new experience not only matches current functionality but it significantly extends job change capabilities. The new Change Job experience is a much more seamless and user-friendly experience and it streamlines the entire process from start to finish. We've seen that the new user experience has proven to both reduce time to transact and increase completion rates. For customers who have: • Not adopted Change Job Templates: Workday will automatically migrate your current *Change Job* business process into the necessary change job templates configured with the new user experience. Certain domain security configurations will be automatically converted. Additional review by your Administrator will be required to ensure capabilities meet current security requirements. • Adopted Change Job Templates but have not adopted the new user experience: Workday will automatically convert existing templates to use the new user experience. Customers will need to evaluate their security setup to make changes that align with their business needs.
Why is the Enable Enhanced UI for this Template check box grayed out?	On the Maintain Change Job Templates task, you either need to: • Select an initiating action. • Remove Location after Change from the Select Editable Fields for Start Page prompt.

Why doesn't the Position field show up on templates with the enhanced user interface enabled?	In the enhanced user interface for Change Job, we only display the Position field when you can edit it. The Position field is visible when: • The Position field is included in the change job template. • There's an open position in the supervisory organization. • The initiator has access to the proposed supervisory organization, such as through the Manager or Cost Center Manager roles. • The Move Position check box isn't selected. If these conditions aren't met, then Workday defaults the current position and doesn't display the Position field. For change job templates without an enhanced user interface, Workday displays the Position field even if there are no open positions for the supervisory organization.
Where is the Attachments section?	Change Job no longer has an Attachments section because it follows the standard business process framework. Any existing Change Job templates that you'd created that only contained the Documents section are no longer accessible. You must configure the Attachment Settings in BP Toolbar in order to include attachments in your Change Job transactions. See ../../../../manage-workday/business-processes/manage-business-processes/ala1404761315058.dita.
Why is the old experience showing up when I start a job change through Workday Recruiting?	If an internal candidate is moving to a new supervisory organization, Workday uses the *Request Transfer* initiating action. If you haven't configured a change job template for *Request Transfer* with the enhanced user interface enabled, Workday uses the old Change Job experience. If the internal candidate is moving within your own supervisory organization, we use the *Change Job* initiating action. If you haven't configured a change job template for Change Job with the enhanced user interface enabled, Workday uses the old Change Job experience.
What security configuration should I have for the new user experience?	For the new user experience, the Change Job business process uses a combination of the following to determine the change job information displayed to a user: • Business process security policy. • Template configuration. • Access to proposed supervisory organization. • Configuration of optional fields. • Localization settings.

- Security domain configuration for these domains, including view and modify access:
    - *Staffing Actions: Change Job Date and Reason*.
    - *Staffing Organizations: Header* for the *Change Organization Assignments* business process.
    - *Worker Data: Collective Agreements* for the *Assign Employee Collective Agreement* business process
    - These compensation domains for the *Propose Compensation* business process:
        - *Add Compensation Plans: Add Allowance*
        - *Add Compensation Plans: Add Bonus*
        - *Add Compensation Plans: Add Calculated*
        - *Add Compensation Plans: Add Commission*
        - *Add Compensation Plans: Add Hourly*
        - *Add Compensation Plans: Add Merit*
        - *Add Compensation Plans: Add Period Salary*
        - *Add Compensation Plans: Add Salary*
        - *Add Compensation Plans: Add Stock*
        - *Add Compensation Plans: Add Unit Salary*
        - *Compensation Change: Allowance*
        - *Compensation Change: Bonus*
        - *Compensation Change: Calculated*
        - *Compensation Change: Commission*
        - *Compensation Change: Compensation Basis Details*
        - *Compensation Change: Future Changes*
        - *Compensation Change: Guidelines*
        - *Compensation Change: Hourly*
        - *Compensation Change: Manage Compensation Basis*
        - *Compensation Change: Merit*
        - *Compensation Change: Period Salary*
        - *Compensation Change: Salary*
        - *Compensation Change: Stock*

	• *Compensation Change: Total Base Pay* • *Compensation Change: Unit Salary*
What type of help text can I configure on Change Job?	You can configure business process step help text, and QuickTips through the Guidance Workspace report. You can't configure help text for section groups, because section groups don't exist on the new change job experience. We plan to retire the Change Job template on the View Business Process Template report in a future update. We recommend that you use one of the other methods for configuring help text for Change Job. See Steps: Set Up and Manage the Guidance Workspace.

Article: Get Ready for the Enhanced Change Job Experience with 2026R1

Next Level: Preparing for the New Change Job User Interface

Multiple Jobs

Steps: Add Additional Jobs

Prerequisites

- Modify role-based security groups for multiple jobs.
- On the Edit Tenant Setup - HCM task:
  - Select *Multiple Jobs* in the Position Setup Options field.
  - Select an ID definition.
  - Configure job requisitions.
  - Specify whether to enable the override of hiring restrictions.
- Create categories and reasons for additional jobs with the Maintain Event Categories and Reasons task.
- Create hiring restrictions and positions in supervisory organizations.
- Hire the employee into a primary job or position.

Context

Place an employee with a primary job or position into another job or position. The additional job can have a different supervisory organization, compensation rate, pay rate, scheduled hours, location, or job profile.

Employees can have any number of additional jobs. You can't give additional jobs to contingent workers.

To include an additional job in Workday Payroll Interface integration output, associate the job with a pay group.

Workday Payroll for the UK only supports multiple positions in the same company.

If you don't configure *Change Organization Assignments for Worker* as a subprocess, Workday automatically hides the Organization Assignments section on the *Add Job* task. If you use a rule based business process definition where *Change Organization Assignments for Worker* is a subprocess of *Add Additional Job*, the Organization Assignments section always displays when you configure the Cost Center and Custom Organization fields to display. If you use either condition rules or rule based business processes, ensure you include *Change Organization Assignments for Worker* on all the *Add Additional Job* business process definitions.

Steps

1. Edit Business Process Security Policies.

   Configure the *Add Additional Job* business process and security policy in the Staffing functional area.
2. (Optional) Edit Business Processes.

   Add *Change Organization Assignments for Worker* as a subprocess of the *Add Additional Job* business process.
3. (Optional) Maintain Organization Types.

   Select the Show in Change Organization Assignments and Job Requisition check box for cost center and custom organizations.
4. (Optional) Hide or Require Optional Fields.

   In *Add Additional Job*, determine if you want to:

   - Display the Cost Center and Custom Organizations fields.
   - Hide or require other fields on the *Add Job* task.
5. Add Additional Jobs on page 879.

2021R2 What's New Post: Simplified Add Additional Job

Add Additional Jobs

Prerequisites

Configure the *Add Additional Job* business process and security policy in the Staffing functional area.

Context

You can add additional jobs for employees through global search, as well as the:

- Add Job button on the Jobs report of the worker profile.
- Related actions menu of an employee.

Steps

1. Access the Add Job task.
2. Select the Supervisory Organization for the additional job and the Employee.
3. Specify the Effective Date and Reason.

   - If you use job requisitions, the Effective Date must be on or after the Recruiting Start Date on the job requisition.
   - If you don't use job requisitions, the Effective Date must be equal to, or greater than the Hire Date on the position.

4. Complete the hiring details.

   Workday automatically populates many of these fields with values defined on the position or job requisition. If you use job requisitions, you can't change those values; update the job requisition itself.

Option	Description
Position	Select the appropriate position. This field doesn't display for organizations that use job management as the staffing model.
Employee Type	If you assign a worker to an employee type reserved for fixed-term employees, specify an End Employment Date in the Additional Information section.
Job Requisition	You can select a job requisition for either position management or job management organizations if you enable job requisitions for the tenant. For position management organizations, you can select a job requisition if the position selected is associated with a job requisition.
Job Profile	Select from the profiles you specified in the Create Position or Set Hiring Restrictions task, unless your tenant allows overrides.
Time Type	Select from the time types you specified in the Create Position or Set Hiring Restrictions task, unless your tenant allows overrides. Automatically populates from the job profile.
Location	Select from the locations you specified in the Create Position or Set Hiring Restrictions task, unless your tenant allows overrides.
Work Space	Select from the work spaces (such as building, floor, or cubicle) associated with the Location.
Pay Rate Type	Select from the pay rate types available for the country associated with the Location.

5. Complete the Working Time section.

   Workday initially populates many of these fields with values from the position or job requisition. As you complete the task, Workday updates the values.

Option	Description
Scheduled Weekly Hours	Populates from a rule when: • You've defined a working time rule. • The data populated on the task applies the rule. Populates from the Default Weekly Hours if there's no working time rule. Populates based on the position restrictions when:

Option	Description
	• You select the Enable FTE for Position Restriction check box on the Edit Tenant Setup – HCM task. • There's no work hours profile or job requisition for the position.
Location Weekly Hours	Displays the standard weekly hours associated with the Location.
Default Weekly Hours	Populates from a rule when: • You've defined a working time rule. • The data populated on the task applies the rule. Populates from the Location Weekly Hours field if there's no working time rule. Populates based on the position restrictions when: • You select the Enable FTE for Position Restriction check box on the Edit Tenant Setup – HCM task. • There's no work hours profile or job requisition for the position.
FTE	Calculated by dividing the Scheduled Weekly Hours by the Default Weekly Hours. This value displays as a percentage.
Specify a Paid FTE	Select the check box to specify paid full-time equivalent for a worker. Available when you enable Paid FTE on the Maintain Localization Settings task.
Paid FTE %	You can enter a percentage that overrides the FTE field for use in your Workday Compensation and Workday Payroll calculations. Available when you enable Paid FTE on the Maintain Localization Settings task.
Specify a Working FTE	Select the check box to specify working full-time equivalent for a worker. Available when you enable Working FTE on the Maintain Localization Settings task. For use in custom reporting.
Working FTE %	Enter a working full-time equivalent percentage. Used in custom reporting. Available when you enable Working FTE on the Maintain Localization Settings task. For use in custom reporting.
Work Shift	Available when you enable Work Shift on the Maintain Localization Settings task.

Option	Description
	Available when you selecte the Work Shift Required check box on the job profile. Define the work shifts for a location using the Maintain Work Shifts task.
Frequency	Select from the working time frequencies you specified on the Maintain Frequencies task. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Unit	Select from the preconfigured options of hours or days. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Value	Enter the duration of the working time in selected units. Automatically populates to zero. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.

6. Add any Additional Information.

   Workday automatically populates many of the Additional Information fields with values from the job profile.

Option	Description
Job Title	Automatically populates from the Job Profile.
Business Title	Automatically populates from the Job Title. You can control the display of business titles by enabling the *Worker Data: Business Title on Worker Profile* domain security policy in the Staffing functional area.
Job Category	Automatically populates from the Job Profile; not editable.
Job Classifications	Automatically populates from the Job Profile; not editable.
Additional Job Classifications	Select classifications as needed.
Company Insider Types	Select from the types associated with the Job Profile. Define company insider types with the Maintain Company Insider Types task; assign them to a job profile with the Edit Job Profile task.
First Day of Work	Automatically populates to the Hire Date.
End Employment Date	Available only if you assigned the worker to a fixed-term employee type in the Employee Type field.

Option	Description
Exclude from Headcount	Select this check box so that Workday doesn't count the position in headcount reports.

Result

Workday sets the status of the position and job requisition, if applicable, to *Filled*.

Next Steps

You can correct or reverse the addition of a job. From the employee's related actions menu, select Worker History > View Worker History. Then select either Correct or Rescind as a related action on the *Add Additional Job* event. If the worker's position had a job requisition, it reopens when you rescind the event.

If you configure the Add Probation Period step on the *Add Additional Job* business process and you correct the Effective Date of the *Add Additional Job* event, Workday:

- Recalculates the dates of the associated *Manage Probation Period* event.
- Doesn't recalculate the dates of the associated *Manage Probation Period* event with extended end dates or if recalculating the dates causes overlap with another *Manage Probation Period* event.

Ending Jobs

Prerequisites

- Configure the *End Additional Job* business process and security policy in the Staffing functional area.
- Create categories and reasons for ending additional jobs with the Maintain End Additional Job Categories task.
- Verify that the employee has no pending or completed staffing or organization changes that are effective after the end date of the additional job.

Context

End an employee's additional job or position. You can also end an employee's primary job if there is a related future-dated *Switch Primary Job* event.

Steps

1. Access the End Job task.
2. Select the Employee and the Job.
3. Complete the termination details:

Option	Description
End Date	This date must be on or after the effective date of the job.

Option	Description
	You can end a primary job if there is a related *Switch Primary Job* event after this date.
Close Position	You can't close positions that have an open job requisition. Leave blank if you want to keep the position open for staffing. This field is only available for position management organizations; with job management you can't open or close individual jobs.
Is this position available for overlap?	Specify whether another worker can fill the position before the incumbent departs. Available for position management organizations when job overlap is enabled in the Edit Tenant Setup - HCM task.
Last Day of Work	Automatically populates to the End Date.
Pay Through Date	Automatically populates to the End Date. Use this field in situations where severance pay continues past the position end date.
Notify By	Automatically populates to the End Date.

Result

If you didn't close the position, Workday sets its status to *Open*:

- If you use job requisitions, the position is available as soon as you have an open requisition.
- If you don't use job requisitions, the position is available the next day.

Next Steps

You can correct or reverse the ending of an additional job. From the employee's related actions menu, select Worker History > View Worker History; then select either Correct or Rescind as a related action on the *End Additional Job* event. If the position has an open job requisition, you can't rescind the event.

The Next Level: Overview of Primary Position Designation Impact

Switch Primary Job

Prerequisites

- Create reasons for switching a worker's primary job with the Maintain Event Categories and Reasons task.
- Configure the *Switch Primary Job* business process and security policy in the Staffing functional area. You can use *Switch Primary Job* as a standalone business process or as a subprocess for *Add Additional Job* or *Change Job*.
- Edit the security policy on the *Staffing Actions: Primary Job* domain to specify who can view or modify job information.

Context

Change the primary job designation for a worker with multiple jobs.

Workday Payroll for the UK doesn't support multiple jobs.

Steps

1. Access the Switch Primary Job task and select the Worker.
2. Select the Reason and Effective Date for the change.

   The effective date must be later than any previously completed primary job switches. After you enter the date, Workday displays the worker's Primary Job as of this date.
3. If the worker has more than 1 additional job, specify which job to designate as the Proposed Primary Job.

   The All Jobs section displays details about the worker's current primary job and additional jobs. Details include the supervisory organization, manager, location, job profile, pay group, company, employee type, scheduled hours, and full-time equivalent (FTE) percent.

   Note: If you change the effective date after the All Jobs section is populated, the job details don't refresh.

Result

In the worker's history, the *Primary Job Switch* event reflects the worker's primary and additional jobs before the switch, regardless of the event status.

When workers have in-progress on-cycle, on-demand, or retro pay results while you switch jobs, Workday assigns the *Requires Re-calculation* status to those results.

Next Steps

- To view job switch activity by organization for a given date range, access the Primary Job Switch History report.
- You can cancel or rescind the job switch, but you can't correct it. From the employee's related actions menu, select Worker History > View Worker History; then select either Cancel or Rescind as a related action on the *Primary Job Switch* event.

The Next Level: Overview of Primary Position Designation Impact

Concept: Conditions for Switching a Primary Job

You can change a worker's primary job designation under these conditions.

Worker Conditions

The worker can't have:

- Another in-progress *Switch Primary Job* event.
- An in-progress *Termination* event.
- A completed *Termination* event that takes effect after the proposed switch date.

Job Conditions

The proposed primary job:

- Must be an active additional job as of the proposed switch date.
- Can't have an in-progress *End Additional Job* event.
- Can't have a completed *End Additional Job* event that takes effect after the proposed switch date.

You receive a warning if either job has an in-progress staffing event, such as *Change Job* or *Edit Position*. To determine whether the switch impacts other events, review the worker's history.

Business Process Conditions

- The proposed switch date must be after the last completed *Switch Primary Job* event.
- If *Switch Primary Job* is a subprocess for *Add Additional Job*, the proposed primary job must be the newly added job.
- If *Switch Primary Job* is a subprocess for a *Change Job* event on an additional job, the proposed primary job must be that additional job.
- When *Switch Primary Job* is a subprocess for *End Additional Job*, the step only initiates if the primary job is ending.

Payroll Conditions

- Both jobs must either belong to any Workday pay group OR belong to the *same* external pay group or have no pay group assigned.
- Neither job can have an in-progress *Assign Pay Group* event or a completed *Assign Pay Group* event that takes effect after the proposed switch date.
- The proposed switch date must be after the worker's last completed pay calculation result.
- The proposed job can't be an assignment if the position has a Workday Payroll pay group assigned.

Related Information

Tasks

Switch Primary Job on page 885

Concept: Security Roles for Switching a Primary Job

Actions in the *Switch Primary Job* business process are available to roles based on:

- The routing instructions in the *business process definition*.

- Their access rights to multiple job workers as defined for their security group:
  - Role has access to the positions they support
  - Role for primary job has access to all positions
  - Role has access to all positions

When the Role has access to the positions they support or Role has access to all positions:

- Roles associated with all jobs can initiate *Switch Primary Job* events.
- If there are no routing instructions, roles associated with all jobs can view *Switch Primary Job* events and receive approvals and notifications.
- If current group routing is specified, only roles associated with the current primary job receive approvals and notifications.
- If proposed group routing is specified, only roles associated with the proposed primary job receive approvals and notifications.

When the Role for primary job has access to all positions:

- Only roles associated with the current primary job can initiate *Switch Primary Job* events.
- Before the event completes, steps are routed to roles associated with the current primary job.
- After the event completes, steps are routed to roles associated with the proposed primary job and only these roles can view the event.

Reference: Impacts of Enabling Multiple Jobs

When you select *Multiple Jobs* on the Position Setup Options prompt in the Staffing section of the Edit Tenant Setup - HCM task, you can assign additional jobs to employees. This impacts these functional areas:

Functional Area	Task/Business Process	Impact	More Information
Payroll	• Create Earning • Edit Earning • Create Deduction • Edit Deduction	The *Position* calculation worktag becomes available. Enables you to make earnings and deductions position-based. You can't select the worktag for existing earnings and deductions.	Steps: Set Up Payroll for Multiple Jobs
Payroll	• Create Pay Balance • Edit Pay Balance • Create Pay Accumulation • Edit Pay Accumulation	The *Position* filter worktag becomes available. Enables you to make pay balances and accumulations position-based. You can't select the worktag for existing pay balances and accumulations.	Steps: Set Up Payroll for Multiple Jobs
Payroll	*Assign Pay Group*	The Position prompt becomes available	

Functional Area	Task/Business Process	Impact	More Information
		when you initiate *Assign Pay Group* as a stand-alone event for an employee with multiple positions.	
Absence	• Create Time Off Plan • Edit Time Off Plan • Create Leave Type • Edit Leave Type	The Position Based check box becomes available. This check box enables you to define position-based time off plans and leave types. If you don't enable the check box, plans continue to be worker-based. You can't enable the check box for existing plans.	Steps: Set Up Leave of Absence on page 2563 Steps: Set Up Time Off Plans on page 2276
Security	• Create Security Group • Edit Security Group • View Security Group	Enables you to define Access Rights to Multiple Job Workers for constrained role-based security groups. By default, Role has access to the positions they support is selected for new and existing security groups. There is no impact on the existing security permissions for users.	
Benefits	• Create Insurance Rate • Create Insurance Coverage • Create Health Care Rate • Edit Insurance Rate • Edit Insurance Coverage • Edit Health Care Rate • Create Benefit Credit • Edit Benefit Credit	The Combine All Jobs for Salary Source and Combine Benefit Jobs for Salary Source check boxes become available. These check boxes are displayed when creating a benefit credit only if you select *Salary Source Based Credit* as a benefit credit type. Enabling Combine All Jobs for Salary Source ensures that you can calculate the rates, coverages, and credits based on the sum of the salary source for all positions. Enabling Combine Benefit Jobs for Salary Source,	Steps: Set Up Multiple Jobs for Benefit Eligibility on page 1402

Functional Area	Task/Business Process	Impact	More Information
		ensures that you can calculate the rates, coverages, and credits based on the salary source for the positions designated as benefit jobs.	
Recruiting	*Ready for Hire*	The Staffing Action action step is required on the *Ready for Hire* business process. This step enables you to select *Add Additional Job* or *Change Job* for internal applicants. Configure this step when you enable *Multiple Jobs* but not using the *Add Additional Job* business process. This is when you're using the *Start International Assignment* and *End International Assignment* business processes to manage the international assignments.	

