The role doesn't have the correct security permissions to view the Staffing tab on the Supervisory Organization profile.	1. Link the relevant roles to a security group with permissions on the *Worker Data: All Positions* domain in the Staffing functional area. 2. Link the relevant roles to a security group with permissions on at least 1 of these domains in the Organizations and Roles functional area: • *Manage: Supervisory Organization* • *Reports: Supervisory Organization View as of Date* 3. Modify the relevant roles so that they meet at least 1 of these criteria: • The roles are on the relevant supervisory organization. • The roles are on any of the superior supervisory organizations. • The roles are on a location hierarchy that includes the location for the supervisory organization. • The roles are on a location hierarchy that includes the location for any superior supervisory organizations.
The security group that grants permissions on the relevant domain security policies for the assigned role is in an intersection security group.	1. Grant all security groups in the intersection security group access to the *Worker Data: All Positions* domain in the Staffing functional area. 2. Grant all security groups in the intersection security group access to at least 1 of these domains in the Organizations and Roles functional area: • *Manage: Supervisory Organization* • *Reports: Supervisory Organization View as of Date*
There are no positions in the Supervisory Organization.	1. Wait until the business process completes after you create a position or change the position location on the Supervisory Organization. 2. Ensure that your role on the location hierarchy is in a security group that has access to the *Worker Data: All Positions* domain.

Compensation

Components: Elements and Eligibility Rules

Steps: Set Up Compensation Components

Context

Configure compensation frequencies, elements, and eligibility rules for your organization.

Steps

1. Create Frequencies on page 979.

   Define frequencies for use in compensation and payroll calculations.
2. Access the Maintain Units of Measure task.

   Define the units of measure for compensation plans with unit-based targets.

   Security: *Set Up: Unit of Measure* domain in the Common Financial Management functional area.
3. Create Compensation Elements on page 981.

   Compensation elements establish the link between compensation and payroll.
4. Create Compensation Packages on page 1044.
5. Create Eligibility Rules for Compensation on page 986.

   Define the rules that determine the employee groups eligible for compensation plans.
6. Assign Compensation Components to an Eligibility Rule on page 988.

   Assigning compensation components to an eligibility rule enables Workday to automatically populate default compensation values during business processes under certain conditions.
7. (Optional) Steps: Manage Compensation Basis on page 1133.
8. Set up security:

   - Segmented security: Set Up Segmented Security by Compensation Plans on page 1047.
   - Intersection security:

     Note: Workday doesn't recommend using intersection security for Compensation because it doesn't apply to all situations. One case where Workday can't evaluate intersection security is exclusion criteria, which depend on organizations. Many compensation components, including plans, grades, and pay ranges aren't associated with organizations. Managers can't have security over compensation components through organizations and roles the way they can for employees.

Related Information

Reference

Reference: Compensation Plan Comparisons on page 1064

Create Frequencies

Prerequisites

Security: *Set Up: Compensation General* domain in the Core Compensation functional area.

Context

You can maintain existing or create new frequencies for compensation and payroll calculations. Frequencies determine the number of occurrences (or units) in a year that Workday uses to calculate annual compensation.

Workday delivers a set of frequency types, including *Hourly* and *Semi-Monthly*. Each frequency requires an Annualization Factor that is greater than zero and specifies the number of occurrences in a year. Some frequencies, such as *Bi-weekly* and *Semi-monthly*, match pay cycles while other frequencies, including *Hourly* and *Annual*, don't. Examples:

- *Annual*: 1 time in a year.
- *Bi-weekly*: Every 2 weeks or 26 times in a year.
- *Semi-monthly*: 2 times every month or 24 times in a year.

You can modify these or add your own as needed. If the standard number of working hours differs by location, you can create a different hourly frequency for each location.

Steps

1. Access the Maintain Frequencies task.
2. As you complete the task, consider:

Option	Description
Annualization Factor	The number of units (occurrences) in a year. Workday uses the annualization factor to calculate annual compensation. You can enter up to 6 decimal places. The default annualization factor for *Hourly* is 2080, which equals the number of work hours in a year in the USA (40 hours each week * 52 weeks). Other locations might have different annualization factors for *Hourly*. Examples: • 1664 (32 hours each week * 52 weeks). • 1920 (40 hours each week * 48 weeks).
Use Weekly Hours	For *Hourly* frequency types. If selected, Workday uses the scheduled hours each week when calculating annual pay. Using weekly hours affects how Workday evaluates grade range penetration for an hourly worker, which is based on the annual equivalent of hourly pay. If cleared, Workday calculates the annual equivalent. If you use Workday Payroll, select this check box as a best practice for hourly workers. If you clear Use Weekly Hours, Workday might treat part-time, hourly workers as full-time. Example: For Commitments and Obligations, Workday might create commitments for part-time, hourly workers.
Used in Payroll Interface	Select the check box to make a frequency definition available for use in positions, earnings, and deductions that you set up for external payroll.

Example

Example: You schedule a worker to work 20 hours each week at 10 USD an hour. If you:

- Select Use Weekly Hours, Workday calculates the annual equivalent by multiplying hourly pay (10) by the scheduled weekly hours for the worker (20), then by the *Weekly* Annualization Factor (52):

  `10 USD * 20 hours * 52 weeks = 10,400.00 USD annual equivalent`
- Clear Use Weekly Hours, Workday multiplies hourly pay (10) by the *Hourly* Annualization Factor (2080):

  `10 USD * 2080 hours = 20,800.00 USD`

  Workday treats the worker as full-time instead of part time.

Create Compensation Elements

Prerequisites

- Create the earning codes that you want to associate with the base pay compensation elements:
  - Create earnings in Workday Payroll.
  - Maintain external payroll earnings for the Payroll Interface.
- Security: *Set Up: Compensation Elements* domain in the Core Compensation functional area.

Context

Compensation elements link compensation and payroll. When a compensation element is attached to a plan that is assigned to an employee, Workday can determine which earnings to use to pay the employee.

Steps

1. Access the Maintain Compensation Elements task.

   You can also access the Add Compensation Element task to add 1 element at a time for best performance when your compensation elements have a high number of Payroll entities.
2. Consider:

Option	Description
Period Activity Pay Enabled	Displays if the Enable Period Activity check box is selected in the Educational Institutions section of the Edit Tenant Setup - HCM task. Compensation elements enabled for Period Activity Pay aren't available for standard compensation plans.
Academic Pay Enabled	Displays if the Enable Educational Institution Features check box is selected on the Edit Tenant Setup - HCM task. Select the check box if this compensation element can be paid in a different period than the period it was earned in.
Payroll Earning	Select the values that apply to all your payroll entities.
External Payroll Earnings	Select the earnings that apply to each payroll entity.

Next Steps

You can use Maintain Compensation Element Groups task to group compensation elements. If you've more than 1 compensation element that defines base pay, create a compensation element group to associate base pay compensation elements.

Map Earnings to Compensation Elements

Setup Considerations: Compensation Eligibility Rules

You can use this topic to help make decisions when planning your configuration and use of compensation eligibility rules. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Eligibility rules define dynamic lists that group employees based on their attributes, such as location, management level, position, or job profile. Worker attributes change as they progress through their career and receive promotions, transfer departments, or change locations. You create eligibility rules with attributes and condition rules and logical relations between them.

Example: Sam works in the Portland office and is eligible for an allowance plan based on an eligibility rule that uses the Portland location. Sam then transfers to Amsterdam. The Portland-based eligibility rule no longer applies, but eligibility rules based on the Amsterdam location that do.

Business Benefits

Eligibility rules:

- Save time and increase consistency by automatically populating compensation values in business processes like *Offer*, *Hire*, and in compensation reviews.
- Eliminate time-consuming and error-prone manual maintenance of static employee lists. Static lists are often based on employee attributes, so targeting the attributes is more direct and flexible.
- Make it easier to meet regulatory or business requirements.

Use Cases

- Roll out (assign) or remove compensation plans to employee populations. Example: Roll out the same compensation plan to all nonmanagement employees, except employees in selected departments.
- Assign salary plans based on management level, location, or both.
- Propose compensation during the *Offer*, *Employment Agreement*, and other business processes.
- Assign severance plans based on number of years of service.
- Define the compensation plans or plan profiles that apply to job requisitions.

Questions to Consider

Question	Considerations
Do you configure default compensation on positions?	Workday uses default compensation, if configured on the position, to populate compensation values in business processes such as *Hire*. If you don't configure default compensation on positions, Workday uses eligibility rules. You can assign compensation components (plans, grades, and packages) to eligibility rules on the Assign Compensation Components to Rule task. Doing so enables Workday to populate compensation values during business processes under certain conditions. Example: During the *Hire* process, Workday searches for compensation values from previous employment, *Offer*, the job requisition, and the position. If unsuccessful, Workday derives compensation values from the eligibility rules associated with compensation components.
What criteria do you use to assign compensation plans to employees?	Design your eligibility rules around these criteria. You can then roll out (assign) plans to specified populations.
What employee populations do you target for periodic merit, bonus, and stock awards?	Compensation reviews require that you specify merit, bonus, or stock plans. Workday includes employees assigned to those plans in the compensation review process and doesn't use eligibility rules directly. When configuring compensation eligibility rules, consider your periodic compensation reviews and their target populations.
Do you assign grade profiles manually?	You can create eligibility rules for grade profiles and compensation plan profiles to ensure automatic and accurate updates on positions and employees.
How should Workday assign eligibility rules to compensation plan profiles?	You can access the Edit Tenant Setup - HCM task and in the Compensation section, select the Enable Eligibility Rule Performance Enhancement for Compensation Plan Profiles option. • If selected, Workday stops evaluating compensation plan profiles when it finds the first profile the employee is eligible for. If an employee isn't eligible for any plan profiles, Workday uses the default plan target. Note: Selecting this option is permanent. You can't clear or undo your selection after you submit. • If not selected, Workday evaluates all plan profiles. If an employee is eligible for only 1 plan profile, Workday uses it. If an employee isn't eligible for any plan profiles or is eligible for more than 1, Workday uses the default plan target. Workday recommends that you plan and create eligibility rules to be mutually exclusive and don't target overlapping populations of employees.
How do you want Workday to handle eligibility rules based on Guidelines fields when you change a Guidelines field manually?	You can configure Workday to apply compensation defaulting to compensation plan assignments on the business processes when you both: • Base eligibility rules on Guidelines fields. • Change any field in the Guidelines section that the eligibility rules are based on.

Question	Considerations
	Access the Edit Tenant Setup - HCM task and, in the Compensation section, configure the Enable Defaulting Based on Changes to Guidelines option for relevant business processes. See Reference: Edit Tenant Setup - HCM.

Recommendations

Workday recommends that you design, create, and maintain eligibility rules like a software development project:

Recommendation	Description
Organize and Plan	• Build a team to design, plan, and manage the development, deployment, and use of your eligibility rules. • Develop procedures for creating, testing, approving, and managing eligibility rules. • Document your work. Doing so makes it easier to identify problems if they arise and also helps Workday Support to diagnose issues.
Design	• Develop a list of the employee groups based on your needs. Example: Assess your needs for assigning compensation plans, packages, and components. • Compile the list of attributes that you need for configuring eligibility rules, such as location or management level. • As a best practice, build mutually exclusive eligibility rules that don't overlap each other. Too many eligibility rules might make maintenance difficult and affect performance. • Ensure that your rules are exhaustive so that all employees fall into at least 1 eligibility rule.
Develop	• Create enough eligibility rules to meet your needs, but not so many that managing them is burdensome or performance suffers. When you run eligibility rules for business processes like *Hire*, the more rules, the more processing time. • Use Workday-delivered fields. • Name eligibility rules so that the intended target population is evident. Example: Create an eligibility rule with MBT in the name specifically for use as part of a compensation basis with the Manage Basis Total check box selected. Or, add Amsterdam for a location-based eligibility rule used for employees located there.
Test	• Test each eligibility rule upon initial creation and whenever you change them. • If you discover issues with eligibility rules, record the exact conditions under which they occur. Update your documentation and testing procedures accordingly.
Iterate	When your needs change along with changes to your operations, return to the organization and planning phase to determine how eligibility rules can address your needs. Even the best testing procedures can sometimes miss issues that only occur with a specific configuration. When issues arise during production operations, determine if the issue resulted from design or implementation. Update your testing procedures accordingly.

Requirements

Workday requires compensation eligibility rules for compensation defaulting and to ensure that employees get assigned the appropriate compensation components.

Limitations

No impacts.

Tenant Setup

No impacts.

Security

Set Up: Compensation Rule domain in the Core Compensation functional area.

Business Processes

No impacts.

Reporting

Access the Compensation Eligibility Rules report to list the conditions, compensation components, and job profiles for selected eligibility rules.

Integrations

No impacts.

Connections and Touchpoints

Compensation eligibility rules interact with Workday Recruiting.

Features	Considerations
Positions and job requisitions.	If you've configured default compensation on positions, Workday populates compensation values from the position. Otherwise, Workday uses eligibility rules. Design eligibility rules to fill in for positions or job requisitions where there's no default compensation.
Workday Recruiting.	Workday derives compensation values on the *Offer* or *Employment Agreement* from the job requisition. However, if Workday can't find compensation values, it uses eligibility rules.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Create Eligibility Rules for Compensation

Prerequisites

- Set up objects, such as job profiles or locations that form the basis for eligibility rules.
-
- Security: *Set Up: Compensation Rule* domain in the Core Compensation functional area.

Context

You can configure eligibility rules that determine eligibility for compensation components, including compensation plans, grades and grade profiles, and packages. Workday can then use eligibility rules to automatically populate values in some processes. Examples:

- When proposing compensation during the *Offer* or *Employment Agreement* business processes.
- When creating a job requisition.
- When you assign, roll out, or remove a new or updated compensation plan to employees defined by an eligibility rule.
- When creating a referral one-time payment.

Steps

1. Access the Create Compensation Eligibility Rule task.
2. (Optional) Select rules, one at a time, from the Copy Condition from Rule list.

   You can use the related actions menu to view details about the conditions.

   Workday creates a row in the Rule Conditions grid for each rule that you select and populates the Source External Field or Condition Rule column.
3. For each rule condition, consider:

Option	Description
And/Or	If 2 or more rule conditions exist, select *And* or *Or* to control how each relates to the preceding line. Workday evaluates the expression to be true when: • All conditions in an expression connected by *And* are true. • At least 1 of the conditions in an expression connected by *Or* is true.
( )	Use the parentheses columns when you need 3 or more rows connected by *And* and *Or*. Example: To state (a and b) or c add: • An opening parenthesis at the beginning of statement a. • An *And* at the beginning of statement b. • A closing parenthesis at the end of statement b. • An *Or* at the beginning of statement c.
Source External Field or Condition Rule	Select 1 option from delivered Workday sources or from condition rules that you've defined.

Option	Description
	The type of field or condition rule you select determines other available options.
Relational Operator	Options depend on the data type: • A `contains` operator applies to text but not numeric data types. • A `less than` operator applies to numbers or currency, but not text.
Comparison Type	Specify whether to compare the source to another field or to a value you enter.
Comparison Value	Select a comparison field or enter a value to compare to the source.
Order	Use arrows to control the order in which Workday processes the statements.

Result

When you assign compensation components to employees, the eligibility rules determine which ones are available for selection in the By Compensation Rule prompt folder.

Example

You require that an employee is eligible when both rule conditions a and b are true, or if rule condition c is true. In short, if (a and b) or c are true.

Assume also that:

- a means that Location equals Paris.
- b means that Job Exempt is true.
- c means that Job Family is Executive.

The employee is eligible or not eligible under these conditions:

- Eligible if Location is Paris and Job is Exempt.
- Not eligible if Location is Paris but Job is non-Exempt.
- Not eligible if Location is Pleasanton and Job is Exempt.
- Eligible if Job Family is Executive.
- Not eligible if Job Family is Individual Contributor.

Next Steps

- Access the Assign Compensation Components to Rule task to assign eligibility rules to compensation components.
- Run the Compensation Eligibility Rules report to verify details.

2023R1 What's New Post: Eligibility Rule Plan Profile Processing

Assign Compensation Components to an Eligibility Rule

Prerequisites

- Define the compensation components to assign to the eligibility rule.
- Security: *Set Up: Compensation Rule* domain in the Core Compensation functional area.

Context

You can assign compensation components to a compensation eligibility rule. Doing so enables Workday to automatically populate default compensation values during business processes under certain conditions.

Example: During the *Offer* and *Employment Agreement* business processes, Workday attempts to derive compensation values from the job requisition. If there is no job requisition, Workday derives values from the eligibility rules associated with compensation components.

Note: You can also assign eligibility rules to a compensation component when you create or edit the component.

Steps

1. Access the Assign Compensation Components to Rule task.
2. Select the Compensation Packages, Compensation Grades, Compensation Grade Profiles, and Compensation Plans that you want to associate with the rule.

   Workday displays those components already assigned to the rule.

Grades and Grade Steps

Steps: Set Up Compensation Grades and Grade Steps

Prerequisites

Set up compensation elements and eligibility rules.

Context

Configure and manage compensation guidelines:

- Grades, pay ranges, and grade profiles.
- Grade steps and adjustments to them.
- Grade step progression schedules.

Steps

1. Create Compensation Grades on page 989.

   Create compensation ranges for jobs and job profiles.
2. Create Compensation Grade Steps on page 991.

   Create the grade steps that assign specific monetary amounts to workers. Configure the length of time that workers must remain in a step before progressing.
3. Set Up Adjustments to Compensation Steps on page 993.

   Make adjustments to compensation steps associated with a compensation grade. Workday automatically adjusts the amount for all employees with those steps.
4. Create a Compensation Grade Hierarchy on page 994.

   Create a superior-subordinate relationship between grades.

5. Set Up Automatic Compensation Grade Step Progression Schedules on page 995.

   Configure automatic compensation grade step progression schedules to ensure that regulatory or workplace policies for step progression occur on time.
6. Request Grade Change on page 997.

   Request a change in grade for an employee.
7. Set Up Adjustments to Compensation Grades Assigned to Job Profiles on page 997.

   Update the grade assigned to a job profile or to employees in that job profile.

Create Compensation Grades

Prerequisites

- Set up compensation elements and eligibility rules.
- Create eligibility rules for compensation.
- Create frequencies.
- Security: *Set Up: Compensation Packages* domain in the Core Compensation functional area.

Context

Grades are guidelines used in determining compensation for a worker. Grades also define the standard compensation range for a given job or job level. You can associate more than 1 compensation basis and pay range to a grade.

Steps

1. Access the Create Compensation Grade task.
2. Consider:

Option	Description
Pay Range Segments	Enter 3, 4, or 5 to define the number of segments you want the pay range broken into. Example: If the pay range is 45,000 - 100,000 USD and you select 3, then the 3 Workday calculated segments are: • 45,000 - 63,333 USD • 63,333 - 81,666 USD • 81,666 - 100,000 USD Maximum Pay - Minimum Pay = $100,000 - $45,00 = $55,000. Total Range Spread / Number of Segments = $55,000 / 3 = $18,333.
Use Grade Profiles	Select this check box if you want to use eligibility rules to create more granular compensation ranges within the grade. Example: • Default range = 45,000 USD - 100,000 USD

Option	Description
	• New York range = 55,000 USD to 120,000 USD

If you selected both of these check boxes:

- Apply FTE% on the salary plan.
- Use 100% FTE for Pay Range Comparisons in the Compensation section on the Edit Tenant Setup - HCM task.

Workday divides the employee salary by the FTE % before comparing it to the salary range midpoint when calculating these fields:

- Compa-Ratio
    - Compa-Ratio = 100% FTE Basis Amount / Mid-point
- Position in Range
- Pay Range Segment

3. In the Default section, consider:

Option	Description
Base Pay Elements	Select the compensation elements you want to associate with this grade. Workday only includes hourly, salary, and allowance plans categorized as base pay to calculate compa-ratio and target penetration.
Eligibility Rules	Select 1 or more rules to use to determine who is eligible for this compensation component or plan. When you assign compensation to employees, the eligibility rules determine whether this component is available for selection in the By Compensation Rule prompt folder. If you select multiple eligibility rules, Workday evaluates each rule independently to determine employee eligibility for the compensation component. Employees are eligible if they meet the qualifications of any 1 rule. You can only use individual rules once in the grade and grade profiles.

4. In the Compensation Pay Range tab, enter default compensation pay ranges. Consider:

Option	Description
Calculate Segments	Select this check box if you want Workday to calculate the values for the segment tops in equal amounts and the midpoint. When selected, only the Minimum and last segment top fields are available for entry. Once you enter these fields, Workday automatically calculates the other segment tops and midpoint.
Segment # Tops	This is the top value for the segment. The last segment top is the maximum value for the range.
Midpoint	You can enter the midpoint when the Calculate Segments check box is cleared. Workday uses the *Use Calculated 50%* option to calculate compa ratio instead of the value you enter here when you: • Change the midpoint to be anything other than 50% of the range, and

Option	Description
	• Have the *Use Calculated 50%* option selected for Compa-Ratio Midpoint field on Edit Tenant Setup - HCM.

5. (Optional) If you selected the Use Grade Profiles check box, enter your grade profiles in the Compensation Grade Profiles tab.

   A grade profile must have a pay range associated with Total Base Pay. You can't change the number of pay range segments for profiles, the number is the same as the grade defaults.

   You can drill down to details on any job profiles that reference this grade.

   Grade profiles don't display if their number exceeds 250.

Result

Workday uses grades to calculate compa-ratio and pay range segments.

If proposed compensation for an employee extends beyond the limits of the reference pay range for the employee's grade or grade profile, Workday issues a warning but permits submission of the proposed compensation. Reviewers and approvers can then evaluate whether to approve the proposal.

Next Steps

To associate a grade to a job profile, use the Create or Edit Job Profile tasks.

Create Compensation Grade Steps

Prerequisites

- Create compensation grades.
- Security: *Set Up: Compensation Steps* domain in the Core Compensation functional area.

Context

A step is a specific point in a compensation grade or grade profile salary range associated with an interval, period, and optionally a step progression rule. Steps, like compensation plans, assign a specific monetary amount to a worker.

If you assign a grade profile to a worker's compensation package, Workday uses the steps on the grade profile, not the steps on the grade.

Steps

1. Access the Maintain Compensation Steps task.
2. Select the Assign 1st Step During Compensation Proposal check box to assign the first compensation step to workers associated with their grade or grade profile when hired.

   If selected, Workday assigns the first compensation step when all these conditions are true:

   - The worker has an eligible compensation grade.
   - The grade has compensation steps.
   - The worker either doesn't have a step assigned or doesn't have a step in the grade assigned.
3. In the Grade Profile Steps tab, consider:

Option	Description
Salary Pay Plan	Select the salary or hourly plan you want to associate with these steps.

Option	Description
Allow Override	Select this check box to allow the overriding of the step values in a specific worker's compensation package.

4. In the Steps section of the Grade Profile Steps tab, consider:

Option	Description
Inactive	Select to mark this step as inactive. Inactive steps are skipped in automatic step progression, and can't be selected during compensation events. You can have duplicate inactive steps; however, only 1 step that shares a Name or Sequence value with another step can be active at a time. When you reactivate a previously inactive grade or grade profile, all associated steps with a unique Name and Sequence will reactivate. Duplicate steps will remain inactive. Example: when performing an annual update, some of your compensation steps must be retired. Rather than rebuilding a new grade profile to exclude the retired steps, you simply mark the step as Inactive.
Sequence	Identifies the step progression order for workers assigned to the grade or grade profile. Enter any unique and sortable character string, such as 1-2-3 or A-B-C. Workday sorts the sequence by character. So if you use numbers, use 01 for 1, 02 for 2, and so on. Otherwise, 11 precedes 2 and 21 precedes 3.
Interval and Period	Define the length of time that workers must remain in the step before progressing to the next step in the grade. The interval must be a positive whole number, such as *6 Months* or *2 Years* or *13 Weeks* or *30 Days*.
(Optional) Progression Rule	Select an eligibility rule for Workday to use to progress workers. The rule on the current step must be true for workers to progress to the next step. Examples: Age, length of service, job profile, or collective agreement.
Grace Period Interval and Grace Period Type	The number of hours or workweeks a worker can accumulate applicable time off or leave before Workday adjusts their Next Step Progression Target Date.

Option	Description
	See Set Up Time Off and Leave Impact on Step Progression.

5. (Optional) In the Grade Profile Steps tab, you can define a step on a profile.

   If there are no profiles associated with the selected salary pay plan, then you can't add grade profile steps.

   When a worker matches the eligibility rules on the grade profile, Workday uses the values associated with the grade profile steps, not those on the Grade Steps tab.

Result

To view the compensation step assigned to the worker, select Compensation > View Compensation as a related action off the worker.

Next Steps

Assign steps to employees as part of staffing transactions based on your compensation package and compensation defaulting rules.

Related Information

Tasks

Set Up Automatic Compensation Grade Step Progression Schedules on page 995

Reference

Reference: Edit Tenant Setup - HCM

Set Up Adjustments to Compensation Steps

Prerequisites

- Configure the *Set Up Compensation Step Adjustment* business process to meet your organization's needs.
- Create compensation steps.
- Define reasons for the *Request Compensation Change* event using the Maintain Event Categories and Reasons task.

Context

You can make adjustments to compensation steps associated with a compensation grade. Workday automatically adjusts the amount for all employees with those steps.

Steps

1. Access the Set Up Compensation Step Adjustment task.
2. Select the compensation grade.

   If the grade you want to adjust already has an adjustment in progress, the grade won't be available for selection.
3. Select the allowed actions for Employees using Default and Employees using Override.

Option	Description
Adjust to New Defaults	Applicable to Employees using Default and Employees using Override. Workday sets the assigned value to the new default.

Option	Description
Adjust by Same Amounts	Applicable to Employees using Override. Workday calculates the difference between the old default and the new default. Workday adjusts the employee's assigned value by that same difference. For example, the old default was 500 and the new default is 600, which equals a difference of 100. The employee's override amount was 700. The adjustment to the employee's assigned value would be 700 + 100 = 800.

4. In the Grade Steps tab, enter the New Amount for the step that replaces the Old Amount.
5. In the Grade Profile Steps tab, enter the New Amount for the step that replaces the Old Amount.

Result
If you included a review step in the business process definitions, the reviewer completes the same steps and either approves, denies, or sends back the request to the proposer.

Once approved, the process:

- Updates the compensation grade steps with the new defaults so that future grade assignments have the new values.
- Creates compensation events with new values for each impacted employee.

Next Steps

To correct a future dated compensation event, correct or rescind the event and then reprocess it after you run the adjustment process.

Tasks
Create Compensation Grade Steps on page 991
Set Up Automatic Compensation Grade Step Progression Schedules on page 995

Create a Compensation Grade Hierarchy

Prerequisites

- Create compensation grades.
- Security: *Set Up: Compensation General* domain in the Core Compensation functional area.

Context

You can create a single superior-subordinate relationship between grades. Example:

Level 1	CEO	CFO	CIO
Level 2	VP Finance	VP Human Resources	VP Sales
Level 3	Manager Engineering	Manager Recruiting	Manager Research
Level 4	Receptionist	Support Analyst	Salesperson

Note: You can also use the *Put Compensation Grade Hierarchy* web service to create or edit your grade hierarchy.

Steps

1. Access the Maintain Compensation Grade Hierarchy task.
2. Create your grade structure.

Option	Description
Order	This is the grade level. 1 is the highest level.
Compensation Grades	Enter all grades you want associated with the grade level.

Create Compensation Grade Steps on page 991

Set Up Automatic Compensation Grade Step Progression Schedules

Prerequisites

- Create compensation steps and their progression sequence for your grades and grade profiles.
- Security: *Process: Automatic Step Progression* domain in the Core Compensation functional area.

Context

Administrators can configure automatic compensation grade step progression schedules to ensure that regulatory or workplace policies for step progression occur on time. As a best practice, Workday recommends that you schedule the Employee Compensation Step Progression and Employees Eligible for Next Compensation Step reports to run at the same time as the step progression process. Doing so identifies the employees participating in parallel compensation events that can prevent them from progressing to the next step.

Steps

1. Access the Schedule Automatic Step Progression task.
2. Select a Run Frequency to determine when and how frequently to automatically progress your employees to the next step.
3. On the Schedule tab, enter the applicable scheduling options, which vary depending on the selected Run Frequency.

   This tab doesn't apply to the *Run Now* option.

Option	Description
Daily Recurrence	How frequently the process runs in the Recurs Every x Day(s) field. The number you enter must range from 1 through 366. Example: To schedule a recurrence for every day, enter 1; for every other day, enter 2. You can select Recurs Every Weekday to run the process every day from Monday through Friday.
Weekly Recurrence	How frequently the process runs in the Recurs Every x Week(s) field. The number you enter must range from 1 through 52.

Option	Description
Monthly Recurrence	How frequently the process runs in the Day of the Month, or Week of the Month and Day of the Week fields.
Start Time	The time of day to start the background process.
End Date	You can't schedule a process to run more than 5 times after the end of the next calendar year. Example: a process that runs daily starting on 4/22/2013 must end no later than 1/5/2014. As a best practice, set the end date no later than 12/31 of the next calendar year.

4. (Optional) Select 1 or more employees to include or exclude from the step progression schedule using either an eligibility rule or by selecting employees individually.

Result

The process scans all employees with compensation steps and evaluates whether the interval/period or the step progression rule on the current step applies. If so, Workday progresses these employees to the next grade step. Upon completion, the process updates compensation history for these employees.

- If you assigned a progression rule to the step, the effective date of the compensation change is the date of the scheduled run. If you associated the step with an interval/period, the effective date of the compensation change is the date employees meet the time requirement.
- If employees are participating in a parallel compensation event, Workday doesn't progress them to the next step. You can view a list of these employees by running these reports:
  - Employee Compensation Step Progression
  - Employees Eligible for Next Compensation Step

  The next time you run the process, it includes those employees. The date of the step change is the start date of the new step no matter when the process advances the employee.

Example: An employee is eligible to progress from Step 1 to Step 2 on July 1 but is part of another compensation process on July 1. The automatic step process ignores that employee and logs them on the Employee Compensation Step Progression Audit report. Each run, the process attempts to progress that employee to the next step until successful. The date of step change remains July 1, no matter when the process finally succeeds.

For employees managed by a compensation basis total, Workday processes salary plans in different ways, depending on whether the plan allows overrides:

- If the salary plan doesn't allow overrides, Workday treats the salary increase associated with step change as a fixed amount and doesn't alter it.
- If the salary plan does allow overrides, Workday allocates the plan as necessary.

In both cases, Workday performs a partial calculation for any plans that depend on the salary plan. Workday then adjusts the Primary Compensation Basis.

Tasks

Create Compensation Grade Steps on page 991

Reference

Reference: Compensation Step and Grade Progression Reports on page 1003

Request Grade Change

Prerequisites

- Define reasons for the *Request Compensation Changes* event using the Maintain Event Categories and Reasons task.
- Create compensation grades.
- Configure the *Request Compensation Change* business process to meet your needs.

Context

You can request a change in grade for any employee not assigned a grade step.

Steps

1. Access the Request Grade Change task.
2. Specify the Employee to whom this change applies. This field doesn't display when you select this task as a related action off an employee.
3. Select a different Grade, and optionally, select a new Grade Profile.

Result

Changing the grade might change the pay range for the employee; however, it doesn't change actual compensation.

Next Steps

To change pay, use the Request Compensation Change task.

Related Information
Tasks
Set Up Compensation Package Analytics on page 1045

Set Up Adjustments to Compensation Grades Assigned to Job Profiles

Prerequisites

- Configure the *Set Up Compensation Grade Job Profile Adjustment* business process.
- Define reasons for *Request Compensation Change* event using the Maintain Event Categories and Reasons task.

Context

You can update the grade assigned to:

- A job profile.
- Employees in that job profile.

Note: Workday doesn't update employees in a grade step.

Steps

1. Access the Set Up Compensation Grade Job Profile Adjustment task.

2. Select the Job Profile.

   If the job profile you want to adjust already has an adjustment in progress, it won't be available for selection.

   Workday calculates and displays:

Employees in this Grade	• Identifies all positions that have the selected job profile. • Identifies employees in those positions. • Identifies employees that have the same grade as that on the job profile. • Excludes employees in a compensation step.
Employees not in this Grade	• Identifies all positions that have the selected job profile. • Identifies employees in those positions. • Identifies employees that have a grade that doesn't match the one on the job profile.
Employees with an In Progress Event	Workday doesn't process these employees. Complete the in-progress event and then reprocess these employees.

3. Select the Allowed Actions for Employees not in this Grade.

   This applies only when you assign employees to the plan.

Option	Description
Adjust to New Grade	Workday sets the assigned value to the new default.
Do Not Adjust	Workday makes no changes to the values assigned to the employee's compensation.

4. In the Proposed Grade section, enter the Grade you want to associate with the job profile.

Result

Once approved, the process:

- Updates the job profile with the new grade.
- Assigns the grade to the employees and uses eligibility rules to determine if an employee qualifies for a grade profile.
- Creates compensation events using the entered Event Name for each impacted employee.

Example

An employee living in Atlanta has a job profile called Individual Contributor. The grade associated with the job profile is called Level 1. Level 1 has 3 grade profiles: Boston, Chicago, and Detroit. The employee doesn't qualify for any of the grade profiles.

Change the grade associated with the job profile to the grade called IC Level 1. IC Level 1 has 2 grade profiles: Atlanta and San Francisco.

When you run the process, the employee receives the same job profile with the new grade called IC Level 1. However, the eligibility rules associated with the grade qualifies the employee for the grade profile called Atlanta.

Set Up Step Progression Configuration and Notifications

Prerequisites

Set up compensation grades. See Create Compensation Grades.

Set up compensation grade steps. See Create Compensation Grade Steps.

Set up automatic step progression schedules. See Set Up Automatic Compensation Grade Step Progression Schedules.

Security: *Process: Within Grade Increase* domain in the core compensation functional area to access the Edit Step Progression Configuration task.

Security: *Worker Data: Step Progression Target* domain in the core compensation functional area to view an employee's Next Step Progression Target date in the View Compensation task.

Configure the default definition and business process security policy for the *Within Grade Increase Notification* business process.

Context

Workday enables you to configure automatic step progression so that a worker's next step progression target date is preserved if they receive a pay increase or face other compensation changes tied to an effective date.

Workday also enables you to remain informed of upcoming step progressions with the option to schedule step progression notifications that notify your managers of their worker's upcoming step progression events, whether they're eligible or ineligible for progression. If an employee doesn't meet all of the criteria for their automatic step progression, managers can approve or deny the step progression in this notification.

Steps

1. Access the Maintain Event Categories and Reasons task.
    a. Select the *Request Compensation Change* event.
    b. Create a Reason Category named *Last Equivalent Increase*, or whatever your organization chooses.
    c. Create a Reason to denote that a compensation event won't affect the employee's step progression schedule. Example: *Voluntary Demotion*.
2. Access the Edit Step Progression Configuration task.

    As you complete the *Within Grade Increase* section, consider:

Option	Description
Step Progression Notification Time Frame (in days)	Enter the amount of calendar days you want Workday to check ahead for scheduled step progressions to notify you of. Example: You want to be notified of step progressions scheduled to occur 60 days in the future.

Option	Description
Performance Rating Threshold	Select the minimum performance rating an employee must achieve to be eligible for automatic step progression.
Quality Step Increase Reason Code	See Set Up Quality Step Increase.
Step Progression Effective Date	Select the date when the automatic step progression will take place. Example: An employee is eligible for step progression on a Thursday, and pay periods begin on Mondays. You select the *Start of Next Pay Period* option to automatically progress the employee to the next step on the following Monday, the start of the next pay period.

3. Select the Enable Last Equivalent Increase for Step Progression Date Adjustment check box under the *Last Equivalent Increase* tab.

   Add the reasons you configured to the Non-Qualifying Event Reasons field.
4. Access the Schedule Within Grade Increase Notification task.

   This task determines when and how often managers receive notifications of upcoming worker step progressions.

Result

Users configured in the security policy of the *Within Grade Increase Notification* business process will receive 2 types of step progression notifications in My Tasks based on your schedule and business process configuration: 1 for workers who meet the performance threshold and time spent in their current step, and 1 for workers who do not meet these criteria. Users can grant or withhold the step progression of a worker who does not meet the criteria.

When an administrator accesses the Request Compensation Change task, they can now select a *Last Equivalent Increase* reason to preserve the employee's automatic step progression schedule after they submit the compensation change.

Example

To remain up to date on all upcoming scheduled step progressions, you configure the notification schedule to notify you on the first of every month of employee step progressions scheduled to occur within the next 30 days. You've configured the business process to notify you of both eligible and ineligible employees. Employees who receive a performance rating below 3 do not automatically progress to their next step, and you can grant or withhold their progression.

Next Steps

Run the All Within Grade Increase Notification Events report to view a complete list of notification events.

Reinstate the automatic step progression of employees whose automatic step progression you withheld.

You can create step progression override events for workers and change their Workday-calculated Next Step Progression Target Date to a date of your choosing. Automatic step progression will run based on this new overridden date. To do this:

1. Configure the business process security policy and default definition for the *Request Step Progression Date Override* business process.
2. Access the Request Step Progression Date Override task.

Set Up Time Off and Leave Impact on Step Progression

Prerequisites

Set up compensation grades. SeeCreate Compensation Grades.

Set up compensation grade steps. See Create Compensation Grade Steps.

Set up automatic step progression schedules. SeeSet Up Automatic Compensation Grade Step Progression Schedules.

Security:

- *Set Up: Leave of Absence* in the Absence functional area.
- *Set Up: Time Off* in the Absence functional area.
- *Process: Within Grade Increase* in the Core Compensation functional area.
- *Worker Data: Step Progression Target* in the Core Compensation functional area.

Context

You can enable a worker's time off or leave to impact their next step progression target date. Based on the step's eligibility rules, grace period, and time off or leave impacts, Workday calculates an adjusted Next Step Progression Target Date on the worker's profile.

Steps

1. Access the Edit Step Progression Configuration task.

   Select the Enable Time Off and Leave Event Adjustments check box in the Time Offs and Leave Types tab.
2. Access the Maintain Absence Type Code Mapping task.

   Map the time off and leave events that you want to impact step progression to the impact code Step Progression. You can only map time offs and leave types configured in hours to step progression.
3. (Optional) Access the Maintain Compensation Steps task and configure the Grace Period Interval and Grace Period Type of time off and leave events for each step.

   Grace periods enable you to indicate the number of hours or workweeks a worker can accumulate applicable time off or leave before Workday adjusts their Next Step Progression Target Date. You can't assign a different grace period by leave type, time off, or location. The grace period is configured at the step level and all configured time offs and leaves impact the step progression equally.

Result

Workday takes the total amount of approved leave and time off hours taken by the worker and tied to the step progression impact code, and adjusts the Next Step Progression Target Date to a later date. This evaluation occurs continuously as time off and leave hours are approved.

Example

A worker on compensation step 5 has a next step progression target date of June 1. He takes 2 months off work with a leave type tied to the Step Progression impact code. His current step has a grace period of 1 month. Workday adjusts his next step progression target date to July 1.

Set Up Quality Step Increase

Prerequisites

Set up compensation grades. See Create Compensation Grades.

Set up compensation grade steps. See Create Compensation Grade Steps.

Set up automatic compensation grade step progression schedules. See Set Up Automatic Grade Step Progression Schedules.

Configure the default definition and business process security policy for the *Quality Step Increase* business process.

Security: *Process: Within Grade Increase* in the Core Compensation functional area.

Context

Quality step increases in Workday grant employees a one-time step increase that doesn't impact their normal step progression schedule.

Steps

1. Access the Maintain Event Categories and Reasons task.
    a. Select the *Request Compensation Change* event.
    b. Create a Reason Category named *Quality Step Increase*, or whatever your organization prefers.
    c. Create a Reason to denote why a worker will receive a quality step increase. Examples: *Temporary Promotion*, or *Outstanding Rating*.
2. Access the Edit Step Progression Configuration task.

    Add your reason to Quality Step Increase Reason Code field. This will be the default reason listed in the quality step increase request.
3. Access the Request Quality Step Increase task.

Result

Workday sends the user configured to review the quality step increase a My Tasks notification with the options to approve, deny, cancel, or add additional reviewers to the request.

The worker receiving the quality step increase retains their normal step progression schedule.

Reference: Compensation Grade and Pay Range Security

You can configure security domains in the Core Compensation functional area:

- For default compensation on open positions and job requisitions.
- To access worker compensation data.
- For workers to access their own compensation data.

Default Compensation on Open Positions and Job Requisitions

Configure security domains for default compensation on open positions and job requisitions.

Non-Worker Data: Compensation	Parent domain of the non-worker compensation data subdomains.
Non-Worker Data: Compensation Basis Pay Range	Grants access to the pay range, compa-ratio, penetration, and segment-related fields.
Non-Worker Data: Compensation Grade	Grants access to the compensation grade and grade profile-related fields.
Non-Worker Data: Compensation Pay Range	Grants access to the total base pay range, compa-ratio, benchmark, and segment-related fields.

Worker Compensation Data

Configure security domains to access worker's compensation data.

Worker Data: Compensation by Organization	Grants access to the Compensation tab on the worker profile, which displays reports and report fields for the worker's compensation assignment.
Worker Data: Compensation Basis	Grants access to worker's Compensation Basis.
Worker Data: Compensation Basis Pay Range	Grants access to the pay range, compa-ratio, penetration, and segment-related fields of compensation bases.
Worker Data: Compensation Grade	Grants access to compensation grade and grade profile-related fields.
Worker Data: Compensation Pay Range	Grants access to the total base pay range, compa-ratio, benchmark, and segment-related fields.

Worker Access to Their Compensation Data

Configure security domains for workers to access their own compensation data.

Note: Workday doesn't deliver these self-service security policies enabled. Enable the security policies and add security groups to allow employees to see their own pay ranges.

Self-Service: Compensation Basis Pay Range	Grants workers access to the pay range of their Primary Compensation Basis.
Self-Service: Compensation Salary Grade	Grants workers access to compensation information related to their salary grade and grade profile
Self-Service: Total Base Pay Range	Grants workers access to the pay range of their total base pay.

Reference: Compensation Step and Grade Progression Reports

To view employee information regarding step and grade progression, use these reports:

Report Name	Purpose	Generation	Next Step
Employee Compensation Step Progression	Lists employees who have had a compensation step change within the specified time period. The report captures: • Employees advanced to the next step through the automatic step progression progress. • Employees hired into a compensation step. • Employees with a manual compensation step change. Click the various links on a compensation change to drill into details. For hire compensation events, the Old Step value remains blank if this is their first step.	To run this report: • Access the report through search or the Compensation menu category. • Use the Schedule a Report task to schedule and run the report the same time that you run automatic step progression process.	Review the employees included on the list and drill into details as necessary. If you have run the automatic step progression process, access the Employee Compensation Step Progression Audit report to review a list of skipped employees due to conflicting compensation events.
Employee Compensation Step Progression Audit	This report lists employees eligible to progress to the next compensation step in their grade but did not. Some employees don't progress due to a parallel compensation process that ran the same time as the automatic step progression process. The automatic step progression process can advance employees to the next step if there is no parallel compensation process in progress.	To run this report: • Access the report through search or the Compensation menu category. • Use the Schedule a Report task to schedule and run the report the same time that you run automatic step progression process.	Complete the processing of the conflicting compensation event for the pending employees. To drill to the compensation event that prevented the step progression, click the Parallel Compensation Process link. Next, rerun the automatic step progression process using the Schedule Automatic Step Progression task.
Employees Eligible for Next Compensation Grade	Lists relevant details about employees who have reached the last compensation step in their current grade and are eligible to progress into the first step of the next grade.	To run the report: • Access the report through search or the Compensation menu category. Use the current or future date.	For employees on the last step of their grade, progress these employees to the next grade manually using the Request Compensation Change task.

Report Name	Purpose	Generation	Next Step
		• Use the Schedule a Report task to schedule and run the report the same time that you run automatic step progression process.	The automatic step progression process only moves employees to the next step within the same grade.
Employees Eligible for Next Compensation Step	This report lists, as of a specific date, relevant details about employees who have satisfied the time requirement for their current compensation step and are eligible to progress to the next step in their grade.	Access the report through search or the Compensation menu category. Use the current or future date.	When ready, run the automatic step progression process to advance these employees to the next step in their grade. To schedule and run the process, use the Schedule Automatic Step Progression task.

Compensation Survey Management and Benchmark

Setup Considerations: Compensation Survey Management and Compensation Benchmark

You can use this topic to help make decisions when planning your configuration and use of compensation survey management and compensation benchmark. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Compensation survey management and compensation benchmark enable you to compare how you're compensating your employees to other employers and to employees in your tenant. You can match market data from compensation survey vendors, and internally to Workday job profiles to compensate your employees and candidates accordingly.

Business Benefits

With compensation survey management, you can:

- Understand how your organization's compensation compares to the market.
- Monitor compensation trends in your industry.
- Budget for compensation cycles in a competitive job market.
- Identify employees that fall below market.
- Offer candidates more competitive compensation packages.
- Make informed decisions on retaining key employees.

Use Cases

- Maintain multiple vendors, products, and compensation surveys over time.
- Match survey jobs with Workday job profiles.
- Connect your employees with matched survey jobs.
- Populate job matches in new compensation surveys based on matches in past surveys.
- Use Workday reports to collect employee compensation data for survey submission.
- Store survey results from multiple surveys with multiple compensation components.
- Store custom fields and percentiles for each compensation component.
- Manage multiple result sets and their effective dates for each survey.
- Manage survey scopes, and use compensation eligibility rules to connect employees with survey scopes.
- Use data from multiple surveys to generate a compensation benchmark that you can use for guidance during compensation transactions or to analyze employee compensation.
- Use machine learning to analyze jobs and job profiles from compensation surveys to recommend job matches.

Questions to Consider

Questions	Considerations
Will Workday calculate the external compensation survey benchmark, or will you calculate it outside of Workday and load it?	If Workday calculates the compensation benchmark, set up survey vendors, job matches, load survey results, and configure a calculated compensation benchmark cycle. If you calculate the benchmark outside of Workday, you only need to set up survey result compensation components and result percentiles. Then load your benchmark data into a loaded compensation benchmark cycle.
What survey vendors and products are best suited for this feature?	You can use this feature to manage quantitative compensation surveys.
How often should you update survey vendors, products, and surveys?	You only need to set up a vendor and survey product once. You can then add new surveys each year.
How many compensation survey components do you need?	You can configure as many survey components, such as Base Pay or Total Cash, as necessary with the Maintain Compensation Survey Components task. You can then load components into Workday using the *Import Compensation Survey Job Results* web service.
How do you set up compensation survey result custom fields?	Access the Maintain Compensation Survey Result Custom Fields task. You can configure each custom field as numeric or to inherit the currency type from compensation component. You can then load your custom fields into Workday using the *Import Compensation Survey Job Results* EIB template and web service.
How do you set up compensation survey result percentiles?	Use the Maintain Compensation Survey Result Percentiles task to configure percentiles. You can configure as many percentiles, such as 25th, 50th, and 75th, as necessary. You can then load them into Workday using the *Import Compensation Survey Job Results* web service.

Questions	Considerations
What survey scopes do you need?	Configure scopes that belong to each compensation survey vendor on the Maintain Compensation Survey Scopes task. Survey scopes can be locations, such as *Tri-Cities Area* or *San Francisco Bay Area*. You can associate survey scopes with employees using eligibility rules.
How do you want to manage multiple survey result set releases of the same survey?	You can configure result set names and effective dates on the Maintain Compensation Survey Result Sets task.
How do you match a job profile to a survey job or a specialty of a survey job?	You can match job profiles to survey jobs or job specialties on the Edit Compensation Survey Job Matches task. You can also use the *Put Compensation Survey Job Matches* web service. To match a subset of employees of a job profile to a survey job or a specialty, you can also set up eligibility rules on that job match. Workday matches employees for the job profile that meet: • 1 of the eligibility rules on the compensation survey, and 1 on the survey job to the job profile match. • 1 of the eligibility rules on the compensation survey, and 1 on the survey job specialty to the job profile match.
How do you use a compensation survey so that it applies only to a certain country?	Access the Maintain Compensation Surveys task to set up an eligibility rule specifying that country on the survey. Workday matches only the employees in that country to jobs in the survey.
Do you have a compensation survey that applies to multiple countries but the job matches differ across countries?	You can set up eligibility rules: • To manage surveys for each country separately. However, you must create a separate survey for each country and load survey job catalogs and job matches for each survey. • On the job match, not the compensation survey. You can then set up 1 survey and load the survey job catalog once. For the survey jobs that have different matches by country, you can set up multiple matches and attach country-specific eligibility rules to each match.
How do you manage a compensation survey that covers multiple countries or multiple locations with different survey results?	You can set it up as 1 survey, then load the job catalog and job matches. For each country or each location, set up a result scope using the Maintain Compensation Survey Scopes task, and attach eligibility rules to each scope.
Do all job profiles or a subset require weights, adjustments, or annual aging factors?	You can configure weight, adjustment, and aging factors for all job profiles or a subset on the Create Compensation Benchmark Cycle task.

Questions	Considerations
	You can then apply them to all job profiles or to a subset.
What weight, adjustment or aging factors do you apply to your survey results?	You can configure weight, adjustment, and aging factors on the Create Compensation Benchmark Cycle task.

Recommendations

Workday recommends that you:

- Set up eligibility rules to determine which employees qualify for compensation surveys, job matches, or scopes. If you don't set up eligibility rules, all employees qualify.
- Group all job families or job profiles that share the same configuration together when configuring a compensation benchmark.

Requirements

No impact.

Limitations

You can only load 4 custom fields and 5 percentile fields at a time with the *Import Compensation Survey Job Results* web service. If you need more custom or percentile fields, run the web service again.

Tenant Setup

No impact.

Security

These security domains in the Core Compensation functional area.

Domains	Considerations
Non-Worker Data: External Compensation Benchmark	Provides access to the external compensation benchmark for a non-worker, such as for a job requisition. External compensation benchmark data is provided by compensation survey vendors outside of Workday.
Non-Worker Data: Internal Compensation Benchmark	Provides access to the internal compensation benchmark for a non-worker, such as for a job requisition. Workday aggregates internal compensation benchmark data from employee compensation data internal to your tenant.
Set Up: Compensation Benchmark	Enables you to configure compensation benchmark cycles and generate compensation benchmarks from survey results.
Set Up: Compensation Surveys and Survey Jobs	Enables you to configure survey vendors, products, and jobs.
Set Up: Compensation Survey Job Matches	Enables you to match survey jobs with Workday job profiles.
Set Up: Compensation Survey Results	Enables you to configure and load survey results: • Components. • Custom fields. • Percentiles. • Result sets.

Domains	Considerations
	• Scopes.
Worker Data: External Compensation Benchmark	Enables you to create calculated fields for reporting on external compensation benchmarks.
Worker Data: Internal Compensation Benchmark	Enables you to create calculated fields for reporting on internal compensation benchmarks.

Business Processes

No impact.

Reporting

Reports	Considerations
Compensation Survey Jobs	You can use this report to review a survey's job catalog, including job codes, titles, levels, descriptions, families, and functions. With survey job detail and subdetail reference IDs, this report can also help you to prepare the EIB template and update the existing job catalog.
Compensation Survey Jobs and Matches	You can use this report to verify how a survey's jobs match to Workday job profiles.
Compensation Survey Job Matches by Job Profile	You can use this report to verify how Workday job profiles match to compensation survey jobs.
Compensation Survey Results	You can use this report to view survey results of all survey jobs in a selected result set.
Internal Compensation Benchmark for Job Profile(s)	You can use this report to examine how your internal workers are being paid compared with their peers.
Internal Compensation Benchmark for Worker(s)	You can use this standard report for the internal compensation benchmark. You can copy it, create calculated fields, and add them to your copy.
Review Compensation Benchmark Cycle	You can use this report to review configurations contributing to the benchmark of a job family group, a job family, a job profile, or the entire cycle.
Review Compensation Benchmark Data	You can use this report to review the compensation benchmark data of multiple job family groups, job families, or job profiles.
Compensation Survey Results by Job Profile	You can use this report to view survey results for survey jobs that match selected Workday job profiles or job families from specified survey result sets.
Worker and Compensation Data for Survey Job Matches	You can use this report to: • Collect employee compensation data for each employee.

Reports	Considerations
	• Match the employee's job profile to the survey job. • Prepare employee data for survey submission. The survey you select determines the survey jobs and matches. The effective date determines the employee data.

Integrations

Workday provides these public web services to support compensation survey management:

Web Services	Description
Import Compensation Benchmark Configuration	Import a calculated benchmark cycle, including benchmark cycle data, weight method, and age to date.
Import Compensation Benchmark Data	You can create benchmark data outside of Workday and load it with this EIB.
Import Compensation Survey Job Details *Put Compensation Survey Job Detail*	After setting up compensation survey vendors, products, and surveys, use these web services to create and update the survey job catalog.
Import Compensation Survey Job Results	Set up compensation survey: • Components. • Custom fields. • Percentiles. • Result sets. • Scopes. Then use this web service to load survey results into Workday.
Put Compensation Survey Job Matches	Use this web service to match survey jobs with Workday job profiles.

Connections and Touchpoints

Compensation Survey Management touches the Staffing functional area, especially regarding job profiles.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Enable Machine Learning for Compensation Benchmark Job Matching

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Context

Using machine learning, Workday:

- Analyzes the data in your tenant that defines the job profiles and jobs from compensation surveys.
- Matches skills across jobs.
- Recommends jobs from compensation surveys to match with a job profile.

Steps

1. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   On the Innovation Services Opt-In task, select the HCM ML Features and Third Party Connectors GA service on the Available Services tab in the HCM category.
2. Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

   Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.
3. Wait until the next business day for Workday to extract and index survey jobs.
4. Test your configuration in your implementation tenant only.
   a) Access the Run On-Demand Machine Learning Activation for Implementation Tenant task.
   b) Select HCM ML Features and Third Party Connectors GA.

      If you've updated your survey or job profile data, you can run this task only 1 time each day to refresh your suggestions.
   c) Access the Maintain Weekly Machine Learning Activation for Implementation Tenant task to test on an ongoing basis.

   Security: *Manage: Innovation Services* in the Innovation Services functional area.

Result

With machine learning enabled, Workday:

- Makes recommendations for matching jobs with Workday job profiles on the Edit Compensation Survey Job Matches task.
- Uses your mapping of Workday job profile levels to survey job levels on the Maintain Compensation Survey Job Level Mapping task. This enables machine learning to recommend survey jobs of the right level.

Next Steps

- Match survey jobs with Workday job profiles on the Edit Compensation Survey Job Matches task to enable machine learning recommendations for job matches with Workday job profiles.
- Map Workday job profile levels to survey job levels on the Maintain Compensation Survey Job Level Mapping task to ensure better machine learning recommendations.

Related Information

Tasks

Steps: Configure External Compensation Benchmarks from Survey Results on page 1016

Reference

Workday Community: Available Innovation Services – Service Descriptions and Exhibits

Workday Community: Compensation Survey Job Match

Workday Community: Workday Machine Learning

Reference: Edit Tenant Setup - HCM

Steps: Manage External Compensation Surveys, Job Catalog, and Job Matches

Context

You can add new and manage existing compensation survey vendors, their products, and their surveys.

Managing compensation surveys is:

- Required if you use calculated external compensation survey benchmark cycles. In this case, you configure how Workday calculates the compensation benchmark.
- Unnecessary if you only use loaded external compensation survey benchmark cycles. For loaded benchmark cycles, you calculate benchmark data outside of Workday and load it using a web service.

Steps

1. Access the Maintain Compensation Survey Vendors and Products task.

   Add 1 or more Vendor and Product combinations. Each vendor can have 1 or more products. You can't remove vendors and products if you've created compensation surveys for them.

   You can click Usage Count to see where the product is used.

   Security: *Set Up: Compensation Surveys and Survey Jobs* domain.

2. Access the Maintain Compensation Surveys task.
    a) Select a Vendor.
    b) Select a Product.
    c) Add 1 or more Survey Date and Survey Name rows.

       You can delete a row as long as there are no associated jobs.
    d) Add 1 or more Compensation Eligibility Rules for each row, if necessary.

       Eligibility rules associate positions or job requisitions in Workday to surveys, job details, or job specialties. If you add more than 1 compensation eligibility rule per row, Workday associates positions or job requisitions with the survey when they meet any 1 rule.

       If you don't set up eligibility rules:

       - On a compensation survey, all employees qualify for that survey.
       - On a match between a survey job and a job profile, Workday matches all employees on the job profile to the survey job.

       Security: *Set Up: Compensation Surveys and Survey Jobs* domain.
3. Create and update the survey job catalog with these web services:

    - *Import Compensation Survey Job Details*.
    - *Put Compensation Survey Job Detail* to load a survey job catalog.

   Security: *Set Up: Compensation Surveys and Survey Jobs* domain.
4. Match survey jobs with Workday job profiles.

   You can do this on the Edit Compensation Survey Job Matches task. If you've enabled machine learning for compensation benchmark job matching, Workday makes machine learning recommendations.

   You can also match survey jobs with Workday job profiles using the *Put Compensation Survey Job Matches* web service.

   The Find Compensation Survey Jobs task provides multiple criteria by which you can identify survey jobs for matching.

   On the Edit Compensation Survey Job Matches task, select surveys and as you add 1 or more job matches, consider:

Option	Description
Job Profile	Select a Workday job profile to match to compensation survey jobs.
Include Matches from Surveys	Select the surveys you want to assign job matches for the job profile.
Survey	Select 1 of the surveys ones you selected previously.
Survey Job	Select a job from the survey.
Job Match Eligibility Rules	Select 1 or more job match eligibility rules. The job match only applies to employees or job requisitions that meet an eligibility rule.

   With the *Put Compensation Survey Job Matches* web service, consider:

To accomplish this...	Do this...
Match a survey job in the survey to a Workday job profile.	Enter 1 line with the survey job from the survey and the Workday job profile.

To accomplish this...	Do this...
Delete a match between a survey job in the survey and a Workday job profile.	Enter the survey job without the Workday job profile.
Match a survey job in the survey to multiple Workday job profiles.	Enter multiple lines with the survey job from the survey for each Workday job profile.
Match multiple survey jobs to a Workday job profile.	Enter multiple lines with each survey job from the survey and the Workday job profile.
• Match the same survey job to different job profiles in different locations. • Match workers, positions, or job requisitions in a specific organization or location to a survey job.	Enter compensation eligibility rules for the job detail or subdetail. The compensation survey job detail or subdetail matches only workers, positions, or job requisitions that meet 1 or more compensation eligibility rules.

Note: The *Put Compensation Survey Job Matches* web service updates or appends existing job matches in Workday. Only the job matches you add or change affect existing job match data.

Security: *Set Up: Compensation Survey Job Matches* domain in the Core Compensation functional area.

5. Access the Maintain Compensation Survey Job Level Mapping task.

   Map Workday job profile levels to survey job levels. If you've enabled machine learning for compensation benchmark job matching, Workday uses your mapping practices to make recommendations.

   Security: *Set Up: Compensation Survey Job Matches* domain in the Core Compensation functional area.
6. Access the Maintain Compensation Survey Jobs task.

   Add a Survey Job Code and 1 or more jobs, including title, level, function, family, and 1 or more specialties. You can also use the Add Compensation Survey Jobs or Edit Compensation Survey Jobs tasks.

   Example: SMP-C2034, Technical Writer 1, Level 1, Sr. Technical Writer, Maintain Admin Guide, Information Development, Admin Guide.

   To delete survey jobs, access the Delete Compensation Survey Jobs by Survey task.

   Security: *Set Up: Compensation Surveys and Survey Jobs* domain.

Next Steps

- Steps: Manage External Compensation Survey Results on page 1015.

Tasks

Create Eligibility Rules for Compensation on page 986

Steps: Manage External Compensation Survey Results

Prerequisites

Set up compensation survey vendors, products, and the job catalog.

Context

After you've set up compensation survey vendors, products, and the job catalog, configure survey:

- Components.
- Custom fields.
- Percentiles.
- Result sets.
- Scopes.

Then run the *Import Compensation Survey Job Results* web service.

Steps

1. Access the Maintain Compensation Survey Components task.

   Enter 1 or more compensation survey components and their order.

   Example: Base Pay, Bonus, Total Cash.

   Enter the *Reference ID* or *Workday ID* of the compensation components you created into the First Component through Sixth Component columns of the *Import Compensation Survey Job Results* EIB.

   If you need to load more than 6 compensation components, run the *Import Compensation Survey Job Results* web service more than once.

   Security: *Set Up: Compensation Survey Results* domain.
2. (Optional) Access the Maintain Compensation Survey Result Custom Fields task.

   This step is unnecessary if you used loaded compensation benchmark cycles.

   Enter 1 or more custom fields, and consider:

Option	Description
Numeric	The custom field is always a numeric value. Example: the Number of Employees custom field is always numeric.
Inherit Currency Type from Compensation Component	Inherits the currency type from the compensation component. Example: If the compensation component is Base Pay, the Average custom field is a currency. If the component is Bonus Target Percent, the Average custom field isn't a currency.

   Enter the *Reference ID* or *Workday ID* of the custom fields you created in the First Custom Type through Fourth Custom Type columns of the *Import Compensation Survey Job Results* EIB.

   If you need to load more than 4 custom fields per compensation component, run the *Import Compensation Survey Job Results* web service more than once. You can also use percentile fields to store custom fields.

   Security: *Set Up: Compensation Survey Results* domain.
3. Access the Maintain Compensation Survey Result Percentiles task.

   Enter 1 or more percentile name and value rows. Use only integers to represent each percentile value. Example: Enter 25th for the Percentile Name and 25 for the Percentile Value.

   Alternatively, you can use the *Import Compensation Survey Job Results* EIB and web service. Enter the *Reference ID* or *Workday ID* of the percentile fields you created in the First Percentile through Fifth Percentile columns. If you need to load more than 5 percentiles per compensation component, run the *Import Compensation Survey Job Results* web service more than once. You can also use custom fields to store percentiles.

Security: *Set Up: Compensation Survey Results* domain.

4. (Optional) Access the Maintain Compensation Survey Result Sets task.

   This step is unnecessary if you used loaded compensation benchmark cycles.

   For each survey, enter 1 or more result set names and effective dates.

   Example: A compensation survey releases results quarterly. Enter:

   - Q1 2020 and 01/01/2020.
   - Q2 2020 and 04/01/2020.
   - Q3 2020 and 07/01/2020.
   - Q4 2020 and 10/01/2020.

   Security: *Set Up: Compensation Survey Results* domain.
5. (Optional) Access the Maintain Compensation Survey Scopes task.

   This step is unnecessary if you use loaded compensation benchmark cycles.

   For each vendor, enter 1 or more compensation survey scopes. For each survey scope, you can select 1 or more eligibility rules. Example: If the survey results of this scope apply only to employees in the San Francisco Bay Area, enter:

   - *San Francisco Bay Area* for the scope, and
   - *Location is San Francisco Bay Area* for the eligibility rule.

   When configuring a calculated benchmark cycle, you can select survey result scopes to apply specific survey results to a benchmark profile.

   Security: *Set Up: Compensation Survey Results* domain.
6. (Optional) Run the *Import Compensation Survey Job Results* web service to load survey results.

   This step is unnecessary if you used loaded compensation benchmark cycles.

Next Steps

To delete survey results, access the Delete Compensation Survey Results .

Access the Compensation Survey Results and Compensation Survey Results by Job Profile reports.

Related Information

Concepts

Concept: EIB Spreadsheet Data Entry Guidelines

Tasks

Create External Compensation Survey Benchmark Cycles on page 1018

Steps: Configure External Compensation Benchmarks from Survey Results

Context

You can use data from multiple external market surveys to calculate compensation benchmarks to guide you during compensation transactions.

Steps

1. Access the Maintain Compensation Benchmark Profiles task.

   Enter 1 or more benchmark profiles and 1 or more compensation benchmark eligibility rules for each. Workday links employees and job requisitions to benchmark profiles based on eligibility rules.

   A benchmark profile usually corresponds to a location, which can have its own market data.

   To determine which compensation benchmark profile to use for the external compensation benchmark of an employee, Workday determines which benchmark profile the employee is eligible for. If an employee is eligible for multiple benchmark profiles, Workday uses the highest ranked eligible benchmark profile.

   Rank the benchmark profiles according to usage. Example: Rank San Francisco ahead of United States. If most of your employees are in the United States, rank United States ahead of other countries.

   Security: *Set Up: Compensation Benchmark* in the Core Compensation functional area.
2. Access the Maintain Compensation Benchmark Targets and Spreads task.

   As you complete this task, consider:

Option	Description
Job Families or Groups / Job Profiles / All Job Profiles	Select 1 option: • 1 or more job family groups. • 1 or more job families. • 1 or more job profiles. • All job profiles.
Compensation Components / All Compensation Components	Select 1 or more compensation components from the list or select all.
Target Percentile	The percentile that you configured as the target of a compensation composite. Examples: 25th, 50th, 75th.
Range Spread, %	Enter a percentage. Workday calculates the minimum and maximum: • Minimum = Midpoint / (1 + 0.5 * Range Spread). • Maximum = (1 + Range Spread) * Minimum. Example: If the 50th percentile of the compensation benchmark is 110,000, and you select the 50th percentile as the composite target percentile, Midpoint is 110,000. If the Range Spread is 20%, Minimum is 100,000 and Maximum is 120,000.

   Security: *Set Up: Compensation Benchmark* in the Core Compensation functional area.
3. Create External Compensation Survey Benchmark Cycles on page 1018.

   Security: *Set Up: Compensation Benchmark* in the Core Compensation functional area.

4. Reporting on Compensation Benchmarks on page 1023.

   You can access the: Review Compensation Benchmark Data report to review the external compensation benchmark of job profiles.

   You can also create custom reports for:

   - External compensation benchmark for job profiles.
   - Current compensation assignment and pay range from compensation grade and grade profile.
   - External and internal compensation benchmark for employees.

   Security: *Worker Data: External Compensation Benchmark* and *Worker Data: Internal Compensation Benchmark* in the Core Compensation functional area.

Next Steps

Access:

- Delete Compensation Benchmark Cycle task.
- View Compensation Benchmark Cycles report.

Create External Compensation Survey Benchmark Cycles

Prerequisites

Security: *Set Up: Compensation Benchmark* in the Core Compensation functional area.

Context

You can create either a calculated or loaded external compensation survey benchmark cycle type:

- Calculated: You configure how Workday calculates the compensation benchmark using either the Create Compensation Benchmark Cycle task or the *Import Compensation Benchmark Configuration* web service.
- Loaded: You calculate benchmark data outside of Workday and load it into Workday using either the Create Compensation Benchmark Cycle task or the *Import Compensation Benchmark Data* web service.

For calculated external compensation survey benchmark cycles, you can configure benchmark weight, adjustment, and aging factors on a single row, provided job profiles or job families share the same configuration.

If a job profiles or job families have varying attributes, you can configure them on multiple rows.

For ease of management and review, Workday recommends that:

- For a compensation benchmark of a job family group, job family, or job profile, keep configurations of all benchmark profiles together.
- For a compensation benchmark profile, keep configurations of all compensation components together.

For weights and adjustments, configurations can differ for each compensation component (such as base pay or total cash target) at each location for each job profile. For annual aging factor, you can also assign a different value per compensation component per location per job profile.

Steps

1. Access the Create Compensation Benchmark Cycle task.
2. Select a Compensation Benchmark Cycle Type.

Option	Description
Calculated	Select this option to configure a benchmark cycle within Workday. Configure weights, adjustments, and aging factors to calculate benchmarks from survey results.
Loaded	Select this option if you calculate benchmark data outside of Workday. Configure Workday to receive the data, then load your calculated benchmark data into Workday.

3. (Optional) Configure a Calculated benchmark cycle:

   As you complete this task, consider:

Option	Description
Weight Method	For calculated benchmarks, select: • Equal Weight Among Surveys: Workday weights the selected surveys equally. If a job profile matches multiple jobs in a survey, Workday divides the weight for that survey evenly among the jobs. • Manual Weight: Manually configure weight among surveys. • Weight by Survey Result Custom Field: Workday calculates the weight of each survey for each compensation component based on the relative ratio of selected custom fields. Example: The compensation component Base Pay for the Software Engineer 1 job profile comes from the: ◦ 2021 Radford GTS survey, with 1,500 companies contributing data. ◦ 2021 Mercer TRS survey with 500 companies contributing data. Radford has a weight of 1,500 / (1,500 + 500) = 75%. Mercer has a weight of 500 / (1,500 + 500) = 25%.
Configuration Effective Date	The effective date of the benchmark cycle remains in effect until a cycle with a later date becomes effective.
Age to Date	Workday ages compensation survey results to this date using annual aging factors.
Job Families or Groups / Job Profiles / All Job Profiles	Select 1 option: • 1 or more job family groups. • 1 or more job families. • 1 or more job profiles. • All job profiles.
Benchmark Profile	Select 1 of your benchmark profiles.
Compensation Components / All Compensation Components	Select 1 or more compensation components from the list or select all. Workday only ages components you select.

Option	Description
Survey / Survey Result Set	For Weights and Adjustments, select a compensation survey or survey result set. If you select a survey for this field, Workday uses the survey result set with the latest effective date from the selected survey. Some surveys release survey results multiple times per year. When you create and load a new survey result set, Workday uses data from the latest survey result set without updating benchmark cycle configuration.
Surveys / Survey Result Sets	For Annual Aging Factors, elect 1 or more compensation surveys or survey result sets. If you select a survey, Workday applies aging to all result sets in this survey. If you select a survey result set, Workday applies aging only to the selected survey result set.
Survey Result Scope	For Weights and Adjustments, select a scope that belongs to the vendor of the survey or survey result set and applies to the selected benchmark profile. Example: If the benchmark profile is *San Francisco, CA, US*, select the *San Francisco Bay Area* survey result scope.
Survey Result Scopes / All Survey Result Scopes	(Optional) For Annual Aging Factors, if configured, Workday applies aging only to the scope of your selected surveys or survey result sets. If left blank, Workday applies aging to all scopes of your selected surveys or survey result set.
Weight Factor, %	For Weights and Adjustments, enter a percentage. Example: 10 is 10%. Weight factors must total 100% for a compensation component.
Adjustment Factor, %	For Weights and Adjustments, enter a percentage. Example: 10 for 10%.

Option	Description
Aging Factor, %	(Optional) For Annual Aging Factors, enter a percentage. Example: 10 is 10%.

Workday calculates the benchmark using this formula:

```
sum(Cn * Wn* (1 + ADJn) * (1 + An))
```

Where:

- *Cn*: Compensation component value for the nth source of survey result data.
- *Wn*: Weight factor for the nth source of survey result data.
- *ADJn*: Adjustment factor for the nth source of survey result data.
- *An*: Aging factor for the nth source of survey result data. The aging factor is proportional to the annual aging factor and is based on the duration in months between:
    - The compensation benchmark cycle age to date.
    - The survey result set effective date.

  Example:

    - The annual (12 months) aging factor is 3% (0.03).
    - The survey result set effective date is 4/1/2020 and the benchmark cycle age to date is 10/1/2021 (18 months).
    - The aging factor is: 0.03 * 18 / 12 = 0.045 (4.5%).

Workday uses lower level configurations to override higher level configurations, in this order:

a. Job profile.
b. Job family.
c. Job family group.
d. All job profiles.

4. (Optional) Configure a Loaded benchmark cycle for the compensation benchmark data you calculated outside of Workday.

   As you complete this task, consider:

Option	Description
Job Profile	Enter a job profile.
Benchmark Profile	For each job profile, enter a benchmark profile, a currency, and a frequency.
Compensation Component	For each benchmark profile, enter a compensation component.
Percentile	For each compensation component, enter a percentile.
Benchmark Amount	Enter a benchmark amount.

   After you finish your configuration here, load your calculated data using the *Import Compensation Benchmark Data* web service EIB.

Next Steps

Access:

- Edit Compensation Benchmark Cycle task.
- Review Compensation Benchmark Cycle report.

- Review Compensation Benchmark Data report to review the calculated benchmark data for selected job family groups, job families, or job profiles.

Related Information

Tasks

Steps: Manage External Compensation Surveys, Job Catalog, and Job Matches on page 1012

Steps: Manage External Compensation Survey Results on page 1015

Steps: Configure External Compensation Benchmarks from Survey Results on page 1016

Reference

Reference: Workday Compensation Benchmark Solutions on page 1025

Steps: Create Shadow Compensation Pay Ranges

Prerequisites

Configure compensation benchmark profiles.

Context

You can compare the compensation grades and profiles you have in Workday to those of the benchmark. The Generate Shadow Compensation Pay Ranges task creates shadow compensation pay range segments based on the number of segments in the Workday parent pay range, grade, and grade profile. You can then use the Shadow Compensation Pay Range Comparison report to compare Workday pay ranges to their shadow counterparts.

Workday generates shadow compensation pay ranges when:

- A compensation benchmark cycle exists with data for the selected job profile.
- The pay range grade or grade profile for the job profile has the same eligibility rule or rules as a benchmark profile type in the benchmark cycle. If no eligibility rules are configured on the pay range, Workday uses the default from the benchmark cycle.
- A benchmark target configuration exists for the selected job profile.

Steps

1. Access the Maintain Compensation Benchmark Targets and Spreads task.
2. Access the Create Compensation Benchmark Cycle task.
3. Access the Generate Shadow Compensation Pay Ranges task.

   Select 1 or more job profiles and optionally select a compensation basis.

   Security: *Set Up: Compensation Benchmark* domain in the Core Compensation functional area.
4. Access the Shadow Compensation Pay Range Comparison report.

   Select 1 or more job profiles or 1 or more compensation bases for which you've generated shadow compensation pay ranges.

   The report displays grade profiles and their segments, currency, and frequency for both Workday and the shadow benchmark. You can then compare your current profiles to benchmark data.

   Security: *Set Up: Compensation Benchmark* domain in the Core Compensation functional area.

Steps: Configure Internal Compensation Benchmarks

Context

You can use data from within your own tenant to create internal compensation benchmarks.

Workday calculates the internal compensation benchmark of an employee using the 100% FTE value of each position included in the calculation. Workday includes primary or secondary positions with active employees that share the same job profile, compensation grade, and grade profile as the primary position of the employee. Workday excludes compensation basis values of zero and basis amounts for positions that aren't eligible for the selected compensation basis.

For terminated employees, Workday calculates the internal compensation benchmark based on positions that matched the terminated employee's primary position as of their last day of work.

Steps

1. Access the Edit Tenant Setup - HCM task.

   You can enable more meaningful internal benchmarks while safeguarding sensitive employee data.

   In the Compensation section, enter a value for Internal Compensation Benchmark Threshold.

   The threshold is the number of employees in outside organizations that a manager must have access to for Workday to include them in the benchmark calculation. If the manager doesn't have access to any employee data outside of their organization, the threshold has no effect.

   Workday displays job profile data according to the configured threshold to balance the needs for meaningful information while keeping sensitive data secure. A higher threshold value ensures the security of sensitive pay information, but might result in less meaningful information. A low threshold value might display more meaningful information, but risks a manager being able to deduce the pay of specific employees in outside organizations.