Reference: Impacts of Primary Position Designation

When you assign multiple positions to an employee, you need to designate one of the positions as the primary. Review the impact that the primary position can have on these functional areas:

- Absence Management and Time Tracking
- Absence Management
- Time Tracking
- Staffing
- Talent
- Compensation
- Benefits
- Workday Payroll for the U.S.
- Workday Payroll for the Canada
- Reporting
- Various

Absence Management and Time Tracking

Component	Impact
Holiday Calendars	Workday evaluates the Country / Country Region field for the primary position only. For international assignees where you need to base the holiday

Component	Impact
	calendar on the country of their additional position, we recommend creating separate holiday calendars. Make these calendars without the Country / Country Region field populated and with an eligibility rule that makes only the assignees eligible.

Absence Management

Component	Impact
Leave Types	For worker-based leave types, Workday evaluates the Country / Country Region criteria based on primary position.
Time Off Plans	For worker-based time off plans, Workday evaluates the Country / Country Region criteria based on primary position. To evaluate all positions, you can enable the Country / Country Region Enabled for All Positions check box.

Time Tracking

Component	Impact
Time Block Create Calculations	Always generate for the primary position, even if the time entry is for the additional position.
Time Entry	The primary position populates in the Position prompt when you enter time. All positions are available for selection.
Time Code Groups	Workday evaluates the Country / Country Region and Pay Rate Type criteria based on primary position only. To evaluate all positions, leave the Country / Country Region and Pay Rate Type fields blank, and build a time tracking eligibility rule using position-based business objects.

Staffing

Component	Impact
Notice Periods	Workday evaluates eligibility for notice periods based on the Country/ Country Region for the primary position. Unless you assign custom notice periods, they'll dynamically update when a primary position change results in an eligibility change.
Personal Information	The country for the primary position determines the: • Types of personal information that are available for the employee. • Values that you can select.

Component	Impact
	You can also add personal information by country based on a worker's additional positions.
Termination	Only security groups with permission to edit the primary position of the employee can initiate termination.

Talent

Component	Impact
Goals	You can only cascade private organization goals to the primary position.
Calibration	Workday includes employees included in calibration with their primary position.
Career Hub Talent Marketplace	Machine Learning only considers the primary position for: • Connections • Jobs • Mentors Machine Learning considers the skills of the worker for: • Flex Teams • Learning

Compensation

Component	Impact
Internal Compensation Benchmarking	The Internal Compensation Benchmark for Workers report returns only the primary position. Workday includes the employee in the report output if the criteria selected in the report prompts match with their primary position details. The compensation details displayed for the employee in the report are also only based on the primary position.

Benefits

Component	Impact
Insurance Rates Insurance Coverages Health Care Rates	Based on the primary position. Dynamically updates if you change the primary position.
Salary Source Based Benefit Credits	Enable the Combine All Jobs for Salary Source check box to base it on all positions. Or enable the Combine Benefit Jobs for Salary Source check box to base it on one or more benefit jobs.

Component	Impact
Non-Salary Source Based Benefit Credits	Always based on the primary position. Use benefit annual credits if you can't base the benefit credits on the primary position.
Benefit Jobs	Workday considers the primary position to be the benefit job. You can change the benefit job using the Change Benefit Jobs task.

Workday Payroll for the U.S.

Component	Impact
Pay On Demand	You can only request pay on demand for the primary position, unless this information is the same for both the primary and additional positions: • Company • Pay group

Workday Payroll for Canada

Component	Impact
Location Province of Employment Payroll Reference Number	Based on the processing position. For international assignments, this information is based on the company and work location of the position in Canada.

Reporting

Component	Impact
Trended Worker Reports	Trended worker reporting includes the primary position of the employee. Workday might not include the worker in the Trended Worker Reports at all if you enable the: • Exclude from Headcount check box for the primary position. • Remove Exclude From Headcount prompt on the Trended Worker Reports. You can treat the international assignment position as primary when you can't make the host position the primary position.
Worker-Based Reports	Standard and custom reports that use worker-based data sources return the position data of the primary position for the employee.

Various

Component	Impact
Eligibility Rules	Workday evaluates position-related report fields on the Worker business object based on the primary position. It varies per functional area whether report fields are available based on a Position business object. Assignment-related report fields are generally available. You can use calculated fields to evaluate eligibility based on the additional position.

International and Domestic Assignments

Setup Considerations: International and Domestic Assignments

You can use this topic to help make decisions when planning your configuration and use of international and domestic assignments. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

International and domestic assignments in Workday enable you to create an assignment for employees who are working on a different team with responsibilities outside of their regular duties.

Business Benefits

With international and domestic assignments, you can:

- Place employees into another job or position or add an additional assignment.
- Flexibly manage employees during an assignment in their home or host position.
- Start assignments for internal candidates directly from a job application.

Use Cases

You can use international and domestic assignments to:

- Add assignments for employees and internal candidates.
- End assignments for employees.
- Change an employee's job to a domestic assignment.
- Track assignment types and the expected end date for the assignments.
- Report on assignment details to help assist with regulatory compliance.
- Exclude the host position from headcount when you initiate an assignment.

Questions to Consider

<table>
<tr><th>Questions</th><th>Considerations</th></tr>
<tr><td>What types of assignments do you manage?</td><td>You can configure different types of assignments for your organization and categorize them as domestic or international assignments.</td></tr>
<tr><td>How do you want to fill and manage international assignments?</td><td> You can fill international assignments with the Add Additional Job or Start International Assignment business process. Workday recommends that you use the Add Additional Job business process for improved functionality. If you already use the Start International Assignment business process, you can decide to either: Configure the Add Additional Job business process for new assignments and end existing international assignments with the End Additional Job business process.
Continue only using the Start International Assignment and End International Assignment business processes for international assignments. If you use the Add Additional Job business process and Workday Recruiting, you can add an assignment for internal candidates directly from a job application. You can manage employees in their host location by making the assignment a primary job. </td></tr>
<tr><td>How do you want to fill domestic assignments?</td><td> You can add a domestic assignment as an additional job with the Add Additional Job business process and make the assignment the primary job. You can manage employees in their host location by making the assignment a primary job. With the Change Job business process, you can also change an employee's job to a domestic assignment. If you use Workday Recruiting, you can add an assignment for internal candidates directly from a job application. </td></tr>
<tr><td>How do you want assignments to display on the worker profile?</td><td>You can configure labels for assignments that display in parentheses after an employee's title on their worker profile. You can also translate these labels. If you don't configure labels, Workday displays (IA) for an international assignment or (DA) for a domestic assignment after an employee's title.</td></tr>
</table>

Questions	Considerations
How do you want to track the home and host position details?	You can add assignments as additional jobs and track the home and host position details with the *Add Additional Job* business process. If you don't want to track the home position details, use the *Change Job* business process to change an employee's job to an assignment.

Recommendations

Workday recommends that you add international assignments with the *Add Additional Job* business process instead of the *Start International Assignments* business process for improved usability and flexibility.

To configure international assignments for Payroll accurately, make sure you set up:

- Assignment Type as *International* using the Add Job task.
- Non-international assignment and international assignment positions in different Workday pay group countries.

Requirements

To add assignments with the *Add Additional Job* business process, access the Configure Optional Fields task to enable assignment fields.

Limitations

- You can't currently select an assignment for the employee's primary job if the position has a Workday Payroll pay group assigned.
- Workday Payroll for Australia, Workday Payroll for France, and Workday Payroll for the UK don't currently support international assignments or multiple jobs. You can create a second work record or duplicate a worker ID to manage those workers.
- Workday Payroll supports only 1 active international assignment position at a time.

Tenant Setup

Access the Edit Tenant Setup - HCM task to enable multiple jobs.

Security

Domains	Considerations
Set Up: Position	Enables you to set up assignments.
Set Up: Staffing	Enables you to set up event categories and reasons for assignments.
Worker Data: Assignments and Global Mobility	Enables you to access assignment details for employees.
Worker Data: All Positions	Enables you to access all positions and assignment data for employees.

Business Processes

Business Processes	Considerations
Add Additional Job	Enables you to add additional jobs, international assignments, and domestic assignments for employees. If you use Workday Recruiting, you can start an assignment directly from a job application for an internal candidate. To streamline making an assignment the primary job, configure *Switch Primary Job* as a subprocess. You can also assign a collective agreement as a subprocess of the *Add Additional Job* business process.
Change Job	Enables you to add domestic assignments. If you use Workday Recruiting, you can start an assignment directly from a job application for an internal candidate. To streamline making an assignment the primary job, configure *Switch Primary Job* as a subprocess.
End Additional Job	Enables you to end additional jobs, international assignments, and domestic assignments. You can also use the *End Additional Job* business process to end international assignments added with the *Start International Assignment* business process.

If you decide not to use the business processes above for assignments, you can configure these business processes for international assignments:

Business Processes	Considerations
End International Assignment	Enables you to end international assignments that were added with the *Start International Assignment* business process.
Start International Assignment	Enables you to add international assignments for employees. You can configure role-based security groups for this business process but the Start International Assignment task isn't constrained to your configured security groups and gives users access to all workers in any organization. This enables users in host countries to start the international assignment for workers in other organization and locations.

Reporting

Reports	Considerations
Employees on International Assignment	View details for all employees on international assignments.
Employee with Compensation for Additional Jobs Audit	View details for all employees with compensation from additional jobs and assignments.

Reports	Considerations
View Assignment Type Label Override	View custom labels for assignment types.

Integrations

You can use these web services to manage assignments and switch primary jobs for employees in bulk:

- *Add Additional Job*
- *Change Job*
- *End Additional Job*
- *Switch Primary Job*

If you continue using the *Start International Assignment* and *End International Assignment* business processes, you can use these web services to manage international assignments in bulk:

- *End International Assignment*
- *Start International Assignment*

Connections and Touchpoints

International and domestic assignments interact with:

- Compensation.
- Payroll.
- Recruiting.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Reference

The Next Level: Understanding International and Domestic Assignments

The Next Level: International and Domestic Assignments Overview

Reference: Edit Tenant Setup - HCM

Steps: Set Up International and Domestic Assignments

Context

You can manage international and domestic assignments as additional jobs with these business processes:

- *Add Additional Job*
- *End Additional Job*

With the *Change Job* business process, you can change an employee's job to a domestic assignment.

You can also manage international assignments with these business processes:

- *Start International Assignment*
- *End International Assignment*

Using the *Add Additional Job* and *End Additional Job* business processes to manage international assignments provides you with improved usability and flexibility. Example: You can make an assignment a primary job as a subprocess of the *Add Additional Job* business process to manage employees in their host country.

Workday recommends that you don't end the assignment and terminate the employee on the same date. If you end the assignment and terminate the employee on the same date, the assignment continues to display as the default position on the worker profile. If you rehire the same employee, the position that you select when hiring becomes the employee's primary position.

Steps

1. Create Role-Based Security Groups.

   Configure role-based security for multiple jobs.

   Note: The Start International Assignment task isn't constrained to your configured security groups and gives users access to all workers in any organization. This enables users in host countries to start the international assignment for workers in other organizations and locations.
2. (Optional) Access the Edit Security Group task to grant managers access to the home and host job or position data for employee's on international assignments.

Option	Description
Role has access to the positions they support.	Gives the roles in the supervisory organization associated with the specified position access to the worker's person and job or position data.
Role for primary job has access to all positions.	Gives only those roles in the supervisory organization associated with the primary job or position access to the worker's person and job or position data.
Role has access to all positions.	Gives all roles in the supervisory organization associated with the primary and additional jobs or positions access to the worker's person and job or position data.

3. Create Custom Business Processes.
   - To manage international and domestic assignments, configure these business processes and security policies in the Staffing functional area:
     - *Add Additional Job*
     - *End Additional Job*

     To change employee's positions to domestic assignments, you can also configure the *Change Job* business process and security policies in the Staffing functional area.
   - To manage international assignments only, configure the *Start International Assignment* and *End International Assignment* business processes and security policies in the Staffing functional area.
4. Edit Domain Security Policies.

   Set up security policies for these domains in the Staffing functional area to set up and report on assignments:
   - *Set Up: Position*
   - *Set Up: Staffing*
   - *Worker Data: Assignments and Global Mobility*
5. Hide or Require Optional Fields.

   If you're using the *Add Additional Job* business process, enable assignment fields for the *Add Additional Job* business process with the Configure Optional Fields task.

   You can also hide assignment fields on the *Change Job* business process.

6. Access the Maintain Assignment Types task.

   Create assignment types.
7. (Optional) Access the Translate Business Object report.

   Translate custom assignment labels configured in the Maintain Assignment Types.
8. Access the Maintain Event Categories and Reasons task.

   Create categories and reasons for the *Add Additional Job* or *Start International Assignment* business process.
9. Access the Maintain End Additional Job Categories task.

   Create categories and reasons for the *End Additional Job*, *End International Assignment*, or *Change Job* business process.
10. If you use Workday Payroll to pay workers on international assignments, access the Edit Tenant Setup - HCM task.

    Select *Multiple Jobs* in the Position Setup Options to enable international assignment payments.
11. (Optional) Access the Maintain Custom Labels task.

    Create an alternative term for international assignments.
12. (Optional) Set up job overlap for vacating positions.

    Steps: Set Up Job Overlap on page 907.

The Next Level: Understanding International and Domestic Assignments

The Next Level: International and Domestic Assignments Overview

Add International and Domestic Assignments

Prerequisites

- Set up assignments.
- Hire the employee into a primary job or position.

Context

You can send an employee on an international or domestic assignment by creating an additional position. These aspects of the assignment can differ from the primary job or position:

- Compensation rate.
- Job profile.
- Location.
- Pay rate.
- Scheduled hours.
- Supervisory organization. Examples; Company, Cost Center, Employee Belonging Council.

Steps

1. Access the Add Job task or the Start International Assignment task.

   Use the Add Job task if your organization uses the *Add Additional Job* business process for assignments.

   Use the Start International Assignment task if your organization uses the *Start International Assignment* business process for international assignments.

   Use the *Add Additional Job* business process if an employee has multiple positions and the assignment is domestic. You can also use *Change Job* for a domestic assignment if you don’t need to track the home position.

   For an international assignment, you can use either the *Add Additional Job* business process or the Start International Assignment task. Workday recommends that you use the *Add Additional Job* business process for improved functionality.
2. Select the Supervisory Organization for the assignment and the Employee.
3. Specify the Start Date and Reason.
   - If you use job requisitions, the Start Date must be on or after the Target Hire Date on the job requisition.
   - If you don't use job requisitions, the Start Date must be on or after the Hire Date on the position.
4. Complete the Assignment Details section.

   Workday populates many of these fields with values from the position or job requisition. If you use job requisitions, you can't change those values; update the job requisition itself.

Option	Description
Position	Doesn't display for organizations that use job management for the staffing model.
Job Requisition	Available for job management and position management organizations based on tenant settings. Job Management: Available if you select Enable Job Requisitions for Job Management. Position Management: • Required if you've selected Require Job Requisitions for All Position Management staffing events. • Available if you've selected Enable Job Requisitions for Position Management based on rules. Exit conditions defined on the *Hire* business process determine the requirement of a job requisition. Example: You can add an exit condition that requires job requisitions for all hiring in Canada, but not elsewhere.
Assignment Type	Select from the types defined in the Maintain Assignment Types task.
Employee Type	This value can be different from the employee type for the employee's primary job or position.

Option	Description
Job Profile	Select from the profiles you specified on the Create Position or Set Hiring Restrictions task, unless your tenant allows overrides.
Time Type	Select from the time types you specified on the Create Position or Set Hiring Restrictions task, unless your tenant allows overrides. Populates from the value defined on the job profile.
Location	Select from the locations you specified on the Create Position or Set Hiring Restrictions task, unless your tenant allows overrides. While the employee is on an assignment, Workday displays this location address as the work address of the host country on the employee's worker profile. When the employee has an alternate work location that's effective on or after the start date of this assignment, Workday also displays the alternate work location. If applicable, Workday also displays the address for this location in local script on the employee's profile.
Work Space	Select from the work spaces (such as building, floor, or cubicle) associated with the Location.
Pay Rate Type	Select from the pay rate types available for the country associated with the Location.
Expected Assignment End Date	Require this field for a fixed-term employee type. If you enable the Sync Employment/ Contract End Dates option in the Edit Tenant Setup - HCM task, this field syncs with the employment end date.

5. Complete the Working Time section.

   Workday initially populates many of these fields with values from the position or job requisition. As you complete the task, Workday updates the values.

Option	Description
Scheduled Weekly Hours	Populates from a rule when: • You've defined a working time rule. • The data populated on the task applies the rule. Populates from Default Weekly Hours when there's no working time rule. Populates based on the position restrictions when: • You select the Enable FTE for Position Restriction check box on the Edit Tenant Setup – HCM task.

Option	Description
	• There's no work hours profile or job requisition for the position.
Location Weekly Hours	Displays the standard weekly hours associated with the Location.
Default Weekly Hours	Populates from a rule when: • You've defined a working time rule. • The data populated on the task applies the rule. Populates from Location Weekly Hours when there's no working time rule. Populates based on the position restrictions when: • You select the Enable FTE for Position Restriction check box on the Edit Tenant Setup – HCM task. • There's no work hours profile or job requisition for the position.
FTE	Calculated by dividing the Scheduled Weekly Hours by the Default Weekly Hours. This value displays as a percentage.
Specify a Paid FTE	Select the check box to specify paid full-time equivalent for a worker. Available when you enable Paid FTE on the Maintain Localization Settings task.
Paid FTE %	You can enter a percentage that overrides the FTE field for use in your Workday Compensation and Workday Payroll calculations. Available when you enable Paid FTE on the Maintain Localization Settings task.
Specify a Working FTE	Select the check box to specify working full-time equivalent for a worker. Available when you enable Working FTE on the Maintain Localization Settings task. For use in custom reporting.
Working FTE %	Enter a working full-time equivalent percentage. Used in custom reporting. Available when you enable Working FTE on the Maintain Localization Settings task. For use in custom reporting.
Work Shift	Available when you enable Work Shift on the Maintain Localization Settings task. Available when you select the Work Shift Required check box on the job profile.

Option	Description
	Define the work shifts for a location using the Maintain Work Shifts task.
Frequency	Select from the working time frequencies you specified on the Maintain Frequencies task. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Unit	Select from the preconfigured options of hours or days. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.
Value	Enter the duration of the working time in selected units. Automatically populates to zero. Available when you enable Working Time (Frequency, Time Unit, and Time Value) on the Maintain Localization Settings task.

6. As you complete the Additional Details section, consider:

Option	Description
Job Title	Populates from the Job Profile.
Business Title	Populates from the Job Profile. Secured to the *Worker Data: Business Title on Worker Profile* domain security policy in the Staffing functional area.
Job Category	Populates from the Job Profile.
Job Classifications	Populates from the Job Profile.
Additional Job Classifications	Select classifications as needed.
Company Insider Types	Select from the types associated with the Job Profile. Define company insider types on the Maintain Company Insider Types task; assign them to a job profile on the Edit Job Profile task.
First Day of Work	Populates from the Effective Date.

Result

When you search for the worker using global search, Workday always displays the manager of the primary job in the worker profile preview. The current manager displays on the Summary section of the worker profile.

The worker profile displays the assignment as the default position with the label (IA), (DA), or your configured label after the position name. To view the primary job, click Other Jobs.

Concept: Workday Docs

Tasks

Add Additional Jobs on page 879

Steps: Set Up Workday Docs

End International and Domestic Assignments

Context

When you end an employee's assignment, Workday removes the employee from the position and returns the employee to their primary position.

Workday recommends that you don't end the assignment and terminate the employee on the same date. If you end the assignment and terminate the employee on the same date, the assignment continues to display as the default position on the worker profile. If you rehire the same employee, the position that you select when hiring becomes the employee's primary position.