   Example: When Astrid accesses the benchmark of Brendt, Workday determines access to the compensation of all employees, regardless of organization, that share Brendt's job profile, compensation grade, and grade profile.

   - If yes, Astrid can see the internal benchmark derived from all employees.
   - If no, Workday determines the number of employees not in Astrid's organization sharing the same job profile, compensation grade, and grade profile. Workday then compares that number to the threshold.
     - If the number is greater than or equal to the threshold, Astrid can see the internal benchmark derived from all employees, regardless of organization.
     - If the number is less than the threshold, Astrid can only see Brendt's internal benchmark. Brendt's internal benchmark comes from those employees Astrid already has access to and that share the same job profile, compensation grade, and grade profile.

   Security: *Set Up: Compensation Benchmark* in the Core Compensation functional area.
2. Reporting on Compensation Benchmarks on page 1023.

   Access the Internal Compensation Benchmark for Workers standard report. You can compare the current compensation assignment for the primary position to the internal benchmark on the Total Base Pay and Total Salary & Allowances compensation bases.

   You can create a custom report to display current compensation assignment for the primary position, pay range from compensation grade (profile), and internal compensation benchmark of employees.

   Security: *Worker Data: Internal Compensation Benchmark* in the Core Compensation functional area.

Related Information

Tasks

Steps: Manage External Compensation Surveys, Job Catalog, and Job Matches on page 1012

Reference

Workday Community: Overview of Primary Position Designation Impact

Reporting on Compensation Benchmarks

Prerequisites

- Set up compensation survey vendors, products, and the job catalog for external benchmarks.
- Create compensation benchmark cycles for external benchmarks.

- Configure external compensation benchmarks from survey results.
- Security:
  - *Set Up: Compensation Benchmark* in the Core Compensation functional area.
  - *Worker Data: External Compensation Benchmark* in the Core Compensation functional area.
  - *Worker Data: Internal Compensation Benchmark* in the Core Compensation functional area.

Context

External compensation benchmark data comes from these sources:

- Workday generates it from compensation survey market data.
- You load it into compensation benchmark cycles.

Workday generates internal compensation benchmark data from within your tenant.

Business objects for external and internal compensation benchmark data include:

- Compensation Benchmark Composite.
- External Compensation Benchmark.
- External Compensation Benchmark Composite.
- External Compensation Benchmark Configuration.
- Internal Compensation Benchmark.

To provide data from the proper context, use compensation benchmark report fields with these adapter fields:

- External Compensation Benchmark Composite for Job Profile.
- External Compensation Benchmark Composite for Worker.
- External Compensation Benchmark for Job Profile.
- External Compensation Benchmark for Worker.
- Internal Compensation Benchmark for Worker.
- Internal Primary Compensation Basis Benchmark for Worker.

Use these data source filters to select workers or job profiles:

- Workers by Job Profile and Compensation Grade on the Workers for HCM Reporting data source.
- Job Profile by Name, Family, and Family Group on the All Active Job Profiles data source.

Large volumes of workers or job profiles increases report run times. Workday recommends that you minimize the number of workers or job profiles.

Steps

1. Access the Create Calculated Field task.

   Example for an external compensation benchmark:

Option	Description
Business Object	*Worker*
Function	*Lookup Field with Prompts*
Source Field	If you want to report the benchmark percentile value, select *External Compensation Benchmark for Worker*. If you want to report the composite target percentile, range spread, minimum, mid-point, and maximum, select *External Compensation Benchmark Composite for Worker*.
Compensation Component	Select the component you want to report on, such as Base Pay.

Option	Description
	You can create multiple calculated fields to report external compensation benchmark for different compensation components.

Example for an internal compensation benchmark:

Option	Description
Business Object	*Worker*
Function	*Lookup Field with Prompts*
Source Field	If you want to report the internal benchmark of a compensation basis, select *Internal Compensation Benchmark for Worker*.
Compensation Basis	If you use *Internal Compensation Benchmark for Worker* as the Source Field, select the compensation basis you want to report on, such as Base Pay. You can create multiple calculated fields to report internal compensation benchmark for different compensation bases.

2. Create a custom report to display the compensation benchmark for employees.

   For the internal compensation benchmark, copy the Internal Compensation Benchmark for Worker(s) standard report as a custom report.

   Example:

Option	Description
Data Source	Workers for HCM Reporting
Data Source Filter	Workers by Job Profile and Compensation Grade
Primary Business Object	Worker

Add the calculated fields and report fields for the compensation benchmark. You can also add report fields for employee's current compensation assignments and pay range to compare with another benchmark.

This report provides information only on the:

- Primary position for those workers with more than 1 position.
- Workers that match the criteria selected in the report prompts on their primary position details.

Steps: Configure Internal Compensation Benchmarks on page 1022

Reference: Workday Compensation Benchmark Solutions

Workday provides these compensation benchmark solutions:

External Compensation Survey Benchmark	Internal Compensation Benchmark
Workday derives the external compensation benchmark using data from external market survey vendors.	Workday derives the internal compensation benchmark using the compensation of employees sharing the same job profile, compensation grade, and grade profile in the tenant.

External Compensation Survey Benchmark	Internal Compensation Benchmark
Steps: Configure External Compensation Benchmarks from Survey Results on page 1016	Steps: Configure Internal Compensation Benchmarks on page 1022

Related Information
Concepts
Setup Considerations: Compensation Survey Management and Compensation Benchmark on page 1005

Steps: Set Up Benchmark Jobs

Prerequisites

Note: Workday recommends that you use our new, more robust compensation benchmarking solution, accessible through these tasks and reports:

- Create, Edit, Review, and Delete Compensation Benchmark Cycle.
- Maintain Compensation Benchmark Profiles.
- Review Compensation Benchmark Data.
- View Compensation Benchmark Cycles.

Security: *Set Up: Benchmark Jobs* domain in the Core Compensation functional area.

Context

You can manually load composite market data from compensation surveys. You can see which workers are below, at, or above market level when making compensation changes.

Steps

1. (Optional) Access the Maintain Benchmark Job Settings task.

Option	Description
Compare Primary Compensation Basis to Total Cash	Total Cash market data displays on market salary compensation tasks and reports for comparison.
Benchmark Percentile Defaults	Workday uses the percentiles you select here to create rows for manually entering data when creating or editing benchmark jobs.

2. Access the Create Benchmark Job task.
3. In the Default Benchmark Data section, consider:

Option	Description
Competitive Market Target	Select the percentile that you consider the at-market level for this benchmark job.
Target Spread %	The salary range that you consider your at-market level. Example: If you select 50th as your Competitive Market Target: • Enter 10% as the Target Spread, and • 50,000 as the salary Amount for the 50th Percentile.

Option	Description
	The salary spread for this benchmark job is 47,500 - 52,500. Any employee with a base salary that falls within this range is considered at-market level.

4. In the Profile Market Data section, you can define different values for specific employee populations using eligibility rules. If an employee matches the criteria defined by the eligibility rule, Workday uses the Profile Market Data section values instead.

Next Steps

You can access these reports:

Report	Description
Benchmark Jobs Audit	Displays a list of job profiles not associated to a benchmark job.
Direct Reports Market Position	Displays the number of workers that are Above Market, Below Market, At Market, and Blank (not mapped to a benchmark job.)
Job Profile Market Position	Compares the average total base pay to the market for selected job profiles.
Organization Market Position	Displays workers by organization that are Above Market, Below Market, At Market, and Blank (not mapped to a benchmark job).

Manage Compensation Plan Assignments

Roll Out Compensation Plans to Employees

Prerequisites

- Create compensation plans.
- Security: *Process: Compensation Plan Employee Management* domain in the Core Compensation functional area.

Context

You can assign, or roll out, compensation plans to a group of target employees. This process bypasses reviews and approvals, enabling you to assign plans to employees immediately.

You can use the Rollout Compensation Plans to Employees task to assign compensation plans of all types except hourly and salary. To assign hourly and salary plans, use the Request Compensation Change task or web service.

Steps

1. Access the Rollout Compensation Plans to Employees task.
2. Select an Effective Date.

   Workday generates *Request Compensation Change* process events that assign the plans you select to the target employees on this date.
3. Select the Compensation Plans to assign.

4. (Optional) Enter an Expected End Date and an Actual End Date.

   Actual End Date displays only if Enable Actual End Date is selected on the Edit Tenant Setup - HCM task.

   The Expected End Date is an estimate for when the employee's assignment to a salary, hourly, or allowance plan ends. To remove compensation plans from employees based on the Expected End Date, access the Schedule Remove Compensation Plans with Expected End Date task.

   If you enter an Actual End Date, Workday automatically removes the compensation plan assignment from the employee at 11:59:59 PM on that date. If there are future-dated events, Workday doesn't remove the plan assignment.

   The Schedule Remove Compensation Plans with Expected End Date task ignores compensation plan assignments with an Actual End Date. Workday only removes employees from compensation plan assignments on this schedule if there's no Actual End Date configured for the compensation plan assignment.
5. Select the employees to assign the specified plans, either By Compensation Eligibility Rule or By Selected Employees.

   If you use the By Selected Employees option, Workday lists the first 50 employees. Workday doesn't list any individual employees selected using By Compensation Eligibility Rule.

Result

As of the effective date specified, Workday generates a *Request Compensation Change* event for the target employees and adds a row to their compensation history.

Next Steps

Access the View Compensation Plan Rollout Process report to view complete lists of the affected employees. The Employees receiving Compensation Plan field displays the eligible or selected employees that are affected. The Employees not receiving Compensation Plan field displays the eligible or selected employees that are unaffected.

FAQ: Propose Compensation on page 1036

Remove Compensation Plans from Multiple Employees

Prerequisites

Security: *Process: Compensation Plan Employee Management* domain in the Core Compensation functional area.

Context

Remove allowance, bonus, commission, hourly, merit, and stock plan assignments from a target population of employees. This process bypasses reviews and approvals.

Steps

1. Access the Remove Compensation Plans from Employees task.
2. Select the Effective Date on which you want this process to create the compensation change requests to remove the target employees from the specified plans.
3. Select the Compensation Plans (both active and inactive) that you want to remove from the target population of employees.
4. Select Employees to remove from the specified plans, either By Compensation Eligibility Rule or By Selected Employees.
   If you use By Selected Employees, Workday lists the first 50 employees either included in the process or not included because they are in a pending compensation event. Workday does not list any individual employees selected using By Compensation Eligibility Rule.

Tasks
Steps: Add or Remove Employees to or from Compensation Reviews on page 1208

Remove Compensation Plans with Expected End Date

Prerequisites

- Create allowance, hourly, and salary plans.
- Create event using the Maintain Event Categories and Reasons task.
- Security: *Process: Compensation Plan Events* domain in the Core Compensation functional area.

Context

Remove salary, hourly, or allowance plan assignments from a target population of employees if the compensation plan assignments have an Expected End Date. This administrative process and doesn't include reviews or approvals.

Steps

1. Access the Schedule Remove Compensation Plans with Expected End Date task.
2. In the Process Details section, consider:

Option	Description
Effective Date Options	Determines the date on which Workday removes the compensation plan assignments from the employee.
Effective as of Date	Available if you selected *Specific End Date* in the Effective Date Options field. The date on which Workday removes compensation plan assignments from the employees.
Expected End Date	Available when Run Frequency is *Run Now*. Workday includes in the target population employees with this expected end date on the compensation plan assignments.
Start Date	Available when Run Frequency is *Run Now*. Workday includes in the target population employees with an expected end date on or

Option	Description
	after this start date on the compensation plan assignments.
End Date	Available when Run Frequency is *Run Now*. Workday includes in the target population employees with an expected end date on or before this end date on the compensation plan assignments.

3. In the Plans section, select the compensation plans that you want to remove from the target population of employees.

   You can remove active or inactive plans.
4. Click the Schedule tab and complete the Recurrence Criteria and Range of Recurrence information.

   Available when the Run Frequency doesn't equal *Run Now*.

Result

As of the effective date specified, Workday generates a *Request Compensation Change* event for the target employees and adds a row to their compensation history.

This process ignores compensation plan assignments with an Actual End Date. Workday only removes employees from compensation plans if there's no Actual End Date configured.

Next Steps

Access the View Compensation Plan Remove Process report to view complete lists of the affected employees. The Employees removing Compensation Plan field displays the eligible or selected employees that are affected. The Employees not removing Compensation Plan field displays the eligible or selected employees that are unaffected.

Set Up Adjustments to Unit Salary, Hourly, Allowance, and Commission Plans

Prerequisites

- Configure these business processes to meet your needs:
  - *Set Up Unit Salary Plan Adjustment*
  - *Set Up Hourly Plan Adjustment*
  - *Set Up Allowance Plan Adjustment*
  - *Set Up Unit Allowance Plan Adjustment*
  - *Set Up Commission Plan Adjustment*
- Define reasons for *Request Compensation Change* event using the Maintain Event Categories and Reasons task.

Context

You can make adjustments to a unit-based salary, hourly, allowance, and commission plans. Workday then adjusts the compensation amount for all employees in the plan.

Steps

1. Access the appropriate task:
    - Set Up Unit Salary Plan Adjustment
    - Set Up Hourly Plan Adjustment
    - Set Up Allowance Plan Adjustment
    - Set Up Unit Allowance Plan Adjustment
    - Set Up Commission Plan Adjustment
2. Select the compensation plan.

    If the plan you want to adjust already has an adjustment in progress, you can't select the plan.
3. (Optional) For allowance plans, select Retain Basis Total for MBT Employees on the Set Up Allowance Plan Adjustment task.

    If selected, Workday reallocates the compensation basis but retains the basis total. This option affects MBT employees assigned to an allowance plan on a compensation basis with Retain Basis Total selected.
4. Select the Allowed Actions for Employees using Default and Employees using Override for employees assigned to the plan.

Option	Description
Adjust to New Defaults	Applicable to Employees using Default and Employees using Override. Workday sets the assigned value to the new default.
Adjust by Same Amounts	Applicable to Employees using Override. Workday calculates the difference between the old default and the new default, and adjusts the assigned value by that difference. Example: Set the new default to 600 from 500. If the override amount is 700, Workday adjusts the assigned value to 800 because the default increased by 100.

5. Enter the new values.

Result

If you included a review step in the business process, the reviewer approves the request, denies it, or sends it back to the proposer for further revision.

Once approved, the process:

- Updates the plan definition with the new defaults so that future plan assignments have the new values.
- Assigns the plan to the employees and uses eligibility rules to determine if an employee qualifies for a plan profile.
- Creates compensation events with the new values for each impacted employee.

Next Steps

- Access the Compensation Plan End Date Audit report to detect employees with a future dated compensation event that conflicts with the event generated by this process.

    To correct a future dated compensation event, rescind the event and then reprocess it after the adjustment process.

Edit Business Processes
Create Unit Salary Plans on page 1071
Create Commission Plans on page 1086

Steps: Propose Compensation for Employees or Positions

Prerequisites

- Security:
    - Configure access to the domain for each plan type in both the Core Compensation and the Advanced Compensation functional areas.

      Some plan definitions restrict the ability to override values. If you're using a compensation matrix, Workday can derive the plan target for the employee only after their performance review rating exists.

      Your security policies define the sections that display and the changes you can make when proposing compensation. You can set up compensation plans to not allow individual overrides.
    - For employees managed by a compensation basis total, configure access to the *Compensation Change: Compensation Basis Details* domain in the Core Compensation functional area.
- Configure these business processes if you use the Workday Recruiting *Offer* or *Employment Agreement* business processes.
    - *Propose Compensation Offer/Employment Agreement*.
    - *Request One-Time Payment Offer/Employment Agreement*.
    - *Request Stock Grant Offer/Employment Agreement*.

(Optional) Configure your tenant to not display compensation for previously terminated employees you want to rehire. See Concept: Remove Prior Compensation for Rehires.

Context

You can propose compensation for an employee or a candidate during these business processes:

- *Offer*
- *Employment Agreement*
- *Hire*
- *Request Compensation Change*
- *Change Job*
- *Add Additional Job*
- *Start International Assignment*

You can alternatively update compensation for groups of employees using Enterprise Interface Builder (EIB):

Employee Group	EIB
Existing employees	*Request Compensation Change*
New Hires	*High Volume Event - Hire Employee*

You can also assign default compensation to an approved job or position. Every employee hired into that position gets the same default compensation values.

Workday doesn't allow you to initiate a compensation change for yourself.

Steps

1. Access the Maintain Event Categories and Reasons task.

   Define reasons for the *Request Compensation Change* event.
2. (Optional) Access the Configure Optional Fields task.

   You can hide or require most fields delivered as optional on these business processes:

   - *Change Default Compensation*.
   - *Propose Compensation Change (Change Job)*.
   - *Propose Compensation Hire*.
   - *Propose Compensation Offer/Employment Agreement*.
   - *Request Compensation Change*.
   - *Requisition Compensation*.

   You can set the Criteria column to *Hide For All* or hide from *Security Group* for the Guidelines – Total Base Pay Range and Guidelines – Primary Compensation Basis Pay Range fields.

   You can also select *Not Enterable For* (read only) in the Criteria column for most fields delivered as optional or required.

   Example: You want to display both Salary – Currency and Salary – Frequency during business processes as read only fields. You access the Configure Optional Fields task, select the Propose Compensation Change for Hire functional area, and for both Salary – Currency and Salary – Frequency select *Not Enterable For*. During the *Propose Compensation Change for Hire* process, both fields display as read only and can't be edited.

   Changes made to optional fields apply to all:

   - Compensation plan assignments that are part of the event.
   - Events already in progress and all those going forward.

   Note: Any fields configured as hidden or required remain so even when the business process is used as a subprocess of another business process.

   Security: *Set Up: Configure Optional Fields* domain in the System functional area.
3. (Optional) Configure your tenant to display only relevant plan types during the *Propose Compensation Change* process when used as a step in *Change Job*.

   You can select the Enable Dynamic Display for Compensation Plan Sections tenant option on the Edit Tenant Setup - HCM > Compensation task.

   If selected, Workday displays only relevant compensation plan sections during the *Propose Compensation Change* business process when used as a step on the *Change Job* business process. This applies only for an internal job change or an internal hire.

   See FAQ: Propose Compensation on page 1036.

4. (Optional) Steps: Enable Machine Learning Recommendations for Change Job

   If you opt in to machine learning, Workday recommends up to 5 compensation plans whenever you assign a new compensation plan to a worker in the *Propose Compensation Hire*, *Propose Compensation Change* and *Request Compensation Change* business processes.

   Example: When you add an allowance plan, Workday might suggest Car Allowance, Housing Allowance, or Meal Allowance. Workday uses machine learning to recommend compensation plans most relevant to:

   - You, when making the change, depending on how frequently and recently you assign plans.
   - The worker receiving the assignment, such as eligibility, job profile, or location.

   Workday only displays plans that are active and:

   - The worker is eligible for, unless you have the ability to assign any plan regardless of work eligibility.
   - You have security permissions to add.
5. Access the relevant task or business process:

Use this task or process...	to...
Change Job business process.	Propose new compensation when an employee changes jobs or for promotions, demotions, or transfers. Workday recommends that *Propose Compensation* is either the completion step or is before the completion step.
Create Position or *Edit Position* business processes.	Assign default compensation to a position.
Propose Compensation button in My Tasks.	Propose compensation for a new hire.
Request Compensation Change task.	Change an existing employee's compensation.
Start International Assignment business process.	Propose new compensation when an employee starts an international assignment.

   You can display the current compensation for internal candidates on the Maintain Localization Settings task.

   Select *Internal Candidate Compensation* for the Area.

   Select 1 or more locations from Allow for Countries or Regions. Workday displays the internal candidate's current compensation only if you select their current job's primary location.

   When configuring the *Change Job* or *Edit Position* business process definitions, consider including the *Propose Compensation Change* business process as a step. If not included, Workday recommends as a best practice configuring the *Automatic Compensation Change for Position Change Event* business process security policy to match that of *Propose Compensation Change*.

Workday initiates the *Automatic Compensation Change for Position Change Event* process when both:

- The *Change Job* or *Edit Position* business process doesn't include the *Propose Compensation Change* step.
- Event transactions for either the *Change Job* or *Edit Position* processes result in a compensation-related change, such as location or FTE%.

Because the *Automatic Compensation Change for Position Change Event* process is automatic, there's no user to apply the Employee Visibility Date to the event.

As you propose compensation, consider:

Option	Description
Employee Visibility Date	If configured, Workday hides updated pay-related compensation data from the employee until the date. If left blank, Workday uses the effective date. See: FAQ: Employee Visibility Date on page 1191
Expected End Date	On salary, hourly, or allowance plans, the Expected End Date is an estimate. Access the Schedule Remove Compensation Plans with Expected End Date task to actually remove compensation plan assignments from employees.
Actual End Date	If displayed, the Actual End Date determines when Workday automatically removes the compensation plan assignment from the employee.

Fixed for Manage by Basis Total	Displays only when:
	• The employee is managed by basis total.
	• The Primary Compensation Basis (PCB) includes the compensation plan.
	• The compensation plan allows overrides.
	• The business process is *Change Job*, *Hire*, or *Request Compensation Change*.
	• The compensation plan is:
	    • Allowance Amount Plan.
	    • Allowance Unit Plan.
	    • Bonus Amount Plan.
	    • Commission Plan.
	    • Stock Amount Plan.
	If selected, Workday treats the assigned amount as fixed when performing a top-down calculation on the PCB.

Guidelines	If you change the Grade Step, the Progression Start Date defaults to the effective date of the compensation change event. You can change it to a future date.

Result

After the request is approved, the business process creates a compensation event for the employee that can be tracked in *Worker History*.

If you assigned default compensation to a position, Workday uses the compensation values from the position instead of eligibility rules for staffing transactions with position events.

Note: Workday doesn't rerun eligibility rules if you change plan assignments at the same time you're proposing compensation. Example: If you change a bonus plan, Workday doesn't run eligibility rules to update other compensation values during the same transaction.

Next Steps

- Access the Schedule Remove Compensation Plans with Expected End Date task to remove compensation plan assignments. This task ignores compensation plan assignments with an Actual End Date.
- To review period salary plans, use the Period Salary Plans Manage By Compensation Basis Health report.

Tasks
Hide or Require Optional Fields

Concept: Remove Prior Compensation for Rehires

You can unassign all compensation from a terminated worker's previous employment upon rehire to help meet compliance requirements. When you select the Remove Prior Compensation for Rehires check box in the Edit Tenant Setup - HCM task, Workday doesn't display a rehire's previous compensation in the *Propose Compensation Hire* step of the *Hire* process.

The Remove Prior Compensation for Rehires tenant setting doesn't apply to:

- *Hire* events that were already In Progress before you turn the setting on.
- Former workers without a record of prior compensation.
- Hiring or converting contingent workers that have no prior compensation plan assignments.
- Internal hires processed through the *Change Job* process.

When you enable Remove Prior Compensation for Rehires, Workday only displays assignments that a worker is eligible for within their position in the *Propose Compensation Hire* process, event details, and in the Compensation History and Worker History reports. Workday retains a worker's compensation history from their prior assignments and termination, but doesn't display it during the *Hire* process.

Once you enable the tenant setting, you must log out, then log back in to see the change.

FAQ: Propose Compensation

How do the Expected End Date and Actual End Date fields work?	For salary, hourly, or allowance plans, the Expected End Date is an estimate. Access the Schedule

Remove Compensation Plans with Expected End Date task to actually remove compensation plan assignments from employees.

For compensation plan assignments with an Actual End Date, Workday automatically removes the compensation plan assignment at 11:59:59 PM on that date. Workday doesn't remove plan assignments when there are future-dated events on the plan assignment.

Note: The Schedule Remove Compensation Plans with Expected End Date task ignores compensation plan assignments with an Actual End Date.

Workday displays the Actual End Date field only if you selected the Enable Actual End Date field in the Compensation section of the Edit Tenant Setup - HCM task.

How does proposing compensation affect the compensation basis total?	If you make changes to the individual plans of a compensation basis, Workday recalculates the proportional plans based on the modified plan for employees managed by basis total. However, Workday doesn't recalculate plans that are a percentage of total cash when individual plans change. On the *Hire* and *Change Job* business processes, managers can override the amount for employees managed by a compensation basis. Workday then performs a partial calculation and recalculates only those plans that depend on the change. In this case, the period salary plan functions as a percentage-based plan. If you want to have the period salary plan function as a percentage of salary only, modify the compensation basis to contain salary only. Run the Period Salary Plans Manage By Compensation Basis Health report to verify your configuration. With Fixed for Manage by Basis Total selected, Workday treats the assigned amount as fixed when performing a top-down calculation on the Primary Compensation Basis (PCB). This check box displays only when: • The compensation plan is part of the PCB. • The compensation plan is amount- or unit-based. • The compensation plan allows overrides.
What does the Enable Dynamic Display for Compensation Plan Sections tenant option do?	If this option is selected in the Compensation section of the Edit Tenant Setup - HCM task, Workday displays only relevant compensation plan sections during the *Propose Compensation Change* business process when used as a step on the *Change Job* business process, either for an internal job change or an internal hire.

Workday determines the relevant plan sections based on worker eligibility and the security permissions for the user performing the compensation change.

Note: If the user performing the compensation change has access to the *Select Any Compensation Package* domain, Workday displays all plan sections, regardless if this option is selected or cleared.

For users with View/Modify permissions on any of these following compensation security domains:

- *Compensation Change: Allowance*
- *Compensation Change: Bonus*
- *Compensation Change: Calculated*
- *Compensation Change: Commission*
- *Compensation Change: Hourly*
- *Compensation Change: Merit*
- *Compensation Change: Period Salary*
- *Compensation Change: Salary*
- *Compensation Change: Stock*
- *Compensation Change: Unit Salary*

Workday displays the respective plan section if the worker for whom the compensation change either:

- Has an assignment of that plan type, or
- Had an assignment of that plan type but has lost the assignment because of eligibility or manual removal of the assignment.

For users with View/Modify permissions on the above domains and Modify permissions on these security domains:

- *Add Compensation Plans: Add Allowance*
- *Add Compensation Plans: Add Bonus*
- *Add Compensation Plans: Add Calculated*
- *Add Compensation Plans: Add Commission*
- *Add Compensation Plans: Add Hourly*
- *Add Compensation Plans: Add Merit*
- *Add Compensation Plans: Add Period Salary*
- *Add Compensation Plans: Add Salary*
- *Add Compensation Plans: Add Stock*
- *Add Compensation Plans: Add Unit Salary*

Workday displays the respective plan section if the worker for whom the compensation change:

- Has an assignment of that plan type, or
- Had an assignment of that plan type but has lost the assignment because of eligibility or manual removal of the assignment, or
- Is eligible for that plan type.

FAQ: Compensation Defaulting

What is the difference between default compensation and compensation defaulting?

Default compensation refers to the compensation attributes configured on a position. Workday automatically populates fields when filling a position or a job from default compensation, if it's configured on the position. *Compensation defaulting* simply refers to how Workday populates compensation values.

Example: You've configured compensation for the Recruiter position but not for the Event Coordinator position. There's no offer or job requisition. When Glen hires Andrea for the Recruiter position using *Hire*, Workday automatically populates compensation from the position. When Glen hires Heather for the Event Coordinator position, Workday uses eligibility rules.

This table lists stand-alone business processes and the sources from which Workday automatically populates compensation values. For some business processes, Workday searches for compensation values in multiple sources sequentially and stops when it finds values.

Task or Business Process	Source of Compensation
Create Position and Edit Position	Eligibility rules. The *Change Default Compensation* subprocess of the *Create Position* process assigns compensation guidelines and plans to a position using eligibility rules. Workday assigns any changes made or additional compensation plans added

Task or Business Process	Source of Compensation
	during this subprocess to future staffing events.
Create Job Requisition	1. Position. 2. Eligibility rules. If you use Evergreen requisitions, Workday derives compensation values from the Evergreen requisition.
Edit Job Requisition	Eligibility rules. If you use Evergreen requisitions, Workday derives compensation values from the Evergreen requisition.
Offer and *Employment Agreement*	1. Default compensation configured on the job requisition. 2. Eligibility rules. 3. Both 1 and 2 if you configure the Run Eligibility Rules when there is Requisition Compensation prompt in the Compensation section on the Edit Tenant Setup - HCM task. If configured, Workday runs eligibility rules during the selected business processes even when default compensation exists on the job requisition. Note: Workday might populate the same compensation values regardless of the source. Example: Compensation values derived from the eligibility rules might be identical to those from the default compensation on the job requisition.

Task or Business Process	Source of Compensation
	Workday persists individual overrides from default compensation on the job requisition if the candidate is still eligible for the plan as of the hire date on the process. If *Offer* or *Employment Agreement* details, like location, change during a renegotiation, Workday runs eligibility rules even if default compensation exists on the job requisition. The *Offer* and *Employment Agreement* business processes don't use default compensation on position.
Hire	1. For rehires only, Workday uses compensation assignments in effect before termination. However, Workday clears the the Expected End Date and Actual End Date fields from compensation plan assignments. 2. *Offer*. 3. Job requisition. 4. Position. 5. Eligibility rules.
Change Job	1. *Offer*. 2. Job requisition. 3. Position, but only when default compensation is configured on the position and you're not using the *Change Job* Move option. When using the Move option to move a worker to a new position, Workday always uses eligibility rules even if default compensation is

Task or Business Process	Source of Compensation
	configured on the new position. 4. Eligibility rules.
Request Compensation Change	No defaulting.
Request Requisition Compensation Change	No defaulting when initiated as a stand-alone business process. When included as a subprocess, the parent business process determines how compensation defaults. Example: *Request Requisition Compensation Change* as subprocess of *Job Requisition*.

What's the advantage of using default compensation on a position?

So that every employee who hires into that position receives the same compensation values.

Default Compensation enables the establishment of compensation guidelines, plans, and plan amounts on a position. Examples:

- Position budgeting.
- Tracking default compensation as budgeted or approved compensation.
- Sending target or approved compensation to an external Applicant Tracking System.
- To aid in giving concise compensation guidance to those proposing compensation.

What's the advantage of using default compensation for requisition compensation?

So that every applicant hired using the same job requisition receives consistent compensation values.

When does Workday default a grade or grade profile configured on a job profile?

Depending on the business process, when a grade or grade profile doesn't exist on the offer, job requisition, or position, Workday determines if the job profile has a grade or grade profile. If so, Workday populates compensation values in this order:

1. Grade, regardless if the eligibility rule configured on the grade applies to the employee.
2. Grade profile, only when an eligibility rule configured on the grade profile applies to the employee.

Why doesn't Workday default compensation in the Request Compensation Change task?

The Request Compensation Change task is for:

	• Proposing a change to existing compensation for an employee, not to initially determine it. • A single-purpose compensation change. Workday doesn't run eligibility rules at initiation to populate plans in the Proposed column of the transaction. You can view the eligible plans when proposing compensation using the *By Compensation Package and Rule* or *By Compensation Rule* options.
What effect does a compensation package have on compensation defaulting?	Compensation packages group together grades, grade profiles, and compensation plans. If an employee is affected by an eligibility rule associated with a compensation package, the grades, grade profiles, and compensation plans associated with the compensation package determine compensation defaulting.
Why do rehired employees have ***current*** assignments?	To determine compensation for a rehired employee, Workday: 1. Reads compensation assignments in effect before the employee terminated and uses that for the initial compensation values on rehire. 2. Reads compensation values from the *Offer* business process in Workday Recruiting, if they exist. If not, Workday looks for default compensation if configured on the position. Finally, if the position doesn't have default compensation, Workday uses eligibility rules. You can configure your tenant to not reassign or display a previous employee's prior compensation when you rehire them. See Concept: Remove Prior Compensation for Rehires.
How does the Retain Basis Total option on the compensation basis affect the proposed total?	If you selected Retain Basis Total on the compensation basis, Workday populates the existing compensation basis total during the *Propose Compensation* step of the *Change Job* process. The primary compensation basis doesn't come from the job requisition. Workday then rebalances the plan assignments but keeps the compensation basis total fixed. If Retain Basis Total isn't selected, Workday recalculates the compensation basis total based on the changed plan assignments.
Does Workday apply compensation defaulting when Guidelines fields are changed manually?	By default, no. However, you can configure the Enable Defaulting Based on Changes to Guidelines on the Edit Tenant Setup - HCM task to enable compensation defaulting for 1 or more of these business processes: • *Add Additional Job (Propose Compensation Hire)* • *Change Job (Propose Compensation Change)* • *Employment Agreement (Propose Compensation Offer/Employment Agreement)*

- *Hire (Propose Compensation Hire)*
- *Job Requisition (Requisition Compensation)*
- *Job Requisition Change (Requisition Compensation)*
- *Offer (Propose Compensation Offer/Employment Agreement)*

Workday applies the compensation defaulting to compensation plan assignments on the business processes you select when you both:

- Base eligibility rules on Guidelines fields.
- Change any field in the Guidelines section that the eligibility rules are based on.

Manage Compensation

Create Compensation Packages

Prerequisites

- Create compensation components and grades.
- Create 1 or more compensation plans to include in the compensation package.
- Security: *Set Up: Compensation Packages* domain in the Core Compensation functional area.

Context

Compensation packages group compensation guidelines and compensation plans. Example:

- Grades.
- Grade profiles.
- Steps associated with grade profiles.

A compensation package enables you to assign grades and plans to a worker simultaneously during a staffing transaction. During a staffing transaction, use eligibility rules to assign grades and plans to a worker simultaneously.

To have compensation components automatically populate for eligible employees during staffing transactions:

- Assign an eligibility rule to a compensation package.
- Associate the default grade and grade profile.
- Associate 1 or more plan with that package.

Steps

1. Access the Create Compensation Package task.
2. (Optional) Select one or more Eligibility Rules to establish who is eligible for this package.

   If you select multiple eligibility rules, Workday evaluates each rule independently. Employees are eligible if they meet the qualifications of any 1 rule.

3. Select the Compensation Grades to associate with this package.

   Accessible by Users Granted Segment is available only if segmented security for compensation is set up.
4. Select the Compensation Plans to associate with this package.

   For eligibility rules to work during staffing events, associate plans with packages.

   You can assign multiple salary plans to compensation package but each plan requires its own compensation rule.
5. (Optional) Select the Compensation Basis to associate with this package.

   This section is required for Workday to allocate awards to plans that make up an employee's compensation basis. You can use a total compensation amount to manage compensation review process awards or other compensation change events.

   You can only select compensation bases that have the Manage Basis Total check box selected.

Next Steps

- Use the Edit Compensation Package task to update the package.
- Assign packages to employees or update an employee's package:
  - As part of the hiring process (initial assignment only).
  - As part of the promote, demote, and transfer staffing transactions.
  - Using the Request Compensation Change task.

Related Information
Tasks
Steps: Set Up Compensation Grades and Grade Steps on page 988

Set Up Compensation Package Analytics

Prerequisites

Security: *Set Up: Compensation Packages* domain in the Core Compensation functional area.

Context

You can configure whether to display pay ranges, segments, guidelines, and pay range analytics on compensation-related reports and tasks, such as:

- Request Grade Change
- Request Compensation Change
- View Compensation
- Direct Report Compensation Summary

Examples:

- Select Display Total Base Pay Range and clear Display Position in Range to display the total base pay range and compa-ratio.
- Select Display Primary Compensation Basis Range and Display Position in Range and clear Display Compa-Ratio to display both the Primary Compensation Basis (PCB) range and the position in range.

Steps

Access the Edit Compensation Package Analytics task.

As you complete this task, consider:

Option	Description
Display All Segments for Total Base Pay Range Display All Segments for Primary Compensation Basis Range	If you select 1 or both, Workday displays all segments for the selected range. During compensation transactions, such as *Propose Compensation Change*, you can see all pay range segments, provided you have view access on 1 or both of these domains: • Worker Data: Compensation Basis Pay Range. • Worker Data: Compensation Pay Range
Display Midpoint	If selected, Workday displays the midpoint of the pay range on a worker's Compensation profile report, the Compensation > View Compensation task, and in the *Request Compensation Change* and *Propose Compensation* business processes. The compensation package must include the grades to display the midpoint.
Guidelines Warnings	Select the method for displaying guidelines warnings. A warning message displays for values above or below the pay range for the employee's total base pay or PCB.
Display Compa-Ratio Display Position in Range	If selected, Workday displays these fields in the Compensation > View Compensation task and in compensation change tasklets on these business processes: • *Add Additional Job* • *Change Job* • *Hire* • *Request Compensation Change* • *Start International Assignment*

2023R2 What's New Post: Improving Compensation Experience in Job Changes for Managers

Restrict Viewing of Funded and Non-Funded Plan Assignments

Prerequisites

Security:

- *Set Up: Compensation Security Segments* domain in the System functional area.
- *Security Configuration* domain in the System functional area.

Context

You can create security segments that restrict specific compensation plan assignments to specific security groups.

Steps

1. Create the segments that define the plan types and plans to which you want to grant access.
    a) Access the Create Compensation Plan Assignment Security Segment task.
    b) Select 1 or more funded or non-funded plan types, and for each, 1 or more plans.

       The segment includes all individual plans associated with a plan type.
2. Create segment-based security groups that you want to associate with the plan assignment segments.
    a) Access the Create Security Group task.
    b) For Type of Tenanted Security Group, select *Segment-Based Security Group*.
    c) Select the Security Groups you want to have access to the segment.
    d) In the Access Rights field, select the segment you created.
3. Activate any of these domains: *Self Service: Funded Plan Assignments*, *Self-Service: Non-Funded Plan Assignments*, *Worker Data: Funded Plan Assignments*, and *Worker Data: Non-Funded Plan Assignments*.
    a) Access the View Domain task.
    b) Select the a Domain.
    c) From the related actions menu of Domain Security Policy, select Domain Security Policy > Enable.
    d) Select the Confirm check box.
    e) Repeat steps A - D for all the domains you want to activate.
    f) Access the Activate Pending Security Policy Changes task and confirm changes.
4. Add the segment-based security group to the domains you activated in the previous step.
    a) Access the View Domain task.
    b) Select the Domain.
    c) From the related actions menu of Domain Security Policy select Domain Security Policy > Edit Permissions.
    d) Add the segment-based security group to the applicable domain or business process security policies.
    e) Delete any role that displays in the list of security groups that is also part of the segment-based security group.
    f) Access the Activate Pending Security Policy Changes task and confirm changes.

Result

You can only see compensation plan assignments as defined by the security segments on:

- Event information
- Compensation history
- Worker history
- Worker profile
- View Plan Assignments
- View Plan Audits

Set Up Segmented Security by Compensation Plans

Prerequisites

- Analyze your organization's needs and decide whether segmented security for compensation is appropriate. Evaluate your current organizational structure and thoroughly understand segmented security requirements.

- Configure organizational hierarchies, security groups, and organizational roles.

  Note: The use of segmented security groups won't apply to every business; it involves a number of complex steps and impacts your overall compensation practice. Even if you currently use location hierarchies for other purposes, your current hierarchies might not be adequate for restricting access to compensation components. Also, intersection security, constrained job-based security groups, and rule-based security groups aren't supported for Compensation.
- Create location hierarchy organizations that parallel the segments you need.
- Security:
  - *Set Up: Compensation Security Segments* domain in the System functional area.
  - *Set Up: Tenant Setup - HCM* domain in the System functional area.
  - *Set Up: Assignable Roles* domain in the Organization and Roles functional area.
  - *Reports: Organization* domain in the Organization and Roles functional area.
  - *Security Configuration* domain in the System functional area.
  - *Worker Data: Non-Funded Plan Assignments* in the Core Compensation functional area.
  - *Self-Service: Non-Funded Plan Assignments* in the Core Compensation functional area.

Context

Segmented security groups divide access to Compensation setup data (such as Compensation Plans) among multiple Compensation Partners. Example: A business with sites in Canada, the U.S., and Mexico might require a separate Compensation Partner for each country with appropriate access to the setup data.

Note: Compensation Administrators need access to all compensation segments you create, no matter how you decide to segment your organization's compensation groups.

Steps

1. Enable the segmented security group feature for compensation.
   a) Access the Edit Tenant Setup - HCM task.
   b) In the Compensation section, select the Enable Compensation Setup Segment Security check box.
2. Enable the *Compensation Partner* role for the *Location Hierarchy* organization type.
   a) Access the Maintain Assignable Roles task.
   b) In the Enable for Organization Types column, add *Location Hierarchy* to any organization types already enabled.
3. In the applicable location hierarchy organization, assign the *Compensation Partner* role to the desired worker.
   a) Access the View Organization task.
   b) Open the applicable location hierarchy organization.
   c) From the related actions menu, select Roles > Assign Roles.
   d) In the Assign Roles section, select *Compensation Partner* as the Role, and select the desired Worker to whom the Role should be assigned.
4. Create an organization membership security group that includes the applicable location hierarchy.
   a) Access the Create Security Group task.
   b) For Type of Group, select *Organization Membership Security Group*.
   c) In the list of Organizations, add the desired location hierarchy to the security group.
   d) Specify whether the new organization membership security group Applies to Current Organization Only or Applies to Current Organization And All Subordinates.

5. Create an intersection security group that includes the applicable organization membership security group and the Compensation Partner security group.
    a) Access the Create Security Group task.
    b) For Type of Group, select *Intersection Security Group*.
    c) In the list of Security Groups, add the desired organization membership security group and the Compensation Partner security group.
6. Create a security segment for the desired compensation component, such as country.
    a) Access the Create Compensation Setup Security Segment task.
    b) Select the Pay Component (or set of components) to contain within the segment.
7. Create a segment-based security group that joins the applicable intersection security group with the applicable security segment. This is a critical step that ties together the preceding steps.
    a) Access the Create Security Group task.
    b) For Type of Group, select *Segment-Based Security Group*.
    c) In the list of Security Groups, add the applicable intersection security group.
    d) In the list of Access Rights, add the applicable security segments.
8. Repeat steps 3 through 7 for each secured compensation segment you want to create.
9. Create Segment-Based Security Groups.

    Create a segment-based security group for the Compensation Administrator that joins the Compensation Administrator with all the security segments created.
10. To use any new segment-based security group that you've created, update and activate the domain security policy and business process security policy for the Compensation functional area.
    a) Access the Functional Areas report.
    b) From the related actions menu for Core Compensation and Advanced Compensation, select Functional Area > View Business Process Policies (or View Domain Policies).
    c) Click Edit Permissions.
    d) Add the segment-based security group to the applicable domain security policy/business process security policy.
    e) Delete the *Compensation Partner* security group from the applicable domain security policy/ business process security policy.
    f) Access the Activate Pending Security Policy Changes task to confirm changes.

Next Steps

You can use the All Compensation Setup Security Segments report to review which intersection groups constrain the segment-based security groups for a particular compensation segment or component.

Concept: Out of Order Compensation Changes

You can process simultaneous compensation changes for the same worker using In Progress *Request Compensation Change* and *Change Job* as a sub-business process using an opt-in tenant configuration. You can also process multiple simultaneous In Progress *Request Compensation Change* events for the same worker. Processing simultaneous compensation changes makes ad-hoc pay adjustments simpler and streamlines compliance with policies and regulations.

Note: (U.S. federal) With respect to the OPM Simultaneous Pay Actions rule, Workday recommends running an In Progress *Request Compensation Change* event and an In Progress *Change Job* business process event together for pay changes taking effect on the same date. To maintain compliance with OPM rules and GPPA, all compensation change business processes need to be PAR certified prior to the event effective date.

To configure your tenant and opt-in:

1. Access Maintain Functionality for Staffing Transactions.
2. Filter by Business Process Type for Request Compensation Change.
3. Select a Functionality option.
4. Select an Enabled for security option.
5. Configure by Security Group. This field controls which users can:
    a. Initiate *Request Compensation Change* if a *Change Job* event is already In Progress.
    b. Initiate *Request Compensation Change* if a *Request Compensation Change* process is already In Progress.

Note: Since this functionality can lead to unexpected assignment values and reporting results, it's recommended that you configure your tenant setting to only allow trained Security Groups to initiate a simultaneous event.

When you opt-in, Workday disables the validation that blocks you from initiating a *Request Compensation Change* when either a *Change Job* as a sub-business process or another *Request Compensation Change* process is already In Progress. This tenant configuration disables validation on Request Compensation Change for initiating actions only. All subsequent Business Process steps will honor normal Business Process policies.

When you opt-in, Workday expects this tenant configuration to not introduce any change in behavior in the coordination of events during compensation review.

Considerations

Understand how Workday processes Compensation data before initiating a simultaneous compensation event:

- When a compensation event is initiated, Workday uses a worker's Current assignment values based on their most recently completed event to determine effective compensation.
- When multiple compensation events are In Progress, the assignment or plan values of those events will not refresh based on other simultaneously In Progress events.

When a compensation event is completed:

- Workday doesn't apply out of order data rolling to the plans or assignments of impacted future dated or completed events. When you modify, add, or remove a plan assignment in an event initiated second, the event initiated first will not reflect the updated plan assignment value after the second event completes.

When processing multiple In Progress compensation events with the same effective date:

- Workday processes the Proposed values of each event by completion moment. If you change the same plan for a worker in two In Progress compensation events, the assignment values from the event that completes last will be applied to the worker's effective compensation.

This processing can lead to unexpected results in Current event values and effective compensation assignments and reporting. To ensure that your simultaneous compensation changes reflect intended results and avoid overwrites, Workday recommends that you:

- Consider existing In Progress compensation events before you initiate a simultaneous compensation event.

- Check the effective date of plan assignments against other in progress events to ensure you are aware if assignment has been changed elsewhere.
- Complete events in the desired order to ensure the intended Proposed compensation values are assigned to the worker.
- Monitor In Progress events using the standard report Faceted Standard Report Find Events. Copy this report, apply the RDS In Progress Compensation Changes, 1435$515 and customize the output with the In Progress facet filter and Change Job and RCC BPTs. Group by position column. Intended Security Group(s) must have access to the report.

2025R2 Feature Release Note: Simultaneous Compensation Changes Using Multiple In Progress Request Compensation Change Processes

Maintain Compensation Change Templates

Prerequisites

- Access the Maintain Change Job Templates task and select the Enable Enhanced UI for this Template. See: Set Up Change Job Templates on page 849
- Add *Propose Compensation Change* as a step on the *Change Job* business process. See: Steps: Set Up Job Changes on page 844
- Add *Propose Compensation Hire* as a step on the *Hire* business process.
- Security: *Set Up: Compensation Change Templates* in the Core Compensation functional area.

Context

You can create templates for the *Propose Compensation Change* or *Propose Compensation Hire* business processes when they're included as a subprocess of *Change Job* or *Hire*, respectively. These templates determine how sections and fields are displayed in the *Propose Compensation Change* or *Propose Compensation Hire* subprocesses.

Each template applies only to the initiation step of the *Propose Compensation Change* and *Propose Compensation Hire* subprocess, not to the review and approve steps. You can configure up to 100 compensation change templates.

Steps

Access the Maintain Compensation Change Templates task.

To create a new template, select the Add + button. Otherwise, select an existing template to modify.

As you complete this task, consider:

Option	Description
Make This Template Inactive	Workday won't display an inactive template even if it's part of an in-progress compensation change event.
Select Security Groups	(Optional) Select 1 or more security groups to which the template applies. If you don't select at least 1 security group, the template applies to anyone that initiates a *Change Job* or *Hire* process that's associated with the specified Reason.
Enable for Business Process Type	Specify the business process type to which the template applies.

Option	Description
	You can specify only 1 business process type per template.
Reasons for *business process type*	Specify 1 or more reasons for the template. This field associates the compensation change template to the *Change Job* or *Hire* process, depending on what business process type you select. To associate this template with the *Change Job* process, select this template's associated *Reason* on the Select Reason for Template field on the Maintain Change Job Templates task. See: Set Up Change Job Templates on page 849 To associate this template with the *Hire* process, select this template's associated *Reason* within the *Hire* process. Each reason can apply to only 1 active template and can't be shared across templates.
Select Sections for Template	Select 1 or more sections and configure 1 or more fields to display for each section. Each section and field you select displays during the respective *Propose Compensation Change* or *Propose Compensation Hire* subprocess.

Example

You create a compensation change template with this configuration:

Template Name	Base Pay Salary + Allowance
Select Security Groups	Left blank, so that the template applies to anyone that initiates a*Change Job* process that's associated with the specified reason.
Enable for Business Process Type	Change Job (Propose Compensation Change)
Reasons for Change Job	Change Job Details. The *Change Job* business process must also have the Select Select Reason for Template field set to Change Job Details on the Maintain Change Job Templates task.
Select Sections for Template	• Salary • Total Base Pay
Total Base Pay Fields to Display	Total Base Pay - Total Base Pay Detail
Salary Fields to Display	• Salary - Amount • Salary - Currency • Salary - Frequency

Next Steps
Access the View Compensation Change Template report.

Set Up Task Consolidation for Compensation in Recruiting

Prerequisites

- Set up consolidated tasks.

- Select the Consolidate Tasks check box on the business process security policy on these business processes:
  - *Offer*
  - *Employment Agreement*

Context

You can consolidate offer and employment agreement tasks into a single workbook using Worksheets, saving you time and submitting multiple tasks at once.

The *Offer* and *Employment Agreement* business processes in Workday Recruiting can include these Compensation subprocesses:

- *Propose Compensation Offer/Employment Agreement*
- *Request One-Time Payment Offer/Employment Agreement*
- *Request Stock Grant Offer/Employment Agreement*

Note: Consolidated Task functionality doesn't support all the fields available in a non-consolidated workflow and doesn't support Manage by Basis Total.

Steps

1. Configure Modify access on these domains in the Core Compensation functional area:
   - Add Compensation Plans: Add Allowance.
   - Add Compensation Plans: Add Calculated.
   - Add Compensation Plans: Add Commission.
   - Add Compensation Plans: Add Hourly.
   - Add Compensation Plans: Add Period Salary.
   - Add Compensation Plans: Add Salary.
   - Add Compensation Plans: Add Unit Salary
   - Compensation Change: Guidelines.
2. Configure Modify access on these domains in the Advanced Compensation functional area:
   - Add Compensation Plans: Add Bonus.
   - Add Compensation Plans: Add Merit.
   - Add Compensation Plans: Add Stock.
3. Configure View access on these domains in the Core Compensation functional area:
   - Compensation Change: Manage Compensation Basis.
   - Compensation Change: Total Base Pay.

Tasks

Steps: Set Up Offers on page 489

Steps: Set Up Employment Agreements on page 635

Steps: Set Up Task Consolidation for Offers on page 493

Steps: Analyze Pay Equity

Context

You can analyze and report on pay equity for these areas: ethnicity, age group, and gender. You can set up either or both:

Pay Equity Discovery Board	The Pay Equity Discovery Board combines data from Staffing, Talent and Performance, and Compensation. It provides a starting point for your pay equity analysis. The discovery board consists of 2 sheets, each with several visualizations: • Current Worker Data: Visualizations use the Workers for HCM Reporting indexed data source. • Compensation Events: Visualizations use the Completed Employee Compensation Events for HCM Reporting indexed data source.
Pay Equity Dashboard	Enables you to monitor and report on potential gender pay and equity issues.

Steps

1. (Optional) Set up the Pay Equity Discovery Board.
    a) Access the Delivered Discovery Board task.
    b) Select Pay Equity, select Make a Copy, and save it in your Drive.
    c) Open your copied discovery board and select filters.

       As a best practice, Workday recommends that you select filters that limit the number of employees analyzed to less than 10,000.

   Workday updates indexed data sources and fields every hour.

   Security:

    - *Discovery Boards: Administration* in the System functional area.
    - *Discovery Boards: Create* in the System functional area.
    - *Discovery Boards: Manage Delivered Discovery Boards* in the System functional area.
    - *Worker Data: Compensation by Organization* in the Core Compensation functional area.
2. (Optional) Set up the Pay Equity Dashboard.
    a) Select the Enable Worker Trending check box on the Edit Tenant Setup - Reporting and Analytics task.
    b) Set up a security group that is unconstrained and has access to these domains:

        - *Pay Equity Dashboard* in the Core Compensation functional area.

          Workday recommends that you consult with your legal team about access to sensitive pay equity data before adding any security groups to the *Pay Equity Dashboard* domain.
        - *Person Data: Gender* in the Personal Data functional area.
        - *Trended Worker Data* in the Staffing functional area.
        - *Worker Data: Compensation by Organization* in the Core Compensation functional area.
        - *Worker Data: Current Staffing Information* in the Staffing functional area.
        - *Worker Data: Performance Reviews* in the Performance Enablement functional area.
        - *Worker Data: Public Worker Reports* in the Staffing functional area.

       Workday delivers the dashboard empty.
    c) Workday recommends that you add these reports to the dashboard, configured as worklets:

        - Average Compa-Ratio by Country & Gender
        - Average Compa-Ratio by Gender
        - Average Compa-Ratio by Job Family Group & Gender
        - U.S. Average Base Pay by Performance Rating & Gender

       You can also run these reports individually or use them to create custom reports.

Configure Scramble Plans for Compensation

Prerequisites

- Review Concept: Data Scrambling.
- Security: *Scrambler Administration* domain in the System functional area.

Context

You can scramble or remove compensation data in Implementation tenants for training and testing purposes, or to cloak sensitive information.

Note: Scrambling permanently changes or removes data. Scramble data in Implementation tenants only.

When you submit more than 1 scramble field at a time, Workday removes data before scrambling. Example: When you configure both the Removal of Compensation Assignments and Payments and Allowance Plans scramble fields, Workday removes plan assignments, leaving no allowance plan assignments to scramble.

Note: Workday doesn't scramble plan defaults that equal zero.

Steps

1. Access the Create Data Scramble Plan task.
2. As you complete the Compensation section, consider these scramble fields and scramble methods:

Option	Description

Allowance Plans
Bonus Plans
Commission Plans
Merit Plans
One-Time Payment Plans
Stock Plans
	Select:
	• Any option beginning with Input Value, Increment Profiles, and Update.
	For each plan type, select a scramble method and enter values for Amount, Percent, or the Number of Units and Per Unit Amount.
	Workday scrambles:
	  • Amount-based plan defaults, assignments, and payments to the value specified for Amount. For commission plans, Workday scrambles both the amount and the draw amount.
	  • Percent-based plan defaults and assignments to the value specified for Percent.
	  • Unit-based plan defaults and assignments to the values specified for Number of Units and Per Unit Amount.

Option	Description
	• Set to Plan or Plan Profile Default Workday: • Overrides compensation assignments and payments with individual targets. • Sets the plan or plan profile default to plan assignments, payments, and any grants. For commission plans, Workday scrambles both the amount and the draw amount. Workday assigns the new scrambled default or profile default value to those employees that don't have individual targets on their plan, depending on their eligibility.
Compensation Elements Compensation Grades, Grade Profiles, and Grade Hierarchies Compensation Packages Compensation Plans	For both methods, Workday generates a generic name for each object and appends a dash and the next number in sequence. Example: *General Salary Plan* renamed to *Salary Plan - 1*. Select: • Scramble to Number Sequence (Names and Descriptions) • Scramble to Number Sequence (Names, Descriptions, and Reference IDs) Workday also renames all object Reference IDs to match the name of the scrambled object.
Compensation Pay Ranges	Select: Input Percentage Variance and enter the percentages to decrease the minimum and increase the maximum. Workday: • Selects random values according to your input percentage variance settings for the minimum and the maximum. • Recalculates the segments in between evenly. Workday recalculates segments the same as the Calculate Segments check box on the Create Compensation Grade task.
Removal of Compensation Assignments and Payments	Remove all guidelines, plan assignments, and payments. Or, remove selected plan assignments and payments, but not guidelines. • Remove All Guidelines, Plan Assignments, and Payments • Remove Selected Plan Assignments and Payments
Removal of Compensation Review Data	Workday removes all compensation review: • Plan assignments. • Employee or organization-specific award data. • Scorecards and profiles. • Organization / budget pool contributions. • Statements.
Salary and Hourly Plans	Select:

Option	Description

	• Input Percentage Threshold for Salary and Hourly Assignments
	Workday scrambles all salary and hourly plan assignment values to a random value between the minimum and your specified threshold percentage of the total base pay range.
	Example: The total base pay range for an hourly plan is 10 through 20. You want to scramble that to a random point between the minimum (10) and 50% of the range (15), so you enter 50 for the threshold percentage. Workday scrambles the hourly plan assignment to 12, which is a random point between the minimum of 10 and the threshold percentage of 15.
	• Input Value and Update Assignments
	Enter values for hourly plan defaults, hourly assignments, and salary assignments.
	Workday:
	  • Sets hourly plan defaults and assignments to the value you specify for Hourly Assignments.
	  • Sets salary assignments to the value you specify for Salary Assignments.

Related Information

Concepts

Concept: Data Scrambling

Setup Considerations: Data Scrambling

Tasks

Steps: Scramble Tenant Data

Create Compensation Grades on page 989

Examples

Example: Compensation Pay Ranges Scramble Field on page 1057

Example: Compensation Pay Ranges Scramble Field

Context

You want to scramble compensation pay ranges on your Implementation tenant.

Steps

1. Select the Compensation Pay Ranges scramble field.
2. Select the *Input Percentage Variance* scramble method.
3. Enter 10 for Variable % Decrease for Minimum.
4. Enter 5 for the Variable % Increase for Maximum.

Result

For an employee with a Pay Range Minimum of 50,000 and a Pay Range Maximum of 150,000, Workday:

- Scrambles to random values according to your input variance percentage settings for the pay range minimum and maximum.

- Recalculates the segments in between evenly.

Pay Range Minimum	Because you entered 10 for the Variable % Decrease for Minimum, Workday scrambles (decreases) to a random value from 1 through 10 percent, from 45,000 through 50,000. In this example, Workday randomly selects 6.4%: 50,000 - (50,000 * 0.064) = 46,800.
Pay Range Maximum	Because you entered 5 for the Variable % Increase for Maximum, Workday scrambles (increases) to a random value from 1 through 5 percent, from 150,000 through 157,500. In this example, Workday randomly selects 2.2%: 150,000 + (150,000 * 0.022) = 153,300.
Pay range segments.	Workday recalculates segments evenly, exactly as if you selected the Calculate Segments check box on the Create Compensation Grade task: • Minimum = 46,800. • Segment 1 Top = 82,300. • Segment 2 Top = 117,800. • Maximum (or Segment 3 Top) = 153,300. • Midpoint = 100,050.

Reference: Full Time Equivalent in Compensation

Workday provides these Full Time Equivalent (FTE) settings that affect calculations:

Option	Configuration	Description
Use 100% FTE for Pay Range Comparisons	Edit Tenant Setup - HCM > Compensation	If selected, Workday divides part-time employee by the FTE % before comparing it to the range midpoint, minimum, maximum and segments when calculating: • Compa-Ratio • Position in Range • Pay Range Segment If one of the compensation plans assigned to an employee has the Use Assigned Value in 100% Calculations option selected, Workday uses the assigned plan amount instead of dividing the assigned amount by the FTE %. See ../../../manage-workday/tenant-configuration/tenant-setup/dan1370797339945.dita
Paid FTE	Staffing section on Maintain Localization Settings	If selected, Workday uses the paid FTE override on the position to prorate compensation plans or calculate 100% FTE plan values. See Concept: Working Time on page 552
Apply FTE%	When creating or editing: • Allowance plans.	If selected on a compensation plan, Workday prorates the plan assignment amount for part-time employees based on their FTE.

Option	Configuration	Description
	• Unit-based Allowance Plans. • Amount-based Bonus plans. • Salary plans.	When Paid FTE is enabled, Workday prorates using the paid FTE override on the position. Otherwise, Workday calculates FTE by dividing Scheduled Weekly Hours by Default Weekly Hours when proposing compensation during these business processes: • *Add Job* • *Change Job* • *Edit Position* • *Employment Agreement* • *Hire* • *Offer* • *Start International Assignment* See Create Salary Plans on page 1069
Use Assigned Value in 100% Calculations	When creating or editing: • Amount-based Allowance plans. • Unit-based Allowance Plans. • Amount-based Bonus plans. • Salary plans.	If selected, Workday uses the assigned amount on the plan as the fixed proration value and the 100% value in calculations. When the check box is cleared, Workday divides the assigned amount by the employee's FTE for 100% FTE calculations. Example: You assign a worker with 50% FTE amount-based Bonus Plan A for 1,000 and amount-based Allowance Plan B for 1,000. You select the Use Assigned Value in 100% Calculations for Bonus Plan A and None of the above for Allowance Plan B. The 100% FTE value calculated for Bonus Plan A is the assigned amount of 1,000. Workday doesn't divide this amount by the worker's FTE. The 100% FTE value calculated for Allowance Plan B is 2,000, which equals the assigned amount (1000) divided by the employee's 50% FTE (0.5): (1000/0.5 = 2000). Workday doesn't apply this option to workers Managed by Basis Total or to calculated plans that reference plans with this option selected. See Create Bonus Plans on page 1094
FTE Changes in Period	On the Create Time Proration Rule task.	If selected, Workday creates a proration segment for each event that can change the FTE% during the compensation review process period. For percent-based bonus plans, Workday applies the FTE% to the basis to determine the merit or bonus target. For amount-based bonus plans, Workday applies the FTE% to the target award amount the employee is eligible for. Example: You configure an amount-based bonus plan with an FTE time proration rule. Ben has an FTE change during the process period of the compensation review. Workday calculates proration segments based on Ben's FTE changes.

Option	Configuration	Description
		See Create Time Proration Rules for Compensation Reviews on page 1162

2023R2 What's New Post: Flexibility in 100% Assigned FTE

Reference: Benefits and Pay Hub

The Benefits and Pay hub provides a single location for employees to review and maintain their benefits, compensation, payroll information. Employees can also access related reports.

Security:

- *Self-Service: Benefits and Pay Hub*
- *Self-Service: Compensation History*

Note: Workday controls the visibility of any control or report in the Benefits and Pay hub by the security of the related action, report, or business process. Examples:

- Employees in a security group with access to the *Self-Service: Benefits (My Tax Documents) - USA* security domain can view and print their ACA forms.
- Employees can see the Change Retirement Savings option if you modify the business process policy for the *Change Retirement Savings* business process.

Use the Maintain Hubs task to configure the Benefits and Pay hub to display on custom dashboards. See Configure Dashboard Content. You might notice differences in visibility between tenants, such as Preview and Sandbox, if you don't migrate or set up your configuration consistently.

Worklet	Description	Additional Information
Overview	Provides a current view of an employee's benefit, pay, and compensation with links to detailed reports. Employees can view and modify payment and withholding elections, initiate benefit changes, and view arrears balances and tax documents. A Needs Attention section displays if the worker has an active benefit event for either open enrollment or life events.	
Benefits	Enables employees to: • View their current benefit elections. • View expanded details for a benefit plan from the Benefit Elections page. • View their benefits as of a specified date. • Change their benefits elections.	• Steps: Set Up Employee Benefit Plans on page 1288 • Manage Dependents and Beneficiaries on page 1500

Worklet	Description	Additional Information
	• Change their retirement savings elections and contributions. • View their dependents. • View and edit their beneficiaries. • View and print their ACA forms.	
Pay	Enables employees to: • Access all their available payslips and tax documents. • Access the Most Recent Pay card to review gross and net pay on their most recent payslips. • Access the Deduction card to review deductions on their most recent payslips. • Access the Accounts section where they can view, add, or update their accounts for receiving pay. • Access links to useful payroll reports, dashboards, and tasks. • Add new or edit existing withholding elections for workers in Canada and the U.S. using the Federal, State, Local, and Provincial Withholdings buttons. Note: Workday doesn't support some withholding features, such as federal, state, and local withholding forms or multiple worksite reporting, for workers on international assignment, either in the U.S. or elsewhere. • Review and add voluntary deductions. • Review flexible payments and deductions requests. • Review arrears balances and payments.	• Steps: Set Up Payroll Processing • Steps: Create Earnings • Steps: Create Deductions • Define Payslips • Concept: Additional Payroll Data

Worklet	Description	Additional Information
	• Switch positions if they're in Canada or the U.S. and have multiple jobs. • View and update payment, tax, and tax form printing elections. • View their additional payroll data when they belong to a third-party pay group and you have configure the Additional Payroll Data feature.	
Compensation	Enables employees to: • View their bonus and one-time payment history. • Request a one-time payment for themselves (self-service), if configured. • View their compensation review statements. • View their total rewards. • View their compensation history (self-service, if configured) and a summary of each position for which they receive compensation. • View their current or upcoming period activity pay. • View their stock grants.	• Steps: Set Up and Manage One-Time Payments on page 1124 • Steps: Enable Self-Service One-Time Payments on page 1131

2022R2 What's New Post: Benefits and Pay Hub

Reference: Out of Order Changes and Effective Dating

Workday uses the most recent Effective Date when processing out of order changes to:

- Allowance plans.
- Commission plans.
- Grades.
- Grade profiles.
- Hourly plans.
- Period salary plans.
- Salary plans.

- Steps.
- Unit salary plans.

When you create or edit compensation plans or guidelines, you must set future effective dates. Over time, you might make several edits to the same plan or guideline, and on each occasion set a different effective date.

Note: Workday doesn't require that effective dates be in chronological order. Workday applies your changes based only on the effective date, not the date you make the edits.

You can edit a plan on Monday with an effective date 1 year into the future. You can then edit the same plan on Tuesday with an effective date of Wednesday, only 1 day into the future. These edits are out of order because the second edit takes effect a year before the first.

Consider developing policies and procedures for managing changes to your compensation plans and guidelines.

You change the name and description of a salary plan, then select Exclude from Merit.

Edit Order	Effective Date	Action	Result
1	2000-01-01	You create the plan.	The plan becomes effective 2000-01-01.
2	2021-12-01	You change the plan name and description.	Plan name and description edits become effective 2021-12-01.
3	2010-05-01	You select the Exclude from Merit check box.	Because the effective date of this edit falls before and out of order with the second edit, it applies from 2010-05-01 through 2021-11-30. The entire plan configuration resulting from the second edit, effective on 2021-12-01, overwrites the third edit and clears the Exclude from Merit check box. To enable Exclude from Merit, you must edit the salary plan a fourth time and set the effective date after 2021-12-01.

You make edits to a compensation grade and add new grade profiles.

Edit Order	Effective Date	Action	Result
1	2000-01-01	You create a compensation grade with these profiles: USA, CAN, and MEX.	The compensation grade has 3 profiles from 2000-01-01 through 2021-09-30: USA, CAN, MEX.
2	2022-02-01	You update the compensation grade and add these new profiles: JPN and KOR.	The compensation grade has 5 profiles from 2022-02-01 to the present: USA, CAN, MEX, JPN, KOR. Because the entire grade configuration resulting from the second edit has the latest effective date, Workday overwrites the third edit with a previous effective date of 2021-10-01.

Edit Order	Effective Date	Action	Result
3	2021-10-01	You update the compensation grade and add a new profile: FRA.	This change is out of order to the second edit, which is effective 2022-02-01. The compensation grade has 4 profiles from 2021-10-01 through 2022-01-31: USA, CAN, MEX, FRA. Because this edit has an earlier effective date than the second edit, Workday overwrites the FRA profile on 2022-02-01.

You make edits to the compensation steps for a compensation grade on the Maintain Compensation Steps task.

Edit Order	Effective Date	Action	Result
1	2000-01-01	You create compensation step AAA.	The compensation grade has 3 profiles from 2000-01-01 through 2021-09-30: USA, CAN, MEX.
2	2022-02-01	You edit the Interval for compensation step AAA.	This edit overwrites the progression rule added with the out of order third edit on compensation step AAA.
3	2018-03-01	You add a progression rule for compensation step AAA You create compensation step BBB.	The progression rule for step AAA applied from 2018-03-01 through 2022-01-31. The compensation step BBB applies from 2018-03-01 to the present. The edit made effective 2022-02-01 applies only to compensation step AAA, not the grade.

Reference: Compensation Plan Comparisons

This chart describes the differences between the various types of Workday compensation plans to help you determine which plan type to use.

Plan Type	When do I use this plan type?	How do I assign employees to the plan?	How do the employees get paid?	What is the result?
Salary	Use to associate eligible salaried employees with the appropriate base salary compensation elements.	• As part of the Hire transaction. • As part of another staffing transaction (promote, demote, transfer). • As a result of using the Request	Workday automatically feeds the compensation to payroll for the regular pay period payment.	Workday pays employees the indicated amount.

Plan Type	When do I use this plan type?	How do I assign employees to the plan?	How do the employees get paid?	What is the result?
		Compensation Change task.		
Hourly	Use to associate eligible hourly employees with an hourly rate amount.	• As part of the Hire transaction. • As a result of using the Request Compensation Change task. • As part of another staffing transaction (promote, demote, transfer).	Workday sends the compensation and actual hours to payroll for the regular pay period.	Workday uses the indicated hourly amount to calculate how much to pay employees in their regular pay checks.
*Merit	Use to group employees (using eligibility rules) who are going to get a change to their base pay, and optionally, a promotion or additional adjustments. You can also add bonus and stock components to merit plans. If you want to give 1 person a raise, use the Request Compensation Change task.	• As part of the Hire transaction. • As part of another staffing transaction (promote, demote, transfer). • Through the Rollout Compensation Plans to Employees task. • As a result of using the Request Compensation Change task.	You can create a specific merit plan, which generates a request for each person in the plan to get a base pay change. A change to the base pay amount automatically flows to payroll.	Simply being in a merit plan doesn't affect pay. Workday changes the employee's compensation based on approved changes made during the compensation review process..
*Bonus	Use to group people together who are all going to get a bonus payment at the same time.	• As part of the Hire transaction. • As part of another staffing transaction (promote, demote, transfer). • Through the Rollout Compensation Plans to Employees task. • As a result of using the Request	A compensation review process with bonus awards generates a request for each person enrolled in the plan to get a portion of the bonus pool. The manager or administrator then determines the amount for each person and whether to pay the target amount	Simply being in a bonus plan doesn't affect pay. At the end of the compensation review process, Workday passes the bonus amount or tranche to payroll.

Plan Type	When do I use this plan type?	How do I assign employees to the plan?	How do the employees get paid?	What is the result?
		Compensation Change task.	in 1 payment or in predefined installments (tranches). You can also load these amounts using the EIB. The approved bonuses automatically flow to payroll.	
*One-Time	Use to give an employee a payment for something such as an incentive bonus.	Workday doesn't assign the plan type to the employee but makes it available for assignment.	Request and complete a one-time payment transaction, which automatically flows to payroll for payment.	The result is a payment amount flowing to payroll.
*Period Salary Plan	Use to give an employee extra months, weeks, or days of pay.	• As part of the Hire transaction. • As part of another staffing transaction (promote, demote, transfer). • As a result of using the Request Compensation Change task.	Workday sends the amount specified in the period salary plan to payroll for inclusion with regular pay.	Workday sends the payment amount to payroll.
*Commission	Use to store the target amount for commission.	• As part of the Hire transaction. • As part of another staffing transaction (promote, demote, transfer). • Through the Rollout Compensation Plans to Employees task. • As a result of using the Request Compensation Change task.	Workday doesn't pay out commission plans. You can integrate with a third-party sales incentive management application to pay the commissions appropriately.	This type of plan stores a target amount for assigned employees.

Plan Type	When do I use this plan type?	How do I assign employees to the plan?	How do the employees get paid?	What is the result?
Allowance	Use for compensation paid on a regular basis, such as a monthly cell phone allowance. Allowance plans can also be reimbursable as an expense item paid through the expense process, not Payroll.	• As part of the Hire transaction. • As part of another staffing transaction (promote, demote, transfer). • Through the Rollout Compensation Plans to Employees task. • As a result of using the Request Compensation Change task.	The amount specified in the allowance plan automatically flows to Payroll for inclusion with the employee's regular pay, unless Reimbursable is selected. Reimbursable allowance plans are expense items and don't flow through Payroll.	The result is an additional amount paid to an employee with their regular pay, unless the plan is Reimbursable.
*Stock	Use to group people together who are all going to get a stock grant at the same time.	• As part of the Hire transaction. • As part of another staffing transaction (promote, demote, transfer). • Through the Rollout Compensation Plans to Employees task. • As a result of using the Request Compensation Change task.	Workday doesn't pay out stock plans. You can integrate with a third-party stock administration application to handle vesting and other stock administration needs.	The stock grants based on this type of plan store stock grant details for employees.
*Future Payment Plan	Use alone or consider targets from other bonus or one-time payment plans to pay an employee a target amount. Enables administrator to true up any remaining balance in a final payment at the end of the period.	Administrators can assign an employee to the plan using the Assign Future Payment Plans task.	Administrators can launch a future payment plan, which generates a request for each person enrolled in the plan to get a portion of the bonus pool. The administrator then determines the amount for each person. The approved bonuses	Simply being in a future payment plan doesn't affect pay. To participate in a future payment plan, assign an employee to the plan and to any other bonus plans relevant for calculating the true up.

Plan Type	When do I use this plan type?	How do I assign employees to the plan?	How do the employees get paid?	What is the result?
			automatically flow to payroll.	

**These compensation plans are discretionary. Employees aren't paid from discretionary compensation plans in every pay period.*

To view:

- All compensation-related reports, run Workday Standard Reports. Select the *Compensation* and *Set Up Compensation* categories.
- A complete list of your compensation plans, access the Compensation Plans report.
- Employees assigned to various compensation plans, access the View Compensation Plan Rollout Process report or the Compensation Component Assignments report.
- All the employees in any compensation plan, run the Compensation Plan Assignments report.
- Employees assigned a specific plan, except future payment plans or one-time payment plans, select [plan type] > [plan type] Assignments from the related actions menu of the plan. Example: Merit Plan > Merit Plan Assignments.

Salary Plans

Steps: Set Up Salary Plans

Prerequisites

Set up compensation components and grades.

Steps

1. Create Salary Plans on page 1069.
2. Create Unit Salary Plans on page 1071.
3. Create Period Salary Plans on page 1072.

   Create a plan that enables you to assign extra months, weeks, or days of pay to employees.
4. (Optional) Create Compensation Rounding Rules.

   You can associate rounding rules with allowance, salary, merit, bonus, or stock plans, or with compensation bases managed by a compensation basis total.

   Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

Next Steps

You can:

- Assign the salary plan to a compensation package.
- Assign the salary plan to new hires.
- Assign the salary plan to promoted, demoted, and transferred employees.

Related Information

Tasks

Roll Out Compensation Plans to Employees on page 1027

Create Salary Plans

Prerequisites

- Set up compensation components and grades.
- Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.

Context

Create a salary plan that you can then assign to eligible employees.