Steps

1. Access the End Job, End Jobs, or End International Assignment task.

   Use the End Job or End Jobs task if your organization uses the *End Additional Job* business process to end assignments.

   Use the End International Assignment task if your organization uses the *End International Assignment* business process.
2. Select the Employee and the job or position.
3. Complete the termination details:

Option	Description
Close Position	You can't close positions that have an open job requisition. Leave blank if you want to keep the position open for staffing. This field is only available for position management organizations; with job management, you can't open or close individual jobs.
Is this position available for overlap?	Specify whether another worker can fill the position before the incumbent departs. Available for position management organizations when job overlap is enabled in the Edit Tenant Setup - HCM task.
Last Day of Work	Populates to the Effective Date or End Date.
Pay Through Date	Populates to the Effective Date or End Date. Use this field in situations where severance pay continues past the employee's end date.
Notify By	Populates to the Effective Date or End Date.

Next Steps

If you use an alternate work location for the employee instead of the address for the assignment location, manually remove the alternate work location when it no longer applies. Otherwise, Workday will continue displaying the alternate work location as the employee's work address.

FAQ: International and Domestic Assignments

- Which business process should I use for an assignment? on page 906
- Can I start an international assignment from a job application? on page 906
- How is an employee on an international assignment paid? on page 906
- How to manage international assignments and time off plans? on page 906
- Is international assignment possible for contingent workers? on page 906
- How to extend an international assignment? on page 906
- Does an assignment end automatically on the expected assignment end date? on page 906
- Can an employee have 2 different international assignments with one home country position? on page 906

- How headcount reports work for an employee on an international assignment? on page 907
- Can I promote an employee who is on an international assignment? on page 907

Which business process should I use for an assignment?

If an employee is with multiple positions and the assignment is domestic, you should use *Add Additional Job*. You can also use *Change Job* for a domestic assignment if you don't need to track the home position.

For an international assignment, you can use either *Add Additional Job* or *Start International Assignment*. Workday recommends that you use the *Add Additional Job* business process for improved functionality.

Can I start an international assignment from a job application?

Yes, you can start an international assignment from a job application by using the *Add Additional Job* business process.

How is an employee on an international assignment paid?

The compensation will depend on the agreement you have made with the assignee. It's possible to configure Workday to pay an employee in their home country, host country, or both.

When an employee goes on an assignment, by default, the pay group will be tied to the home position. As part of the business process you use to start assignments, it's possible to assign a different pay group to the host position. Assigning a different pay group is necessary if the employee is paid through the host position, or for reporting purposes. Through the pay group assignments, you can send compensation data to your (third party) payroll for the home position, host position, or both.

How to manage international assignments and time off plans?

You can configure time off plans to be position-based or worker-based depending on your requirements.

You can evaluate time off plans based on:

- Primary position for worker-based plans.
- Both positions for position-based plans.

If your time off plans are worker-based, eligibility rules that reference the attributes of the position will be based on the home (primary) position of the worker. In this set up, a worker with an international assignment retains eligibility to the existing plans based on the home position.

For a worker on an international assignment to be eligible for time off plans based on the host position, the time off plans has to be position-based. In this case, the non-primary positions of the worker can be referenced for eligibility.

Is international assignment possible for contingent workers?

No.

How to extend an international assignment?

Use the Edit Position or Change Job task to change the expected assignment end date of a position with an international assignment.

Does an assignment end automatically on the expected assignment end date?

Assignments won't end automatically at an expected end date. You'll have to initiate the end of the assignment. Assignments can also end when you terminate an employee.

Can an employee have 2 different international assignments with one home country position?

Yes, an employee can have multiple assignments.

How headcount reports work for an employee on an international assignment?

When an employee is on an international assignment, the employee must have 2 positions: home and host position. Both positions are open and counted within headcount reports as 2. There's an option to exclude positions from headcount reports. Update a job profile and select the Exclude from Headcount check box to avoid displaying an employee twice in headcount reports.

Can I promote an employee who is on an international assignment?

Yes.

As the home and host positions are independent of each other, promoting one position will not impact the other. It's your decision to either promote an employee's home, host, or both positions.

The Next Level: Understanding International and Domestic Assignments

Job Overlap

Steps: Set Up Job Overlap

Context

You can set up job overlap for 2 workers in 1 position on:

- Position restrictions when the principal worker has an unknown vacating date.
- Vacating business processes, such as *Change Job* and *Termination*, when the principal worker is transferring to another job or leaving the company.
- Positions when the principal worker goes on leave.

Steps

1. Access the Edit Tenant Setup - HCM task.

   Configure these job overlap options:

Option	Description
Enable Job Overlap for Vacating Positions	Enables you to select individual positions for overlap when they become vacant. Designate jobs for overlap in these business processes: • *Change Job* • *End Additional Job* • *End Contingent Worker Contract* • *End International Assignment* • *Termination* This selection displays the Is this position available for overlap? check box on the tasks for these business processes.
Automatically Select Is This Position Available for Overlap on Vacating Events	Automatically selects the Is this position available for overlap? check box on the tasks for these business processes: • *Change Job* • *End Additional Job*

Option	Description
	• *End Contingent Worker Contract* • *End International Assignment* • *Termination*
Enable Job Overlap on Position Restrictions	Enables you to select if a position is available for overlap on the position restriction. This selection enables you to backfill a position when the worker has an unknown vacating date. Example: You can backfill a position for a worker who is on an international assignment.
Enable Job Overlap Routing Exclusion Rules	Enables you to create and activate rules that will exclude specific Job Overlap positions from receiving notifications. This check box is only available if you've also selected either of these check boxes: • Enable Job Overlap for Vacating Positions • Enable Job Overlap on Position Restrictions
Allow Job Overlap for Leave	Automatically makes positions available for overlap when workers go on leave. Unlike the staffing option, this setting doesn't enable you to select individual positions for overlap. Any current or future-dated leave of absence at the worker level makes positions available for overlap.

When you enable both of these tenant settings, Workday recommends that you configure the *Remove Overlap Check Box on Position Restriction* event service on vacating staffing business processes:

- Enable Job Overlap for Vacating Positions
- Enable Job Overlap on Position Restrictions

When the worker is vacating the position, this configuration ensures that Workday automatically removes the Available for Overlap check box on the position restriction.

See Reference: Edit Tenant Setup - HCM.

2. (Optional) Configure the *Remove Overlap Check Box on Position Restrictions* event service step on vacating business process.

   If you enabled job overlap on vacating positions and position restrictions, configure the event service step on these business processes:

   - *Change Job*
   - *End Additional Job*
   - *End Contingent Worker Contract*
   - *End International Assignment*
   - *Termination*

   You can also configure a step delay for the event service.

3. (Optional) Configure rules to help reduce the number of notifications workers receive when they're inactive in a job overlap position.
    a) Select the Enable Job Overlap Routing Exclusion Rules check box on the Edit Tenant Setup - HCM task.
    b) Access the Create Job Overlap Routing Exclusion Rule task.

        Create rules specifying which positions that you want to exclude from receiving notifications.

        Security: *Set Up: Job Overlap Routing Exclusion Rules* domain in the Staffing functional area.
    c) Access the Maintain Job Overlap Routing Exclusion Rules task.

        Configure and maintain the rules you created on the Create Job Overlap Routing Exclusion Rule task.

    Workday excludes positions in job overlap from receiving routing based on the rules you configured. The rules only apply when:

    - There's 2 filled positions in job overlap capable of receiving routing.
    - The recipient is in a role-based security group.
    - You don't delegate or reassign the business process step.
    - The business process step isn't a Shared Participation Type.
4. (Optional) Hide or Require Optional Fields.

    Configure these fields:

    - *Job Holder for Position Overlap* on the *Job Details* report on the worker profile.
    - *Available for Overlap* on the Create Position and Edit Position Restrictions tasks.

Next Steps

- If you enabled job overlap on position restrictions, access the Edit Position Restrictions task. Select the Available for Overlap check box to make the position available for overlap another worker when the principal worker has an unknown vacating date.
- If you enabled job overlap on vacating positions, you can select the Available for Overlap check box on vacating business processes. This selection will make the position available for overlap another worker when the principal worker is leaving the position.
- If you enabled job overlap for leave, this setting automatically applies to any position filled by a worker who goes on leave.
- If you enabled job overlap routing exclusions, you can view positions that you excluded from receiving routing. Create a custom report using *Is Excluded from Routing* report field on the Position – Position Management business object (secured to the *Set Up: Job Overlap Routing Exclusion Rules* domain).

Setup Considerations: Leave of Absence on page 2554

Tasks

Maintain Step Delay

Reference

2021R2 What's New Post: Job Overlap for Positions

2023R1 What's New Post: Configurable Job Overlap Routing

Concept: Job Overlap

You can overlap workers in the same position to meet different staffing needs. Examples:

- Train a replacement before a worker transfers to another job or leaves the company.
- Backfill a position while a worker takes a leave of absence.
- Backfill a position while a worker is on an assignment.

Job overlap is only available for the position management staffing model. Workers can be in only 1 job overlap at a time.

The terms for job overlap include:

- *Principal worker* = original job holder.
- *Overlap worker* = secondary job holder.
- *Overlapped position* = original position.
- *Overlapping position* = secondary position.

Downstream Impacts

When a worker is in a job overlap, you may have downstream impacts to:

- The All Positions report. A single position in Job Overlap will be listed twice.
- Terminating a worker who's in a job overlap position.
- The *Move Worker (Supervisory)* business process. Workday suggests that you don't initiate the *Move Worker (Supervisory)* business process on a worker in a job overlap position. We suggest that you end the job overlap before moving the worker.
- Future-dated events. Workday suggests that you review any future-dated events for both workers before placing them in a job overlap. Such as any *Change Job*, *Move Worker (Supervisory)*, or *Termination* business process events.
- The *Change Job* business process. *Change Job* events for one worker might conflict with events you try to run for the other worker in the same position. Workday suggests not making any changes to a worker in a job overlap position when the other worker in the position has a *Change Job* event in progress.

Earliest Overlap Date

You can see the Earliest Overlap Date on the Position Overview tab in the View Position Restrictions report. This date is the later of:

- The day after the principal worker filled the position restriction.
- The day after the last overlap worker left the position restriction.
- The Target Hire Date on the job requisition.

The Earliest Overlap Date doesn't display if:

- The position restriction or supervisory organization is frozen.
- There's a pending staffing event that fills the position.
- The date when the principal worker left the position or returned from leave is earlier than the overlap date.

Fill Overlap Positions

You can fill a position with an overlap worker using the Add Job, Change Job, Contract Contingent Worker, Hire Employee, and Start International Assignment tasks. The Position prompt has a Filled Positions Available for Overlap selection list.

Only filled positions are available for overlap, and only 2 workers at a time can be in overlap for a position. You can overlap workers into positions that are in the past or hire a worker into a position that was available for overlap when the incumbent worker has already vacated.

You can hire a worker into a position that is available for overlap even if the incumbent worker doesn't have a future termination date.

If you require job requisitions, you must create a requisition before you can fill a position with an overlap worker. The target hire date on the requisition can be earlier than the position vacancy date.

If a position has a future-dated *Move Workers (By Organization)* or *Move Workers (Supervisory)* event, you can't fill it with an overlap worker until after the organization change takes effect.

Security Roles

Overlap workers share all security roles associated with the position with the principal worker during the overlap period. The workers share the manager roles as well, regardless of whether or not you enable supervisory organizations to have multiple managers.

Organization Assignments

Workday doesn't synchronize organization assignments between the overlapped position, the overlapping position, and the position restrictions. If you use these business processes, the changes only apply to the position or position restrictions that you act on:

- *Change Organization Assignments for Worker*
- *Change Organization Assignments for Workers by Organization*

Update the other position or position restrictions separately.

Manage Job Overlap

You can rescind or correct business processes that remove principal workers from their positions:

- When you rescind, the overlap worker remains in the position and keeps the security roles unless you take additional steps to reassign the worker.
- When you correct, you can only change the effective date and the overlap flag. If you've already assigned an overlap worker to the position, you can't change the overlap flag. You can't correct the effective date to be after the date that you hired the overlap worker into the position.

When you hire the overlap worker into a position on the same date that the principal worker leaves the position, the workers aren't in job overlap. The only exception is a termination, as the position doesn't become available until 1 day after the termination effective date. If you hire the overlap worker into the position on the termination date, the workers are in job overlap. If you hire 1 day later, they're not in job overlap.

You can move principal or overlap workers within nonsupervisory organizations with the *Move Workers (By Organization)* business process. You cant use the *Move Workers (Supervisory)* business process, which is only available for moving workers between supervisory organizations, to move workers who are in job overlap. You can't close positions that are in overlap.

Related Information
Reference
Reference: Edit Tenant Setup - HCM
2021R2 What's New Post: Job Overlap for Positions

Reference: Job Overlap Reporting

Workday provides several tools to help you report on job overlap.

Standard Reports	Two standard reports are available: Overlap Workers and Positions with Overlap.
Labels	Workday identifies overlap positions with these labels: • (Overlap) on the overlap worker's position and both workers' position restrictions.

	• (Position Vacate) or (On Leave) on the principal worker's position.
Workers	You see both the principal and overlap worker when you search by position ID, view organization members, and use these tasks and reports: • Directory by Organization • Headcount Report • Manage Position Freeze • Position Overview and Incumbent History on position restrictions • Position Restrictions as of Date The Job Holder for Position Overlap field also shows if a worker is the principal or overlap worker in the *Job Details* report on the worker profile. You can enable this field using the Configure Optional Fields task.
Position Count	The following reports count only 1 position when a job overlap exists: • FTE Report • Headcount & Open Position Analysis • Headcount Report • Open Position Summary

Organization Assignments

Steps: Change Organization Assignments for Worker

Prerequisites

- Configure the *Change Organization Assignments for Worker* business process and security policy in the Organizations and Roles functional area. All roles that have initiate permission on the business process must also have edit permissions on the *Staffing Organizations: Header* domain. Access the Template-Driven Business Process Security report to confirm that you've aligned the business process and domain security permissions.
- When creating or editing supervisory organizations and location hierarchies, specify which organizations are available to assign by organization type.

Context

You can change the organization assignments for an individual worker or a position. These assignments can include a:

- Business unit
- Company
- Cost center
- Custom staffing organization

- Fund
- Gift
- Grant
- Program
- Region

Steps

1. Define the organization types that support staffing in the Maintain Organization Types report.

   Before you can assign workers to a costing or custom organization in a staffing transaction, you must select the Show in Change Organization Assignments and Job Requisition check box on the report. When you don't select this check box, some organization data won't be available, and the organization won't display on the worker position.
2. From the related actions menu of the worker, position, or position restrictions, select Organization > Change Organization Assignments.
3. In the Organizations section, view the default assignments and update them as needed.

   Workday displays only the organization types that you configured as Allowed Organizations when editing the:

   - Location Hierarchy.
   - Supervisory Organization.

   When you restrict the Allowed Organizations to Location Hierarchies and Supervisory Organization, Workday displays only organizations allowed in both.

   The location of a position might be in multiple location hierarchies. Workday displays only the organizations allowed across all location hierarchies as of the Effective Date.

   Workday also displays custom organizations in order of creation, and you can't change this order.

Next Steps

For the *Change Organization Assignments for Worker* business process, you can:

- Correct the latest event when it's a standalone event or a subprocess of another business process. The organizations must be active as of the new effective date.
- Set up out of order insertion and correction using the Maintain Functionality for Staffing Transactions task.

2021R2 What's New Post: Correct and Insert Organization Assignments Out of Order

Mass Change Organization Assignments

Prerequisites

- Define the organization types that support staffing in the Maintain Organization Types report.

  Before you can assign workers to a costing or custom organization in a staffing transaction, you must select the Show in Change Organization Assignments and Job Requisition check box.
- Configure the *Change Organization Assignments for Worker* business process and security policy in the Organizations and Roles functional area. All roles that have initiate permission on the business process must also have edit permissions on the *Staffing Organizations: Header* domain.

Context

Make mass organization assignments or individual assignment changes for an individual worker or a position.

When you create or edit supervisory organizations and location hierarchies, you can specify which organizations are available to assign by organization type.

Steps

1. Access the Change Organization Assignments task.
2. Specify which workers to include in the change.
3. Select a new proposed organization for each existing current organization.

   - Make mass assignment changes that apply to all workers from the prompt in the Override Organization Assignments section at the top of the page. When you select an organization, it's displayed in the Proposed Organization field for all workers selected in the list.
   - Make individual assignment changes from the prompt in the Proposed Organization field for each worker.

   Available organizations are based on the allowed values that you specified on the supervisory organization intersected with the allowed values on the location hierarchy.

   Selection lists are based on the allowed values that you specified on the supervisory organization intersected with the allowed values on the location hierarchy.

   If you restricted the Allowed Organizations for supervisory organizations and location hierarchies, the selection lists contain the intersection of the allowed organizations for both. If the location of a position is in multiple location hierarchies, the selection list is limited to the intersection of allowed organizations across all location hierarchies as of the Effective Date.

   Note: If you leave the Proposed Organization blank, Workday deletes the existing Current Organization of that type.

Tasks

Steps: Change Organization Assignments for Worker on page 912

Create Location Hierarchies

Maintain Organization Types

Steps: Set Up Mass Action Workbooks to Initiate Change Organization Assignments

Context

You can set up mass actions to initiate the *Change Organization Assignments for Worker* business process in bulk for up to 1000 workers.

Steps

1. Set up mass action workbooks.

   Steps: Set Up Mass Actions.
2. Edit Business Process Security Policies.

   Configure security permissions for the *Change Organization Assignments for Worker (Mass Action)* and *Change Organization Assignment (REST)* initiating actions on the *Change Organization Assignments for Worker* business process policy.
3. (Optional) Add additional facets to the delivered Launch Mass Change Organization Assignments for Worker report. To add additional facets, copy the delivered report to a custom report and add any additional filters to the report definition.
4. (Optional) Create Custom Reports.

   Create or edit a custom report that has a data source containing positions or position restrictions. You can use the report or report filter to populate up to 1000 workers in the workbook using the Launch Mass Action Event task.
5. (Optional) Create or edit a search report that has a data source containing positions or position restrictions. You can select workers in the search report to populate up to 1000 workers in the Launch Mass Action Event task.

   Ensure that you select *Launch Mass Action Event* from the Mass Action column on the Advanced tab of the search report.

   See Steps: Create Search Reports.

Next Steps

Access the Launch Mass Action Event task or a configured search report to initiate the *Change Organization Assignments for Worker* business process.

Related Information
Concepts
Setup Considerations: Org Studio and Mass Actions

Initiate Change Organization Assignments in Mass Action Workbooks

Prerequisites

- Configure the Change Organization Assignments for Worker business process and business process security policy.
- Set up mass action workbooks for changing organization assignments.

Context

You can initiate the *Change Organization Assignments for Worker* business process in bulk with a mass actions workbook.

You can add contingent workers and employees to the workbook by:

- Using the Launch Mass Change Organization Assignments for Worker or Launch Mass Change Job reports.
- Selecting a report in the Launch Mass Action Event task.
- Using a search report to access the Launch Mass Action Event task.
- Adding them manually in the workbook.

Steps

1. Access the Launch Mass Action Event task.

2. As you complete the task, consider:

Option	Description
Mass Action	Select *Change Organization Assignments for Worker*.
Report	To populate the workbook, select a standard or custom report that includes up to 1000 workers. The report must have a data source that contains positions or position restrictions. You can filter the population by report definition parameters, if you select a custom report with configured parameters.
Company Cost Center Region	Select a value for these fields to populate every row in the workbook. You can override these values in the workbook.

3. After the workbook generates, select Open Workbook.
4. Complete the details in the workbook using the prompts and validation messages.
5. Select Begin Error Validation.

   Resolve errors and submit the workbook.

   You can submit a workbook with errors. Any rows with errors remain in the workbook instead of initiating the *Change Organization Assignments for Worker* business process. You can access the workbook later to resolve and submit the remaining rows.

Result

The *Change Organization Assignments for Worker* business process initiates for the relevant workers in the workbook. Any other steps on the business process route for completion.

Related Information
Tasks

Steps: Set Up Mass Action Workbooks to Initiate Change Organization Assignments on page 914

Steps: Set Up Mass Actions

Set Up Out of Order Insertion and Correction for Organization Assignments

Prerequisites
Security: *Set Up: Staffing* domain in the Staffing functional area.

Context

Configure which security groups on the *Change Organization Assignments for Worker* business process policy can:

- Insert events out of order.
- Correct events out of order.

An out of order event is one you initiate with an effective date before a completed event.

If you had out of order events before 2022, you might see different current organization values returned for these business processes when comparing historical transactions:

- *Move Workers (By Organization)*

- *Change Organization Assignments for Worker*

You can use these web services to load and retrieve configurations on the Maintain Functionality for Staffing Transactions task in bulk:

- *Get Maintain Functionality for Staffing Transactions*
- *Put Maintain Functionality for Staffing Transactions*

Steps

1. Access the Maintain Functionality for Staffing Transactions task.

   Security: *Set Up: Staffing* domain in the Staffing functional area.
2. Select *Change Organization Assignments for Worker* in the Business Process Type field.
3. As you complete the task, consider:

Option	Description
Functionality	Ensure that the functionality has the same security groups on the relevant actions on the business process policy: • The *Correct Out of Order Events* functionality corresponds to the *Correct* action. Example: You need to correct the region on an assign organization event for a worker who has subsequent assign organization events. • The *Insert Out of Order Events* functionality corresponds to the *Change Organization Assignments* initiating action and *Change Organization Assignments for Worker (Mass Action)* initiating action. Example: You need to initiate a change to the company for a worker. The effective date for the change is before an existing organization assignment event. • The *Insert Out of Order Events (Web Services)* functionality corresponds to the *Change Organization Assignments (Web Services)* initiating action. Example: You need to initiate a change to the company for workers, using the web service. The effective date for the change is before an existing organization assignment event.
Enabled for	The *All Security Groups* option enables access to every security group configured on the business process security policy, for the relevant action. The *Restricted Security Groups* option enables you to select any security group in the Security Groups column. However, Workday only grants access to the security groups that are on the

Option	Description
	corresponding action on the business process security policy.
Security Groups	The groups you select must also have access to the relevant actions on the business process security policy.

Result

- You can correct organization assignment events out of order for another business process when you configure *Change Organization Assignments for Worker* as a subprocess.
- When you insert or correct an organization assignment event out of order, Workday updates subsequent organization assignment events.
- You might have *Change Organization Assignments for Worker* business process definitions that use condition rules. You might need to update those condition rules to include the Impacted Future Events report field.

  Example: You have a condition rule that states that you can't associate Cost Center A with Region B. When you correct or insert a cost center for a worker out of order, Workday updates future events without considering the condition rule. You update the condition rule to include this information:

And/Or	Source External Field	Relational Operator
Or	*Impacted Future Events*	*is not empty*

  Now, Workday considers impacted future events when evaluating the condition rule.
- Any automatically updated future events will display a *Corrected* status on the Process History report. You can manually correct any individual events as required.

Example

Your cost centers for your organization are as follows:

	January 1	February 1	March 1	April 1
Cost Center	A	A	A	B

You insert Cost Center C for January 15th, replacing Cost Center A.

	January 1	January 15	February 1	March 1	April 1
Cost Center	A	C	A	A	B

Workday overrides Cost Center A to Cost Center C in all subsequent organization assignment events. Workday doesn't override Cost Center B because the cost center has a different value.

	January 1	January 15	February 1	March 1	April 1
Cost Center	A	C	C	C	B

Next Steps

To display any future events that Workday will update, click View Impacted Events on the *Change Organization Assignments for Worker* business process while you:

- Insert events out of order.
- Correct events out of order.

Move Workers in Supervisory Organizations

Prerequisites

Configure the *Move Workers (Supervisory)* business process and security policy in the Staffing functional area.

Context

You can move workers and positions from 1 supervisory organization to another. You can move all workers in the organization or individual workers. These restrictions apply:

- If you're moving workers from a job management organization to any other organization, you can move only filled positions. When moving workers from a position management organization to any other organization, you can move both filled and unfilled positions.
- You can't move workers who have a future-dated, completed staffing event that changes their supervisory organization.
- You can't move workers in organizations with more than 1500 jobs or positions, regardless of the number of workers you've selected. You can use the *Change Job* web service instead.
- You can't move workers who are in job overlap with the *Move Workers (Supervisory)* business process.
- If you move unfilled jobs or positions, you can't fill them until after the effective date of the *Move Workers (Supervisory)* event.
- You can rescind a hire or transfer for a worker who you've moved from 1 organization to another. You can:
    - Move the worker back to the hire organization before you rescind.
    - Move the worker back into the organization from which you transferred them before you rescind.

Steps

1. Access the Move Workers (Supervisory) task.
2. Identify workers to include in the move.
3. Identify the target organization for the selected workers.
    - You can move all workers to the same supervisory organization. Select the target organization in the Proposed Supervisory Organization field.
    - You can move workers to a mix of organizations. Select a target organization for each employee in the Proposed Supervisory Organization field in the table.

Next Steps

You can correct the effective date of an individual worker move that is part of a completed *Move Workers (Supervisory)* event. The new effective date automatically updates on the associated *Change Organization Assignments for Worker* event.

(Optional) To report on transfer activity from the *Move Workers (Supervisory)* business process, create a custom report using the *Trended Workers* data source.

Steps: Set Up Workday Docs

Move Workers to New Managers

Prerequisites

- Configure the *Move to New Manager* business process and security policy in the Staffing functional area.
- Create reasons for moving workers to new managers with the Maintain Event Categories and Reasons task.

Context

Create an organization for someone who isn't currently a manager and move a worker into the new organization. You can move workers to new managers when:

- The worker's position is in a job management or position management organization.
- The nonmanager's current organization uses the same staffing model as the worker's organization.
- The effective date of the move is after other staffing or organization changes that affect the worker's position.
- The worker's position has no in-progress events and isn't in a job overlap.

Steps

1. Access one of these tasks:

Option	Description
Change Job	Enables the current manager to search for and select a nonmanager in the Start section. Workday then displays an alert and automatically switches to the Move to New Manager task. This option provides a familiar starting point for managers, who must have permission on the initiating actions for both the *Change Job* and *Move to New Manager* business processes.
Move to New Manager	Enables the current manager to transfer a worker to a nonmanager who is currently in another organization.
Request Transfer to Me	Enables a nonmanager to request transfer of a worker from another organization. This task is: • Only accessible from the related actions menu of a worker. • Only available to workers who aren't managers.

2. Select the worker, date, reason, and new manager.
    - If you started from Change Job, you only need to select the reason.
    - If you started from Request Transfer to Me, you only need to select the date and reason.

Result

The new organization inherits its location, staffing model, roles, and organization assignments from the parent organization, and the manager's name becomes the default organization name.

If you include a Review Move to New Manager Action step in the *Move to New Manager* business process, an HR role can:

- Change the effective date and reason for the move.
- Update details about the new supervisory organization.

When the *Move to New Manager* business process completes, Workday:

- Creates a new supervisory organization as a subordinate to the new manager's current organization.
- Sets the availability date of the new organization to the effective date of the move.
- Assigns the new manager to the Manager role.
- Applies hiring restrictions from the parent organization (job management staffing model only).
- Moves the worker into the new organization.

Workday displays the transaction as a *Move Worker (Supervisory)* event in the worker's history.

Next Steps

If you rescind the *Move to New Manager* business process, Workday rescinds the worker's move but retains the new organization and manager role assignment.

Concept: Moving Workers on page 922

Concept: Workday Docs

Tasks

Transfer, Promote, or Change Job on page 821

Steps: Set Up Workday Docs

Assign Multiple Managers to Supervisory Organizations

Prerequisites

In the Maintain Assignable Roles task, ensure that the Restricted to Single Assignment check box isn't selected for the Manager role.

See ../../../manage-workday/organizations/dan1370797386252.dita.

Context

You can assign multiple managers to a supervisory organization, which is a common requirement in some industries where shift workers report to multiple managers. When an organization has multiple managers:

- More than 1 position can occupy the Manager role.
- 2 or more managers share equal responsibility for workers in an organization.
- All managers have the same abilities to initiate, view, and approve transactions on a group of workers.
- All managers display as equals on organization charts.

Steps

1. As a related action on the desired supervisory organization, select Roles > Assign Roles.
2. For the Manager role, verify that the Restricted to Single Assignment check box isn't selected.

   (This check box matches the setting of the Restricted to Single Assignment check box in the Maintain Assignable Roles task.)

3. In the Assigned To column, select 1 or more positions that you want to assign to the Manager role.
4. (Optional) In the Single Assignment column, select 1 of the positions assigned to the Manager role to use when a single assignment is required for integrations and reporting fields that require a single instance.

   This column displays for the Manager role only when the Restricted to Single Assignment check box for the Manager role isn't selected in the Maintain Assignable Roles task.

   Making a single assignment selection has no impact on business process routing or security. The Single Assignment column displays on the Roles tab of the associated supervisory organization only when you've explicitly selected a single assignment manager.

Result

After you assign multiple managers to a supervisory organization:

- Any associated organization charts display multiple managers by placing them adjacent to one another at the top of the organization.
- Business processes that are not configured to route to a single assignment manager route to all managers. Any of them can take action on the steps associated with the Manager role.
- Integrations that require a single assignment manager use either the designated manager (if one has been specified) or the manager whose last name comes first alphabetically.

Related Information

Concepts

Concept: Assign Roles

Concept: Moving Workers on page 922

Concept: Moving Workers

Moving Workers in Supervisory Organizations

For supervisory organizations, you move workers by configuring the *Move Workers (Supervisory)* business process.

Routing is based on the security of the outbound supervisory organization. Example: If you assign an approval step to the HR Partner, Workday routes it to the HR Partner in the outbound supervisory organization.

Approvals, reviews, and other workflow tasks apply to the move as a whole rather than to individual employees—separate reviews and approvals aren't required for each employee.

When you include the *Change Organization Assignments* subprocess:

- Routing is based on the security of the inbound supervisory organization.
- You can use the inbound supervisory organization defaults or keep the current organization assignments. To update the assignments for individual workers, use the Organization Assignments grid.
- Workday bypasses reviews, approvals, and other workflow tasks for individual employees and routes 1 workflow task for each inbound organization.

Moving Workers by Organization

For nonsupervisory organizations, you move workers by configuring the *Move Workers (By Organization)* business process. It is a stand-alone business process that starts the *Move Worker (By Organization)* subprocess for each worker who is moved.

Changing Organizational Assignments

You can change organization assignments for workers by configuring the *Change Organization Assignments for Worker* business process.

You can also make mass changes to organization assignments by configuring the *Change Organization Assignments for Workers by Organization* business process. This business process launches the *Change Organization Assignments for Worker* subprocess for each position in the organization. Add condition rules and workflow steps to the parent business process, since the subprocess automatically completes.

Alternative Ways to Move Workers

You can also move workers with these tasks:

- From the related actions menu of a supervisory organization, select Reorganization > Move Workers to move workers, jobs, or positions between 2 organizations that use the same staffing model. You can also use this action to move workers between other types of organizations.
- From the related actions menu of a worker or position, select Job Change > Transfer, Promote, or Change Job to move a single worker, position, or job at a time and enter detailed position or job data as part of the transfer. If you move a manager, you can also move the teams that report to that manager.
- Use the *Move to New Manager* business process to create an organization for someone who isn't currently a manager and move a worker into the new organization.
- Use the Enterprise Interface Builder (EIB) to move workers with the *Move Workers By Organization* web service operation.

Restricting Organization Selection Lists

If you want to restrict organization selection lists, specify which organizations are allowed by type from the related actions menu of supervisory organizations and location hierarchies.

Related Information
Concepts

Concept: Workday Docs

Concept: Moving Workers by Organization

Tasks

Steps: Change Organization Assignments for Worker on page 912

Mass Change Organization Assignments on page 914

Steps: Set Up Workday Docs

Concept: Organization Assignment Worktags

A worker's organization assignments become worktags that automatically populate on transactions involving the worker, such as:

- Expense reports.
- Financial transactions.
- One-time payments.
- Payroll costing allocations.
- Payroll input.
- Period activities pay for academic faculty.
- Spend authorization.
- Time entry.

Organization assignment worktags can also impact your planning, accounting, and reporting throughout Workday. Examples:

- Headcount plans.

- Organization operating expenses.
- Scorecards.
- Spend authorizations.

Worktags configured for organization types assigned to workers can impact accounting for transactions involving the workers. Example: A worker has an invalid combination of organization assignments based on the worktag configuration. The worker's organizations automatically populate as worktags on a transaction, but will cause an error when you try to save the transaction. The invalid combination can result in invalid accounting entries.

You can disable automatic population of worker organization assignments on specific transactions using the Maintain Worktag Type Precedences task.

To identify and fix any invalid organization assignments, access the Organization Assignment Exception Audit report. Fixing the invalid organizations can prevent incorrect worktag combinations. The report displays invalid organizations based on:

- The worker's supervisory organization.
- Any location hierarchies that include the location of the worker's position.
- The related worktag configuration for an organization assigned to the worker.
- The companies for the worker's cost center, from the Restricted to Companies field on the Create Cost Center and Edit Cost Center tasks.

Related Information

Concepts

Concept: Worktags

Concept: Moving Workers by Organization

Tasks

Configure Related Worktags

Configure Worktag Defaulting

Reference: Default Organization Assignments

Workday assigns default organizations to workers and positions based on:

- The availability of related worktags.
- The staffing event type.

Staffing Events

When *Change Organization Assignments for Worker* is a subprocess for these staffing events, it assigns default organizations as shown.

Parent Staffing Event	Organization Assignments
Create Position *Edit Position Restrictions* *Move Workers (Supervisory)*	Populates from the supervisory organization.
Add Additional Job *Contract Contingent Worker* *Hire* *Start International Assignment*	Depends on the staffing model in the proposed supervisory organization: • Job management: Populates from the job requisition if available, otherwise from the supervisory organization. • Position management: Populates from the job requisition if available; then from the

Parent Staffing Event	Organization Assignments
	hiring restrictions if available; otherwise from the supervisory organization. Note: If there are any organization assignments on the job requisition, all the organization data populates from there.

Note: If you don't change the default organization assignments in a staffing event, Workday automatically cancels the *Change Organization Assignments* subprocess.

Change Job

In *Change Job*, the *Change Organization Assignments for Worker* subprocess assigns default organizations differently for each staffing model according to this logic:

Staffing Model	Organization Assignments

Job Management	Filling a Job Requisition with Organization Assignments?
	• Yes: Organization assignments populate from the job requisition.
	• No: Are the current and proposed supervisory organizations job management?
	    • Yes: The Change Job Use Default Organizations for Job Management check box on the Edit Tenant Setup - HCM task determines whether organization assignments populate from the current job or from the proposed supervisory organization.
	    • No: Organization assignments populate from the proposed supervisory organization if available; otherwise from the current job.

Position Management	Filling a Job Requisition with Organization Assignments?
	• Yes: Organization assignments populate from the job requisition.
	• No: Are you creating a new position?
	    • Yes: Organization assignments populate from the proposed supervisory organization if available; otherwise from the current position.
	    • No: Organization assignments populate from the proposed position restriction. When there are no organizations on the proposed position restriction, organization assignments populate from the proposed supervisory organization.

Staffing Model	Organization Assignments
	Otherwise, organization assignments populate from the current position.

Related Worktags

When you add related worktags to cost centers, custom organizations, gifts, or grants, the *Change Organization Assignments*, *Job Requisition*, and *Job Requisition Change* business processes automatically populate organizations as shown.

Action	Organization Assignments
• Move a position that has organizations assigned. • Move a worker to a new position that has organizations assigned. • Move a worker and position together.	• Cost centers, custom organizations, gifts, and grants populate from related worktags. • Organizations that populate from related worktags supersede organizations defined on the position. • Default organizations must conform with the Allowed Organizations on the supervisory organization or location hierarchy.
Move a worker to a new position without organization assignments, but with default organizations assigned to the supervisory organization.	• Organizations populate from the supervisory organization. • Cost centers, custom organizations, gifts, and grants populate from related worktags when you change a worker's organization. • Organizations that populate from related worktags supersede organizations defined on the position. • Default organizations must conform with the Allowed Organizations on the supervisory organization or location hierarchy.
Move a worker to a new position without organization assignments.	• Cost centers, custom organizations, gifts, and grants populate from related worktags. • No other organizations automatically populate.
Create or edit a job requisition.	Workday automatically populates organizations on the Create Job Requisition and Edit Job Requisition tasks when you select an organization that has related worktags. Related worktags only populate for organizations you manually select. If an organization automatically populates as a related worktag, Workday doesn't populate the related worktags for that organization.

Reference: Manager Change Event Lite

Workday creates an event lite and a corresponding transaction log lite for manager change when a worker has a new manager.

You can see audit entries for manager changes more accurately in the *Core Connector: Worker* integration output if a manager change event lite exists.

Background Job or Process	Description	Where to View
Manager change event lite	Depends on manager change background job. Runs periodically to update the audit trail of workers with new managers. Also runs when you use *Get Workers* web service.	Data audit files

Note: wd-environments will be the user making the change as wd-environments is the owner of the manager change background job.

Job and Business Titles

Concept: Changing Business Titles

You can specify a worker's business title in staffing tasks such as:

- Add Job
- Change Job
- Contract Contingent Worker
- Edit Position
- Hire Employee
- Start International Assignment

The business title automatically populates from the job title when you select a job profile.

- If the job profile has an empty Job Title Default field, then the job title automatically populates from the Job Profile Name field.
- If you override the default job title, the business title automatically changes to match the job title, but you can also override the business title.

Both titles are effective until the worker's job profile changes; then the job and business titles automatically populate from the new job profile.

There are 4 ways to change a business title in Workday. Only administrators can make future-dated changes to business titles.

- Administrators can:
    - Use the Change Business Title task.
    - Use the *Change Business Title* web service and EIB.
    - Change a worker's business title when correcting a staffing event.
- Workers can use the Change My Business Title self-service task to change their own business title.

You can change business titles out of order, without having to rescind later events in a worker's history, even if those events also change the business title.

Note: You must override the default job title and business title before you can translate business and position titles.

Related Information

Concepts

Concept: Out of Order Insertion on page 945

Concept: Enterprise Interface Builder

Tasks

Create Job Profiles on page 573

Reference: Job and Business Titles

Workers can have both a job title and a business title in Workday. The term *job title* applies to all staffing models and is equivalent to a position title in a position management organization.

A job title takes precedence over a business title.

Example: If you change a job title, which is populated from the job profile, from Consultant to Sales Solution Consultant, the business title will automatically change to Sales Solution Consultant.

Titles have these default values and characteristics.

	Job Title	Business Title
Automatically populates from the Job Title Default field (or if blank, from the Job Profile Name field) on the job profile.	X	
Automatically populates from the Job Title field in staffing tasks.		X
Editable in staffing tasks.	X	X
Effective dated.	X	X
Display name for a worker's job.	X	
Secured to the *Worker Data: Business Title on Worker Profile* domain for greater control over view permission.		X
Updates automatically if it defaults from the job profile and you change the Job Title Default or Job Profile Name field.	X	X
Can be updated through the *Title Change* business process, independent from other job data and optionally available for employee self-service.		X
Clears automatically if you override the default title and you change the worker's job profile.	X	X
Translatable if it defaults from the job profile, but not if you specify an override.	X	X

Flexible Work Arrangements

Setup Considerations: Flexible Work Arrangements

You can use this topic to help make decisions when planning your configuration and use of flexible work arrangements. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday enables you to track and report on the types of flexible work arrangements for your workers that are applicable to your organization.

Business Benefits

- Workers can request and view their flexible work arrangements in Workday.
- Enables managers and HR partners with tracking and reporting capabilities.
- Enables you to load data for flexible work arrangements in bulk.
- Reduces manual effort when ending jobs and terminating workers.
- Manage various work arrangements tied to workers.