Steps

1. Access the Create Salary Plan task.
2. In the Details section, select the Inactive check box if you don't want the plan available for use with new processes. Processes already in progress using this plan complete as normal.
3. In the FTE section, consider

Option	Description
Apply FTE%	If selected, Workday prorates the bonus for part-time employees assigned to this plan based on their FTE. You can enable Paid FTE in the Staffing section on the Maintain Localization Settings task. If enabled, Workday prorates using the paid FTE override on the position. Otherwise, Workday calculates FTE by dividing Scheduled Weekly Hours / Default Weekly Hours when proposing compensation during these business processes: • *Offer*. • *Employment Agreement*. • *Hire*. • *Change Job*. • *Edit Position*. • *Add Job*. • *Start International Assignment*.
Use Assigned Value in 100% Calculations	For amount-based plans only. This option doesn't apply to workers Managed by Basis Total (MBT). If selected, Workday uses the assigned amount on the plan as the fixed proration value and the 100% value in calculations. If not selected, Workday divides the assigned amount by the employee's FTE for 100% FTE calculations. Example: You assign a worker with 50% FTE amount-based Salary Plan A for 1,000 and amount-based Allowance Plan B for 1,000. You select the Use Assigned Value in 100% Calculations for Salary Plan A and None of the above for Allowance Plan B. The 100% FTE value calculated for Salary Plan A is the assigned amount of 1,000. Workday doesn't divide this amount by the worker's FTE. The 100% FTE value calculated for Allowance Plan

Option	Description
	B is 2,000, which equals the assigned amount (1000) divided by the employee's 50% FTE (0.5): (1000/0.5 = 2000).
None of the Above	Workday doesn't apply FTE% and doesn't use the assigned plan value in 100% calculations.
Rounding Rule	Displays only when you've selected Apply FTE% and the worker's FTE% is less than 100%. For MBT workers with prorated compensation, Workday ignores any rounding rule on the salary plan. In addition, Workday doesn't round the salary amount for any Compensation business process that doesn't have an associated Pay Group. Workday calculatesSalary Assignment from the worker's Pay Group Frequency for the position being evaluated, rounds, and converts the value to Plan Frequency.

4. In the Salary Defaults section, select a Compensation Element.

   Compensation elements store the earnings associated with compensation. If you select a compensation element designated as base pay, Workday includes the compensation in the employee's base pay calculation.
5. In the Plan Eligibility section, select 1 or more eligibility rules.

   Eligibility rules determine which employees are eligible for this plan. If you select multiple eligibility rules, Workday evaluates each rule independently to determine employee eligibility for the plan. Employees are eligible if they meet the qualifications of any 1 rule. You can only use individual rules once in the plan and profiles.
6. Select the Exclude from Merit check box if you don't want this plan to be available when you initiate a compensation review process.

Next Steps

You can:

- Assign the plan to employees on the Request Compensation Change task or web service.
- Add the plan to a compensation package on the Create Compensation Package task.
- Access the Salary Plan report for detailed information on a specific plan.
- Access the Edit Salary Plan task.

  You can update default values only for plans not yet assigned to employees. You can, however, update the Compensation Element field regardless if the plan is assigned or not.
- Hide the compensation plan type from specified groups of workers using the *Worker Data: Compensation Plan Type* domain in the Core Compensation functional area.

Example: Time-Based Proration for Merit and Bonus Awards on page 1184

Create Unit Salary Plans

Prerequisites

- Set up compensation components and grades.
- Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.

Context

Create a unit salary plan that you can then assign to eligible employees.

Steps

1. Access the Create Unit Salary Plan task.
2. In the Salary Defaults section, consider:

Option	Description
Compensation Element	Compensation elements store the earnings associated with compensation. If you select a compensation element designated as base pay, Workday includes the plan's compensation in the employee's base pay calculation.
Unit	Select the unit for measuring the work performed.
Per Unit Amount	Enter the amount paid for each unit of work performed.
Default Units	Enter the number of units an employee is expected to work for the specified time period. Units multiplied by per unit amount determine an employee's pay. This is only used as a guideline and can be overridden. If you select a compensation element designated as base pay, then Workday includes the plan's compensation in the employee's base pay calculation.
Frequency	Select the time frame in which an employee gets paid for the number of units worked. Workday calculates pay for employees by using the employee's scheduled weekly hours or a user-defined annualization factor, as defined in the frequency definition. To ensure the proper calculation method, use the Maintain Frequencies task to review the calculation method for the selected frequency.
No Override	Select this check box to prevent these values from being overridden.

3. In the Plan Eligibility section, select 1 or more rules.

   Eligibility rules determine which employees are eligible for this salary plan. If you select multiple eligibility rules, Workday evaluates each rule independently to determine employee eligibility for the plan. Employees are eligible if they meet the qualifications of any one rule.

Next Steps

You can:

- Assign (roll out) the plan to employees on the Rollout Compensation Plans to Employees task.
- Add the plan to a compensation package on the Create Compensation Package task.
- Access the Salary Plan report for detailed information on a specific plan.
- Access the Edit Salary Plan task.

  You can update default values only for plans not yet assigned to employees. You can, however, update the Compensation Element field regardless if the plan is assigned or not.
- Adjust default values for assigned plans on the Set Up Unit Salary Plan Adjustment task.
- Hide the compensation plan type from specified groups of workers using the *Worker Data: Compensation Plan Type* domain in the Core Compensation functional area.

Tasks

Steps: Set Up Salary Plans on page 1068

Set Up Adjustments to Unit Salary, Hourly, Allowance, and Commission Plans on page 1030

Create Period Salary Plans

Prerequisites

- Set up compensation components and grades.
- Create compensation basis.
- Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.

Context

Create a plan that enables you to assign extra months, weeks, or days of pay to employees.

Steps

1. Access the Create Period Salary Plan task.
2. In the Details section, select Inactive to indicate the plan isn't available for use.

   Processes already using plans marked Inactive complete as normal.
3. In the Period Salary Defaults section, consider:

Option	Description
Compensation Element	Compensation elements store the earnings associated with compensation. If you select a compensation element designated as base pay, Workday includes the plan's compensation in the employee's base pay calculation.
Compensation Period Multiplier	Multiplies the Compensation Period. (Up to 2 decimal places allowed.)

Option	Description
	Example: If the Compensation Period Multiplier is 15.50 and the Compensation Period is Day, Workday assigns 15.50 extra days to pay employees.
Compensation Basis	Available if you select the Percent Based Plan option. Select the compensation basis Workday uses to determine the target amount (if the worker isn't managed by a compensation basis) for this plan. If the worker is managed by a compensation basis, Workday doesn't exclude this plan when calculating the target amount. If you select a compensation basis that includes this plan, Workday excludes this plan when calculating the employee's target amount. If you select a subtractive compensation basis, Workday subtracts the subtractive basis amount from the worker's primary compensation basis before calculating the percentage-based target amount. If the plan is part of a compensation basis that has the Manage Basis Total check box selected, you can't change the selected compensation basis. In this case, the period salary plan works like any other proportional plan. Workday allows individual plan changes in business processes that allow compensation changes.

4. In the Plan Eligibility section, select 1 or more rules.

   Eligibility rules determine which employees are eligible for this period salary plan. If you select multiple eligibility rules, Workday evaluates each rule independently to determine employee eligibility for the stock plan. Employees are eligible if they meet the qualifications of any one rule.
5. (Optional) Complete the Period Salary Plan Profiles section.

   This enables you to have different payout amounts for different groups of employees.

   Example: You can set up 1 profile where the target for an individual employee is 2 months total base pay and another with 3 months total base pay.

Next Steps

You can:

- Assign (roll out) the plan to employees on the Rollout Compensation Plans to Employees task.
- Add the plan to a compensation package on the Create Compensation Package task.
- Access the Salary Plan report for detailed information on a specific plan.
- Access the Edit Period Salary Plan task.

  You can update default values only for plans not yet assigned to employees. You can, however, update the Compensation Element field regardless if the plan is assigned or not.
- Hide the compensation plan type from specified groups of workers using the *Worker Data: Compensation Plan Type* domain in the Core Compensation functional area.

Hourly Plans

Steps: Set Up Minimum Wage for Hourly Plans

Prerequisites

To use city, county, and local rates delivered by Workday, specify a Local Minimum Wage Authority on the location of a business site. See Steps: Set Up Local Minimum Wage Rates.

Context

You can configure minimum wage on an hourly plan using:

- A flat rate, or Custom Minimum Wage.
- Minimum wage rates maintained by Workday Payroll, or Payroll Authority Minimum Wage.
- A calculation, or Calculated Minimum Wage.

Configuring minimum wage for hourly plans helps you:

- Support minimum wage requirements for hourly workers.
- Simplify administrative processes related to minimum wage management by automatically updating minimum wage assignments when rates change.
- Improve accuracy by reducing manual entry errors when assigning minimum wage.

Payroll Authority Minimum Wage functionality is available to all HCM customers. However, hourly plans that are configured with Payroll Authority Minimum Wage can only use rates that Workday Payroll delivers. Currently, Workday delivers rates in the following locations:

- United States
- Canada

Steps

1. (Optional) Access the Create Security Policy for Domain task.

   Complete the task:

Option	Description
For Domain	Select *Set Up: Payroll Authority Minimum Wages View*.
Confirm	Select the check box.
Security Group	Add *Compensation Administrators*.
View	Select the check box.
Modify	Select the check box.

   This security policy enables the Compensation Administrators to view Payroll Authority Minimum Wage tables and related reports.

   Security: *Security Configuration domain* in the System functional area.
2. (Optional) Activate Pending Security Policy Changes.

3. Configure a minimum wage type on your hourly plan and edit the status of the Enforce Minimum Wage check box.

   You can use the:

   - Create Hourly Plans or the Edit Hourly Plans task. See Create Hourly Plans on page 1077.
   - *Put Compensation Plans* EIB.
   - Set Up Hourly Plan Adjustment task only for hourly plans configured without minimum wage or configured with Custom Minimum Wage.
4. Assign new or update existing minimum wage assignments for workers to comply with the minimum wage amount on the hourly plan.

   You can:

   - Use the *Hourly Plan Assignment Updates for Worker by Position* mass operation type on the Mass Operation Management task. See Steps: Set Up Mass Operations for Minimum Wage on page 1076.
   - Update assignments manually using the *Request Compensation Change* web service. See Concept: Request Compensation Change EIB.
   - Use the Set Up Hourly Plan Adjustment task to update assignments only for workers who are assigned an hourly plan configured without minimum wage or configured with Custom Minimum Wage.
5. Access the Minimum Wage Audit for Worker Assignments by Position report.

   Identify workers paid below the minimum wage amount that you configured for the hourly plan.

   Security: *Worker Data: Staffing Reports with Compensation Data* domain in the Staffing functional area

Result

Workday applies the minimum wage that you configured to workers who:

- Are assigned a new hourly plan.
- Have an existing hourly plan assignment.

Workday doesn't display the Minimum Wage field in the Hourly Plan tasklet for hourly plans that use Payroll Authority Minimum Wage or Calculated Minimum Wage when:

- There's no table data available for the worker's location.
- The calculated value for minimum wage is zero.

Next Steps

Because the Minimum Wage field in the Hourly Plan tasklet of compensation events is based on the hourly plan's configuration, the field's value could update while an event is in progress. As a best practice, we recommend you verify that the proposed hourly plan assignment's Amount reflects:

- The most recent Minimum Wage value.
- Your original intended compensation change in each business process review step.

If you didn't select the Enforce Minimum Wage check box on the hourly plan, you can configure:

- Validation conditions for business process steps on an hourly plan that doesn't enforce minimum wage. See Steps: Configure Business Process Definitions.
- Minimum wage validations for compensation reviews using the Minimum Wage Amount report field.

You can also configure custom notifications to alert Compensations Administrators about:

- The status of minimum wage compliance across your workforce on the Minimum Wage Audit for Worker Assignments by Position report.
- Updated minimum wage rates on the Payroll Authority Minimum Wage tables from the Payroll Compliance Update Documentation report.

Create Custom Notifications

Examples

2025R1 Feature Release Note: Minimum Wage in Compensation

Steps: Set Up Mass Operations for Minimum Wage

Context

When you first assign an hourly plan to a worker, Workday populates the value of the Minimum Wage field as the default assignment Amount for a worker in a compensation event. This Amount value isn't updated automatically if there are changes to the Minimum Wage field due to:

- Workday-delivered Payroll Authority Minimum Wage rate updates.
- Recalculations of the minimum wage configured on the hourly plan.

To automatically update hourly plans that use Payroll Authority Minimum Wage or Calculated Minimum Wage, you can use the Mass Operational Management task to:

- Help you support compliance by scheduling daily updates for minimum wage rates on hourly plan assignments.
- Efficiently modify the minimum wage rate for a large number of workers with hourly plans by reducing manual maintenance.

Steps

1. Create a Segment-Based Security Group for Mass Operations.

   On the Create Security Group task, select:

Option	Description
Type of Tenanted Security Group	*Segment-Based Security Group*
Security Groups	• *HR Administrator* • *Compensation Administrator*
Access to Segments	*Hourly Plan Assignment Updates*

2. Edit Domain Security Policies.

   Grant your segment-based security group View and Modify permissions to the *Mass Operation Management* domain in the System functional area.
3. Copy Reports.

   Create a copy of the Minimum Wage Audit for Worker Assignments by Position standard report.
4. (Optional) Access the Maintain Event Categories and Reasons task.

   Define the reason for the *Request Compensation Change* event.

   Security: *Set Up: Staffing* domain in the Staffing functional area.
5. Set Up Mass Operations.

   Complete the Mass Operation Management task:

Option	Description
Mass Operation Type	Select *Hourly Plan Assignment Updates for Worker by Position*.

Option	Description
Input Report	Select your copy of the Minimum Wage Audit for Worker Assignments by Position standard report.
Run Frequency	Schedule the desired frequency you want Workday to run the report.

6. Complete the Mass Operation Configuration section:

Option	Description
Validate Only	Select this check box to only view proposed assignment updates.
Effective Date	Enter the date for when you want the compensation event to take effect.
As-of Date	Enter the date for when you want the proposed new Minimum Wage amount to take effect.
Hourly Plan	Select at least one hourly plan to update the worker assignments assigned to the plan.
Action	When you select *Adjust to New Defaults*, Workday assigns the hourly plan value to a worker based on the As-of Date. When you select *Adjust by Custom Amount*, enter a flat amount for Workday to use to adjust a worker's hourly assignment without changing the hourly plan default. Example: You enter *5* for Adjust by Custom Amount to update Terry's hourly rate from 10.00 USD to 15.00 USD. Note: Workday doesn't process Adjust by Custom Amount as an override for the worker.

Result

Workday updates minimum wage assignments for all workers on the hourly plans that you selected.

You can view Positions Processed and Positions Bypassed in the Results section of the Mass Operation Management background process to identify workers whose assignments weren't updated and why.

Create Hourly Plans

Prerequisites

- Set up compensation components and grades.
- Security in the Core Compensation functional area:
  - *Set Up: Base and Plan* domain.
  - *Set Up: Payroll Authority Minimum Wages View* domain. This domain is required only if you want to view thePayroll Authority Minimum Wages report and Payroll Compliance Update Documentation report.

Context

You can create or update an hourly plan that you assign to eligible employees. You can also annualize hourly plans by setting the annualization factor on the Maintain Frequencies task.

Steps

1. Access the Create Hourly Plan task.
2. From the Minimum Wage prompt in the Minimum Wage section:

Option	Description
Calculated Minimum Wage	Select this option to use an Amount Calculation in the Compensation category when defining minimum wage on the plan. When you use this option, you can use one hourly plan for workers across multiple countries by not selecting an option for Currency. Example: You want to calculate your minimum wage by using a minimum wage rate maintained by Payroll while paying 2.00 USD above the Workday-delivered minimum wage rate.
Custom Minimum Wage	Select this option to enter a flat rate Amount that defines the minimum wage in the regulatory region where this hourly plan is in use. Example: You want to set minimum wage of the hourly plan to 18.00 USD.
Payroll Authority Minimum Wage	Select this option to use the rates delivered by Workday in the Payroll Authority Minimum Wage tables. When you use this option, you can set up separate hourly plans by country to specify a Currency per hourly plan. In compensation events, the Minimum Wage Amount is based on the current Minimum Wage rate in the Payroll tables as of the event's effective date. Workday uses the worker's location to: • Identify which rates to use. • Select the highest rate from federal, state, and local authorities. Example: You want to assign the mandated minimum wage rate to hourly workers in San Francisco as of 07/01/24, which is 18.67 USD. When a worker is assigned to multiple positions, Workday assigns a minimum wage rate based on the location of the position associated with the compensation business process. You can access the All Payroll Authority Minimum Wages report to review the minimum wage rates.

3. (Optional) In the Minimum Wage section, select the Enforce Minimum Wage check box to display a critical error message in compensation events.

   This critical error prevents users from assigning an Amount that's below the minimum wage rate configured on the hourly plan.
4. In the Hourly Defaults section:

Option	Description
Compensation Element	Compensation elements store the earnings associated with compensation. If you select a compensation element designated as base pay, Workday includes the compensation for a plan in the employee's base pay calculation.

Option	Description
Currency	If configured, the hourly plan's Currency overrides the currency setting: • The compensation grade or grade profile. • Your tenant's default currency. As a best practice, Workday recommends that when you configure the Currency field, consider how it interacts with these minimum wage types: • Payment Authority Minimum Wage • Calculated Minimum Wage See Concept: Minimum Wage in Compensation on page 1079.
Frequency	Select *Hourly* so that the employee gets paid by the hour. Workday calculates pay for employees by using the employee's scheduled weekly hours or a user-defined annualization factor, as defined in the frequency definition.

5. In the Plan Eligibility section, select 1 or more rules.

   Employees are eligible if they meet the qualifications of any 1 rule. If you select multiple eligibility rules, Workday evaluates each rule independently to determine employee eligibility for the plan.
6. In the Plan Eligibility section, select the Exclude from Merit check box if you don't want this plan to be available when you initiate a compensation review process.

Next Steps

You can:

- Assign the plan to employees on the Request Compensation Change task or web service.
- Add the plan to a compensation package on the Create Compensation Package task.
- Access the Hourly Plan and View Hourly Plan Usage reports.
- Access the Edit Hourly Plan task. You can update default values only for plans not yet assigned to employees. You can, however, update the Compensation Element field regardless if the plan is assigned or not.
- Update default values for new and assigned plans or adjust existing assignments using the Set Up Hourly Plan Adjustment task. You can only use this task for hourly plans configured without minimum wages or configured with Custom Minimum Wage.
- Hide the compensation plan type from specified groups of workers using the *Worker Data: Compensation Plan Type* domain in the Core Compensation functional area.

Tasks

Set Up Adjustments to Unit Salary, Hourly, Allowance, and Commission Plans on page 1030

Steps: Set Up Compensation Components on page 979

Steps: Propose Compensation for Employees or Positions on page 1032

Concept: Minimum Wage in Compensation

Enforce Minimum Wage

When you select the Enforce Minimum Wage check box, Workday:

- Enforces the minimum wage rate set on the plan.
- Triggers a critical error if you try to assign an Amount less than the default Minimum Wage configured on the hourly plan.

When you assign minimum wage to a worker, you must enter an assignment amount that's equal to or greater than the recommended rate in the Minimum Wage display field, which uses the amount from the hourly plan. These validations help identify and reduce errors due to assignments or changes to a worker's mandated minimum wage rate.

When the Enforce Minimum Wage check box is cleared, Workday doesn't display a critical error.

Updating Hourly Plans with Minimum Wage

When you change them minimum wage type on an existing hourly plan, consider both the current and proposed minimum wage types when applying changes to workers' assignments:

Current Minimum Wage Type	Proposed Minimum Wage Type	Recommended Related Tasks or EIB
• No minimum wage • Custom Minimum Wage	• Custom Minimum Wage • No minimum wage	You can use the Set Up Hourly Plan Adjustment task. Note: You can't assign an Amount using the Edit Hourly Plan task or the *Put Compensation Plan* EIB for these minimum wage types.
• Payroll Authority Minimum Wage • Calculated Minimum Wage	• No minimum wage • Custom Minimum Wage	You can: 1. Update the minimum wage type on the Edit Hourly Plan task. 2. Enter an Amount on the Set Up Hourly Plan Adjustment task.

Currency and Minimum Wage in Compensation

As a best practice to help you maintain compliance, Workday recommends that when you configure the Currency field on the hourly plan, consider:

Currency Configured on Hourly Plan?	Minimum Wage Type Selected?	Considerations
Yes	*Payment Authority Minimum Wage*	Workday: • Converts the currency of the Payment Authority Minimum Wage rate to the currency specified on the plan. • Displays worker assignments in that currency.
No	*Payment Authority Minimum Wage*	Workday assigns currency based on the pay range grade or grade profile, if configured, or your tenant's default currency. The currency set on the Payroll Authority Minimum Wage rate doesn't affect plan assignments.

Currency Configured on Hourly Plan?	Minimum Wage Type Selected?	Considerations
Yes	*Calculated Minimum Wage*	Workday converts Calculated Minimum Wage to the currency specified on the plan.
No	*Calculated Minimum Wage*	Workday assigns currency based on the pay range grade or grade profile, if configured, or the tenant's default currency.

Minimum Wage in Compensation Events

You can use the Minimum Wage field on the Hourly Plan tasklet of compensation events to review and verify the minimum wage rate configured on the plan. Workday populates this field based on:

- The minimum wage configured on the hourly plan.
- The compensation event's effective date.

The Hourly Plan tasklet automatically populates the value of the Minimum Wage field into Amount only when you first assign an hourly plan to a worker. For existing assignments, Workday doesn't automatically update the Amount assigned to a worker. If the minimum wage on an hourly plan has changed, Workday displays:

- The updated rate in the Minimum Wage field.
- The current Amount assigned before the worker's hourly plan changed.

If you don't manually update the assignment Amount, there could be differences between the Minimum Wage field and the Amount assigned to a worker.

As a best practice to help you maintain minimum wage assignments for compliance, we recommend that you:

- Enforce minimum wage on your hourly plans.
- Schedule mass operations for minimum wage to run daily on the current date.

Report Fields for Minimum Wage

You can use these fields to customize reports and to configure calculations for hourly plans with Calculated Minimum Wage:

Field	Business Object	Description
Minimum Wage		Indicates if an hourly plan has a configured minimum wage.
Minimum Wage Amount	Compensation Plan Assignment	Displays the minimum wage rate for a worker based on: • Their hour plan assignment. • The effective date.
Minimum Wage Amount - Current	Compensation Assignment Proposal	Displays the current minimum wage rate for a worker based on the effective date.
Minimum Wage Amount - Proposed	Compensation Assignment Proposal	Displays the proposed minimum wage rate for a worker based on the effective date.

Reference: View Tax Authority Data (CAN)

Allowance Plans

Create Allowance Plans

Prerequisites

- Set up compensation components and grades.
- Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.

Context

You can create allowance plans for employees as part of their regular paycheck using the pay calculation process.

Examples:

- A cell phone allowance for a flat amount of 150 USD per month.
- An off-site reimbursement allowance of 10 percent of an employee's base pay salary per month to offset temporary relocation.
- A car allowance of 300 miles per week paid at 3 USD per mile.

You can link allowance plans to expense items and pay out to employees using the settlement process. Example: A tuition reimbursement program for a flat amount of 2,500 USD, or a specific number of units per quarter.

Steps

1. Access the Create Allowance Plan task.
2. Select:

Option	Description
Reimbursable	Select this option to link the allowance plan with an expense item. The expense item for reimbursement accounts must have an Expense Item Amount Type of Based on Allowance Plan. See: dan1370797733661.dita If selected, you can't: • Add a compensation element to this plan. • Update the Percent Based Plan options. You can access the View Reimbursable Allowance Plan Activity report and configure it to display on the View Worker, Worker Profile, and Talent Profile.
Amount Based Plan	Targets for the plan are based on a fixed monetary amount.

Option	Description
Percent Based Plan	Targets for the plan are based on a percentage of salary. This option isn't available if you selected the Reimbursable option.
Unit Based Plan	Targets for the plan are based on a number of units.

3. In the Details section, consider:

Option	Description
Inactive	Select this check box if the plan isn't available for use. Processes already using this plan complete as normal.
Expense Item	Available if you select the Reimbursable option. To be part of a settlement process, the plan must be linked to the Expense Item.
Expense Accumulator	Available if you select the Reimbursable option. Workday Expenses provides these options: • *Month to Date* • *Month with Custom Start Date* • *Year to Date* • *Year with Custom Start Date*
Allow Overage	Displays if you select the Reimbursable option.

4. In the FTE section, consider:

Option	Description
Apply FTE%	Select this check box to prorate the compensation for employees assigned to this plan based on their full-time equivalent hours percentage. You can enable Paid FTE in the Staffing section on the Maintain Localization Settings task. If enabled, Workday prorates using paid FTE on compensation plans. Otherwise, Workday calculates FTE by dividing `Scheduled Weekly Hours / Default Weekly Hours` when proposing compensation during these business processes: • *Offer* • *Employment Agreement* • *Hire* • *Change Job* • *Edit Position*
Use Assigned Value in 100% Calculations	For amount or unit-based plans only. This option doesn't apply to workers Managed by Basis Total (MBT).

Option	Description
	If selected, Workday uses the assigned amount on the plan as the fixed proration value and the 100% value in calculations. If not selected, Workday divides the assigned amount by the employee's FTE for 100% FTE calculations. Example: You assign a worker with 50% FTE amount-based Bonus Plan A for 1,000 and amount-based Allowance Plan B for 1,000. You select the Use Assigned Value in 100% Calculations for Bonus Plan A and None of the above for Allowance Plan B. The 100% FTE value calculated for Bonus Plan A is the assigned amount of 1,000. Workday doesn't divide this amount by the worker's FTE. The 100% FTE value calculated for Allowance Plan B is 2,000, which equals the assigned amount (1000) divided by the employee's 50% FTE (0.5): (1000/0.5 = 2000).
None of the Above	Workday doesn't apply FTE% and doesn't use the assigned plan value in 100% calculations.

5. In the Allowance Defaults section, consider:

Option	Description
Compensation Basis	Available if you select the Percent Based Plan option. Select the compensation basis Workday uses to determine the target amount (if the worker isn't managed by a compensation basis) for this plan. If the worker is managed by a compensation basis, Workday doesn't exclude this plan when calculating the target amount. If you select a compensation basis that includes this plan, Workday excludes this plan when calculating the employee's target amount. If you select a subtractive compensation basis, Workday subtracts the subtractive basis amount from the worker's Primary Compensation Basis before calculating percentage-based target amount.
Compensation Element	Unavailable if you select the Reimbursable option. Compensation elements store the earnings associated with compensation. If you select a compensation element designated as base pay, Workday includes the plan's compensation in the employee's base pay calculation.
Amount	Displays if you select the Amount Based Plan option. Enter the flat amount to be paid to the employee.
Percent	Displays if you select the Percent Based Plan option.

Option	Description
	Enter the percent to use to determine the amount to be paid to the employee: `Allowance = (percent) X (base pay)`
Number of Units	Displays if you select the Unit Based Plan option. The number of units to be paid to the employee.
Unit	Displays if you select the Unit Based Plan option. The measurement in which the employee is paid.
Per Unit Amount	Displays if you select the Unit Based Plan option. The monetary value associated with each unit.
Currency	Displays if you select the Amount Based Plan or Unit Based Plan options. The currency in which the allowance is paid.
Frequency	Identifies how often you want the allowance to be paid.
No Override	To prevent the override of these values for employees assigned to the plan, select this check box. • Amount • Percent • Number of Units • Per Unit Amount • Currency
Rounding Rule	Displays only when you've selected a Percent Based Allowance Plan. For MBT workers with prorated compensation, Workday ignores any rounding rule on the allowance plan. Workday uses the pay range frequency to calculate the rounded compensation amount in Workday and payroll calculations.

6. (Optional) Configure a ceiling for a percent-based allowance plan.

   Enter a Ceiling Amount and a Ceiling Currency to place an upper limit on the allowance plan.
7. (Optional) Create Compensation Rounding Rules.

   You can associate rounding rules with allowance, salary, merit, bonus, or stock plans, or with compensation bases managed by a compensation basis total.

   Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.
8. In the Plan Eligibility section, select 1 or more eligibility rules.

   You can't use an eligibility rule more than once in a plan.

   Eligibility rules determine which employees are eligible for this plan. Employees are eligible if they meet the qualifications of any 1 rule. If you select multiple eligibility rules, Workday evaluates each rule independently to determine employee eligibility for the plan.
9. If you selected an Amount Based or Percent Based plan option, select Exclude from Merit if you don't want this plan available when you initiate a compensation review process.

10. In the Allowance Plan Profiles section, configure these:

Option	Description
For amount-based plans	Amount, Currency, and Eligibility Rule.
For percent-based plans	Percent, Eligibility Rule, and Compensation Basis.
For unit-based plans	Number of Units, Per Unit Amount, Currency, and Eligibility Rule.

If you're defining the plan to have multiple targets, it enables you to create a single plan for what are effectively multiple plans. Example: You can set up one profile where the target for individual contributors is 500 USD and the target for directors is 1000 USD.

Next Steps

You can:

- Assign (roll out) the plan to employees on the Rollout Compensation Plans to Employees task.
- Add the plan to a compensation package on the Create Compensation Package task.
- Access these reports: Allowance Plan, Allowance Plans, and View Allowance Plan Usage.
- Access the Edit Allowance Plan task.

  You can update default values only for plans not yet assigned to employees. You can, however, update the Compensation Element field regardless if the plan is assigned or not.
- Adjust default values for assigned plans on the Set Up Allowance Plan Adjustment or Set Up Unit Allowance Plan Adjustment tasks.
- Hide the compensation plan type from specified groups of workers using the *Worker Data: Compensation Plan Type* domain in the Core Compensation functional area.

Commission Plans

Create Commission Plans

Prerequisites

- Set up compensation components and grades.
- Security: *Set Up: Commissions* domain in the Core Compensation functional area.

Context

Create or update a commission plan that you can then assign to eligible employees. Example:

- Field Sales Commission
- Inside Sales Commission

Steps

1. Access the Create Commission Plan task.
2. Select either Amount Based Plan or Percent Based Plan.
3. In the Details section, select the Inactive check box if the plan isn't available for use.

   Processes already using this plan complete normally.
4. In the Commission Defaults section, consider:

Option	Description
Compensation Element	Select the element mapped to a payroll earning you want associated with this plan. Compensation elements store the earnings associated with compensation. If you select a compensation element designated as base pay, then Workday includes the plan's compensation in the employee's base pay calculation.
Amount	Workday uses this amount if it can't find another target value for the employee.
Percent	You can use percent-based commission plans as part of an on target earnings structure that sets commission target as a percentage of a compensation basis. You can't include percent-based commission plans in compensation review processes.
Currency	Enables you to manage a commission plan in a single currency, but still accommodate employees with various currencies.

5. In the Plan Eligibility section, select 1 or more eligibility rules.
6. In the Draw Defaults section, the information you enter is for informational purposes and passing to a third-party commission application.
7. Complete the Commission Plan Profiles section:

   If you're defining the plan to have multiple targets, the plan profiles section enables you to associate different targets for different eligibility rules. Example: you can set up 1 profile where the target for individual contributors is 500 USD and another where the target for directors is 1000 USD.

Next Steps

- Assign (roll out) the plan to employees on the Rollout Compensation Plans to Employees task.
- Add the plan to a compensation package on the Create Compensation Package task.
- Access these reports: Commission Plan, Commission Plans, View Commission Plan Usage, and Workers on Commission Plans.
- Access the Edit Commission Plan task.

  You can update default values only for plans not yet assigned to employees. You can, however, update the Compensation Element field regardless if the plan is assigned or not.
- Adjust default values for assigned plans on the Set Up Commission Plan Adjustment task.
- Hide the compensation plan type from specified groups of workers using the *Worker Data: Compensation Plan Type* domain in the Core Compensation functional area.

Merit Plans

Steps: Set Up Merit Plans

Prerequisites

Set up compensation components and grades.

Context

Merit plans can change base pay or promote employees to another grade or job (within the managers span of control). After you create the merit plan and assign it to employees, you use the compensation review process to implement proposed pay changes. These changes can rely on an optional compensation matrix.

Steps

1. (Optional) Steps: Create a Compensation Matrix on page 1151.

   If you want guidelines for minimum and maximum amounts when giving merit awards, you can create a compensation matrix.
2. (Optional) Create Eligibility Waiting Periods for Compensation Review Processes on page 1161.
3. (Optional) Create Time Proration Rules for Compensation Reviews on page 1162.
   Create or update the time proration rule you intend to use in the plan.
4. (Optional) Create Compensation Rounding Rules on page 1165.

   You can associate rounding rules with allowance, salary, merit, bonus, or stock plans, or with compensation bases managed by a compensation basis total.

   Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.
5. (Optional) Steps: Manage Compensation Basis on page 1133.
6. Create Merit Plans on page 1088.

Next Steps

You can also Create or Edit Compensation Packages to add the plan to the appropriate compensation package.

Related Information

FAQ: Compensation Reviews on page 1185

Create Merit Plans

Prerequisites

- Set up compensation components and grades.
- Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

	

Steps

1. Access the Create Merit Plan task.
2. In the Award Calculation section, consider:

Option	Description
Manage Basis Total	Select if you want to apply merit increases to the total Primary Compensation Basis (PCB) for an employee, instead of to total base pay. During a compensation review process, Workday automatically allocates amounts to the individual plans that make up the employee's PCB.
Allow Target Override	This makes the Individual Target field available for entry on the Request Compensation Change task and in compensation assignments for staffing events that include this plan.
Hide Target from Security Groups	Select 1 or more security groups from which to hide funded plan targets. Workday hides the funded plan target beginning on the effective date of the plan. Reports that display plan assignments hide plan targets only when the plan is in effect. Workday doesn't hide funded plan targets during the *Initiate Compensation Review Process* or during the *Offer* or *Employment Agreement* business processes in the Task Consolidation context.
Target %	Enter the recommended increase percentage. You can enter up to 4 decimal places. Available for percentage-based plans only. Required for all merit plans that use a compensation matrix or multiple targets. Workday uses this value if it can find no other target increase percent for the employee. This can happen when employees: • Have no individual target. • Aren't eligible for any of the multiple plan profile targets. • Are eligible for multiple plan profile targets. • Have no target pulled from a compensation matrix. You can use a Target % for single-target merit plans. Doing so gives you the option to create a merit plan without using it to budget for merit increases.

Option	Description
	Note: Always run the Employees without Unique Targets audit report before launching the compensation review process to identify the employees without a unique target.
Target Amount	Available for amount-based plans only. Enter the recommended positive or negative amount with up to 4 decimal places. Use the Target Amount to assign employees identical merit increases (or decreases). You can select amount-based merit plans when creating a compensation matrix.
Reference Currency	This enables you to manage a merit plan in a single currency, but still accommodate employees who use a variety of currencies.
Reference Frequency	Workday uses this frequency to calculate the actual cost of the award, plus or minus any currency fluctuations.
Subject to Statutory Minimum	Applies to percentage-based plans only. Select to indicate that the plan is subject to statutory increases. If selected as of the Process Period End Date, Workday lists plans subject to a statutory minimum when you initiate a compensation review process. Workday uses the statutory minimum percentage you enter to calculate the merit pool if greater than the merit plan target percentage.
Compensation Matrix	Select to base merit increases on factors such as employee's performance reviews and potential ratings.
Use as Reference Only	Available if you select a compensation matrix. Select if you don't want Workday to calculate the individual target or pool amount using the selected compensation matrix. Workday displays only the percentage when proposing the employee award.
Time Proration Rule	Select a rule to prorate employees' target compensation in a compensation event for this plan according to time-based criteria such as leave of absence or time since hire.

3. (Optional) In the Plan Eligibility section, select a Waiting Period.

   You can also access the Create Eligibility Waiting Period task.

   A waiting period restricts eligibility until after the employee satisfies the waiting period criteria. By using a waiting period, you can assign the plan at any time and rely on the waiting period to control eligibility.

   If the waiting period is still in effect as of the Process Period End Date configured on the compensation review process, Workday:

   - Includes the employee as an exception.
   - Sets the suggested target percent (and prorated target increase percent, if applicable) to zero.

   The pool doesn't reflect the employee target and managers can override the zero target value.
4. In the Process Eligibility section, consider:

Option	Description
Include Active Employees Assigned Plan During Process Period	If selected, employees assigned to the plan during the process period, but not currently assigned to the plan, are eligible for an award.
Include Active Employees in Waiting Period	Select if you want to include employees assigned to the plan but are in a waiting period included in a compensation review process. Workday doesn't calculate the employee target amounts, which display as zero.

5. In the Merit Plan Profiles section, enter a Target % and select an Eligibility Rule:

   This enables you to create a single budget for what are effectively multiple plans.

   You can set up 1 profile with a target for individual contributors at 3 percent and a target for directors at 6 percent.

   When the merit plan has multiple targets (plan profiles), Workday calculates the merit pool based on the appropriate target for each employee. Workday uses the Eligibility Rule on the plan profiles. The appropriate target percentage displays on the employee compensation. If Workday doesn't find a unique target using eligibility rules, it uses the target percentage from the plan defaults.

Result

When the compensation review process generates the merit pool, it accounts for the rules, profiles, and other settings in the plan. This enables you to make sound budgeting decisions. The combined use of a compensation matrix and a performance management review type enables you to pay employees for performance based on completed review results.

Next Steps

You can:

- Assign (roll out) the plan to employees on the Rollout Compensation Plans to Employees task.
- Add the plan to a compensation package on the Create Compensation Package task.
- Access the Merit Plan and Merit Plans reports.
- Access the Edit Merit Plan task.
- Hide the compensation plan type from specified groups of workers using the *Worker Data: Compensation Plan Type* domain in the Core Compensation functional area.

Bonus Plans

Steps: Set Up Bonus Plans

Prerequisites

Set up compensation components and grades.

Steps

1. (Optional) Steps: Create a Compensation Matrix on page 1151.

   To pay for employee performance, create or update the compensation matrix for use with the plan.

   If you must update the compensation eligibility rules for an existing compensation matrix, change the rules using the Edit Compensation Matrix Rules task.
2. (Optional) Define Employee Review Types on page 1625

   To pay for employee performance or view it as part of the bonus proposals, create or update the review type for the plan.
3. (Optional) Create Eligibility Waiting Periods for Compensation Review Processes on page 1161
4. (Optional) Create Time Proration Rules for Compensation Reviews on page 1162
5. (Optional) Create Compensation Scorecards on page 1099

   Workday factors company performance into the bonus pool only if you add the scorecard to the bonus plan and you have a qualifying performance results set.
6. (Optional) Create Compensation Rounding Rules on page 1165

   You can associate rounding rules with allowance, salary, merit, bonus, or stock plans, or with compensation bases managed by a compensation basis total.

   Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.
7. (Optional) Steps: Manage Compensation Basis on page 1133

   To use Compensation Basis to calculate the target bonus of employees in percent-based plans, configure the Compensation Basis settings for your tenant.
8. (Optional) Create Deferred Bonus Calculations on page 1102
9. Create Bonus Plans on page 1094

Steps: Pay for Company Performance

Prerequisites

Establish the compensation structure for the bonus plan.

Context

Factor company performance into the bonus funding.

Steps

1. Concept: Company Performance Options on page 1106
   Decide how you want to fund bonuses for the organizations within the company.
2. (Optional) Edit Business Processes

   Add the *Manage Bonus Process Funding* as the last step of the compensation review business process.

   Example: This step enables you to adjust the bonus funding percent on approved bonuses as the last step on the compensation review process.

   If you're not using this optional step for the organization, Workday recommends using the completion step that comes in the standard business process setup.
3. Create Compensation Scorecards on page 1099
   Create or update the performance scorecard for the company.

   You can also import scorecard data into Workday with the *Put Compensation Scorecard* Enterprise Interface Builder (EIB) web service.
4. (Optional) Create Compensation Scorecard Results on page 1100

   Define the criteria for rating the performance of the company. You can rate company performance at any time during the compensation review process but when you rate performance affects bonus funding defaults.

   If you want company performance results factored into the bonus funding pool, create them before rolling out the bonus to organizations. You can add or create them later during the *Manage Bonus Process Funding* step.
5. (Optional) Create Bonus Plans on page 1094
   Add the company performance scorecard to a bonus plan.
6. Roll Out Compensation Plans to Employees on page 1027
   If the bonus plan is new, roll out the bonus plan to a target population of employees.
7. (Optional) Access the Maintain Bonus Accrual Estimates report.

   You can estimate and report on bonus costs using compensation review initiation criteria, including organizations, bonus plans, and date parameters.

   Security: *Process: Compensation Management Events* domain in the Advanced Compensation functional area.
8. Initiate Compensation Review Processes on page 1205
9. Steps: Recalculate Bonus Targets, Pool, and Awards During Compensation Reviews on page 1212

Steps: Set Up Eligible Earnings Overrides for Bonuses

Prerequisites

Define your bonus plans and related compensation structure.

Context

Define eligible earnings when you want to use a specific value as an employee's estimated earnings to calculate their percent of salary-based bonuses. Eligible earnings overrides can only be used in compensation review processes that include bonus awards.

Steps

1. In the Create Eligible Earnings Override Period task, define the eligible earnings period.

   Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

2. Create Bonus Plans on page 1094
   To use eligible earnings as the basis for calculating bonuses, select Eligible Earnings Override as the compensation basis.
3. Create Eligible Earnings Overrides for Bonus and Stock on page 1160
   Define the eligible earnings for the employee, including the amount, the applicable period, and the applicable bonus plans.
4. (Optional) Before running the compensation review process, view the Employees without Eligible Earnings Override report.

   Ensure that you defined eligible earnings for all employees assigned to the bonus plan who should be receiving the bonus. To define eligible earnings, select Compensation > Create Eligible Earnings Override from the worker's related action menu.
5. Initiate Compensation Review Processes on page 1205
   To calculate bonuses based on the eligible earnings, run the process for the bonus plan and eligible earnings period.

Create Bonus Plans

Prerequisites

- Set up compensation components and grades.
- Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

Context

You can create bonus plans to assign to employees. When Workday generates the bonus pool as part of a compensation review process, it takes into account the rules and target profiles in the bonus plan.

When creating bonus plans, consider how you want to:

- Divide or consolidate bonus plans, by region, job level, job profile, or grade.
- Set up targets for each bonus plan, such as no target, a single target, or multiple targets.

Steps

1. Access the Create Bonus Plan task.
2. In the Details section, consider:

Option	Description
Inactive	Select if the plan isn't available for use. Processes already using this plan will complete as normal.
Compensation Element	Select the element mapped to the payroll earning you want associated with this plan.

3. In the FTE section, consider:

Option	Description
Apply FTE%	For amount-based plans only. If selected, Workday prorates the bonus for part-time employees assigned to this plan based on their FTE. You can enable Paid FTE in the Staffing section on the Maintain Localization Settings task. If enabled, Workday prorates using the paid FTE override on the position. Otherwise, Workday calculates FTE by dividing Scheduled Weekly Hours / Default Weekly Hours when proposing compensation during these business processes:

Option	Description
	• *Offer*. • *Employment Agreement*. • *Hire*. • *Change Job*. • *Edit Position*. • *Add Job*. • *Start International Assignment*.
Use Assigned Value in 100% Calculations	For amount-based plans only. This option doesn't apply to workers Managed by Basis Total (MBT). If selected, Workday uses the assigned amount on the plan as the fixed proration value and the 100% value in calculations. If not selected, Workday divides the assigned amount by the employee's FTE for 100% FTE calculations. Example: You assign a worker with 50% FTE amount-based Bonus Plan A for 1,000 and amount-based Allowance Plan B for 1,000. You select the Use Assigned Value in 100% Calculations for Bonus Plan A and None of the above for Allowance Plan B. The 100% FTE value calculated for Bonus Plan A is the assigned amount of 1,000. Workday doesn't divide this amount by the worker's FTE. The 100% FTE value calculated for Allowance Plan B is 2,000, which equals the assigned amount (1000) divided by the employee's 50% FTE (0.5): (1000/0.5 = 2000).
None of the Above	Workday doesn't apply FTE% and doesn't use the assigned plan value in 100% calculations.

4. In the Award Calculation section, consider:

Option	Description
Compensation Basis	Available if you select Percent Based Plan. Select the compensation basis Workday uses to determine the target amount for this plan. Workday doesn't exclude this plan when calculating the target amount for employees managed by a compensation basis. If you select a compensation basis that includes this plan, Workday excludes this plan when calculating the target amount. If you select a subtractive compensation basis, Workday subtracts the subtractive basis amount from the employee's Primary Compensation Basis before calculating percentage-based target amount. You can't change a compensation basis if the plan is part of compensation basis that has the Manage Basis Total check box selected.
Target Amount	Available for amount-based plans only. Enter the amount of the target bonus award. Workday uses the target amount when the employee: • Doesn't have an individual target.

Option	Description
	• Isn't eligible for any of the plan profile targets. • Is eligible for more than 1 plan profile target.
Target %	Available for percent-based plans only. Enter the percent of the target bonus award. Workday uses the target % when the employee: • Doesn't have an individual target. • Isn't eligible for any of the plan profile targets. • Is eligible for more than 1 plan profile target.
Reference Currency	Selecting the currency enables you to manage a bonus plan in a single currency but still accommodate employees who use other currencies.
Reference Frequency	Workday uses this frequency to calculate the actual cost of the award, plus or minus any currency fluctuations.
Company Funding Scorecard	Determines the funding of the target bonus pool. The compensation review process factors company performance into the bonus pool only if you add the scorecard to the bonus plan and you have qualifying performance scorecard results. The Company Funding Scorecard can't contain profiles. You can update results on the *Manage Bonus Funding* step of the compensation review process.
Plan Modifier Scorecard	If you want to modify the target, select a scorecard. The Plan Modifier Scorecard can contain profiles. You can update results on the Recalculate Pool and Awards task while the compensation review is in progress.
Time Proration Rule	Select a rule to prorate employees' target compensation for this plan according to time-based criteria such as leave of absence or time since hire.
Allow Target Override	If selected, you can override the default plan or profile target for an individual employee.
Hide Target from Security Groups	Select 1 or more security groups from which to hide funded plan targets. Workday hides the funded plan target beginning on the effective date of the plan. Reports that display plan assignments hide plan targets only when the plan is in effect. Workday doesn't hide funded plan targets during the *Initiate Compensation Review Process* or during the *Offer* or *Employment Agreement* business processes in the Task Consolidation context.

5. (Optional) In the Plan Eligibility section, select a Waiting Period.

   A waiting period restricts eligibility until after the employee satisfies the waiting period criteria. By using a waiting period, you can assign the plan at any time and rely on the waiting period to control eligibility.

   If the waiting period is still in effect as of the Process Period End Date configured on the compensation review process, Workday:

   - Includes the employee as an exception.
   - Sets the suggested target percent (and prorated target increase percent, if applicable) to zero.

   The pool doesn't reflect the employee target and managers can override a target value of zero.
6. In the Process Eligibility section, consider:

Option	Description
Include Active Employees Assigned Plan During Process Period	Indicates that employees assigned to the plan at any point during the process period, but not currently assigned the plan, are eligible for an award. Workday determines the related target from: • The individual override as of the date the employee was last assigned the plan. • The plan profile as of the compensation snapshot date. • Target Changes in Period if selected on the proration rule.
Include Active Employees in Waiting Period	Select if you want to include employees assigned to the plan and in a waiting period included in a compensation review process. Workday doesn't calculate the employee target amounts, which display as zero.

7. (Optional) Select 1 or more Coverage Date Eligibility rules.

   If configured, Workday:

   - Displays editable Coverage Start Date and Coverage End Date columns for bonus plans during compensation reviews.
   - Applies coverage dates to bonus awards resulting from the compensation review event. Coverage dates become visible in Workday Payroll and Payroll Integration when the compensation review completes.

   Coverage dates enable Workday Payroll or Payroll Integration to associate dates with the bonus for US Fair Labor Standards Act (FLSA) reporting requirements.
8. In the Performance Factors tab, consider:

Option	Description
Compensation Matrix or Compensation Matrix for Individual Performance Factor	Identifies the compensation matrix used to calculate the individual target amount during the compensation review process.
Use Matrix as Reference Only	Available when you select Bonus Plan with Compensation Matrix and enter a compensation matrix. Select if you don't want Workday to calculate the individual target or pool amount using the selected compensation matrix. Workday

Option	Description
	displays only the percentage when proposing the employee award.
Apply Net Attainment	If selected, Workday uses net attainment as a multiplier for the bonus target or bonus amount during compensation reviews. Example: If a discretionary target with a weighted matrix is equal to 2000, a Net Attainment Percent of 50% reduces it to 1000.
Weighting	The total weight between all compensation matrices and scorecards must equal 100 percent.
Compensation Scorecards	Enter 1 or more scorecards. Workday uses them to calculate the bonus award.
Modifier	If you want to modify an individual performance or performance scorecard award amount, select a scorecard.

9. Enter a Tranche number and Tranche Percent for each tranche.

   You can define bonus plans distributed in predefined portions or installment amounts. Workday calculates the portions or installments by prorating the overall bonus target using a tranche percent.
10. In the Deferred Bonus tab, consider:

   You can configure the bonus plan to divide the deferred payments into an initial cash award, followed by a stock plan disbursement.

Option	Description
Deferred Bonus Eligibility	Select eligibility rules.
Default Calculation	Select a calculation created on the Create Deferred Bonus Calculation task.
Deferred Bonus Profiles	Select an Eligibility Rule, Calculation, and Stock Plan for subgroups of the employee population defined by the Deferred Bonus Eligibility rule.

   Workday uses the Default Calculation and Default Stock Plan for employees that either meet none or meet more than 1 of the deferred bonus profiles.

   During compensation review processes with bonus awards, Workday uses these eligibility rules and the associated calculations and stock plans to determine how to divide deferred bonus awards.

   You can override deferred bonus values if your compensation review grid configuration includes Deferred Bonus Amount, Deferred Bonus Percent, or both as editable columns.

Result

For percent-based plans, Workday multiplies the basis amount by the target percent to derive the target amount. For amount-based plans, Workday simply adds the targets for the employee. Workday then sums these employee target amounts to derive the organizational bonus pools and the overall bonus pool for the process.

For Bonus Plan Modifiers, Workday calculates individual employee target amounts:

```
Compensation Basis * Target Percent or Target Amount * Individual Performance
Scorecard Results
```

If you use modifiers, Workday automatically adjusts the pool and employee award amounts.

For tranches, Compensation Administrators are responsible for rolling out the correct number of bonus events and tranches for the bonus period. To base the final true up bonus on the difference between the true up target and completed payments, use the Complete Future Payment True Up Bonus task.

Example

If an employee:

- Earns 100,000 per year.
- Has an overall bonus target of 40%.
- The target for the first tranche is 12.5%.

The employee is eligible to receive a 5000 bonus for the first tranche (100,000 * 0.4 * 0.125 * 1). If the manager proposes a bonus for the employee, the suggested target bonus is 5000 or 5%.

Next Steps

You can:

- Assign (roll out) the plan to employees on the Rollout Compensation Plans to Employees task.
- Add the plan to a compensation package on the Create Compensation Package task.
- Access the Bonus Plan and Bonus Plans reports.
- Access the Edit Bonus Plan task.
- Hide the compensation plan type from specified groups of workers using the *Worker Data: Compensation Plan Type* domain in the Core Compensation functional area.

  Example: Use this security domain to hide the compensation plan type on the Compensation Plan Assignments report for workers in Germany. Workers can still see the plan name.

Create Compensation Scorecards

Prerequisites

- Create eligibility rules for compensation.
- Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

Context

Scorecards capture company, division, or department goals and their attainment. A scorecard can have 2 components:

- Default scorecard goals
- Scorecard profile goals

You can assign a scorecard to percentage- or amount-based bonus plans. You can use scorecard profiles to override default goals and weightings using eligibility rules.

Example: Create a default scorecard to monitor goals for the Sales Department. If your sales employees are in different locations, they can have slightly different goals and weighting for 1 or more locations.

Example: You can create a company performance scorecard where customer satisfaction has the heaviest weight:

Scorecard Goal	Weight
All Critical Issues Resolved	20%
On-Time Product Delivery	15%
95 Percent Customer Satisfaction	50%
100 Million Annual Sales	15%

Steps

1. Access the Create Compensation Scorecard task.

   You can also import scorecard data into Workday with the *Put Compensation Scorecard* web service.
2. Select the Inactive check box if you don't want the scorecard available for use.

   If a process is already in-progress using this scorecard, it completes as normal.
3. In the Default Scorecard Goals section, enter a Scorecard Goal Name, Scorecard Goal Description, and Weight that you want to track.
   The sum weight of the goals must equal 100 percent.

Result

Rate the performance level for each criteria using the Create Compensation Scorecard Results task. Workday uses the results combined with achievement percentages to calculate the weighted results percent for the scorecard. If you include the scorecard performance in the bonus plan or when you initiate the compensation review process, Workday uses the weighted results when determining bonuses.

Next Steps

You can:

- Update or delete the scorecard using the Edit Compensation Scorecard task.

  You can edit or delete scorecards only if there are no performance results, or the current date is after the Evaluation Date of existing results. Example: If you have scorecard result sets from March 31 of this year and December 31 from the previous year, you can edit the scorecard only after March 31.
- Use scorecards to monitor performance, to influence funding for a bonus plan, or to adjust the funding amount after bonus approvals.

Related Information
Tasks
Create Eligibility Rules for Compensation on page 986

Create Compensation Scorecard Results

Prerequisites

- Create compensation scorecards.
- Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

Context

Enter an achievement percent to rate the level of performance toward each goal within the selected compensation scorecard.

Note:

You can create company funding scorecard results:

- During the *Manage Bonus Process Funding* step in a compensation review process.
- Using the *Put Compensation Scorecard Results* web service.

You can also update in-progress compensation review processes with updated scorecard results using the Recalculate Pool and Awards task.

Steps

1. Access Create Compensation Scorecard Results.
2. Select the Evaluation Date on which to rate the performance.
   Workday associates this date with the performance result set.
3. For each criteria, enter an Achievement percentage to indicate how well the company did in meeting that performance goal.
   The Weighted Result Percent is the sum of Weight multiplied by Achievement for all rows of criteria. Workday automatically calculates and adjusts the value as you enter achievement percentages.

Result

The saved performance rating for the specified evaluation date becomes a performance result set. A result set is a combination of the performance scorecard and the evaluation date of the rating.

If you associate this scorecard with a bonus plan, Workday uses the company performance result set with the most recent Evaluation Date to determine bonus funding. If there are no results, the compensation review process continues and assumes 100 percent in calculating bonus funding.

Example

Performance Criteria	Weight	Achievement
All Critical Issues Resolved	20%	100%
On-Time Product Delivery	15%	100%
95 Percent Customer Satisfaction	50%	90%
100 Million Annual Sales	15%	200%

If you multiply the weight by the achievement for each row and sum all of the rows, you get a weighted funding of 110 percent.

Next Steps

To assign compensation plans to multiple employees, use the Rollout Compensation Plans to Employees task.

Related Information
Tasks

Roll Out Compensation Plans to Employees on page 1027

Create Deferred Bonus Calculations

Prerequisites

- Set up compensation eligibility rules.
- Set up stock plans.
- Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

Context

You can give employees bonuses with an initial cash payment followed by a stock grant that vests over time. The deferred bonus calculation includes 1 or more amount ranges and corresponding deferred percentages. You can also configure a progressive calculation.

After you create the deferred bonus calculation, you can add it to bonus plans and specify the applicable eligibility rules and stock plans.

You can add Deferred Bonus Amount, Deferred Bonus Percent, or both as editable columns on your grid configuration. During compensation reviews, you can then override deferred bonus values for employees assigned to bonus plans with deferred calculations. The deferred bonus override amount must be 0.00 or greater and less than or equal to the total bonus amount.

Steps

1. Access the Create Deferred Bonus Calculation task.
2. Select Reference Field(s).
3. (Optional) Select the Progressive Calculation check box.

   If selected, Workday calculates deferred bonus payments progressively.

   Enter a Minimum Threshold amount to set the minimum bonus amount required for the progressive calculation. If the bonus amount is less than this minimum, Workday doesn't defer any bonus amount.
4. Configure the Definition of the calculation.

   Each row defines a range of bonus amounts and the percentage of the bonus to defer.

Example
This table depicts a nonprogressive deferred bonus calculation:

Range Name	To Value	Deferred Percentage
Tier 1	250,000	0%
Tier 2	500,000	10%
Tier 3	900,000	20%
Tier 4	1,500,000	30%
Max Tier	99,999,999	40%

The To Value of each row defines the lower limit of the range for the next row. Tier 2 has a lower limit of 250,000 because 250,000 is the To Value for Tier 1. In this deferred bonus calculation, a bonus award of 450,000 falls into Tier 2 with 10% deferred.

Examples
Example: Deferred Bonus Progressive Calculation on page 1108

Create Future Payment Plans

Prerequisites

- Create bonus plans.
- Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.

Context

Create a future payment plan with a target that pays out to employees over several bonuses or one-time payments. To calculate the outstanding balance, add a final true-up process at the end.

Steps

1. Access the Create Future Payment Plan task.
2. In the Future Payment Defaults section, consider:

Option	Description
Allow Target Override	Select this check box to enable the entry of a target or percent for an individual employee assigned to the plan. To override the values for the plan and its profiles, enter an Individual Target when requesting a compensation change or assigning compensation. Example: Select this option to double the target for top performing individuals.
Compensation Element	Select a default compensation element. Compensation elements store the earnings associated with compensation. If you select a compensation element designated as base pay, Workday includes the compensation for the plan in the base pay calculation.
Reference Frequency	Workday uses the Reference Currency and Reference Frequency settings to calculate an estimated budget in a common currency and frequency. This is useful if you are in a global team environment.

Tasks
Steps: Set Up Bonus Plans on page 1092
Roll Out Compensation Plans to Employees on page 1027
Calculate Outstanding Balances for Future Payment Plans on page 1104

Assign Future Payment Plans to Employees

Prerequisites

- Create a future payment plan.
- Security: *Worker Data: Compensation by Organization* domain in the Core Compensation functional area.

Context

You can assign 1 or more future payment plans with a target to pay out to employees:

- Over several bonus and one-time payments, and

- A final true up process at the end to calculate the outstanding balance to pay.

A future payment plan assignment is a package of assigned plans with an effective date.

Workday recommends that you have only 1 assignment per true up period. If the plan is paid out or processed and you want to assign a new target for the next period, make a new assignment.

Steps

1. Access the Assign Future Payment Plans task.

   This task is also available as a related action off the employee, under Compensation, provided a future payment plan is assigned.
2. Select the Effective as of date.

   An assignment of future payment plans is effective from this date until the day preceding the next set of assignments or forever if there's no subsequent set of assignments. You can't create 2 sets of assignments with the same effective date.

   The first time you create an assignment for an employee, Workday uses the eligibility rules associated with future payment plans to determine whether the employee matches the criteria. If the employee is eligible, Workday automatically populates Assign Future Payment Plans with this data. If the employee doesn't match any eligibility rule, Workday displays no plans.

   For subsequent assignments, Workday automatically pulls in all current plans and creates an entry for processed plans.

   If you create an assignment that has an earlier Effective as of date, Workday uses the eligibility rules to determine which plans to display.
3. Consider:

Option	Description
Individual Target	If you've enabled individual targets on the plan, you can enter an amount.
Processed	Indicates that the Complete Future Payment True Up Bonus has been run. You can't delete a plan that has the Processed check box selected.

Result

When you create an assignment of future payment plans to the employee, you must carry forward existing ones. If they aren't, Workday removes them from the employee.

Next Steps

You can use the Complete Future Payment True Up Bonus task to calculate the outstanding balance of a future payment or a bonus plan in tranches.

Calculate Outstanding Balances for Future Payment Plans

Prerequisites

- Assign future payment plans.
- Security: *Process: Compensation Plan Events* domain in the Core Compensation functional area.

Context

As the Compensation or HR Administrator, you can calculate the outstanding balance of a future payment or bonus plan in tranches. The target pool represents the amount still owed for the total true up pool.

Note: The Compensation History report displays all aspects of employee compensation.

This process doesn't address any salary changes during the period. If an employee in a future payment plan gets a salary increase during the period, the bonus calculation for that period might be higher. This might result in a lower target bonus during the true up process. The overall target bonus for an amount-based true up remains the same, regardless of salary fluctuations. For a percent-based true up, the overall target bonus fluctuates with salary changes.

Steps

1. Access the Complete Future Payment True Up Bonus task.
2. (Optional) Select Target Pay Date From and Target Pay Date To to narrow search results.
3. (Optional) Select 1 or more Organizations to narrow search results.
4. For each employee in the future payment plan, enter a Bonus Amount and a Target Payment Date.

   Workday pays the amount you enter on the date you select.

Example

You configure a future payment plan to consider multiple bonus and one-time payment plans. The target for the employees is 25,000 USD. In Quarters 1, 2, and 3, Workday pays the employees 6,250 USD and a one-time payment of 3,000 USD. The true up process calculates the outstanding balance as 3,250 USD.

Tasks
Create Future Payment Plans on page 1103

Steps: Rescind or Forfeit Bonus Payments for Employees

Prerequisites

Enable the *Rescind* action for selected security groups in the *Employee Bonus for Bonus Process* business process.

Context

You can rescind or forfeit a bonus payment for a specific employee. You can also forfeit a one-time payment.

Steps

1. To rescind a bonus payment, as a related action off the worker, select Compensation > View Compensation History.

   On the Bonus and One-Time Payments tab, select Business Process > Rescind as a related action off the business process event for the worker's bonus payment.

   The *Initiate Compensation Review Process* must be complete.
2. To forfeit a bonus or one-time payment from the *Request One-Time Payment* business process, select Forfeit.

   - Configure the *Request One-Time Payment* process as a step on the *Termination* business process.
   - The Scheduled Payment Date must be after the Termination Date.
   - Select the Send to Payroll option on the payment.

   If you select Forfeit, Workday forfeits the payment, overriding Send to Payroll.

   The ability to forfeit applies only when the worker still has the primary position as when you configured the one-time or bonus payment. Workday only displays those payments for forfeit associated with the current position. Workday doesn't display a payment for forfeit if the worker changes jobs or gets a new primary position after you configured the payment. Example: Terry has a one-time payment associated with the old position and another associated with the current position. During the termination process for Terry, Workday displays only the one-time payment associated with Terry's current position, not the former position.

Result

The Workflow State for the employee's bonus payment updates to *Rescinded*.

Concept: Company Performance Options

Workday gives you several options for funding bonuses to factor in company performance. You can apply company performance results to:

- The initial bonus funding pool when you set up the compensation review process.

  To use this option:

  - Assign the compensation scorecard to the bonus plan.
  - Rate company performance before initiating the compensation review process.
- The updated bonus pool and spend for in-progress compensation reviews.

  To use this option:

  - Assign the compensation scorecard to the bonus plan.
  - Update company performance using the Edit Compensation Scorecard Results task while the compensation review process is in progress.
  - Use the Recalculate Pool and Awards task.
- Approved bonuses at the end of the compensation review process.

  To use this option:

  - Add the *Manage Bonus Process Funding* business process step to the organization's *Initiate Compensation Review Process* business process.
  - Assign the company funding scorecard to the bonus plan.
  - Rate company performance after bonus approval (once your results are in).

You can also:

- Use the compensation scorecard as a standalone way to track company performance.
- Give bonuses without taking company performance into consideration.
- Manually override the bonus funding percent before committing to it.

Depending on the option you select and when you rate company performance, Workday applies the performance results to bonus funding differently.

If You	And You Rate Performance before Compensation Review Process Initiation	And You Rate Performance after Compensation Review Process Approval
Apply company performance to the initial bonus funding pool only.	Workday includes company performance results when calculating the bonus funding pool.	Performance results have no impact because you haven't added the *Manage Bonus Process Funding* business process step to the organization's *Initiate Compensation Review Process* business process.
Apply funding to approved bonuses. You must add the	Assumes 100% funding.	Workday provides you with a step that enables you to use

If You	And You Rate Performance before Compensation Review Process Initiation	And You Rate Performance after Compensation Review Process Approval
Manage Bonus Process Funding step.		the new rating or to revise the funding percent.
Apply company performance to the initial bonus funding pool and apply funding to approved bonuses.	Workday includes company performance results when calculating the bonus funding pool.	Workday includes company performance results when calculating the approved bonuses.
Use the company performance scorecard only.	Performance results have no impact on bonus funding calculations. The scorecard is for tracking purposes only.	Performance results have no impact on bonus funding calculations. The scorecard is for tracking purposes only.
Award bonuses without accounting for company performance.	No impact to existing bonus processing. You aren't using compensation scorecards or the *Manage Bonus Process Funding* business process step.	No impact to existing bonus processing. You aren't using compensation scorecards or the *Manage Bonus Process Funding* business process step.

Concept: Future Payment Plans and True Ups

Compensation Administrators can create future payment plans to define the type of bonus (amount or percent) and bonus targets across multiple bonus or one-time payments. At the end of the period, the Compensation Administrator can true up a future payment plan by paying the outstanding balance. Future payment periods can extend beyond annual.

Typical bonus plans define the type of bonus (also amount or percent) and the plan target. A manager can distribute a bonus target over several predefined bonus payments (called tranches) and accumulate the bonus paid to date across bonus or one-time payment plans. Bonus plan frequencies can be annual, monthly, or quarterly. Bonus plans that include tranches don't use true up, but a future payment plan can include bonus plans that use tranches.

Plan Type	Security Group	Description
Future payment plan	Compensation Administrator	The bonus target can consider multiple bonus and one-time payment plans and does a true-up at the end to pay the outstanding balance.
Bonus plan with tranches	Manager	Workday pays out the bonus target in predefined installments using fixed frequencies.

A true up event represents a combination of fixed pay, variable pay, and short-term incentive pay. You can set a target bonus and accrue bonuses over the year or period until you reach the target bonus. A true up also enables you to distribute a total bonus in tranches over several periods. Distributing the payout over several tranches is an advantage to the company. The advantage to the employee is an advance on an annual bonus. During the final bonus cycle of the period, Workday totals and reconciles the individual period bonuses against the true up target. The final payout also provides an opportunity for managers to factor in performance against the period target for each employee.

There are 2 types of true up events:

- Single Plan True Up: The company grants an annual bonus (800) and defines tranches to pay out 1/8 of the target for the first 3 quarters. In the fourth quarter, the company pays the remaining 5/8

(500). Alternatively, a final process calculates the outstanding balance, paid as a true up. Workday supports this true up type within the current compensation review process.

- Multiple Plan True Up: The company sets a guaranteed minimum amount (800), and then awards various bonuses or one-time payments over the year. At the end of the year, you pay the remaining amount as the true up target. If an employee receives 3 bonuses totaling 500, the true up value is 300, which the Compensation Administrator or Manager can adjust. Workday can calculate the true up value across several bonus plans or one-time payment plans. Workday supports this true up type with these tasks:
  - Create Future Payment Plan.
  - Assign Future Payment Plans.
  - Complete Future Payment True Up Bonus.

In a single plan true up, Workday pays the total bonus amount in portions and prorates the bonus target by a percentage called a tranche percent.

Example: An overall bonus target is 40% and the target for the first tranche is 12.5%. An employee with an annual base salary of 100,000 is eligible to receive a 5000 bonus for the first tranche (100,000 X 0.4 X 0.125 X 1). When the manager proposes a bonus for this employee, Workday calculates 5000 or 5%. The employee receives 40% before the end of the true up period, but not all at once. You can define tranches to regulate when to pay bonuses and how much each portion is.

Note: The reference frequency for true up bonus plans or bonus plans with tranches is typically annual because the true up target is generally an annual target. In other words, the frequency reflects the true up period. If the bonus frequency doesn't reflect the true up period, Workday de-annualizes all employees' annual salaries and then applies the tranche percent, which might be inaccurate.

The purpose of a future payment plan is to contain the configuration options specific to the multiple plan true up process and the true up bonus target, currency, and frequency. The future payment plan is also the plan used when you launch the true up process. Future payment plans aren't full compensation plans. They're defined outside of worker compensation, similar to eligible earnings, and have the same security as eligible earnings.

Future payment plans enable you to enter multiple bonus and one-time payment plans, but not tranches, which apply only to bonus plans. Tranches apply to a single bonus plan target and are part of a single bonus plan. A future payment plan target can apply to multiple bonus and one-time payment plans.

Proration, waiting periods, and bonus accrual estimates aren't part of future payment plans. Merit Increase Matrices (MIM) don't apply to future payment plans. You can, however, assign a review type to the true up plan to view performance results for the period. Managers can also adjust recommended targets during a compensation review process.

To participate in a future payment plan, you must assign an employee to the plan and to any other relevant bonus plans for calculating the true up.

Tasks

Create Future Payment Plans on page 1103

Assign Future Payment Plans to Employees on page 1103

Example: Deferred Bonus Progressive Calculation

Context

For progressive calculations, Workday applies more than 1 range to the same bonus award if there are marginal amounts.

Example: The deferred bonus calculation is:

Range Name	To Value	Deferred Percentage
Tier 1	250,000	Zero%
Tier 2	500,000	10%
Tier 3	900,000	20%
Tier 4	1,500,000	30%
Tier Max	99,999,999	40%

Kyle receives a 1,000,000 deferred bonus award. The deferred bonus calculation has the Progressive Calculation check box selected. The bonus award of 1,000,000 exceeds the 250,000 upper limit of Tier 1, leaving a balance of 750,000. Workday compares that balance to the upper limit of the tier and multiplies the smaller value by the deferral amount:

Tier	Remaining Bonus Amount	Difference from To Value	Smaller Value	Deferred %	Deferred Amount
1	1,000,000	250,000	250,000	Zero%	Zero
2	750,000	250,000	250,000	10%	25,000
3	500,000	400,000	400,000	20%	80,000
4	100,000	600,000	100,000	30%	30,000
Max	Zero	1,000,000	Zero	40%	Zero

The total amount deferred for Kyle's bonus award is 135,000.

Stock Plans

Steps: Manage Stock Plans and Grants

Prerequisites

Set up compensation components and grades.

Steps

1. Steps: Create a Compensation Matrix on page 1151
2. Access the Maintain Stock Grant Types task.

   Maintain the available grant types, view how many stock plans are using each type, and assign grant types to stock plans.

   Long Term Cash as a Grant Category enables you to offer cash that vests over time like stock.

   Security: *Set Up: Stock* domain in the Advanced Compensation functional area.
3. Access the Maintain Stock Vesting Schedules task.

   You can assign vesting schedules to stock plans. Use the Stock Vesting Schedules report to list all the entered vesting schedules.

   Security: *Set Up: Stock* domain in the Advanced Compensation functional area.

4. Access the Maintain Stock Date Rules task.

   Create rules that Workday uses to determine the vesting or expiration date for a stock grant. You can't delete stock date rules if their usage count is greater than zero. Rules are a concatenation of values in the Rule Type, Number, Unit, and From Date fields.

   Example:

   - Expiration Rule: Ten Years from Grant Date
   - Vest From Rule: Zero Days from Event Effective Date

   You can then assign expiration rules to a stock plan and use vesting rules when updating grants.

   Security: *Set Up: Stock* domain in the Advanced Compensation functional area.
5. (Optional) Create Compensation Rounding Rules on page 1165.

   You can associate rounding rules with allowance, salary, merit, bonus, or stock plans, or with compensation bases managed by a compensation basis total.

   Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.
6. (Optional) Access the Maintain Event Categories and Reasons task.

   You can enable the selection of reasons by manager role-based security group when requesting a stock grant. To do so, select Manager Reason for the *Request Stock Grant* business process, and the applicable reason code.
7. Create Stock Plans on page 1110.
8. Award stock to employees.

   Both of these tasks initiate the *Request Stock Grant* business process, but have important differences:

Request Stock Grant	This task is intended for Manager Self-Service for one stock grant to an employee or candidate at a time. See: Request Stock Grants on page 1113
Add Stock Grant	You can set up multiple grants and configure vesting details on this task. See: Add Stock Grants on page 1114

9. Create Stock Participation Rate Tables on page 1115.

Next Steps

To ensure that defaults display during staffing events, associate stock plans with a compensation package and rule.

Related Information

Steps: Set Up Compensation Components on page 979

Create Stock Plans

Prerequisites

- Set up compensation components and grades.
- Security: *Set Up: Stock Plan* domain in the Advanced Compensation functional area.

Steps

1. Access the Create Stock Plan task.
2. Consider:

Option	Description
Amount Based Plan	Targets based on a fixed monetary amount.

Option	Description
Percent Based Plan	Targets based on a percent of salary.
Unit Based Plan	Targets based on a number of shares.

3. In the Award Calculation section, consider:

Option	Description
Allow Target Override	Select this check box if you want to enable overriding the default plan or profile target amount, percent, or shares. Example: For top performing individuals, you want to double the target.
Hide Target from Security Groups	Select 1 or more security groups from which to hide funded plan targets. Workday hides the funded plan target beginning on the effective date of the plan. Reports that display plan assignments hide plan targets only when the plan is in effect. Workday doesn't hide funded plan targets during the *Initiate Compensation Review Process* or during the *Offer* or *Employment Agreement* business processes in the Task Consolidation context.
Compensation Matrix	Select a compensation matrix if you want to give an individual employee stock grants based on a performance rating, retention rating, pay range quartiles, or eligibility rules.
Use as Reference Only	Available if you select a compensation matrix. Select if you don't want Workday to calculate the individual target or pool amount using the selected compensation matrix. Workday displays only the percentage when proposing the employee award.
Rounding Rule	Available for amount-based and percent-based plans only. During the *Update Stock Grant* business process, Workday calculates the number of shares by dividing the grant's currency amount or percent by the grant price. Workday applies the rounding rule to the number of shares granted.
Compensation Basis	Available if you select the Percent Based Plan option. Select the compensation basis Workday uses to determine the target amount (for employees not managed by a compensation basis) for this plan. For employees managed by a compensation basis, Workday doesn't exclude this plan when calculating the target amount.

Option	Description
	If you select a compensation basis that includes this plan, Workday excludes this plan when calculating the employee's target amount. If you select a subtractive compensation basis, Workday subtracts the subtractive basis amount from the employee's Primary Compensation Basis before calculating percentage-based target amount. You can't change the selected compensation basis if the plan is part of compensation basis that has the Manage Basis Total check box selected.
Use Target Currency for Grant	Available for amount-based plans only. Selecting this check box causes stock grants to display in the currency of the employee's plan target.

4. In the Stock Plan Defaults tab, consider:

Option	Description
Target Amount/Target %/Target Shares	The default recommendation for an employee assigned to this plan.
Currency	This enables you to manage a stock plan in a single currency, but still accommodate employees who use a variety of currencies.
Grant Type	Any grant type created using the Maintain Stock Grant Types task, such as ISO, RSU, or Cash. Note: Cash vests over time just like stock. In reports, Workday displays Cash grants under the Long Term Cash category.
Vesting Schedule	You can select a schedule for each Grant Type for both Stock Plan Defaults and Stock Plan Profiles.
Expiration Date Rule	Select a rule for each Grant Type for both Stock Plan Defaults and Stock Plan Profiles.

5. In the Stock Plan Profiles tab, enter values that differ from the defaults.

Next Steps

You can:

- Assign (roll out) the plan to employees on the Rollout Compensation Plans to Employees task.
- Add the plan to a compensation package on the Create Compensation Package task.
- Access the Stock Plan and Stock Plans reports.
- Access the Edit Stock Plan task.
- Hide the compensation plan type from specified groups of workers using the *Worker Data: Compensation Plan Type* domain in the Core Compensation functional area.