Use Cases

- Workers can request or end their own flexible work arrangements.
- Users can add or end a flexible work arrangement for workers they support.
- Track and report on workers' current, future, and ended flexible work arrangements.
- Rescind upcoming or active flexible work arrangements.
- Users can correct termination dates for workers, which automatically updates their flexible work arrangement end date.

Questions to Consider

Questions	Considerations
What are the types of flexible work arrangements that you want to track for your organization?	Depending on the needs of your organization, you can configure types such as: • Compressed work schedule. • Fully remote. • Office/remote hybrid. • Work hours change.
Do flexible work arrangement types vary by country?	You can configure which countries you want to restrict the arrangement types and subtypes to. Example: Your company has locations in France, Germany, and the United States. When you configure subtype options for the *Fully Remote* flexible work arrangement type, you decide to

Questions	Considerations
	enable workers in the United States to have the option to work from home 100% of the time. However, you don't enable it for workers in France or Germany.
How can I test the condition rules that I've setup? How do condition rules impact future-dated positions and country restrictions?	You can access the Test Flexible Work Arrangement Subtype Eligibility Rule task to test the condition rule you've created. When you test condition rules for a future-dated position, Workday evaluates the rule at the moment the task runs, not as of the effective date of the position. This can result in the condition rule becoming ineligible at the time of testing. When you have both condition rules and country restrictions setup, Workday requires both to be true in order for the subtype to display when requesting or adding a flexible work arrangement.
Do you want managers or HR Partners to add Flexible Work Arrangements for workers directly?	You can set up Add Flexible Work Arrangement for Worker as an action step on the *Request Flexible Work Arrangements* business process. Ensure that you set the step preceding Request Flexible Work Arrangements as the completion step.

Recommendations

Configure a questionnaire on the *Request Flexible Work Arrangement* business process to collect address information and send a notification to Payroll if an employee is requesting to work from a location other than their home.

Configure flexible work arrangement types and subtypes that you can use in condition rules for business process routing.

Create a To Do step on the *Request Flexible Work Arrangement* business process if a worker requests a change in work hours. The To Do step reminds the user receiving the To Do to perform a job change.

When you enable users to add attachments, you can limit access to attachments by assigning them to categories that you secure to segment-based security groups.

Set up Embedded Analytics to enable managers to make business decisions based on insights gathered for their direct reports. You can gain visibility into this data when adding flexible work arrangements for workers.

You can configure this functionality using the Maintain Related Worklets related action on the *Request Flexible Work Arrangement* business process.

Requirements

No impact.

Limitations

- There are currently no connections to or from other Workday Solutions, such as Payroll or Recruiting.
- You can only add flexible work arrangements for a worker's current position, not previous positions.

Tenant Setup

No impact.

Security

Domains	Considerations
Self-Service: Flexible Work Arrangements	Provides a worker with self-service access to their flexible work arrangements.
Set Up: Flexible Work Arrangements	Secures set up tasks for flexible work arrangements.
Worker Data: Flexible Work Arrangements	Provides access to workers' flexible work arrangements.

Business Processes

Business Processes	Considerations
End Flexible Work Arrangement	Enables users to end a flexible work arrangement.
Request Flexible Work Arrangement	Enables users to request a flexible work arrangement. You can also set up the *Request Flexible Work Arrangement* business process as a sub process for these business processes: • Hire • Add Additional Job • Contract Contingent Worker • Start International Assignment

Reporting

Report / Report Data Source	Considerations
View Flexible Work Arrangement Types report	View the configured flexible work arrangement types and subtypes.
Workers with Flexible Work Arrangements report	View workers that have flexible work arrangements within the organizations and date ranges selected. You can also include workers with flexible work arrangements that have ended.
Flexible Work Arrangement for HCM Reporting report data source	Accesses Flexible Work Arrangement as its primary business object and returns 1 row per flexible work arrangement. Includes all flexible work arrangements.

Integrations

Web Services	Considerations
Add Flexible Work Arrangement	Adds a flexible work arrangement for a worker. Uses the Request Flexible Work Arrangement

Web Services	Considerations
	business process. When a worker has multiple jobs, you must specify 1 of the jobs for the worker.
End Flexible Work Arrangement	Ends a flexible work arrangement for a worker. Uses the Request Flexible Work Arrangement business process. When a worker has multiple jobs, you must specify 1 of the jobs for the worker.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

2022R2 What's New Post: Flexible Work Arrangements
2023R1 What's New Post: Flexible Work Arrangements as a Sub-Business Process of Staffing Events

Steps: Set Up Flexible Work Arrangements

Context

Workday enables you to track and report on the types of flexible work arrangements for your workers that are applicable to your organization.

Steps

1. Edit Domain Security Policies.

   Security: These domains in the Staffing functional area:

   - *Self-Service: Flexible Work Arrangements*
   - *Set Up: Flexible Work Arrangements*
   - *Worker Data: Flexible Work Arrangements*
2. Edit Business Process Security Policies.

   Configure these business process security policies in the Staffing functional area:

   - *End Flexible Work Arrangement*
   - *Request Flexible Work Arrangement*
3. Edit Business Processes.

   Configure these business processes in the Staffing functional area:

   - *End Flexible Work Arrangement*
   - *Request Flexible Work Arrangement*

4. Access the Maintain Flexible Work Arrangement Types task.

   Security: *Set Up: Flexible Work Arrangements* domain in the Staffing functional area.

   a. Configure flexible work arrangement types and subtypes offered to workers.
   b. (Optional) Access the Create Flexible Work Arrangement Subtype Rule task in the Condition Rule column to create condition rules for flexible work arrangements.

   To view all existing condition rules, you can use the Flexible Work Arrangement Subtype Rules prompt folder in the Condition Rule column.
5. (Optional) Access the Maintain Event Categories and Reasons task.

   Select these events and configure reason categories and subcategories for both:

   - *End Flexible Work Arrangement*
   - *Request Flexible Work Arrangement*
6. (Optional) Access the Configure Profile Group task.

   Select the *Job for Worker Profile* option in the Profile Group prompt.

   Add the Flexible Work Arrangements report.
7. (Optional) Create Custom Labels.

   Access the Staffing term context to override labels related to flexible work arrangements.
8. (Optional) Hide or Require Optional Fields.

   Hide or require fields for these business processes:

   - *End Flexible Work Arrangement*
   - *Request Flexible Work Arrangement*
9. (Optional) Define Document Categories.

   Add a document category for Flexible Work Arrangement business process attachments.
10. (Optional) Create Segment-Based Security Groups.

    Configure segmented security for access to Flexible Work Arrangement worker documents.

Next Steps

You can access the Workers with Flexible Work Arrangements report to view workers with flexible work arrangements within the organizations and date ranges selected.

You can set up Add Flexible Work Arrangement for Worker as an action step on the *Request Flexible Work Arrangements* business process. You can only add flexible work arrangements for a worker's current position, not previous positions.

Staffing History

Setup Considerations: Worker Start Date Corrections

You can use this topic to help make decisions when planning your configuration and use of the *Correct Worker Start Date* business process. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

You can use the *Correct Worker Start Date* business process to correct a worker's hire date while also addressing any blocking events.

Business Benefits

The *Correct Worker Start Date* business process enables you to reduce manual effort when addressing hire date corrections with blocking events.

Use Cases

Use for employees who need to move their hire date to another date and who have events blocking the new hire date.

Example: An employee has a hire date on August 1, as well as several other events later in August. You find out that they won't be able to start until September 1. You use the *Correct Worker Start Date* business process to correct the hire date and correct, rescind, or cancel the blocking worker events.

Questions to Consider

Questions	Considerations
What do hire date corrections look like for your organization?	Consider what events typically affect hire date corrections, as well as what status they tend to be in. These events can affect how you configure your security and defaulting rules. Example: Your new hires generally have a completed *Move Worker* event that prevents you from correcting their hire date. You set up your defaulting rules so that Workday attempts to automatically rescind this event during a hire date correction.
Who should be able to perform worker start date corrections?	The *Correct Worker Start Date* action step is best suited to administrator-level users who have permission to view all in progress and completed events for a worker.
Who do you want to notify?	When a worker event requires a user to take action, Workday sends a task to My Tasks of the selected Notify groups in the Correct Worker Start Date task grid. Ensure that notified groups know how to address the relevant events.
What kinds of events do you want to address?	Workday requires you to address all blocking events.

Questions	Considerations
	The Correct Worker Start Date task grid displays all actionable events that occur on or after the original hire date, including events that: • Are in progress. • Don't block the hire date.

Recommendations

Workday recommends that you provide thorough training for the groups who will receive tasks in My Tasks for manual action.

Requirements

This business process uses tasks in My Tasks to notify user groups of events that need manual action. Ensure that you set up the *Notify Worker Start Date Correction Event* business process to enable these tasks in My Tasks.

Limitations

You can only use the *Correct Worker Start Date* business process to:

- Address blocking events that support correct, rescind, or cancel.
- Address the worker's latest hire date.

When the current hire date is:

- In the past, you can't move the hire date back further.
- In the future, you can move the hire date to the current date or later. Ensure that the new hire date isn't already in the past for the worker's local time zone.

The *Correct Worker Start Date* business process can correct the start date for employees only.

A worker can have only 1 start date correction in progress at a time.

You can't rescind or send back the *Correct Worker Start Date* business process.

This feature doesn't apply to contingent workers.

Tenant Setup

No impact.

Security

Domains	Considerations
Business Process Administration in the System functional area.	Can create business process definitions.
Set Up: Maintain Defaulting Rules for Worker Start Date Correction in the Staffing functional area.	Can access the Maintain Defaulting Rules for Worker Start Date Correction task.
Staffing Actions: View Worker Start Date Correction in the Staffing functional area.	Can access the View Worker Start Date Correction report.
Staffing Actions: View Worker Start Date Job in the Staffing functional area.	Can access the Correct Worker Start Date job processing.

To access and submit a *Correct Worker Start Date* event, users must:

- Have access to the Correct Worker Start Date action step on the *Correct Worker Start Date* business process.
- Have permission to correct the *Hire* business process.

Business Processes

To use this feature, you must set up these business processes:

- *Correct Worker Start Date*
- *Notify Worker Start Date Correction Event*

The *Notify Worker Start Date Correction Event* business process enables Workday to send tasks in My Tasks to users who must take action on blocking events.

You can correct *Assign Pay Group* events as part of the *Correct Worker Start Date* business process.

Reporting

You can use the View Worker Start Date Correction report to view the business process status.

Integrations

No impact.

Connections and Touchpoints

Because the *Correct Worker Start Date* business process affects worker events, it can interact with multiple areas of Workday, including:

- Absence Management.
- Benefits.
- Compensation.
- Onboarding.
- Payroll.
- Time Tracking.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Tasks

Hire Employees on page 690

Reference

2020R1 What's New Post: Worker Start Date Corrections

Steps: Set Up Worker Start Date Corrections

Prerequisites

Review Setup Considerations: Worker Start Date Corrections on page 933.

Context

The *Correct Worker Start Date* business process enables you to:

- Move a worker's hire date.
- Manage blocking events for the new hire date.

This feature doesn't apply to contingent workers.

Steps

1. Access the Create Business Process Definition (Default Definition) task.

   Create these business process definitions:

   - *Correct Worker Start Date*
   - *Notify Worker Start Date Correction Event*

   Security: *Business Process Administration* domain in the System functional area.
2. Edit Business Process Security Policies.

   Configure the *Correct Worker Start Date* business process security policy in the Staffing functional area.

   Ensure that groups with access to the *Correct Worker Start Date* action step also have permission to correct hire events.

   Configure the *Notify Worker Start Date Correction Event* business process security policy in the Staffing functional area.

   Assign the Worker Start Date Correction Assignee security group to the *Blocking Action for Worker Start Date Correction* action step. Make no other changes to the security policy.
3. Configure a business process definition for these business processes:

   - *Correct Worker Start Date*
   - *Notify Worker Start Date Correction Event*

   See: Steps: Configure Business Process Definitions.

   For the *Correct Worker Start Date* business process, include only:

   a. An *Initiation* step.
   b. The *Correct Worker Start Date* action step.
   c. (Optional) A *Review Documents* type step. Ensure that this step is after the *Correct Worker Start Date* action step.
   d. (Optional) An approval step. Ensure that this step is after the *Correct Worker Start Date* action step and is the completion step.

   For the *Notify Worker Start Date Correction Event* business process, include only:

   a. An *Initiation* step.
   b. The *Worker Start Date Correction Assignee* security group on the *Blocking Action for Worker Start Date Correction* action step.
4. Edit Domain Security Policies.

   Configure the security policies for these domains in the Staffing functional area:

   - *Set Up: Maintain Defaulting Rules for Worker Start Date Correction*
   - *Staffing Actions: View Worker Start Date Correction*
   - *Staffing Actions: View Worker Start Date Job*
5. (Optional) Access the Maintain Defaulting Rules for Worker Start Date Correction task.

   Set up defaulting rules for some events in the *Correct Worker Start Date* business process. During the *Correct Worker Start Date* business process, users can edit these defaults before submitting the event grid. As you complete the task, consider:

Option	Description
Event	Includes all worker events that support cancel, correct, or rescind. When an event isn't

Option	Description
	blocking the hire date and doesn't support those actions, it doesn't display in the grid. You can create only 1 defaulting rule for each event type.
Proposed Action	Workday only enables you to select proposed actions that are possible for each event. When you select these actions, Workday only routes a task to My Tasks of the Notify groups when an error occurs: • *Automatically Correct* • *Automatically Rescind/Cancel* When you select *Manually Correct*, Workday routes a task to My Tasks of the Notify groups.
Proposed Effective Date	When you select the *Same as Proposed Hire Date* option, the proposed effective date for the event will default to the proposed hire date. When you select the *Same Interval Between Dates* option, Workday uses the interval of time between the current hire date and the current event effective date. Example: The current one-time payment date is 1 week after the current hire date. The proposed effective date for the one-time payment will also default to 1 week after the proposed hire date.
Notify	Only displays the groups that have permission on the associated business process security policy, to correct, rescind, or cancel the event. Workday sends a task to My Tasks of these groups when: • You select a manual proposed action. • Workday encounters an error while attempting to automatically correct, rescind, or cancel an event.
Include	Clear this check box to exclude events from the start date correction for the worker. You can only clear events that don't block the new hire date.

Next Steps

Use the Request Worker Start Date Correction task to initiate a start date correction for a worker.

View the status of the start date correction with the View Worker Start Date Correction report.

To edit documents that you attached to the business process for the worker, access the View Worker Start Date Correction report. From the related actions menu of the Business Process, select Business Process > Manage Attachments.

2020R1 What's New Post: Worker Start Date Corrections

Correct Staffing Events

Prerequisites

The original event must have a status of *In Progress* or *Successfully Completed* before you can enter corrections. For academic appointments, the event status must be *Successfully Completed*.

Context

You can correct the details of a staffing event to fix data entry errors or react to changes as many times as needed. In many cases, you can correct a staffing event out of order, without rescinding subsequent events, as long as the sequence of events is in the same order. You must have access on the *Correct* action on the business process security policy in order to correct a staffing event.

Note: Only administrators should have security permission to correct staffing events. Corrections don’t trigger notifications and Workday saves corrections without requiring review or approval of the main process or any subprocess steps.

Correctable staffing events include:

Category	Business Process
Hire	• *Add Additional Job* • *Assign Employee Collective Agreement* • *Contract Contingent Worker* • *Edit Notice Periods* • *Hire* • *Employee Contract* • *Manage Probation Period* • *Start International Assignment*
Job Change	• *Assign Employee Collective Agreement* • *Change Job* • *Edit Notice Periods* • *Employee Contract* • *Manage Probation Period*
Work Space Change	• *Change Work Space*
Organization Assignments	• *Change Organization Assignments for Worker*
Termination	• *End Additional Job* • *End Contingent Worker Contract* • *End International Assignment* • *Termination*
Retirement	• *Add Retiree Status* • *Remove Retiree Status*
Academic Faculty	• *Add Academic Appointment*

Category	Business Process
	• *End Academic Appointment* • *Update Academic Appointment*

Steps

1. Select Worker History > View Worker History from the related actions menu of the employee whose event that you want to correct.

   Find the event that you want to correct.

   a) Select Business Process > View Hire or Contract Start Date Correction Conflicts from the related actions menu of the *Hire* or *Contract* event.
   b) Correct or rescind any business process events that would block the correction of the hire or contract start date.
2. From the related actions menu of the staffing event you want to correct, select Business Process > Correct.
3. If the employee has later events, expand the Subsequent Processes section to view possible impacts of your changes to existing job information.

   The Subsequent Processes section displays all staffing events, worker moves, and reorganizations that occurred later than the effective date of the event you want to correct.

   Note: You might see *Workday System Generated Events* in the process history. These events reflect changes that occurred when Workday converted and automatically populated data during a previous update. You can drill into these events for more information and you can rescind the events if necessary.
4. Correct the event details as needed.

Result

After you complete a correction to a business process that includes the *Change Benefit Elections* step, Workday checks for changes to the employee's benefit eligibility.

Note: Workday doesn't check for eligibility changes if the business process initially skipped the Change Benefits step, based on your business process configuration. You can manually initiate a benefit event with the Change Benefits task.

Correct Hire Date and Reason for Multiple Employees

Prerequisites

- Configure the *Mass Correct of Hire* business process in the Staffing functional area.
- Security: *Staffing Actions: Mass Correct* domain in the Staffing functional area.

Context

You can change the Hire Date and Hire Reason for multiple employees. Example: Your company and another company have merged and you want all employees from the other company to have the same Hire Date and Hire Reason.

Steps

1. Access the Mass Correct of Hire report.
2. Select a Start Date and an End Date for the hire dates or reasons to correct.
3. (Optional) Select faceted search check boxes to restrict the result set of hires that meet your start and end dates.
4. Select 1 or more individual hires or Select All.
5. Select Correct Hire.
6. Select the correct Hire Date or Hire Reason to replace the current values.

Related Information
Tasks

Hire Employees on page 690

Correct Staffing Events on page 939

Concept: Job History

Use the Job History report to see how a job or position has changed over time. This report is available for all staffing models and displays:

- Which staffing events affected a job.
- Who initiated those events.
- When the events occurred.

You can view Job History in several ways:

For a Worker	Select Job History on the worker profile. You can see the worker's entire job history as long as you have access to the worker's current job. If the worker has additional jobs, select Other Jobs in the header to switch from the primary job to another job. Your security access to multiple job workers determines whether you can view history for all jobs or only the jobs you support. Note: To add the Job History report (secured to the *Worker Data: Historical Staffing Information* domain) to worker profiles, use the Configure Profile Group task. To view past, present, and future jobs for a worker, access the View All Jobs report (secured to the *Worker Data: Staffing Information* domain).
For a Specific Job or Position	Select Position > View Job History from the related actions menu. Workday also displays a History section when you view or edit a job or position.
For All Workers That You Have Permission to Access	Access the Job History standard report. You can export the report to Microsoft Excel for further analysis.

You can customize the Job History report to meet your needs with the Copy Standard Report to Custom Report task. Workday also provides several job history report fields.

Related Information
Concepts

Concept: Landing Pages

Tasks

Steps: Set Up Profiles and Profile Groups

Concept: Corrections to Staffing History

You can correct a hire, termination, or job change based on these guidelines and restrictions.

Workday recommends reviewing both the Job History report and the event details you're correcting in the Worker History report. This ensures that you're correcting the latest and most accurate details.

Hire

- You can correct information only in the initial *Hire* step, not other steps, or substeps (such as compensation elements).
- You can correct the pre-hire record, job, or position only by rescinding the original hire action and restarting the process.
- If you configure the Add Probation Period step on the *Hire* business process and you correct the Hire Date of the *Hire* event, Workday:
    - Recalculates the dates of the associated *Manage Probation Period* event.
    - Doesn't recalculate the dates of the associated *Manage Probation Period* event with extended end dates or if recalculating the dates causes overlap with another *Manage Probation Period* event.
- You can correct the Hire Date and Reason for multiple employees using the Mass Correct of Hire task.
- You can correct the supervisory organization on a completed hire, as long as the new supervisory organization uses the same staffing model. Use the Change Organization Assignments task to change organization assignments manually when assignments on the position don't align with the allowed organizations on the new supervisory organization.
- You can't override hiring restrictions established at the position, or organization level, including restrictions on the:
    - Job profile
    - Employee type
    - Time type
    - Location

  Use the Edit Position Restrictions and Edit Hiring Restrictions tasks instead.