Related Information

Tasks

Create Compensation Packages on page 1044

Request Stock Grants

Prerequisites

- Security:
  - *Set Up: Stock* domain in the Advanced Compensation functional area.
  - Configure modify access on the *Candidate Data: Stock Grant Offer* domain in the Advanced Compensation functional area.
- Set up stock plans.
- Configure the *Request Stock Grant* business process to meet your needs.
- Configure the *Request Stock Grant Offer/Employment Agreement* business process if you use the Workday Recruiting *Offer* business process.

  If using Consolidated Tasks for *Offer*, select the Consolidate Tasks check box on the business process security policy.
- Access the Maintain Event Categories and Reasons task to create a reason for the *Stock Grant* category.

Context

Managers can request a stock grant for an individual employee or for a candidate as part of an *Offer*.

Steps

1. Access the Request Stock Grant task.
2. Consider:

Option	Description
Amount Requested	Available for stock plans based on currency amount.
Percent of Base Salary Requested	Available for stock plans based on percent of base salary.
Number of Shares Requested	Available for stock plans based on unit amount.

Result

Workday routes the request to the appropriate reviewers, if any, for approval according to the roles assigned to the *Review Stock Grant Request* step of the *Request Stock Grants* business process for the employee's organization.

Add Stock Grants

Prerequisites

- Security: *Set Up: Stock* domain in the Advanced Compensation functional area.
- Configure the *Request Stock Grant* business process to meet your needs.
- Use the Maintain Event Categories and Reasons task to create a reason for the *Stock Grant* category.
- Set up stock plans.

Context

Award stock grants to 1 or more employees.

Steps

1. Access the Add Stock Grant task.
2. In the Stock Grant section, consider:

Option	Description
Percent Granted	Displays if the stock plan was created as a Percent. Enter the award as a percentage of base salary.
Amount Granted	Displays if the stock plan was created as an Amount Based Plan. Enter the award as a fixed monetary amount.
Shares Granted	Displays if the stock plan was created as a Unit Based Plan. Enter the award as a number of shares.
Converted Amount	Displays only for amount or percent-based plans and when the currency assigned to the employee is different than the currency for the grant price. Workday converts the amount or percent granted
Vesting Schedule	Displays the Vesting Schedule configured for the grant type on the stock plan or plan profile.
Vest From Date	The date that the stock grant becomes available to the employee. It's also the date that stock options become available for exercise. This is often the same date as the hire date or event date.
Options Pricing Factor	Displays only for amount-based or percent-based plans and when the grant category equals *Option*.

Option	Description
	Workday converts the amount or percent granted. Workday uses the Options Pricing Factor when calculating Calculated Shares.
Calculated Shares	Displays only for amount-based or percent-based plans. Workday calculates this value by dividing the amount granted by the Grant Price, and divided again by the Options Pricing Factor.

Next Steps

Access the Update Stock Grants task to update approved stock grants with the grant date, grant price, vest from date, and board approval.

Edit Business Processes

Steps: Update Approved Stock Grants on page 1117

Edit Domain Security Policies

Create Stock Participation Rate Tables

Prerequisites

- Set up stock plans.
- Security: *Set Up: Stock* domain in the Advanced Compensation functional area.

Context

Stock participation rate tables enable managers to allocate stock to diverse populations of employees while maintaining control over the size of the pool. Eligibility rules control which employees can receive stock; participation rates control how much each employee contributes to the stock pool.

You can create rate tables based on:

- Classic criteria such as management level and grade.
- Eligibility rules.

You assign rate tables when you initiate a compensation review process with stock awards. Rate tables apply to any stock plan and any eligibility rules associated with the compensation review process.

During a compensation review process with stock, Workday evaluates each row of the rate table from top to bottom. Workday assigns only the first rate that applies to the employee and doesn't evaluate any others. If no rates apply, Workday uses the Default Percentage Rate.

To view the stock participation rate during a compensation review process, use a grid configuration that contains the Stock column group and the Stock Participation Rate % field.

If you use a rate table in a compensation review process, Workday disables the Autofill and Prefill functions for stock.

Steps

1. Access the Create Stock Participation Rate Table task.

2. Enter a Default Percentage Rate.

   Percentage rates can exceed 100. Workday uses the default rate if it can't find a match in the rate table.
3. Select the rate table type and enter 1 or more rows for Workday to evaluate when proposing awards:

Option	Description
Uses Classic Criteria	Select any combination of Management Level, Job Profile, Country, or Compensation Grade.
Uses Eligibility Rules	Select an Eligibility Rule .

   The Percentage Rate for either type of table can exceed 100.
4. Sort the rates in the order you want Workday to evaluate them.

   Workday assigns only the first rate that applies to the employee.

Result

The stock participation rate displays on when proposing stock awards during a compensation review.

Example

Company A has created a rate table with these dimensions:

- Table Name: Stock Participation – Management Level and Country
- Default Percentage Rate: 100%

Priority Order	Management Level	Country	Participation Rate
1	• Manager • Supervisor	• United States • United Kingdom • France • Canada	75%
2	• Manager • Supervisor	• Brazil • Russia • China • India • Mexico	65%
3	• Manager • Supervisor		50%
4	Individual Contributor		10%

Next Steps

You can:

- Edit rate tables using the Edit Stock Participation Rate Table task and delete them with the Delete Stock Participation Rate Table task. However, you can't edit or delete a rate table that's in use.
- Access the Stock Participation Rate Audit report to display workers, positions, assigned participation rate, and rate table dimensions. The report also lists multiple matches.

Initiate Compensation Review Processes on page 1205
Manage Awards for Compensation Reviews on page 1217

Steps: Update Approved Stock Grants

Prerequisites

Add and approve stock grants for 1 or more employees.

Context

You can update approved stock grants for an employee with the grant date, grant price, vest from date, and board approval.

There are 3 ways to update approved stock grants:

Stock Grant Update Option	Description
Update Stock Grants task.	Best used for individuals or a small numbers of employees.
Update Stock Grant Events mass operation type.	A less-complicated method, compared to web services, for updating large numbers of employees.
Update Stock Grant web service.	Best for integrated solutions and large numbers of employees.

Steps

1. (Optional) Use the Update Stock Grants task.

   Select the criteria based on the grants that you want to update. To see the updated values, use the Stock Grants Summary report.

   Security: *Process: Compensation Management Events* domain in the Advanced Compensation functional area.
2. Create an advanced type custom report using the *Completed Stock Grant Events* report data source. This report doesn't need to be optimized for performance. As you complete this task, consider:

Option	Description
Report Name	Update Stock Grant - MOM
Report Type	Advanced
Data Source	*Completed Stock Grant Events*. Leave the Optimized for Performance disabled.
Data Source Type	Standard
Primary Business Type	Stock Grant Event
Columns	• Business Object: Stock Grant Event • Field: Worker

3. (Optional) Use the *Update Stock Grant Events* mass operation type from the Mass Operation Management task.

   Access the Mass Operation Management task. As you complete the task, consider:

Option	Description
Mass Operation Type	*Update Stock Grant Events*.
Input Report	Select the custom report that you created.
Run Frequency	You can schedule the run, or select*Run Now*.

   Security:

   - *Mass Operation Management* in the System functional area.
   - *Process: Compensation Management Events* in the Advanced Compensation functional area.
   - rant access to the *Update Stock Grant Events* mass operation security segment. Add the segment to the existing segment-based group that includes Compensation administration with View and Modify Mass Operation Management permissions.
4. (Optional) Use the *Update Stock Grant* web service.

Next Steps

Calculated Plans

Steps: Manage Calculated Plans for Compensation

Context

Compensation administrators can create powerful compensation plans based on customized calculations. Calculated plans can be:

- Assigned to employees like other compensation plans.
- Used as part of a compensation basis.
- Updated in the Other section in Compensation transactions and in Staffing transactions that include compensation.

Unlike other compensation plans, Workday doesn't automatically remove calculated plans with a zero value from Manage by Basis Total (MBT) employees. Workday recalculates plans with a zero value without having to reassign them.

Note: Calculations can be very complex. Workday recommends that you engage Workday Professional Services or a Workday Consulting Partner to help you configure the calculations for Compensation.

Steps

1. Create 1 or more calculations in the *Compensation* category using tasks such as:
    - Create Aggregate Calculation
    - Create Constant Value Calculation
    - Create Lookup Calculation

    Security: *Set Up: Payroll (Calculations – Generic)* in the Core Payroll functional area.

    Example: Your US federal agency uses locality pay and you access the Create Locality Pay Area task to enter a percentage for each locality pay area. You then access the Create Arithmetic Calculation task to configure a Locality Pay Calculation. You also create a calculated plan that uses your Locality Pay Calculation. Finally you assign the calculated plan to employees or positions.
2. Access the Create Calculated Plan task.
    a) Select how Workday calculates plan amounts:
        - Dynamic: Workday recalculates plan amounts based on current values whenever a compensation event occurs or you view the plan.
        - Event Driven: Workday calculates plan amounts when a compensation event occurs or when you run the *Calculated Plan Assignment Updates by Position* operation type on the Mass Operations Management task. Workday creates an event whenever a plan amount changes.

    b) (Optional) Enter a Plan Type Name Override to replace the automatically populated name.

    c) (Optional) Select the Exclude from Total Salary and Allowance Compensation Basis check box.

    Doing so excludes the calculated plan when Workday calculates the *Total Salary and Allowance* compensation basis.

    d) Select a Compensation Element to associate this plan with a payroll earning.

    e) Select a Calculation, or click Create.

    f) (Optional) Select a Target Percent Calculation, a Ceiling Amount Calculation, or both on amount-based plans.

    Given a defined Target Percent Calculation or Ceiling Amount Calculation, Workday evaluates salary-dependent plans for MBT workers when calculating the Primary Compensation Basis (PCB).

    However, Workday doesn't include calculated plans that lack a target when allocating compensation basis amounts.

    You can use these fields for reporting and in Payroll or Payroll Integration.

    g) Select 1 or more Eligibility Rules.

    Security, in the Core Compensation functional area:
    - *Set Up: Base and Plan*
    - *Add Compensation Plans: Add Calculated*
    - *Compensation Change: Calculated*
3. Run the *Calculated Plan Assignment Updates by Position* mass operation.
    - Create a custom report using the Positions for HCM Reporting data source.
    - Access the Mass Operation Management task. As you complete the task, consider:

Option	Description
Mass Operation Type	*Calculated Plan Assignment Updates by Position*.
Effective Date	The date of this event becomes effective.
As of Date	Workday evaluates the plan as it existed on this date. Example:

Option	Description
	• You have a calculated plan that calculates the number of service years * 100. • You want the amount to change on the first of the month for any employee with a service year change during that month. • You run the operation type the first day of every month and set both the Effective Date and the As of Date to March 1. • A worker with a service date of March 15 won't get a new amount because Workday evaluated the plan as it existed on March 1. To avoid this, configure an As of Date of March 31.
Input Report	Select the custom report that you created.
Run Partial Calculation	Select to perform partial calculation only for employees with calculated plan assignment changes. Workday recalculates plans with dependencies on the calculated plan. If not selected, Workday recalculates the calculated plan and adjusts the PCB.
Update Selected Calculated Plans Only	Workday updates only the selected calculated plans during calculations. Workday updates the PCB regardless if you selected Retain Basis Total on the basis.
Update Selected Calculated Plans and Dependent Plans - MBT Only	Workday updates the selected plans only if they have changes, and updates their dependent plans. However, Workday doesn't update dependent plans for non-MBT employees. Workday doesn't update dependent plans for MBT employees if the dependent plans have changes but the selected plans don't. Workday might update the PCB regardless if you selected Retain Basis Total on the basis.
Update All Compensation Plans - MBT Only	Workday recalculates all compensation plans only when 1 or more selected calculated plans have changes. Workday maintains the PCB constant, regardless if you selected Retain Basis Total on the basis.

For MBT employees, Workday updates both dynamic and event-driven plans. For non-MBT employees, Workday updates only event-driven plans. You can run this operation on a regular basis for employees, including MBT employees or those with multiple positions. You can also use this operation to calculate amounts for event-driven plans on demand.

Security:

- *Mass Operation Management* domain in the System functional area.
- Set up segment security for mass operations.

Example

Create a calculated plan to give each eligible employee a fixed amount for every year of service.

1. Access the Create Arithmetic Calculation.

   Create a calculation called Seniority Pay that multiplies Length of Service by a fixed Seniority Accrual amount set up as a Constant Value.

2. Access the Create Calculated Plan task and select Seniority Pay in the Calculation field.
3. Access the Rollout Compensation Plans to Employees task to assign your calculated plans.

Reference: Calculations and Calculated Fields Comparison

Concept: Calculated Plans for Compensation

Compensation administrators can create powerful compensation plans based on customized calculations.

Calculations

Calculated compensation plans rely on calculations created on the Create Arithmetic Calculation, Create Conditional Calculation, or other tasks. Calculations can be simple, such as a constant value, or very complex with nested operations.

You must create calculations in the *Compensation* category to use them in Compensation. Workday recommends not modifying calculations in other categories because doing so might negatively affect other Workday product areas.

You can create calculations using a wide variety of Workday-delivered report fields and Instance Value Calculations within the *Compensation* category.

Calculated Plans

After you create calculations, use the Create Calculated Plan task to associate your calculations with plans. Calculated plans can be of 2 types, dynamic or event-driven. Each work differently depending on whether they're Managed by Basis Total (MBT):

<table>
<tr><th></th><th>Dynamic</th><th>Event-Driven</th></tr>
<tr><td>MBT</td><td colspan="2">Workday updates plan assignment amounts when:
A compensation event occurs.
You run the Calculated Plan Assignment Updates by Position operation type on the Mass Operations Management task.
Workday creates new effective-dated events each time the amount is updated.

Workday doesn't calculate a negative target percent calculation or ceiling amount calculation when the calculated plan is salary dependent.</td></tr>
</table>

	Dynamic	Event-Driven
Non-MBT	Workday updates plan assignment amounts whenever you view the plan assignment. Workday doesn't generate new compensation events when plan amounts change. You can't use the Mass Operations Management task to update plan assignment amounts. Workday is able to calculate a negative target percent calculation or ceiling amount calculation when the calculated plan is salary dependent.	Workday updates plan assignment amounts when: • A compensation event occurs. • You run the *Calculated Plan Assignment Updates by Position* operation type on the Mass Operations Management task. Workday creates new effective-dated events each time the amount is updated. Workday doesn't calculate a negative target percent calculation or ceiling amount calculation when the plan is salary dependent.

You can then:

- Assign calculated compensation plans to employees like other compensation plans.
- Use plans as part of a compensation basis.
- Use plans for MBT employees and non-MBT employees.

  Note: Calculations based on commission plans, remainder plans, or nonfixed salary plans won't be accurate for MBT scenarios.
- View or update data in the Other section in Compensation reports and transactions, and in staffing transactions that include compensation. Example: During a *Request Compensation Change* business process, Workday displays a list of compensation plans for the employee. You open the Other section to display any calculated plans assigned to the employee.

Calculated plans for MBT employees can't have dependencies on commission plans or remainder plans.

Unlike other compensation plans, Workday doesn't remove calculated plans with a zero value. Workday can recalculate zero value calculated plans when compensation transactions, or staffing transactions that include compensation, change the value.

For dynamic plans not part of the Primary Compensation Basis, Workday updates assignment amounts for MBT employees. However, Workday only changes the effective date if the event requires a recalculation.

Workday can't process salary-dependent calculated plans that:

- Use a subtractive calculation compensation basis and a salary plan.
- Use a guaranteed calculation compensation basis for MBT workers.
- Include plans with a ceiling and maximum salaries that don't equal 100%.
- Include plans without a target percent in the calculated plan and where the compensation element is in a base pay group.

Calculated Plan Assignment Updates by Position

For MBT employees, Workday updates calculated plans when performing top-down calculations. You can also update calculations on a schedule using the Mass Operation Management task.

Create a calculated plan that adds a fixed amount to the salary of each employee for every year of service. Use the Create Arithmetic Calculation task to create a calculation that multiplies years of service (using a Workday-delivered report field) by a fixed Accrual amount set up as a Constant Value. Then use the Mass

Operation Management task and the *Calculated Plan Assignment Updates by Position* operation type to update these employees once each year.

Locality Pay

Steps: Set Up Locality Pay Areas

Prerequisites

Security: *Set Up: Locality Pay* domain in the Core Compensation functional area.

Context

A locality pay area in Workday consists of 1 or more locations that share a percentage cost-of-living adjustment to base pay. You can use the percentage when calculating compensation plans. When an unfilled position is eligible for 2 locality pay areas, Workday uses the greater of the 2 percentages. You can assign locations only to 1 locality pay area.

Steps

1. Access the Create Locality Pay Area task.

   Assign a percentage for the base pay adjustment and select locations for the locality pay area.
2. Access the Create Arithmetic Calculation task.

   Configure a locality pay calculation.
3. Assign the locality pay calculation to a compensation plan.

   See Steps: Manage Calculated Plans for Compensation on page 1118.
4. Roll Out Compensation Plans to Employees on page 1027.

Next Steps

Run the Active Locality Pay Areas report to view a complete list of active locality pay areas.

Related Information
Reference
2022R2 What's New Post: Locality Pay Areas

Concept: Locality Pay Areas

When you set up locality pay areas in Workday, you can group multiple work locations into an area and assign a percentage of additional base pay to it. Example: You can group employees in San Francisco and Los Angeles into the locality pay area for California. Then, you can configure that area to add 25 percent to their base pay.

You can leverage the locality pay area percentage in calculated compensation plans.

Using locality pay areas is helpful when you:

- Have set base salaries for identical positions within given compensation grades and steps.
- Have multiple work locations with different costs of living or other unique attributes.
- Use multiple complex calculations to determine additional base pay by location.

This feature is available for all customers.

Related Information

2022R2 What's New Post: Locality Pay Areas

One-Time Payment Plans

Steps: Set Up and Manage One-Time Payments

Prerequisites

Set up compensation elements and eligibility rules.

Context

You can use one-time payments for:

- Referral bonuses.
- Retention incentives.
- Severance payments.
- Signing bonuses.

You can also access these web services:

- *Get One-Time Payment Plans*
- *Put One-Time Payment Plan*
- *Request One-Time Payment*

Steps

1. (Optional) Access the Create One-Time Payment Plan Configurable Category task.

   You can create categories for one-time payments for informational or reporting purposes. You can use these Workday-delivered categories:

   - *Referral* for rewarding employees that refer successful new hires.
   - *Clawback* to enable the tracking of a clawback date on one-time payment processes. See: Concept: Forfeit and Clawback for Terminated Workers on page 1132.

   Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.

2. (Optional) Access the Create One-Time Payment Plan Schedule task.

   Select a number and a unit for each schedule you create.

   Example: Create a schedule called *Retention Bonus* with Number set to 2, Unit set to Year, and From Date set to *Scheduled Payment Date*. If you select *Retention Bonus* in an amount-based plan with Category set to *Clawback*, you can recover the bonus up to 2 years after the Scheduled Payment Date.
   Example: Create a schedule called *Wait Period* with a Number of 3 and a Unit of Months. If you select *Wait Period* on an amount-based plan with Category set to *Referral*, Workday pays when the employee serves 3 months beyond the Hire Date.

   Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.
3. (Optional) Access the Edit Tenant Setup - HCM task.

   Select the Route Business Processes Based on Costing Overrides option in the Compensation section. If you use worktags on these business processes:

   - *Request One-Time Payment*
   - *Request One-Time Payment Offer/Employment Agreement*

   Workday routes steps to the managers associated with the worktags.

   You can optionally select the Data Entry Check Options > Select areas to switch on Data Entry Check > Request One-Time Payment - OTP Amount item on the Edit Tenant Setup - HCM task. Doing so enables Workday to validate the data you enter for the one-time payment amount. If the numeric value you enter is a statistical outlier, Workday displays a validation message. Outliers are determined from historical entries of the one-time payment plan type. See: ../../../manage-workday/tenant-configuration/tenant-setup/dan1370797339945.dita

   Consider selecting the Enable Multiple One-Time Payments check box on the Edit Tenant Setup - HCM task. If not selected:

   - You can only configure 1 one-time payment for each event.
   - Workday prevents you from adding a one-time payment during the *Termination* process if the employee has a clawback payment.

   Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.
4. Create One-Time Payment Plans on page 1126.
5. (Optional) Access the Maintain Custom Validations report to configure custom validations for one-time payments.

   Custom validations enable you to warn or prevent users from submitting one-time payments with invalid data combinations. You can also specify one-time payment plans within the conditions of your custom validation.

   We recommend not making configuration changes to custom validations while there are one-time payments in progress.

   Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.
6. (Optional) Access the Maintain Event Categories and Reasons task.

   You can enable the selection of reasons by manager role-based security group when requesting a one-time payment. To do so, select Manager Reason for the *Request One-Time Payment* business process, and the applicable reason code

   Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.

7. (Optional) Access the Configure Optional Fields task.

   You can hide or require most fields delivered as optional on these business processes:

   - *Request One-Time Payment*.
   - *Request One-Time Payment for Self*
   - *Request One-Time Payment Offer/Employment Agreement*.
   - *Request Referral Payment*.

   Changes made to optional fields apply to all:

   - Payments that are part of the event.
   - Events already in progress and all those in the future.

   Note: Any fields configured as hidden or required applies even when the business process is used as a subprocess of another business process.

   Security: *Set Up: Configure Optional Fields* domain in the System functional area.
8. (Optional) Add one-time payment business processes as steps on the *Offer*, *Hire*, or *Change Job* business processes.

   If you include *Request One-Time Payment* as a subprocess of *Offer* as a signing bonus, Workday recommends adding it to both *Hire* and *Change Job* too. Doing so ensures that any one-time payment included with an offer carries forward into *Hire* and *Change Job*.

   If you plan to use *Request One-Time Payment Offer/Employment Agreement* as a subprocess of *Offer*, consider configuring your one-time payment plans with eligibility rules based on job requisition attributes.

   You can automate referral bonuses by:

   - Creating referral payment plans.
   - Associating referral payment plans to job requisitions or job profiles.
   - Adding the *One-Time Payment for Referral* subprocess to the *Hire* business process.
9. Request One-Time Payments for Employees on page 1129.
10. (Optional) Steps: Enable Self-Service One-Time Payments on page 1131.

Create One-Time Payment Plans

Prerequisites

- Set up compensation components and grades.
- Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.

Context

You can create one-time payment plans and use them for:

- Referral bonuses.
- Retention incentives.
- Signing bonuses.

- Severance pay.

After you create one-time payment plans, you can assign them to employees.

Steps

1. Access the Create One-Time Payment Plan task.
2. (Optional) Select the Enable Coverage Dates check box to display the Coverage Dates section on the Request One-Time Payment task.

   Coverage dates enable Workday Payroll or Payroll Integration to associate dates with the one-time payment for US Fair Labor Standards Act (FLSA) reporting requirements.
3. (Optional) Select a Category.

   Workday delivers these categories:

Option	Description
Clawback	If selected, Workday displays the Clawback Payment Options section and enables the Clawback Date field on any *Request One-Time Payment* process configured using this plan.
Referral	For use with amount-based employee referrals only. To add the *One-Time Payment for Referral* step to the *Hire* business process, you must add the *Referral* category. One-time payment plans that use the *Referral* category aren't available for use in other business processes.

   You can create additional categories for reporting and sorting purposes on the Create One-Time Payment Plan Configurable Category task.
4. (Optional) Configure the Clawback Payment Options section.

   This is only available if you selected the *Clawback* category.

Option	Description
Clawback Schedule	Select a schedule created with the Create One-Time Payment Plan Schedule task. Example: Create a schedule called *Retention Bonus* to recover the bonus up to 2 years after the Scheduled Payment Date. Workday populates the Clawback Date on any *Request One-Time Payment* process configured with this plan. You can access the One-Time Payments Eligible for Clawback report to display one-time payments with a clawback date that occurs after the worker's termination date.
Clawback Calculation	Select a calculation created in the Compensation category on tasks such as Create Arithmetic Calculation and others to assist in calculating an amount for clawback during the worker's termination process. You can use Workday-delivered calculations as a starting point, such as: • Recommended Clawback Percent based on Length of Employment. • Recommended Clawback Percent based on Scheduled Payment Date.
5. (Optional) Configure Referral Payment Options.

   This is only available if you selected the *Referral* category.

Option	Description
Payment Schedule	(Optional) Select a schedule created with the Create One-Time Payment Plan Schedule task.

Option	Description
	Example: Create a schedule called *Wait Period* to hold payment for 3 months after the hire date. If not selected, Workday pays the referral bonus on the hire date.
Cost to New Hire Organizations	(Optional) Select to charge the referral to the hiring organizations during the *Hire* process. If selected, Workday: • Automatically populates worktags with relevant organization assignments from the referrer and hiring organizations. • Displays the organization assignments for both the new hire and referrer.

6. In the Defaults section, consider:

Option	Description
Compensation Element	If you select a compensation element with a gross up earning, Workday automatically selects the Gross Up check box.
Target Amount	Enter the amount to pay to the employee. For a gross up earning, enter the desired net payment.
Target Percentage	Enter the percentage of total base pay used to calculate the payment amount. For a gross up earning, enter the percentage for the desired net payment.
Currency	Enter the currency for the payment.
Reference Frequency	Select the frequency for Workday to use when calculating the payment amount. Example: • Total base pay for Leslie is 125,000. • You select 10 percent for the Target Percentage. • You select *Quarterly* for the Reference Frequency. Workday calculates the payment amount: 125,000 * 0.10 * 0.25 = 3,125, or 10 percent of one quarter of the total base pay.
Recommended Minimum / Recommended Maximum	Select values to serve as guidelines for the manager requesting the one-time payment. Managers can enter values outside of the range.

7. In the Plan Eligibility section, select 1 or more eligibility rules.

   For referral plans, eligibility rules can use report fields on the hired worker and the referral to determine eligibility.
8. (Optional) Select 1 or more Worktags configured on the Maintain Worktag Usage task for integration with Workday Payroll or a third party payroll integration.

   You can't select worktags if you selected the Cost to New Hire Organizations check box.

9. (Optional) Set up 1 or more profiles in the One-Time Payment Plan Profiles section if you want multiple plan targets.

   If you're defining the plan to have multiple targets, the One-Time Payment Plan Profiles section enables you to create a single plan for what are effectively multiple plans.

   Example: You can set up 1 profile where the target for individual contributors is 500 USD and the target for directors is 1000 USD.

Next Steps

You can hide the compensation plan type from specified groups of workers using the *Worker Data: Compensation Plan Type* domain in the Core Compensation functional area.

Concept: Compensation Elements and Payroll Processing

Tasks

Roll Out Compensation Plans to Employees on page 1027

Roll Out Compensation Plans to Employees on page 1027

Steps: Set Up Referral Payment Processes on page 441

Request One-Time Payments for Employees

Prerequisites

- Configure the *Request One-Time Payment* business process for your organizations.
- Configure the *Request One-Time Payment Offer/Employment Agreement* business process if you use the Workday Recruiting *Offer* business process.

  If using Consolidated Tasks for *Offer*:

  - Select the Consolidate Tasks check box on the business process security policy.
  - Configure modify access on the *Candidate Data: One-Time Payment Offer* domain in the Core Compensation functional area.
- Set up primary or required worktags with the Maintain Worktag Usage task to integrate with Workday Payroll or Payroll Integration.
- Security: *Request: One-Time Payment* in the Core Compensation functional area.

Context

You can request a one-time payment for an employee when:

- You access the Request One-Time Payment task for a referral bonus, a retention incentive, or for another reason.
- You've included the *Request One-Time Payment* business process as a step in business processes such as *Offer*, *Hire*, *Change Job*, or *Termination*.

You can also use the *Request One-Time Payment* web service.

Steps

1. Access the Request One-Time Payment task.
2. (Optional) Select an Employee Visibility Date.

   If configured, Workday hides updated pay-related compensation data from the worker until the date. If left blank, Workday uses the effective date. See: FAQ: Employee Visibility Date on page 1191.
3. (Optional) Select Add to configure the one-time payment.
4. Select a One-Time Payment Plan.

5. (Optional) Select 1 or more Worktags to integrate with Workday Payroll or Payroll Integration.

   For more control of payroll expense reporting, you can configure related worktags on the Maintain Related Worktag Usage task. See: ../../../manage-workday/user-experience/worktags/baj1561753561443.dita.Example: Configure Cost Center as a related worktag for one-time payments.

   If you use worktags, you can also enable the Route Business Processes Based on Costing Overrides option in the Compensation section on the Edit Tenant Setup - HCM task. Doing so enables Workday to route business process steps to the managers associated with the worktags.
6. (Optional) Select a Costing Company.

   Workday overrides the default company and charges the one-time payment to the company you select.

   This only displays if you selected the Intercompany Accounting - Enable check box in the Payroll Accounting section on the Edit Tenant Setup – Payroll task. See: ../../../manage-workday/tenant-configuration/tenant-setup/dan1370796805364.dita.
7. Select a Scheduled Payment Date greater than the Effective Date.

   This only displays if you selected the Enable Multiple One-Time Payments check box in the Compensation section on the Edit Tenant Setup - HCM task. See: ../../../manage-workday/tenant-configuration/tenant-setup/dan1370797339945.dita.

   When using multiple one-time payments, the Scheduled Payment Date can differ for each payment.

   Workday processes the one-time payment in the on-cycle payroll calculation for the pay period that includes the Scheduled Payment Date.
8. (Optional) Select a Coverage Start Date and Coverage End Date.

   The Coverage Period section only displays if you selected Enable Coverage Dates on the one-time payment plan. Coverage dates enable Workday Payroll or Payroll Integration to associate dates with the one-time payment for US Fair Labor Standards Act (FLSA) reporting requirements.
9. Select the Send to Payroll check box for Workday Payroll or Payroll Integration to process the payment.

   Otherwise, Workday doesn't process the payment.

   With Send to Payroll selected, the Forfeit check box displays during terminations for both one-time and bonus payments under certain conditions. See: Concept: Forfeit and Clawback for Terminated Workers on page 1132.

   If you select Forfeit, Workday forfeits the payment, overriding Send to Payroll, and won't pay the one-time or bonus payment.

   If the pay group detail is locked, then the one-time payment may be delayed until the next payroll cycle.
10. Select a Clawback Payments option:

Option	Description
Do Not Clawback	If selected, Workday still creates the clawback payment for reporting purposes, but takes no other action. Use this option if you don't plan on recovering the payment.
Send to Payroll	If selected, Workday processes the clawback payment through Payroll on the Scheduled Clawback Date.
Recover Manually	Select this if you intend to recover the one-time payment manually, outside of Workday.

Reference

FAQ: Payroll Input
FAQ: Employee Visibility Date on page 1191

Steps: Enable Self-Service One-Time Payments

Context

You can enable workers to request one-time payments for themselves using the *Request One-Time Payment for Self* business process.

Steps

1. Edit Business Process Security Policies.

   Access the Create Business Process Definition (Default Definition) task and create a default definition and security policy for the *Request One-Time Payment for Self* business process type.

   Give security groups access to the *Self-Service: Request One-Time Payment* domain in the Core Compensation functional area.
2. Hide or Require Optional Fields.

   Access the Configure Optional Fields task and select Core Compensation > Request One-Time Payment for Self from the By Functional Area prompt.

   Workday permanently hides these fields from the worker during the *Request One-Time Payment for Self* business process:

   - Coverage Dates
   - Gross Up
   - Recommended Maximum
   - Recommended Minimum
   - Send to Payroll
   - Target Amount
   - Target Currency
   - Target Frequency
   - Target Percent
3. Access the Maintain Custom Validations report to configure custom validations for one-time payments.

   Existing custom validations for the *Request One-Time Payment* process also apply to the *Request One-Time Payment for Self* process. Use the *One Time Payment Event for Self* source external field to exclude these types of events from specific custom validations.

   Configure any custom validations that your organization requires. Consider adjusting any custom validations that you use only for the *Request One-Time Payment* event.
4. Select the Worker Selectable check box on one-time payment plans to enable them for self-service.

   Doing so enables the plan for selection during the *Request One-Time Payment for Self* business process, provided the worker is eligible for the plan. If you don't select Worker Selectable, workers can't select the plan during the *Request One-Time Payment for Self* process.

Result

Workers with the appropriate security can access the Request One-Time Payment for Myself task to initiate the *Request One-Time Payment for Self* business process. Workers can also access the task from the Benefits and Pay Hub.

Workers can cancel their one-time payment request but only while it's still in progress. Workers can't correct or rescind their own *Request One-Time Payment for Self* process after it completes, regardless of the business process security policy.

Reference: Benefits and Pay Hub on page 1060

2022R2 What's New Post: Self-Service for One-Time Payments

Concept: Forfeit and Clawback for Terminated Workers

Workday provides the ability to forfeit and claw back one-time payments to terminated workers processed through Workday Payroll or Payroll Integration.

Workday Payroll only processes the one-time payment when you select the Send to Payroll option on the Request One-Time Payment task. With Send to Payroll selected, the Forfeit option displays during terminations for both one-time and bonus payments only when both:

- You have configured *Request One-Time Payment* as a step in the *Termination* business process.
- The Scheduled Payment Date on the one-time or bonus payment is after the Termination Date.

  The worker still has the primary position as when you configured the one-time or bonus payment. Workday only displays those one-time or bonus payments associated with the current position. Workday doesn't display a payment if the worker changes jobs or gets a new primary position after you configured the payment.

  Example: Terry has a one-time payment associated with their current position, but also has another associated with their old position. During the termination process for Terry, Workday displays only the one-time payment associated with Terry's current position.

If you select Forfeit, Workday forfeits the payment, overriding Send to Payroll, and won't pay the one-time or bonus payment.

You can also claw back one-time payments. The Clawback section displays only when 1 or more of the worker's one-time payments meet these criteria:

- You selected the *Clawback* category on the one-time payment plan.
- You selected Send to Payroll.
- The Clawback Date on the one-time payment is after the worker's Termination Date.
- The Scheduled Payment Date is on or before the Termination Date.
- The worker still has the primary position as when you configured the one-time or bonus payment. Workday only displays those one-time or bonus payments for clawback associated with the current position. Workday doesn't display a payment for clawback if the worker changes jobs or gets a new primary position after you configured the payment.

Compensation Basis

Steps: Manage Compensation Basis

Steps

1. (Optional) Create Compensation Rounding Rules on page 1165.
2. Create Configurable Compensation Basis on page 1134.
3. (Optional) Create Calculation Compensation Basis on page 1136.
4. (Optional) Access the Map Retirement Savings Plans to Compensation Basis task.

   For Workday to calculate the employer contribution amount based on a percentage of the employee's salary, identify the compensation basis that defines the components that make up the employee's salary. Otherwise, Workday can't calculate the employer contribution amount and the compensation basis amount is zero.

   If the plan is part of a compensation basis that has the Manage Basis Total check box selected, you can't change the selected compensation basis.

   Security: *Set Up: Base and Plan* and *Worker Data: Total Rewards* domains in the Core Compensation functional area.
5. (Optional) Access the Set Up Compensation Basis Adjustment task.

   Adding or changing a rounding rule on an existing compensation basis applies only to future compensation transactions, but not the existing Primary Compensation Basis (PCB). After you've added or changed a rounding rule on an existing compensation basis, use this task to apply it to employee's existing PCB.

   You can select all workers that have the compensation basis, select 1 or more eligibility rules, or select 1 or more specific employees.

   Security: *Process: Compensation Plan Employee Management* domain in the Core Compensation functional area.
6. Associate compensation bases with percent-based compensation plans, such as allowance, period salary, bonus, or stock plans:

   Workday uses this to calculate the employee's individual target amounts. Workday uses individual target amounts to calculate pool amounts.
7. (Optional) Access the Model Allocation by Compensation Basis report.

   For workers managed by a compensation basis, simulate the changes that result from business processes such as *Change Job*, *Change Position*, *Hire*, or *Request Compensation Change*.

   Note: Workday doesn't display data unless the business processes would change it.
8. (Optional) Manage merit awards using a compensation basis.
   a) Create Compensation Packages on page 1044

      To assign a compensation basis to the compensation package, complete the Compensation Basis tab.
   b) Create Merit Plans on page 1088

      Select the Manage Basis Total check box.

   Workday allocates merit increases during a compensation change, job change, promotion, transfer, or demotion to the compensation plans associated with the compensation basis.
9. (Optional) Create Compensation Rounding Rules

   You can associate rounding rules with allowance, salary, merit, bonus, or stock plans, or with compensation bases managed by a compensation basis total.

   Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

Create Period Salary Plans on page 1072
Create Allowance Plans on page 1082

Create Configurable Compensation Basis

Prerequisites

- Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.
- Create compensation plans.

Context

You can create a compensation basis from 1 or more compensation plans. You can then use the basis to manage merit awards and assign or change employee compensation.

You can also use these web services to retrieve, add, or modify configurable compensation bases:

- Get Configurable Compensation Basis.
- Put Configurable Compensation Basis.

Note: You can't use these web services to retrieve or upload configurable compensation bases with Manage by Basis Total selected. Use the Create Configurable Compensation Basis task instead. You also can't use these web services for calculation compensation bases. Use the Create Calculation Compensation Basis task instead.

Steps

1. Access the Create Configurable Compensation Basis task.
2. In the Details section, consider:

Option	Description
Eligibility Rule	Select 1 or more eligibility rules to apply the compensation basis only to specific employees. If you leave the field blank, the compensation basis applies to all employees.
Functional Areas	Select 1 or more: • *Benefits*: If you're going to include a retirement savings plan. • *Compensation*: If you want to use it in compensation-related transactions or in the severance worksheet. • *Planning*: If you want to create a custom compensation basis for your headcount plans. (Requires access to the Workday Planning product.)

Option	Description
	• *Projects and Work*: (For Projects only.) If you want to use this compensation basis to derive a fully burdened cost rate for worker on a project.
Use to View Compensation	Available only if you selected *Compensation* in the Functional Areas field. If selected: • Configurable Compensation Basis displays on the worker's related actions menu. • Compensation Basis is available for percentage-based plans such as bonus or allowance.
Ranking	Available only if you selected *Compensation* in the Functional Areas field. If an employee is eligible for more than 1 compensation basis, Workday: • Calculates the amount using the highest ranking compensation basis, known as the Primary Compensation Basis (PCB). • Uses the PCB for reporting estimated earnings. Example: Sam is eligible for compensation bases with Ranking set to 2, 3, and 4. Sam isn't eligible for the compensation basis ranked 1. The compensation basis ranked 2 is the highest Sam is eligible for and is the PCB.
Compensation Plan	• *All*: All compensation plans of the same type included in the calculation of the compensation basis. • *Base Pay Only*: Includes all compensation plans of the same type in the calculation of the compensation basis, provided the compensation element selected on the plan is part of the employee's compensation grade as a base pay element.

3. In the Manage Basis Total section, consider:

Option	Description
Manage Basis Total	If selected, you can manage the change to an employee's compensation as a total compensation amount. Workday distributes the change to the components that make up the compensation basis.
Salary Plans Maximum	Example: If an employee's total compensation amount is 100,000 USD and the Salary Plans Maximum is 30 percent, then the amount allocated to salary plans can't be greater than 30,000 USD.

Option	Description
Rounding Rule	Workday rounds compensation plan assignment amounts for all future compensation transactions. A rounding rule created using the Create Compensation Rounding Rule task with the Round to Currency Precision check box selected provides the most precise results. Discrepancies between the original PCB entered and what is displayed after plan allocation might result from unit-based plans that include a payment frequency. Example: If the total compensation basis equals 200,000 USD, the displayed value of the total compensation basis might be rounded down to 199,999.10 USD if the 2 unit-based allowance plans are: • Rounded to currency precision. • Paid quarterly.
Retain Basis Total	If selected, Workday retains the compensation basis total even when a staffing transaction changes compensation plan assignment. Example: If Retain Basis Total is selected, Workday populates the proposed total with the existing compensation basis total during the *Propose Compensation* step of the *Change Job* process. Workday then rebalances the plan assignments but keeps the compensation basis total fixed. If Retain Basis Total isn't selected, Workday recalculates the compensation basis total based on the changed plan assignments.

Include an amount-based allowance, bonus, stock, or commission plan that allows overrides to handle any remainder amounts from Workday's automatic distribution. Otherwise, Workday can't allocate the full amount of the change to the employee.

4. (Optional) Select Calculation Bases created on the Create Calculation Compensation Basis task.
5. Complete the information for each plan you want to include in the compensation basis.

Next Steps

If you edited an existing compensation basis and added or changed a rounding rule with Manage Basis Total selected, you can use the Set Up Compensation Basis Adjustment task to apply the rule to existing plan assignment amounts.

Related Information
Tasks
Create Compensation Rounding Rules on page 1165

Create Calculation Compensation Basis

Prerequisites

- Create compensation plans.
- Security: *Set Up: Base and Plan* domain in the Core Compensation functional area.

Context

You can use a calculation compensation basis to augment a compensation basis used to support global operations.

Steps

1. Access the Create Calculation Compensation Basis task.
2. Select the type:

Option	Description
Adjustable Basis	Comprised of variable and guaranteed plans that Workday might adjust during the calculation.
Guaranteed Basis	Comprised of plans, the sum of which is guaranteed for the worker. Workday can only decrease the guaranteed amount when the worker's Primary Compensation Basis (PCB) amount decreases.
Subtractive Basis	Associated with a percentage-based compensation plan. Workday decreases the PCB by the amount defined by the subtractive basis. Workday then calculates the percentage-based plan target amount.
Variable Basis	Defines the variable amount of the compensation basis and can include: • Plans that decrease when you must add funds to the guaranteed plans to preserve the guaranteed amount. • Plans that you adjust in inverse proportionality to the amount needed to fund the guaranteed amount.
Fixed Basis	Includes fixed compensation plans that Workday won't change during Manage by Basis Total calculations, even if you selected Retain Basis Total. Workday treats the compensation plans you select as a higher priority than maintaining the PCB.

3. (Optional) Select the Compensation Plans that make up the calculation compensation basis.

Result

You can select calculation compensation bases created on the Create Calculation Compensation Basis task. You can select subtractive calculation compensation bases when creating or editing a percentage-based compensation plan.

Next Steps

- Create a compensation basis associated with a calculation compensation basis.

  Note: If Apply FTE % is selected on both the calculated compensation basis and on the salary or allowance plan, Workday applies the FTE % twice. Example: If a calculation compensation basis has Apply FTE % selected and includes an allowance plan that also has it selected, Workday prorates the allowance plan twice.
- View Calculation Compensation Basis, Edit Calculation Compensation Basis or Delete Calculation Compensation Basis tasks.

Concept: Compensation Basis

A compensation basis groups together compensation components that define estimated earnings for employee populations.

Examples:

- On Target Earnings US: Includes salary plans, commission plans, bonus plans.
- On Target Earnings UK: Includes salary plans, allowance plans, commission plans, bonus plans.
- Cost to Company: Includes salary plans, allowance plans, and bonus plans.

Workday uses the value associated with the grouped compensation components:

- As the basis for percentage-based allowance, bonus, period salary, and stock plans; and compensation packages.

  Example: You can define an allowance plan to be 10 percent of total cost to company.
- To define how Workday manages merit changes for an employee, or other processes that change compensation.

  You can either change an employee's compensation at the individual plan level or manage by basis total (MBT). If you use MBT, Workday automatically distributes the new total amount across the plans that make up the compensation basis.

Workday delivers 3 compensation bases:

- *Total Base Pay*: Includes all salary and allowance plans defined as base pay for the compensation grade or grade profile.
- *Total Salary and Allowances*: Includes these plans assigned to a position:
  - Allowance plans.
  - Calculated plans.
  - Salary plans.
  - Period salary plans.
  - Unit salary plans.
  - Hourly plans.
- *Eligible Earning Override*: For bonus plans and processes only. Includes customer-defined currency amounts at the employee level used as the basis for bonus calculations.

For employees eligible for more than 1 compensation basis, Workday calculates the amount using the highest ranking basis, called the Primary Compensation Basis (PCB). Workday uses the PCB for reporting estimated earnings.

You can configure and manage your compensation bases, including the Ranking, on these tasks:

- Create or Edit Configurable Compensation Basis
- Create Calculation Compensation Basis
- Maintain Compensation Basis

See: Steps: Manage Compensation Basis on page 1133

You can then view the compensation basis value for employees using reports and processes such as the Compensation Basis Analytics report.

Manage Basis Total (MBT)

Managing employees by a compensation basis total simplifies the management of diverse, interrelated compensation components common for companies that operate globally. Rather than updating several individual plans from the bottom up, managing by a basis total enables you to update a single value from the top down. Workday then redistributes the total across the individual plans that comprise the basis. See:FAQ: Manage Basis Total (MBT) on page 1140

For compensation review processes, select the Manage Basis Total check box on the merit plan. If these conditions are met, when you enter 120,000 USD as the merit increase, Workday distributes this sum in this order:

1. Applies the award to amount-based compensation plans that don't allow overrides.
2. Applies the award to percent-based compensation plans.
3. Applies the award to amount-based compensation plans that allow overrides.
4. Workday applies any remainder amount to the compensation plans that allow overrides.

Note: If your plan doesn't allow overrides, Workday doesn't distribute the full amount.

Calculation Compensation Basis

A calculation compensation basis augments a compensation basis and is used primarily in support of global operations. A calculation compensation basis can be of these types:

Calculation Compensation Basis Type	Description
Adjustable Basis	Comprised of variable and guaranteed plans that Workday adjusts during the calculation.
Guaranteed Basis	Comprised of plans, the sum of which is guaranteed for the worker. Workday can only decrease the guaranteed amount if the worker's PCB amount decreases. Workday won't exceed a ceiling set on a percentage-based allowance plan.
Subtractive Basis	Associated with a percentage-based compensation plan. Workday decreases the PCB by the amount defined by the subtractive basis. Workday then calculates the percentage-based plan target amount.
Variable Basis	Defines the variable amount of the compensation basis. A variable basis can be made up of: • Plans that Workday decreases when funds must be added to the guaranteed plans to preserve the guaranteed amount. • Plans that Workday adjusts in inverse proportionality to the amount needed to fund the guaranteed amount.

Workday uses adjustable, guaranteed, and variable calculation compensation bases as parameters when calculating the compensation basis.

You manage calculation compensation bases with the Create Calculation Compensation Basis, Edit Calculation Compensation Basis, and Delete Calculation Compensation Basis tasks. Use the Create Configurable Compensation Basis or Edit Configurable Compensation Basis tasks to associate calculation compensation bases with a compensation basis.

To use a subtractive compensation basis, you must edit a percentage-based compensation plan to include it. Workday decreases the PCB by the amount defined by the subtractive basis. Workday then calculates the percentage-based plan target amount.

Managing employees with a compensation basis linked with a calculation compensation basis changes how Workday calculates plans.

Guaranteed Basis Example: Company A is located in France. The vacation premium is a guaranteed amount and part of the collective agreement. Within Workday, this guaranteed amount can never be reduced unless the employee is demoted. The guaranteed vacation premium amount remains in place through compensation changes while the collective agreement remains valid for the employee.

To guarantee the amount remains in place in Workday:

- Create a guaranteed calculation compensation basis.
- Add the vacation premium plan to the guaranteed compensation basis.
- Associate the guaranteed calculation compensation basis with the worker's PCB.

Subtractive Basis Example: A bonus plan defined as a percentage of the PCB minus commissions.

Variable Basis Example: Sales Incentive plans.

FAQ: Manage Basis Total (MBT)

What is Manage Basis Total (MBT)?

What's the difference between MBT and non-MBT compensation?

Why should I use MBT?

Why should I use non-MBT compensation instead of MBT?

How difficult is it to switch from MBT back to non-MBT compensation?

How does Workday calculate MBT?

What happens when a grade step changes for an MBT worker?

When does Workday calculate MBT?

How does Workday calculate non-MBT compensation?

What is a partial calculation and when is it used?

Can I use MBT if I must provide a guaranteed amount?

Does Workday persist updated compensation basis values when using MBT?

If I use MBT, does it apply to all workers?

What are some best practices for implementing MBT?

<table>
<tr><td>What is Manage by Basis Total (MBT)?</td><td>Managing employees by a compensation basis total (MBT) simplifies the management of diverse, interrelated compensation components common for companies that operate globally. MBT is a method to manage total cash compensation through 1 overall value rather than multiple values at the plan level. Example: During a compensation transaction, you update the employee MBT value and Workday allocates the changed value to all the compensation plans that comprise the compensation basis.</td></tr>
<tr><td>What's the difference between MBT and non-MBT compensation?</td><td>It's an entirely different method of managing compensation. Whether to use MBT is as important a decision as selecting a staffing model. While MBT enables you to update 1 value, non-MBT compensation requires that you individually update the value of every compensation plan that makes up the compensation basis.
<table>
<tr><td>MBT</td><td>Update 1 value. Workday allocates the change from the top down to all compensation plans that comprise the basis.</td></tr>
<tr><td>Non-MBT Compensation</td><td>Update the value of the compensation plans that comprise the basis from the bottom up.</td></tr>
</table></td></tr>
</table>

Why should I use MBT?	It’s much easier to manage a single value than to manage a diverse and complicated set of compensation components and their interdependencies. This is especially true for multinational corporations with multiple compensation components and dependencies on country-specific regulations, employment agreements or union contracts, and company policies. Implementing MBT: • Enables you to enter a single total compensation amount. • Configures Workday to allocate the total among the compensation plans that comprise the basis. • Enables managers to use a single point of entry to manage complex compensation events. • Workday persists an assignment amount and currency for every plan type for each assignment. A compensation event must take place to update the assigned amounts.
Why should I use non-MBT compensation instead of MBT?	We don't recommend using MBT if you have employees with fixed compensation components or have assigned compensation plans that must be managed directly. With non-MBT compensation: • You must enter amounts for each individual compensation plan that comprise the basis, or let Workday automatically populate values based on the plan configuration. • You must understand the details and the dependencies of complex compensation configurations. • Workday calculates individual assignment amounts dynamically every time you view or report on an employee's compensation, based on the current state of compensation.
How difficult is it to switch from MBT back to non-MBT compensation?	You must run a Mass Operation Management task that converts stored data for workers that have a Primary Compensation Basis (PCB) with MBT. However, after the conversion, workers may have different total compensation amounts due to the difference in how Workday calculates amount-based and percent-based compensation plans. Workday recommends that you carefully analyze when deciding to switch back to non-MBT compensation from MBT.
How does Workday calculate MBT?	Rather than updating several individual plans, MBT enables you to update a single value. Workday then

allocates the total across the individual plans, using this this sequential calculation:

Group	Description
1	Fixed amount plans.
2	Percentage plans, based on the PCB.
3	Percentage plans based on Groups 1 and 2, and any of their dependent plans.
4	Salary plans.
5	Percentage plans based on Groups 1 through 4, and any plans dependent upon the salary plans.
6	Remainder plans, which include amount plans that allow individual overrides.

The resulting changes to individual compensation amounts comprise a single compensation event.

During a compensation review process, you can change an employee's total compensation by changing their PCB. Workday automatically allocates that amount to the compensation plans that make up the PCB, provided it:

- Has the Manage Basis Total section completed.
- Is associated with the employee's compensation package.
- Is the PCB for the employee. Example:
    - You have CompBasis A with a ranking of 1, CompBasis B with a ranking of 2, and CompBasis C with a ranking of 3.
    - Based on the eligibility rules associated with each compensation basis, an employee qualifies for CompBasis B and CompBasis C.
    - Because the ranking for CompBasis B is higher than CompBasis C, the employee's PCB is CompBasis B.

What happens when a grade step changes for an MBT worker?

For employees with grade steps managed by a compensation basis total, Workday treats salary plans differently depending on whether they allow overrides. When a grade step changes:

- If the Allow Override option isn't selected on the salary plan step, Workday treats the salary increase associated with a step change as a fixed amount and doesn't alter it.
- If the salary plan does allow overrides, Workday allocates the plan as necessary.

	In both cases, Workday performs a partial calculation for any plans that depend on the salary plan and adjusts the PCB.
When does Workday calculate MBT?	Workday runs the MBT calculation during these business processes, even when used as a step in another process: • *Propose Compensation Hire* • *Propose Compensation Offer/Employee Agreement* • *Propose Compensation Change* • *Request Compensation Change* • *Request Compensation Change for Leave of Absence* • *Initiate Compensation Review Process*
How does Workday calculate non-MBT compensation?	You update individual plans and Workday sums the change into the compensation basis. However, each update to individual plans may require managers to understand minute details and dependencies to determine compensation plan allocations.
What is a partial calculation and when is it used?	Workday performs partial calculations in cases where you update an individual compensation component during a business process such as *Change Job*. Workday then recalculates plans in the same sequence as a normal MBT calculation but begins at the step associated with the updated component, and skips previous steps. Example: The compensation administrator updates the salary plan amount assigned during a *Change Job* business process. With this change in salary plan, Workday performs a partial calculation beginning with the salary plan and continuing downward.
Can I use MBT if I must provide a guaranteed amount?	Yes. You can configure a calculation compensation basis and select Guaranteed Basis for the type. A guaranteed basis consists of plans, the sum of which is guaranteed for the worker. Workday can only decrease the guaranteed amount when the worker's PCB amount decreases. See: Create Calculation Compensation Basis on page 1136 and Manage by Basis Total - Advanced.
Does Workday persist updated compensation basis values when using MBT?	Yes. With MBT, Workday persists an assignment amount, currency, and frequency for every plan type for each assignment. A compensation event must take place to update the assigned amounts. For non-MBT compensation, Workday doesn't store plan assignment amounts for certain plan types at the assignment level. Workday recalculates these

	amounts dynamically each time they display, taking into account the current state of compensation data. Workday also calculates percent-based plans differently and this often results in very different assignment amounts compared to MBT.

If I use MBT, does it apply to all workers?	No. An MBT worker must:
	• Meet the conditions of the eligibility rule associated with the MBT compensation basis.
	• Be eligible a PCB compensation basis that has:
	  ◦ An associated eligibility rule the worker qualifies for.
	  ◦ The Manage Basis Total option selected.
	  ◦ Compensation included in the Functional Areas field.
	  ◦ The Use to View Compensation option selected.
	  ◦ The Ranking must be set to 1.

What are some best practices for implementing MBT?	Workday recommends that you follow these best practices when configuring a compensation basis with MBT: • Use the same frequency and currency for all pay components. Doing so ensures consistency when Workday recalculates individual pay assignments based on the PCB. • Add MBT to the name of any compensation basis you create with the Manage Basis Total option selected. Consider doing the same if you use eligibility rules specifically for MBT.

Set Up Compensation Reviews

Setup Considerations: Compensation Reviews

You can use this topic to help make decisions when planning your configuration and use of compensation reviews. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.

- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Compensation reviews enable you to plan for and grant periodic:

- Merit increases to base pay, including promotions, allowances, and lump sum awards.
- Bonuses, including cash and deferred bonus in the form of stock.
- Stock grants as shares, options, or cash.

As part of your planning process, you can decide on compensation review milestones and set up grid configurations and named sets of initiation options.

Business Benefits

The compensation review process enables you to:

- Schedule important compensation milestones.
- Configure the organization type and roles with authority to create, edit, or review awards.
- Process staffing changes while compensation reviews are in progress.
- Manage budgets.
- Include merit, bonus, or stock plans.
- Select the organizations to include.
- Select the eligibility rules for target employee populations.
- Identify those responsible for planning, approving, and reviewing awards.

You can create a custom set of fields, or grid configurations, to guide managers during compensation reviews. You can set the fields to read-only, editable, or advanced (drill-down). You can reuse or update grid configurations in subsequent review cycles.

Use Cases

You can plan and schedule regular compensation reviews, including:

- Annual reviews that include merit, bonus, and stock awards.
- Semiannual or quarterly reviews that include bonus awards.
- Periodic reviews that include only stock awards and align with your fiscal cycle.

Questions to Consider

Questions	Considerations
Do you have employees in multiple countries or managers with direct reports in other countries?	As a best practice, consider selecting the Calculate Inverse Rate on the Maintain Currency Conversion Rates task for the selected rate type and affected currencies. If selected, Workday automatically calculates the inverse currency exchange rate between the source and target currencies. You can also select your own currency exchange rate.
Which goals factor into bonus awards?	To calculate bonuses, you can create compensation scorecards to capture company, division, or department goals and their attainment.

Questions	Considerations
Do you offer stock to your employees?	You can configure stock plans based on amount, percent, or units. You can also grant cash in the same manner as stock. You can use a third-party stock administration application to enable employees to manage their stock awards.
Do you move employees between organizations or create new organizations during compensation reviews?	You can use the Maintain Compensation Review Process Employee Participation report to add or remove employees to or from in-progress compensation review processes. You can also use the *Compensation Review Maintain Employee Participation* operation type on the Mass Operation Management task to remove or add back previously removed employees. The Compensation Review Update New Organization Data task runs automatically on a regular schedule to detect organizations that aren't currently in a compensation review process but have eligible employees resulting from: • The Maintain Compensation Review Process Employee Participation report. • The *Change Job* process. • The *Request Compensation Change* process. • The *Move Workers* process. • The *Change Organization Assignment* process. This task automatically adds new organizations provided they're both subordinate to the top level organization and existed before you initiated the process. Optionally, you can use this task to manually add newly detected organizations more quickly than the automatic process. See: Steps: Add or Remove Employees to or from Compensation Reviews on page 1208 As a best practice, Workday recommends that you create new organizations that you intend to add to a compensation review process before you initiate the process.
How do you manage staffing and compensation changes that occur while the compensation reviews are in-progress?	You can configure participation rule sets to manage individual compensation, grade, or job changes while the compensation review is in-progress. You can also: • Access the Create Compensation Review Options task. • Allow specific business processes to proceed with options for date ranges or eligibility rules.

Questions	Considerations
	If you don't configure participation rule sets, Workday blocks job or compensation changes for eligible employees. • After process initiation. • Before the latest effective date of any award in the compensation review event.
Do you need to allow some staffing or compensation changes while compensation reviews are in progress?	You can configure compensation review options that allow *Change Job* or *Request Compensation Change* events to proceed. You can: • Allow all events for the process to proceed for 1 or more date ranges. • Allow only events for the process to proceed for 1 or more eligibility rules and for 1 or more date ranges.
What fields do you want managers to view during compensation reviews?	You can configure compensation review grid configuration fields as read-only, editable, and advanced (drill-down) fields.
Is 1 compensation review grid adequate, or do you require more than 1, each targeted for a specific population?	You can set up grid configuration profiles, each targeted at users based on locale, organization, assigned roles, and other attributes. You can also set up a default grid configuration. See: Steps: Configure Compensation Review Grid Profiles on page 1172.
Do you use eligibility waiting periods?	You can configure eligibility waiting periods to determine whether employees are eligible for merit raises or bonuses.
Do you prorate merit or bonus target amounts?	You can base proration rules on base pay changes, time since hire, leaves of absence, and other criteria.
What period do you consider when prorating awards?	Workday uses the process period end date to determine: • Eligible employees based on their plan assignments. • The proration calculations and performance ratings used.
When do you want employees to find out their awards?	You can set an employee visibility date to hide awards until management communicates with employees outside of Workday.

Recommendations

Workday recommends that you create or retire organizations either before initiating a compensation review process or after the process completes.

If you use compensation matrices and include performance ratings, Workday recommends that you complete performance ratings before the process period end date of the compensation review.

Determine whether your event is large enough that you need to work with the Workday Production Readiness team.

See Workday Community: Production Readiness: Large Volume Events Best Practices. for guidelines about opening a Production Readiness case.

Requirements

No impacts.

Limitations

Workday doesn't support intersection security groups with exclusion criteria for compensation reviews.

Tenant Setup

You can configure these compensation review options on the Edit Tenant Setup - HCM task:

Option	Description
Disable Create New Compensation Review Statement functionality for Employee on View Compensation Review Statements	Prevents employees from creating their own compensation review statement.
Preferred Compensation Review Employee Awards Grid Limit	Workday limits to 500 the number of employees in the same organization hierarchy that a planner can view.

Security

These security domains in the Advanced Compensation functional area.

Domains	Considerations
Worker Data: Stock Grants	Required to configure stock pools or issue stock grants.
Worker Data: Propose Stock Award as Part of Compensation Review	Required to issue stock awards during compensation reviews. You can only configure roles on the same organization type as used in the *Complete Employee Awards* step.
Worker Data: Compensation Review Statements	Enables managers to print statements for their direct reports.
Self-Service: Compensation Review Statement	Enables employees to print their own statements.
Process: Compensation Management Events	Enables compensation administrators to initiate and finalize the process.
Process: Compensation Review Process Controls	Enables the Manager role to access and complete tasks.
Process: Compensation Review Process Participant	Enables support roles such as HR Partner and Compensation Partner to view and edit employee awards.
Process: Compensation Review Process Reviewer	Enables Reviewers (HR Partners and location or regional managers) to view or edit awards.

Domains	Considerations
Process: Compensation Review Rule Based Access	Enables you to configure rule-based security for compensation administrators and others with heightened security to control employee-as-self access.
View Compensation Review Pool Data	Enables you to hide compensation review pool and budget wheel graphics from target populations of compensation review users.

Business Processes

Before configuring the *Initiate Compensation Review Process* business process for all compensation reviews, consider which roles:

- Should have control over submitting employee awards. Examples: Merit Planner or Manager.
- To add to the *Complete Employee Awards* subprocess: Example: Compensation Administrator.

Reporting

Reports	Considerations
Compensation Review Process Search Employees (Default)	You can use this report to give participants access to the grid configuration within the Organization Summary.
Compensation Review Organization Search Report (Default)	You can use this report to give reviewers access to the grid configuration within the Organization Summary.
Compensation Review Process Status Report By Hierarchy	Administrators can use this report to access organizations in the process and review budgets, spend, and status.
Maintain Bonus Accrual Estimates	You can use this report to estimate bonus costs using the same initiation parameters as a periodic compensation review.

Integrations

Workday provides these public web services to support compensation reviews:

Web Service	Description
Get Compensation Matrices	Retrieves compensation review matrices. You can also use the *Put Compensation Matrices* web service.
Get Compensation Review Participation Rule Sets	Retrieves compensation review participation rule sets created on the Maintain Compensation Review Participation Rule Sets task. You can also use the *Put Compensation Review Participation Rule Sets*
Get Compensation Review Validation Rules	Provides validation rules created in Workday for compensation review processes.

Web Service	Description
Get Deferred Bonus Calculation	Displays deferred bonus calculations that you created on the Create Deferred Bonus Calculation task.
Get Eligibility Waiting Period	Provides eligibility waiting periods created on the Create Compensation Eligibility Rule task or the *Put Eligibility Waiting Period* web service.
Get Employee Awards	Provides employee awards for a specific employee by position or all employees in a supervisory organization.
Get Import Compensation Review Budget Pools	Imports into the compensation review budget pools for single or multiple organizations, by compensation review event and organization. You can include subordinate organizations by compensation plan type.
Import Compensation Review Budget Pools	Updates the budget pool, holdback, and reserve information for all supervisory organizations for a specified compensation review.
Import Eligible Earnings Override	Adds or updates eligible earnings override information for a given employee. Workday updates in-progress compensation reviews that: • Have participation rule sets. • Include bonus awards.
Import Employee Awards	Updates employee awards for specified employees, organization, and compensation review.
Put Compensation Matrices	Uploads compensation review matrices. You can also use the *Get Compensation Matrices* web service.
Put Compensation Review Participation Rule Sets	Uploads compensation review participation rule sets. You can also use the *Get Compensation Review Participation Rule Sets* web service.
Put Compensation Review Validation Rules	You can upload new or modified validation rules for compensation review processes into Workday.
Put Deferred Bonus Calculation	Add or change a deferred bonus calculation.
Put Eligibility Waiting Period	You can upload new or modified eligibility waiting periods.

Touchpoints and Connections

Compensation review events can touch many other areas in Workday, including the *Hire* and *Change Job* business processes, Workday Payroll, Workday Expenses, and Workday Talent.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Examples

Example: Coordination of Organization Events in Compensation Reviews on page 1181

Example: Time-Based Proration for Merit and Bonus Awards on page 1184

Steps: Create a Compensation Matrix

Prerequisites

Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

Context

You can configure a compensation matrix to help you determine merit increases, bonus targets, or stock grants for employees during a compensation review. You can build a classic compensation matrix with:

- Rating scales.
- Potential rating.
- Compa ratio.
- Retention ratings.
- Pay range segments.

You can also configure a total value compensation matrix based on a custom conditional calculation that incorporates skills from the job profile, performance, or other worker attributes.

Examples:

- Give high-performing employees paid within the lower quartile of their grade range a larger bonus or pay increase.
- Plan relative increases, bonus awards, or stock grants in order to reward performance, encourage retention, or equalize pay within a grade.

During compensation reviews, managers can see a suggested range that uses performance, talent, and market data to determine the award.

Steps

1. Access the Create Compensation Matrix task.

2. Select the type of compensation matrix:

Option	Description
Classic Compensation Matrix	Configure a matrix based on rating scales, potential rating, compa ratio, retention ratings, and so on.
Total Value Compensation Matrix	Configure the matrix with a custom calculation that evaluates worker attributes. Example: • Terry doesn't have a review rating and Workday can't calculate a performance factor using a classic compensation matrix. • By using a total value compensation matrix with a custom calculation, you can default a 2 percent factor for workers like Terry that don't have a review rating.

3. As you complete this task, consider:

Option	Description
Amount	An amount matrix is for amount-based stock, bonus, or merit plans and consists of an exact amount for the minimum and maximum bonus amount, and a default currency. The exact amount can be positive or negative and up to 2 decimal places. Example: • Terry has an amount-based stock plan with a 10,000 target. • Terry has a performance rating of 3-Meets Expectations. • The compensation matrix has a Minimum of 8000, a Maximum of 12500, and the default currency is USD. • The recommended stock grant for Terry ranges from 8,000 to 12,500 USD.
Percent	A percent matrix can be used for percent-based stock, bonus, or merit plans and consists of the exact percent for the minimum and maximum values. Example: • Casey has a base salary of 100,000. • Casey has a performance rating of 3-Meets Expectations. • The compensation matrix has a Minimum of 2% and a Maximum of 3%. • The recommended merit increase for Casey is 2-3% based on a percent-based matrix with Review Rating = 3, Minimum = 2%, and Maximum = 3%.
Weighted	A weighted matrix can be used for amount- or percent-based bonus or merit plans. It can also be used for an amount-, percent-, or unit-based stock plan. Use a weighted matrix if you want the minimum and maximum target ranges based on a factor used to derive the targets for a plan based on a percentage amount. Example: • Haley, has a percent bonus plan with a 6% target. • Haley has a base pay of 100,000 and receives a performance rating of 3-Meets Expectations.

Option	Description

	• The weighted matrix has a Minimum of 50% and a Maximum of 75%.
	• The recommended bonus range is:
	  • Minimum = 100,000 * 0.06 * 0.5 = 3,000.
	  • Maximum = 100,000 *0.06 * 0.75 = 4,500.

Use Above and Below Segments	Available if you selected Include Pay Range Segments. Adds rows for Below Segment 1 and Above Top Segment to the matrix. Enter the Number of Pay Range Segments.
Use Multiple Targets	Select this check box if you want the matrix to apply to specific employees that match 1 or more eligibility rules. Select 1 or more Eligibility Rules to identify the target population for the matrix.
Calculation	For a total value compensation matrix, select a custom calculation that determines a default factor. You can edit the calculation even when the compensation matrix is used in an in-progress event, provided the calculation produces a numeric value. See ../../../manage-workday/tenant-configuration/calculations/uso1574201918193.dita
Default Currency	Select a default currency. Select Apply Currency to apply your choice for Currency to all eligibility rules displayed in the Currency by Eligibility Rule list. Apply Currency displays for amount-based matrixes with Use Multiple Targets selected.
Currency by Eligibility Rule	(Optional) Select the currency for each eligibility rule.
Compensation Matrix	Enter the Minimum and Maximum values for each row of the matrix. Workday doesn't automatically enforce the minimum and maximum values you enter. To enforce the minimum and maximum, you must create custom validations. See Steps: Set Up Custom Validations.

You can also use the *Get Compensation Matrices* and *Put Compensation Matrices* web services.

4. (Optional) Access the Maintain Compa Ratio Range task.
   a) Enter the Segment Top to establish the maximum value for the compa ratio range.
   b) Create the compa ratio ranges you'll use for the compensation matrix.

      Examples: you can create rows for 25, 50, 75, 100 and 125 that results with ranges of:

      - Zero - 25% (zero - 25.000)
      - 25 - 50% (25.001 - 50.000)
      - 50 - 75% (50.001 - 75.000)
      - 75 - 100% (75.001 - 100.000)
      - 100 - 125% (100.001 - 125.000)
      - 125% and greater (125.001 +)

5. (Optional) Access the Edit Compensation Matrix Rules task.
    - Convert a single target matrix to a multitarget matrix and update the name.
    - Add or remove compensation eligibility rules for a multitarget matrix.

Result
You can now assign the compensation matrix to a merit, bonus, or stock plan.

When you process the plan, Workday uses the compensation matrix factors and associated plan targets to calculate the pool and provide managers with target ranges. You can also assign the matrix to a merit plan as reference only.

Create Compensation Packages on page 1044
Create Grid Configurations for Compensation on page 1169
Reference
Reference: Compensation Step and Grade Progression Reports on page 1003
Total Value Compensation Matrix

Steps: Prepare for Compensation Reviews

Prerequisites

Set up merit, bonus, or stock plans.

Steps

1. Steps: Set Up the Compensation Review Business Process on page 1157.
2. Edit Domain Security Policies.

    To include stock in the process, grant access to these domains in the Advanced Compensation functional area:

    - *Worker Data: Propose Stock Award as Part of Compensation Review*.
    - *Worker Data: Stock Grants*.

    To print compensation review statements, configure these security domains in the Advanced Compensation functional area:

    - *Self-Service: Compensation Review Statements* domain, so employees can print their own statements.
    - *Worker Data: Compensation Review Statements* domain, so managers can print statements for their direct reports.
3. Enable domains (in the Advanced Compensation functional area) and assign roles:

Domain	Roles	Description
Process: Compensation Management Events	Compensation Administrator	Required to initiate and finalize a compensation review process.
Process: Compensation Review Rule Based Access	Compensation Administrator	Enables you to create rule-based security groups that determine access to employee level data in compensation reviews,

Domain	Roles	Description
		including whether they can modify awards or planning for themselves.
Process: Compensation Review Process Participant	Planners: • Manager • Primary compensation planner	Plan compensation for an organization and view or plan subordinate supervisory organizations. Requires Modify access to plan awards.
Process: Compensation Review Process Controls	Manager	Required for access to Complete on Behalf.
Process: Compensation Review Process Controls and *Process: Compensation Review Process Participant*	Support roles: • HR Partner • Compensation Partner	View and edit employee awards as a planner. Can have either View or Modify access.
Process: Compensation Review Process Reviewer	Reviewers: • HR Partners • Location partners • Location or regional managers	View or edit the awards of their assigned employees. Can have either View or Modify access. The Business Process step *Review Employee Awards* uses any role-based security groups with Modify access on this domain in its configuration selection list.

Compensation Administrator	

Compensation Administrator	

4. (Optional) ../../../manage-workday/tenant-configuration/tenant-setup/dan1370797339945.dita.

Option	Description
Disable Create New Compensation Review Statement functionality for Employee on View Compensation Review Statements	Prevents employees from creating their own compensation review statement.
Preferred Compensation Review Employee Awards Grid Limit	Workday limits the number of employees in the same organization hierarchy displayed to a planner. You can enter a limit up to 500 or leave blank to use the default of 100.

5. Create and assign compensation plans.

6. (Optional) Configure how Workday manages merit changes for an employee:

   - To determine individual targets for percent-based plans and enter award amounts for each assigned plan, use total base pay. For this option, you don't have to create a compensation basis; Workday provides it for you.
   - To determine individual target amounts for percent-based plans, use the Primary Compensation Basis (PCB). Enter a total amount for the award. Workday allocates that amount to the individual plans that make up the PCB.

   See Steps: Manage Compensation Basis on page 1133.
7. Access the Maintain Event Categories and Reasons task.

   Create event categories and reasons for giving each award.

   Security: *Set Up: Staffing* domain in the Staffing functional area.
8. Access the Maintain Currency Rate Types task to create at least 1 rate type specifically for compensation review processes.
9. (Optional) Manage Compensation Review Participation Rule Sets on page 1166.

   Define rules that Workday uses to handle compensation-related events that occur during the compensation review process.
10. (Optional) Access the Maintain Bonus Accrual Estimates report.

    Use compensation review initiation criteria, including organizations, bonus plans, and date parameters to estimate bonus costs.

    a) Configure compensation review initiation options as you would for any periodic review with bonus awards.
    b) Select an action.

       You can calculate your estimate immediately or configure a run schedule. Workday then generates the bonus accrual report. You can also cancel (delete), edit, or review an estimate.
    c) Click an accrual report to view and download your estimated bonus costs.

    Security: *Process: Compensation Management Events* domain in the Advanced Compensation functional area.
11. (Optional) Steps: Create Custom Compensation Review Statements on page 1223.

    Create employee compensation review statements to meet reporting requirements.

    Workday recommends:

    - Use the Workday-delivered Compensation Review Employee Adjustment for Statements report data source.
    - If scheduling a PDF print run in advance, access the Release Compensation Review Statement task and schedule it for off hours. You can use custom layouts and manage when employees can view their compensation review statement.
12. Create Grid Configurations for Compensation on page 1169.

    Grid configurations can include read only, editable, or advanced fields for drilling down into details.
13. Steps: Configure Compensation Review Grid Profiles on page 1172

    Grid profiles enable you to use more than 1 grid configuration for each compensation review process.
14. (Optional) Create Stock Participation Rate Tables on page 1115.

    Applies only to compensation review processes that include stock awards.
15. (Optional) Access the Create Compensation Review Process Template task.

    Create templates to enable Workday to populate fields in compensation review processes. See Initiate Compensation Review Processes on page 1205 and Manage Compensation Review Pools on page 1213 Steps: Configure Compensation Review Grid Profiles on page 1172 for detailed field descriptions.

You can also manage compensation review templates using these web services:

- *Get Compensation Review Template*
- *Put Compensation Review Template*

Next Steps

Run these reports to review the date, time, responsible party, and notes for the last submitted change to awards:

- Compensation Review Merit Award Audit
- Compensation Review Talent Audit
- Compensation Review Bonus Payment Audit
- Compensation Review Stock Plan Award Audit

25R2 Release Note: Rule-Based Security Groups for Compensation Review

Steps: Set Up the Compensation Review Business Process

Prerequisites

Decide which roles, such as Planner or Manager, require control over submitting employee awards. Workday determines roles for the entire compensation review when you initiate the process and ignores any subsequent changes in role assignments.

Context

You can set up the *Initiate Compensation Review Process* business process for all award types, including bonus and stock awards, with or without merit awards.

You can set up an integration with a third-party stock administration application to manage vesting and other stock administration needs.

Note: Don't delete business process condition rules that you associate with either active or inactive compensation plans. Doing so might result in unexpected errors. You can't recover deleted condition rules.

Steps

1. Select Business Process > Edit Definition from the related actions menu of the *Initiate Compensation Review Process* business process.
2. As you complete this task, consider:

Option	Description
Complete Employee Awards	a. Add the Compensation Administrator role to oversee the compensation review process, monitor organization status, maintain pools, and review employee participation. b. Activate Pending Security Policy Changes.