Termination

- You can correct an employee's termination details, but to reverse a termination you must rescind the event.
- You can only correct information in the initial *Termination* step, not other steps, or substeps (such as COBRA eligibility).
- You can't correct the Close Position check box, regardless of the termination status.

Change Job

- The *Change Job* business process includes outbound and inbound steps in the same workflow. During correction, you only see the proposed (changed) job information. You don't see a worker's current and proposed values in side-by-side columns as you do in the initial task.

- If you configure the Add Probation Period step on the *Change Job* business process and you correct the Effective Date of the *Change Job* event, Workday:
    - Recalculates the dates of the associated *Manage Probation Period* event.
    - Doesn't recalculate the dates of the associated *Manage Probation Period* event with extended end dates or if recalculating the dates causes overlap with another *Manage Probation Period* event.
- You can correct job-related information but, regardless of the process status, you can't correct the:
    - Supervisory organization.
    - Job or position.
    - Headcount options.
    - Option to create a position.
- You can’t correct organization changes for a staffing event if:
    - It's a duplicate event created to keep position and position restriction in sync.
    - It isn't at the top of the list when there are multiple assign organization events for the same day.
    - It has a compensation review in-progress.

Tasks

Correct Staffing Events on page 939

Correct Hire Date and Reason for Multiple Employees on page 940

Reference

2021R1 What's New Post: Correct Supervisory Organization on Hire

Concept: Worker Start Date Corrections

You can use the *Correct Worker Start Date* business process to correct the hire date for a worker and take action on any associated worker events.

Requesting a Worker Start Date Correction

You can only initiate the *Correct Worker Start Date* business process using the Request Worker Start Date Correction task.

Once submitted, Workday generates a task in My Tasks for the groups specified in the Correct Worker Start Date action step of the *Correct Worker Start Date* business process.

Before you submit the *Correct Worker Start Date* business process task in My Tasks, you can still cancel the business process in these ways:

- The user who submits the Request Worker Start Date Correction task can access the Business Process > Cancel related action from the archived task in My Tasks.
- The user who receives the *Correct Worker Start Date* task in My Tasks can select Task Action > Cancel.

Once you submit the *Correct Worker Start Date* business process, you can't rescind it or send it back.

Processing Events

For every event included in the business process, Workday either:

- Completes the proposed automatic action.
- Sends a task in My Tasks to a user instructing them to take manual action. Workday doesn't send a manual correction if an event is a subprocess of the *Hire* business process.

When moving the hire date to a later date, Workday processes the events in reverse chronological order based on current effective dates, starting with the latest event. When moving the hire date to an earlier date, Workday processes the events in chronological order.

For all manual actions, Workday sends a task in My Tasks to the group proposed in the Notify column of the Correct Worker Start Date grid. Workday also sends tasks in My Tasks to users informing them to take manual action when an error prevents an automatic action.

Once Workday sends a task in My Tasks, a user must take action before the worker start date correction can continue. They don't have to take the action proposed in My Tasks. They can take any appropriate action, including actions on multiple events.

Once someone reviews and takes action on an event, Workday continues the correction process automatically.

View Worker Start Date Correction

Use the View Worker Start Date Correction task to track the worker start date correction process. The task grid displays both the proposed action and the status for each event. When an event is In Review, the process won't continue until the notified user takes action on that event.

When an event automatically corrects, rescinds, or cancels, Workday adds a system-generated comment to the event process history.

Note: You can cancel a worker start date correction process from the View Worker Start Date Correction task. However, when you cancel the process at this point, Workday won't cancel or rescind any events that are already automatically or manually addressed.

Reference
2020R1 What's New Post: Worker Start Date Corrections

Concept: Out of Order Correction

You can correct a staffing event without rescinding later events in a worker's history, as long as the correction doesn't change the worker's position. For academic workers, you can't correct the track type or employment position. Workday enables you to make out of order corrections to most staffing events that are available for correction, including:

Category	Business Process
Hiring	• *Add Additional Job* • *Contract Contingent Worker* • *Hire* • *Start International Assignment*
Job Change	• *Change Job*
Work Space Change	• *Change Work Space*
Termination	• *End Additional Job* • *End Contingent Worker Contract* • *End International Assignment* • *Termination*
Academic Faculty	• *Add Academic Appointment*

Category	Business Process
	• *End Academic Appointment* • *Update Academic Appointment*

To help you determine the impact of a correction, Workday displays any subsequent processes that a change could affect, including staffing events, moves, and reorganizations. Whenever a worker's history has later events than the effective date of the event you're correcting, the Correct Business Process page includes the Subsequent Processes section.

The key things to remember about out of order corrections:

- You can't change the sequence of events in a worker's history. If you correct the date of a staffing event, the new effective date must be:
  - *On or after* the date of the previous event in the staffing history.
  - *On or before* the date of the next event in the staffing history.
- Workday doesn't apply corrections to later events in a worker's history.

  Note: There's an exception for the *Change Organization Assignments for Worker* business process. When you correct an organization assignment event out of order, Workday automatically updates future events. Organization assignment events in the future with the same value will update to the corrected value. Workday updates future events until there's an event with a different value for the organization type.
- If you correct a completed staffing event, Workday doesn't validate the correction against the hiring restrictions that you defined for the worker's job or position.
- Workday doesn't provide additional security for out of order correction. Anyone who has permission to initiate one of these staffing events can correct it out of order. Workday recommends that you restrict the correct action to administrators.

  Note: There's an exception for the *Change Organization Assignments for Worker* business process. Workday provides additional security for correcting organization assignment events out of order through the Maintain Functionality for Staffing Transactions task.

Correct Staffing Events on page 939

Reference

2021R2 What's New Post: Correct and Insert Organization Assignments Out of Order

Concept: Out of Order Insertion

You can insert a staffing event without rescinding later events in a worker's history.

When the new event doesn't change the worker's position, you can insert out of order changes for these business processes:

- *Assign Matrix Organization*
- *Assign Pay Group*
- *Change Job*
- *Change Organization Assignments for Worker*
- *Change Work Space*
- *Edit Position*
- *Edit Position Restrictions*
- *Employee Contract*
- *Freeze Position*

- *Remove from Matrix Organization*
- *Request Compensation Change* (unless there's a pending merit event with a promotion)
- *Service Dates Change*
- *Title Change*
- *Update Academic Appointment*

You can configure the *Change Job* business process so that you can insert position and job change events before other completed staffing and end-employment events and their respective subprocesses. You can insert vacating and non-vacating job, position, and supervisory organization changes. See: Concept: Out of Order Insertions for Job Changes.

If an out of order insertion could affect later staffing events, Workday displays those events in an exception. You're responsible for determining the impact of your change and updating the later events as needed. Optionally, you can add a *Review* step to your business process definitions that identifies an out of order event. The step then routes the change to an HR Administrator for review. Workday provides an *Out of Order Business Process* boolean report field for this purpose.

Note: The default definitions of the *Assign Pay Group*, *Edit Position*, and *Title Change* business processes include this *Review* step for new implementations. Instructions for configuring this step in existing business process definitions are available in the Workday Community.

The key things to remember about out of order insertions:

- When you insert an event out of order, your change is effective only until a later event changes it.
- Workday doesn't apply details from an out of order event to later events in a worker's history.

  Note: There's an exception for the *Change Organization Assignments for Worker* business process. When you insert an organization assignment event out of order, Workday automatically updates future events. Organization assignment events in the future will have the same value until there's an event with a different value for the organization type.
- Workday doesn't provide additional security for out of order insertion. Anyone who has permission to initiate one of these staffing events can insert it out of order.

  Note: There are exceptions for the *Change Organization Assignments for Worker* and*Change Job* business process. Workday provides additional security for inserting events out of order through the Maintain Functionality for Staffing Transactions task.

Related Information
Reference
2021R2 What's New Post: Correct and Insert Organization Assignments Out of Order

Concept: Out of Order Insertions for Job Changes

Note: This topic is relevant to the enhanced change job experience. The new change job experience is available to all customers at this time.

Workday enables you to configure the *Change Job* business process so that you can insert position and job change events before other completed staffing and end-employment events and their respective subprocesses. You can insert these events out of order:

- *Change Job*
- *Change Organization Assignment*
- *End Additional Job*
- *End International Assignment*
- *End Contract for Contingent Workers*
- *Edit Position*
- *Move Worker by Supervisory Organization*
- *Move Worker by Organization*
- *Termination*

You can only insert out of order changes when you are moving a worker into a vacant job or position. To rescind out of order insertions, you must start with the latest effective date and move through backward, rescinding sequentially.

Downstream Impacts

For changes that do not vacate a job, position, or supervisory organization, Workday only applies the data from the inserted event until the subsequent event in the worker's history. Workday doesn’t automatically roll out of order event data forward to all subsequent events.

When you insert a change that vacates a job, position, or supervisory organization, Workday updates subsequent events with the new position, job, or supervisory organization data.

Workday recommends accessing the Out of Order Job Changes report (secured to the *Worker Data: Historical Staffing Information* domain) to audit any out of order changes and their downstream impacts. You may need to manually correct job-related fields on events that come after an out of order insertion.

Absence and Time Tracking Impacts

Workday doesn't automatically:

- Correct or reprocess events, jobs, steps, and services.
- Perform or re-evaluate calculations.
- Update or remove an absence, time off record, time record, or event that was rendered invalid or ineligible for a worker.

Out of order insertions can impact these functions:

- Worker absence and time off events, time events, historical absence balances, eligibility rules, accrual calculations, and time calculations.
- Historically run service steps that perform worker data changes.
- In-progress processes.

We recommend that you review existing absence and time tracking events to ensure there are no detrimental downstream impacts.

Reference

2025R1 Feature Release Note: Out of Order Change Job

Example: Update Worker History for Terminated Employee

This example illustrates how to add staffing events in a terminated worker's history.

Context

Over the period of a year, you hire, promote, and terminate Mariana. After they leave the company, you need to add additional staffing events in the worker history to reflect changes that occurred before their termination. The changes affected their business title.

You can add these events, without rescinding the promotion or termination, as long as they don't affect the supervisory organization or position of the worker.

Prerequisites

Create these events in the worker history for Mariana:

1. Hire on January 15.
2. Promotion, with a position and business title change, on April 15.
3. Future-dated termination on December 1.

Steps

1. Access the Change Business Title task.
2. Select Mariana as the Worker.
3. Click OK.
4. Set the Effective Date to January 20.
5. In the Business Title field, enter *Sales Manager*.

   Now the title is accurate for their initial months on the job. The title change is only effective until the promotion of the worker on April 15, when their position and business title change to *Regional Sales Manager*.

Result

You can see the new event by selecting Worker History > View Worker History from the related actions menu for the worker.

Headcount Plans

Steps: Set Up Security for HCM Headcount Plans

Prerequisites

Note: This headcount plan functionality is for HCM customers without a subscription to Planning. See Workday Community: Adaptive Planning Hub.

Context

Set up security to determine who can create and edit basic headcount plans and who can view and analyze plan data.

Steps

1. Access the Maintain Functional Areas task.

   Select the Enabled check box for the Headcount Plans (HCM) functional area. You can only enable 1 headcount plan functional area at a time. If you enabled the Headcount Plans functional area, clear the Enabled check box for that functional area.

   Security: *Security Configuration* domain in the System functional area.
2. Create Segment-Based Security Groups.

   Create a segment-based security group for users who need access to HCM headcount plans using these values:

Option	Description
Security Groups	Add the security groups who need access to HCM headcount plans.
Access to Segments	Select *Headcount Plan Type Segment*.

3. Edit Domain Security Policies

   Configure the domain security policies for these domains in the Headcount Plans (HCM) functional area:

   - *Access Plan Type (Segmented)*
   - *Process: Headcount Plan (HCM)*
   - *Reports: Headcount Plan (HCM)*
   - *Set Up: Headcount Plan (HCM)*

   For the *Access Plan Type (Segmented)* domain, add a new row on the Report/Task Permissions grid for the segment-based security group you just created. Give this security group View and Modify access.
4. Edit Business Process Security Policies.

   Set up the *Headcount Plan Event* business process and security policy based on your organization needs, such as to add approvers for your HCM headcount plans.
5. Activate Pending Security Policy Changes.
6. To use HCM headcount plan reports, access the Map Standard Aliases task.

   Map the standard alias for the Supervisory Organization business object. We recommend that you map the top level of your supervisory organization hierarchy.

   Security: *Aliases* domain in the System functional area.

Steps: Create Headcount Plans for HCM

Prerequisites

Note: This headcount plan functionality is for HCM customers without a subscription to Planning. See Workday Community: Adaptive Planning Hub.

Enable the Headcount Plans (HCM) functional area and set up security.

Context

You can create, maintain, and report on basic headcount plans in Workday as part of your HCM subscription. You can create headcount plans for any staffing model, and select different statistic types, such as cost of workforce. You can also establish the driving organization for your plan, such as cost center or supervisory organization, and set various dimensions and time frames. You can also import existing plan data from an external source using web services or use existing Workday reports to populate your plan.

Steps

1. Create Headcount Plan Structures for HCM on page 950.
2. Create Templates for HCM Headcount Plans on page 953.
3. Add your plan data.

   You can import external data into your plan using the *Import Headcount Plans* web service. You can also export Workday report data, and then import the data back into your plan with this web service.

   If you use the web service, don't select the Generate Spreadsheet with Data check box when you generate your spreadsheet template.
4. (Optional) Maintain Headcount Plans for HCM on page 954.

   Update or change the imported plan data.

5. Submit headcount plans for approval.

   Once the planners review the plan, the plan follows the business process you set up for your plan. Any planner or plan administrator that has access to the top plan hierarchy can submit a plan using the Submit Headcount Plans business process.

   When the approver:

   - Approves the plan: Plan changes to Available status. It's no longer available for edits in the Maintain Headcount Plans (HCM) task.
   - Denies the plan: Planners and plan administrators can make changes to the plan. Planners with submit privileges, can resubmit the plan for approval.

   Security: *Headcount Plans (HCM)* domain in the Headcount Plans (HCM) functional area.
6. (Optional) Copy an existing plan.

   You can copy an existing plan to create a new plan that includes all plan lines from the original plan. The plan status for the new plan is in Draft.

   Security: *Set Up: Headcount Plan (HCM)* domain in the Headcount Plans (HCM) functional area.
7. Report on your headcount plans.

   See: Concept: Headcount Plan Reports for HCM on page 956

Create Headcount Plan Structures for HCM

Prerequisites

- Set up headcount plan type on the Maintain Entry Types task.
- Security: *Setup: Headcount Plan (HCM)* domain in the Headcount Plans (HCM) functional area.

Context

For HCM headcount plans, the plan structure is the foundation upon which you build your headcount plan. On the plan structure, you can define the rules of applicable and relevant headcount dimensions and the timeframe you want to plan by.

Steps

1. Access the Create Plan Structure task.
2. Enter plan structure details.

Option	Description
Name	If you use various organizing dimensions for planning, consider naming your structure using the organizing dimension type so that it's easily identifiable for reuse.
Plan Type	Select *Headcount* as your Plan Type. Workday automatically selects Use Amendments/ Approval for all headcount plans.

3. Enter Schedule details.

   The schedule options available match the options of a financial plan type structure so that you can align your financial and headcount plans.

Option	Description
Schedule	Select the time frame for the headcount plan that you're going to create from this structure.

Option	Description
	Workday uses the fiscal schedule together with the plan entry selection and plan time frame to create plan periods and duration. Your selection for the headcount plan matches the fiscal schedule for the company, as set using the Edit Company Accounting Details task. Using fiscal year is useful when aligning your financial and headcount plans.
Plan Entry By	Select how you want to define your plan periods. These periods serve as your milestones for how frequently you want to track your headcount plan data. Workday uses your selection to create each entry period that you define a headcount plan for. Workday bases the headcount plan periods on: • *Period*: The periods of the fiscal schedule. • *Summary Schedule*: A summarized group of fiscal periods, such as quarterly or half yearly.

4. Select an Organizing Dimension Type.

   The driving dimension for your plan that you want to measure your headcount by. Workday automatically adds the dimension you select here as another dimension on the Structured Dimensions grid. In the grid, the organizing dimension is read only. You can further refine organizing dimension criteria when you create the template for your plan.
5. Enter dimension details on the Structured Dimension grid.

Option	Description
Order	Move dimensions up or down in the structured grid based on the column order that you want for the plan.
Dimension	Workday supports numerous dimensions for headcount planning. Select those dimensions most critical to your business. Example: If you want to align your headcount plan with your financial plan, add *Cost Center* as a dimension. Or, if you're most concerned about the distribution of your workers around the world, you might select *Location* as another dimension. You can only add *Employee* as a dimension if you also add *Position* as a dimension. You can't add *Employee* as a required dimension. Note: The more dimensions you use and the more values that exist for each selected dimension, the more complex your plan becomes.
Required	You can make a dimension required or optional. Workday automatically selects

Option	Description
	required for the Organizing Dimension Type and changes the required option to read only. For any required dimensions, planners must include a value for that dimension in all rows as they work in the plan. When maintaining your plan, Workday treats dimensions without data differently for this setting: • For optional dimensions without data, Workday displays all plan lines, including plan lines for dimensions that don't contain data. • For required dimensions without data, Workday doesn't display any plan lines, even if other dimensions contain data.
Primary Worktag	Select this option for the dimensions that you want to display as standalone columns in the maintain plan task. You can select up to 10 primary dimensions. Dimensions that you don't identify as primary display together in the Worktags column in the maintain plan task. You can set primary worktags in this task only. The primary worktag option isn't available when loading data using the *Import Headcount Plan* web service.
Hierarchy	Select the specific hierarchy within the selected dimension that you want to target for your plan. Some dimensions might not include hierarchies, in which case Workday disables the hierarchy fields, such as for *Worker Type*. Top Level Hierarchy: Select the uppermost hierarchy level at which to plan. If the dimension doesn't allow hierarchies, you can't select a top-level hierarchy. Hierarchy Level: For some dimensions that are organizations, within the top-level hierarchy you select, you can plan at the hierarchy level or at a node level.
Members to Include/Exclude	Select the specific values that you want to include for each dimension. You can include all members for each dimension or just a few so that planners can only enter the dimension values that you select.

Result

You can use this structure repeatedly to generate multiple headcount plans.

Next Steps

Create a plan template, which builds the shell in which you'll enter or import your headcount plan data.

Create Templates for HCM Headcount Plans

Prerequisites

- Create a plan structure for your plan.
- Security: *Set Up: Headcount Planning* domain in the Headcount Plans (HCM) functional area.

Context

Once you outline the parameters of your plan on the plan structure, you can further specify organizational, timeframe, and other headcount details for your plan. In Workday, the plan template creates an empty plan into which you can import your plan data.

Steps

1. Access the Create Plan Template task.
2. Select the headcount plan structure to use for your template.

   Workday populates the Organizing Dimension Type for you from the plan structure that you selected.
3. As you complete the task, consider:

Option	Description
Organizations As Of	For your plan, this date drives what you can pick in your top plan hierarchy for the selected organizations. You can select a moment in time where organizations might be different based on future organizations that you added or removed from a plan structure. Controls the organizations that are effective as of the date you enter here. You can change the prepopulated current date to any date.
Top Plan Hierarchy	Select the highest level organization that you want for your plan based on the organizing dimension you selected in the plan structure. Doing so enables you to limit your plan to a lower-level hierarchy than the highest level organization available to you. The prompt displays only the allowed hierarchies for the organizing dimension and the date you selected in the Organizations As Of field.
Organizations	You can limit your plan to specific organizations within the top plan hierarchy that you selected. Or, you can select Include All Organizations so that you can plan by all organizations within that hierarchy. Options include: • Any and all levels for supervisory organizations since it's a true hierarchy. • All nodes on cost center hierarchies and custom organization hierarchies.