Option	Description
	c. Select Configure Participation. Then select the Organization Type to Use and the Group (role), such as Manager or Planner. The organizations you configure on this step must also be configured on the Create Compensation Review Options task. Workday recommends not to configure a delay on the Shared Participation step in this business process. A delay may result in irreversible problems with My Task items, sending back, and so on.
Manage Impacted Employees	This must be the second step in the *Initiate Compensation Review Process*.
• *Configure Pool* • *Distribute Pool* • *Launch Employee Award*	These steps must remain in this order.
Manage Bonus Process Funding	(Optional) For compensation review processes with bonus awards. If included, make this the completion step.
Review Employee Awards	(Optional) This step must follow the *Complete Employee Awards* step. The organizations you configure on this step must also be configured on the Create Compensation Review Options task. You can grant role-based security groups outside of your specified organizational hierarchy access to approve awards using assignable roles for organizations on the *Process: Compensation Review Process Reviewer* domain.

Tasks
Edit Business Processes
Create Custom Business Processes

Steps: Manage Custom Calculations for Compensation Reviews

Prerequisites

Security:

- *Set Up: Payroll (Calculations – Generic)* in the Core Payroll functional area.
- *Grid Management* domain in the System functional area.
- *Process: Compensation Management Events* domain in the Advanced Compensation functional area.

Context

You can use custom calculations to populate fields in compensation reviews.

During a compensation review, Workday uses the calculation table to populate fields on your grid.

Steps

1. Create 1 or more calculations in the *Compensation* category using tasks such as Create Arithmetic Calculation or Create Lookup Calculation.

   You'll use calculations created in the *Compensation* category when you build the calculation table.

   Note: Calculations can be very complex. Workday recommends that you engage Workday Professional Services or a Workday Consulting Partner to help you configure the calculations for Compensation.
2. Access the Maintain Compensation Review Calculation Lists task.

   Configure 1 or more calculation lists and up to 50 list values. When you configure a compensation review calculation table, you can select that list and associate it with calculations and grid configuration fields. You can modify list values while a compensation review is in progress.

   Example: Enter Performance Factor for the list name with values for: Top Performer, Meets Expectations, and Needs Improvement. When you configure the calculation table, you can select the Performance Factor list and associate a calculation to each value.

   Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.
3. Access the Create Compensation Review Calculation Table task.

   A calculation table creates an association between the values on a custom calculation list, calculations, and update fields on your grid configuration.

   a) Select Calculation Table Entries, including 1 or more rows, each with an Input list value from a calculation list, a Calculation, and an Update grid configuration field.

      During the compensation review,
   b) Select the Custom Calculation Lists tab for merit, promotion, bonus, or stock.
4. Create Grid Configurations for Compensation on page 1169.

   Add custom calculation fields into the Merit or Bonus section of your grid configuration. Example: Custom Calculation Merit Numeric or Custom Calculation Bonus Currency. As a best practice, Workday recommends that also you add the update fields you used to create your calculation table.

   If you use a custom calculation bonus list, add Custom Calculation Bonus List Value to the Bonus section as an editable field.
5. Create Compensation Review Options on page 1174

   Select your Compensation Review Calculation Table or create a calculation table without leaving the task.
6. Initiate Compensation Review Processes on page 1205

   Select:

   - The grid configuration with 1 or more custom calculation fields.
   - The set of compensation review options that includes your Compensation Review Calculation Table.

Result

During the compensation review, Workday:

- Displays your grid with the custom calculation and other fields you configured. You can any update fields that you configured as editable when you set up the grid configuration.
- Recalculates the value of any Update Field based on changes to fields that it depends on.

Example

1. Create a calculation in the *Compensation* category on the Create Arithmetic Calculation task.
2. Create the Performance Factor calculation list on the Maintain Compensation Review Calculation Lists task with values for: Top Performer, Meets Expectations, and Needs Improvement.

3. On the Create Compensation Review Calculation Table task, you select the Custom Calculation Lists tab and on the Custom Calculation Bonus List prompt, select the Performance Factor calculation list.
4. On the Calculation Table Entries tab, you select *Custom Calculation Bonus List Value* for the Input field, select a Calculation, and select *Bonus Factor %* for the Update field.
5. On the Create Grid Configuration task, add the Bonus Factor % as an editable field to the Bonus section.
6. During the compensation review, you select a value from the Custom Calculation Bonus List Value List and enter a Bonus Factor % for each employee.

2022R2 What's New Post: Compensation Review Calculation Lists for Bonuses

Create Eligible Earnings Overrides for Bonus and Stock

Prerequisites

Security: *Worker Data: Compensation Management by Organization* domain in the Advanced Compensation functional area.

Context

You can configure the actual earnings amount for an eligible earnings override, the period associated with the eligible earnings, and the qualifying bonus or stock plans.

Example: Rhonda worked over 40 hours of overtime from November 1 through December 31. You create the eligible earnings override for Rhonda with the exact eligible earnings amount. Workday then uses your override amount as the eligible earnings when calculating the bonus or stock awards.

You can only use eligible earnings overrides in compensation review processes that include bonus or stock awards.

You can also use these web services to manage eligible earnings overrides:

- *Import Eligible Earnings Override*.
- *Get Eligible Earnings Override*.

Steps

1. Access the Create Eligible Earnings Override task.
2. Select the Employee.

   If the specified employee has multiple jobs or positions, you can also select the Position.
3. Select the Eligible Earnings Override Period (date range) for which the employee's earnings are eligible for bonus or stock.

   If the period you require doesn't exist, select Create Eligible Earnings Override Period to create it.
4. Select any combination of bonus and stock plans.
   Example: Select Apply to All Bonus Plans to have the compensation review process apply eligible earnings to all bonus plans assigned to the employee, including newly assigned plans. Then select

3 Stock Plans to restrict the application of eligible earnings for stock to only those 3 plans. The override now applies to all bonus plans and 3 specific stock plans assigned to the employee.

Selecting the Bonus Plans or Stock Plans option without selecting any specific plans is equivalent to selecting None of the Above.

If you assign new plans to the employee, consider accessing the Edit Eligible Earnings Override task to update your configuration.

5. Enter the exact amount of the employee's Eligible Earnings Override for the specified plans and period.

   Note: Workday doesn't calculate the eligible earnings override. Enter the exact value that you want Workday to use as the basis for calculating awards.
6. Select the Currency of the eligible earnings amount.

   Eligible earnings use the frequency associated with the plan.

Next Steps

Access these reports:

- Eligible Earnings Override.
- Employees without Eligible Earnings Override.
- View Eligible Earnings Override Period.

Related Information

Tasks

Manage Compensation Review Participation Rule Sets on page 1166

Create Eligibility Waiting Periods for Compensation Review Processes

Prerequisites

Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

Context

Create or update a compensation eligibility waiting period on the Create Eligibility Waiting Period task, which determines whether employees are eligible for a raise or a bonus. You base the rule on a single value, such as a hire date. If you run the process before the waiting period expires, you can add employees in a waiting period an exception with a target of zero.

You can also use these web services:

- *Get Eligibility Waiting Period*
- *Put Eligibility Waiting Period*

Employees in the waiting period don't automatically receive an award when the waiting period is over. Run the process again after the waiting period ends to give awards to these employees.

Steps

1. Access the Create Eligibility Waiting Period task.
2. Enter the Number and select a Unit value for the rule logic.

   Example: To configure a 1 year waiting period, select *12* and *Months*.
3. Select a From Date from which Workday starts counting.

4. If you selected Date of Last Base Pay change, you can select Excluded Criteria to exclude events that Workday won't consider as an increase.

   You can select:

   - Any number of staffing events to exclude.
   - Event categories and reasons regardless of segment security configuration.

   You can define types of excluded criteria on the Maintain Event Categories and Reasons task.

Example

When configuring the plan, you can select the Include Active Employees in Waiting Period option. If selected, Workday includes employees assigned to the plan and in the waiting period, as of the Process Period End Date, in the compensation review. However, Workday includes these employees as exceptions with a target of zero. Consider:

- Eligibility waiting period: *3 Months from Hire Date*.
- Include Active Employees in Waiting Period: selected.
- Process Period End Date: December 31.
- Two employees have different hire dates, September 23 and October 6.

Hire Date	Eligible for award on December 31?
September 25	Yes, September 23 to December 31 is more than 3 months. The waiting period ended on December 23.
October 6	No, October 6 to December 31 is less than 3 months. This employee is included in the process as an exception with a target of zero.

Next Steps

Assign the waiting period to merit and bonus plans. You can assign the same waiting period to multiple plans.

Tasks
Steps: Set Up Bonus Plans on page 1092
Steps: Set Up Merit Plans on page 1088

Create Time Proration Rules for Compensation Reviews

Prerequisites

Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

Context

You can create proration rules to determine the portion of the merit or bonus target amount that employees receive in compensation review processes.

You can use proration rules on various criteria:

- Compensation basis. Example: base pay changes.
- Factors. Example: FTE or scorecard changes.
- Time. Example: time in plan or time since a specified date.

Workday processes proration rules associated with merit or bonus plans during the compensation review process period and evaluates anything not specifically prorated on the compensation snapshot date. Exclusion criteria ignore the event that meets the rule, except in cases where other rules must evaluate the event.

Steps

1. Access the Create Time Proration Rule task.
2. (Optional) Select a Leave of Absence Grace Period Table.

   You can use grace period tables only in compensation reviews.

   You can also access the Create Leave of Absence Grace Period Table task.

   Each grace period table must have:

   - Leave Type
   - 1 or more Location Hierarchies
   - Grace Period Days
3. Select the Proration Criteria you want to use to calculate the individual target amount and contribution to the award pool.

   To exclude certain types of events, select Excluded Criteria. You can define types of Excluded Criteria in the Maintain Event Categories and Reasons task.

   For rules that define the process period start date, Workday uses the most conservative criteria. Example: If you use both *Time Since Hire* and *Time Since Continuous Service Date* in the same rule, Workday uses the most recent criteria to set the process period start date.

   For bonus plans with the compensation basis with eligible earnings override:

   - Prorates time and target percentage-based proration rules.
   - Doesn't prorate base pay changes.

   FTE Changes in Period only applies to compensation plans that have Apply FTE% selected. Workday evaluates other plans as of the compensation snapshot date. Combining FTE Changes in Period with Base Pay Changes in Period results in the most accurate application of the basis in the proration segments.

Rule Category	Rule	Description
Compensation Basis	Base Pay Changes in Period	Creates a segment for each of these business processes when they create a basis change during the process period: • *Request Compensation Change* • *Propose Compensation Change* as part of *Change Job*. This determines the basis to use, unless specifically excluded in the Exclusion Criteria. A base pay change might be caused by a change to FTE regardless of the use of the FTE Changes in Period rule.
Factor Change	FTE Changes in Period	Creates a segment for each of these business processes that change the FTE% during the process period: • *Request Compensation Change* • *Propose Compensation Change* as part of *Change Job*. • *Edit Position*. For percent-based bonus plans, Workday applies the FTE% to the basis to determine the merit or bonus target. For amount-based bonus plans, Workday applies the FTE% to the target award amount the employee is eligible for.

Rule Category	Rule	Description
		Example: You configure an amount-based bonus plan with an FTE time proration rule. Ben has an FTE change during the process period of the compensation review. Workday calculates proration segments based on Ben's FTE changes.
Factor Change	Scorecard Profile Changes in Period	Creates a segment for each of these business processes, without exclusion, and evaluates the scorecard result as of the segment end dates: • *Change Job* • *Change Organization Assignment* • *Move Workers (by Organization)* • *Move Workers (Supervisory)* Workday might prorate these scorecards: • Compensation matrix modifier. • Performance factor scorecard. • Performance factor scorecard modifier. • Plan modifier scorecard.
Factor Change	Target Changes in Period	Creates a segment for each each of these business processes when they change the employee target during the process period: • *Request Compensation Change* • *Propose Compensation Change* as part of *Change Job*. Workday applies the target to each segment.
Time	Leave of Absence	Subtracts any leave of absence taken from the process pay period. If you selected a Leave of Absence Grace Period Table, Workday subtracts the grace period from the total number of days on leave.
Time	Time in Plan	Excludes any period when the employee wasn't in the plan.
Time	Time in Position	Uses the date the employee was assigned to their position as of the beginning of the process period.
Time	Time Since...	Sets the beginning of the process period to 1 of these dates: • *Company Service Date*. • *Continuous Service Date*. • *Hire*. • *last Base Pay change*. • *last Merit increase*.

Next Steps

Assign the time proration rule to merit or bonus plans. You can assign the same time proration rule to multiple plans.

Create Compensation Rounding Rules

Prerequisites

Security: *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

Context

You can create rounding rules for compensation plans or a compensation basis.

You can add a rounding rule to salary plans, but only when you've selected the Apply FTE% option and the worker's FTE % isn't 100 percent. Using a rounding rule on salary plans eliminates any need to round salary plan values with an integration and maintains consistency between Compensation and Payroll. See: Steps: Set Up Salary Plans on page 1068.

You can apply a rounding rule to allowance plans, but only when you’ve selected a Percent Based Allowance Plan and a ceiling is not also configured on the plan. Using a rounding rule on allowance plans eliminates any need to round allowance plan values with an integration and maintains consistency between Compensation and Payroll. Workday uses the pay range frequency to calculate the rounded compensation amount in Workday and payroll calculations.

Workday rounds merit and bonus award amounts during compensation review processes according to the rounding rules on the plans, if configured. See: Steps: Set Up Merit Plans on page 1088, Steps: Set Up Bonus Plans on page 1092, FAQ: Rounding and Precision in Compensation Review Calculations on page 1197 .

For stock awards, Workday reads the amount- or percent-based stock plans, if configured with rounding rules, and displays the amount or percent, but doesn't determine the final number of stock units in whole numbers until the grant is updated with a strike price. See: Steps: Manage Stock Plans and Grants on page 1109.

You can, however, configure compensation calculation tables that round stock awards by number, percent, or amount to whole numbers of stock units. Example:

- Create a calculation in the *Compensation* category that rounds values.
- Select the *Custom Calculation Stock Numeric* field for the Input column.
- On your grid configuration, add *Custom Calculation Stock Numeric* as an editable field to the Stock section.
- Workday rounds the stock award values you enter during the compensation review.

See: Steps: Manage Custom Calculations for Compensation Reviews on page 1158.

For compensation bases managed by a compensation basis total, Workday applies the rounding rule to the assignment amounts for all future compensation transactions. Steps: Manage Compensation Basis on page 1133.

Steps

1. Access the Create Compensation Rounding Rule task.
2. Select the Rounding Option:

Option	Description
Round	Examples: • 1.4 rounds down to 1.0. • 1.5 rounds up to 2.0.
Round down	Examples: Both 1.4 and 1.7 round down to 1.0.
Round half down	Examples: • Both 1.4 and 1.5 round down to 1.0.

Option	Description
	• 1.6 rounds up to 2.0.
Round up	Examples: Both 1.4 and 1.7 round up to 2.0.

3. Select 1:

Option	Description
Round to Currency Precision	Use the standard decimal precision for the currency.
Round to Nearest	Enter the number to which the rule resolves. Examples: • With *Round* selected, entering 1 for Round to Nearest rounds 7.20 to 7 and 7.80 to 8. • With *Round* Up selected, entering 10 rounds 7 to 10 and 14 to 20. • With *Round down* selected, entering 10 rounds 7 to 0 (zero) and 14 to 10.

4. (Optional) Add 1 or more Compensation Rounding Rule Profiles.

   For each profile, select an eligibility rule.

   Example: Some of your overseas offices have regulatory requirements to round pay to whole numbers. Workday provides tools to help you become compliant. You can configure 1 profile for each country that requires rounding to whole numbers, and select an eligibility rule based on locale. Workday rounds pay to whole numbers for those employees in those locales. Workday uses the default rounding rule for those employees in other locales.

Result

The effect of different rounding methods associated with compensation plans can have a cumulative effect on merit or bonus pool totals. Pool totals might differ from the sum of award amounts due to rounding of the individual amounts or the use of different rounding methods.

Next Steps

Access the View Compensation Rounding Rule report and select the related action off a rule to see an example.

FAQ: Rounding and Precision in Compensation Review Calculations on page 1197

Manage Compensation Review Participation Rule Sets

Prerequisites

Security *Set Up: Merit and Bonus* domain in the Advanced Compensation functional area.

Context

You can create participation rule sets that determine how Workday coordinates events that might conflict with each other. Potentially conflicting events include organization changes, terminations, eligible earnings overrides, and parallel events that occur during a compensation review and result from these business processes:

- *Change Job*.
- *Change Organization Assignments*.

- *Propose Compensation Change*.

  When configuring the parent process, *Propose Compensation Change* must either come before the completion step or be the completion step.
- *Move Workers*.
- *Request and Return from Leave of Absence*.
- *Request Compensation Change*.
- *Request Grade Change*.

You can also use these web services:

- *Get Compensation Review Participation Rule Sets*.
- *Put Compensation Review Participation Rule Sets*.

Steps

1. Access the Maintain Compensation Review Participation Rule Sets report.
2. (Optional) Select an action on any existing participation rule set.
3. Select Create Participation Rule Set.

   Select the type of rule set to create:

Option	Description
Organization Assignment	Organization assignments include those effective before the Organization Snapshot Date you configure when initiating the compensation review.
Compensation Parallel Event	Parallel events include those effective: • On or before the merit, bonus, or stock Compensation Snapshot Date. • Between the Compensation Snapshot Date and the Effective Date. • After the Effective Date. Configure each of these date range tabs: • On or Before Compensation Snapshot Date • Between Compensation Snapshot Date and Effective Date • After Effective Date
Termination	Terminations effective before the Effective Date.

4. As you configure a participation rule set, consider:

Option	Description
Employee Options	Select what Workday does with an employee and their compensation data: • Updates employee compensation basis, prorated targets, title, and other attributes. • Keeps the employee in the compensation review process. • Removes the employee from the compensation review process.
Pools Options	Select what Workday does with an employee's pool contribution:

Option	Description
	• Keeps the employee's pool contribution static or adjusts the organization pool. • Updates the pools with the recalculated plan, target, compensation basis, and proration data. • Removes the employee's pool contribution from the organization. Note: Workday stores pool contributions at the individual employee level and calculates pools once at process initiation to determine pools at the organization level.
Award Options	Select what Workday does with an employee's award: • Keeps it fixed but updates the compensation basis, target, title, and other attributes. • Sets award to zero. • Reverts the award to a previously entered amount or percent, or updates to a new target, spend, and pool.

5. (Optional) In the Rule Profiles section, create 1 or more rule set profiles that apply to specific populations of employees based on eligibility rules.

Result

You can select rule sets when configuring compensation review options. When managing impacted employees in a compensation review process, you can cancel conflicting events or notify the initiators of the source processes.

Next Steps

You can access the Create Compensation Review Options task and configure participation options.

Steps: Manage Custom Modifiers for Compensation Reviews

Prerequisites

Security: *Worker Data: Compensation Management by Organization* domain in the Advanced Compensation functional area.

Context

You can configure custom modifiers to calculate bonus proration segments for specified employees. Examples:

- Set a proration segment to zero.
- Prorate a segment up to or greater than 100 percent.
- Prorate employee awards with multiple performance ratings.
- Prorate awards using more strategic modifiers that scorecards don't address.

Steps

1. Access the Maintain Compensation Review Custom Modifiers task.

   Enter 1 or more custom modifier names. Workday generates the Reference ID for use with the Enterprise Interface Builder on these web services:

   - *Get Employee Proration Segment Details*
   - *Import Employee Proration Segment Details*
2. Create Compensation Review Options on page 1174.

   In the Custom Modifier section on the Participation Rules tab, select what Workday does with the planned bonus award when a custom modifier is altered for an employee during the *Complete Employee Awards* or *Review Employee Awards* steps of a compensation review process:
3. Access the Maintain Compensation Review Custom Modifiers for Employee task.

   Apply custom modifiers to the employee's proration segments as determined by your selected compensation review process and bonus plans.

   For each Custom Modifier you configure for an employee's proration segment, enter a Custom Modifier Percent.

   Example: You apply 2 custom modifiers to Terry's second proration segment:

Option	Description
Company Adjustment	88
Position Performance Factor	110

   The Maintain Compensation Review Custom Modifiers for Employee task only works during these steps of an in-progress compensation review process:

   - *Configure Pools*
   - *Complete Employee Awards*
   - *Review Employee Awards*

Next Steps

Access the View Bonus Calculation report to display any custom modifiers used to calculate the bonus.

Tasks

Steps: Create a Compensation Matrix on page 1151

Create Compensation Review Options on page 1174

Create Grid Configurations for Compensation

Prerequisites

Security: *Grid Management* domain in the System functional area.

Context

You can configure the grids and their editable, read-only, and advanced fields that display during compensation review processes. Each compensation review process can utilize 1 or more grid configuration. To use more than 1, however, you must:

- Set up grid configuration profiles. See:Steps: Configure Compensation Review Grid Profiles on page 1172.
- Set up 1 default response grid that encompass all award types in the compensation review process, If a manager or planner isn't eligible of any of your grid profiles, they'll see the default response grid.

You can optionally configure Data Entry Check Options (DEC) on the Edit Tenant Setup - HCM task. Workday delivers the feature on by default. However, you can click Select areas to switch on Data Entry Check and configure which compensation review fields to enable for DEC. Doing so enables Workday to validate the numeric data you enter for compensation reviews. If the numeric value you enter is outside historical amounts, Workday displays a validation message. Outliers are determined based on historical entries. See: ../../../manage-workday/tenant-configuration/tenant-setup/dan1370797339945.dita

A grid configuration consists of:

Grid Section	Description	Result in Completed Grid Configuration
Composite Column	Contains up to 4 business objects and related fields. Example: Employee name, titles, and photo.	Displays as the first column.
Individual Columns	Contains up to 4 fields for Compensation Review grids. Other grid types contain up to 2 fields.	Displays immediately to the right of the Composite Column.
Column Groups	Contains 1 or more fields. Examples: Merit, Promotion, Performance, Bonus, Stock.	Becomes a tab that, when opened, displays all of the fields configured for the Column Group.
Smart Panel / Summary View	(Optional) You can include fields selected as the Individual Column or as part of any Column Group in the Smart Panel and Summary View.	The Smart Panel displays at the end of each row. The Summary View becomes the first tab of the completed grid configuration.

When configuring a grid, you can select read only, editable, or advanced (drill-down) fields. You can then audit your grid to ensure that there are no missing fields based on the selected merit, bonus, or stock plans.

Steps

1. Access the Create Grid Configuration task.
2. Select:

Option	Description
Create Blank Configurable Grid	Select *Compensation Review Process* from What type of grid do you want to create?
Copy Details from Existing Configurable Grid	Select an existing grid of the type *Compensation Review Process*.

Option	Description
	Workday doesn't copy custom calculated fields. You must create them manually.

3. In the Composite Column section:

    - To define the column name in the completed grid configuration, enter a Label. Example: Employee Details.
    - Select a Business Object and a related Field for Title, First Subtitle, Second Subtitle, or Image.

    The Composite Column displays at the far left of the completed grid configuration.
4. Configure the Individual Columns and Grouped Columns sections. Consider:

Option	Description
Read Only	Displays a read-only business object and 1 of its related fields on the grid.
Editable	Not available for the Individual Columns.
Advanced	Displays a link that users can drill down on to view detailed data. For bonus awards, you can add an Advanced column type and select either the Actual Bonus Amount or Rounded Total Bonus Target Amount. On the completed grid configuration, you can drill down on these fields to reveal bonus calculation details.

    Example: Select Bonus for the Column Group and add Deferred Bonus Amount, Deferred Bonus Percent, or both as editable columns. You can also use these fields with the *Get Employee Awards* and *Import Employee Awards* web services.
5. (Optional) If you selected Read Only, enter a Label Override and, for numeric columns, a Format.
6. (Optional) Add 1 or more custom calculation fields. Example: Custom Calculation Merit Numeric, Custom Calculation Stock Numeric, or Custom Calculation Bonus Currency.

    Custom calculation fields work only with a calculation table. When you update a custom calculation field during a compensation review, Workday reads the calculation table and populates the values of its update fields. Workday recommends that you include all the update fields that make up your calculation table.
7. (Optional) If you selected Advanced, select the Errors field.

    This field is only available if you set up custom Critical or Warning validations using the Maintain Compensation Review Validations report. You set up compensation review validations the same way as other custom validations.

    During the compensation review process, managers must resolve critical exceptions before submitting their work. Example: You can set up a critical exception that prevents a manager from granting both merit and lump sum awards to the same employee.

    These fields are for use in Workday Financials and are incompatible with compensation reviews:

    - Critical Validation Exists
    - Validation Errors and Warnings
    - Warning Validation Exists
8. (Optional) Under Display Options, select 1 or more of the Valid Options to determine how data displays on the Smart Panel and the Summary View. The options available depend on the column type and field you've selected.

    Example: Selecting Show In Panel displays the field in the Smart Panel on the completed grid configuration. You can also add it to the Summary View.

9. (Optional) You can increase the limit on the Preferred Compensation Review Employee Awards Grid Limit on Edit Tenant Setup - HCM task from 500 to 2000.

   To increase the custom search report to 2000 lines, on the Advanced tab on the Copy Standard Report to Custom Report task, select the corresponding mass action:

   - Compensation Review Organization Summary Mass Action for Data Paging: to enable planners of the process to view more than 500 employees in the search report.
   - Compensation Review Process Search Employees Results Mass Action for Data Paging : to enable controllers and the Compensation Administrator to view more than 500 employees in the search report.

   Workday strongly recommends that you use these mass action operations only when the organizations and the compensation review process meet the criteria for infinite scrolling. Workday enables infinite scrolling on the compensation review grid when both:

   - From My Tasks, all employees in the organization are assigned no more than 1 plan of the same plan type.
   - From the Search Results, all employees in the process are assigned no more than 1 plan of the same plan type.
10. To verify that the grid includes fields that the merit, bonus, or stock plans indicate should display as read only or editable, run the Grid Configuration Audit report.
    a) Select a Grid Configuration.
    b) Select 1 or more merit, bonus, or stock plans for the process.

       The audit compares the grid to the selected plans:

       - Blocker: Identifies fields that you must add because they're editable on the plan.
       - Warning: Identifies fields the plan indicates should display as read only but are missing from the grid. Consider adding these fields.

Next Steps

Initiate a compensation review process.

Create Compensation Review Options on page 1174

Steps: Configure Compensation Review Grid Profiles

Prerequisites

Context

You can create compensation review grid profiles that enable you to use multiple grid configurations for the same compensation review process. You can target each grid configuration for a specific audience, based on locale, organization, assigned roles, or other attributes. Compensation review participants see only a grid that makes sense for them, given their attributes.

To use multiple grid configurations for the same compensation review process, you must set up:

- More grid configurations, 1 for each target audience and 1 to use as a default.
- Grid profiles, which are conditional calculations that associate conditions with specific grid configurations.
- Select a grid profile on the compensation review template or when initiating a the compensation review process.

Grid profiles consist of 1 or more conditional calculations. Each conditional calculation specifies a target population, and must be associated with specific grid configuration. When you set up the compensation review, you select a grid profile configuration instead of a grid configuration to use multiple grids in the process.

Workday recommends as a best practice that you plan both your grid configurations and your grid profiles in advance of your compensation reviews:

- Plan a set of grid configurations and a matching set of conditional calculations, 1 for each target a population of your compensation review participants. When a participant enters the compensation review process, their attributes determine what grid configuration displays. Each grid configurations must match at least 1 of the conditional calculations you use for your grid profiles.
- Plan 1 default response grid configuration that encompass all award types present in the compensation review process. Workday displays the default response grid for participants not eligible for any of grid profiles.

Steps

1. Create your profile and default response grid profile configurations.

   See Create Grid Configurations for Compensation on page 1169.
2. Access the Create Conditional Calculation task.

   As you complete this task, consider:

Option	Description
Condition	Select from the Compensation category. Each must correspond to a target population of compensation review participants.
Result	Select a grid configuration to associate with each Condition. You can use the same grid configuration for multiple conditions.
Default Response	Select your default response grid configuration to display in case a participant doesn't meet any of the grid profile conditions.

   Security: *Set Up: Payroll (Calculations – Generic)* in the Core Payroll functional area.
3. (Optional) Access the Create Compensation Review Template task.

   Select a Grid Profile Configuration.
4. Initiate Compensation Review Processes on page 1205.

   Select either a:

   - Compensation Review Process Template that already has a grid profile configuration.
   - Grid Profile Configuration directly.

Result

Your compensation review displays different grid configurations for different populations of participants. Any participants not eligible for a grid profile see the default response grid.

Grid Configuration Profiles for Compensation Review

Create Compensation Review Options

Prerequisites

- Configure rule sets on the Maintain Compensation Review Participation Rule Sets report.
- Security in the Advanced Compensation functional area:
  - *Process: Compensation Management Events* domain.
  - *Process: Compensation Review Process Reviewer* domain.

Context

You can create sets of parameters for options used when initiating compensation review processes.

Steps

1. Access the Create Compensation Review Options task.
2. As you complete the Process Options tab, consider:

Option	Description
Organization Details	Configure the organizations you include on the *Complete Employee Awards* and *Review Employee Awards* steps of the business process. Select an active Top Level Organization that doesn't have any superior organizations. When you select a top level organization, Workday includes employees assigned to plans targeted for the process and all those in the selected organization and its child organizations. (Optional) Select 1 or more Process Top Level Organization from the active child organizations within the structure of the Top Level Organization. Doing so restricts the employees and participants in the process to the subordinates under these organizations.
Approvals and Visibility	When you select: • *Entire Hierarchy*: The top-level planner/participant must approve all organizations. • *Next Participant Only*: Workday limits the approval to 1 planning level above and limits the planner's ability to edit to 1 level below.
Compounding Options	When you select Additional Adjustment and Promotion Awards as Percent of Current Compensation Basis, Workday adds awards to the current compensation basis instead of compounding the award. Example: Brendt's current compensation basis is 100,000. He receives a 10% merit increase, a 2% additional adjustment, and another 2% for his promotion. Workday sums all of Brendt's awards (0.10 + 0.02 + 0.02 = 0.14) and calculates his new current compensation basis: 100,000 + (100,000 x 0.14) = 114,000.
Autofill / Pre-Fill Value	When you select 1 of these options for Merit Awards and Bonus Awards: • *Compensation Matrix*: Workday populates awards to the midpoint of the matrix. • *Target*: Workday populates awards with the funded, prorated target associated with the plans.

Option	Description
	This applies if you: • Set up the merit or bonus plans to use a compensation matrix. • Selected to autofill or prefill values for the award type when you initiated the process.
Compensation Review Calculation	You can select an existing compensation review calculation table or create one here.

3. As you complete the Planning Preferences tab, consider:

Option	Description
Planner / Reviewer Preferences	Configure defaults for: • Edit in Currency: Display either the pay range or reference currency in editable currency amount fields. This setting has no effect on read only, advanced, or calculated fields. Regardless of setting, Workday pays awards in the employee's pay range currency. Workday pays stock plans configured with Use Target Currency for Grant selected in the target currency. • Organization Budgets: Display either all or your current organizations budget graphics during the process. • Exposure to Planners/Reviewers: When you select this check box, planners and reviewers can override the default from their My Tasks items and throughout the compensation review.
Search Reports	Workday enables access to the grid from these reports: • Compensation Review Process Search Employees (Default): Enables access to the grid configuration for security groups on the *Process: Compensation Review Process Reviewer* domain. • Compensation Review Organization Search Report (Default): Enables participants to search employees at the organizational hierarchy level from the My Tasks item. You can also access the compensation review grid from custom reports.
Pool and Spend	When you hide any award type, Workday allows pool overages and enables read-only access for all award types when you configure pools.

4. As you complete the Participation Rules tab, consider:

Option	Description
Date Range	Select 1 or more date ranges for the process, if applicable. Workday: • Allows events to proceed for the date ranges you select. • Blocks events for date ranges you don't select. Workday doesn't apply date ranges to Move Workers or Change Organization Assignments.

Option	Description
	Workday always enables all date ranges for Request and Return from Leave of Absence by default.
Allow All	Select to allow all events to proceed for the selected business process. Workday always enables this option for Request and Return from Leave of Absence by default.
Allow Only	Select 1 or more eligibility rules where you want Workday to allow parallel events to proceed. Workday uses the employee's compensation data as of the compensation snapshot date to determine eligibility.
• Organization Assignments and Reorganizations • Compensation Parallel Events • Terminations	Select a participation rule set for each award type. Rule sets include employee, pool, and award options that control how Workday manages conflicting transactions.
Leave of Absence	Each award type that you select remains on hold during the compensation review process until you release the leave of absence event on the Manage Compensation Review On Hold Events task. When you release, the effective date configured on the award type determines when awards take effect.
Eligible Earnings Overrides	Select what Workday does with the planned bonus awards when you make changes to the eligible earnings override during a compensation review process: • *Previously Entered Percent*: Workday updates the award to the previous percent. • *Update Pool Contributions*: Workday updates the employee contribution to the pool with the Eligible Earnings Override compensation basis.
Custom Modifier	Select what Workday does with the planned bonus awards when you make changes to the custom modifier during a compensation review process: • *Clear Award*: Workday sets proposals or awards to zero, overriding any prior proposals or awards. • *Keep Award Fixed*: Workday keeps the award fixed. • *Update Award to Previously Entered Percent*: Workday updates the award to the previous percent. • *Update Award to Previously Entered Factor*: Workday updates the award to the previous factor for bonus plans with an individual performance factor. • *Update Award to New Employee Target*: Workday updates the employee target, the spend, and the pool.

Result

Workday doesn't block parallel events already in progress before you initiate the compensation review process. Workday uses your configured participation rule sets to manage employee, pool, and award options. If you don't allow parallel events to proceed, Workday notifies and prevents the initiator of the business process from completing the parallel event.

Manage Compensation Review Participation Rule Sets on page 1166
Steps: Manage Custom Modifiers for Compensation Reviews on page 1168

Access Compensation Review Grids from Custom Reports

Prerequisites

Create compensation review option sets.

Context

You can create custom reports from which planners and reviewers can access the compensation review grid.

Steps

Access the Create Custom Report task.

As you complete this task, consider:

Option	Description
Data Source	Select *Compensation Review Process Employee Adjustments - Indexed*.
Data Source Filter	If you select Securing Filter for Participant, Workday uses the report parameters for search criteria when: • The number of employees exceeds the Preferred Compensation Review Employee Awards Grid Limit configured on the Edit Tenant Setup - HCM task. • When you select Search Employees from the Organization Summary. If you select Securing Filter for Reviewer, use the Hide Workday Delivered Report task to hide the Compensation Review Search Employees (Default) report. Note: When you hide standard reports, Workday doesn't display them in searches. You can also use the Hide Workday Delivered Report task to find hidden reports.
Report Definition > Sharing Options	Select Share with all authorized users.
Action > View Options	Select Exclude Execution Link from Search for any reports using the Securing Filter for Participant option to prevent running these reports outside the context of the Organization Summary.
Action > Advanced	Select Compensation Review Organization Summary Mass Action to populate the report from the Organization Summary for participants. Select Compensation Review Process Search Employees Results Mass Action for reviewers.

Understand Compensation Reviews

Concept: Compensation Reviews

Compensation reviews configured with approval limited to the entire hierarchy are a collaboration between process participants. Planners can complete the process for a subordinate organization on behalf of its participant. Planners can also send the process back for correction.

The Compensation Administrator or HR Partner can also review organizations and awards as a planner. The My Tasks notification completes only after all organizations submit up to the Compensation Planner level and the Planner submits.

You can configure compensation reviews to use cost centers, custom organizations, location hierarchies, and supervisory organizations.

Note: Cost centers aren't hierarchical organizations except when grouped as a cost center hierarchy. When configuring the participation on the business process, there's 1 role that is the participant for both the organization and the organization hierarchy. The same role must exist on both organization and organization hierarchy.

Workday stores pool contributions at the individual employee level and calculates pools once at process initiation to determine pools at the organization level. Workday stores remainder amounts or adjustments at the organization level. Example: An organization has a 10,000 pool divided among 3 employees with each receiving 3,333.33. Workday stores the remaining 0.01 at the organization level.

Workday then updates values if employee contributions change due to parallel events. The employee-level contribution isn't reportable for employees removed from the process.

When you distribute or maintain pools, you can change pool amounts and apply holdbacks at any organization level.

If the grid configuration has editable targets, you can create budget pools that:

- Deduct the spend from the merit pool.
- Configure a separate pool based on the merit target of each employee or any configured amount.

Workday records changes to employee targets as overrides on the latest of these effective dates:

- Merit
- Additional adjustment
- Promotion

As you manage impacted employees, you can:

- Apply the original contribution.
- Apply the new contribution.
- Replace the original contribution for the employees that you've manually removed from the process.

Logan accesses the Create Compensation Review Options task and:

- Configures the Autofill / Pre-Fill Value section. Both Merit Awards and Bonus Awards use the compensation matrix to populate awards to the midpoint of the matching compensation matrix row.
- Leaves the Approval Limited To prompt set to *Entire Hierarchy*.

Naomi manages 15 people directly and reports to Drake, who manages 2 managers and 1 direct report. Drake reports to Don, the Vice President of Manufacturing. Don has 4 subordinates.

Logan is the Compensation Administrator and HR Partner. Logan also has the Controller role with the ability to finalize the process and remove planning from the initial participants.

After Logan initiates the compensation review process, Naomi sees a notification to complete the process. She accesses the process and sees the direct reports listed in the grid configuration selected for the process. After reviewing the plans, she decides to click Autofill, enabling Workday to populate the award amounts. She reviews the amounts for each of her reports and submits.

Concurrently, Drake opens his notification, which displays his 2 organizations and direct report. Drake reviews the plan and spend for his entire organizational hierarchy, looking into Naomi's and Julie's organizations. He remembers that Julie is traveling, so he clicks Complete on Behalf and clicks Autofill to populate the awards for her people. While reviewing Naomi's group, he decides it needs work and clicks Send Back for Naomi to reconsider.

Finally, Don reviews the entire process and makes a few adjustments. He reviews the bonus award for some of Naomi's employees, and drills into how Workday calculated the bonus. He clicks Jeremy's rounded bonus target to display the bonus plan modifier and rounding rule applied. Drilling down further, Don sees the discretionary targets, performance factor, and applicable scorecards. Drilling down again, Don sees that Jeremy's prorated numbers because he went from full-time to half-time over the past year. Workday displays the sum of the 2 proration segments, including the eligible earnings, and the target amount. After his subordinates have submitted and Don has corrected some awards, Don's satisfied that everything is in order and submits.

With all subordinate organizations reporting into Don have now submitted, Logan finalizes the process. Workday removes the notification for any outstanding planners who haven't submitted. After the business process completion step, Logan ensures that Workday created all of the compensation worker events accordingly.

The Next Level: Compensation Review Overview

Concept: Coordination of Events During Compensation Reviews

If you initiate compensation or staffing events while a compensation review process is in-progress, any changes you make to compensation attributes might conflict. Because such changes to compensation might affect target or pool calculations, you must configure how Workday manages these conflicts.

If the compensation review is in progress, Workday prevents the initiator of the business process from completing the parallel event. However, Workday allows business process events to proceed if they're in progress before you initiate the compensation review.

For those parallel events in progress before the compensation review, Workday uses participation rule sets to manage conflicting events. You create participation rule sets on the Maintain Compensation Review Participation Rule Sets report. Each participation rule set:

- Applies to a process type: organization assignments, parallel events, or terminations.
- Consists of options that determine what Workday does with employees, their pool contributions, and their awards.
- Can include profiles, each associated with eligibility rules.

When you configure the compensation review process, you can assign participation rule sets to determine how Workday will reconcile the conflicting transactions. Workday displays employees with competing events on the *Manage Impacted Employees* step of the process. These events occur after the Compensation Snapshot Date and before the Effective Date.

Examples:

- If a reorganization occurs during the process, configure a participation rule set that moves the employee awards to the new organization if it's in the process.
- If there's a compensation change outside of the compensation review process, you can remove the employee merit award and their contribution from the merit pool.

There's a way to allow certain business process events to proceed even if initiated while a compensation review is already in progress. You can use the Create Compensation Review Options task to allow business process events to proceed while a compensation review is in progress: You can:

- Allow all events for the process to proceed for 1 or more date ranges.
- Allow only events for the process to proceed for 1 or more eligibility rules and for 1 or more date ranges.

For employees placed on hold, you can access the Manage Compensation Review On Hold Events task. You can release on-hold leave of absence events, cancel on-hold awards, or cancel events. When you release a leave of absence (LOA) event, the effective date configured for the award type determines when awards take effect. Workday doesn't release awards automatically when the employee returns from leave. You can only release on hold events if the employee doesn't have any other in-progress parallel events.

Compensation reviews can only process certain reorganization actions before the organization snapshot date, provided you configure participation rule sets.

Organization Changes	Description
Assign superior organization.	The superior organization must be in the compensation review before the organization snapshot date.
• Create subordinate organization. • Divide organization. • Activate organization.	When employees in a compensation review move to the new organization, either manually or by participation rule sets, the new organization displays in the hierarchy or My Tasks item.
Inactivate organization.	Compensation reviews can't act on inactivated organizations. Reactivate the organization.

The Next Level: Compensation Coordination of Events

Troubleshooting: Compensation Review Participation Rule Sets on page 1199

Concept: Zero Increase Fields in Compensation Reviews

If an employee is eligible for an award, but receives no recommendation (zero), Workday cancels the event by default. Workday only displays the event to users with security access to see cancelled events and doesn't include cancelled events on the Compensation Review Statement.

To override the default behavior, add 1 or more of these fields, set to Editable, to your grid configuration:

- Merit Zero Increase
- Bonus Zero Increase
- Stock Zero Increase

The planner can then select Yes for these fields during the compensation review. The default is No. When a worker is eligible for an award but receives a zero recommendation, selecting Yes for these fields results in:

- A successfully completed event displaying an award amount of 0 (zero).
- A Compensation Review Statement displaying an award amount of 0 (zero).

Workday recommends using these validations if you use 1 or more of the zero increase fields on your grid configuration:

- If the recommendation is 0 and the zero increase field is No, ask the planner to either enter a recommendation or change the zero increase field to Yes.
- If the recommendation isn't 0 and the zero increase field is Yes, ask the planner to either enter a recommendation of 0 or change the zero increase field to No.

Example: Coordination of Organization Events in Compensation Reviews

Organization events that occur while a compensation review is in progress can have an effect on how Workday calculates awards.

Context

Global Modern Services is preparing their 2014 performance period, using this schedule:

01/01/2013 to 12/31/2013	12/31/2013	01/05/2014	02/05/2014	02/10/2014	02/17/2014	03/01/2014
Eligibility Period (Process Period)	• Process Period End Date • Bonus Compensation Snapshot Date • Stock Compensation Snapshot Date	• Process Launched • Organization Snapshot Date	Process Complete	Effective Date of Stock	Effective Date of Bonus	• Merit Compensation Snapshot Date • Effective Date of Merit

The compensation review process involves these compensation plans and organizations:

- Merit Plans A and B
- Bonus Plans D and E
- Stock Plan F
- Organizations X and Y

Betty Liu, Jared Ellis, and Leslie Silko are eligible for merit, bonus, and stock awards in 2014. Parallel compensation or staffing events at the initiation of the process don't affect them.

Result
Betty Liu

Betty Liu has these compensation plans:

- Merit Plan A from 01/01/2013 to 12/31/2013.
- Merit Plan B from 01/01/2014 to 12/31/2014.
- Bonus Plan D from 01/01/2013 to 01/10/2014.
- Bonus Plan E from 01/11/2013 onward.
- Stock Plan F from 01/01/2013 onward.

Betty was a member of Organization X from 01/01/2013 to 01/03/2014. She was a member of Organization Y from 01/04/2014 onward.

Eligibility Period (Process Period)	01/01/2013 to 12/31/2013	Betty is eligible for the process and the merit, bonus, and stock awards because of her plan assignments during the eligibility period.
• Process Period End Date • Bonus Compensation Snapshot Date • Stock Compensation Snapshot Date	12/31/2013	Workday determines Betty's compensation for bonus and stock on this date. Workday calculates the pools as part of Organization Y. Bonus target for Bonus Plan D = 10% * 100% of year. Stock target for Stock Plan F = 2%.
Organization Snapshot Date	01/05/2014	Betty is considered part of Organization Y for the process.
Effective Date of Stock	02/10/2014	
Effective Date of Bonus	02/17/2014	
• Effective Date of Merit • Merit Compensation Snapshot Date	03/01/2014	Merit target for Merit Plan B = 6%.

Jared Ellis

Jared Ellis has these compensation plans:

- Merit Plan A from 01/01/2013 to 12/31/2013.
- Merit Plan B from 01/01/2014 to 12/31/2014.
- Bonus Plan D from 01/01/2013 to 12/10/2013.
- Bonus Plan E from 12/11/2013 onward.
- Stock Plan F from 01/01/2013 onward.

Jared was a member of Organization X from 01/01/2013 to 02/14/2014. He was a member of Organization Y from 02/15/2014 onward.

Eligibility Period (Process Period)	01/01/2013 to 12/31/2013	Jared is eligible for the process and the merit, bonus, and stock awards because he has the eligible plans during the eligibility period.
• Process Period End Date • Bonus Compensation Snapshot Date • Stock Compensation Snapshot Date	12/31/2013	Workday determines Jared's compensation for Bonus and Stock on this date for the process. Bonus target for Bonus Plan D = 10% * 96.98% of year. Bonus Plan E = 15% * 3.02% for the remainder of the year. Bonus total = 10.151%. Stock target for Stock Plan F = 2%.
Effective Date of Bonus	12/31/2013	
Effective Date of Stock	12/31/2013	
Organization Snapshot Date	01/05/2014	Jared is considered part of Organization X for the process. Workday calculates all pools as part of Organization X.
• Effective Date of Merit • Merit Compensation Snapshot Date	03/01/2014	Merit target for Merit Plan B = 6%.

Leslie Silko

Leslie Silko has these compensation plans:

- Merit Plan Q from 02/15/2014 to 12/31/2014.
- Merit Plan A after 03/04/2014, after Effective Date of Merit.
- Bonus Plan D from 01/01/2013 to 01/10/2014.
- Bonus Plan E from 01/11/2014 onward.
- Stock Plan F.

Leslie was a member of Organization X from 01/01/2013 onward.

Process Period (Performance Period)	01/01/2013 to 12/31/2013	Leslie is eligible for the process but only for the bonus, and stock awards because she has the eligible plans during the eligibility period. However, she doesn't have a merit plan assigned at the launch of the process because Merit Plan A's assignment occurred only after process launch.
• Process Period End Date • Bonus Compensation Snapshot Date • Stock Compensation Snapshot Date	12/31/2013	Workday determines Leslie's compensation for Bonus and Stock on this date. Bonus target for Bonus Plan D = 10% * 100% of year. Stock target for Stock Plan F = 2%.
Effective Date of Bonus	12/31/2013	
Effective Date of Stock	12/31/2013	

Organization Snapshot Date	01/05/2014	Leslie is considered part of Organization X for the process. Workday calculates all pools as part of Organization X.
• Effective Date of Merit • Merit Compensation Snapshot Date	03/01/2014	Leslie had Merit Plan Q before the Merit Compensation Snapshot Date, but her change to Merit Plan A only happened after the completion of the process. She won't receive a merit award during this process. Leslie remains eligible for the Bonus and Stock Awards because there were no changes to those plans.

Example: Time-Based Proration for Merit and Bonus Awards

Context

A time proration rule includes *Time since Hire*, *Time since last Merit increase*, and *Leave of Absence* proration criteria:

- You hire Elena on January 1 at 90,000 USD annual.
- You give her a pay increase of 10,000 USD annual on February 1 resulting in 100,000 USD annual.
- She takes 1 month of personal leave in March.
- The focal merit review begins on April 1.
- Her nonprorated target merit increase is 5% annual.

Result

Workday takes the most recent proration criteria, which is the compensation increase. The resulting eligible merit increase period is February 1 to April 1, or 2 months out of 12. The next proration criteria is the personal leave, which subtracts a month from the eligible period. Elena is eligible for 1 month of the merit increase (1/12) of the 100% merit increase target of 5,000 USD. Her target merit increase is 42% or 416.67 USD = the original merit increase target of 5% (or 5000) divided by 12.

The logic is slightly different if the leave of absence occurs before the compensation increase. If Elena:

- Took her leave in February.
- Received a pay increase that took effect on March 1.

Workday takes the most recent proration criteria, which is the compensation increase. The resulting eligible merit increase period is March 1 to April 1, or 1 month out of 12. The next proration criteria is the personal leave. However, because the leave occurred before the compensation increase, Elena still has 1 eligible month. She's eligible for 1/12 of the 100% merit increase target of 5,000 USD. Her target merit increase equals the original merit increase target of 5% (or 5,000 USD) divided by 12. The result is 0.42% (rounded) so her target merit increase for this period is 416.67 USD. The resulting increase is exactly the same but the logic is necessarily different.

Related Information
Tasks
Create Time Proration Rules for Compensation Reviews on page 1162

Example: Include Active Employees Assigned Plan During Process Period

Context

Workday can use only 1 merit plan for each employee to calculate their merit award during a compensation review. Workday uses the most recently assigned plan, depending on plan configuration. If Include Active Employees Assigned Plan During Process Period is selected on the plan, employees assigned to the plan on the Process Period End Date (PPED) remain eligible for an award even if they're no longer assigned to the plan on the Compensation Snapshot Date (CSD).

Note: Workday can't determine a merit award based on a plan unless the plan is included in the process.

Example:

- Terry is assigned to merit plan A on the PPED.
- The Annual compensation review process includes merit plans A and B.
- Merit plan A has Include Active Employees Assigned Plan During Process Period selected. Merit plan B doesn't.
- You reassign Terry to merit plan B after the PPED and before the CSD.
- Workday determines Terry's merit award using merit plan B. Because merit plan A has Include Active Employees Assigned Plan During Process Period selected, Terry is still eligible to receive an award during the Annual compensation review, provided merit plan A is in the review process.

More examples:

Include Active Employees Assigned Plan During Process Period	Plans included in Process	Merit Plan in Effect as of PPED	Merit Plan in Effect as of MCSD	Workday Determines Award Based on Merit Plan...
Selected on Merit Plan A	A	A	B	A, because the option is selected and plan B isn't included in the process.
Not Selected on Merit Plan A	A, B	A	B	B. The option isn't selected on plan A and plan B is the most recently assigned plan.
Selected on Merit Plan A	B	B	A	B. Even though the option is selected on plan A, it's not included in the process.
Not Selected on Merit Plan A	A, B	B	A	A. The option isn't selected for plan A, but it's the most recently assigned plan.

FAQ: Compensation Reviews

How is an employee included in a compensation review process?

What target takes precedence when an employee matches multiple targets?

How do I keep my budget in sync with the compensation matrix?

How does Workday include performance reviews in compensation review processes?

How do I change a completed and funded compensation review process?

Can I set up compensation review processes on organization types other than supervisory?

How do I deal with different pay periods?

Can I use process setup parameters on a recurring basis?

Can I select not to compound additional adjustment and promotion awards?

Is proration calculated to the month or to the day?

How is an employee included in a compensation review process?	When initiating a compensation review process, you configure: • A Process Period End Date. • A merit, bonus, or stock Compensation Snapshot Date. • An Organization Snapshot Date. Workday uses eligibility rules in effect as of the Process Period End Date to: • Determine which employees to include in the process. • Ensures that valid compensation data exists as of the applicable Compensation Snapshot Date. • Processes the Organization Snapshot Date to determine included organizations. You can include terminated employees in a compensation review process that includes bonus awards. Select the Include Employees Terminated During Process Period check box when initiating the process. Workday includes terminated employees subject to rules configured on the bonus plan and on the Maintain Compensation Review Participation Rule Sets report. You can also select Include Active Employees in Waiting Period on the merit or bonus plan. When employees are assigned both the plan and in the waiting period on the Process Period End Date, Workday includes them with a target of zero.
What target takes precedence when an employee matches multiple targets?	Workday uses this order of precedence to derive merit and bonus targets for each employee: 1. Guaranteed minimum target (for individual employee). 2. Employee individual target. 3. Compensation matrix target. 4. Plan profile target. 5. Plan default.

How do I keep my budget in sync with the compensation matrix?	The merit pool displays the increase amount, based on the compensation matrix. If you know what your budget is, you can adjust the merit pool to match it.
How does Workday include performance reviews in compensation review processes?	Workday uses the most recently entered performance rating, either from an in-progress or a completed performance review, when: • A compensation matrix is associated with the merit plan and isn't for reference only. • The performance review template has a period end date relative to the frequency of the plan before the Process Period End Date. For merit, this is 1 calendar year before the Process Period End Date, regardless of the Process Period Start Date. • The performance review rating is either complete or was entered after you initiated the compensation review and before the Process Period End Date. If Workday can't find a performance review rating, it reads the default target on the plan. Workday doesn't retroactively revise the award if the performance review is updated after the Process Period End Date. Workday calculates the overall rating for the specified review templates. Workday then matches this result to the performance level on the compensation matrix to determine the recommended merit increase. If the matrix definition includes pay range segments, Workday determines which segment the employee's salary falls into, based on assigned grade.
How do I change a completed and funded compensation review process?	If you've already distributed the merit pool to organizations, you can select Business Process > Cancel as a related action off the event. Alternatively, you could ask all the managers to award more or less than their designated pool amount. If incorrect pool amounts are likely to be an issue, add a step to the business process to review the merit pool before sending it to the managers. For a completed process, select Business Process > Rescind as a related action off the event. If incorrect employee changes are possible, consider adding a step at the organization or location hierarchy level before completion.
Can I set up compensation review processes on organization types other than supervisory?	Yes. You can select these organization types from the Configure Participation button on the *Initiate Compensation Review Process* business process: • Cost Center • Custom Organization

	• Location Hierarchy • Supervisory Workday displays the organization types you select when you initiate the process.
How do I deal with different pay periods?	Workday considers different pay periods during calculations, and converts all salaries into the reference frequency specified during the compensation review process.
Can I use process setup parameters on a recurring basis?	Yes. Configure named sets of process options on the Create Compensation Review Options and Create Compensation Review Process Template tasks.
Can I select not to compound additional adjustment and promotion awards?	Yes. Select the Additional Adjustment and Promotion Awards as Percent of Current Primary Compensation Basis check box when you initiate the process. If selected, Workday adds awards to the Primary Compensation Basis (PCB) instead of compounding the award. Example: Brendt's PCB is 100,000. He receives a 10% merit increase, a 2% additional adjustment, and another 2% for his promotion. With the check box selected, Workday: • Sums all of Brendt's awards: (0.10 + 0.02 + 0.02 = 0.14). • Calculates his new PCB: 100,000 + (100,000 * 0.14) = 114,000. If left blank, Workday calculates Brendt's new salary in these cumulative steps: • 100,000 + (100,000 * 0.10) = 110,000. • 110,000 + (110,000 * 0.02) = 112,200. • 112,200 + (112,200 * 0.02) = 114,444.
Is proration calculated to the month or to the day?	To the day. Workday calculates employee days as: `proration rule / days in the review period.`
What date does Workday use as the merit year in order to calculate proration?	To calculate the proration, Workday uses Process Period End Date specified when you initiate the process and goes back exactly 1 year.
Can I set the proration period dates?	Yes. You can select the Process Period Start Date for each merit or bonus plan on the Initiate Compensation Review Process task. Workday displays the Days in Period for reference. The default is the difference between the Process Period End Date and the plan frequency. You can select a date up to 15 months before the Process Period End Date.

	The process period start and end dates determine how Workday divides proration segments and employee eligibility. Setting a Process Period Start Date also affects merit and bonus plan eligibility for plans with either of these options enabled: • Include Employees Terminated During Process Period • Include Active Employees Assigned Plan During Process Period
Can I change an employee's compensation plan target during a compensation review?	Yes, by including 1 of these editable fields on the grid configuration: • Allowance Target Amount - Proposed. • Allowance Target Percent - Proposed. • Bonus Target Amount - Proposed. • Bonus Target Percent - Proposed. • Commission Draw Amount - Proposed. • Commission Target Amount - Proposed. • Stock Target Amount - Proposed. • Stock Target Percent - Proposed. Workday determines plan eligibility and the value of the default target as of the merit effective date. Planners can edit the future target if: • The plan allows individual overrides. • The employee is in the process with a related merit plan not managed by basis total. • The employee is still eligible for the plan as of the merit effective date. • The employee isn't being promoted into a position that removes the related plan, such as from Bonus Plan A to Bonus Plan B, or the PCB. Planned targets for promoted employees don't transfer to the *Change Job* process from the Review Promotions in Merit task.
When does a salary increase take effect after the compensation review process?	Workday uses the Effective Date specified when you initiate the compensation review process as the date the new salary takes effect. Example: The Compensation Administrator initiates the compensation review process on February 15 and specifies April 1 as the Effective Date. The process completes on March 10. The employee salaries in Workday reflect the change on April 1.
What happens if there's a compensation change to an employee's salary after the process finishes but before the Effective Date of the salary change?	On the Effective Date, Workday replaces the old salary with the new salary from the merit increase. Example: The Compensation Administrator initiates the compensation review process on February 15 and specifies April 1 as the Effective Date. An employee has a salary of 50,000, and the manager

	approves a 10% raise to 55,000 as part of this process. The process is complete on March 10, and the salary remains 50,000, awaiting the April 1 effective date for the raise to take effect. On March 15, the HR Partner requests an immediate base salary change for the employee, from 50,000 to 60,000, effective March 15. Workday warns that this increase will be superseded. On April 1, the employee's merit increase replaces her current salary. Her merit increase was 55,000. On April 1, her salary is set at 55,000, instead of the previous 60,000 paid between March 15 and March 31. Note: Use the Out of Order Compensation Changes report to verify employees with a compensation change effective earlier than the existing compensation change. You can give an employee a raise that an earlier compensation change with a later effective date voids.
What date does Workday use to determine the current salary amount to use as the basis for the merit percent calculation?	Workday determines what the employee's salary will be on the applicable Compensation Snapshot Date and uses that salary throughout the process. Workday doesn't recalculate the result of the percentage increase on the date the salary change takes effect. The formula for determining the new salary is: `old salary + (old salary * merit increase %) = new salary`. Example: The Compensation Administrator initiates the compensation review process on February 15 and specifies April 1 as the Effective Date and March 31 as the Merit Compensation Snapshot Date. On February 15, Workday determines the employee's salary will be 50,000 on March 31. When the manager gets the compensation review event for the employee, she sees a salary of 50,000 and gives a 10% increase. The new salary is 55,000. The increase is approved, the process completes March 10, and the salary remains 50,000. On April 1, the employee's merit increase replaces her current salary. Since her merit increase was 5,000 (`10% * 50,000`), her salary starting on April 1 is 55,000.
Do changes to a compensation basis update plans other than salary and hourly?	If the merit plan has the Manage Basis Total option selected, yes. If not, changes to the compensation basis during a compensation review update only salary and hourly plans. Example: An employee is assigned: • Merit plan A. Manage Basis Total isn't selected. • Allowance plan B. The PCB is Total Base Pay. • A base pay plan that is a salary plan.

	Workday applies the merit increase percent only to the salary plan, increasing it by the percentage specified. To ensure that updates to a compensation basis affect plans other than salary or hourly, configure Manage Basis Total on both: • The merit plan. • A custom compensation basis that includes both the base pay plan and any other plans you want to include in the calculation.
How do I pay a referral bonus?	A referral bonus is a one-time payment rather than part of a bonus plan. To pay a referral bonus: 1. Establish a one-time payment plan for the referral bonus. 2. Use the Request One-Time Payment task. Note: If the pay group detail is locked, then the referral payment may be delayed until the next payroll cycle.

Troubleshooting: Compensation Review Participation Rule Sets on page 1199

FAQ: Employee Visibility Date

What is the Employee Visibility Date?	The Employee Visibility Date gives compensation administrators the option to select a future date. After that date, employees signed in as Employee as Self can view their updated pay-related compensation data. Managers can then inform their workers of pay changes outside of Workday before the visibility date. Note: Selecting an Employee Visibility Date hides only updated *pay-related* changes, not staffing changes such as transfers, promotions, or changes to benefits. If you don't include the *Propose Compensation Change* step on the *Change Job* or *Edit Position* business processes, Workday doesn't apply the Employee Visibility Date. See: Steps: Propose Compensation for Employees or Positions on page 1032
How do I enable the option to set an Employee Visibility Date?	• Select the Enable Employee Visibility Date check box in the Compensation section on the Edit Tenant Setup - HCM task. • Add the *Employee As Self* security group to the View Completed Only As of Date on the business process security policy for the

	Compensation Change for Compensation Plan Event. To ensure workers can't see updated compensation data before the visibility date, don't include them in the *Employee as Self* security group on the: • *Propose Compensation* step of business processes. • *Propose Compensation Change* business process. • Staffing and Job profile groups from the worker profile. • View All or View Completed Only sections of the *Request Compensation Change* and *Request One-Time Payment* processes.
Does enabling the Employee Visibility Date on the tenant hide any data?	No. Selecting the Enable Employee Visibility Date option on the tenant makes the Employee Visibility Date visible on compensation change and compensation review processes. The compensation administrator must still select a visibility date when initiating the process, which only then hides pay-related data. If the visibility date isn't selected (left blank), pay-related data becomes visible after the Effective Date of the process.
If selected, how does the Employee Visibility Date differ from the Effective Date?	Example: The compensation administrator initiates a compensation review process with an effective date of August 31: <table><tr><td>If the Employee Visibility Date is...</td><td>Updated pay-related data becomes visible...</td></tr><tr><td>September 5</td><td>After the Employee Visibility Date, September 5.</td></tr><tr><td>Left blank</td><td>After the Effective Date, August 31.</td></tr></table>
What about the effective dates for additional awards in compensation reviews?	If the effective date for merit differs from the effective dates of any additional awards, workers can't see the award details until after both: • The Employee Visibility Date of the process. • The respective effective date of the individual awards.

FAQ: Merit, Bonus, and Stock Pool Calculations

How is a merit pool calculated?

How is a bonus pool calculated?

How does a bonus pool calculation differ from a merit pool calculation?

Can I see the detailed bonus calculation?

How does a change in FTE % affect the bonus calculation?

What causes a bonus scorecard profile change and what is the effect?

How does individual or company performance affect an employee's bonus target?

How is a stock pool calculated?

Does plan type affect how Workday calculates pool and spend for target change?

How does Workday handle remainder amounts?

Note: These calculations don't take proration or rounding into consideration.

How is a merit pool calculated?

Workday calculates a merit pool using the compensation basis and merit targets of employees in the same organization and merit plan:

```
Compensation Basis of Employees in
Org. & Plan * Merit Plan Targets of
Employees in Plan = Merit Pool
```

For employees managed by a compensation basis total, the compensation basis is the Primary Compensation Basis. Otherwise, the compensation basis is the total base pay, excluding amount-based compensation plans.

If there's a weighted compensation matrix on the merit plan, the merit pool calculation is:

```
Compensation Basis of Employees in
Org. & Plan * Merit Plan Targets
of Employees in Plan * Weighted
Compensation Matrix = Merit Pool
```

Workday evaluates these factors in order when calculating merit targets:

1. Individual target override: You can configure the merit plan with an option to allow individual target overrides. You can then edit merit plan assignments and override merit targets during a compensation or staffing transaction.

   The individual target, if configured, overrides factors 2, 3, and 4 in the merit pool and the employee target calculations.
2. Nonweighted compensation matrix: Usually includes performance or potential rating, compa-ratio, retention rating, pay range segments, or eligibility rules.

   If the employee meets criteria specified in the compensation matrix, Workday doesn't consider factors 3 and 4.

3. Merit plan profile targets: You can configure the merit plan with profile targets based on eligibility rules, such as country or location. During processing, Workday uses eligibility rules to determine the target award for an employee and to calculate the merit pool.

   If the employee meets criteria specified in a merit plan profile target, Workday doesn't consider factor 4.
4. Default plan target. You can configure merit plans with a default target. Workday uses the default target to calculate the merit pool and award when it can't find an individual target override, compensation matrix, or merit plan profile.

   If Workday can't calculate the merit pool and employee target from evaluating factors 1 through 3, it uses the default plan target.

How is a bonus pool calculated?

If the bonus plan doesn't have a weighted compensation matrix or modifier scorecards, and isn't associated with an eligible earnings override, the bonus pool calculation is:

```
Employee Eligible Earnings Amount /
Period Specified by Plan Frequency *
Employee Bonus Target = Bonus Pool &
Employee Bonus Target
```

If the bonus plan doesn't have modifier scorecards and isn't associated with an eligible earnings override, but does have a weighted compensation matrix, the bonus pool calculation is:

```
Employee Eligible Earnings Amount /
Period Specified by Plan Frequency
* Employee Bonus Target * Weighted
Compensation Matrix = Bonus Pool &
Employee Bonus Target
```

If there are company or modifier scorecards on the bonus plan, the employee bonus target and bonus pool calculations are:

```
Employee Eligible Earnings Amount /
Plan Frequency * Employee Bonus Target
* Scorecard or Modifier = Bonus Pool &
Employee Bonus Target
```

With a weighted compensation matrix, company or modifier scorecards, the bonus pool calculation is:

```
Employee Eligible Earnings Amount /
Plan Frequency * Employee Bonus Target
* Weighted Compensation Matrix *
Scorecard or Modifier = Bonus Pool &
Employee Bonus Target
```

How does a bonus pool calculation differ from a merit pool calculation?	Like the merit target, the bonus target results from individual target overrides, compensation matrix, bonus plan profile targets, or the bonus plan default target. However, the bonus target uses eligible earnings during the period specified by the plan frequency. It can also include company or modifier scorecards that reflect corporate or division performance.
Can I see the detailed bonus calculation?	Yes, provided the process uses a grid configuration that includes the Rounded Total Target Amount and Actual Bonus Amount advanced fields. You can drill down on these fields to reveal exactly how Workday calculated the bonus. You can also run the View Bonus Calculation report to display how Workday calculated: • Total Bonus Target Amount • Bonus Actual Amount • Discretionary Target Amount • Nondiscretionary Target Amount • Sum of Proration Segments You can provide unconstrained or role-based access to the View Bonus Calculation task through the *Process: Compensation Review Bonus Details* domain.
How does a change in FTE % affect the bonus calculation?	If you create a proration rule based on *FTE Changes in Period* and add it to a bonus plan, Workday evaluates FTE % changes between the Process Period Start Date and the Process Period End Date. If the FTE % changes during the process period, Workday divides the process period into proration segments when calculating bonuses. Example: For the 2015 bonus period, Terry's FTE % changed from 100% to 50%. Workday created 2 proration segments at 100% and 50%, respectively. Workday then calculates each proration segment separately: `FTE % * Proration % * Target %` Workday then sums all proration segments before calculating eligible earnings. If you enable Paid FTE in the Staffing section on the Maintain Localization Settings task, Workday uses the paid FTE override in the calculations for these compensation review targets: • Allowance • Bonus • Merit • Stock

	When you drill down on a bonus target during a compensation review, Workday displays the calculation, including the FTE % and Proration %.
What causes a change to the bonus scorecard profile and what is the effect?	These business processes can cause a change to the bonus scorecard profile: • *Change Job* • *Change Organization Assignment* • *Move Workers (by Organization)* • *Move Workers (Supervisory)* Workday prorates on custom organizations for organization changes that occur outside of a compensation review process. However, compensation review coordination of events only processes organization changes for organizations included in the compensation review process. If the *Scorecard Profile Changes in Period* proration rule is associated with the worker's bonus plan: • Workday evaluates the bonus scorecard changes between the initiation of the bonus period and the Process Period End Date. • Creates proration segments when calculating bonuses.
How does individual or company performance affect an employee's bonus target?	A performance rating (part of a compensation matrix) or a compensation scorecard can both be factored into the bonus target calculation: `Employee Bonus Target * Individual or Corporate Performance = Employee Bonus Target`

How is a stock pool calculated?	Stock pool calculations derive primarily from the compensation matrix and stock target (shares, amount, or percent). Percent-based stock plans must reference a compensation basis. Example:
	`Target * Total Base Pay * Weighted Compensation Matrix = Stock Pool`
	You can configure the stock plan to split the stock award into different types of grants. Example: 50% stock options and 50% Restricted Stock Units.
	If you apply the stock participation rate when you initiate the compensation review process, then:
	`Target * Total Base Pay * Weighted Compensation Matrix * Stock Participation Rate = Stock Pool`
	The stock participation rate doesn't affect employee stock targets. However, you can change stock targets using calculated fields.

Does plan type affect how Workday calculates pool and spend for target changes?	Yes. Workday calculates pool and spend differently for amount-based and percent-based plans. For amount-based plans:
	`New Plan Target Amount - Old Plan Target Amount`
	For percent-based plans:
	`New Target % * New Basis or Salary - Old Target % * Old Basis or Salary`
	A percent-based plan might result in spend for target pools even if the target is unchanged. Example: A 10% allowance plan for an employee whose salary changes from 100,000 USD to 200,000 USD results in a spend of 10,000 USD.

How does Workday handle remainder amounts?	Workday stores pool contributions at the individual employee level and calculates pools once at process initiation to determine pools at the organization level. Workday stores remainder amounts at the organization level. Example: An organization has a 10,000 USD pool divided among 3 employees with each receiving 3,333.33 USD. Workday stores the remaining 0.01 USD at the organization level.

The Next Level: Compensation Plans and Pools

FAQ: Rounding and Precision in Compensation Review Calculations

How does Workday round bonus amounts?	Workday: 1. Calculates and stores all amounts with precision up to 12 decimal places. 2. Applies the rounding rule, if configured on the bonus plan, to both the total bonus and the nondiscretionary targets and amounts. 3. Applies currency precision rounding up to 6 decimal places. Workday doesn't update amounts due to changes in scorecard results or compensation plans while the compensation review is in progress, except: • When you run the Recalculate Pool and Awards task. • During processing of participation rule sets that use the Update Employee to Latest Data option. • During the *Manage Bonus Funding* step of the *Initiate Compensation Review Process*, Workday updates amounts based on the company funding scorecard.

- When you access the Compensation Review Recalculate Bonus Targets task. Workday updates nondiscretionary award amounts, but not discretionary amounts.
- When you remove and add back employees using the Maintain Compensation Review Process Employee Participation report.

To display how Workday calculated a bonus, access the View Bonus Calculation report.

Why don't amounts displayed in Workday match calculations made outside of Workday?

Workday calculates and stores numbers internally at a precision of up to 12 decimal places. Spreadsheet applications limit the number of decimal places in a single cell.

Workday displays values in the user interface and on reports at a lower precision, usually 4 or 2 decimal places. Doing so saves space and improves performance. When displaying values in the user interface and on reports, Workday truncates the decimal values without changing the persisted amount and doesn't perform rounding. Example: Workday stores 92.123498765432 but displays 92.1234 without changing the stored value.

When creating pools for compensation reviews, Workday uses individual employee targets if configured, or calculates an individual percentage share of the total pool at a precision up to 6 decimal places. Workday then stores each employee's pool contribution at a precision of up to 12 decimal places.

Example:

- An employee has a current base pay of 29,237.90.
- You enter a merit amount increase of 1,023.40 (2 decimal places).
- Workday calculates the percentage increase and stores the value at a precision up to 12 decimal places: (1,023.40 / 29,237.90) * 100 = 3.500251386043.
- Workday truncates the value to 4 decimal places for display on the user interface and on reports to 3.5002.

Verifying the calculation with less precision results in a difference of 0.02 (rounded to currency precision):

- Using value displayed: (3.5002 / 100) * 29,237.90 = 1,023.38.
- Using value persisted: (3.500251386043 / 100) * 29,237.90 = 1,023.40.

Tasks

Create Compensation Rounding Rules on page 1165

FAQ: How is Total Eligible Earnings calculated?

To determine the Total Eligible Earnings when you configure pools for a compensation review process, Workday:

1. Identifies the plans selected when you initiated the process.
2. Identifies which compensation basis to use to calculate the target award amount: the Primary Compensation Basis (PCB) or *Total Base Pay*. Workday determines:

    a. If the merit plans that have the Manage by Basis check box selected.
    b. The rankings of each compensation basis as configured on the Maintain Compensation Basis task.
    c. The highest ranking PCB for an employee, based on the eligibility rules associated with the compensation basis.

       Example: Brian qualifies for both CompBasis2 and CompBasis3 based on the associated eligibility rules. Because CompBasis2 is ranked higher than CompBasis3 on the Maintain Compensation Basis task, the primary compensation basis for Brian is CompBasis2.
    d. If the compensation package for the employee includes the PCB.

    If Workday can't determine a PCB for the employee, it uses *Total Base Pay*.
3. Calculates the individual target award amounts that contribute to Total Eligible Earnings.

    For percent-based plans, these factors can affect the calculation:

Plan	Apply FTE	Matrix	Proration	Scorecard
Salary	Yes	No	No	No
Hourly	No	No	No	No
Allowance	Yes	No	No	No
Merit	No	Yes	Yes	No
Bonus	No	Yes	Yes	Yes
One-Time Payment	No	No	No	No
Commission	No	No	No	No
Stock	No	Yes	No	No

4. Adds the individual target award amounts to define the total compensation for the compensation review process.

Troubleshooting: Compensation Review Participation Rule Sets

Parallel Events Blocked During a Compensation Review

You've set up participation rule sets and compensation review options, but Workday still blocks parallel events you expected to proceed.

Cause	Solution
There are multiple award types in the process with varying compensation snapshot and effective dates. During compensation reviews, Workday blocks	Use the same snapshot and effective dates for all award types, if possible. Alternatively, reduce

Cause	Solution
parallel events that occur after the earliest snapshot date and before the latest effective date. The more time between these dates, the more likely that Workday blocks an event.	the time between the earliest snapshot and the latest effective date.
There are 1 or more employees that don't meet the conditions of the eligibility rules on the participation rule set.	Make sure the eligibility rules used for participation rule sets apply to the targeted employees. Update the participation rule sets, or if necessary, modify or add the eligibility rules.
You don't have participation rule sets configured on the Create Compensation Review Options task.	Select applicable participation rule sets in the Participation Rules section.
Your configuration on the Create Compensation Review Options task doesn't include the specific date range for the effective date of the event.	Select 1 or more date ranges in the Participation Rules section. Workday allows events to proceed for the date ranges you select and blocks those you don't.
There's a promotion associated with the merit award. While you can promote an employee as part of a compensation review, Workday blocks parallel events for that employee.	Complete parallel processes for the employee before initiating the compensation review process. Alternatively, don't associate promotions with merit.

Examples

Example: Coordination of Organization Events in Compensation Reviews on page 1181

Reference: Compensation Review Participation Rule Set Options

Workday provides these participation options on the Maintain Compensation Review Participation Rule Sets report.

This topic uses these acronyms for date parameters configured on the *Initiate Compensation Review Process* task:

- CSD: Compensation Snapshot Date.
- ED: Effective Date.
- OSD: Organization Snapshot Date.