Option	Description
Statistic Type	You can select 1 or more statistic types for your plan: • FTE: Can be a partial person, such as 50% time. Workday displays results up to 4 decimal places. If you plan to create a position-based plan, select FTE. FTE workers can split time between organizations. • Headcount: To count workers that work for only a single organization, select headcount. Always a whole number. • Cost of Workforce: Select if you want to add workforce costs to your plan. Prepopulates your plan with the current annual compensation amounts of individual workers. In the final plan workbook, you can manually replace the amounts Workday populates with additional workforce costs to include total compensation amounts that you want on the plan. Doing so gives you a more comprehensive assessment of the total cost of your workforce.
From To	Select the year and the summary periods. The available options are based on the configuration in the plan structure.

Result

Workday creates an empty plan into which you can now enter headcount plan data.

Next Steps

Import existing headcount data into Workday using the *Import Headcount Plan* web service or use the Maintain Headcount Plan (HCM) task.

Related Information

Tasks

Create Headcount Plan Structures for HCM on page 950

Maintain Headcount Plans for HCM

Prerequisites

- Create a plan template.
- Security: *Process: Headcount Plan (HCM)* domain in the Headcount Plans (HCM) functional area.

Context

As a plan administrator or planner, you can view and change headcount plans. Workday enables you to select your plan structure and plan. You can first filter the plan to control the columns that display in the grid. Additional filters enable you to control the plan lines that display in the grid.

Filtering the information lets you specify the data that you want to view or change. Your filter criteria determines the plan details that are displayed in a grid.

Steps

1. Access the Maintain Headcount Plan (HCM) task.
2. Select a Plan Structure from the *Headcount Plan Structures* available.
3. Select a Plan.

   Workday populates data based on your plan structure and plan template.

   If it's a multi-year plan, the Year prompt displays the earliest year in the plan by default. Available periods are based on the year you select.
4. Select the filters to create the structure of the grid.

   You must have at least 1 value in each field.

Option	Description
Year	Year of the plan. You can select a different year in the plan, if available. If it's a multi-year plan, you can only select a single year.
Period	Plan periods in the selected year. Remove periods if you don't want to view or change the information in your plan. If you delete 1 or more lines from the plan grid that displays, Workday deletes the plan line for all associated periods and not just the periods on the plan grid. To undo this change, select Search.
Statistic Type	Plan by number of FTE, headcount, or cost of workforce. Available options depend on what's in your plan structure. Remove an option if you don't want to view or change the information in your plan.
5. Select the filters you want to display in your headcount plan grid:

Option	Description
Organization	Select 1 or more available organizations to view or change in your plan. Workday displays only those organizations that are available to you. Organizations control the rows that display in the grid. Select at least 1 organization for the grid to display plan lines.
Company	This filter only displays if your plan structure has *Company* as a dimension.
Worktags	(Optional) Select 1 or more dimensions. You can only select dimensions that are in the plan structure. In the plan structure, you can set a dimension as a primary worktag. Workday displays dimensions identified as primary worktags as separate columns on the grid. Non-primary worktags are displayed under 1 column called Worktags.

6. Select Search.

   A grid displays your headcount plan based on your filters.
7. View or change the plan data in the grid:

   - Organization: Select a different organization. You can only have 1 organization in each row. Organizations you selected in the Organization filter are the options you can select in the grid.
   - Worktag: Remove or add dimensions. You can only select dimensions that are in the plan structure. All required dimensions must have values.

   Note: If you change any values in the grid and then select different filters, all updates you made in the grid are lost if you select Search again. You must select OK to save your changes. Workday recommends that you complete the task and update the plan again, if needed.
8. Change the statistic value for each period as needed.

   As you make changes to your plan, consider:

   - For headcount: You plan at the position level, and you plan to fill a position for a period. Enter 1 in the cell for the period. Otherwise, enter a zero if the position is unfilled.
   - For FTE: You plan at the position level, and you plan to fill a position in a corresponding period. Enter the value you expect the position to be filled at for that period. Example: Enter 0.5 for a part-time worker. If the position is unfilled, enter a zero.
   - For cost of workforce: You plan at the position level, and you plan to fill a position in a corresponding period. Enter the cost for that period; otherwise enter zero. Workday automatically uses your tenant's default currency and supports only that currency.

   Workday automatically populates a statistic cell with a zero if the cell is empty.

Result

Workday saves the headcount plan. You can continue to change your plan using this task if the plan is in draft or denied status.

Next Steps

- View the View Headcount Plan report to verify your plan details.
- Submit your plan for approval using the Submit Headcount Plan task.

Tasks
Create Templates for HCM Headcount Plans on page 953

Concept: Headcount Plan Reports for HCM

Workday delivers 3 headcount plan reports (secured to the *Reports: HCM Headcount Plans* domain) to provide insight into your current and future headcount.

Report	Description
Headcount Activity for Plan	Provides a view of headcount and FTE movement by supervisory organization between periods. The plan structure for the plan you're reporting on must include *Supervisory Organization* as a required dimension. This report enables you to assess risks and challenges by giving you insight into these changes: • Actual and planned headcount. • Gains and losses.

Report	Description
	• Variances. You can configure supervisory organizations as top-level nodes to support outlining. The report includes the Plan Lines for Financial Reporting and Trended Worker report data sources. You can copy these subreports to create additional custom, matrix, and composite reports: • Headcount Activity Actuals - Sub Report • Headcount Activity Actuals Snapshot - Sub Report • Headcount Activity Planned - Sub Report You can also copy the entire composite report to create a custom report. For these custom reports, you must configure your Trended Workers organization report fields on the Organizations tab of the Maintain Trended Workers task.
Headcount Plan to Actuals	Compares actual and planned headcounts and variances by supervisory organization between quarters for both headcount and FTE. The plan structure for the plan you're reporting on must include *Supervisory Organization* as a required dimension. With this report you can: • Drill down on values and metrics. • Configure supervisory organizations as top-level nodes to support outlining. The report includes the Plan Lines for Financial Reporting and Trended Worker report data sources. You can copy this composite report to create a custom report. When you do so, Workday automatically includes these subreports: • Plan Report - Sub Report • Trended Headcount Snapshot for Plan - Sub Report For these custom reports, you must configure your Trended Workers organization report fields on the Organizations tab of the Maintain Trended Workers task.
View Headcount Plan	Displays headcount plan details by organizing dimension and the plan periods that you select in the plan structure.

HR Partner Hub

Steps: Set Up HR Partner Hub

Prerequisites

Security: *Worker Data: HR Partner Hub* domain in the Staffing functional area.

Context

You can configure the HR Partner Hub as a single point of access to workforce movement data and reports.

Steps

1. Edit Domain Security Policies.

   Configure the *Worker Data: HR Partner Hub* domain in the Staffing functional area.

   Note: If you can't access a security policy for the domain, you'll need to create it using the Create Security Policy for Domain task.
2. Set Up Hubs.

   You can:

   - Add an announcement.
   - Hide navigation items.
   - Hide or replace dashboards, reports, or suggested links.
   - Configure the overflow menus of the cards and remove cards you don't want to use on the Content tab.

3. (Optional) Configure dashboards to access from the hub.

   See ../../../manage-workday/tenant-configuration/navigation/tar1423086679639.dita.

Result

You can access the:

- Default or configured dashboards and suggested links.
- Reports to view and manage business process events.

2023R2 What's New Post: HR Partner Hub

Concept: HR Partner Hub

The HR Partner Hub is a workspace for HR partners to access information on workforce movement and composition. You can use the hub to:

- View these past-dated, in-progress, and upcoming workforce movement events:
  - Change job.
  - Move workers.
  - Workers joining.
  - Workers leaving.
- Access detailed reports on these events, including information on the worker and business process.
- Gain insight into key workforce metrics for the next 3 months, such as open job requisitions and workers joining and leaving.
- Navigate to dashboards and suggested links.

Note: The filter on the overview page filters results in the list cards and in the corresponding reports, but not the metrics. Select your filtering options each time you access the hub, as the filter resets after every session. For best performance results, we recommend entering a short time range.

Employee Movement Cards and Reports

The delivered cards and reports provide information on upcoming workforce changes. By default, the cards display a maximum 50 events for the next 30 days. You can adjust the timeframe using the filter on the overview page of the hub.

You can configure an overflow menu of a card to link to relevant tasks, reports, dashboards, and external links. Workday links each card to its corresponding report, where you can access all upcoming events. The reports provide information on:

- The worker.
- The business process and its status.
- The current step, pending steps, and awaiting persons for in-progress transactions.
- Your action items, which you can manage without leaving the hub.

The reports and cards display relevant events for these business processes:

View Workers Joining Events	View Workers Leaving Events	View Change Job and Move Workers Events
• *Hire* • *Contract Contingent Worker* • Add Additional Job	• *Termination* • *End Contingent Worker Contract* • End Additional Job	• *Change Job* • *Move Workers (Supervisory)*

You can also replace the delivered reports in the hub with your custom reports using the Maintain Hubs report.

Workforce Metrics

The HR Partner Hub delivers data visualizations of completed events in the next 3 months for:

- Workers joining, including employees and contingent workers.
- Workers leaving, including voluntary and involuntary terminations.
- Open job requisitions, categorized by 4 sub-periods.

Note: The Open Job Requisitions metric doesn't display confidential, evergreen, or rescinded job requisitions, or requisitions with more than 1 opening. This metric is a copy of the existing Job Requisition Aging - Indexed report. It displays only the job requisitions that you can access through the supervisory organizations that are secured to the *Worker Data: HR Partner Hub* domain.

HR Partner Hub Dashboard and Suggested Links

The HR Partner Hub provides access to these workforce composition dashboards:

- Headcount Movement
- Distribution Trends and Analysis
- Performance and Potential
- Structure Dynamics

If you already have the dashboards configured, you'll have immediate access to them in the hub. Otherwise, you'll need to configure them to display when you're setting up the hub.

For users secured to the *Manage: People Analytics* or *View: People Analytics* domain, the HR Partner Hub delivers a default suggested link to People Analytics. You can hide this link or configure your preferred links.

2023R2 What's New Post: HR Partner Hub

Reference: HR Partner Hub Security and Data Sources

Security Domains

Report Data Sources

Metrics Data Sources

Domains	Considerations
Worker Data: HR Partner Hub in the Staffing functional area.	Grants access to the HR Partner Hub. Restricted to these security group types: • Roles - Company Hierarchy • Roles - Cost Center • Roles - Cost Center Hierarchy • Roles - Custom • Roles - Custom/Financial • Roles - Custom/Staffing • Roles - Location Hierarchy • Roles - Region • Roles - Region Hierarchy • Roles - Supervisory • Unconstrained Groups Note: You can secure unconstrained security groups to the *Worker Data: HR Partner Hub* domain for configuration purposes. However, data display for these users only if they're also a member of a constrained role-based security group.
Security: *Set Up: Tenant Setup - Hub* domain in the System functional area.	Grants access within the Tenant Setup tasks to a Hub. Lets you configure the HR Partner Hub.
Indexed Data Source: Job Requisitions in the Staffing functional area. *Job Requisition Data* in the Pre-Hire Process functional area.	Grants access to the Job Requisition Aging report indexed for the Open Job Requisitions data visualization.
Manage: People Analytics in the People Analytics functional area. *View: People Analytics* in the People Analytics functional area.	Grants access to the default Suggested Link to People Analytics.

The HR Partner Hub includes this indexed report data source (RDS):

RDS	RDS Description	Primary Business Object	Security Domain	Workday Standard Reports Based on RDS
Completed Staffing Events for HCM Reporting	Returns 1 row for each staffing event. Includes all relevant staffing events for organizations that the user manages or support.	Staffing Event	*Worker Data: HR Partner Hub*	• Workers Joining in the Next 3 Months • Workers Leaving in the Next 3 Months

RDS	RDS Description	Primary Business Object	Security Domain	Workday Standard Reports Based on RDS
				You can access these reports only in the HR Partner Hub.

The Workforce Metrics data visualizations in the HR Partner Hub use these data sources:

Visualization	Data Source	Description	Primary Business Object
Workers Joining in the Next 3 Months	Completed Staffing Events for HCM Reporting (secured to the *Worker Data: HR Partner Hub* domain).	An indexed data source providing information on completed joining events for: • Employees. • Contingent workers.	Staffing Event
Workers Leaving in the Next 3 Months	Completed Staffing Events for HCM Reporting (secured to the *Worker Data: HR Partner Hub* domain).	An indexed data source providing information on these completed termination events: • Voluntary termination. • Involuntary termination.	Staffing Event
Open Job Requisitions	Job Requisitions - Indexed (secured to the *Job Requisition Data* and *Indexed Data Source: Job Requisitions* domains).	An indexed data source that returns completed job requisition events. This data source excludes these kinds of requisitions: • Rescinded. • Evergreen. • Confidential. • With more than 1 opening.	Job Requisition

Note: Workday might take several hours to update an indexed data source with the most recent data in your tenant.

The Next Level: Workforce Composition Dashboards

Ad Hoc Worker Communications

Setup Considerations: Ad Hoc Worker Communications

You can use this topic to help make decisions when planning your configuration and use of Ad Hoc Worker Communications. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Ad Hoc Worker Communications enables you to communicate time-sensitive messages to workers using email, mobile push notifications, and SMS.

Business Benefits

- Provides access to worker populations not easily reached through email alone, improving responsiveness.
- Enables you to communicate with workers using multiple channels simultaneously, driving efficiency in your communications.
- Reduces the need to use third-party vendors for messaging, enhancing convenience.
- Empowers you to apply email branding from notification and email templates, connecting your messages with the custom colors, graphics, and links that convey your company culture.
- Enables you to use message templates containing precomposed text, saving you time and helping you maintain consistency in your written communications.

Use Cases

- Create and send messages to workers by email, mobile push notifications, or SMS, or a combination of these channels.
- Issue time-sensitive communications to workers who may not have frequent access to email.
- Communicate company-wide announcements and critical reminders to up to 20,000 workers.
- Select an audience based on worker data. Examples: Job profile, location, supervisory organization.
- Select specific groups of workers for targeted messages from HR administrators.

Questions to Consider

Question	Consideration
Which channels do you want to use to communicate with workers?	All Workday HCM customers can send worker communications using email and mobile push notifications. To send messages by SMS, you must also be a customer of the Workday Messaging SKU. See: Steps: Set Up Ad Hoc Worker Communications on page 967.

Question	Consideration
How can you incorporate the branding for your organization onto the Send Worker Communications task?	You can apply your existing tenant branding by: • Configuring a branding rule. • Using the Configure Tenant Branding task to associate a banner with the rule.
What templates do you want to use to add email branding to worker messages?	When you access the Email Branding prompt on the Send Worker Communications task, you can select templates to add existing visual branding to your message. You can select: • Email templates. • Notification templates. To create and use notification templates, you must configure Notification Designer. See Concept: Email and Notification Templates in Worker Messaging.
How do you want to add text to your worker messages?	You can: • Write an ad hoc message, adding text directly into the fields for your selected contact methods on the Send Worker Communications task. • Select a message template, which will load precomposed text from the template into the draft message for each contact method. See Steps: Set Up Ad Hoc Worker Communications on page 967.
How can I send SMS messages to a worker's personal mobile phone?	By default, Workday delivers worker messages to work mobile phone numbers, but you can send messages to a worker's personal mobile phone if the worker: • Sets either their home or work phone as a Mobile device type and adds their personal mobile phone number. • Opts in to receive SMS notifications for this number. If a worker lists both a home and work mobile phone number, they can only select 1 for SMS notifications.
How can I use AI to help craft my Ad Hoc Worker Communications?	The Ad Hoc Worker Communications AI Text Editor provides two AI capability options: 1. Make Shorter - this can be applied to Push Notifications and SMS. 2. 2. Make Longer - this can be applied to expand email content. Both options are marked with a purple sparkle icon to indicate they use AI. Ensure best practices of reviewing, editing, and approving message content are established

Question	Consideration
	before communications are sent to worker populations. This approach aligns with keeping a “human in the loop” of any AI generated content, while simultaneously empowering communications creators to refine messages for various scenarios. See Concept: Ad Hoc Worker Communications with AI Text Editor on page 969

Recommendations

- Configure and test Ad Hoc Worker Communications in a non-production tenant before using the feature in your production tenant.
- The Send Worker Communications task enables you to send messages to up to 5,000 workers. To reach a maximum 20,000 recipients, select an existing saved search created on the Find Workers report.

  Ensure you're using the Workday-delivered Find Workers standard report; otherwise, the Send Message option won't be available.
- When creating the notification routing rule for your selected channels, select a default frequency of *Immediately*. Not doing so could affect the frequency of notifications for this channel across all your custom business processes.
- Assign role-based security groups to security policies to give the ability for users like managers or HR Partners to send communications.

Requirements

- You must configure Notification Designer to create and use notification templates.

  See Steps: Set Up Security for Notification Designer.
- Workers must opt in to receive SMS.

Limitations

- The SMS functionality in Ad Hoc Worker Communications is only available for U.S., UK, and Canadian mobile phone numbers.
- You can only use the Send Worker Communications task to send messages to work email addresses.

Tenant Setup

Access the Edit Tenant Setup - Notifications task to:

- Create a routing rule for *Ad Hoc Worker Messaging* by overriding the HCM parent notification type settings.
- Select 1 or more of these notification channels:
  - Email.
  - Mobile push notification.
  - SMS.

Security

Domains	Considerations
Ad Hoc Worker Messages in the Staffing functional area	Enables users in unconstrained security groups to access the Send Worker Communications task. You must secure access to this domain to access the Send Worker Communications task from the Find Workers report.
In the System functional area: • *Drive* • *Notification Designer*	Enable you to use Workday Drive and Notification Designer to create and select notification templates in Ad Hoc Worker Communications.
Manage SMS in the System functional area	Enables users in unconstrained security groups to access these reports: • All Outbound SMS Notifications • SMS Notification Event Rows Detail
Set Up: Message Templates in the System functional area	Enables you to use message templates in the Send Worker Communications task.

Business Processes

No impact.

Reporting

Report	Consideration
All Outbound SMS Notifications	View all outbound SMS notifications within a specified date range. Details include the: • Sender. • Recipient. • Phone number. • Message text. • Business process type.
Business Process and Integration Notifications Indexed	View details for all completed notifications for the specified date range, including: • Recipient Email. • Notification Template. • Message Template. • Email, Push Notification, and SMS Messages. • Channels. • Notification Subject.
SMS Notification Event Rows Detail	View all SMS notifications for the specified period. Details for each notification include the: • Time • Subject • Message • Recipient

Integrations

No impact.

Connections and Touchpoints

Features	Considerations
Drive	Drive enables you to create, share, and manage notification templates, which you can select when messaging workers.
Notification Designer	You can use Notification Designer to manage the layout, design, and content of notification templates.
Workday Messaging	Enables you to message workers by SMS.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Examples
24R1 What's New Post: Worker Messaging

Steps: Set Up Ad Hoc Worker Communications

Prerequisites

- Review setup considerations for Ad Hoc Worker Communications.
- Security: *Ad Hoc Worker Communications* domain in the Staffing functional area.

Context

When you set up Ad Hoc Worker Communications in Workday, you can communicate with workers through email, mobile push notifications, and SMS. To use the SMS communication channel, you must have access to the Workday Messaging SKU.

Steps

1. Edit Domain Security Policies.

   Configure a security policy for the *Ad Hoc Worker Communications* domain.

2. Access the Edit Tenant Setup - Notifications task.

   In Notification Delivery settings, select *HCM* and *Ad Hoc Worker Communications*. Select the check box to override parent notification type settings and clear the default rule. Create a notification routing rule and add your preferred communication channels with a default frequency of *Immediately*.

   Note: You must configure SMS notification settings before creating a notification routing rule if you want to send worker communications by SMS.

   See Reference: Edit Tenant Setup - Notifications and Steps: Set Up Workday Messaging.
3. (Optional) Set up Notification Designer.
   a) You must configure Notification Designer if you want to use notification templates to add email branding to worker messages.

      See Steps: Set Up Security for Notification Designer.
   b) Create and Activate Notification Templates.