Employee Options

Employee Option	Valid Process Types & Date Ranges	Description
Remove Employee from... • Merit • Bonus • Stock	Parallel Process: • On or Before CSD. • Between CSD and ED. Termination: Before ED of award type.	Upon completion of the parallel event, Workday removes these employee awards from the compensation review process.
Update Employee to Latest Data	Parallel Process: On or Before CSD.	Upon completion of the parallel event, Workday updates the employee data, such as prorated targets, as of the CSD.
Keep Employee Data Fixed	Parallel Process: On or Before CSD.	Workday doesn't change employee award data, including compensation basis, targets, title, or other attributes. However, you can clear the Remove Pool Contributions check box under Pools Options.
Keep Employee in... • Merit • Bonus • Stock	Parallel Process: • Between CSD and ED. • After ED. Termination: Before ED of award type.	Workday keeps employees in the compensation review process. You can select 1 of these merit award options for parallel processes. However, you can't select bonus or stock award options for parallel processes or terminations. • *Apply Merit Increase Percent*: Workday applies the percentage that you enter to the current base pay of the parallel event. • *Apply Merit Increase Amount*: Workday applies the amount that you enter to the current base pay of the parallel event. • *Keep New Pay Amount Fixed*: Workday applies the new pay amount that you enter to the parallel event. Note: Workday applies the *Apply Merit Increase Percent* and *Apply Merit Increase Amount* options to compensation events effective between the CSD and ED, regardless of when the events successfully complete. However, Workday doesn't display base pay changes while the compensation review is in progress. Workday applies these changes only after process completion. Example: Sidney has a 100,000 USD compensation basis as of the CSD and you enter 10% in the compensation review grid. Sidney gets a pay increase to 200,000 in a parallel event after the CSD and before the ED. Sydney’s proposed base pay differs based on the option that you select:

Employee Option	Valid Process Types & Date Ranges	Description
		• *Apply Merit Increase Percent*: Proposed base pay is 220,000 USD. • *Apply Merit Increase Amount*: Proposed base pay is 210,000 USD. • *Keep New Pay Amount Fixed*: Proposed base pay is 110,000 USD.
Move Employee to New Organization	Organization Assignment: Before OSD.	Moves the employee to their new organization.
Keep Employee in Current Organization	Organization Assignment: Before OSD.	Keeps the employee in the old organization for purposes of the compensation review.

Pools Options

Merit pools include additional adjustment, promotion, lump sum, and any associated plan target pools. Workday stores pool contributions at the individual employee level and calculates pools once at process initiation to determine pools at the organization level.

Pools Option	Valid Process Types	Description
Remove Pool Contributions	Parallel Process, Termination.	Upon completion of the parallel event, Workday removes employee pool contributions from their organizations.
Keep Pool Fixed	Parallel Process, Termination.	Upon completion of the parallel event, Workday keeps employee pool contributions static or adjusts the organization pool.
Update Pool Contributions	Parallel Process.	Applicable only to bonus awards with eligible earnings override. Upon completion of the parallel event, Workday updates the employee contribution to the pool with the eligible earnings override basis. You can select this option on the Create Compensation Review Options task.
Update Pool per Latest Data	Parallel Process, Termination.	Upon completion of the parallel event, Workday updates the pool with the new target.
Merit, Bonus, or Stock	Organization Assignment	For the award type selected, Workday moves the employee's contribution from the old organization pool to the new organization pool. If not selected, Workday keeps the pool in the old organization during the compensation review process.

Award Options

Award Option	Description
Clear Award	Workday sets proposals or awards to zero, overriding any prior proposals or awards.

Award Option	Description
Keep Award Fixed	Workday updates the employee compensation data as of the CSD, but keeps the award fixed.
Update Award to...	• *Previously Entered Percent*: Workday updates the award to the previous percent. You can select this option on the Create Compensation Review Options task. • *Previously Entered Factor*: Workday updates the award to the previous factor for bonus plans with an individual performance factor. • *New Employee Target*: Workday updates the employee target, the spend, and the pool.

Reference: Terminations During Compensation Review Processes

These termination events can occur while a compensation review process is in progress:

- *Terminate Employee*
- *End Additional Job*
- *End International Assignment*

Effects vary depending upon when the effective date, or pay through date, of the termination event occurs relative to these date parameters of the compensation review:

- Process Period End Date (PPED)
- Compensation Snapshot Date (CSD)
- Effective Date (ED)

These tables describe the effects for compensation review processes:

Merit and Stock Awards

Termination Effective Date Occurs...	Termination Event Status - Complete	Termination Event Status - In Progress
Before PPED	Workday: • Doesn't include the employee in the compensation review. • Doesn't apply the termination participation rule sets.	Workday: • Includes the employee in the compensation review. • Applies the participation rule set when the termination event completes. • Hides the Target % advanced field. • Autofills target to zero.
On or after PPED and before ED	Workday: • Includes the employee in the compensation review. • Doesn't apply the termination participation rule set.	Workday: • Includes the employee in the compensation review. • Applies the participation rule set when the termination event completes. • Hides the Target % advanced field.
On or after CSD and before ED	Workday: • Includes the employee in the compensation review. • Doesn't apply the termination participation rule set. • Sets the employee target amount as of CSD. • Autofills target to zero.	Workday: • Includes the employee in the compensation review. • Applies the participation rule set when the termination event completes. • Sets the employee target amount as of CSD.
On or after ED	Workday: • Includes the employee in the compensation review. • Doesn't apply the termination participation rule set.	Workday: • Includes the employee in the compensation review. • Doesn't apply the participation rule set.

On or Before PPED	Workday: • Includes employee. • Applies participation rule set after Manage Impacted Employees.	Workday: • Doesn't include employee. • Doesn't apply participation rule set.	Workday: • Includes employee. • Applies the participation rule set when the termination event completes.
After PPED and before ED	Workday: • Includes employee. • Applies participation rule set after Manage Impacted Employees.	Workday: • Includes employee. • Doesn't apply participation rule set.	Workday: • Includes employee. • Applies the participation rule set when the termination event completes.
On or after ED	Workday: • Includes employee. • Doesn't apply participation rule set.		

Manage Compensation Reviews

Initiate Compensation Review Processes

Prerequisites

- Prepare for compensation reviews.
- Configure the *Initiate Compensation Review Process* in the Advanced Compensation functional area.

Context

You can configure the options and plans for your compensation review process. You can also include merit, allowance, one-time payment, adjustments, promotions, bonus, and stock plans.

Steps

1. Access the Initiate Compensation Review Process task.
2. (Optional) Select a Compensation Review Process Template.
3. Configure process date fields:

Option	Description
Effective Date	The effective date also determines eligibility for proposed target changes, such as the Bonus Target Amount - Proposed editable field.
Employee Visibility Date	If configured, Workday hides the employee's pay-related compensation data until after the specified date.
Process Period End Date	Configure a date to determine: • Employee eligibility for inclusion in the process. • Proration calculations. • Performance ratings.

Option	Description
	Example: If an employee is eligible for a plan on June 1, but the Process Period End Date is May 31, Workday doesn't include the employee in the process. Workday can include employees in eligibility waiting periods as of this date, based on plan setup. However, they display as exceptions with targets of zero.
Organization Snapshot Date	Select the date Workday uses to determine: • The organizations in the compensation review process and the hierarchical structure. • The organization level that stores the pools. When you initiate the process, Workday determines this once and takes into account only completed organization events. Thereafter, Workday manages in-progress organization events (moves or transfers that occur between organizations in this set) according to participation rules. Workday doesn't determine security role assignments for a compensation review process based on this date. Workday determines security when you launch the *Complete Employee Awards* step in the business process. Workday removes organizations inactivated after this date from the hierarchy and won't assign them to a planner.
Compensation Snapshot Date	Select a date for Workday to determine eligible employees in pool and award calculations. The greater the difference between the Effective Date and the Compensation Snapshot Date, the greater potential for other compensation-related events to create a conflict.

4. Select either a Grid Configuration or a Grid Profile Configuration.

   See: Steps: Configure Compensation Review Grid Profiles on page 1172.

   If your grid configuration includes merit and promotions, you can select individual promotions for further review while the compensation review process is in progress.
5. In the Process Details section, consider:

Option	Description
Currency Rate Type	Select the currency rate type to use as the exchange rate as of 12:00 AM on the Process Period End Date to calculate pools and awards. If the date is in the future, select a rate type where the exchange rate won't change before the date. Doing so ensures that Workday uses a consistent exchange rate for pool and award calculations.
Reference Currency	Select the currency for the award pools and all totals. The compensation values for employees whose pay is in another currency still display in that other currency.

6. As you complete the plan-specific sections, consider:

Option	Description
Merit Plans	Enter the Statutory Minimum% to give employees assigned to a plan and the associated plan profiles.

Option	Description
	This only applies to merit plans that have the Subject to Statutory Minimum check box selected and are effective as of the Process Period End Date.
Bonus Plans	You can select Include Employees Terminated During Process Period. If you configured Coverage Date Eligibility on 1 or more bonus plans, you can change the coverage start and end dates. Coverage dates enable Workday Payroll or Payroll Integration to associate dates with the bonus for US Fair Labor Standards Act (FLSA) reporting requirements.
Scorecard Results	Enter the results if you included a bonus plan associated with a scorecard. If you leave this blank, Workday assumes 100% attainment. If you used a compensation process template that has Autopopulate Latest Scorecard Results selected, Workday populates the most recently effective scorecard result for each bonus plan.
Stock Plans	Select a Stock Participation Rate Table or create a new one. If selected, you can't select Autofill.
Allow Award Autofill	Select to enable the Autofill button when proposing awards.
Process Period Start Date	For each merit or bonus plan, this date sets the beginning of the proration period and determines the divisor of the proration calculation. Workday sets the default as the difference between the Process Period End Date and the plan frequency. You can select a date up to 15 months before the Process Period End Date.
Exceptions by Rule	The effective date of the merit award must be on or before the additional adjustment and promotion award dates.

Result

Workday:

- Creates a *Compensation Review Process* event.
- Sends a My Tasks item to the person in the role assigned to the *Manage Impacted Employees* step of the business process.
- Applies awards in this order: merit increases, additional adjustments, and promotions. Workday uses the latest effective date configured for each subsequent award.

Steps: Add or Remove Employees to or from Compensation Reviews

Prerequisites

One or more compensation reviews process must be in progress.

Context

You can add or remove individual employees to or from in-progress compensation review processes on the Maintain Compensation Review Process Employee Participation report. If employees belong to organizations not already in the process, Workday adds the organizations automatically with a background job that runs once every hour. You can also use the Compensation Review Update New Organization Data task to add the organizations immediately.

You can remove or add back employee groups on the Mass Operation Management task.

Steps

1. Access the Maintain Compensation Review Process Employee Participation report.
2. As you complete this task, consider:

Option	Description
Employees Removed from Process	Add an employee back.
Newly Eligible to Process	Add an employee that became eligible after process initiation.
Employees in Waiting Period	Add an employee who is eligible but was in a waiting period when you initiated the process. If you selected Include Active Employees in Waiting Period on the merit or bonus plan, Workday includes employees in a waiting period but sets their target to zero. If you add employees that have completed their waiting period, Workday calculates their target.
Remove Employee from Process	Remove an employee.

Option	Description
Terminated Employees in Process	Remove a terminated employee.
New Employee Pool Contribution	Select to display pool details for merit, additional adjustment, promotion, and lump sum awards.
Remove Pool Amount	Remove pool contributions from the process, regardless of reserves or holdbacks.
Add Pool Amount	Update employee pool contributions for added employees.
Organization	If adding an employee to a compensation review, select the Organization where the employee and the related award belongs. The organization must exist before you initiate the compensation review process and have an effective date on or before the Organization Snapshot Date configured on the process. If you select an organization that's not included in the process, Workday adds it after the Compensation Review Update New Organization Data task or background job completes.
Notification	Send an email to the person identified in the Awaiting Person field.

Security: *Process: Compensation Management Plan Employee Management* domain in the Advanced Compensation functional area.

3. (Optional) Access the Compensation Review Update New Organization Data task.

   This is a background job that runs on a regular schedule. Select an in-progress compensation review. Workday automatically:

   - Detects organizations that aren't in the process but now have employees added through the:
     - Maintain Compensation Review Process Employee Participation report.
     - *Change Job*, *Move Workers*, *Request Compensation Change*, or *Change Organization Assignment* business processes.
   - Workday automatically adds new organizations provided they're both subordinate to the top level organization and existed before you initiated the process.
   - Sends a My Tasks item to the appropriate managers or planners.

   Example: If a participation rule set moves Ferryn from Quality Assurance to Engineering, Workday keeps her in Quality Assurance until this task or the background job runs. Workday then adds the organization to the compensation review and moves Ferryn to Engineering.

   Security: *Process: Compensation Management Plan Employee Management* domain in the Advanced Compensation functional area.
4. (Optional) Access the Mass Operation Management task.

   Select the *Compensation Review Maintain Employee Participation* operation type.

   Select whether to Remove or Add Back previously removed employees. Depending on your selection, you can optionally Remove All Pools or Add Previous Pool Amount.

   Security: Create a segment-based security group and add it to the Compensation Review Maintain Employee Participation segment.

Set Up Mass Operations

Change Dates and Reasons on In-Progress Compensation Reviews on page 1211

Steps: Manage Multiple Events During Compensation Reviews

Prerequisites

Configure the *Initiate Compensation Review Process* business process to meet your needs.

Context

During a compensation review process, employees can have in-progress compensation events. After you initiate the process, you can assign participation rule sets to determine how Workday reacts to these events.

Steps

1. Access the My Tasks item for the compensation review process.
2. In the Manage In Progress Processes section, click the Manage Employee Processes button.

   Workday lists employees eligible for the process that have in-progress compensation events.
3. Select participation rule sets for Termination and Parallel Events.

   For Parallel Events, select a rule set for each award type. Workday reacts to completed transactions after you launch the process.
4. Access the Compensation Review Awards On Hold Audit report and the Manage Compensation Review On Hold Events task.

   You can release on-hold leave of absence events, cancel on-hold awards, or cancel events.

   When you release a leave of absence (LOA) event, the effective date configured for the award type determines when awards take effect. Workday doesn't release awards automatically when the employee returns from leave. You can only release on hold events if the employee doesn't have any other in-progress parallel events.

   Example: Cory returns from an LOA. You manually release the on-hold event on the Manage Compensation Review On Hold Events task. The effective date on Cory's merit award determines when the award takes effect.

Result

Workday allows parallel transactions based on the eligibility rules and date ranges specified by the participation rule sets. If no parallel rule sets apply, Workday blocks compensation and staffing transactions with effective dates that fall before the Effective Date until the process completes.

Change Dates and Reasons on In-Progress Compensation Reviews

Prerequisites

Initiate a compensation review.

Security:

- *Custom/Standard Report Copy* domain in the Tenant Non-Configurable functional area.
- *Mass Operation Management* in the System functional area.
- *Worker Data: Compensation Management by Organization* in the Advanced Compensation functional area.

Context

You can use the Mass Operation Management task to change these compensation review parameters while the process is in-progress:

- Effective dates.
- Employee visibility dates.
- Reasons.

These procedures overwrite any data changed using the *Compensation Review Override Dates and Reasons* operation type on the Mass Operation Management task:

- Participation rules based on any *Use Latest Employee Data* participation options.
- Removing and adding back employees to the process using the:
    - Maintain Compensation Review Process Employee Participation report.
    - *Compensation Review Maintain Employee Participation* operation type on the Mass Operation Management task.

Note: Therefore, Workday strongly recommends that you:

- Complete your compensation planning process before running the mass operation.
- Run the mass operation immediately before finalizing your process.

Steps

1. Access the Copy Standard Report to Custom Report task.

   Copy the Compensation Review Configure Dates and Reasons Workday-delivered standard report.

   This report lists the employees eligible for changes to compensation review effective dates, visibility dates, and reasons.
2. Access the Mass Operation Management task.

   Workday recommends that you examine these date settings of the in-progress compensation review before running the mass operation: effective dates, employee visibility dates (if enabled on the tenant), compensation snapshot dates, and organization snapshot dates.

Option	Description
Mass Operation Type	*Compensation Review Override Dates and Reasons*.

Option	Description
Input Report	Select the custom report that you created in the previous step.

The validation rules for the Effective Date set on the Initiate Compensation Review Process apply when running the *Compensation Review Override Dates and Reasons* operation. The Effective Date must be:

- On or after the Process Period End Date.
- After the Organization Snapshot Date.

Security: Create a segment-based security group and add it to the Compensation Review Maintain Employee Participation segment.

3. Run the *Compensation Review Override Dates and Reasons* mass operation.

Next Steps

To see the affected employees and their updated data, create a custom report or copy the Compensation Review Configure Dates and Reasons report.

Steps: Recalculate Bonus Targets, Pool, and Awards During Compensation Reviews

Prerequisites

Context

You can recalculate bonus targets and bonus pool and awards during an in-progress compensation review.

- Bonus targets: Before the *Configure Pools* step of the process to ensure that updated targets also updates the bonus pool.
- Bonus pool and awards: After you update scorecard data and before the controller submits.

Steps

1. (Optional) Access the Compensation Review Recalculate Bonus Targets task.

   This task updates bonus targets on the bonus plans included in the compensation review process and totals for each employee whenever:

   - Eligibility rules change a profile target.
   - Profile or plan target changes.
   - Scorecard results change.
   - Rounding rule changes.
   - Matrix values change.

   See

   To update both bonus targets and pools, access this task before the *Configure Pools* step of the compensation review process. You can still update targets with this task after *Configure Pools* but doing so only updates targets, not pools.

   Workday updates nondiscretionary amounts based on updated targets. Workday doesn't change discretionary amounts entered during the compensation review.

   Security: *Process: Compensation Management Plan Employee Management* domain in the Advanced Compensation functional area.

2. (Optional) Access the Recalculate Pool and Awards task.

   This task recalculates the bonus pool and awards for in-progress compensation reviews after you update scorecard data using the:

   - Edit Compensation Scorecard task, or
   - *Put Compensation Scorecard* Enterprise Interface Builder (EIB) web service.

   Access this task after the compensation review starts and before the controller submits. As you complete this task, consider:

Update Pool and Keep Bonus Amount Fixed	Automatically selected when some approvals are complete but others aren't. Keeps bonus award amounts fixed and updates the bonus pool.
Update Pool and Keep Bonus Factor % Fixed	Only available if all approvals are complete. Workday applies the Bonus Factor % proposed against the new target with the latest scorecard results to the Award amounts and updates the bonus pool.

   Security: *Process: Compensation Management Plan Employee Management* domain in the Core Compensation functional area.

FAQ: Merit, Bonus, and Stock Pool Calculations on page 1192

The Next Level: Bonus Calculation Consistency

Manage Compensation Review Pools

Prerequisites

Initiate a compensation review process.

Context

Workday automatically calculates pool amounts from the bottom up. Workday uses the plan definitions selected when you initiate the process and the employees identified in the *Manage Impacted Employees* step to calculate the individual employee target amounts for each award type. Workday adds the individual employee target amounts to determine the estimated cost and the initial pool amounts.

When you're using statutory minimums, Workday calculates an employee's individual target amount as the higher percentage of the plan target and the statutory minimum. Example: If a plan target is 3.0% and the statutory minimum is 2.0%, the employee individual target amount is 3.0%.

You can change the initial pool amounts and adjust the pool amounts for individual merit, bonus, and stock plans by selecting the Top-Down option.

Before configuring pools, consider whether you need to recalculate bonus pools with these tasks:

- Compensation Review Recalculate Bonus Targets.
- Recalculate Pool and Awards.

See: Steps: Recalculate Bonus Targets, Pool, and Awards During Compensation Reviews on page 1212

Steps

1. Access the My Tasks item for the compensation review process.
2. As you complete the Pool Controls section, consider:

Option	Description
Allow Pool Holdbacks	Select to enable the distribution of less than 100 percent of the pool amounts to the organizations.
Allow Pool Overage	Select to enable managers to give awards greater than the assigned pool amount when proposing awards. This displays as selected and read-only if you hid any award type in the Pool and Spend section on the Create Compensation Review Options task.
Display Remaining Pools	Select to enable managers to see remaining pool amounts when proposing employee awards.
Override Statutory Minimum	Displays only if there's a merit plan in the process with the Subject to Statutory Minimum check box selected.

3. As you complete the pool sections, consider:

Option	Description
Top-Down	Select this option if you want to set the pool amounts at the top level of the organization.
Apply Merit Target to Current Target Amounts	Select to configure a pool based on the merit target of each employee or any configured amount.
Deduct From Merit Pool	Select to deduct the spend from the merit pool rather than creating a separate pool. The associated target pool doesn't display to planners, but calculated spend displays in the merit pool.
Bottom-Up	Select to have Workday calculate the pool amount and estimated cost based on the employees assigned to the selected merit plans.
Pool Amount	If you selected Top-Down Calculation, specify the portion of the Total Eligible Earnings to make available for distribution to employees.

Option	Description
	Workday automatically sums all the individual target amounts for the employees assigned to the merit plans included in the process. This updates the Percent of Eligible Earning.
Percent of Eligible Earning	If you selected Top-Down Calculation, specify the percent of the Total Eligible Earnings to make available for distribution to employees. This affects the Pool Amount field.
Total Eligible Earnings	Displays the sum of all employee total compensation amounts using either: • Total base pay. • The total primary compensation bases associated with the plan and assigned to the selected merit plans.
Estimated Cost	Displays the sum of all the individual target amounts for the employees assigned to the merit plans in the process.
Prefill Employee Awards	Select to have Workday populate employee awards on the compensation review process and display the Propose All button. The Prefill Employee Stock Awards check box doesn't display if you selected a Stock Participation Rate Table on the Initiate Compensation Review Process task. Depending on how you configured Autofill and Pre-Fill options on the Create Compensation Review Options task, Workday populates award values for: • *Compensation Matrix*: To the midpoint of the matrix. • *Target*: With the funded, prorated target associated with the plans.

4. As you complete additional adjustments, allowance plans, lump sums, and promotions, consider:

Option	Description
Deduct From Merit Pool	Select to deduct awards made to employees during the process from the merit pool rather than from a separate pool. If you don't select this check box, Workday creates a separate pool for the award.
Distribute to Organizations	If you're creating a separate pool, selecting this check box enables you to distribute the pool to supervisory organizations.
Compensation Basis	Available when the Deduct From Merit Pool check box is cleared. Workday determines the list of values from the compensation bases associated with employees from the selected merit plans.
Percent of Compensation Basis	Available when the Deduct From Merit Pool check box is cleared. Workday calculates total eligible earnings by: • Identifying employees assigned to the merit plans selected for the process. • Summing the total compensation amount for these employees using the selected compensation basis.

5. (Optional) Click Review Plan Funding to adjust a specific plan funding amount.

   You can adjust the pool amounts for individual merit, bonus, and stock plans. Doing so affects the total pool amount and Workday automatically selects the Top-Down option.

   The Funding % automatically populates 100 percent for merit and stock plans. The funding percent for bonus plans equals the weighted result % of the plan funding scorecard. You can change the percentage to less than or greater than 100.
6. Distribute pool amounts.

   During the *Distribute Pool* step of the compensation review process, Workday estimates organizational-level pools for each award type based on the plans you selected at process initiation.

   Whether holdbacks or remaining pools display depends on:

   - The plans you selected for the process.
   - Your selection on the Allow Pool Holdbacks check box.
   - Your role in the organization structure. You can see the holdbacks of subordinate organizations but not those of superior organizations.

   Workday initially sets holdbacks and remaining pools to zero but they can change as you distribute pool amounts to organizations. Workday subtracts the distributed amount from the total pool to calculate holdbacks.

   When you submit, Workday recalculates pool distributions and updates the actual pools, taking into account any changes made during the *Distribute Pool* step. Workday might create organizational pool adjustments, both positive and negative, to persist the top-level pool. Workday also takes into account any employee pools removed during the *Distribute Pool* step.

   You can also access the Recalculate Pool and Awards task.
7. Enter the estimated pool amounts or units that you want to distribute to each organization in the Pool Distribution Summary.

   When you change an estimated amount for a parent organization, Workday adjusts each child organization proportionally.

   Example: The Sales & Marketing hierarchy has a Sales organization and a Marketing organization, each with a pool of 100 USD for a total pool of 200 USD. If you change the total pool of 200 USD to 150 USD, Workday reduces both the Sales and Marketing pools by 25% to 75 USD. The holdback amount is 50 USD.

   Review the estimated cost of the awards for the company to the actual distributed pool amounts plus holdbacks. You can apply the original contribution, the new contribution, or replace the original contribution for employees manually removed from the process.

   For the merit awards, the values include any additional awards, lump sums, promotions, and one-time payments. Total Process Award Pools are pool amounts for additional award types where you didn't select Deduct From Merit Pool and Distribute to Organizations.
8. (Optional) Click Compensation Review Process Maintain Pools.

   As you make adjustments for each Organization and award type, Workday:

   - Locks the pools so that no other task that adjusts pools can complete until you click Review or Cancel.
   - Adds the Distribution amount to the appropriate Holdback when you reduce or remove it.

   You can use the Pool Reserve column to increase the overall pool after you initiate the process without affecting employee targets. Example: Senior management distributes additional stock several days after the compensation review process starts. You can add a Pool Reserve to the top-level organization to distribute the additional stock to employees.

If the Compensation Review Process Maintain Pools task is locked and the administrator owning the lock is unavailable to unlock it, use the Unlock Compensation Review Maintain Pools Sessions task. When you unlock a pool maintenance session, Workday discards any pending changes.

Example: Keith left for vacation without submitting his changes. Kristen accesses the Unlock Compensation Review Maintain Pools Sessions task to unlock Keith's pool maintenance session. Workday discards Keith's changes, but Kristen accesses the pool maintenance task, makes updates, and submits. The compensation review then moves forward.

9. Click Launch.

Next Steps

You can Review the Pool Spend Analysis charts. The Total Process Award Pools section displays pool amounts for additional award types where you didn't select Deduct From Merit Pool during the *Configure Merit Pools* step.

Manage Awards for Compensation Reviews

Prerequisites

Initiate a compensation review process.

Context

You can review, edit, and approve recommendations across their subordinate organizations.

Steps

1. Access the in-progress compensation review process.
2. Select whether to propose awards for all organizations at once or drill down to review specific organizations.
3. (Optional) Modify the Compensate Employees - Assess Performance and Talent section.

   If you included editable fields in the Performance section of the grid configuration, you can edit these ratings if they were completed in Talent within the last 12 months.

   Note: Changes made to performance-related fields don't update ratings in Talent.
4. As you review award proposals, consider:

Option	Description
Submit All	Available if you manage more than 1 organization and you want to submit all employees at once.
Submit	Submit awards for employees within a specific organization.
Submit Directs	Available only if you selected *Next Participant Only* from the Approval Limited To prompt on the Create Compensation Review Options task. Submit proposals for organizations of your direct reports.

Option	Description
Complete on Behalf	Manually advance the entire organizational hierarchy to the current planner
Send Back	Click to send back for the organizational hierarchy to a previous planner.

Next Steps

Run these reports to review the date, time, responsible party, and notes for the last submitted change to awards:

- Compensation Review Merit Award Audit
- Compensation Review Talent Audit
- Compensation Review Bonus Payment Audit
- Compensation Review Stock Plan Award Audit

Review Promotions in Compensation Reviews

Prerequisites

Security: *Process: Compensation Management Plan Employee Management* domain in the Advanced Compensation functional area.

Context

You can select promotions for further review as part of an in-progress compensation review process.

Steps

1. Access the Review Promotions in Merit task.
2. Select an in-progress Compensation Review Event.
3. Select 1 or more Organizations and optionally select whether to Include Subordinate Organizations.
4. (Optional) Select 1 or more Job Profiles.
5. Select a display option:

Option	Description
Only Promotions with Requested Reviews	Displays only those promotions previously selected for review.
Only Promotions without Requested Reviews	Displays only those promotions not previously selected for review.
None of the Above	Displays all promotions.

6. Select the promotions for review.

   Workday routes selected promotions to the *Change Job* business process only after you submit merit award proposals. Workday stores your selections in case you access this task on multiple occasions.
7. (Optional) In the *Change Job* business process, add an entry condition rule for steps not to execute when the promotion originates from a compensation review process:

Source External Field or Condition Rule	Initiated by Merit Review Process
Relational Operator	Is blank
Comparison Type	Value specified in this filter

8. In the *Change Job* business process, verify that the *Propose Compensation Change* step doesn't automatically complete after initiation when it originates from the compensation review process.

   This is to prevent Workday from applying the promotion increase before the merit increase and additional adjustment. If the same person is both the initiator and reviewer, Workday might apply the promotion increase before the merit increase and additional adjustment. To avoid automatic approval, update the entry condition rule on the *Review Compensation Change* step.

Tasks

Steps: Set Up the Compensation Review Business Process on page 1157

Initiate Compensation Review Processes on page 1205

Manage Funding for Bonuses

Prerequisites

- Steps: Prepare for Compensation Reviews on page 1154
- Configure the *Initiate Compensation Review Process* business process to meet your organization's needs.

Context

You can change the bonus funding after you have submitted bonus amounts for individual employees. Example: Originally, bonuses totaled $1 million, but the company only pays $750,000.

Steps

1. Open the My Tasks item for *Manage Bonus Process Funding*.
2. (Optional) Update or add a company funded scorecard results.
3. Enter a percent in the Revised Funding % field.

   This is the percentage by which you want to fund the bonus pool.

Result

Workday uses the value entered in the Revised Funding % field and divides it by the original funding percent. The result is applied to the individual employee bonus amount to create the employee's new bonus amount.

Next Steps

You can add the *Manage Bonus Process Funding* as the last step in the compensation review business process.

Compensation Statements

Steps: Create Wage Theft Prevention Notices

Context

To meet requirements set for your organization or regulatory jurisdiction, you can provide employees with a statement that specifies their:

- Rates of pay, including overtime and doubletime.
- Basis of wage payment.
- Allowances.
- Regular payday.
- Employer name, address, and telephone number.
- Workers' Compensation Insurance carrier name, address, telephone, and policy number.

Note: Workday enables you to store and report any required data but doesn't assume responsibility for meeting regulatory requirements.

You can generate 1 or more wage theft prevention notices at any time. Alternatively, you can add the *Generate Wage Theft Prevention Notice* as a step to business processes.

Steps

1. Create a wage theft prevention notice document template using either of these:

Add Documents to Workday	Security in the System functional area: • *Document Library* domain • *Document Generation Results* domain • *Print Document Generation* domain
Concept: Workday Docs	Security in the System functional area: • *Drive* domain • *Docs* domain • *Document Library* domain

2. Create a security policy for the *Wage Theft Prevention Notice* business process.
3. Access the Maintain Event Categories and Reasons task and create reason codes for the *Wage Theft Prevention Notice* event.
4. (Optional) Configure the insurance carrier for workers.

   Access the Create Workers Compensation Carrier task and configure insurance carrier data, including the carrier's name, address, telephone, and policy number. Access the Edit Company Workers' Compensation Carrier task to associate the insurance carrier with the worker's company.
5. Configure the *Wage Theft Prevention Notice* business process.
   - You can optionally configure the *Generate Document* step so that an administrator can receive and edit the generated notice. Click Configure Generate Document and associate your document template.
   - Configure the *Review Documents* step for employees to review and acknowledge their notice. Click Configure Document Review and associate your document template to the step.

6. (Optional) Add the *Wage Theft Prevention Notice* to 1 or more of these business processes:
    - *Add Additional Job*
    - *Hire*
    - *Change Job*
    - *Request Compensation Change*
7. (Optional) Access the Generate Wage Theft Prevention Notice task to generate notices for 1 or more employees on demand.

    Security: Set up security groups for this task on the *Wage Theft Prevention Notice* business process security policy.

Result

For business processes that include the *Wage Theft Prevention Notice* process, Workday generates the notices and sends a My Tasks item to each employee in the target population. The employee must acknowledge receipt of the statement before the notice appears with their Worker Documents. You can cancel, rescind, and reassign Wage Theft Notice events.

Tasks

Edit Business Processes

Edit Business Process Security Policies

Steps: Set Up Workday Docs

Steps: Set Up Total Rewards Statement

Context

Set up the Total Rewards statement to display a breakdown of base pay, bonuses, health and other benefits, stock, commissions, and so on.

Steps

1. Access the Create Total Rewards Section task.

    As you complete this task, consider:

Option	Description
Title Text	Enter a title for the section.
Explanatory Text	Enter explanatory text or instructions for your section.
Quicklink	Enter an external web site URL for the section.
List / Table	Select list or table format.
Group Title	Enter a title for the Group.
Column Header Override	Enter your own labels for the primary and comparison columns.
Item	Select 1 or more Compensation, Benefits, or Payroll items. You can emphasize the item, override the item name, or provide explanatory text. If you select an item in the Comparison column set, the statement displays the primary and comparison items together.

Option	Description
	If you select an item from the Payroll categories of Earning/Deduction or Pay Component Groups, you must also select a Balance Period. You can also display the item if the value is zero or hide the value.

Security:

- *Reports: Total Rewards Statement (Results - Security based on Pay Component Security)* domain in the Core Payroll functional area.
- *Self Service: Total Rewards* domain in the Core Compensation functional area
- *Self-Service: Total Rewards Dashboard* domain in the Core Compensation functional area.
- *Set Up: Total Rewards* domain in the Core Compensation functional area.

2. Access the Create Total Rewards Rule task.

   A total rewards rule specifies criteria that apply to a subset of workers. These workers see their statement filtered through the template that uses the rule.

   Security: *Set Up: Compensation* domain in the Core Compensation functional area.
3. Configure Total Rewards Templates on page 1222.

   Templates enable you to:

   - Display compensation, benefits, and payroll data by country.
   - Display a targeted view that highlights commission-related compensation or executive packages.

Result

The Total Rewards Statement is available to a worker that meets these conditions:

- The worker matches the criteria specified in a total rewards rule.
- A total rewards template uses that rule.

Workers who meet these conditions can view Compensation > View Total Rewards from the related action menu. Workday displays the total amount that would result from a summation of compensation, benefit or payroll data. Workday displays all amounts in the currency of the base compensation.

Next Steps

You can view the Total Rewards Dashboard.

Configure Total Rewards Templates

Prerequisites

Security: *Set Up: Total Rewards* domain in the Core Compensation functional area.

Context

You can create a total rewards template that enables you to:

- Display compensation, benefits, and payroll data by country.
- Display a targeted view that highlights commission-related compensation or executive packages.

The total rewards template consists of:

- A condition rule that controls which workers can view their statement through the template.
- The total rewards sections that display on the statement.

Steps

1. Access the Create Total Rewards Template task.

   See: Steps: Set Up Total Rewards Statement on page 1221.
2. As you complete this task, consider:

Option	Description
Total Rewards Rule	Don't use a rule that: • Another template is already using. • Includes workers associated with another template.
Summary Display Text Override	(Optional) Enter an override for statements made up of only nonannual values. Enter up to 100 characters to override the default annual frequency displayed on the statement. Example: If all items on your Total Rewards Statement display monthly values, enter Monthly.
Disclaimer Text	(Optional) Enter text that displays at the bottom of the statement.
Rounding Rule	(Optional) Select a rule created with the Create Compensation Rounding Rule task. Workday rounds decimal values on the Total Rewards Statement according to the rule that you select. However, Workday doesn't round stock values.
Section Group Title	Enter a title for the section group.
Do Not Sum	(Optional) Select if you don't want the value of all the items in this section added to the grand total or displayed in the Total Rewards graphic.
Section	Enter a Section configured on the Create Total Rewards Section task.
Display Employee Cost	(Optional) Select to display any employee-paid portion of the compensation components in this section. Example: The employee pays for some health benefits. If selected, Workday adds a column to the table that displays the employee cost.

Next Steps

Access the Total Rewards Template Audit report to display the employees associated with more than the 1 template.

Setup Considerations: Manager Insights Hub on page 2933

Tasks

Translate Business Data

Steps: Create Custom Compensation Review Statements

Prerequisites

- Download and install Workday Studio, including Report Designer, from Workday Community.
- Enter *.rptdesign* in the File Type Set Up Instructions field on the Edit Tenant Setup - System task.
- Assign the Report Writer user group to the user modifying the report.

- Familiarize yourself with the Workday Studio documentation and tutorials for Report Designer.

Context

Workday provides 3 compensation review statement formats. You can create custom statements by defining a business form layout using Workday tasks and Report Designer in Workday Studio.

Steps

1. Download the report design attachments from Workday Community: Compensation Review (Merit) Statement on Workday Community.
2. Make a copy of the Print Compensation Review Statement report.
    a) Access the Copy Standard Report to Custom Report task.
    b) Select the Print Compensation Review Statement report from the Standard Report Name prompt.
    c) Rename the report.
    d) On the Share tab, click the appropriate share option.
    e) Save the report.

    Use the Compensation Review Employee Adjustment for Statements report data source to ensure you can release and generate statements on the Release Compensation Review Statement task.
3. Save the report data (XML) and XML schema (XSD) for later use in Workday Studio.
    a) As a related action off your custom Print Compensation Review Statement report, select Web Service > View URLs.
    b) Select Workday XML > REST > Workday XML.
    c) When the XML source code displays, save it as an XML file to your local drive.
    d) Select Workday XML > XSD > XSD.
    e) When the XSD source code displays, save it as an XSD file to your local drive.

        Use the Save Page As feature in your browser. Don't copy and paste the text from the browser.
4. Use Workday Studio to create a new report layout for the report design downloaded from Workday Community.
5. Associate your custom Print Compensation Review Statement report with the new report layout.
    a) Access the Create Business Form Layout task.
    b) In the Report Design prompt, select Create > Create Custom Business Form Report Design Attachment.
    c) Browse for the report design that you downloaded from Workday Community.
    d) Click Upload.
    e) In the Custom Report field, select your custom Print Compensation Review Statement report.

Example

This statement is now available for selection in the Create Compensation Review Statement Rule task. You can select it as the default layout or can associate it with 1 or more eligibility rules.

Steps: Manage Compensation Review Statements

Prerequisites

- Approve employee compensation review awards.
- Create custom compensation review statements.

Context

You can generate compensation review statements and make them visible to administrators and managers before, on, or after the effective date of the compensation review process.

You can include the Release Compensation Review Statement in the *Initiate Compensation Review Process* business process or access it as a standalone task.

Note: If you provide your employees with a custom statement report outside of the Release Compensation Review Statement task, a high volume of print jobs might affect performance.

Steps

1. (Optional) Access the Edit Tenant Setup - HCM task and select the Disable Create New Compensation Review Statement functionality for Employee on View Compensation Review Statements check box.

   If selected, this hides the Create New Statement button on the View Compensation Review Statement History view for Employee as Self.
2. Access the Release Compensation Review Statement as a standalone task if it isn't included as a step in the *Initiate Compensation Review Process* business process.

   As you complete this task, consider:

Compensation Review Statement Rule	Select a rule that defines the statement layout. You can create rules on the Create Compensation Review Statement Rule task.
Statement Release Date	You can select a date before, on, or after the effective date of the compensation review process. Workday releases statements at 12:00 AM on this date according to the time zone of each employee's location.
Generate Statement PDF	If selected, Workday generates compensation review statement PDF files on the configured start date, time, and time zone for all employees in compensation review process.

   Security: *Process: Compensation Management Plan Employee Management* domain in the Advanced Compensation functional area.

   See also: FAQ: Employee Visibility Date on page 1191.
3. (Optional) Access the Set Compensation Review Statement Visibility task to make statements visible for employees immediately.

   You can only use this task for a given organization and compensation review:

   - After you've run the Release Compensation Review Statement task.
   - Before either the Effective Date or the Employee Visibility Date configured on the compensation review.

Option	Description
Organization	Select an organization with a completed compensation review process.

Option	Description
	You can optionally include subordinate organizations.
Completed Compensation Review Process	Select a completed compensation review process for the organization that you selected. Workday displays only processes completed within the last 18 months and released with the Release Compensation Review Statement task.
Statement Visible	Available only after you've generated the statement PDF. If selected for the individual employee, Workday makes the statement visible. Example: You have meetings scheduled with 3 of your employees later today. Select these 3 employees to make their statements visible immediately.

If you don't run the Set Compensation Review Statement Visibility task, Workday makes compensation review statements visible to employees on the latest of either the Employee Visibility Date or the Effective Date configured on the compensation review process.

Security: *Worker Data: Compensation Review Statement Visibility* domain in the Advanced Compensation functional area.

4. Access the View Compensation Review Statements report.

   This report enables you to:

   - Generate compensation review statements for multiple employees.
   - Print compensation review statements in batch mode as a single PDF file.
   - View compensation review statements for employees after you've released them and generated the PDF.

   Security: *Worker Data: Compensation Review Statements* domain in the Advanced Compensation functional area.
5. Run the *Compensation Review Maintain Released Statements* mass operation.

   - Create a custom report using the All Compensation Review Process Employee Adjustments report data source.
   - Access the Mass Operation Management task. As you complete the task, consider:

Option	Description
Mass Operation Type	*Compensation Review Maintain Released Statements*.
Input Report	Select the custom report that you created.

You can:

- Delete all released statements.
- Delete those statements for a target population specified by an eligibility rule.
- Generate new statements.

Security:

- *Mass Operation Management* in the System functional area.
- *Compensation Review Maintain Employee Participation* in the Advanced Compensation functional area.

[FAQ: Employee Visibility Date] on page 1191

2023R1 What's New Post: Compensation Review Statement Generation and Delivery

FAQ: Compensation Review Statements

When can I access the Set Compensation Review Statement Visibility task?	• After you release the statement on the Release Compensation Review Statement task. • Before either the Effective Date or the Employee Visibility Date configured on the compensation review.
What happens when I don't use the Set Compensation Review Statement Visibility task?	Workday makes compensation review statements visible to employees on the latest of either the Employee Visibility Date or the Effective Date configured on the compensation review process.
Why do some reports show US Pacific Time when I selected my local time zone for PDF generation?	Workday generates compensation review statement PDF files as of the start date, time, and time zone you configure on the Release Compensation Review Statement task. However, Workday stores your selection in U.S. Pacific Time and displays U.S. Pacific Time on some reports. Example: September 10 2:00 PM Japan Standard Time is 10:00 PM U.S. Pacific Time. From your Tokyo office, you select Generate Statement PDF and configure:
Can I include ***Release Compensation Review Statement*** as a step in the compensation review process?	Yes, you can add Release Compensation Review Statement as a step in the *Initiate Compensation Review Process* business process.
How can I delete statements that have been released and are no longer needed?	Access the Mass Operation Management task and run the *Compensation Review Maintain Released Statements* mass operation type.

Prompt	Selection	Workday Stored Value
Start Date	09/10/2023	09/9/2023
Time	2:00 PM	10:00 PM
Time Zone	GMT +9:00 Japan Standard Time (Tokyo)	GMT -8:00 Pacific Time (Los Angeles)

Severance Plans

Steps: Manage Employee Severance

Prerequisites

Set up compensation elements and eligibility rules.

Context

You can manage how you compensate terminating employees:

- Create a severance matrix and worksheets.
- Assign a severance package to an employee.
- Integrate with Workday Payroll to pay out the severance package either as a lump sum or continual payments upon termination.

  Note: For third-party payroll users, use the Maintain External Payroll Input for Worker task for ongoing severance.

When using Workday Payroll for France to calculate and report statutory termination payments, you must manage employee severance payments directly through pay components or pay input.

Steps

1. Access the Maintain Event Categories and Reasons task and configure the *Post Termination Compensation* and *Severance Assignment* events.

   Security: *Set Up: Staffing* in the Staffing functional area:
2. Set up these business processes to meet your needs:

Business Process	Configuration Details
Severance Worksheet	Make sure that the *Deliver Severance Worksheet* step is the completion step.
Request Post Termination Compensation	Use this process if you don't plan on using severance.
Termination	Workday recommends that you configure the *Review* or *Approval* steps as the completion step. Doing so ensures the fields shared with severance worksheets aren't changed between the *Review* or *Approval* steps and the termination completion step.

   Security in the Core Compensation functional area:

   - *Set Up: Severance Packages*
   - *Severance Worksheet*
   - *Worker Data: Severance Worksheets*
3. Access the Maintain WARN Period task to configure WARN periods for different locations.

   Workday automatically populates the correct WARN period on the severance worksheet based on worker locations.

   Security: *Set Up: Severance Packages* domain in the Core Compensation functional area.

4. Create Severance Matrix on page 1229.

   Workday uses a severance matrix to calculate severance amounts, severance payment dates, and notification dates based on length of service and eligibility rules.
5. Create Severance Packages on page 1231.

   Specify the components that are part of the severance event, such as early retirement, plant closing, or reduction in workforce.
6. Create Severance Worksheets for Workers on page 1233.

   Create a worksheet that calculates and adjusts the estimated cost for terminating an employee.
7. Present the severance policy to the employee outside of Workday.
8. Complete Severance Package Assignments on page 1235.

   Record dates when you informed the employee of their severance and when they signed or declined.

   You can use the Edit Severance Worksheet Dates task to update the signed, declined, or revocation cutoff dates after termination is complete without changing other worksheet data.

The Next Level: Severance in Workday

Create Severance Matrix

Prerequisites

Security: *Set Up: Severance Packages* domain in the Core Compensation functional area.

Context

Create a severance matrix to determine:

- The compensation basis Workday uses to calculate the severance.
- The duration of severance payments both before and after the termination date.

Steps

1. Access the Create Severance Matrix task.
2. Select an Effective Date.

   You can add a severance matrix to a severance package after the effective date.
3. Select 1 Basis option and 1 Duration option to determine the severance matrix type:

Option	Description
Compensation Basis Range	Create the severance matrix based on a compensation basis range.
Service Length Basis Range	Create the severance matrix based on a service year compensation basis.
Specific Duration Entries	Create the severance matrix based on a specific duration amount. You can qualify who receives an amount according to length of service and eligibility rules.

Option	Description
Length of Service Multiplier	Create the severance matrix based on a duration amount as a multiplier of length of service.

4. Configure options applicable to the severance matrix type:

Option	Description
Duration Unit	Enter the units for the minimum and maximum ranges for each matrix band (row).
Length of Service Unit	Available if you based the severance matrix type on Service Length Basis Range. The options available depend on the units used to define the minimum and maximum length of service.
Calculate Compensation Basis As Of Date	Available if you based the severance matrix type on Compensation Basis Range. Select the relative date from which Workday calculates the compensation basis and determines eligibility for the matrix band.
Compensation Rounding Rule	Available if you based the severance matrix type on Length of Service Multiplier. Workday rounds the calculated severance or notice duration according to the selected rounding rule created on the Create Compensation Rounding Rule task.
Multiplier Order	Available if you based the severance matrix type on Length of Service Multiplier. Select when Workday performs rounding, before or after multiplication.

5. As you complete the severance matrix eligibility bands (rows), consider:

Option	Description
Minimum / Maximum Compensation Basis Range	Available if the severance matrix type is Compensation Basis Range. Enter the minimum and maximum values of the compensation basis range. You can enter up to 2 decimal places. Workday uses this range to determine eligibility for this matrix band.
Minimum / Maximum Length of Service	Available if you based the severance matrix type on Service Length Basis Range. Enter the minimum and maximum values of the length of service in Duration Units. You can enter up to 2 decimal places if the length of service is under 1 year. The minimum value of the next range must be equal to the maximum value of the previous range. Example: • Range 1: From 1.00 through 10.00. • Range 2: From 10.00 through 20.00.

Option	Description
	Workday uses this range to determine eligibility for this matrix band.
Eligibility Rules	Limits the severance matrix to a specific group of employees.
Duration	Available if you based the severance matrix type on Specific Duration Entries. When combined with Duration Units, defines how long an employee is entitled to receive severance or notice. If you enter zero, eligible employees don't receive severance pay.
Length of Service Multiplier	Available if you based the severance matrix type on Length of Service Multiplier. Specifies how long an employee is entitled to receive severance or notice when multiplied by the Minimum Years of Service and Duration Units. If you enter zero, eligible employees don't receive severance pay.
Minimum Duration	Enter the minimum duration the worker eligible for this band is guaranteed to receive. Used to validate any adjustments made on the Severance Package Assignment. If you leave the field blank or enter zero, Workday doesn't enforce restrictions if any dates change on the Severance Package Assignment.
Maximum Duration	Enter the maximum duration the worker eligible for this band is guaranteed to receive, regardless of the length of service multiplier. Used to validate any adjustments made on the Severance Package Assignment. If you leave the field blank or enter zero, Workday calculates zero severance duration for the worker.

Next Steps

You can access the Severance Matrix Report to compare severance matrices to each other.

Related Information
Tasks

Create Compensation Rounding Rules on page 1165

Create Severance Packages

Prerequisites

- If your company policy includes U.S. WARN payments, specify the number of days of advance notice a worker must receive before termination.
- Configure the *Severance Assignment* event in the Maintain Event Categories and Reasons task.
- Create severance matrix.

- Security: *Set Up: Severance Packages* domain in the Core Compensation functional area.

Context

A severance package defines the types of severance pay components that an employee receives upon termination.

Steps

1. Access the Create Severance Package task.
2. Consider:

Option	Description
Reason for Severance	Determines which severance packages and reasons you can assign to the severance worksheet for an employee.
Severance Matrix	Determines start and end dates that entitle an employee to receive severance payments.
Notice Matrix	Determines how far in advance an employee is to receive notice of termination.
Service Start/End Date	Select the dates you want Workday to use when determining the length of service.
Override Compensation Basis for Ongoing Severance Calculation	Select a compensation basis to override the calculation of salary plans for Post Termination Payments *Ongoing Severance Pay*. Workday evaluates which compensation basis to use in this order: a. The selected override compensation basis. b. The highest compensation basis the employee is eligible for. c. The total base pay compensation basis.
Termination Payouts	Configure 1 or more Severance Payouts that define single payment lump sums paid with the final paycheck. Select the One-Time Payment Plan Payroll and Payroll Interface use to pay out the severance amount.
Estimated Time Off Payout	Select 1 or more Time Off Payout and Time Off Plans combinations you want to: • Pay out at termination. • Display in the severance worksheet cost estimations.
Service Instructions	Configure 1 or more service instructions that apply to the employee. For each instruction, select an option and enter instructions.

Next Steps

Assign the severance package to an employee.

Related Information

Tasks

Create Severance Worksheets for Workers on page 1233

Create Severance Worksheets for Workers

Prerequisites

- Steps: Manage Employee Severance on page 1228
- Security in the Core Compensation functional area:
  - *Set Up: Severance Packages*
  - *Severance Worksheet*
  - *Worker Data: Severance Worksheet*

Context

You can create severance worksheets to calculate severance duration and amounts.

You can create and assign a severance worksheet to:

- A rehired employee each time they're rehired.

  Example: Don is a seasonal employee you rehire each year for several weeks to help with accounting and tax preparation. You assign a severance worksheet to Don each time you rehire him.
- An employee that you plan to terminate, is currently being terminated, or is already terminated.

If you create a severance worksheet on a date for a pay period where the worker doesn't have a payroll result, retro will be unprocessed.

You can also use the *Create Severance Worksheet* web service.

Steps

1. Access the Create Severance Worksheet task.
2. Select a Target Termination Date.
3. Select a Reason for Severance.

   Workday calculates the Notify By date by subtracting the Duration from the Target Termination Date.

   Example: A Target Termination Date of December 31 minus a 14-day Duration equals a Notify By Date of December 17.
4. In the Termination Dates section, consider:

Option	Description
Last Day At Work	Must be on or before the Target Termination Date.
Target Termination Date	Last day the employee's status is active, which must equal the end date of the last continuation payment plan. Changes in duration or start dates on continuation payment plans change this date.
Pay Through Date	Last day of compensation for an employee. Workday calculates this using the severance matrix associated with the package. Note: The Pay Through Date on the severance worksheet might differ from the Pay Through Date in the termination event.

Option	Description
	Workday uses the Pay Through Date from the severance worksheet to determine severance payment durations in the *Severance Worksheet* business process. However, if any of these conditions are true, Workday uses the Pay Through Date from termination events: • Worker doesn't have a completed severance worksheet. • None of the worksheets associated with the worker have Send to Payroll enabled. • *Termination* is complete after the delivery of the worksheet, and you entered a Pay Through Date in the *Termination* process that differs from the one in the worksheet.

5. For each Severance Calculation listed, consider:

Option	Description
Duration	Automatically populates from the matrix assigned to the package.
Start Date	This date affects the dates of subsequent payout amounts. You can edit the Start Date of the Payment Type listed first but it must match the Target Termination Date. You can't edit the start dates of subsequent payment types. Workday sets these to the day following the End Date of the previous payment type.

Result

Workday sends a notification to the role assigned to the *Review Severance Worksheet* action in the *Severance Worksheet* business process. After assignment approval, Workday sends a notification to the role assigned to the *Deliver Severance Worksheet* action in the business process.

Next Steps

To view in-progress or completed events, use the Severance Process Status report.

Complete Severance Package Assignments

Prerequisites

Assign severance packages to employees.

Context

To complete the severance package, you must record the:

- Date that you presented the severance package to the employee.
- Date by which the employee must accept or decline the severance package.
- The actual date the employee accepts or declines the severance package.

If you want this step to complete only if specific information is entered, add validations to the *Deliver Severance Worksheet* step of the *Severance Worksheet* business process.

Steps

1. Access the My Tasks item for Severance Worksheet.
2. In the Severance Actions section, consider:

Option	Description
Send to Payroll	If selected, Workday uses the Severance Worksheet to: • Populate data in the *Termination* process, unless a termination process is already in place for the employee. • Create compensation events for the employee's severance. You can only select Send to Payroll on 1 severance worksheet per employment. If left blank, Workday won't associate the severance worksheet with the *Termination* process or generate compensation events.
Severance Response Due	The deadline for the employee to sign and accept the severance package.
Worksheet Delivered	The date the employee received the documents detailing their severance package.
Notified Employee	The date you notified the employee of their severance package.
Worksheet Signed	The date the employee signed their severance package.
Worksheet Declined	The date the employee declined their severance package.
Revocation Cutoff	The deadline for the employee to change their mind after signing their severance package.

Option	Description
	Displays when you enter a Worksheet Signed or Worksheet Declined date.

3. (Optional) Access the Edit Severance Worksheet Dates task.

   You can update the Signed Date, Declined Date, or Revocation Cutoff dates after termination is complete without changing other worksheet data.

Request Compensation Change After Termination

Prerequisites

- Define the steps for *Request Post Termination Compensation* business process.
- Define reasons for the *Post Termination Assignment* event using the Maintain Event Categories and Reasons task.

Context

You can request a salary or hourly plan assignment for an employee 1 day after the employee's termination date up to the employee's Pay Through Date. The termination date and the pay through date is defined from either the process or the employee's severance package.

Workday uses the Pay Through Date from a severance worksheet to pay severance and to determine payment durations in the *Request Post Termination Compensation* business process.

Note: Workday recommends that you use either the *Request Post Termination Compensation* business process or severance, but not both simultaneously.

Steps

1. Access the Request Post Termination Compensation task.
2. As you complete this task, consider:

Option	Description
Effective Date	Enter the effective date for this request. The date must be 1 day after the termination date and 1 day before the pay through date.
Employee	Only terminated employees that match the requirements of the effective date are available for selection.

3. Complete the proposed compensation.

   If there was already a salary or hourly plan in the post-termination section of a severance package, Workday displays it as deleted. However, you can restore them.

   Workday doesn't calculate retroactive payments.

Tasks

Steps: Manage Employee Severance on page 1228

Terminate Employees on page 699

Benefits

Set Up Benefits

Steps: Set Up Benefits

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

Set up your benefit plans for health, insurance, and retirement savings.

Steps

1. Manage Benefit Coverage Types on page 1243.

   Define categories of health care, health savings, retirement plans, spending account, and insurance plans. Benefit coverage types are linked to enrollment events. These events define the types of benefits that employees can gain or lose with a benefit event. Coverage types help define benefit plans.
2. Access the Maintain Health Care Classifications task.

   Health care classifications refer to types of provider organizations such as *PPO*, *EPO*, *HMO*, and *DHMO*.
3. Define benefit coverage targets.
   - Create Health Care Coverage Targets on page 1246.
   - Create Insurance Coverage Targets on page 1247.
4. Create Benefit Providers on page 1248.
5. Create Enrollment Events on page 1343.

   Identify
   - Events that trigger benefit gains and losses.
   - The coverage types an employee can lose or gain with each event.

   Examples:
   - Open enrollment.
   - Termination.
   - Birth of a child.
6. Create Enrollment Event Rules on page 1349.

   For the enrollment events you created, define the conditions of coverage. Examples:
   - Coverage begin and end dates.
   - Increase limits.
   - Evidence of insurability requirements.
   - Waiting periods.
7. Set Up Benefit Electronic Signatures on page 1255.
8. Create Benefit Eligibility Rules on page 1255.

   Define rules that group workers together or exclude workers from specific benefit elections.

9. Create Benefit Groups on page 1249.

   Define groups of workers for similar benefit plans and elections based on the eligibility rules.
10. Define benefit plans.

    See Steps: Set Up Employee Benefit Plans on page 1288.
11. Configure passive events.

    Manage benefit gains and losses that result from the passage of time rather than from online changes to employee data.

    See Steps: Set Up Passive Events on page 1441.
12. Set up benefit credits and surcharges.

    See Steps: Manage Benefit Credits and Surcharges on page 1390.
13. Define cross benefit plan dependencies and rules.

    - Create Cross Plan Enrollment Prerequisites on page 1382 to make enrollment in one or more primary plans a prerequisite for enrollment in a secondary plan.
    - Create Cross Plan Insurance Coverage Maximums on page 1384 to place a coverage limit on the combined total of 2 or more insurance plans.
    - Create Cross Plan Insurance Percentage Maximums on page 1386 to limit plan coverage to a percentage of the total coverage in 1 or more other insurance plans.
14. Create instructional text to help workers complete their benefit enrollments.

    See Set Up Benefit Enrollment Instructions on page 1253.
15. (Optional) Set Up Auto-Enrollment for Benefit Plans on page 1381 that automatically enroll an employee if they don't complete their benefit elections.
16. Create Benefit Plan Year Definitions on page 1418.

    Define the collection of benefit plans that are valid for a given year or other plan period. For retirement savings, define a separate plan year if you don't have re-enrollment each year.
17. Set up benefit eligibility for employees that have multiple jobs.

    See Steps: Set Up Multiple Jobs for Benefit Eligibility on page 1402.
18. Configure requirements for evidence of insurability.

    See Steps: Set Up Evidence of Insurability on page 1453.
19. Set up COBRA automation for US employees.

    See Steps: Set Up COBRA Automation on page 1457.
20. Set up Affordable Care Act reporting for US employees.

    See Steps: Set Up Affordable Care Act Measurements and Eligibility on page 1466.
21. Set up individual benefit rates for private health insurance plans.

    See Steps: Manage Individual Benefit Rates on page 1268.

Next Steps

Set up open enrollment.

The Next Level: Solutions for Global Benefits

Setup Considerations: Benefits for Mergers and Acquisitions

You can use this topic to help make decisions when planning your configuration and updates resulting from a merger or acquisition. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

When you're part of a merger with or acquisition, you can use Workday Benefits to update your benefit plans and transition employees to new or changing benefits.

Business Benefits

If you continue to use Workday for benefits as a result of a merger or acquisition, you can:

- Save effort by adding new benefit groups, providers, plans, and events to your existing tenant configuration.
- Can easily import new workers, while preserving existing worker data.

Use Cases

- Transition employees to new or change benefit elections.
- Change payroll earnings and deductions for new or updated benefit plans.
- Gather and import Affordable Care Act 1094-C and 1095-C data for new employees.

Questions to Consider

Question	Considerations
Will an acquired company keep their current benefits?	If yes, you can add plans and providers to Workday. If not, you can add them to existing plans with new benefit groups.
Do you have new locations?	Consider adding new benefit groups for new locations, especially if they are in a different country.
Do you need to run an off-cycle open enrollment event for new employees?	The simplest way to trigger benefit elections is through the hire process. However, if you need to change plans for existing employees, you can run an off-cycle open enrollment event. You need to: • Create a new benefit group to trigger the off-cycle open enrollment. • Update your benefits defaults for the new group.
After a merger, who is eligible for your new benefit plans?	You can update eligibility rules to ensure that new employees are only eligible for any new benefit groups. You can run the *View Workers in Multiple Benefit Groups Audit* job to check your eligibility rules.
Do you have new providers?	You need to create new providers if new employees have unique providers. Also, if you have a new location, your existing providers might

	not be available there so you might need to find new providers.
Do you have new benefit plans?	If you create new providers, you need to create new plans. With new plans, you: • Need to configure the rules that define eligibility for the plans and the benefit groups. • Can work with payroll to create new deductions or earnings for the new plans.
Do you have new vendors?	You can check the Workday Cloud Connect for Benefits catalog for Workday-provided vendor templates.

Recommendations

- To maintain a clear enrollment history for new employees, create a new open enrollment event type for an off-cycle open enrollment.
- Check your rate frequencies for benefit groups, benefit plans, and pay groups. Determine whether they need to match. Example: Monthly versus quarterly.
- Consider enabling the Mobile Open Enrollment app, especially if any employees don’t have personal computers.

Requirements

Review the Open Enrollment Checklist on Community. The checklist helps you verify that you have made all new and updated changes. It can help with your questions before you begin setup.

If you run an off-cycle open enrollment event, create a benefit group for the new employees to trigger the event.

Create new benefit plans or providers. Don’t rename an existing benefit plan or provider. These changes impact current integrations and benefit enrollment history.

If you create a new event type, you need to add the new type to your enrollment event rules.

Prepare for ACA 1095-C reporting for United States employees:

- Collect and store data from prior years in case of IRS auditing.
- Ensure that you have all the data needed to file with the IRS for the acquisition or merger calendar year.
- Prepare the Import 1095-C Data EIB with any months that you include for your ACA filing that aren't already in the tenant. Consult your legal counsel to determine the correct number of 1094-Cs for each tax year.
- Be aware of any new U.S. states for your employee population. There might be state level 1095-C filing requirements.

Limitations

No impact.

Tenant Setup

In the Tenant Setup for HCM, under Benefits, you can select the Enable Mobile Benefits check box to enable the open enrollment on the Workday Benefits mobile app.

Security

Domains	Considerations
Set Up: Tenant Setup - HCM in the Systems functional area.	Enables the administrator to enable or disable benefit configuration options in the Edit Tenant Setup - HCM task
Set Up: Benefits in the Benefits functional area.	Enables the benefits administrator to access open enrollment configuration tasks.
Worker Data: Benefit Eligibility in the Benefits and Personal Data functional areas.	Enables the benefits administrator to access the Benefits Eligibility by Worker report.
Worker Data: Benefits in the Benefits and Personal Data functional areas.	Enables the benefits administrator to manage worker's benefit elections, including access to the Benefits tab on the worker profile.
Worker Data: Insurance Calculated Coverage in the Core Compensation functional area.	Gives the benefits administrator access to the Calculated Coverage report field. Administrators can view individual worker's calculated coverage amounts for the plans they enroll in.
Self Service: Benefits in the Benefits functional area.	Enables employees to complete benefit elections

Business Processes

You can add worklets for embedded analytics to business process steps, providing links to additional information.

Note: Ensure that you configure the worklets on each business process.

Business Processes	Considerations
Change Benefits for Open Enrollment	Initiates open enrollment for benefits.
Change Benefits	Launches the *Change Benefits for Life Event* business process.
Change Benefits for Life Event	Initiates enrollments for life events, including births, divorce, and promotion.

Reporting

Reports or Dashboards	Considerations
Active and Completed Open Enrollment Status Report	Use this report to view and manage the status of active and completed enrollment election events. This report provides more detail than the Open Enrollment Status Report, but can take a long time to run. Workday recommends that you limit your use to managing enrollment elections *after* finalizing open enrollment events.
Benefit Corrections in Progress Audit	Use this report to view a list of benefit corrections that you've started, but not yet submitted.
Benefits Eligibility by Benefit Group	Use this report to view future-dated benefits groups. You can run the report for each benefit group using the open enrollment event date.

Reports or Dashboards	Considerations
	Compare the reports to ensure that no workers exist in more than 1 group.
Benefit Events Status Report	Use this report to view workers with benefit events and the status of those events.
Finalize Open Benefit Events	Use this task to clean up all outdated enrollment events.
Manage Evidence of Insurability Status	Use this task to clean up all outdated EOI requests.
Open Enrollment Status Report	Use this report to view and manage workers with open enrollment events. You can view the status of those events before finalizing enrollment. This report provides better performance than the Active and Completed Open Enrollment Status report.
Terminated Employees Eligible for Benefits	Use this report to view the terminated employees that can still receive benefits.
View Benefit Eligibility Rule Results	Use this report to troubleshoot to see why someone is or isn't meeting an eligibility rule.
View Workers in Multiple Benefit Groups Audit	Use this job to view workers eligible for more than 1 benefit group so that you can troubleshoot this issue. Don't use for future-dated benefit groups.
Workers for Benefit Group by Most Recent Benefit Event	Use this RDS to create a custom report that audits benefit enrollments data.
Workers no longer eligible for Open Enrollment	Use this report to view workers who aren't eligible for benefits but currently have an open enrollment event.

Integrations

Give yourself plenty of lead time for testing a new integration.

Workday Benefit Connectors:

- Providers: Workday provides integration templates through Workday Cloud Connect for Benefits (CCB). There's a CCB template for each provider. For new providers, check the Cloud Connect for Benefits catalog. You can also use third-party integrations that Workday doesn't support as part of CCB.
- Affordable Care Act: Workday provides the ACA Connectors to assist with reporting to the IRS.

When you offer a new benefit plan with the same provider, link the plan to your existing integration. Likewise, if you discontinue a plan, remove the integration link.

You can change integration maps for benefit providers to specify how values in Workday map to values in an external endpoint.

If you're introducing new benefit plans or employee locations, you'll likely need to update your integration mapping. Example: Some medical providers require a unique proprietary vendor code that you need to send for each state. You might need to map codes for states that haven't had employees.

Consider how to include payroll balances. CCB integrations can only access actual contribution amounts from Workday Payroll. If you use a third-party payroll provider, benefit integrations send estimated amounts based on the benefit plan setup.

Connections and Touchpoints

Benefits enrollment interacts with Payroll for plan-related deductions and credits.

These types of employee data drive eligibility rules for benefit plans:

- Exempt status.
- FTE.
- Job profiles.
- Management levels.
- Pay rate type.
- Scheduled weekly hours.

Compensation data can impact benefit plans like insurance.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Manage Benefit Coverage Types

Prerequisites

- For health care plans, create health care classifications.
- For insurance plans, create insurance coverage targets.
- For additional benefits plans, create additional benefit coverage targets.
- For plans that require coverage, create default plans and priorities.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

Define the types of coverage that you plan to offer to your workers for each benefit plan type. Coverage types provide categories that benefit plans can fit in.

Examples:

Benefit Plan	Benefit Coverage Type
Health Care	Medical, Dental, or Vision
Health Savings Account	HSA or HSA Catchup
Insurance	Basic Life or Long-Term Disability
Retirement	401(k) or 403(b)
Spending Accounts	Health Care or Dependent Care

Benefit Plan	Benefit Coverage Type
Additional Benefits	Long-Term Care or Commuter

Steps

1. Access the Maintain Benefit Coverage Types task.
2. As you complete each section, consider:

Option	Description
Name	Enter the name of the coverage type that employees see during elections. Note: Limit the length of the name because it displays in a pop-up message that confirms the selection. Names longer than 20 characters might cause Workday to truncate the confirmation message.
Classifications	Limits the coverage type to a specific health care classification.
Beneficiary Designation	Specifies whether a worker must designate a beneficiary.
Use Coverage Target	Enables the coverage targets to be associated with rates and eligibility on the benefit plan.
Plan Behavior	Select: • *Accept Amounts* and *Accept Percents* when you define the minimum and maximum amounts that an employee can contribute. During enrollment, an employee can enter the contribution as either a flat amount or as a salary percentage. • *Rates* when you want to assign specific rates for an additional benefits plan.
Only One Election	Limits employees to elect only 1 benefit plan belonging to the specified coverage type. Otherwise, employees can select more than 1 plan belonging to the designated coverage type. Examples: • You have 2 medical benefit plans, an HMO and a PPO plan, and permit workers to select only 1 of the plans. • You have 2 basic life insurance plans and permit workers to select only 1 of the plans.
Must Elect Coverage	Select if employees must elect a plan belonging to the specified coverage type during benefit enrollment (employees can't waive coverage).

Option	Description
	Note: To implement this option, define default plans and priorities using the Maintain Benefit Defaults task.
Display Employee Cost	Displays employee costs for a benefit coverage type on the employee's benefit enrollment form and various reports. Required for the coverage type of plans with employee-defined contributions.
Display Employer Contribution	Display employer contributions to a benefit coverage type on the employee's benefit enrollment form and various reports.
Flex Credits Can Be Applied	Applicable for the benefits integration with Sun Life. Identify which coverage types that you want included when: • Calculating an employee's total benefit cost. • Applying benefit credits to offset the costs.
Medical	Indicates what coverage types that you want Workday to consider as medical. Used by: • Vermont Employer Health Care Contribution Tax • Patient Protection and Affordable Care Act
Use Coverage From Plan Year End	Available for Workday Payroll and integrations based on the Payroll Interface Output File template. Calculates benefit rates and coverage using the plan year-end. Verifies that the integration attribute *Calculate Benefits as of Pay Check Date* isn't selected in the integration system.
Enable Coverage Begin Date Override	Available only to health care coverage types. Enables you to override the Workday-calculated coverage begin date for a plan.
COBRA Eligible	Indicates that a coverage type is eligible for COBRA. Select to automate COBRA eligibility checks and have the information automatically populated in the COBRA record.

Next Steps

Use the:

- Benefit Coverage Types report to view a list of all coverage types and their detailed configurations.
- Create Benefit Plan task to associate coverage types with benefit plans.
- Maintain Enrollment Event Types report to identify the coverage types that are available to employees as part of an enrollment event.
- Create Enrollment Event Rule task to define the requirements and conditions of enrollment.
- Maintain Custom Validations task to create custom validations for enrolling employees in coverage types.

If you've enabled coverage begin date override, override the coverage begin date of a plan on the *View Summary* page of a benefit election. This only applies to elections processed with the *Change Benefits for Life Event* business process, or the Correct Benefits task.

2023R2 What's New Post: Coverage Begin Date Override

Create Health Care Coverage Targets

Prerequisites

- Define employee relationship types.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

Define health care coverage targets to control who can enroll in health care plans. Example: Employee Only, Employee + Spouse, or Employee + 1 Child.

The Derived Coverage Targets feature requires that each Name (coverage target) must have a unique combination of the Minimum Dependent Count, Maximum Dependent Count, and Valid Dependent Types. If you configure 2 coverage targets to be functionally identical, Workday cannot select which one to use for the Coverage field when you change benefit elections.

Steps

1. Access the Maintain Health Care Coverage Targets task.
2. As you complete the task, consider:

Option	Description
Display Order	Controls the order in which coverage targets display on the benefit enrollment form.
Minimum Dependent Count	Enter the minimum number of dependents that can be covered. Examples: • *Employee Only* can't enroll any dependents; Minimum Dependent Count = 0. • *Employee + Spouse* can enroll 1 dependent; Minimum Dependent Count = 1. • *Employee + Family* can enroll 1 - 9 dependents; Minimum Dependent Count = 1.
Maximum Dependent Count	Enter the maximum number of dependents that can be covered.

Option	Description
	Examples: • *Employee Only* can't enroll any dependents; Maximum Dependent Count = 0. • *Employee + Spouse* can enroll 1 dependent; Maximum Dependent Count = 1. • *Employee + Family* can enroll 1 - 9 dependents; Maximum Dependent Count = 9.
Valid Dependent Types	Identify the dependent types that are eligible for coverage. You can select only those relationships that have blank, *Dependent*, or *Beneficiary* in the Restrict to Relationship field on Maintain Related Person Relationships task. Example: Define *Child* and *Spouse* as Valid Dependent Types for a target group that includes *Employee + Family*.
Requires Enrollment	Select this check box if you want to require that an employee with this dependent type be enrolled in the health care plan. If you have more than one dependent type selected in the Valid Dependent Types field, Workday requires that an employee's dependent type match one of the listed types.
HSA Coverage Target	If employees are eligible for health savings accounts (HSAs), associate each health care coverage target with an HSA coverage type.

Result

Use the:

- Maintain Health Care Coverage Targets task to edit coverage targets.
- Health Care Coverage Targets report to view a list of all coverage targets and detailed information for each.

Manage Personal Relationship Types on page 1498

Steps: Set Up Benefits on page 1237

Create Insurance Coverage Targets

Prerequisites

- Define dependent or beneficiary types.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

Define insurance coverage targets that control who can enroll in insurance plans. Example: *Employee Only* and *Domestic Partner*.

Steps

1. Access the Maintain Insurance Coverage Targets task.
2. As you complete the task, consider:

Option	Description
Maximum Dependent Count	Enter the maximum number of dependents covered. Examples: • *Employee Only* can't enroll any dependents; Maximum Dependent Count = 0. • *Spouse* can enroll 1 dependent; Maximum Dependent Count = 1. • *Dependents* can include all children; Maximum Dependent Count = 99.
Valid Dependent Types	Identify the dependent types that are eligible for coverage. You can select only those relationships that have blank, *Dependent*, or *Beneficiary* in the Restrict to Relationship field on the Maintain Related Person Relationships task. Example: Define *Child* and *Spouse* as Valid Dependent Types for a *Family* target group.

Result

Use the:

- Maintain Insurance Coverage Targets task to change coverage targets.
- Insurance Coverage Targets report to view a list of all coverage targets and the detailed information for each.
- Maintain Benefit Coverage Types task to associate coverage targets with insurance coverage types.

Create Benefit Providers

Prerequisites

- Define benefit provider identifier types with the Maintain Benefit Provider Identifier Types task. Example: Medical, Dental, or Retirement Savings.
- Define electronic signature text.
- Create an integration system for the provider.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

You can set up health care, insurance, or retirement planning providers and map them to the appropriate benefit plans.

Note: You can't change a provider after creating a benefit plan. Create a new plan with a different provider.

Steps

1. Access the Create Benefit Provider task.
2. As you complete the task, consider:

Option	Description
Carrier URL	Select the carrier website link to display additional plan or enrollment details.
Electronic Signature	Select the electronic signature text to display at the end of benefit election pages. The statement informs employees that their name and password are valid electronic signatures.
Benefit Program Partner	Select to create benefit program cards for this provider.

Next Steps

Access the Create Benefit Plan task to associate the provider to benefit plans.

Related Information
Tasks
Set Up Benefit Electronic Signatures on page 1255
Create Integration System

Create Benefit Groups

Prerequisites

- Create benefit eligibility rules.
- Define enrollment event rules.
- Set up benefit credits.
- Security:
    - *Set Up: Benefits* in the Benefits functional area.
    - *Manage: Benefits for Organizations* in the Benefits functional area.

Context

Workday enables you to create dynamic benefit groups. Using eligibility rules that define membership criteria, Workday automatically assigns employees that meet the criteria to that group.

Example: Use eligibility rules to assign executive management staff to a single benefit group, salaried employees to a second group, and hourly employees to a third group.

Note: When you create benefit groups, only include workers who are eligible for any benefits. When you launch open enrollment, all included workers receive open enrollment notifications to participate, even if they can't make benefit elections.

You can also define how Workday applies benefit credits or offsets for a specific benefit group or a coverage type within the group.

Steps

1. Access the Create Benefit Group task.
2. On the Group Rules tab, consider:

Option	Description
Enrollment Event Rule	Defines how Workday processes changes in coverage for the benefit group.
Waiting Period Calculation Order	Calculates the start date for a benefit plan when an enrollment event has both a waiting period and a begin date.
Frequency	Defines the frequency displays during benefit enrollment and when viewing current benefit elections.
Country	Defines the country in which the benefit group is valid. This option is useful if you have employees in multiple countries, and would like to assign 1 country to this benefit group. For enrollment event types that you set up by country, select the country used in the Restricted to Countries field on the Create Benefit Event Type task.
Enrollment Signature Line	Adds an employee signature line on the printable enrollment summary and the printable beneficiary designation page.
EOI Takes Effect On Date	If you don't select a date, Workday automatically selects the approval or denial date.
Calculate Remaining Pay Periods as of Period End Date	Used to calculate the number of remaining deductions for health savings accounts and spending accounts. Select this check box to include all pay periods that end in the plan year, even if the payment date is outside the plan year.
Include Pay Periods that End Before the Deduction Begin Date	Used to calculate the number of remaining deductions for health savings accounts and spending accounts. Select this check box to include pay periods that end before the Deduction Begin Date, if they have a payment date after the Deduction Begin Date.
Adjust Final Pay Period Deductions in Workday Payroll to Meet Annual Goals	Calculates a variable HSA or spending account deduction for the final pay result of the year if Workday can't evenly divide the total deduction amount across paychecks. Example: You have 24 pay periods and the employee selects a $2000 election. The value per pay period is approximately $83.33, but totals $1999.92 across all pay periods. To meet the exact $2000 goal, Workday can adjust the deduction in the final pay period to $83.41.

Option	Description
	When selected, enter a threshold percentage of 1% or more in the Maximum Percent Change from Previous Deductions field. The worker needs to have an HSA or spending account deduction on the next to last pay result of the year. Workday uses the threshold percentage with this deduction to determine the amount of the final deduction, rounding up or down. If the amount needed to true up the final payment is outside of the maximum percentage change, Workday doesn't add or subtract any amount. Example: The next to last pay result is $100 and you set the Maximum Percent Change from Previous Deductions check box to 1 percent. Workday Payroll can add or deduct an additional $1 from the last pay result to true up the deduction. You can't select this option if you select the Calculate Remaining Pay Periods as of Period End Date check box.
Calculate As Of	Defines the date Workday uses to calculate the employee age.

3. On the Benefit Credits tab, consider:

Option	Description
Enable Benefit Credits	(Optional) Select to enable benefit credits for the benefit group.
Enable Remaining Benefit Credits	(Optional) Select Enable Remaining Benefit Credits, to display the remaining credits and credit offsets to workers during enrollment on their benefits statements.
Display Benefit Credits in Enrollment	(Optional) Select to display benefit credits and offsets during an enrollment event.
Excess Credits to Health Spending Account (Canada)	Available if you clear Enable Remaining Benefit Credits. Applicable only with the benefits integration for Sun Life and when you select Flex Credits can be Applied check box on the Maintain Benefit Coverage Types task. Clear this check box if you want to add unused credits to employee-taxable income. To calculate the cash value of unused flex credits, enter an earning in the Earnings and Deductions field.
Source Coverage Type for Unused Plan Credits	Add the coverage types from which you can select unused plan credits.

Option	Description
Benefit Group Credits	Assign benefit credits and bundles to this benefit group.
Earnings Code	Select any applicable earning codes for the benefit group.

4. Assign credits to coverage types in the Coverage Types Credit grid. Consider:

Option	Description
Coverage Type	Coverage types created in the Maintain Benefit Coverage Types task.
Credits if Eligible	The credits available for the coverage types that meet eligibility rules for the benefit group.
Credits if Elected	The credits available if members of the benefit group elect the coverage type.
Credits if Waived	The credits available if members of the benefit group waive the coverage type.
Earnings Code	The earning codes for the coverage type.

5. Select deduction offsets and their priority to help defray benefit plan costs with credits. Consider:

Option	Description
Coverage Type	Select coverage types that have the Flex Credits can be Applied check box selected in the Maintain Benefit Coverage Types task.
Benefit Credit Offset Order	To indicate a higher priority, enter a lower value.

6. Map obsolete plans to new ones.

   Use the Benefit Plan Mappings tab to replace any obsolete benefit plan with another. During open enrollment, Workday converts employees to the new benefit plan. Successful conversions require:

   - Coverage targets between the old and new plans must be the same for health care and additional benefit plans.
   - Insurance coverage targets between the 2 plans must be the same.
   - The coverage levels and coverage type for the old insurance plan must match the new plan.
   - Dependents in health care and insurance plans must meet the eligibility rules for the new plan.
   - The employee contribution type (% or flat amount) in retirement plans must be the same.
   - The minimum and maximum values/max values must be the same in the retirement plans.
   - The currency in the old plan must match the new plan.
   - A benefit enrollment event.

   Best Practice: When a benefit plan becomes obsolete, you can use the Do Not Use check box in the Create Benefit Plan task to hide the plan in any Benefit Plan prompt.

Next Steps

- Test the eligibility rules for your benefit group, ensuring that workers have 1 group assignment each.
- Associate the benefit with a benefit plan using the Create Benefit Plan task. Not all workers in a benefit group have to qualify for the same benefit plan. You can define eligibility criteria at the plan level to limit certain plans to subgroups within the larger benefit group.

- Enable benefit group persistence to use eligibility information that Workday saves daily. You can select the Use Persisted Benefit Groups check box in the Edit Tenant Setup - HCM task. Workday tasks frequently check eligibility, and using this option can improve performance.

Reference: Edit Tenant Setup - HCM

Set Up Benefit Enrollment Instructions

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

You can provide instructions that display on the enrollment landing and plan selection pages to help workers with their benefit enrollments. You can also provide alternate instructions to specific benefit groups, benefit event types, or both.

Steps

1. Access the Maintain Enrollment Instructions task.
2. Select 1 of these options:
    - General Enrollments Sections: These sections include the landing page, benefit plans, and other types of instructions related to enrollment elections. Examples: Health Care and Evidence of Insurability.
    - Tobacco Use Sections: These sections enable you to configure instructions for employee and dependent tobacco use questions.
3. As you complete the General Enrollment sections, consider:
    - Target where and for who Workday displays instructions by selecting benefit groups, enrollment event types, or the 6 benefit plan types. You can select more than 1 filter. Workday prioritizes filters in this order: Coverage Type, Enrollment Event Type, and Restrict to Benefit Groups.
    - Click Format Text to add links to external websites or documents.
    - You can't remove or customize the enrollment confirmation message. Workday automatically displays this message when workers complete their enrollment successfully, before your configured instructions in the Submit Elections Confirmation section.

Option	Description
Restricted to Benefit Groups	(Optional) Select benefit groups that need to view the specialized instructions, questions, and responses. You might want to use this option to meet regional or national requirements, or for contract employees.
Coverage Types	(Optional) Specify 1 or more coverage types for specific instructions. You can select coverage types in these sections:

Option	Description
	• Additional Benefits Elections • Health Care Elections. • Insurance Elections. • Retirement Savings Elections.

4. (Optional) As you complete the Enrollment Tobacco Use and Dependent Tobacco Use sections, consider:

Option	Description
Restricted to Benefit Groups	Select the benefit groups that view the specialized instructions, questions, and responses. You might want to use this option to meet regional or national requirements, or for contract employees.
Question Text	Enter a tobacco use question for workers to answer. Example: Have you used tobacco in the last 12 months?
Question Responses: Text	Enter the response options that employees can select from. You can enter 2 or 3 responses. Example: You can add a third response option for Not Applicable.
Question Responses: Values	Assign either *Uses Tobacco* or *Does Not Use Tobacco* to the response. If you have a third response, you can assign either of these values to it. Assigning these values triggers any tobacco surcharges or credits that you add to a benefit plan rate. Examples: You can assign *Does Not Use Tobacco* to these responses: Yes, but I'm in a cessation program or Not Applicable.
Display Question for Spouse or Domestic Partner During Enrollment	Select to enable the tobacco use question for spouse or domestic partner. Workday automatically displays the tobacco use question on the Add Dependent task and requires a response. If you don't track tobacco use, you can add a row in the Question Responses grid and enter Not Applicable in the text field. Select the *Does Not Use Tobacco* option and the Default Response check box for the row.

Note: If you hide the Tobacco Status (Dependent) localized field, during enrollment, Workday hides the tobacco question instructions for spouses and dependents.

Related Information

Tasks

Steps: Set Up Benefits on page 1237

Set Up Benefit Electronic Signatures

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

Enter the text that displays as the electronic signature on the benefit election pages.

Steps

1. Access the Maintain Benefit Electronic Signatures task.
2. Enter text for an electronic signature that Workday automatically uses for all coverage providers.

   You can add additional signature text for specific providers.

Result

When the employee submits their benefit elections, all electronic signatures that meet the defined criteria (provider, country, or benefit group) display on the Submit Benefit Election Review page.

You can use the:

- Create Benefit Provider task to associate the electronic signature text with a benefit provider.
- Benefit Electronic Signatures report to view a list detailed information for all benefit-related electronic signatures.

Set Up Save for Later

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

You can specify whether your workers can use the Save for Later button during enrollment events by locale. This button saves a draft of a worker's elections, but doesn't submit them for processing. When workers click the button, Workday displays a reminder to return to the enrollment event and submit their elections. You can enable or disable the Save for Later button. When you disable the button, Workday saves the worker's elections if they exit the enrollment event without submitting the elections.

Steps

1. Access the Maintain Localization Settings task.
2. To enable or disable the button, select *Benefits Enrollment* from the Area prompt and add or delete the locales.

Related Information

Tasks

Steps: Set Up Open Enrollment on page 1414

Create Benefit Eligibility Rules

Prerequisites

Security: *Set Up: Benefits* domain in the Benefits functional area.

Context
Create the condition rules that Workday uses to identify:

- An employee's eligibility for a benefit group.

  They provide access to benefits for a group of employees. You can have only 1 eligibility rule per benefit group. Membership in a benefit group must be exclusive. Associate each worker with only 1 group based on eligibility criteria. Otherwise, Workday can't determine which benefit plans, coverage options, and event rules apply to that worker during enrollment events.
- An employee's eligibility for a benefit plan.

  Target specific benefit plans to a subpopulation within a larger benefit group.
- A dependent's eligibility for benefits.
- Employees you must evaluate for participation in the Affordable Care Act (ACA).

Example: You can create a medical EPO plan for members of the Salaried Employees benefits group. At the plan level, you can define a worker eligibility rule to limit enrollment to residents of California. You can also use a dependent eligibility rule to limit dependent coverage to children under age 26.

Steps

1. Access the Create Benefit Eligibility Rule task.
2. As you complete the task, consider:

Option	Description
And/Or	When 2 or more logical statements exist, set the *And* or *Or* option to control how the statements interact with each other. For the expression to be true: • All conditions in an expression connected by *And* must be true. • At least 1 of the conditions in an expression connected by *Or* must be true.
(	If you want to group 1 or more logical statements together, use the left-hand parentheses to indicate the beginning of the grouping.
Source External Field or Condition Rule	You can select from delivered Workday sources or from condition rules that you've already defined.
Relational Operator	Options depend on the data type.
Comparison Type	Indicate whether to compare the specified value to the report field or subrule.
)	If you want to close the grouping of 1 or more logical statements, select the right-hand parentheses.

3. Verify that the rules work as expected:
    - Verify that the rules are returning results with the Benefit Eligibility Rules Audit report.
    - Verify that the eligibility rules don't select workers for multiple groups with the View Workers in Multiple Benefit Groups Audit report.
    - View the list of workers who meet the selection criteria for the rules with the View Eligible Workers task. If workers are missing or there are workers in the group who you shouldn't include, then refine the condition rules.
    - View a rule and whether a specific employee meets the conditions of the rule with the View Benefit Eligible Rule Results task.

Example

An eligibility rule that determines dependent benefit eligibility:

- The relationship can be Spouse, Domestic Partner, or Child.
- If the relationship is Child, then the child must have one of these statuses:
    - Disabled
    - A full-time student and 27 years or less in age
    - Less than 19 years of age

And/Or	(	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value	)
And		Relationship	Any in the selection list	Value specified in this filter	Spouse Domestic Partner	
Or	(	Relationship	Any in the selection list	Value specified in this filter	Child	
And	(	Disabled	Equal to	Value specified in this filter	Select check box.	
Or	(	Full-time Student	Equal to	Value specified in this filter	Select check box.	
And		Age	Is less than or equal to	Value specified in this filter	26	)
Or	(	Age	Is less than	Value specified in this filter	19	))

Next Steps

Link the benefit eligibility rule to a benefit group, benefit plan, Affordable Care Are measurement period, or passive event rule.

Note: You can only have one benefit eligibility rule per benefit group, benefit plan, Affordable Care Are measurement period, or passive event rule.

Related Information

Tasks

Steps: Set Up Benefits on page 1237

Set Up Benefits Billing Reporting

Prerequisites

Configure the *Benefits Billing Event* business process default definition and security policy in the Benefits functional area.

Context

Workday enables you to designate a benefits billing status for employees who are maintaining their benefits contributions while they're not receiving pay. Benefits billing statuses are used for reporting and tracking, and have no impact on payroll.

You can configure the *Benefits Billing Event* business process to enable employees to designate how they prefer to contribute to their benefits when they go into a nonpay status, such as when they request a leave of absence. Benefits Administrators can also create a benefits billing event for an employee at any time.

Steps

Edit Business Processes.

Add the *Initiate Benefits Billing* step on these business processes:

- *Change Benefits for Life Event*
- *Request Leave of Absence*

Add the *Review Benefits Billing* step on the *Request Return from Leave of Absence* business process.

Result

When an employee changes their benefits for a life event, or requests a leave of absence, Workday generates a benefits billing event. The employee receives a My Tasks task in which they select Direct Pay or Payroll Deduction for each coverage type they're enrolled in and contribute a nonzero amount to.

When an employee requests a return from leave of absence, Benefits Administrators receive a My Tasks task in which they review and update the employee's benefits billing event.

Next Steps

Self-service users can:

- Access the View My Benefits Billing History task from the related actions menu of their worker profile.
- View the My Benefits Billing History tab in the Benefits section of their worker profile.

Benefits Administrators can access the Create Benefits Billing Event standalone task to create a benefits billing event for an employee.

Run a custom report to track workers who are in a nonpay status while maintaining their benefits, and how they prefer to pay for each coverage type.

Access the Maintain Custom Labels task to override the terms Direct Pay and Payroll Deduction with your organization's preferred terms.

Concept: Leave of Absence Business Processes on page 2602

2024R1 What's New Post: Benefits Billing Reporting

Tasks

Create Custom Reports

Steps: Set Up Benefits Messaging

Prerequisites

You must subscribe to the Workday Messaging SKU to send SMS messages. See Steps: Set Up Workday Messaging. You can still send emails and push notifications without the Workday Messaging SKU.

Context

You can send employees branded emails, SMS messages, and push notifications related to their benefits and open enrollment. You can leverage Workday Notification Designer to create notification templates and add email branding to your messages and open enrollment reminders. You can also leverage message templates as a starting point in your benefits messages to ensure consistency. Sending messages helps to improve employee responsiveness and open enrollment completion rates. You can send benefits messages ad-hoc or as a part of open enrollment reminders from the Open Enrollment Details view.

Steps

1. Edit Domain Security Policies.

   Configure the *Send Benefits Messages* domain in the Benefits functional area. To send open enrollment reminders, configure the *Process: Open Enrollment* domain in the Benefits functional area.
2. Access the Edit Tenant Setup - Notifications task.
   a. In the Notification Delivery Settings section, select the HCM parent notification type, and navigate to the Benefits Notification and Open Enrollment for Benefits notification types.
   b. If you want benefit notification settings for either of these types to be different from the parent HCM settings, select the Override Parent Notification Type Settings check box.

   Security: *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.
3. (Optional) If you choose to override the parent notification type settings, Create Notification Routing Rules.

   Add your preferred communication channels. You can select Mobile Push Notification, SMS, and Email. Set the notification frequency to Immediately.
4. (Optional) Create and Activate Notification Templates.

   Set up Notification Designer. When creating your notification templates, select the:
   - Benefits Notifications notification type to create a notification template for benefits messages.
   - Open Enrollment for Benefits notification type to create a notification template for open enrollment reminders.
5. (Optional) Create message templates.

   See Steps: Set Up Message Templates. When you configure security for the *Set Up: Message Templates* domain, add the same security groups you've added to the *Send Benefits Messages* domain. This ensures the groups you want to send benefits messages can also access the message templates. Then, select the:
   - Benefits Notifications notification type to create a message template for benefits messages.
   - Open Enrollment for Benefits notification type to create a message template for open enrollment reminders.

Result

You can access the Send Benefits Messages task or reroute to it from the Send Open Enrollment Reminders action.

Example

Next Steps

To send:

- Ad-hoc messages, access the Send Benefits Messages task. See Send Benefits Messages.
- Open enrollment reminders, select the Send Open Enrollment Reminders action from the Open Enrollment Details view. See Send Open Enrollment Reminders to Employees.

Related Information
Concepts
2024R2 Feature Release Note: Benefits Messaging

Concept: Checking Benefit Group Eligibility

Workday tasks frequently access workers' eligibility for a benefit group, which can impact performance. Workday saves the workers' eligibility status to improve the performance of these checks.

Workday performs a daily check for benefit group eligibility and saves (persists) the results. You can use these results to improve the performance of tasks, reports, and integrations that Workday has enabled.

Enable persistence with the Edit Tenant Setup - HCM task by selecting the Use Persisted Benefit Groups check box. Hover over the check box name to see what tasks, reports, and integrations Workday has enabled to use the saved values.

You can run the View Workers with Different Eligible and Persisted Benefit Groups report to determine whether to use the check box at any given time. The report displays any workers with eligibility differences for an effective date between:

- The current benefit group.
- The most recent persisted benefit group as of the effective date.

Depending on the results, you can:

- Use the saved eligibility results by selecting the Use Persisted Benefit Group check box.
- Access the Schedule Benefit Group Detection task and update the saved values.
- Use current eligibility by clearing the Use Persisted Benefit Groups check box.

If you have workers with changes, you might want to opt out temporarily. You can opt in or out at any time.

Related Information
Tasks
Create Benefit Groups on page 1249

Custom Validations

Concept: Custom Validations for Benefits Enrollment Events

You can create custom validations for benefits open enrollment and life events. You can create critical error or warning messages to display when a worker makes a mistake while electing their benefits. Custom validations prevent Workday from processing benefit elections that you identify as invalid or incomplete. With the Maintain Custom Validations task, you can configure custom validations for these types of election options:

- Benefit Coverage Types
- Benefit Elections
- Benefit Employee Enrollment Event

Security

The Maintain Custom Validations task is secured to the *Set Up: Custom Validations* security domain in the System functional area.

Examples

You can use custom validations for benefit events in these and other use cases:

- To require attachments for new dependents.
- To require the same coverage target levels on unrelated plan types.
- To enforce whole numbers (Examples: beneficiaries; retirement plans).
- To prevent workers from waiving a plan under certain conditions.
- To prevent increases or decreases to the contribution percentage during a life event.
- To prevent the enrollment of multiple spouses or domestic partners.

Note: When creating custom validations, ensure that you don't use quotes or special characters in the description. Examples: @, #, $, &.

See Steps: Set Up Custom Validations. Workday displays the error message when it processes the transactions that meet the conditions for the validations.

Translation

You can translate validation text with the Translate Custom Validation Notifications task.

Web Services

You can use these web services with custom validation for benefits election events:

- *Get Custom Validation Rules*
- *Put Custom Validation Rules*

Report Fields

You can use report fields as is and to create calculated fields for the custom validation rules.

On the Benefit Election business object:

- Changed Benefit Plan Selection
- Increased Insurance Coverage
- Previously Elected

On the Enrollment Offering business object:

- Any Attachments on the Benefit Event?
- Changed Benefit Coverage Level or Target
- Changed Contribution Percent or Amount
- Changed Dependents on Coverage Type
- Dependent Added to Coverage Type
- Enrollment Event for Enrollment Offering
- Enrollment Offering Type
- Waived Benefit Coverage Type

Considerations

As you use custom validations for enrollment events, consider:

- Warnings and errors display when the worker clicks the Submit button on the enrollment event.
- Custom validations don't display when using the Correct Benefits task to correct a benefit event.
- Custom validations don't support effective dates.
- The *Change Benefits* and *Enroll in Retirement Savings Plans* web services don't support custom validations.
- The Workday mobile app only supports custom validation for critical errors on benefit enrollments. Validations that are warnings don't display to users on mobile devices.

Steps: Set Up Custom Validations

Set Up Custom Validation Serverity and Conditions

Configure Custom Validation Messages

Examples

2023R2 What's New Post: Custom Validations for Benefits Enrollment

The Next Level: All Things 2023R2 in Benefits

Example: Custom Validations to Prevent Multiple Spouses

Context

This example demonstrates how to create a custom validation to prevent a worker from enrolling more than one spouse or domestic partner in a benefit plan. We create 2 calculated fields, create the validation rule, and then add the validation message to the related actions of the validation.

Prerequisites

Security: *Set Up: Custom Validations* security domain in the System functional area.

Steps

1. Create the first calculated field.
    a) Access the Create Calculated Field task and enter these values:
        - Field Name: *Is Spouse or Domestic Partner*.
        - Business Object: *Dependent*.
        - Function: *True/False Condition*.

    b) Click OK.
    c) On the Calculation tab, enter these values:
        - Field: *Relationship*.
        - Operator: *In the selection list*.
        - Comparison Type: *Value specified in this filter*.
        - Comparison Values: *Domestic Partner* and *Spouse*.

    d) Click OK.
2. Create the second calculated field.
    a) Access the Create Calculated Field task and enter these values:
        - Field Name:*Benefit Election - Count of Spouse or Domestic Partner Dependents*.
        - Business Object: *Benefit Election*.
        - Function: *Count Related Instances*.

    b) Click OK.
    c) On the Calculation tab:
        - Related Field: *Dependents*
        - Count: Select the Instances where condition is true option and select *Is Spouse or Domestic Partner* from the list.

    d) Click OK.

3. Create the custom validation.
    a) Access the Maintain Custom Validations task.
    b) Select Benefit Election on the left panel.
    c) Click New Validation for *Critical* severity.
    d) Enter *Add only 1 spouse or domestic partner.* in the Description field.
    e) In the Rule Conditions grid, enter these values:

Field	Value
Source External field or Condition Rule	*Benefit Election - Count of Spouse or Domestic Partner Dependent*
Relational Operator	*Greater than or equal to*
Comparison Type	*Value specified in this filter*
Comparison Value	*2*

    f) Click OK.
4. Configure the validation message.
    a) From the related actions menu of the *Add only 1 spouse or domestic partner.* custom validation, select Validation > Configure Validation Message.
    b) Select the Text option and enter this message: *Add only 1 spouse or domestic partner*. Click OK.
    c) Add another row and select the External Field option. Enter this text: *Benefit Coverage Type*. Click OK

Result

If workers attempt to enroll more than one spouse or domestic partner as a dependent, they receive a critical error that prevents them from making an enrollment error.

When workers create an additional spouse or domestic partner as a dependent during an enrollment event, Workday creates a Dependent Event transaction in the background. The worker will see the duplicate dependent when viewing their dependents. You can create a report to audit for duplicate dependents so that you can delete the duplicates.

Set Up Custom Validation Serverity and Conditions
Configure Custom Validation Messages

Reference: Benefits and Pay Hub

The Benefits and Pay hub provides a single location for employees to review and maintain their benefits, compensation, payroll information. Employees can also access related reports.

Security:

- *Self-Service: Benefits and Pay Hub*
- *Self-Service: Compensation History*

Note: Workday controls the visibility of any control or report in the Benefits and Pay hub by the security of the related action, report, or business process. Examples:

- Employees in a security group with access to the *Self-Service: Benefits (My Tax Documents) - USA* security domain can view and print their ACA forms.
- Employees can see the Change Retirement Savings option if you modify the business process policy for the *Change Retirement Savings* business process.

Use the Maintain Hubs task to configure the Benefits and Pay hub to display on custom dashboards. See Configure Dashboard Content. You might notice differences in visibility between tenants, such as Preview and Sandbox, if you don't migrate or set up your configuration consistently.

Worklet	Description	Additional Information
Overview	Provides a current view of an employee's benefit, pay, and compensation with links to detailed reports. Employees can view and modify payment and withholding elections, initiate benefit changes, and view arrears balances and tax documents. A Needs Attention section displays if the worker has an active benefit event for either open enrollment or life events.	
Benefits	Enables employees to: • View their current benefit elections. • View expanded details for a benefit plan from the Benefit Elections page. • View their benefits as of a specified date. • Change their benefits elections. • Change their retirement savings elections and contributions. • View their dependents. • View and edit their beneficiaries. • View and print their ACA forms.	• Steps: Set Up Employee Benefit Plans on page 1288 • Manage Dependents and Beneficiaries on page 1500
Pay	Enables employees to: • Access all their available payslips and tax documents. • Access the Most Recent Pay card to review gross and net pay on their most recent payslips. • Access the Deduction card to review deductions on their most recent payslips. • Access the Accounts section where they can view, add, or update their	• Steps: Set Up Payroll Processing • Steps: Create Earnings • Steps: Create Deductions • Define Payslips • Concept: Additional Payroll Data

Worklet	Description	Additional Information
	accounts for receiving pay. • Access links to useful payroll reports, dashboards, and tasks. • Add new or edit existing withholding elections for workers in Canada and the U.S. using the Federal, State, Local, and Provincial Withholdings buttons. Note: Workday doesn't support some withholding features, such as federal, state, and local withholding forms or multiple worksite reporting, for workers on international assignment, either in the U.S. or elsewhere. • Review and add voluntary deductions. • Review flexible payments and deductions requests. • Review arrears balances and payments. • Switch positions if they're in Canada or the U.S. and have multiple jobs. • View and update payment, tax, and tax form printing elections. • View their additional payroll data when they belong to a third-party pay group and you have configure the Additional Payroll Data feature.	
Compensation	Enables employees to: • View their bonus and one-time payment history. • Request a one-time payment for themselves (self-service), if configured. • View their compensation review statements. • View their total rewards.	• Steps: Set Up and Manage One-Time Payments on page 1124 • Steps: Enable Self-Service One-Time Payments on page 1131

Worklet	Description	Additional Information
	• View their compensation history (self-service, if configured) and a summary of each position for which they receive compensation. • View their current or upcoming period activity pay. • View their stock grants.

2022R2 What's New Post: Benefits and Pay Hub

FAQ: Benefit Groups

- How many benefit groups should I create for my organization?
- How do I test the eligibility rules that I create to define employee membership in a benefit group?
- How do I assign workers to a benefit group?
- How do I ensure that terminations and leaves result in a loss of coverage?

How many benefit groups should I create for my organization?

The number of benefit groups you define depends on many factors. Examples:

- Open enrollment processes by benefit group. Many organizations initiate and process open enrollment at different times for different groups of workers. Create separate groups to maintain the correct timing of your enrollment events.
- If you apply different insurance or health care rates to different categories of workers, create a separate benefit group for each category.

  Note: When you define insurance or health care plans in Workday, you can specify different rates for each benefit group that is eligible for the plan.
- In Workday, all benefit reporting is by benefit group. Consider whether the definitions for your benefit group conflict with your reporting requirements. If necessary, either consolidate workers into fewer groups or create additional groups.
- Rules and conditions of enrollment can vary for different groups of workers. Create separate benefit groups with unique

	enrollment event rules for each group if differences exist in: • Coverage begin and end dates. • Maximum coverage level or amount increases. • Waiting periods. • EOI requirements.
How do I test the eligibility rules that I create to define employee membership in a benefit group?	After defining an eligibility rule for a benefit group, you can test the rule using these audits and reports. • Benefit Eligibility Rules Audit. Run this report to verify that the eligibility rule returns results. • Select Benefit Group Eligibility Rule > View Eligible Workers from the related actions menu of the eligibility rule for a group. View the list of workers who meet the selection criteria for the rule. If any workers are missing or don't belong in the group, modify the eligibility rule. • View Workers in Multiple Benefit Groups Audit. Run this report to determine if workers belong to more than 1 benefit group. Verify that your employees belong to only 1 benefit group. If a worker belongs to more than 1 group, modify the selection criteria in your group eligibility rules. Note: When using the Benefit Job Rules, the results might not be accurate. You can run the Benefit Group Audit report to compare results. • Select Benefits > View Benefit Eligibility from the related actions menu of a benefit group. View a list of employees who meet the eligibility criteria for the group. • Workers Not Eligible for Benefits. Run this report to identify workers who don't meet the eligibility criteria for the benefit group.
How do I assign workers to a benefit group?	You don't need to assign workers to benefit groups manually. Workday automatically assigns workers to the correct groups based on the eligibility rules that control group membership. Employees can only be eligible for 1 benefit group. Run the View Workers in Multiple Benefit Groups Audit report to determine if there are workers assigned to more than 1 group.
How do I ensure that terminations and leaves result in a loss of coverage?	To ensure loss of coverage for terminations and leaves of absence, configure the eligibility rule with this condition: only active employees can participate in the group. Otherwise, Workday doesn't discontinue benefit coverage for employees in the benefit group.

Costs and Rates

Steps: Set Up Insurance Costs

Context

Workday calculates insurance costs as: (Insurance Coverage Level x Insurance Rate) = Insurance Cost

Defining insurance coverage levels separately from insurance rates enables greater flexibility. You can associate a single rate with multiple insurance coverages. You can also create an insurance coverage and associate it with different insurance rates.

You can create banded insurance rates based on these demographic factors in combination with gender and tobacco use:

- Age
- Salary
- Length of service

Steps

1. Access the Maintain Benefit Annual Rate Types task.

   Define the type of employee annual salary you want to use to when calculating benefit costs or coverage.

   Security: Set Up: Benefits in the Benefits functional area.
2. Create coverage levels.

   Access these tasks:

   - Create Amount Based Coverage Levels to create flat amount coverage levels.

     Example: For coverage levels of 100,000, 200,000, and 300,000 USD, enter:

     - 100,000 as the coverage start.
     - 300,000 as coverage end.
     - 100,000 as the coverage increment.
   - Create Percent Based Coverage Levels to create insurance coverage options for percentage of salary type insurance plans.
   - Create Multiplier Based Coverage Levels to create insurance coverage options for multiples of salary type insurance plans.

     Example: For coverage levels of 1 x salary, 2 x salary, and 3 x salary, enter:

     - 1 as the multiplier start.
     - 3 as the multiplier end.
     - 1 as the multiplier increment.
3. Create Insurance Coverages on page 1272.
4. Create Insurance Rates on page 1275.

Steps: Manage Individual Benefit Rates

Context

You can offer employees individual rates for health care, insurance, and additional benefits plans. Individual rates are helpful to companies that offer private health insurance plans to their employees along with their company-sponsored benefit packages.

Note: Workday recommends that you create a separate benefit plan for employees using individual rates. Mixing employees that use individual rates with employees that don't in the same benefit plan prevents automatic rate updates for all employees in the plan.

Steps

1. Create Health Care Plans on page 1289, Create Insurance Plans on page 1295, or Create Additional Benefit Plans on page 1313.
    a) Select the Use Individual Rate check box when setting up coverage plans, insurance coverage plans, and additional benefits plans.
    b) To revert to the rates defined on the benefit plan when a new plan year begins, select the Reset Individual Rates for New Plan Year check box.
    c) Enter zero for the employee and employer costs or enter the normal rates. These costs display on the enrollment form.
2. Submit a change in benefit elections or complete open enrollment.
    a) Employee completes a change in benefit enrollment or completes open enrollment that includes a benefit plan using individual rates.
    b) Administrator: completes changes in the employee's benefit enrollment. Or, they enter the employee's open enrollment elections, which include a benefit plan that uses individual rates.
3. Obtain individual rates from provider.

    Complete this step outside of Workday.
4. Enter Individual Benefit Rates on page 1278.

Create Health Care Rates

Prerequisites

- Security: *Set Up: Benefits* in the Benefits functional area.
- Define benefit annual rate types and assign to workers.

    To define a worker's annualized rate, select Benefits > Change Benefits Annual Rate from a worker's related actions menu.
- Define benefit credits and surcharges.

Context

Create a rate table with values that are based on:

- Flat amount
- Percent of the employee's salary
- Combination of both

Rates might also vary according to demographic information such as age, salary, or length of service.

Steps

1. Access the Create Health Care Rate task.
2. Select the Method for Rate Calculation.
3. Select the Demographic Factors to Consider.
4. If applicable, select the Tobacco check box.

    Selecting the Tobacco check box displays the Tobacco Use column in the rate table. You can enter rates in this column based on the Does Not Use and Uses questions.

5. On the Benefit Rate Source tab, consider:

   This tab displays for *percent of salary* and *percent of salary with flat amount* rate types.

Option	Description
Salary Source	If you select *Salary* as a demographic factor, specify what Workday should use to determine the correct rate band to retrieve the employee and employer rates. Select from: • *Benefits Annualized Rate or Compensation Elements:* If available, Workday uses the benefits annualized rate; if not, Workday uses compensation elements. If you select this option, the Compensation Element field becomes available. • *Benefits Annualized Rate or Total Base Pay:* If available, Workday uses the benefits annualized rate; if not, the Workday uses the base salary.
Benefit Annual Rate Type	Available if you selected *Benefits Annualized Rate or Compensation Elements* or *Compensation Elements*.
Compensation Element	Available if you selected *Benefits Annualized Rate or Compensation Elements*.
Salary Frequency	Available if you selected *Salary* as a demographic factor. Indicates whether the salaries in the rate band are weekly or monthly salaries, or use a different frequency.

Calculate As Of	If you select age, length of service, or salary as demographic factors, tell Workday what date to use in its calculations. Options are:
	• *Coverage Begin or Plan Year Begin*: If the employee had coverage as of the start of the plan year, Workday uses this date. Otherwise, Workday uses the date the employee originally enrolled in the plan.
	• *Coverage Begin or Specific Date:*
	Workday compares these dates:
	  • The date the employee originally enrolled in the benefit plan.
	  • The date entered in the Specific Month and Specific Day field.
	It uses the most recent date to retrieve the value and assumes that the year is the current benefit plan year. If you want to use the prior plan year values, select the Prior Year check box.

6. On the Rate Band Definition tab, consider:

Option	Description
Health Care Coverage Targets	Select the health care targets that you want to assign to this health care rate.
Minimum Costs/Maximum Costs	Select these check boxes to include a minimum and maximum costs in the rate band table.
First Band is 0 to Last Band is Over Bands Are Incremented By	Define the parameters Workday uses to build the rows in the rate band table. Note: Enter a value greater than zero on Bands Are Incremented By.

7. On the Final Rounding Rule tab, define how you want Workday to adjust the final calculated cost of health care coverage.

   This tab displays for *percent of salary* and *percent of salary with flat amount* rate types.

Option	Description
Round Amount To	Enter the value to which Workday rounds. Example: If you want Workday to round to the nearest whole number, enter 1.
Rounding Rule	You can: • *Round Up:* Example: The amount in this field is 1 USD, and the employee's calculated cost is 1.50 USD. Workday rounds the cost up to 2 USD. • *Round Down:* Example: The field amount is 1 USD, and the employee's calculated cost is 1.50 USD. Workday rounds the cost down to 1 USD. • *Round Up On Number:* Specify the number at which Workday rounds up or down. Example: The amount in the Round Amount To field is 1 USD, and the Round Up On Number is 0.5. Workday rounds up any costs greater than or equal to 0.5 and rounds down any costs less than 0.5. If the calculated cost is 1.49 USD, Workday rounds down to 1 USD. If the cost is 1.5 USD, Workday rounds up to 2 USD.

8. (Optional) On the Rate Bands tab, enter the *Enrollment Code* on the far right side of the table.

   Entering an enrollment code maps it to that rate band row in Workday. Example: You can map the vendor code 12345 to a Workday rate band. The enrollment code signifies that unique combination of health care benefit plan, premium, and coverage targets for the rate band. You can also change the *Enrollment Code* column label by accessing the Maintain Custom Labels task.

Result

If you selected *Benefits Annualized Rate* as the Salary Source, pay close attention to effective dates when loading the benefits annual rate. Example: You load a conversion event effective 1/1/2009, but then load the employee's compensation or Benefit Annual Rate (BAR) as of 4/1/2009. In this scenario, Workday isn't able to calculate the coverage.

The rate used to calculate an employee's benefit costs can vary based on the salary definition. Example:

- When salary = Base Salary, Workday returns a value of 50,000.
- When salary = Compensation Elements (Base Pay + Commission), Workday returns a value of 65,000 for the same employee.

In the rate table, you can associate each of these values with a different rate: 0.13 for 50,000 of salary, and 0.16 for any salary amount over 60,000.

Related Information
Tasks
Create Health Care Plans on page 1289

Create Insurance Coverages

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

Create insurance coverages that can be based on:

- Increment of Currency Coverage (flat amounts).
- Multiples of Salary Coverage (2 x salary).
- Percent of Salary Coverage (60% of salary).
- Multiples of Dependents Coverage (2 multiples on spouse and on each dependent child).

Steps

1. Access the Create Insurance Coverage task.
2. Select the Insurance Coverage to Create.
3. As you complete the task, consider:

Option	Description
Amount Based Coverage Levels name	Only available to *Increment of Currency Coverage* types.
Coverage Amounts	Only available to *Increment of Currency Coverage* types.
Salary Minimum Multiplier Salary Maximum Multiplier	Only available to *Increment of Currency Coverage* types. Define the minimum amount of coverage an employee can elect based on the salary of the employee. Example: 1x salary to 6x salary.
Minimum Amount Maximum Amount	Only available to *Multiples of Salary Coverage* and *Percent of Salary Coverage* types. Define the minimum and maximum amount of coverage an employee can elect based on the salary of the employee. Example: If the minimum amount of coverage is 50,000, and an employee making 45,000 elects 1x salary, the coverage amount based on salary is less than the minimum.

Option	Description
	If the maximum amount of coverage is 500,000, and an employee making 100,000 elects 6x salary, the coverage amount based on salary exceeds the maximum.
Salary Source	If you select *Salary* as a demographic factor, specify the rate band Workday uses to retrieve the employee and employer rates. Select from: • *Benefits Annualized Rate or Compensation Elements:* If available, Workday uses the benefits annualized rate; if not, Workday uses compensation elements. If you select this option, the Compensation Element field becomes available. • *Benefits Annualized Rate or Total Base Pay:* If available, Workday uses the benefits annualized rate; if not, Workday uses the base salary.
Benefit Annual Rate Type	Available if you selected *Benefits Annualized Rate or Compensation Elements* or *Compensation Elements*.
Compensation Element	Available if you selected *Benefits Annualized Rate or Compensation Elements*.
Round Amount To	Enter the value you want Workday to round to. Example: If you want Workday to round to the nearest whole number, enter 1.
Rounding Rule	Choices are: • *Round Up:* Example: If the amount in this field is 1 USD, and the employee's calculated cost is 1.50 USD, Workday rounds the cost up to 2 USD. • *Round Down:* Example: If the amount in this field is 1 USD, and the employee's calculated cost is 1.50 USD, Workday rounds the cost down to 1 USD. • *Round Up On Number:* Specify the number to round up on. Example: Suppose the amount in the Round Amount To field is 1 USD, and the Round On Number is 0.5. In this case, Workday rounds up any costs greater than or equal to 0.5, and rounds down any costs less than 0.5. If the calculated cost is 1.49 USD, Workday rounds down to 1 USD. If the cost is 1.5 USD, Workday rounds up to 2 USD.
Benefit Multiplier Order	Only available when you enter a value greater than zero in the Round Amount To field. Indicate when you want the rounding to occur:

Option	Description
	Example: You select the *Round Up On Number* in the Rounding Rule field and enter 400 in the Round on Number field. An employee making 50,211 selects a coverage level of 2x salary. If you select *Round Amount then Multiply*, Workday rounds the salary down to 50,000 before multiplying by 2 to determine the coverage amount: 100,000. If you select *Multiply then Round Result*, Workday multiplies 50,211 by 2 to obtain the coverage amount—100,422—and then rounds the result up to 101,000.
Do Not Round Final (If Age Adjusted)	Applies only if there is an age adjustment rule on the insurance plan. If selected, Workday doesn't round the final coverage amount. Example: An employee makes 137,177.25, which is age-reduced by 40% (0.40) to 54,870.90. With a coverage level of 0.5x, the final coverage amount (not rounded) is 27,435.45.
Spouse Amount per Multiple Child Amount per Multiple	Only available to *Multiples of Dependents* coverage. The amount of coverage per multiple of spouse or child. Example: If you elect 3 multiples with the spouse amount being $5,000 and child amount being $2,500, you will receive $15,000 in the event of the death of your spouse and $7,500 in the event of the death of a child.
Additional Coverage Amount	Only available to *Multiples of Salary Coverage* and *Percent of Salary Coverage* types. Enter a flat amount to be added to the total calculated coverage.
Multiplier Based Coverage Levels Name	Only available to *Multiples of Dependent Coverage* types.
Multipliers	Only available to *Multiples of Dependent Coverage* types.

Next Steps

- Associate the coverage with specific benefit groups on an insurance plan with the Create Benefit Plan task.
- View detailed information for a specific insurance coverage with the Insurance Coverage report.

Related Information

Tasks

Steps: Set Up Insurance Costs on page 1268

Create Insurance Plans on page 1295

Create Insurance Rates

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

Create rates containing insurance plan costs.

If rates vary by demographic factor such as age or length of service, you can add demographic bands with their corresponding rates. Workday uses this information to calculate the correct rate based on each employee's demographic information.

Steps

1. Access the Create Insurance Rate task.
2. Select the Method for Rate Calculation.

   Ensure that you select the same method as provided by your provider. Or, convert the rate amounts or percentages from the provided rate to your selected rate method:

   - The amount of coverage.
   - The amount of covered salary.
   - A flat amount (these rates are per covered individual).
   - A flat amount per covered dependent (these rates are per covered dependent).

   Note: Flat rates represent the cost of the benefit per covered individual. Example: The cost of dependent life insurance is 10 USD per month for each dependent. A worker who elects to cover a single dependent pays 10 USD per month. Another worker elects the same benefit for 4 dependents and pays 40 USD.
3. (Optional) Select the Demographic Factors to Consider.
4. (Optional) Select the Gender or Tobacco check boxes.

   If you select the Gender check box, the rate table includes a Gender column so you can enter rates based on *Female*, *Male* or *Not Declared*.

   If you select the Tobacco check box, the rate table includes a Tobacco Use column so you can enter rates based on *Do Not Use*.

   Workday creates a table with banded rates based on the selected demographic factors. You can't change these demographic factors after Workday creates the table.
5. The Benefit Rate Source tab displays for *Amount of Salary* rate types. As you complete this tab, consider:

Option	Description
Salary Source	If you select *Salary* as a demographic factor, specify what factors Workday should use to retrieve the employee and employer rates. Consider: • *Benefits Annualized Rate or Compensation Elements:* If available, Workday uses the benefits annualized rate. If not available, Workday uses compensation elements. If you select this option, the Compensation Element field becomes available.

Option	Description
	• *Benefits Annualized Rate or Total Base Pay:* If available, Workday uses the benefits annualized rate. If not available, Workday uses the base salary.
Benefit Annual Rate Type	Available if you selected *Benefits Annualized Rate or Compensation Elements* or *Compensation Elements*.
Compensation Element	Available if you selected *Benefits Annualized Rate or Compensation Elements*.
Salary Frequency	Available if you selected *Salary* as a demographic factor. Select if the salaries in the rate band are weekly salaries, monthly salaries, or use a different frequency.
Calculate As Of	If you select age, length of service, or salary as demographic factors, select the date Workday uses in its calculations. Consider: • *Coverage Begin or Plan Year Begin*: Workday uses this date if the employee had coverage from the beginning of the plan year. Otherwise, Workday uses the date the employee originally enrolled in the plan. • *Coverage Begin or Specific Date:* Workday compares the original enrollment date of the benefit plan with the Specific Month and Specific Day field. It uses the most recent date to retrieve the value and assumes that the year is the current benefit plan year. If you want to use the prior plan year values, select the Of Prior Plan Year check box. • *Coverage Begin:* Select to prevent workers from moving between age bands over time. Workday uses the date the worker first enrolled in the plan at the current coverage level. • *Event Date*: Select to enable Workday to evaluate salary band changes when a worker's salary changes. The rate changes dynamically if the worker has a salary change that moves age bands. • *Last Date of Previous Pay Period*: When an employee has a birthday that moves them into a new age band, the new age band becomes effective the pay period following the one in which the birthday occurs.

6. On the Apply Rate Per tab, consider:

Option	Description
Apply Rate Per	The value that the amount specified by the Method for Rate Calculation is divided by. Example: The Method for Rate Calculation is *Amount of Coverage*. You specify 1,000 as your Apply Rate Per amount. If the worker has a coverage amount of 40,456 USD, then Workday divides this coverage amount by 1,000, and applies the relevant Rounding Rule. Note: To get a more granular result on higher coverage amounts, divide this field value by the rate amount of 1000. Example: You apply a rate amount of 0.19 to every 1,000 USD of coverage: • Divide by 1000 and the rate amount becomes 0.00019 and Apply Rate Per is 1.0. If your coverage is 124,560 USD, the result is 23.67 USD.
Rounding Rules	Specifies how to round a coverage amount, in case the coverage amount isn't evenly divisible by the Apply Rate Per amount. Workday multiplies the rounded amount by either the Employer Cost or Employee Cost, or both, on the Rate Amount tab. • *Round Up:* Example: The employee's coverage amount is 3173.33 USD. The Apply Rate Per amount is 100. Workday rounds up to 3200 USD. • *Round Down:* Example: The employee's calculated coverage is 42,400 USD. The Apply Rate Per amount is 500. Workday rounds down to 42,000 USD. • *Round Up On Number:* The most flexible rounding rule. After Workday divides the coverage amount by the Apply Rate Per amount, it compares the remainder against the value in the Round On Number field. If the remainder is less than the Round On Number, the coverage amount rounds down. Otherwise, the amount rounds up. Example: The amount in the Round On Number field is 500. The Apply Rate Per is 1000. If the employee coverage is 1,500 USD, then Workday rounds up to 2,000 USD.

Result

Pay attention to effective dates. If you selected *Benefits Annualized Rate* as the Salary Source, pay close attention to effective dates when loading the benefits annual rate. Example: You load a conversion event effective 1/1, but then load the employee's compensation or BAR as of 4/1. In this scenario, Workday isn't able to calculate the coverage.

The rate used to calculate an employee's benefit costs can vary based on the Method for Rate Calculation.

Example:

- When Salary = Base Salary, Workday returns a value of 50,000 USD.
- When Salary = Compensation Elements (Base Pay + Car Allowance), Workday returns a value of 65,000 USD for the same employee.

In the rate table, each of these values might have a different rate in each band: 0.13 for 1 - 59,999, 0.15 for 60,000 - 129,999, and 0.16 for 130,000 - 999,999,999 USD.

Next Steps

Use the:

- Edit Insurance Rate task to edit the rates.
- Insurance Rate report to view detailed information about the rates.
- Create Benefit Plan task to associate the rates with insurance plans.

Enter Individual Benefit Rates

Prerequisites

- Complete Steps: Manage Individual Rates.
- During enrollment, the employee must elect a benefit plan that uses individual rates.
- Security: *Manage: Benefits for Organizations* in the Benefits functional area.

Context

Enter an employee's individual benefit rate for a benefit plan.

Steps

1. Access the Manage Individual Rates task.
2. (Optional) Enter criteria to target specific employees enrolled in benefit plans that have individual rates.

   Select the Include Employees with Rate Overrides check box to include these types of employees:

   - Their individual rates have been updated using Manage Individual Rates.
   - Their individual rates remain unchanged.

   Otherwise, the results only include employees with unchanged individual rates.
3. (Optional) Select the Select All - Email Notification check box if you want Workday to select the Email Notification check box next to all the employees listed.

   Later, you can override the selection for an individual employee.
4. As you complete the task, consider:

Option	Description
Rate Modified	For display only. When selected, indicates an updated rate during this session.
Employee Cost (Pre-tax)	Enter the amount of the pretax employee cost.
Employee Cost (Post-tax)	Enter the amount of the post-tax employee cost.

Option	Description
Employer Contribution (Non-taxable)	Enter the amount of the nontaxable employer contribution.
Employer Contribution (Taxable)	Enter the amount of the taxable employer contribution.

5. Enter the subject and body text for the email notification.

   This option is available if you elected to send an email notification. Workday displays a list of the employees that should receive the email.

Result

Workday assigns these new rates to the employees' benefit packages and sends the rates to Workday Benefits Network, Payroll Interface, or Workday Payroll.

Troubleshooting: Incorrect Long-Term Disability Insurance Rates

Cause	Solution
The provided Long-Term Disability (LTD) rate was based on 1 type of calculation. However, you selected an insurance rate using a different type of calculation in the LTD benefit plan. Example: The provided rate was based on Amount of Salary. You selected a rate with the method of calculation as Amount of Coverage.	Security: *Set Up: Benefits* domain in the Benefits functional area. 1. Access Edit Benefit Plan. 2. From the Benefits Eligibility and Rates grid, select an Insurance Rate based on the calculation method required by the rate you were given. Example: Select a rate from the *Amount of Coverage Rates* options.
Workday calculated the LTD coverage using the salary amount with an incorrect compensation element.	Security: *Set Up: Benefits* domain in the Benefits functional area. 1. Access the Edit Insurance Rate task. 2. Select the salary-based rate. 3. Verify that the Salary Source field displays *Compensation Elements*. 4. Select a value from the Compensation Element prompt.
The calculated coverage amount is incorrect or is zero.	Security: • *Set Up: Benefits* domain in the Benefits functional area. • *Person Data: Personal Information* domain in the Personal Data functional area. 1. Access the worker's profile to check that the effective date for compensation falls within the coverage period of the LTD plan. 2. Click the Benefits profile group and note the Coverage Begin Date for the LTD plan. 3. Click the Compensation profile group and check the worker's compensation effective date. 4. Verify that the date is on or after the Coverage Begin Date date in the LTD benefit plan.

Cause	Solution
	5. On the Compensation profile group, click the Compensation Package link. Verify that the effective date is on or after the Coverage Begin Date in the LTD benefit plan.
The coverage amount had rounding discrepancies.	Security: *Set Up: Benefits* domain in the Benefits functional area. 1. Access the Edit Insurance Rate task. 2. On the Apply Rate Per tab, adjust the Apply Rate Per value and decimal point of the rate.
Employee's rate goes up but their coverage has a cap.	Create a new rate using Amount of Coverage. Convert the rate from the provider (usually a rate of Salary) to Amount of Coverage.

Create Insurance Rates on page 1275

Troubleshooting: Tobacco Question Missing for Dependents

Workday skips the Tobacco Use question for a dependent and you have a benefit plan configured with tobacco rates.

Cause: You've hidden the localized field, Tobacco Status (Dependent), for the country of the employee's primary position.

Solution:

Steps

Security: *Set Up: Tenant Setup - Global*

1. Access the Maintain Localization Settings task.
2. In the Area prompt, select *Personal Information* and locate the Tobacco Status (Dependent) field.
3. Add the correct country in Allow for Countries or Regions prompt if it has listed countries, but doesn't include the required country.

Cause: Ensure that you've set up tobacco rates correctly. Otherwise, your tenant might be missing a behind-the-scenes connection between the dependent types and the coverage targets. You can create an insurance plan and a rate that uses a dependent coverage target to make this connection. This plan doesn't need to be in the benefit plan year definition.

Solution:

Steps

Security: *Setup: Benefits* in the Benefits functional area.

1. Access the Create Insurance Rate task and create an insurance rate.

   Select the Tobacco Use check box.
2. Access the Maintain Insurance Coverage Targets task.

   Verify that you have an insurance coverage target with valid dependent types of spouse, domestic partner, or dependent. If not, add a coverage target that has 1 of these valid types.

3. Access the Create Benefit Plan task to create an insurance plan.

   In the Covers prompt, select 1 of the dependent coverage targets.

   In the Benefits Eligibility and Rates grid, select the insurance rate that you've created.

Set Up Employee Benefit Plans

Setup Considerations: Payroll and Benefits

You can use this topic to help make decisions when planning your configuration and use of Workday Payroll and Workday Benefits. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

When used together, Workday Payroll and Workday Benefits enable you to integrate worker benefits with their associated costs, including:

- Defining benefit plans.
- Configuring payroll earnings and deductions for benefits.
- Integrating with third-party benefit providers to handle contribution amounts.

Note: This topic only discusses how Workday Payroll interacts with Workday Benefits. It doesn't address how Cloud Connect for Third-Party Payroll (CCTPP) interacts with Workday Benefits.

Business Benefits

Reduce the risk of errors from manual entries by using Workday to pull the latest values automatically into Payroll from Benefits.

Configure security policies to prevent unauthorized users from viewing confidential benefit and payroll data.

Use Cases

- Process 401 (k), Health Savings, and Spending Account contributions through payroll.
- Process any benefit plan credits and surcharges through payroll.
- Deduct benefit plan costs for health care and insurance through Payroll.
- Configure biweekly pay schedule for 26 paychecks in a year, with HSA and spending account deductions twice a month.
- Coordinate benefits changes for leave of absence transitions from short-term disability to long-term disability.
- Process benefit changes that result from salary changes.
- Automatically enroll workers into a benefit plan based on eligibility rules.

Questions to Consider

Questions	Considerations
Do you need to apply deduction limits to benefit amounts?	If you need to apply a deduction limit to benefit amounts, configure this limit in Payroll. Example: Federal limits on retirement plans or health savings accounts. If you don't use Workday Payroll, work with your payroll provider to set limits.
Do you need to create a new deduction or earning? Or, can you reuse an existing one?	When your benefits plans change, you can reuse earnings and deductions. Note: Don't remove the mapping between an old benefit plan and the associated earning or deduction. When you remove the mapping for a worker with a supported retro event, Workday tries to rescind all deductions ever calculated for the worker in the retro recalculation. Workday recommends that you leave the old plan mapped to the deductions. You can remove the benefit plan from the benefit plan year. If you create a new plan, map it to the deductions as the active plan.
Does your weekly or biweekly payroll overlap payroll years at the end of the year?	Workday automatically processes a deduction if the pay period end date is on or after the deduction begin date. To prevent Workday from using benefit deduction rates from the wrong year, you might need to modify how Workday applies the deduction begin date. When you create or edit deductions in Payroll, you can select the coverage or cost as of the payment date. Workday processes the deduction if the payment date is on or after the deduction begin date. Workday doesn't consider in which pay period the deduction starts.
Do you want Workday to adjust the final paycheck to meet the worker's annual deduction goal for HSA and spending accounts?	You can configure a benefit group so that Workday Payroll adjusts deductions in the final pay period to meet annual goals. To adjust the final paycheck, you must configure the deduction to occur in the final pay period of that year. To enable this deduction adjustment option: • The worker must be enrolled in an HSA or spending account plan in the final pay period of the year. • The HSA or spending account must be in a benefit plan year using this calendar year (with end date of December 31).

Questions	Considerations
	• The deduction must be an HSA or spending account plan. • You must calculate remaining deductions based on the payment date as opposed to the period end date.
Do you need to manage Déclaration Sociale Nominative (DSN) reporting for France?	You can use Workday Payroll for France to declare benefits information in DSN reporting. To do so, you must: • Map benefit contributions to DSN blocks. • Enter additional benefit data, such as coverage targets, when setting up the French company tax configuration. To ensure correct DSN reporting, when setting up health care plans, don't map the same deduction to more than 1 health care benefit plan reported as prevoyance in a DSN. Use the plan that you report as mandatory health and disability coverage in a DSN.
Do you have Irish or UK-based workers?	Irish and UK legislation means that you must provide a pension plan for workers who match specific criteria. You can combine eligibility assessments in Payroll with a pension plan in Benefits. Based on the assessment results, you can enroll eligible workers into the plan.
Do you match U.S. worker 401(k) contributions?	You can configure set contributions on the benefit plan. If you calculate employer matches based on the worker's contributions, set up the calculation on the payroll deduction.
Do you enable your workers to give some of their pay regularly to an outside benefit plan or charity?	Occasionally it's impractical to provide a benefit plan, such as when it would only apply to a few workers. In that case, Workday provides alternative functionality that enables workers to request that you take voluntary deductions or flexible payments from their pay. Example: A worker wants to donate to a specific charity, or to pay back a relocation expenses loan provided by the business.
When do you want to begin and end payroll deductions for a benefit plan?	You can set up enrollment event rules to specify when to begin or end payroll deductions. You can specify when to deduct from a worker's pay by configuring: • The coverage begin date, which determines when coverage by the benefit plan starts for a worker. • The deduction begin date, which Workday uses to determine the pay period to start withholding deductions from a worker's pay.

Questions	Considerations
	Workday only withholds deductions for workers covered by a plan. It uses the combination of the coverage begin date and the deduction begin date to determine when the first deduction occurs. Similarly, you can configure when to stop payroll deductions based on a: • Coverage end date. • Deduction end date.

Recommendations

Performance	Workday recommends creating the minimum number of earnings and deductions to optimize performance. To maximize performance, set up earnings and deductions using precise criteria to streamline payroll processing. Use specific eligibility criteria so that Workday runs calculations only for applicable workers and pay and benefit groups.
Selection Criteria	To prevent possible calculation mismatches, Workday recommends that you use the same selection criteria when you create rules that: • Enroll workers into a plan in Workday Benefits. • Calculate worker contributions in Workday Payroll.
Global Payroll and Benefits	Workday recommends that you use Workday Benefits to integrate with Workday Payroll. Workday Payroll for the UK customers who don't have a license to use Workday Benefits can use limited benefits features to support the set up of UK pension auto-enrolment. If calculating payroll with Workday Payroll for France, Workday recommends using advanced lookup tables to store benefit rates to meet plan requirements.
Health Savings Accounts and Spending Accounts	To simplify the enrollment experience and deduction configurations for catch-up HSA plans, Workday recommends that employers create a separate plan for each of these age groups: • Workers under 55. • Workers 55 and older. Workday strongly recommends that you avoid using a plan for all workers with an add-on plan for workers 55 and older. If you use a deduction schedule different from the pay frequency, use both override and custom

	scheduling in Payroll to ensure correct deductions. Example: You use a biweekly pay schedule for 26 paychecks in a year, but take HSA and spending account deductions twice a month.
Benefit Earnings and Deductions	Workday recommends that you avoid removing a benefit plan from earnings and deductions. These changes can result in the over- or under-payment of prior deductions, or a lump sum deduction. Instead, remove the benefit plan from the plan year. Example: You remove an old benefit plan from the deduction and add the new plan. When you run retro calculations, Workday recalculates and attempts to rescind all prior deductions for the worker, resulting in incorrect calculation values. Consider leaving out HSA and spending plans from retro calculations. Unwanted retro calculations might occur after plan changes or when a worker meets their annual goal. Avoid using benefit plans labeled with Do Not Use. Benefit administrators can mark benefit plans with this label to hide obsolete benefit plans based on an effective date. The Benefit Plan prompt displays on the Non-Effective Dated tab for these tasks: • Create Deduction. • Create Credit. Workday appends the effective date of future-dated benefit plans to the Do Not Use label.

Requirements

Set up your benefit plans before creating the associated earnings and deductions.

If managing DSN reporting, provide the group policy number on the benefit plan and the provider ID.

Limitations

- Workday Payroll doesn't support effective dating of deductions and earnings. Instead, Workday Benefits enables you to record an effective date between benefit plans and deductions and earnings.
- To avoid processing a retroactive payroll calculation, you can make plans unavailable to workers after a certain date using:
  - Benefits eligibility rules.
  - Plan year definitions.
- Workday Payroll for the UK doesn't support pension auto-enrolment in prior pay periods. If you run payroll in arrears, you can either turn off the pension auto-enrolment feature or ensure you monitor the process and make the necessary adjustments.
- Workday Payroll for Australia doesn't support superannuation configured with Workday Benefits.

Tenant Setup

To determine allowable YTD payroll contributions, you can select an additional HSA coverage target option on the Edit Tenant Setup - HCM task. This option also enables you to configure family or individual IRS limits in Workday Payroll for the additional coverage target.

Security

Domains	Considerations
Manage: Benefits for Organizations in the Benefits functional area.	Enables you to create benefit groups.
Set Up: Benefits in the Benefits functional area.	Enables you to create benefit plans and set up enrollment.
Set Up: Payroll (Calculations - Payroll Specific) in the Core Payroll functional area.	Enables you to create and modify earnings and deductions.
Set Up: Tenant Setup - HCM in the Systems functional area.	Enables you to enable the Benefits mobile app and configure tenant options.

You can enable the benefits administrator and the benefits partner to view benefit plan deductions for workers. You can apply segmented security to custom reports based on these segmented data sources:

- Earning/Deduction Payroll Balances for Organization
- Earning/Deduction Payroll Balances for Worker
- Earning/Deduction Payroll Results for Organization (As of Sub Period End Date)
- Earning/Deduction Payroll Results for Organization, Worker, Period and Date Range (As of Sub Period End Date)
- Earning/Deduction Payroll Results for Worker (As of Sub Period End Date)

Business Processes

Business Processes	Considerations
Change Benefits	Add as step to other business processes, such as *Change Job* or *Termination*. Launches the *Change Benefits for Life Events* business process, which uses the *If there is an effect on employee benefits?* condition rule to determine whether to create a benefit event.
Change Benefits for Life Event	Enables users to change benefits for life events, including births, divorce, and promotion.
Change Benefits for Open Enrollment	Enables you to open enrollment for benefits. You can add step-related worklets with the Business Process > Maintain Step Related Worklets related action on the Change Benefits for Open Enrollment task.
Change Job	Enables you to change to a worker's position, such as promotion or a transfer, which can affect their benefits. You can add a step to launch the *Change Benefits for Life Events* business process to initiate a benefit event.

Reporting

Reports	Considerations
All Deductions All Earnings	Use these reports to verify any pay component configurations, such as which benefit plan the pay component references.

Reports	Considerations
Benefits Eligibility by Benefit Group	Use this report to view future-dated benefits groups.
DSN Benefits Contributions by Establishment	Use this report to compare benefit amounts aggregated by benefit plan and population with the aggregated payroll amounts. (For French Payroll Déclaration Sociale Nominative (DSN) reporting only.)
View Benefit Eligibility Rule Results	Use this report to determine why someone is or isn't meeting an eligibility rule. It can be useful when troubleshooting issues with deductions and credits.
View Workers in Multiple Benefit Groups Audit	Use this task with an effective date to ensure that employees are only eligible for 1 benefit group. It can be useful when troubleshooting issues with deductions and credits.

Integrations

Integration	Considerations
Cloud Connect for Benefits	Workday offers integration templates for benefit providers through Cloud Connect for Benefits (CCB).
Change Benefits	This web service loads workers' benefit elections and retirement savings plans.
Enroll in Retirement Savings Plans	This web service loads workers' retirement savings plan elections. It enrolls workers, updates existing elections, and carries forward prior elections unless they are explicitly changed.

Connections and Touchpoints

Touchpoint	Consideration
Absence	When you configure time off plans to track balances in Absence Management, you can retrieve the units for approved time off as part of earning and deduction calculations. Use absence component-related calculations (ACRCs) to associate absence plans to earnings and deductions. Ensure that you map all absence plans that can impact payroll or benefits earnings or deductions.
HCM Staffing and Compensation	Provide worker and job-related data for payroll and benefit processing, such as: • Worker status. • Personal information. Provide salary changes that can trigger benefit enrollment events.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Employee Benefit Plans

Prerequisites

- Set up benefits.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

You can configure benefit plans, including health care, insurance, and retirement plans. You can also configure the healthcare savings and spending accounts. Example: Flexible spending account plans.

Steps

1. Create Health Care Plans on page 1289.

   Associate medical, dental, and vision health care plans with:

   - Coverage types.
   - Eligibility rules.
   - Plan costs.
   - Earnings and deductions.
2. Create Insurance Plans on page 1295.
3. (Optional) Create critical illness insurance plans.

   Select a benefits plan type that supports the enrollment data that you need to provide to your benefits provider.

   See Setup Considerations: Critical Illness Insurance Plans on page 1298.
4. Create Retirement Savings Plans on page 1302.

   Define the retirement plan minimum and maximum contribution amounts or percentages for:

   - Employees.
   - Employers.
   - Payroll deductions.
5. Create Rules for Allocating Retirement Savings Contributions on page 1304.
6. (Optional) Create Spending Account Plans on page 1310.

   Define contribution limits and other details for benefits spending account plans.

7. (Optional) Access the Maintain Health Care Coverage Targets task.

   (Optional) In Edit Tenant Setup - HCM, in the Benefits section:

   - Select the Include an additional HSA Coverage Target Option check box if your Health Care Savings (HSA) plan offers more coverage levels than Employee and Family.
   - Select either *Employee* or *Family* for IRS Limit for additional HSA Coverage Target Option.

   Set up HSA coverage targets. See Create Health Care Coverage Targets on page 1246.

   Associate health care coverage targets with either the HSA *Employee* or the *Family* coverage targets.
8. (Optional) Create Health Savings Account Plans on page 1306.

   Define contribution limits and other details for health savings account plans.
9. (Optional) Create Additional Benefit Plans on page 1313.

   Create benefit plans for other types of plans. Example: ESPP, commuter, pet insurance, or gym membership.
10. (Optional) Access the tasks Maintain FEGLI Codes and Maintain FEGLI Plan Mapping (U.S. Federal).

    Create mappings for FEGLI insurance codes and SF 50 equivalents. Example: 0000 - B0. Also, map the FEGLI plan types (Basic, Options A, B, and C) to insurance plans.

Steps: Set Up Benefits on page 1237

2022R1 What's New Post: Hide Benefit Plans

Create Health Care Plans

Prerequisites

- Set up benefits.
- Create benefit coverage types for health care.
- Create health care rates. Define rates by:
  - Age.
  - Demographic factors.
  - Length of service.
  - Percentage of salary.
  - Percentage of salary plus a flat amount.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

You can create a plan for each health care provider. You can have multiple plans, including high-deductible plans. For US employees, you can also configure options for US Medicare and US Affordable Care Act Form 1095-C.

Steps

1. Access the Create Benefit Plan task.
2. From the Benefit Plan Type prompt, select *Health Care Coverage Plan*.

3. Select a Health Care Rate Type to determine how you map benefit groups with health care rates or plan costs.

   Select:

   - *Flat Rate* to configure plan costs for each benefit group.
   - *Calculated Rate* to select a predetermined health care rate. You can create a derived health care rate based on additional criteria that add credits or surcharges for the benefit plan from the Create Health Care Rate task.
4. As you complete the task, consider:

Option	Description
Do Not Use	When selected, Workday appends the Do Not Use label to the benefit plan name and hides it from Benefit Plan configuration prompts, as of the effective date. This check box doesn't hide the benefit plan name from configuration prompts in these tasks and business process: • Create or Edit External Payroll Deduction tasks. • Create or Edit External Payroll Earning tasks. • *Review COBRA Eligibility Event* business process.
External Plan Description	Create an external URL that Workday displays on the enrollment form.
Worker Plan Eligibility	Select an eligibility rule to limit plan coverage to a subset of workers in the participating benefit group. Example: Limit coverage in the *Hourly Employees* benefit group to the workers in the state of California. Select an eligibility rule that includes only California workers.
Dependent Plan Eligibility	Select an eligibility rule to limit coverage to a class or category of dependents. Example: Limit coverage to dependents under the age of 27.
Overage Dependent Eligibility	Select the eligibility rule to use in association with the Fair Market Value per Dependent field. This rule enables you to determine who should have imputed income calculated by Workday Payroll or Payroll Interface.
Auto Enroll	Select to enroll employees in a benefit plan automatically. Note: When you select this option, access the Maintain Benefit Coverage Types task. Select the Only One Election check box for the coverage type that the health care plan belongs to. During enrollment, Workday automatically selects *Elect* for the plan and the employee can't make changes.

Option	Description
High Deductible Health Plan	Select to enable Health Savings Account elections.
Use Individual Rates	Available when if the Health Care Rate Type is *Flat Rate*. Select to override the employee and employer costs specified on the Manage Individual Rates task.
Reset Individual Rates on Plan Year Begin	Select to update employee and employer costs when the new plan year begins. Workday uses the values defined in the benefit plan. If you don't select this check box, the costs stay the same as the preceding year. Displays during enrollment when you select both: • A Health Care Rate Type of *Flat Rate*. • The Use Individual Rates check box.
Currency	Specifies the currency used to calculate the contribution amount for the benefit plan. Select the same currency used by the benefit groups that can enroll in the plan. Consider creating a separate benefit plan for each currency or country. You can only update this field if the Usage Count is zero.
Frequency	Available when the Health Care Rate Type is *Flat Rate*. Workday uses this frequency in payroll calculations, which might differ from the rate frequency displayed to employees during benefit enrollment.
Derive Coverage Targets	Select to have Workday automatically populate the Coverage targets that display when you view or modify your benefit plans. When you enroll workers in health care plans, Workday selects the Coverage target automatically based on current employee information.
Earnings and Deductions	For Workday Payroll, select: • *Earning* for benefit credits. Employer costs that are taxable to the employee. Required for imputed income. • *Deduction* for pretax and posttax employee costs. The employer costs and benefit surcharges that aren't taxable to the employee. Workday also

Option	Description
	uses these deductions for calculated health care rates. You need to specify deductions to ensure that the plans display costs. Note: When using the Payroll Interface for Workday, perform additional setup steps to map earnings and deductions to flexible health care rates. Contact your Integration Consultant for guidance on these setup steps.
Related Articles	Select existing articles related to the health care plan to build a knowledge base. You can link the last published version of an article that you create and publish with the Create Article task to a benefit plan. Note: Workers don't see a link in the benefit plan details. See Steps: Set Up Knowledge Management on page 3043.

5. (Optional) Configure options for the US Affordable Care Act Form 1095-C in the US Affordable Care Act Options section when you select a *Medical* health care type.
6. (Optional) Configure the US Medicare Options section to identify which benefit plans coordinate with Medicare.
7. Add plan details for your employees so that they can see the specific features of the benefit plan.

   As you complete the Expanded Plan Details section, consider:

Option	Description
Expanded Plan Details	Select the dental, medical, or vision plan benefit detail. Example: *Copay*, *Coverages*, or *Office Visits*.
Coverage Details	Select the coverage type, level, or benefit detail to display. Example: If you selected Chiropractor for the Expanded Plan Details, you might select In Network as the coverage detail.
Coverage Detail Type	Select the type of coverage. Available options depend on the value in the Coverage Details field and include: • Currency Amount • Percentage • Yes/No • Number • Months • Years
Coverage Detail Value	Enter or select the value for the benefit detail. Example: You select *Chiropractor* in Expanded Details, *Out of Network* for Coverage Details, and *Yes/No* for Coverage Details Type. You can select or clear the check box to

Option	Description
	indicate whether employees have Chiropractic coverage.
Value Override	Enter text that replaces the value for Coverage Detail Value, such as an email address, phone number, or considerations for the employee.

8. Configure the Benefit Rates and Eligibility grid to map benefit groups to health care rates or plan costs.

   As you complete the step consider.

Fair Market Value per Dependent	Flat Rate: Workday Payroll or Payroll Interface uses this value and Over Age Dependent Eligibility to calculate the imputed income.
External Payroll Cost Splits	Flat Rate: If you use an external payroll system to calculate flat rate costs, select: • The payroll entity. • The corresponding benefit deduction. • The cost amount.

Result

Workday creates a health care plan that you can add to an enrollment event.

Next Steps

- Create or edit the benefit plan year definition and add this plan to it.
- After creating health care plans, associate them with:
    - Coverage types such as dental, medical, or vision.
    - Eligibility rules.
    - Plan costs.

Tasks

Steps: Create Standard Forms for Benefits

Steps: Create Deductions

Map Pay Components to Benefit Plans

Set Up Benefits Knowledge Base Articles on page 1316

Set Up Decision Support for Medical Plans

Prerequisites

Configure demographics for peer groups:

- Access the Maintain Genders task to configure genders for the gender peer groups.
- Access the Maintain Related Person Relationships task to configure relationships for the coverage peer group.
- Select the Medical check box on the Maintain Benefits Coverage Types task for each benefit plan to include in the peer group data.

Security: *Set Up: Benefits* domain in the Benefits functional area.

Context

You can configure peer groups for your U.S. workers so that they can see what medical plans their peers selected in the previous open enrollment event. A peer group consists of workers that have similar demographics, like gender, income, or age. Workday identifies a medical plan as one whose benefit coverage type has the Medical check box selected.

You can schedule a job that generates the peer group data that workers see during open enrollment. During enrollment, Workday displays percentage of peers that selected each plan in the My Peers Chose column of the medical plan grid.

Steps

1. Access the Maintain Decision Support Peer Groups for Benefits task.
2. To include a demographic category, select any of these check boxes and select 1 or more of the options:
   - Gender
   - Age Ranges
   - Total Base Pay Ranges
   - Coverage
3. Access the Generate Peer Group Data for Benefits task and schedule it for now or in the future.

Result

During open enrollment, workers see statistics in the My Peers Chose column of the medical plan selection grid. They can use the information to guide their selection of a plan, based on what their peers selected in the previous open enrollment event.

Note:

Workers won't see the My Peers Chose column if they are in a peer group of fewer than 10 workers. Workday displays *New or Updated Plan* for new medical plans. If you map a new plan to an existing plan, Workday displays the election percentage of the existing plan.

Example

Gina is a benefits partner that has 2,000 employees that are eligible for open enrollment, with 3 medical plans. Gina accesses the Maintain Decision Support Peer Groups for Benefits task and makes these selections:

- Gender: Male, Female, Not Declared
- Age Ranges: Under 25, 35-44, 45-54, 55-65
- Coverage: Child, Domestic Partner, Spouse

Gina then runs the Generate Peer Group Data for Benefits job to generate the data. To see the results, Gina runs the View Peer Group Data for Benefits report, which displays 30 peer groups, 1 for each combination of demographic categories.

This table displays 3 examples of the peer groups:

Gender	Age Ranges	Coverage	Medical Plan	Enrolled
Female	25 - 34	Worker	Plan A	105
			Plan B	146
			Plan C	49
Male	35 - 44	Worker, Domestic Partner, Spouse, Child	Plan A	150
			Plan B	240
			Plan C	110
Not Declared	45 - 54	Worker, Domestic Partner	Plan A	45
			Plan B	15
			Plan C	15

During open enrollment, workers see the percentages for their peer group.