      You can manage your notification templates using the Maintain Notification Templates task. In the *HCM* tab, select *Ad Hoc Worker Communications* in *Active for Notification Types* for your chosen templates.
4. (Optional) Set up message templates to enable you to use precomposed text in worker messages.
   a) Modify the security policy for the *Set Up: Message Templates* domain and create a segment-based security group. Grant the group access rights to the *Ad Hoc Worker Communications* segment.
   b) Access the Create Message Template task, name your template, and select *Ad Hoc Worker Communications* as the notification category.

   See Steps: Set Up Message Templates.
5. (Optional) To configure AI capabilities, see Set Up AI Text Editor on page 970

Result

Access the Send Worker Communications task, or select a saved search and use the Send Worker Communications button on the Find Workers standard report.

Tasks
Steps: Set Up Drive

Concept: Email and Notification Templates in Ad Hoc Worker Communications

Workday enables you to use email and notification templates to add email branding when you send emails using the Send Worker Communications task. When you select a template, your worker message populates with visual elements from the template. Examples:

- Color
- Images
- Links

You can select both email and notification templates in Ad Hoc Worker Communications, but there are differences in the ways you create these templates.

Ad Hoc Worker Communications doesn't retrieve text from email or notification templates. To add precomposed text to a worker message, you can select a message template in the Send Worker Communications task.

To use AI to assist with drafting messages, see Concept: Ad Hoc Worker Communications with AI Text Editor on page 969.

You have the ability to assign role-based security groups to security policies giving the ability for users such as managers or HR Partners to send communications.

Email Templates

Email templates are a legacy functionality that you can use to define the branding elements, content, and layout you want to include in email notifications generated by Workday. Email templates use a row-based HTML process to create design elements that form a wrapper around the main body content of the template.

When you create an email template, you need to assign it an email template behavior, which specifies the purpose of the template. Examples: Default, job alerts, student engagement. The selected behavior determines the Workday-delivered dynamic content variables that you can use in the template. You can also define static content for each template, such as images and URLs, but you need to create the content in HTML outside of Workday and add it into the template.

Notification Templates

Notification Designer enables you to create, share, and collaboratively edit templates using:

- Prebuilt notification layouts.
- Custom layouts.

Notification Designer simplifies how you create templates using an intuitive graphical interface. You can create multiple templates for each notification type, and you can add and format content within the UI. Examples: Buttons, dynamic data content, images.

You can publish the notification and set the notification categories it's available for, so you don't need to create any content outside of Workday.

Related Information

Tasks

Create Email Templates

Steps: Set Up Security for Notification Designer

Examples

Workday Community: Get to Know Workday Notification Designer

Concept: Ad Hoc Worker Communications with AI Text Editor

Workday’s Send Worker Communications task enables organizations to communicate time sensitive messages to their workers using SMS, email, and push notifications. Within the task, various templates are enabled to help with precomposed content and templates that provide consistent visual branding for organizations.

Workday provides an AI enhancement to the Ad Hoc Worker Communications Text Editor if you want to use AI to assist in crafting your messages.

Workday uses Vertex AI models for this feature. These models are an approved subprocessor and Workday partner. More details are available on the Community Subprocessors page.

Note: This solution will not use any of your company data for training AI models.

AI Text Editor

The Ad Hoc Worker Communications AI Text Editor provides two options:

1. The option to expand on email messages using the assistive capabilities to help formulate additional content for messages when emailing.
2. The option to summarize and refine Push Notifications and SMS content for more concise messaging when sending shortened messages.

Note: SMS messaging capabilities are only available to customers of Workday’s Messaging.

Note: AI is experimental. Ensure best practices of reviewing, editing, and approving message content are established before communications are sent to worker populations. This approach aligns with keeping a 'human in the loop' of any AI generated content, while simultaneously empowering communications creators to refine messages for various scenarios.

When using Gen AI prompts to Make Shorter/Make Longer, don't add dynamic fields to the message prior to using the prompts. Dynamic fields are not retained in messages sent to the Vertex AI model. You can add dynamic fields as a final step after prompts are used.

If you need to revert AI generated content to the original content, use the CTRL-Z command once or twice in a row to revert.

Set Up AI Text Editor

Prerequisites

- Security:*AI- Ad Hoc Worker Communications* domain.
- If applicable, ../../../manage-workday/tenant-configuration/Machine-Learning-and-Innovation-Services/enable-innovation-services-feature-and-data-contribution.dita and opt-in to Ad Hoc Worker Communications.
- If you are a USMA Customer who would like to opt-out of the AI Text Editor, select the checkbox to opt-out of AI for Ad Hoc Worker Communications.

Context

The AI text editor gives you the ability to receive suggestions to make your message longer (for emails) or shorter (for push notification and SMS).

Steps

To Configure AI capabilities for the Text Editor:

1. Opt-in when applicable to the Innovation Services Agreement.
2. Navigate to the AI- Ad Hoc Worker Communications domain.
3. Select the related actions button for Create Security Policy.
4. Select the Confirm checkbox, then selectOK.
5. Confirm the Security Groups under Report/Task Permissions, select OK, then select Done.
6. Complete the steps for Activate Pending Security Policy Changes.

Result

After you set up the AI Text Editor, you can use AI to help refine your Ad Hoc Worker Communications.

Next Steps

To allow role-based Manager and HR Partner security groups to send communications:

- Add the appropriate constrained security groups to the security policy defined for the Ad Hoc Worker Communications domain.
- For HR Partners, if location based intersection security groups apply, they need to be enabled within the security policy.
- For Managers, to allow the ability to send communications to both primary and subordinate organizations, the appropriate role-based security group with the access rights for those organizations would need to be enabled within the security policy.

To enable the AI Text Editor for role-based users, the security policy for the AI Ad Hoc Worker Communications domain would also need to have the above security groups enabled.

When role-based Managers or HR Partners access the Send Worker Communications task, the option to select from existing Saved Searches will require the entry point to be from the Find Workers report. The Saved Searches selector will not be available within the task. Select your Saved Searches from the

Find Workers report and ensure the Results checkbox is selected before proceeding to select the Send Message button. Once you select the Send Message button, the recipient count and worker listing on the Send Workers Communications page will only show recipients the user is allowed to send communications to.

Examples
Ad Hoc Worker Communications with AI Text Editor

Retirees

Retire an Employee

Prerequisites

- Configure the *Add Retiree Status* business process and security policy in the Staffing functional area.
- Create a retiree organization and assign support roles to it , such as Retiree Administrator and Retiree Partner, using the Create Retiree Organization task.
- Create reasons for adding retiree status using the Maintain Event Categories and Reasons task.
- Terminate the employee.

Context

You can assign retiree status to a terminated employee in 2 ways:

- Add the *Add Retiree Status* business process to the *Termination* business process as an optional step after the completion step. In the Maintain Termination Categories task, select the Retirement check box next to reasons that you want to use to track retirees.
- Run the Add Retiree Status task.

Steps

1. Access the Add Retiree Status task and select the terminated employee.

   Workday recommends you only assign retiree status to termination events or terminated workers.
2. Specify an Effective Date at least one day after the termination date.
3. Select a Reason and Retiree Organization.

Result

The employee receives the *Retiree as Self* and *All Retirees* roles. Workday automatically places the employee in the retiree organization.

The worker is still displayed in the historical information for their previous organization.

Next Steps

You can correct or reverse the retiree status. From the employee's related actions menu, select Worker History > View Worker History; then select either Correct or Rescind as a related action on the *Add Retiree Status* event.

Related Information
Tasks
Set Up Nonsupervisory Organizations
Terminate Employees on page 699

Rehire a Retiree

Prerequisites

- Configure the *Remove Retiree Status* business process and security policy in the Staffing functional area.
- Create reasons for removing retiree status using the Maintain Event Categories and Reasons task.

Context

You can remove the retiree status from an employee in 2 ways:

- Add the *Remove Retiree Status* business process to the *Hire*, *Contract Contingent Worker*, or *Edit Position* business processes as an optional step after the completion step.
- Run the Remove Retiree Status task.

Steps

1. Access the Remove Retiree Status task.
2. Select the retired employee.

   Workday recommends you only remove retiree status from retired workers who are being rehired or who have already been rehired.
3. Specify an Effective Date and Reason.

Result

Workday removes the *Retiree as Self* and *All Retirees* roles from the worker, and removes the worker from the retiree organization.

Next Steps

When you use the Add Retiree Status task on an active worker who has been previously terminated, the worker status displays as (Retired - Active).

You can correct or reverse the removal of the retiree status. From the employee's related actions menu, select Worker History > View Worker History; then select either Correct or Rescind as a related action on the *Remove Retiree Status* event.

If you need to postpone a worker's termination date, we don't recommend removing retiree status. Instead, correct the *Add Retiree Status* and then correct the *Termination* event.

Correct Staffing Events on page 939

Staffing FAQs

FAQ: Pre-Hire Segmented Security

What's a Constrained Pre-Hire?

A constrained Pre-Hire is a Pre-Hire that’s associated with an organization in Workday:

- If Hired: Workday associates them with the organization into which they’ve been hired
- If Terminated: Workday associates them with the organization into which they were hired
- In Progress Hire: Workday associates them with the organization targeted for the hire.

- In Progress Hire Offer/Employment Agreement: Workday associates them with the organization from the job requisition used in the hire.

What is an Unconstrained Pre-Hire?

An unconstrained Pre-Hire is a Pre-Hire that has no association with an organization in Workday. Example: A Pre-Hire that an authorised user creates using the *Create Pre-Hire* task. An authorised user with access to any Pre-Hire has visibility of all unconstrained Pre-Hires.

How does this feature impact a worker with an unconstrained security group?

Workers with an unconstrained security role (Example: HR Admins who operate across the company) won't experience any changes to their access to Pre-Hires following opt-in to the enhancements. Their unconstrained security role ensures that they can view both constrained Pre-Hires (regardless of their organization) and unconstrained Pre-Hires.

How does this feature impact a worker with a constrained security group?

Previously, workers with a constrained security group (Example: A Manager who operates within an organization) can only view Pre-Hires within the organization to which they have access plus any unconstrained Pre-Hires. Workday now enables customers to configure which workers can access unconstrained Pre-Hires.

Are there any exceptions to the Pre-Hire security logic?

There may be some exceptions to this enhanced Pre-Hire security logic throughout Workday applications, where the business logic would not benefit from this enhancement. Examples: *Background Check*, *Contract Contingent Worker*, *Hire Employee*, *Offer*.

In these cases, your authorized users need access to all Pre-Hires in your tenant (including any terminated worker Pre-Hire profiles) to mitigate against the creation of duplicate Pre-Hire profiles and support the hire and recruitment processes effectively. This enhancement could potentially introduce a poor experience. Example: Where an authorized user can create a Pre-Hire but not hire them. To prevent this, Workday maintains the existing security that governs access to the task, regardless of whether the customer opts into this enhancement . Provided the user has access to the tasks and Pre-Hire security domains, they'll continue to have access to both constrained and unconstrained Pre-Hires within these tasks and processes.

How does restricting access to unconstrained Pre-Hires impact the recruitment process and duplicate management functionality?

The duplicate management functionality arises when a newly created Pre-Hire (through a new application) matches key criteria of an existing Pre-Hire. Workday considers a Pre-Hire that's created through the recruitment process to be a constrained Pre-Hire.

- Where the recruiter has constrained security access, the existing process is maintained. Provided the recruiter has appropriate access to the organisation of the legacy Pre-Hire profile (existing process), the duplicate management functionality works as expected.
- Where the recruiter has constrained security access and they don't have access to the organizations of the legacy Pre-Hire profile, the duplicate management functionality may not work. However, this would be an existing restriction around access to legacy Pre-Hire profiles.
- Where the recruiter has unconstrained security access, they can see the Pre-Hires associated with all and no organizations, assuming there's no negative impact to duplicate management.

How does this enhancement impact the Create Pre-Hire task and duplicate management functionality?

When an authorised user accesses the stand-alone *Create Pre-Hire* task after opting into the feature, they'll lose access to any Pre-Hires they create unless they can access the necessary domains as listed below.

If they attempt to hire a Pre-Hire using the *Hire Employee* task or the recruitment process, they'll be able to access and complete the process as normal. When a user creates a new Pre-Hire with the same name and country as an existing Pre-Hire, Workday triggers the 'Pre-Hire already exists' exception, regardless of their security configuration.

How can I ensure a worker with a Constrained Security Group can access Unconstrained Pre-Hires?

1. Access the *Create Security Group* task.
2. Create a segment-based security group using the new Unconstrained Pre-Hire segment: From the Access to Segments drop-down menu, select Security Segments (Workday Owned) > Pre-Hire Security Segment.
3. Add the unconstrained security group (Example: *Manager (Unconstrained)*) for the required role (Example: *Manager* role) to the Unconstrained Pre-Hire Segment-Based Security group.
4. Identify the security domains or business process security policies that are impacted or control access to the task, data, or business process for which they want the role to retain access.
5. Add the new segmented Pre-Hire security group to the appropriate domain security policy or business process policy, ensuring that they provide the required level of access (Example: *View* and *Modify*).

Recommendations:

- To ensure the existing constrained security access is retained, the original security group should be left in place.
- If opted in, segment-based security configuration should be the same for these tasks:
    - *Create Pre-Hire*
    - *Edit Pre-Hire*
    - *View Pre-Hire*

Any inconsistency in the segment configuration across these tasks may result in unexpected behaviour. Example: A user can create a Pre-Hire, but lose editing access to their profile.

Which security domains should I update for this enhancement?

In order to correctly implement this enhancement, we strongly recommend that you update these domains as according to your organization's needs:

- *Manage: Expense Report for Pre-Hire*
- *Manage Pre-Hire Data (User-Based Groups only)*
- *Manage Pre-Hire Process*
    - *Manage Pre-Hire Process: Consider Pre-Hires*
    - *Manage Pre-Hire Process: Enter Pre-Hire Interviews*
    - *Manage Pre-Hire Process: Hire Eligibility Status Comment*
    - *Manage Pre-Hire Process: Manage Pre-Hires*
    - *Manage Pre-Hire Process: Pre-Hire Eligibility*
    - *Manage Pre-Hire Process: View Pre-Hire*
    - *Manage Pre-Hire Process: View Pre-Hire Interviews*
    - *Manage Pre-Hire Process: Worker Hire Eligibility*
- *Offer / Employment Agreement: Collective Agreement*
- *Offer / Employment Agreement: Employee Contracts*

- *Offer / Employment Agreement: Notice Period*
- *Offer / Employment Agreement: Probation Period*
- *Pre-Hire Data: Employment Agreement*
    - *Pre-Hire Data: Business Title*
    - *Pre-Hire Data: End Date*
    - *Pre-Hire Data: Scheduled Weekly Hours*
    - *Pre-Hire Data: Start Date and Location*
    - *Pre-Hire Data: Term Time*
- *Pre-Hire Data: Name and Contact Information*
    - *Pre Hire Data: Names*
    - *Pre Hire Data: Contact Information*
- *Pre-Hire Demographics by Organization*
- *Pre-Hire Personal Data*
    - *Pre-Hire Personal Data: Age/Marital Status*
    - *Pre-Hire Personal Data: Ethnicity/Disability/Religion/Country of Birth*
    - *Pre-Hire Personal Data: Gender*
    - *Pre-Hire Personal Data: ID Information*
    - *Pre-Hire Personal Data: Medical Exams*
    - *Pre-Hire Personal Data: Military/Citizenship/Political/Nationalities*
    - *Pre-Hire Personal Data: Personal Information*
    - *Pre-Hire Personal Data: Sexual Orientation & Gender Identity*
    - *Pre-Hire Personal Data: Social Benefits Locality*
    - *Pre-Hire Personal Data: Web Services with Details*
- *Pre-Hire Process Development*
- *Pre-Hire Process: Mass Action on Job Requisitions*
- *Pre-Hire: Skills and Experience*
- *Reports: Job Requisition and Positions*
    - *Reports: Manager (Pre-Hire)*
    - *Reports: Open Positions*
- *Set Up: Pre-Hire Process*

These domains are for unconstrained security groups and aren't impacted:

- *Manage Pre-Hire Data: Delete Pre-Hires*
- *Manage Pre-Hire Data: Mark Pre-Hires for Deletion*
- *Pre-Hire Data: Background Check Status*
- *Search: Pre-Hire by Private Email Address*

Do I need to update my business process security policy?

Yes, we recommend that you update your business process security policy if you've opted into this feature.

How does this enhancement affect my web services?

If a constrained role is used to submit the web service request, access to the unconstrained Pre-Hire should be configured on the domain securing the web service, as outlined above. If an unconstrained role is used to submit the web service, no update is required.

FAQ: How Does the Conversion Position Start Date Field Work?

The Conversion Position Start Date field is workers' start date for the current position and you can use this field to calculate the time in position. This date must be after the hire date.

During implementation, Workday displays a Conversion Position Start Date field for workers whose hire date differs from their current position start date. This field enables you to report on the actual length of time workers have been in their current position. Example:

- You hired Steve in 1999 as a business analyst.
- Steve became a product manager in 2005.
- The company Steve works for went live on Workday in 2012.
- To reflect how long Steve has been a product manager, set the hire date for Steve to 1999 and set the conversion position start date to 2005.

To update the conversion position start date for workers after implementation:

- Correct the *Hire* or *Contract Contingent Worker* business process. From the related actions menu of the *Hire* or *Contract Contingent Worker* event in a worker's history, select Business Process > Correct.
- Use the *Correct Hire* or *Correct Contract Contingent Worker* web service (secured to the new Staffing Actions: Correct Contract Contingent Worker and Hire domain). You can use these web services to correct the conversion position date for completed events as a mass action.

FAQ: Supervisory Organizations and Staffing Events

Can Nonsupervisory Roles Perform Staffing Tasks?

Nonsupervisory roles are roles that are on an organization that's not supervisory. Nonsupervisory roles can only perform staffing tasks for workers and positions in associated supervisory organizations linked to the nonsupervisory role through the:

- Company or Company Hierarchy
- Cost Center or Cost Center Hierarchy
- Location Hierarchy
- Region or Region Hierarchy
- Custom Organization
- Matrix Organization
- Pay Group
- Retiree Organization

Access the Business Process Security Policies for Functional Area report and add the nonsupervisory roles to the security groups that can initiate these tasks.

Task	Location Hierarchy Restrictions	Other Nonsupervisory Organizations
Create Position Set Hiring Restrictions	You can only create positions or set hiring restrictions in a supervisory organization whose primary location is in a location hierarchy you can access.	Only staffing organization roles from the supervisory organization defaults can perform these tasks.
Add Job Contract Contingent Worker Hire Employee Start International Assignment	The position or hiring restrictions must be either: • Associated with a business site location in a location hierarchy you can access. • Unassociated with a specific business site location.	The position or hiring restrictions must be in the nonsupervisory organization.

Task	Location Hierarchy Restrictions	Other Nonsupervisory Organizations
All other worker-based tasks, such as Change Contact Information	The worker's position must be in a business site location in a location hierarchy you can access.	The worker's position must be in the nonsupervisory organization.
All other position-based tasks, such as Edit Position and Change Job	The position must be in a business site location in a location hierarchy you can access. If you use the Change Job task to move a worker but not the position, the location hierarchy automatically populates from the first available of the: • Hierarchy associated with the proposed location. • Hierarchies associated with the location hiring restrictions. • Hierarchy associated with the primary location of the proposed supervisory organization.	The position must be in the nonsupervisory organization. If you use the Change Job task to move a worker but not the position, only roles from the default organizations associated with the proposed supervisory organization can perform the task.

How Are Historical Staffing Events Secured?

Workday secures a staffing event to the organizations of the position. Users with roles on those organizations have access to those current and historical staffing events. To view events for a worker that's no longer part of the supervisory organization, use the View Supervisory Organization As Of task.

Example: A worker leaves Supervisory Organization A and joins Supervisory Organization B. You're an HR Partner whose role is based on Supervisory Organization B. You don't have a position or role on Supervisory Organization A. You don't have access to the historical staffing events completed when the worker was in Supervisory Organization A.

FAQ: Can I control which job details are visible on worker profiles?

Yes, you can create a custom report that contains custom fields, and display that report on the worker profile using the Configure Profile Group task. You can also hide many fields on the Job Details tab of worker profiles using the Configure Optional Fields task.

See Hide or Require Optional Fields.