Next Steps

Use the report, View Peer Group Data for Benefits, to gain insight into the type of medical plans workers selected in the previous open enrollment event.

Tasks

Steps: Set Up Open Enrollment on page 1414

Create Insurance Plans

Prerequisites

- Set up benefits.
- Set up insurance costs.
- Configure insurance coverage definitions.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

Define the insurance plans for your employees.

Steps

1. Access the Create Benefit Plan task.
2. In the Benefit Plan Type field, select *Insurance Coverage Plan*.

3. As you complete the task, consider:

Option	Description
Do Not Use	When selected, Workday appends the Do Not Use label to the benefit plan name and hides it from Benefit Plan configuration prompts, as of the effective date. This check box doesn't hide the benefit plan name from configuration prompts in these tasks and business process: • Create or Edit External Payroll Deduction tasks. • Create or Edit External Payroll Earning tasks. • *Review COBRA Eligibility Event* business process.
External Plan Description	Provide a link to an external document about the benefit plan; Workday displays this link on the enrollment form.
Worker Plan Eligibility	If not all workers in the participating benefit groups are eligible for this plan, then select an eligibility rule to limit coverage to a subset. Example: You want to limit coverage within the *Hourly Employees* benefit group to workers in the state of California. To do so, select an eligibility rule that includes only California workers.
Dependent Plan Eligibility	Select an eligibility rule to limit coverage to a class or category of dependents. Example: Limit coverage to dependents under the age of 27. Only dependents who meet the criteria for an eligibility rule become available for selection during enrollment. If you don't select a dependent plan eligibility rule, coverage is available to all dependents.
Employee Cost is Pre-Tax	If you clear this check box, Workday takes employee costs from after-tax earnings.
Employer Cost is Non-Taxable	If you clear this check box, Workday considers employer costs taxable to the employee.
Auto Enroll	Select to enroll employees in an insurance plan automatically. Then select the Only One Election option for the coverage type to which the insurance plan belongs. Note: Don't select Auto Enroll for insurance plans that require evidence of insurability (EOI).

Option	Description
	On the enrollment pages, Workday automatically selects *Elect* for this election, which employees can't change.
Enable Evidence of Insurability Link	Select to display the Evidence of Insurability Link prompt and to display the link during an enrollment event.
Evidence of Insurability Link	Select or create an external URL that links workers to evidence of insurability information. Example: Link to the provider website or information on your organization website.
Covers	Identify the target populations that are valid for the insurance plan.
Insurance Coverage	Select an insurance coverage definition to specify the coverage levels or amounts that employees enrolling in the plan can select.
Use Individual Rates	Select this check box to override the employee and employer costs defined with the Manage Individual Rates task.
Reset Individual Rates on Plan Year Begin	Select to update employee and employer costs when the new plan year begins. Workday uses the values defined in the benefit plan. If you don't select this check box, the costs stay the same as the preceding year.
Earnings and Deductions	For Workday Payroll, select: • *Earnings* for benefit credits. Calculates employer costs that are taxable to the employee (required for imputed income). • *Deductions* for pretax and post-tax employee costs. Calculates employer costs and benefit surcharges that aren't taxable to the employee. Workday also uses these deductions for calculated health care rates. If you don't specify deductions, the plans might not display costs. Note: When using the Payroll Interface for Workday, perform additional setup steps to map earnings and deductions to flexible health care rates. Contact your Integration Consultant for more guidance on these setup steps.

4. In the Expanded Plan Details section, add plan details for your employees so that they can see the specific features of the benefit plan. You can also add instructions and links to benefit plan information. Workday displays coverage options with costs.
5. In the Benefits Eligibility and Rates tab, define the plan costs and benefit credits for each benefit group that qualifies for the insurance plan.

6. (Optional) In the External Payroll Deductions tab, select the payroll deduction code.

   If you’re using an external payroll system to calculate insurance costs, select benefit deduction for the payroll entity.
7. (Optional) In the Age Adjustment Policy tab:
   a) Select whether to calculate the employee cost based on the age-adjusted or full coverage amount. Make the same selection for the employer contribution.
   b) Select Use Employee's Age for Age Adjustment to base the spouse age-adjusted coverage amount on the employee age.
   c) Define rules for adjusting insurance coverage amounts based on an employee age:
      - Enter the Age From, the Age To, and the Multiply by Percentage fields.
      - Select the Calculate As Of date and, if necessary, enter the specific month (expressed as a number) and day. You can select Of Prior Plan Year check box to use specific dates from the prior plan year.
      - Select Last Date of Previous Pay Period to enable the new coverage amount based on an employee's age to become effective the pay period following the one in which their birthday occurs.

   Example: Adjust coverage amount to 95% of full coverage for employees 70 to 75 years of age.

Next Steps

- Create or edit the benefit plan year definition and add this plan.
- (Optional) Create cross-plan insurance prerequisites.
- (Optional) Create cross-plan coverage amount or percentage maximums.

Concept: Hiding Benefit Plans from Configuration Prompts on page 1318

Setup Considerations: Critical Illness Insurance Plans

You can use this topic to help make decisions when planning your configuration and use of critical illness plans. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday doesn't provide a benefit plan type for critical illness coverage, so you can select from these plan types:

- Insurance
- Additional Benefits
- Health Care

Each plan type enables you to manage enrollments in critical illness plans, but each has important administrative challenges to consider. You select a plan type for your critical illness plans, depending on:

- The critical illness plan design.
- The rate structure.

You also select a plan type depending on what you want to do with the critical illness information:

- Report internally within the company.
- Send the plans to the benefit provider through a benefit connector or a custom integration.
- Send plan information to the benefit provider manually. Example: Uploading the information through a website.

Before you set up a critical illness plan in Workday Benefits, you must consider how you'll send plan information to your benefits provider. The choices you make while configuring benefit plans determine the information available to send to your provider.

You can create plans that capture the coverage amount for each coverage target, based on whether you use:

- Individual coverage rates.
- Multiple coverage targets.
- Tiered rate bands.

Business Benefits

Selecting the correct plan type before setting up critical illness plans helps:

- Avoid creating a plan that doesn't address your needs and in the wrong format for the benefits provider.
- Deliver the right information to benefit providers through custom or Cloud Connect for Benefits integrations.

Use Cases

- You use individual rates for employees.
- You have multiple rate bands.
- You use age bands.
- You have a vendor not covered by a CCB and use custom integration.

Questions to Consider

Question	Considerations
What critical illness plan information do you need to give to your benefit provider?	Most benefit providers require specific data elements and reporting formats to establish enrollment participation and coverage amounts. They might: • Expect multiple records with different plan codes for each coverage target. • Collect the data on a single record with multiple columns.
What plan type best captures the information that your vendor requires?	Typically, we recommend the Insurance plan type. Each plan type provides different configuration options. Contact your Integrations Consultant to determine what data and format that they need.
How many rate bands should you have?	Consider which employee and dependent demographic data determines these rates bands. Examples: Age, dependents, or beneficiaries.

Recommendations

Plan Type	Recommended For	Considerations
Insurance	• Workday Cloud Connect for Benefits integrations. • Multiple coverage targets. • Individual rate bands.	Recommended for most employers because you can define specific coverage targets and coverage amounts. You can also provide demographic data for dependents. This plan type: • Recommended for Cloud Connect for Benefits integrations. • Needs a plan for each coverage target.
Additional Benefits	Individual rate plans.	You can create critical illness plans with different coverage targets and amounts, without creating separate plans for each coverage target. You can't easily add age bands, and you can't provide the demographic information required for dependents.
Health Care	• Single composite rate for premiums and billing. • Individual rate bands.	Recommended only if the benefit provider or integration vendor asks for tiered coverage, which Insurance plans can provide. Supports age bands. Health Care plans don't capture coverage amounts, making it difficult for downstream applications and integrations to display and report coverage.

Requirements

- Complete the prerequisites required for benefits plans.
- Request the file specification from your benefit provider so that you can familiarize yourself with their data requirements. The plan setup might need to accommodate:
  - Coverage start dates.
  - Coverage amounts for the employee, spouse, or dependents.
  - Demographic information for spouse or dependents. Example: Name, date of birth, and social security number as identifiers.
- Cloud Connect for Benefits integrations: Compare the data requirements for your benefit provider with the output options provided by the integration.
- Create a custom integration if you select a plan type other than Insurance.
- Set up integrations with third-party vendors.

Limitations

No impact.

Tenant

No impact.

Security

Domains	Considerations
Set Up: Benefits domain in the Benefits functional area.	Users secured to this domain can create benefit plans.
Manage: Benefits for Organizations domain in the Benefits functional area.	Users secured to this domain can manage individual benefit rates.

Business Processes

No impact.

Reporting

No impact.

Integrations

Workday Cloud Connect for Benefits integrations require an Insurance plan type for critical illness plans. If you don't use Workday-provided integrations, you need to create a custom integration.

Note: When using Cloud Connect for Benefits for critical illness plans, contact your Integration Consultant to ensure that the integration can process the critical illness plan information correctly.

The Cloud Connect for Benefits or custom integrations typically require:

- Subscriber data.
- Enrollment data.
- Compensation data.
- Coverage information.
- Beneficiary information.
- Dependent information.

Connections and Touchpoints

Critical illness plans interact with these parts of Workday:

- Enrollment information.
- Cloud Connect for Benefits.
- Deduction payments.
- Insurance plans.
- Health care plans.
- Additional benefit plans.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Create Retirement Savings Plans

Prerequisites

- Set up benefits.
- Create one or more deductions or earnings.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

When you create retirement savings accounts for employees, you can define the:

- Retirement plan minimum and maximum contribution amounts for employees.
- Employer contribution amounts.
- Payroll deductions.

You can allocate retirement savings contributions across multiple plans by creating a separate deduction for each plan.

Steps

1. Access the Create Benefit Plan task.
2. Select *Retirement Savings Plan* from the Benefit Plan Type prompt.
3. As you complete this task, consider:

Option	Description
Do Not Use	When selected, Workday appends the Do Not Use label to the benefit plan name and hides it from Benefit Plan configuration prompts, as of the effective date. This check box doesn't hide the benefit plan name from configuration prompts in these tasks and business process: • Create or Edit External Payroll Deduction tasks. • Create or Edit External Payroll Earning tasks. • *Review COBRA Eligibility Event* business process.
External Plan Description	Create a plan description document and make it available on the enrollment form as an external link.
Worker Plan Eligibility	Select an eligibility rule to limit coverage to a subset of eligible workers in the participating benefit groups.
Currency	Specifies the currency used to calculate the contribution amount for the benefit plan. Select the same currency used by the benefit groups that can enroll in the plan. Consider creating a separate benefit plan for each currency or country.

Option	Description
	You can only update this field if the Usage Count is zero.
Frequency	Workday uses the frequency in payroll calculations.
Earnings and Deductions	Select the deductions Workday Payroll uses to calculate employee and employer contributions to retirement plans.

4. In the Expanded Plan Details section, add plan details for your employees so that they can see the specific features of the benefit plan. You can also add instructions and links to benefit plan information. Workday displays employee and employer contribution information.
5. In the Employee Contribution section,you can enable workers to automatically increase retirement savings contributions, to support Secure Act 2.0.

   This feature is only available for *percentage* contributions. Employees can opt in or out of automatic contribution increases during an enrollment event with the Auto Contribution Increase check box.

   As you complete this section, consider:

Option	Description
Auto Contribution Increase	Select to enable auto contribution increases on the retirement savings plan.
Auto Contribution Percentage	Specify the default contribution percentage of the worker's initial enrollment, between 3% and 10%. Available only when you enable Auto Contribution Increase.
Yearly Auto Contribution Increase Percentage	Specify how much the percentage increases each year. Typically 1%. Available only when you enable Auto Contribution Increase.
Auto Increase Percentage Maximum	Specify the maximum percentage at which the yearly increase stops. Available only when you enable Auto Contribution Increase.

6. (Optional) Select a deduction for the Payroll Entity on the External Payroll Deductions grid when you use an external payroll application to calculate employee and employer contributions.

   Specify deductions to ensure that retirement savings plans display costs.

Result

You can enable employees to configure their contribution elections for retirement savings plans during open enrollment. Workday enables employees to configure their contribution elections during open enrollment or update them during the plan year on the Benefits and Pay Hub.

Next Steps

- Enable employees to allocate their contribution to more than 1 retirement savings plan using the Maintain Retirement Savings Allocation Across Multiple Providers task.
- Create or edit the benefit plan year definition and add the new retirement savings plan to it.

Create Rules for Allocating Retirement Savings Contributions

Prerequisites

- Create retirement savings plans.
- Security: *Set Up Benefits: Retirement Savings Allocation Across Multiple Providers* domain in the Benefits functional area.

Context

Create the coverage types that enable employees to allocate their retirement savings contribution to more than 1 retirement plan within a coverage type.

Note: If you use allocation of retirement savings plans, you can't use benefit defaults or cross plan prerequisites.

To	Complete the Employee Contribution Allocation Section	Complete the Employer Contribution Allocation Section	Set the Employer Allocation Rules
Allocate both employee and employer contributions.	Yes	Yes	Employee can always allocate.
Allocate only employee contributions. Can’t allocate employer contributions.	Yes	No	
Allocate only employer contributions. Can’t allocate employee contributions.	No	Yes	Don’t select.
Allocate both employee and employer contributions. Workday allows allocation of employer contribution only if the employee doesn't contribute to any plans.	No	Yes	Employee can allocate only if they don’t contribute to any plan.

Steps

1. Access the Maintain Retirement Savings Allocation Across Multiple Providers task.
2. As you complete both the employee and employer Employee/Employer Contribution Allocation Across Multiple Providers sections, consider:

Option	Description
Retirement Savings Coverage Type	Select the coverage types to which employees can allocate contributions.
Employer Contribution Allocation Rules	Select either:

Option	Description
	• *Employee can always allocate* if you want the Employer Allocation on the enrollment form available for entry. • *Employee can allocate only if they do not contribute to any plans*. If you want the Employer Allocation on the enrollment form available for entry only when the employee hasn't selected to contribute to any plans within that coverage type.
Priority	Enter a number that Workday uses to determine which retirement plans receive the default Employer Contribution Percent. Workday applies only the highest priority to plans for which the worker is eligible. If the worker is eligible for multiple plans with different priority defaults, Workday applies only the default with the highest priority. The lower priority plan doesn't receive a default Employer Contribution Percent.
Allocation	Enter the percentage amount that you want as a default in the Employer Contribution Allocation field on the enrollment form. The total employer contribution allocation for all benefit plans must total 100%. On the enrollment form, the Employer Contribution Allocation automatically populates with this value.

Result

On the Retirement Savings Enrollment form for the benefit coverage types you added, you see a separate page for each coverage type.

Next Steps

- Start an open enrollment.
- Initiate a change in retirement savings task.
- Initiate a passive event process.

Enroll Employees in Retirement Savings Plans

Prerequisites

- Create rules for allocating retirement savings plan contributions.
- Initiate an open enrollment, change benefit election, or passive event for an employee.
- Security: *Worker Data: Benefits* in the Benefits domain.

Context

You can enroll an employee in a retirement savings plan. If you configured multiple retirement savings plans, you can allocate the employee's percentage across the multiple plans. You can also troubleshoot issues the employee has in allocating the correct amounts or percentages.

Administrators can use the *Enroll in Retirement Savings Plans* web service to bulk load multiple enrollment events.

Because administrators use the *Enroll in Retirement Savings Plans* web service for loading data the web service completes processing automatically, even if you specify manual processing.

Steps

1. Access the task in My Tasks for enrolling in benefits.
2. As you complete these steps, consider:

Option	Description
Employee Contribution	(Optional) Enter a contribution percent or amount. The amount must be within the minimum and maximum contribution defined on the plan.
Plan Contribution Percentage	The contribution percentage for either the employee or employer for each plan. To allocate contributions to more than 1 plan, enter a percentage allocation for each plan. The total allocation for each grid must equal 100%.
Employer Contribution	Displays when you configure the employer contribution for the plan or if the employee can contribute.

Next Steps

Use these reports to view details of employee benefit plans:

- Benefit Elections report.
- Benefit Election History report.
- Employee Benefit Elections - Current vs. Previous report.

Create Health Savings Account Plans

Prerequisites

- Set up benefits.
- Set up payroll deductions.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

Define contribution limits and other details for health savings account plans.

A Health Savings Account (HSA) combines a lower-cost, high-deductible health insurance plan (HDHP) with a tax-favored savings account. The HSA enables employees to deposit money to pay for qualified health care expenses until they meet the medical plan deductible. Unlike a health care flexible spending account, the unspent savings in an HSA can roll over year after year and earn interest.

The U.S. Federal government sets the maximum contribution amount for HSA plans each year. Workers age 55 and over have an additional catch-up amount. Workday recommends that you create 1 plan for workers under 55 and another for workers 55 and over. With this approach, employees 55 and older can enroll in an HSA plan with a limit that includes both the HSA catch up and the regular HSA limits. This approach prevents employees 55 years or older from having to enroll in 2 plans to get the full benefit.

Steps

1. Access the Create Benefit Plan task.
2. As you complete this task, consider:

Option	Description
Do Not Use	When selected, Workday appends the Do Not Use label to the benefit plan name and hides it from Benefit Plan configuration prompts, as of the effective date. This check box doesn't hide the benefit plan name from configuration prompts in these tasks and business process: • Create or Edit External Payroll Deduction tasks. • Create or Edit External Payroll Earning tasks. • *Review COBRA Eligibility Event* business process.
Health Savings Account Coverage Type	Identify the health savings account type. Example: *HSA*.
External Plan Description	Select the URL address. When employees enroll in this plan, a link displays that opens the website in a new browser page.
Participating Benefit Groups	Associate the plan to specific benefit groups.
Worker Plan Eligibility	Select an eligibility rule that limits coverage to a subset of the employees in the selected Participating Benefit Groups.
Currency	Specifies the currency used to calculate the contribution amount for the benefit plan. Select the same currency used by the benefit groups that can enroll in the plan. Consider creating a separate benefit plan for each currency or country. You can only update this field if the Usage Count is zero.
Frequency	Specifies the amount that the employee can contribute during the specified frequency. Example: If you specify a maximum of $9300 USD at an annual frequency, the worker can contribute up to this amount during the 12-month period.

Option	Description
	During a single enrollment event, deductions and earnings on spending accounts and HSA plans have to have the same frequency. Schedule frequency overrides in Payroll. You can only update this field if the Usage Count is zero.
Earnings and Deductions	Map the contribution amounts to payroll (typically done through Workday Payroll or the Payroll Interface): • For Workday Payroll, select earnings and deductions. • For Payroll Interface, select earnings and deductions. Note: When using the Workday Payroll Interface, map earnings and deductions to HSA contributions. Contact your Integration Consultant for more guidance on these setup steps. See: • ../../../payroll/earnings-deductions-and-other-calculations/xmb1553624017699.dita • ../../../payroll/earnings-deductions-and-other-calculations/create-earnings-and-deductions/dan1370797367682.dita • ../../../payroll/earnings-deductions-and-other-calculations/create-earnings-and-deductions/dan1370797354517.dita • ../../../payroll/earnings-deductions-and-other-calculations/create-earnings-and-deductions/dan1370797354117.dita
Do Not Calculate Remaining Pay Periods	Used during enrollment. • Select this check box to have the employee or administrator enter the number of remaining pay periods during midyear benefit events. If the benefit event type is Open Enrollment, Workday uses the Benefit Group frequency to calculate the remaining pay periods automatically. For other event types, Workday leaves the Remaining Periods field empty, requiring the employee to enter a value. During a single enrollment event, deductions and earnings on spending

Option	Description
	accounts and HSA plans have to have the same frequency. • Clear this check box for Payroll to use the period schedule when calculating the remaining pay periods. Note: Don't select this check box after initiating open enrollment.

3. In the Plan Costs section, consider:

Option	Description
Participating Benefit Groups	If contributions vary by benefit group, identify each group separately and assign the contribution amounts to the corresponding coverage targets. If all benefit groups have the same contributions, list all groups in the Participating Benefit Groups field and assign the corresponding coverage targets and contribution amounts.
HSA Coverage Target	Workday automatically enters *Employee* and *Family*. If you've selected the check box to Include an additional HSA Coverage Target Options on the Edit Tenant Setup - HCM task, Workday automatically assigns the *Other* coverage target.
Maximum Contribution	Enter the maximum contribution amount for the savings plan. This amount includes both the employee and employer contributions. Workers can enter an amount up to 1 USD over the maximum. With this method, Workday allows for rounding that might prevent workers from reaching the maximum annual goal amount. Note: To prevent overcontributing, set a limit on the Payroll side to stop deductions at the maximum contribution level. Example: A worker with biweekly pay frequency elects the maximum amount of 7000 USD. The worker contributes 269.23 USD each pay period (7000/26 = 269.23067). The worker only contributes a total of 6999.92 USD (269 * 26 = 6999.98), 0.02 USD short of the maximum. However, if the worker elects 7001 USD, the worker can reach the 7000 USD limit.
Minimum Contribution	Enter the minimum amount that an employee must contribute to the savings plan.

Option	Description
	This amount doesn't include employer contributions.
Employer Contribution	Enter the amount that the employer contributes to the savings plan.

4. In the Expanded Plan Details section, add plan details for your employees so that they can see the specific features of the benefit plan.

   You can also add instructions and links to benefit plan information. Workday displays employee and employer contribution information.

Next Steps

- Create or edit the benefit plan year definition and add this plan.
- Access the Create Cross Plan Enrollment Prerequisites task to link the HSA plan to the prerequisite HDHP.

  IRS rules require that employees enroll in an HDHP before enrolling in an HSA plan.

  Note: You must link an HDHP plan as a prerequisite to an HSA plan. Workday requires the link to determine the correct HSA contribution limit. The link also enables employees to access the HSA enrollment page.

The Next Level: Troubleshooting Benefits

Create Spending Account Plans

Prerequisites

- Set up benefits.
- Create payroll deductions.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

Define contribution limits and other details for benefits spending account plans.

Steps

1. Access the Create Benefit Plan task.
2. Select *Spending Account* for the Benefit Plan Type prompt.
3. As you complete the task, consider:

Option	Description
Do Not Use	When selected, Workday appends the Do Not Use label to the benefit plan name and hides it from Benefit Plan configuration prompts, as of the effective date. This check box doesn't hide the benefit plan name from configuration prompts in these tasks and business process:

Option	Description
	• Create or Edit External Payroll Deduction tasks. • Create or Edit External Payroll Earning tasks. • *Review COBRA Eligibility Event* business process.
Spending Account Type	Identify the spending account type. Example: *Healthcare FSA*, *Dependent Care FSA*, or *Transportation*.
External Plan Description	Select the URL address. When employees enroll in this spending account plan, a link displays that opens the website in a new browser page.
Participating Benefit Groups	Associate the plan to specific benefit groups.
Worker Plan Eligibility	Enter an eligibility rule that limits coverage to a subset of the employees in the selected Participating Benefit Groups.
Currency	Specifies the currency used to calculate the contribution amount for the benefit plan. Select the same currency used by the benefit groups that can enroll in the plan. Consider creating a separate benefit plan for each currency or country. You can only update this field if the Usage Count is zero.
Frequency	Specifies the maximum amount that the employee can contribute during the specified frequency. Example: If you specify a maximum of $9300 USD at an annual frequency, the worker can contribute up to this amount during the 12-month period. During a single enrollment event, deductions and earnings on spending accounts and HSA plans have to have the same frequency. After defining the frequency, you can only change it when the plan has no elections associated with it.

Earnings and Deductions	Map the contribution amounts to payroll (typically done through Workday Payroll or the Payroll Interface):
	
	• For Workday Payroll, select:
	    • The pretax deduction for employee contributions. (Workday Payroll doesn't process posttax deductions for spending accounts.)
	    • Earnings and deductions.

Option	Description
	• For Payroll Interface, select earnings and deductions. Note: When using the Workday Payroll Interface, map earnings and deductions to spending account contributions. Contact your Integration Consultant for more guidance on these setup steps. See: • ../../../payroll/earnings-deductions-and-other-calculations/xmb1553624017699.dita • ../../../payroll/earnings-deductions-and-other-calculations/create-earnings-and-deductions/dan1370797367682.dita • ../../../payroll/earnings-deductions-and-other-calculations/create-earnings-and-deductions/dan1370797354517.dita • ../../../payroll/earnings-deductions-and-other-calculations/create-earnings-and-deductions/dan1370797354117.dita
Do Not Calculate Remaining Pay Periods	For enrollment: • Select this check box to have the employee or administrator enter the number of remaining pay periods during midyear benefit events. If the benefit event type is Open Enrollment, Workday uses the Benefit Group frequency to calculate the remaining pay periods automatically. For other event types, Workday leaves the Remaining Periods field empty, requiring the employee to enter a value. During a single enrollment event, deductions and earnings on spending accounts and HSA plans have to have the same frequency. • Clear this check box for Payroll to use the period schedule when calculating the remaining pay periods. Note: Don't select this check box after initiating open enrollment.

4. In the Expanded Plan Details section, add plan details for your employees so that they can see the specific features of the benefit plan. You can also add instructions and links to benefit plan information. Workday displays employee and employer contribution information.

5. On the Plan Costs tab, consider:

Option	Description
Maximum Contribution	Enter the maximum contribution amount for the spending account. This amount includes both the employee and employer contributions. Workers can enter an amount up to 1 USD over the maximum. With this method, Workday allows for rounding that might prevent workers from reaching the maximum annual goal amount. Note: To prevent over contributions, set a limit on the Payroll side to stop deductions at the maximum contribution level. Example: A worker with biweekly pay frequency elects the maximum amount of 7000 USD. The worker contributes 269.23 USD each pay period (7000/26 = 269.23067). The worker only contributes a total of 6999.92 USD (269 * 26 = 6999.98), 0.02 USD short of the maximum. However, if the worker elects 7001 USD, the worker can reach the 7000 USD limit.
Minimum Contribution	Enter the minimum amount that an employee must contribute to the spending account. This amount doesn't include the employer contribution.
Employer Contribution	Enter the amount that the employer contributes to the spending account.

Next Steps

Create or edit the benefit plan year definition and add this plan.

Concepts

Concept: Hiding Benefit Plans from Configuration Prompts on page 1318

Reference: Health Savings and Spending Accounts Enrollment Options on page 1321

Create Additional Benefit Plans

Prerequisites

- Set up benefits, defining these items for additional benefits:
  - Additional benefit coverage types.
  - Coverage targets or contributions for additional benefit plans.
- Set up benefit credits.
- Set up benefit surcharges.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

You can create an additional benefit plan for a benefit that doesn’t fit in the other coverage categories.

Examples:

- Commuter plans.
- Employee Stock Purchase Plans (ESPP).
- Gym memberships.
- Legal assistance.
- Pet insurance.

You can also create a long-term care insurance additional benefit. With the individual rate feature, you can enter a rate at the employee level.

You can track enrollment and costs in these plans.

Steps

1. Access the Create or Edit Benefit Plan task.
2. From the Benefit Plan Type prompt, select *Additional Benefits Plan*.
3. As you complete this task, consider:

Option	Description
Do Not Use	When selected, Workday appends the Do Not Use label to the benefit plan name and hides it from Benefit Plan configuration prompts, as of the effective date. This check box doesn't hide the benefit plan name from configuration prompts in these tasks and business process: • Create or Edit External Payroll Deduction tasks. • Create or Edit External Payroll Earning tasks. • *Review COBRA Eligibility Event* business process.
External Plan Description	Create an external URL that Workday displays on the enrollment form.
Participating Benefit Groups	Select the benefits groups that are eligible for this plan. The groups you select here determine the groups that are available in the Benefit Rates and Eligibility section.
Worker Plan Eligibility	If all workers in the participating benefit groups aren’t eligible for this plan, select an eligibility rule to limit coverage to a subset of workers. Example: You want to limit coverage within the Hourly Employees benefit group to workers in the state of California. To do so, select an eligibility rule that includes only California workers.
Auto Enroll	Select to enroll employees in an additional benefit plan automatically. On the enrollment

Option	Description
	page, Workday automatically selects *Elect*, and employees can only view it. Note: To enroll employees in a benefit plan automatically, select this option and select the Only One Election option for the Maintain Benefit Coverage Types page.
Use Individual Rates	Select this check box to override the employee and employer costs using the Manage Individual Rates task. Not available for amount-based plans.
Reset Individual Rates on Plan Year Begin	Select this check box when a new plan year begins to revert the employee and employer costs to the values defined on the benefit plan. Otherwise, the costs stay as they were for the prior year.
Whole Number Percentages Only?	Select to ensure that employees use whole numbers on additional benefit plans that use percentages. When selected, Workday displays an error for Workday on the desktop when an employee attempts to enter something other than a whole number.

Earnings and Deductions	Applies to Workday Payroll users and integrations to third-party payroll providers.
	
	• Select:
	    • Earning codes used to calculate employer costs that are taxable to the employee.
	    • Deduction codes used to calculate employee pre/post-tax costs
	    • Codes used to calculate employer costs that aren't taxable to the employee.

Currency	Specifies the currency used to calculate the contribution amount for the benefit plan. Select the same currency used by the benefit groups that can enroll in the plan. Consider creating a separate benefit plan for each currency or country. You can only update this field if the Usage Count is zero.

4. In the Expanded Plan Details section, add plan details for your employees so that they can see the specific features of the benefit plan. You can also add instructions and links to benefit plan information. Workday displays contribution information and the amount workers pay.

5. In the Benefit Rates and Eligibility section, enter:

Option	Description
Covers	Displays only if you selected the Use Coverage Target check box on the Maintain Benefit Coverage Types page.
Employee Cost (Pre-tax)	Available if you selected a coverage type with *Rates* in the Plan Behavior field. Enter the pretax plan cost.
Employee Cost (Post-tax)	Available if you selected a coverage type with *Rates* in the Plan Behavior field. Enter the post-tax plan cost.
Employee Amount Minimum	Available if you selected a coverage type with *Accepts Amount* in the Plan Behavior field. Enter the minimum amount that an employee can contribute.
Employee Amount Maximum	Available if you selected a coverage type with *Accepts Amount* in the Plan Behavior field. Enter the maximum amount that an employee can contribute.
Employee Percent Minimum	Available if you selected a coverage type with *Accepts Percent* in the Plan Behavior field. Enter the minimum percentage that an employee can contribute.
Employee Percent Maximum	Available if you selected a coverage type with *Accepts Percent* in the Plan Behavior field. Enter the maximum percentage that an employee can contribute.
Employer Cost (Non-taxable)	Map nontaxable costs to a payroll deduction.
Employer Cost (Taxable)	Map taxable costs to a payroll earnings code.

Next Steps

Create or edit the benefit plan year definition and add this plan.

Set Up Benefits Knowledge Base Articles

Prerequisites

- Workday Help SKU.
- Security: In the *Help* functional area, the segmented security group for benefits administrator needs:
    - *Manage: Help Articles* (Modify)
    - *View: Help Articles*

Context

You can create a knowledge base of articles related to health care benefit plans. You can link the last published version of an article that you create and publish with the Create Article task to a benefit plan. This feature doesn't add article links to the worker's benefit plan.

Steps

1. Access the Maintain Article Categories task to create benefits article categories.
2. Set up security to give benefits administrators the ability to create knowledge base articles and add them to benefit plans. Create a segment-based security group to limit the categories benefits administrators have access to.
    a) Access the Create Security Group task and select *Segment-Based Security Group* as the type. Name the new security group.
    b) In the Security Groups field, select *Benefits Administrator*.
    c) In the Access to Segments group, select categories in the Knowledge Base Article Category prompt that you want administrators to be able to use for creating and managing articles.
    d) Give this security group modify and view permissions for the *Manage: Help Articles* domain.
3. Create articles and add them to benefit plans:
    a) Access the Create Article task to author and publish articles.
    b) Link an article to a benefit plan by accessing the Edit Benefit Plan task. Select an article title from the Related Article field.

Create Health Care Plans on page 1289

Generate Help Article for Benefit Plan

Prerequisites

- Workday Help SKU.
- Set Up Benefits Knowledge Base Articles.
- Security:
    - *Generate: Benefit Plan Help Articles* domain in the Benefits functional area.
    - *Manage: Help Articles* domain in the Help functional area and the People Experience functional area.

Context

You can use Generative AI (GenAI) to generate Help articles for your healthcare plans. When you run the task, Workday automatically generates a draft article and places it in the Help Workspace, after which you can review, edit, and publish it for workers to read and better understand their benefit options. You can then link the articles to the Related Articles field of the associated healthcare plan.

When generating your article, the GenAI incorporates these benefit plan details:

- Benefit Plan Full Name.
- Benefit Provider.

- Currency.
- Dependent Plan Eligibility.
- Description.
- Expanded Plan Details.
- Frequency.
- Overage Dependent Eligibility.
- Plan Costs.
- Plan Short Cut Name.
- Plan Type.
- Worker Plan Eligibility.

You can only generate articles for Health Care Coverage plan types. This feature only generates content in English - U.S.

Steps

1. Access the Generate Help Article for Benefit Plan task.

   Or, from the related actions menu of the healthcare benefit plan, select Benefit Plan > Generate Help Article.
2. Select the Benefit Plan you want to generate an article for.
3. Select a Plan Data as of Date.

   Workday uses the benefit plan configuration as of this date to generate the article's content.
4. Enter a unique title for your article.
5. Select OK.

   Workday displays the selected plan and any existing published articles linked to that plan.
6. Select Generate Help Article.

Result

Workday directs you to the generated article in the Help Workspace.

Next Steps

1. Review, edit, then publish your article.
2. (Optional) Access the Edit Benefit Plan task and manage Help article links in the Related Articles field.

Concept: Hiding Benefit Plans from Configuration Prompts

You can hide benefit plan names from the Benefit Plan prompt in tasks and reports to avoid using obsolete benefits plans. Examples:

- Creating or editing benefit plan year definitions.
- Creating earnings and deductions.
- Defining cross-plan dependencies.

You can select the Do Not Use check box on the benefit plan to append a label of Do Not Use to the name. Workday hides these plan names from configuration prompts. This label makes it easier to view obsolete plans in benefit plans year definitions and in reports.

Note: By selecting this check box, you don't affect the active status of the benefit plan. To inactivate the benefit plan, remove it from the benefit plan year definition.

You can also use the Do Not Use field on the Benefit Plan web service to hide benefit plans.

After you select the check box, you can use the Benefit Plans report to view plans with the label Do Not Use. You can then remove obsolete plans from the current benefit year plan definitions.

You can continue to search for and select the plan name in search prompts. To view hidden plans, you can access the Edit Benefit Plan task. From the Benefit Plan prompt, select All Benefit Plans Marked Do Not Use.

Effective Dating

Workday uses the effective date of the plan to determine when to display the Do Not Use label in the benefit plan name. When you use a future date, Workday also appends the effective date in some prompts that don't use effective dating.

Example: On the Edit Earning task, Workday displays the Benefit Plan prompt on the Non-Effective Dated tab. Workday might display the benefit plan name as *GMS Dental Plan (Do Not Use as of 02/22/2022)*.

Affected Configuration Prompts

Workday hides benefit plan names with the Do Not Use label from these tasks:

- Create Benefit Credit (Insurance Cost Lookup Credit types only).
- Create Benefit Group, on the Benefit Plan Mappings tab.
- Create Benefit Plan Year Definition.
- Create Cross Plan Insurance Coverage Maximum.
- Create Cross Plan Insurance Percentage Maximum.
- Create Cross Plan Enrollment Prerequisite.
- Create Cross Plan Retirement Savings Contribution Maximum.
- Create Deduction.
- Create Earning.
- Edit Benefit Credit (Insurance Cost Lookup Credit types only).
- Edit Benefit Group, on the Benefit Plan Mappings tab.
- Edit Benefit Plan Year Definition.
- Edit Cross Plan Insurance Coverage Maximum.
- Edit Cross Plan Insurance Percentage Maximum.
- Edit Cross Plan Enrollment Prerequisite.
- Edit Cross Plan Retirement Savings Contribution Maximum.
- Edit Deduction.
- Edit Earning.
- Maintain Benefit Defaults.

Concept: Employee Stock Purchase Plans

Employee Stock Purchase Programs (ESPP) provide employees the option to purchase company stock at a discounted price. Employers typically offer these plans once or twice a year, using either an open enrollment event or life event. You can configure an ESPP plan using either the Retirement Savings Plan or the Additional Benefits Plan types. You can set up matching contributions with your payroll provider.

Example: Add Expanded Details for Medical Plans

This example illustrates how to set up the expanded plan details that employees can view when selecting their health care plans during an enrollment event.

Context

You want to display the details for an existing medical plan during open enrollment. You configure the expanded plan details for the PPO medical plan.

Prerequisites

- Create a medical plan called *Medical - MyMedical PPO* with a flat rate.
- Security: *Set Up: Benefits* in the Benefits functional area.

Steps

1. Access the Edit Benefit Plan task.
2. Select *Medical - MyMedical PPO* from the Benefit Plan prompt that you created in the prerequisite step.
3. Select today's date from the Effective Date prompt to specify when the expanded plan details become available in the plan for enrollment events.

   Click OK.
4. In the Expanded Plan Details section, enter this informational text: *This plan doesn't require a Health Savings Account (HSA).*
5. Enter these values in the grid. Use the Display Order column to define the order in which you want the details to display for the employee.

Display Order	*Expanded Plan Details*	*Coverage Details*	*Coverage Detail Type*	*Coverage Detail Value*	*Value Override*
1	Coverage	~Individual (Network)~	Percentage	85	
		~Individual (Non-Network)~	Percentage	40	
2	Deductible	~Individual (Benefits)~	Number	3,000	
		~Individual + DP/ Spouse or Child(ren)~	Number	7,500	
3	Out-of-Pocket Annual Maximum	~Individual (Benefits)~	Number	50,000	

Display Order	*Expanded Plan Details*	*Coverage Details*	*Coverage Detail Type*	*Coverage Detail Value*	*Value Override*
		~Individual + DP/ Spouse or Child(ren)~	Number	75,000	
5	Hospital	In Network	Percentage	85	
		Out of Network	Percentage	40	
4	X-rays/ Medical Labs	~Individual (Network)~	Percentage	85	85. Doesn't include non-network technicians.
		~Individual (Non-Network)~	Percentage	40	

6. Click OK and Done.

2022R1: What's New Post: Benefit Election Decision Support

Reference: Health Savings and Spending Accounts Enrollment Options

If you need to approve or correct the plan entries, you can view these enrollment records:

- Health Savings Account (HSA).
- Spending account.

You can see additional fields in the enrollment record that the employee can't.

Note: Employees can change health savings and spending account contributions as long as Workday can take the payroll deduction during the same plan year.

This table displays the available fields and identifies the additional fields that you can use to view employee enrollments. Both HSA and spending account enrollments use the same fields.

Field Name	Visible	Who can see this?
Your estimated contributions made this year	Displays for midyear events that are not open enrollment events.	Admin and employee
Actual contributions from payroll	Displays when you use Workday Payroll.	Admin
Per Paycheck	Displays the contribution amount per paycheck. When you enter a value, Workday automatically updates the Annual field.	Admin and employee
Annual	Workday displays:	Admin and employee

Field Name	Visible	Who can see this?
	• Zero, when the employee is newly eligible or previously waived the plan. • The elections that the employee made in their last enrollment when this event is a midyear change. When you enter a value, Workday automatically updates the value in the Per Paycheck field. The value: • Must be equal to or greater than the contribution minimum defined on the benefit plan. • Must be equal to or less than the contribution maximum defined on the benefit plan. • If the change occurs at midyear, the value must be equal to or greater than the value in the Your estimated contributions made this year field. However, if the plan minimum is zero, you can enter zero, even if the employee made previous contributions in the year.	
Total Paychecks or Remaining Paychecks (for midyear event)	Displays when: • You maintain period schedules and clear the Do Not Calculate Remaining Pay Periods check box on the plan. The value is the number of periods left in the benefit plan year. • You select the Do Not Calculate Remaining Pay Periods check box and this event is for open enrollment. Workday automatically displays the frequency associated with the benefit group. • You select the Do Not Calculate Remaining Pay	Admin and employee

Field Name	Visible	Who can see this?
	Periods check box and this event isn't for open enrollment. The value is zero. • You don't maintain the period schedules and you clear the Do Not Calculate Remaining Pay Periods check box on the plan. The default value is zero.	
Use Paycheck Override	When selected, Workday applies the change across all HSA and spending accounts.	• Admin
Number of Paychecks	Displays if you select the Use Paycheck Override check box. Enter the number of deductions in case of a life event.	• Admin • Employee if you select the Do Not Calculate Remaining Pay Periods check box with a benefits life event.
Contribution	Displays when the frequency of the benefit group is different to than the frequency associated with the employee's pay group.	Admin and employee
Total Annual Contribution	Displays all contributions, including employer contributions, if any.	Admin and employee

Your employee changes their spending account enrollment at the end of the plan year.The change can occur only if the employee can take the deduction as an employee deduction. Example:

- The employee has a benefit event on 12/23.
- The pay period frequency occurs biweekly: 12/16 and 12/29.
- The pay date occurs on 1/3 of next year.
- The period ends in the current year, but Workday can't take the deduction until the next year.
- Workday prevents the enrollment from completing.

Calculate Your estimated contributions made this year.

Your employee enters these values during the enrollment.

Field	Value
Your number of remaining Payroll deductions for the year	15
Your estimated contributions made this year	600 - (25 * 15) = 225
How much do you want to contribute for the total year	600
How much do you want to contribute per paycheck Or How much do you want to contribute	25

FAQ: How do I stop calculated insurance coverage amounts from displaying?

You can prevent an employee's calculated insurance coverage amount based on percent of salary from displaying on benefit reports. Update the security policies in the Core Compensation functional area for these domains:

- *Self-Service: Insurance Calculated Coverage*
- *Worker Data: Insurance Calculated Coverage*

Hidden calculated coverages apply to all calculated coverage amounts regardless of benefit coverage type. However, insurance coverage amounts based on flat amounts still display.

Related Information
Concepts
Create Insurance Plans on page 1295

FAQ: How do I make HSA contribution changes without a qualifying event?

In Workday, you can configure the enrollment process so that employees can elect or change HSA contributions in response to a qualifying event. Qualifying events include a dependent or marital status change. You might, however, also want to give employees the ability to elect or change HSA contributions in the absence of a specific qualifying event.

When you define the events that open the enrollment process on the Maintain Enrollment Event Types report, create an event called *HSA Contribution Change*. This event must include only the HSA coverage types, and it must have the Worker Selectable option to enable employees to initiate HSA changes.

Benefit Programs

Steps: Set Up Benefit Programs

Context

You can deliver benefit program content to workers that display to workers in locations that you specify. You can have benefit program partners import content with web services, such as benefit plan information. The benefits administrator can also create the cards in Workday and display them to workers.

Steps

1. (Optional) Set Up Security and Endpoints for External Benefit Program Partners on page 1334.
2. Enable a benefits provider to be a benefits program partner so that you can create and manage program cards for the provider. Security: *Set Up: Benefits*.
    a) Access the Create Benefit Providers or Edit Benefit Providers task.
    b) Select the Benefit Program Partner check box.
3. Configure Benefit Program Cards on page 1335.
4. (Optional) Set Up the Worker Wellbeing Profile Card on page 1339.

Related Information
Concepts
Concept: Benefit Program Cards on page 1341

Set Up Security and Endpoints for External Benefit Program Partners

Prerequisites

Security:

- Manage: Benefit Program Software Partner
- Manage: Benefits for Organizations

Context

You can enable benefits program partners to create and import program cards for your employees. You can use the Maintain Benefit Programs task to specify which employees see the cards and where they display. Cards can have up to 3 lines of text and an image. Workday provides a web service that enables the benefits program partners to build a certified integration. We provide a security domain specifically for the program partner.

This task describes the steps that the benefits administrator performs to enable the benefit program partner to create and import the programs.

Steps

1. Configure security for benefits program partners.
    a) Create the integration system user account, which enables you to set up a Workday account for software partners.
    b) Select Do Not Allow UI Sessions to restrict the account for integrations only.
    c) Select the Security Profile-related action from the new Workday account.
    d) Select Assign Integrations System Security Groups.
    e) Add the account to an existing or new integration security group, which must be unconstrained.
    f) Edit the *Manage: Benefit Program Software Partner* domain security policy and give the relevant security groups view or change access.
    g) (Optional) Include the account on the Manage Authentication Policies report.
    h) Access and run the Activate Pending Security Policy Changes task.
2. Provide an endpoint URL to the benefit program partner:
    a) Sign into the tenant for your endpoint.
    b) Run the Public Web Services report and locate the *Benefits Partner Program Integrations* web service for benefit program cards. For cards that display on the on the Wallet page of the Benefits and Pay Hub, locate these web services:

Put_Worker_Benefit_and_Wellbeing_Wallet_Cards, *Benefit_Provider_Reference*, and *Coverage_Type_Reference*.

c) From related actions of the web service, select Web Service > View WSDL.
d) Go to the end of the file and locate this line, where [*link*] is the WSDL ID that you provide.

```
<soapbind:address location =“[link]”>
```

e) Send the end point to the benefits program partner.

Result

The *Put Benefit Partner Program* web service becomes available to the benefits program partner.

Next Steps

Configure program cards.

Related Information

Tasks

Concept: Benefit Programs on page 1341

Configure Benefit Program Cards

Prerequisites

- Select the Benefit Program Partner check box on the Edit Benefit Providers task.
- Security:
    - Manage: Benefits for Organizations
    - Self-service: Benefit Elections
    - Self-Service: Benefits
    - Self-Service: Benefits and Pay Hub
    - Set Up: Benefits
    - Worker Data: Benefits

Context

Program cards contain information that you need to communicate to workers. They contain text, images, and links for users to follow for further information. Benefit administrators can create content or authorized benefit program partners can import content using the *Benefits Partner Program Integrations* web service. See Set Up Security and Endpoints for External Benefit Program Partners on page 1334.

Steps

1. Access the Maintain Benefit Programs task.

   Note: You see content on this page only if you've enabled a provider as a program partner with the Edit Benefit Provider task.
2. Create new cards related to a provider by selecting the provider name and clicking the + button.

   (Optional) For program content that isn't related to a provider, access the Create Benefit Provider task. Create a provider with a name that meets your organizational requirements. Example: Internal Benefit Programs. Be sure to select the Benefit Program Partner check box.
3. As you complete this task, consider:

Option	Description
Display Order	Specify the order in which the program cards display.

Option	Description
Enabled	Select to display the benefit program card in your tenant. Note: Selecting this check box displays the program card based on the Start Date value. We recommend that you preview the card before selecting this check box.
Title	Enter the name of the benefit program. Example: Open Enrollment.
Description	Enter the text for the program card. Example: Get ready for open enrollment by reviewing your new benefits options!
Start Date	Select the date when Workday displays the program card.
End Date	Select the date when Workday stops displaying the program card.
Benefit Group	Select 1 or more benefit groups that can see the program card.
Benefit Coverage Type	Select benefit coverage types for the program card. Example: Medical, Dental, Vision. • Required for My Tasks, benefit plan selection, and an election submission confirmation. • Optional for the Overview section of the Benefits and Pay Hub and the Total Rewards statement. When selecting coverage type for the Overview section of the Benefits and Pay Hub and the Total Rewards statement, Workday displays a program card for eligible workers. A worker is eligible when: • They received the coverage type in a previous enrollment. • You offer them the coverage type in a current event (including statuses of *Not Started*, *In Progress*, or *Submitted*). • You offer them the coverage type in a close or finalized future-dated event. Note: If you don’t select a coverage type for a card, Workday will automatically display the card in the Overview section of the Benefits and Pay Hub, and in the Total Rewards statement (if you select those locations) for the workers in the selected benefit groups once the card is enabled within the specified start and end dates. You also must select a coverage type when you select 1 or more of these Benefit Program Locations:

Option	Description
	• *Benefit Plan Selection* • *My Tasks* • *Submit Election Confirmation*
Benefit Plan	Select 1 or more benefit plans for the program card.
Benefits Program Location	Select in which of these locations to display the benefit program card: • My Tasks. • The Benefits and Pay Hub, under the Discover Your Rewards section. • During benefit plan selection. • The enrollment confirmation page when the worker submits their elections. • Total Rewards statement.
Image	Upload 1 image for the program card.
Program Card Section Title Override	Override the Discover Your Rewards section title. Example: What's New with your Benefits?
URL	Enter a link to information about the program. Example: A link to a list of health care benefits.
URL Alias	Enter a user-friendly link for web pages to makes it easier for workers to navigate the web site. Example: You have a URL for a list of health care benefits: `https://www.gms.com/benefits/healthcare/benefitslist.html`. You can enter a URL alias of `https://www.gms.com`.
Wellbeing Interest	Select the interests that workers can select from. Example: You can enable the Financial category to include the Retirement interest. You define these interests when configuring the worker wellbeing profile. See Set Up the Worker Wellbeing Profile Card on page 1339.
Admin Notes	Displays information provided to the benefits administrator from the benefits program partner.
Source	Displays *Local* if you create the card in Workday and *Imported* if a benefits program partner imported the card into Workday.

4. Click OK and click the Preview button to display the program card.

Result

After you select the Enable check box, workers can see the information in the program card beginning on the start date.

2023R2 What's New Post: Benefits Partner Enrollment and Hub Communication

Configure the Benefits and Wellbeing Wallet

Prerequisites

- Set Up Security and Endpoints for External Benefit Program Partners on page 1334.
- Security:
    - *Set Up: Benefits* domain in the Benefits functional area.
    - *Manage: Benefit Program Software Partner* domain in the Benefits functional area.
    - *Integration Build* domain in the Integration functional area.

Context

You can configure and display program cards targeted to specific workers on the Wallet page of the Benefits and Pay hub. See: Reference: Benefits and Pay Hub on page 1060.

Workers can then easily view their benefits information on their mobile devices, enabling them to access their benefits information on the go.

Steps

1. Access the Create Benefit Providers or Edit Benefit Providers task.

   Select the Benefit Program Partner check box.
2. Provide the benefit program partner with the request information that they use to import wallet data.
    a) The End Point URL: Run the Public Web Services report and locate the *Put_Worker_Benefit_and_Wellbeing_Wallet_Cards* web service. From the related action, select Web Service → View WSDL. Go to the end of the file and locate the WSDL ID link.
    b) The *Benefit_Provider_Reference*: Access the Benefit Provider task and find the benefit provider you want. From the related action, select Integration ID → View IDs.

       You can also find this value in the Provider ID field on the Benefit Provider report.
    c) The *Coverage_Type_Reference*: Access Benefit Coverage Types report and select the coverage type that you want. From the related action, select Integration ID → View IDs.

       You can also find this value in the Coverage Type ID column of the Maintain Benefit Coverage Types task.
3. Access the Maintain Benefit and Wellbeing Wallet task and configure the Wallet page on the Benefits and Pay hub.

   As you complete the task, consider:

Option	Description
(Optional) Wallet Page Overrides	Enter a custom page label and description. The label displays as the title of the Wallet page of the Benefits and Pay hub.
Section Overrides	• Enable the sections that you want to display on the Wallet page and optionally enter custom display labels for each section. • (Optional) Enter custom instructional text.

Option	Description
(Optional) View Details Overrides	Enter a custom label for the Additional Information link. Example: Related Information.

4. (Optional) To customize the Wallet tab label that displays in the Benefits and Pay hub, access the Maintain Hubs task.

   Select the Custom Hub Navigation option from the Actions menu next to the Benefits and Pay hub.

   Click Override next to Wallet and update the name.
5. Configure and import worker-specific card details using these web services:
   - *Put Worker Benefit and Wellbeing Wallet Cards* for a single card type. The request includes the Card ID, Benefit Provider, Coverage Type, Plan Name, Opt In Preference Link, Logo, and Worker ID.
   - *Bulk Import Put Worker Benefit and Wellbeing Wallet Cards* for multiple card types. The request includes the Card ID, Benefit Provider, Coverage Type, Plan Name, Opt In Preference Link, Logo, and Worker ID.

   Note: This step is for the benefits program partner.

   Because the Plan Name field is an attribute, Workday recommends that the name used by the benefit program partner matches the benefit plan name in Workday.

   When the program partner imports the card into the worker's wallet, Workday displays a generic card until the worker links their account. When the worker changes their opt-in display preference on the partner's site, the provider can then update worker cards with detailed information.
6. Audit workday wallet data.

   Note: This step is for the benefits program partner.

   Use the *Get Wallet Opt In Preference* web service to retrieve a list of the workers who have opted-in to wallet cards.

   The benefits program partner can run audits to confirm that Workday displays the detailed cards for the correct workers compared to the partner's own records.

Result

Workers can now access the Wallet page in the Benefits and Pay hub to view their specific benefits cards.

Set Up the Worker Wellbeing Profile Card

Prerequisites

- Configure Benefit Partner Programs.
- Security: *Setup: Benefits* in the Benefits security domain.

Context

Workday enables you to configure delivered wellbeing interests that you customize for your workers. You can select from a list of categories and interests and make the Benefit Wellbeing Interests card available in 1 or more locations. Workers can then select the interests for the types of content that they want to see.

Example: You select *Occupational (Growth & Career)* as one of the wellbeing categories that you plan to provide content for. Within that category, you select these interest areas: *Learning* and *Professional Training*. Later, when a worker chooses their wellbeing interests, they select *Learning*. If you deliver program cards tagged with these 2 interests, then the worker sees the card with learning content, but not the card with the professional training content.

Steps

1. Configure the Wellbeing Profile categories and interests from which you want workers to select.
    a) Access the Maintain Benefits Wellbeing Interests task.
    b) On the Edit Wellbeing Interests tab, add the categories and corresponding interests.
    c) (Optional) Use the override fields to customize the names of the categories and interests to reflect your organizational needs.
    d) On the Edit Display Locations tab, select 1 or more of these display locations of the card:
    - Worker Profile
    - People Experience Workspace
    - Benefits and Pay Hub
2. Add the Benefits Wellbeing Interests card to the Worker Profile.

    Ensure that you've selected Worker Profile from the Edit Display Locations tab of the Maintain Benefits Wellbeing Interests task.
    a) Access the Configure Profile Summary task.
    b) Select Worker Profile.
    c) Add a row and select the *Wellbeing Interests* option to add the card to the profile.
3. Add the Benefits Wellbeing Interests card to the People Experience Workspace.

    Ensure that you've selected Worker Profile from the Edit Display Locations tab of the Maintain Benefits Wellbeing Interests task.
    a) Access the People Experience Workspace report.
    b) Select Cards from the left navigation panel.
    c) Select the Add Card button.
    d) Select the Benefits Wellbeing Interests check box.
    e) Click the Unpublished status prompt in the Benefit Wellbeing Interest row. Select the *Publish* option to add the card to the Home page.
4. Add the Benefits Wellbeing Interests card to the Benefits and Pay Hub.

    Ensure that you've selected Benefits and Pay Hub from the Edit Display Locations tab of the Maintain Benefits Wellbeing Interests task.
    a) Access the Maintain Hubs task.
    b) From the Actions prompt of Benefits and Pay, select Configure Overview. Select Customize Sections and Cards.
    c) In the row for Benefits and Pay Hub - Overview Page - Needs Attention Section, add the *Empty Worker Wellbeing Card for Benefits and Pay Hub* card.
    d) In the row for Benefits and Pay Hub - Overview Page - Overview Section, add the Worker Wellbeing for Benefits and Pay Hub card.

Result

A card displays in the selected locations asking workers to select or edit their wellbeing interests.

Next Steps

Access the Benefits Wellbeing Interest Aggregated Data report to see how many workers have added each wellbeing interest to their profile. You can use this report to gain insights about what your employees care most about.

Related Information

Examples

2024R2 Feature Release Note: Worker Wellbeing Profile and Program Cards

Concept: Benefit Program Cards

Workday enables you or an external *benefit program partners* to create or import benefit program content and personalized worker benefit information. This information can include both text and images. You can configure the program content to display in program cards in these locations:

- My Tasks.
- The Benefits and Pay Hub.
- During benefit plan selection.
- The enrollment confirmation page when the worker submits their elections.
- Total Rewards Statement.

You can configure personalized worker benefit information to display in these sections of the Wallet page in the Benefits and Pay Hub:

- Health Care
- Financial
- Wellbeing

Example:

An external benefit program partner creates the content announcing a financial seminar on retirement investments for your organization. They import the program content with the *PUT Benefit Program* web service.

As the benefits administrator, you configure the visibility of the program by selecting the location and the dates on which Workday displays the cards. You select the title of the program and the dates of November 1 through November 14. You also select the Benefits and Pay Hub and My Tasks as display locations. You then select Enable to display the card in the locations you've selected.

Enrollment Events and Rules

Steps: Set Up Enrollment Events and Rules

Prerequisites

Create benefit groups to associate with enrollment event rules.

Steps

1. Create Enrollment Events on page 1343

   Create the enrollment events that result in a change in eligibility or entitle employees to change existing elections.
2. Create Enrollment Event Rules on page 1349

   Create the rules that control how enrollment events are processed.
3. (Optional) Steps: Set Up Automatic Benefit Eligibility Checks on page 1342

   Workday can run a benefit eligibility check to see if an employee's benefit coverage is affected by a staffing event. To run the benefit eligibility check, add the *Change Benefits for Life Event* action to the business process associated with the staffing event.
4. (Optional) Create Conditional Messages for Enrollment Events on page 1359

   Use condition rules to create notification and confirmation messages that are specific to an event type.

Reference

Troubleshooting: Enrollment Events on page 1372

Steps: Set Up Automatic Benefit Eligibility Checks

Context

Set up Workday to check automatically if specific staffing, position, or compensation events have affected an employee's benefit coverage. If so, Workday sends a task to My Tasks to the role specified on the business process.

Steps

1. Create Enrollment Events on page 1343.
2. Create Enrollment Event Rules on page 1349.
3. Add the Change Benefit Elections business process as a step to business processes.

Business Process	Guidelines Regarding Placement
Add Additional Job	Add after the completion step.
Change Job	If you add the business process *Propose Compensation* , add after the *Propose Compensation Change*. Otherwise, add after the completion step.
Change Organization Assignments for Worker	Add after the completion step.
Change Primary Address	Add after the completion step.
Edit Position	Add after the *Request Compensation Change* and the completion step for the *Edit Position* steps.
End Additional Job	Add after the completion step.
Hire	Follows the *Create Workday Account* step, but doesn't have to be immediately after. The best placement depends on condition rules associated with this action and the eligibility rules used to determine eligibility.
Request Compensation Change	Add after the completion step.
Request Leave of Absence	Add after the completion step.
Request Return from Leave of Absence	Add after the completion step.
Termination	Add after the completion step.

Result

The *Change Benefit Elections* action runs the *Change Benefits for Life Event* business process. This business process uses the *If there is an effect on employee benefits?* condition rule to determine whether to create a benefit event. This condition rule determines:

- Whether an employee's current elections have caused a gain or loss in the employee's benefit coverage.

  If Workday uses eligibility rules to determine if the employee has lost or gained benefit coverage. If yes, Workday creates a benefit event.
- The default behavior.

  Workday checks the Defaulting Rules selected in the Coverage Rules tab on the Create Enrollment Event Rule task. If there’s a match, Workday creates a benefit event:

  - *Default to Priority Coverage* or *Waive*
  - *Default to Waive*

  Workday creates an event if you selected one of these options and there's a change in the employee's benefit coverage:

  - *Default to Current Elections, Priority Coverage*, or *Waive*.
  - *Default to Current Elections or Waive*.
- What the employee can do.

  Workday checks the Allowed Benefit Plan Changes selected in the Coverage Rules tab on the Create Enrollment Event Rule task. If you selected one of these options, Workday creates a benefit event:

  - *Can Select Any Plan* - Select any plan included in the specified benefit coverage types, including the option to waive.
  - *Current Plan Only* - Change only the details of the benefit plans in which workers are currently enrolled. There's no option to waive. Can add or remove dependents.
  - *Current Plan or Option to Decrease* - (Only Spending or HSA) Decrease contributions or keep at the current level.
  - *Current Plan or Option to Increase* - (Only Spending or HSA) Increase contributions or keep at the current level.
  - *Current Plan or Option to Waive* - Change only the details of the currently enrolled benefit plans, including the option to waive. Can add or remove dependents.

  If you selected one of these options, Workday creates an event when the current benefit coverage has a change in amount or eligibility:

  - *Only on Eligibility Change*.
  - *No changes allowed*.

Workday finalizes the event 1 day after the termination date if benefit coverage has terminated or workers can't make any plan changes. Workday doesn't send a notification to the employee. To send a notification, add a condition rule to the business process.

Note: As you add the *Change Benefit Elections* step to more business processes, review your enrollment event rules. Make sure all your benefit event types have defined rules. Workday combines events that occur on the same day.

Create Enrollment Events

Prerequisites

- Define benefit coverage types.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

Create the enrollment events that either:

- Result in an increase or decrease in benefit eligibility.

- Enable an employee to change current elections.

Enrollment events can be:

- Open enrollment: A period when employees can make additions and changes to their benefit elections.
- Benefit events: Specific qualifying events that open the enrollment process or trigger a gain or loss of benefits. Examples: Staffing, personal changes, and administrative changes.
- Passive events: Events that result from the passage of time rather than from specific changes to employee data. Example: A dependent child reaches age 26.

You can create custom validations to display errors and warnings to prevent workers from submitting elections with mistakes. Example: Require workers to add attachments for evidence of insurability documents or required documents for new dependents.

Steps

1. Access either:
   - Create Benefit Event Type task.
   - Create Open Enrollment Event Type task.
2. As you complete this task, consider:

Option	Description
Enrollment Offering Type	Example: For a birth event you can give employees the ability to elect or change medical, basic life, and supplemental life.
Worker Selectable	Applies to benefit events only. Enable workers to initiate the enrollment process using the Change Benefits task. A Benefit Partner or Administrator can report any type of event.
Route Enrollment to Benefits Partner	Applies to benefit events only. Select to send the Enroll in Benefits notification to the Benefits Partner so that the Benefits Partner can enter the employee's elections. Clear to send the Enroll in Benefits notification to the employee so that the employee can enter their own benefit elections. Note: Update the related business process to ensure that Workday correctly routes the event based on these selections. Don't route enrollment tasks for automated benefit processes to employees or Benefits Partners using the Maintain Enrollment Event Types report. Instead, target enrollment tasks to a role or security group directly in the business process definitions.
Restricted to Countries	Select 1 or more countries. You can limit this enrollment event type to employees in a benefit group that includes these countries. To enable employees to participate in an enrollment

Option	Description
	event for the country, select that country in the benefit group.

3. For benefit events, consider:

Option	Description
Reinstatement Event	Select to reinstate benefits coverage for rehires or employees returning from a leave of absence within an eligibility period. If either event occurs outside of the reinstatement eligibility period, Workday handles the event with the processes you define for nonreinstatement.
Reinstatement Period Time Units	Workday calculates the beginning of the eligibility period in this order: • Start on the rehire date or return from leave date. • Subtract the reinstatement period time. • Select the first day of the Unit of Time (month or year). If you select zero Reinstatement Period Time Units for any Unit of Time, a reinstatement period becomes eligible when these dates occur in the same Unit of Time: • Departure date. • Rehire or return from leave date. Example: Your reinstatement period is 2 months. If an employee's rehire occurs on August 15, the calculated eligibility period is June 1 to August 15. If their departure date occurs within this interval, the employee's benefits are eligible for reinstatement.

4. For benefit events, consider:

Option	Description
Days to Enroll Calculation	Define the benefit enrollment period for a specific type of benefit event. Select whether Workday uses: • The initiation date of the event. • The date of the event; this date starts the enrollment period.
Days to Enroll	Enter the number of days that determine the end date for the enrollment period. Start with the date defined for the Days to Enroll Calculation. Note: Workday only respects this date if the worker initiates a benefit enrollment event with the Change Benefits task. Workday recommends that you create a validation on

Option	Description
	the *Dependent Event* business process. The validation enforces Days to Enroll for when the worker initiates the Add Dependent task.
Employee Cannot Report After Days to Enroll	Select to prevent employees from reporting a benefit event after the enrollment period has passed.

5. For Coordination of Events, consider:

Option	Description
Do Not Reprocess Future Events	Disables coordination of events for this type of benefit event when it has an *earlier* event date than the current benefit event. Example: • Marital Status Change has an event date of July 1. • Beneficiary Change has an event date of June 1. Normally, Workday places the Marital Status Change *on hold* and processes the Beneficiary Change. After completing the Beneficiary Change, Workday rescinds the Marital Status Change and creates a new event. By selecting this check box for the Beneficiary Change, Workday doesn't place Marital Status Change *on hold* and proceeds as normal without any reprocessing. This check box doesn’t apply to events where an employee has a gain or loss in benefit eligibility.
Do Not Reprocess	Disables coordination of events for this type of benefit event when it has a *later* event date than the current benefit event. Example: • Open Enrollment has an event date of January 1. • Beneficiary Change has an event date of December 20. Normally, Workday places Open Enrollment *on hold* and processes the Beneficiary Change. After completing the Beneficiary Change, Workday then rescinds Open Enrollment and creates a new event. When selected, Workday doesn't place the Open Enrollment *on hold* and proceeds as normal. This check box doesn’t apply to events where an employee has a gain or loss in benefit eligibility.

Option	Description
Days to Enroll	The number of days the worker has to complete their benefit enrollment, based on the date when Workday created the new event. This value depends on when the days occur if Workday: • Puts an enrollment event on hold. • Recreates the event because of Coordination of Events. If the minimum number of days occurs: • Within the enrollment period, the employee gets the full enrollment period. • Outside of the enrollment period, the employee has only the number of days defined in this field.

Note: You can enable coordination of events between web service events and future-dated events that you create in Workday. Select Enable Coordination of Events for the Change Benefits Web Service in the Edit Tenant Setup - HCM task. When selected, Workday reprocesses eligible future-dated events when the web service creates earlier-dated events.

6. For Reopen Options, consider:

Option	Description
Enable Reopen of Open Enrollment Event	Enables employees to reopen their open enrollment event to make changes after the event is Closed or Finalized. Benefits Administrators and Partners can also reopen an employee's open enrollment event.
Days in Reopen Period	The number of days the employee has the opportunity to reopen their open enrollment event after the last day of the open enrollment period.
Days to Enroll	The number of days the employee has to enroll in elections after they've reopened their open enrollment event. The greater the value, the greater the risk for the employee to have a lapse in coverage.

7. For Benefit Event Codes, consider:

Option	Description
Pre-Tax Event Code Post-Tax Event Code Life Insurance Event Code	(U.S. Federal) Add unique event codes to your benefit event types. Example: Assign the Life Insurance Event Code 2 to indicate the event allowing an insurance change is a life event, such as marriage or adoption. Workday recommends you only enter a Pre-Tax Event Code for FEHB event types, and handle post-tax deductions and event codes manually.

Option	Description
	To reveal these fields, access the Configure Optional Fields task, then select Create Benefit Event Type. Next, delete the row labeled *Federal*.

8. For benefit events, add Events and Reasons.

Option	Description

Event	Use to map an enrollment event when you've modified a business process to include either of these business processes:
	• *Change Benefits for Life Event*.
	• *Change Benefit Jobs*.
	• You can configure the *Change Benefit Election for Compensation Changes* step on these business processes when a compensation change affects an employee's benefits:
	  • *Initiate Compensation Review Process*.
	  • *Propose Compensation Change*.
	  • *Propose Compensation Hire*.
	  • *Request Compensation Change*.
	  • *Request Employee Merit Adjustment*.
	When you configure the step on a compensation process, Workday can automatically create benefit events when a compensation change impacts calculated insurance coverage or rates.
	When you rescind a merit event with a corresponding benefit event, Workday doesn't rescind the benefit event.
	Note: These business processes are for future use. Don't use:
	  • *Change Default Compensation*.
	  • *Propose Compensation Offer/ Employment Agreement*.
	  • *Requisition Compensation*.

Restricted by Reason	If you want the benefits eligibility check to run only when the business process includes specific reasons, select those reasons here. Note: Use restriction reasons only if you have different events for job changes. If you leave out a reason from the list, Workday doesn't create an event for the event type. Example: You add the *Job Change* event and select *Demotion* and *Transfer* restriction reasons. The employee gets a promotion, but Workday doesn't create an enrollment event

Option	Description
	because you haven't selected *Promotion* as a restriction reason. If you leave the field blank, the benefits eligibility check runs every time the business process occurs. • For leave-related business processes, create reasons using the Create Leave Type task. • For organization-related and *Change Primary Address* business processes, no reasons are available. • For staffing and compensation-related business processes, create reasons using the Maintain Event Categories and Reasons task. • For terminations, define categories and reasons for terminating employment with these tasks: Maintain Termination Categories and Maintain Local Termination Reasons tasks.

Next Steps

- Use the Maintain Enrollment Event Types report to make changes.
- Use the Edit Benefit Event Type or Edit Open Enrollment Event Type task to make changes.
- Use the Enrollment Event Types report to display a list of all the benefit event and open enrollment event types.
- Use the Edit Enrollment Event Rule task to add your reinstatement event.

Tasks

Steps: Set Up Enrollment Events and Rules on page 1341

Reference

The Next Level: Troubleshooting Benefits

Create Enrollment Event Rules

Prerequisites

- Define enrollment events.
- Security: *Set Up: Benefits* domain in the Benefits functional area.

Context

Create rules that Workday uses to process enrollment events. Examples:

- Waiting periods.
- Coverage beginning and ending dates.
- Deduction beginning and ending dates.

- Grace periods for ending coverage.
- Coverage changes with and without evidence of insurability (EOI).
- Default coverage rules.
- Reinstatement of benefits coverage.

Associate event rules with benefit groups using the Create Benefit Group task.

Steps

1. Access the Create Enrollment Event Rule task.
2. As you complete the Start or Waive Coverage tab, consider:

Option	Description
Benefit Coverage Type	Select all benefit coverage types used by the selected event types. Workday uses the coverage types, as configured on the event type and the enrollment event rule, to determine any changes in eligibility. If there are changes, Workday creates an enrollment event for the employee. For coverage types without explicit event rules, Workday uses *Can Select Any Plan* from the Allowed Benefit Plan Changes prompt.
Waiting Period Number and Waiting Period Units	Waiting periods apply to employees who are newly eligible for a benefit and didn't have coverage of the same type before the enrollment event. Newly eligible could be from a hire, promotion, or other enrollment event. Workday uses the Waiting Period Calculation Order on the Create Benefit Group task to determine whether to add the waiting period before or after the Coverage Begin Date.
Ignore Waiting Periods	Overrides the waiting period for event types. Consider whether to select this check box if you select *First of Month On or After the Later of Event or Submission Date* choice for Coverage Begin Date.
Coverage Begin Date	Select the rule to determine the date that benefit coverage begins. You can specify a coverage begin date for all benefit plans that belong to a given coverage type, for events that: • Enable employees to waive existing coverage. • Result in coverage gains, such as job changes. You can specify that coverage begins on the *First of Month On or After the Later of Event or Submission Date*. To avoid coverage delays with this option, select the Ignore Waiting Periods check box. The remaining pay periods don't recalculate.

Option	Description
	Examples: • If the submission date is February 1 and the event date is February 20, the coverage begin date is March 1. • If the submission date is April 1 and the event date is March 20, the coverage begin date is April 1. If the *Change Benefits* business process has an approval step, the submission date is the approval date. You can also specify that coverage begins *On Pay Period Begin On or After the Later of Event or Submission Date*. Example: Pay periods are June 27 - July 10, and July 11 - July 26. If the submission date is June 26, and the event date is July 8, then the coverage begin date is July 11. This is the start of the pay period following the later of the 2 dates. This option and *Later of Event or Submission Date* are only available for life change event enrollment types, such as new hire, family status change, or administrative correction. Workday uses the electronic signature date as the submission date. If there's no electronic signature, Workday uses the completion date of the *Change Benefits for Life Event* business process as the submission date. For options that set the coverage begin date as the first day of the worker's pay period, Workday uses the pay period schedule associated with the pay group tied to the worker's primary position. During a benefit event, Workday updates the Coverage Begin Date for a worker's benefit plan when any of these items change as a result of a benefit event: • Health Care - Benefit Plan and Coverage Target • Health Savings Account - Benefit Plan and Employee Contribution Amount (per paycheck amount) • Spending Account - Benefit Plan and Employee Contribution Amount (per paycheck amount) • Insurance - Benefit Plan, Coverage Level, and Covered Dependents • Retirement Savings - Benefit Plan, Amount, Percent, Employee Contribution

Option	Description
	Allocation Percent, and Employer Contribution Allocation Percent • Additional Benefits - Benefit Plan, Coverage Target, Amount, and Percent
Deduction Begin Date	Select the rule to determine which pay period to take the deduction or start the credit.

3. Complete the Loss of Coverage tab.

   For events that result in coverage losses, define the:

   - Coverage End Date

     For job changes, Workday uses the effective date of the job change for the event date. For terminations, Workday uses the event date + 1 day for the effective date. Example: The termination date is 7/1. The event date is 7/1, but the effective termination date is 7/2.

     To determine the month of the event date, Workday uses the month of the day before the event date. Example: If the event date is 7/1, then the Workday uses the month of June. If the event date is 7/2, then Workday uses the month of July.
   - Deduction End Date
   - Grace Period Number to extend coverage beyond the coverage end date for a given coverage type.
4. On the Levels of Change - Currently Covered tab, create the rules for processing changes to insurance coverage when the employee currently has insurance coverage. As you complete this tab, consider:

Option	Description
Maximum Levels of Change Allowed	Enter the maximum number of levels that employees can increase coverage during enrollment for this event type. Examples: • Your benefit plan offers 2x, 3x, 4x, and 5x salary, and you enter the value 2 for the Maximum Levels of Change Allowed. If an employee has a current coverage of 2x salary, they can increase their coverage up to 4x salary. • Your benefit plan offers 50,000 – 100,000 – 150,000 – 200,000 USD coverage levels. You enter a value of 1 in this field. If an employee currently has coverage of 50,000 USD, they can increase their coverage to 100,000 USD.
Maximum Amount of Change Allowed	Enter the maximum amount that employees can increase coverage during enrollment for this event type.
Include All Benefit Plans in Coverage Type for EOI	Select to use the combined total election for all benefit plans in a coverage type to determine when to require EOI. If selected, make sure to select this option on all of the Levels of Change tabs.

Option	Description
	Note: Don't select auto-enrolled insurance plans.
Maximum Levels of Change Allowed without EOI	Enter the maximum number of levels that employees can increase their coverage without requiring EOI. Used when you have a guaranteed issue level that changes by event type. Workday uses the smallest amount as the guaranteed issue if you populate 1 or more of these fields: • Guaranteed Issue Amount • Guaranteed Issue Multiplier • Maximum Amount of Change Allowed without EOI
Maximum Amount of Change Allowed without EOI	Enter the maximum amount that employees can increase their coverage without requiring EOI. Used when you have a guaranteed issue amount that changes by event type. Workday uses the smallest amount as the guaranteed issue if you populate 1 or more of these fields: • Guaranteed Issue Amount • Guaranteed Issue Multiplier • Maximum Amount of Change Allowed without EOI An employee must provide EOI if they elect more than the guaranteed issue amount.
Guaranteed Issue Amount	Enter the amount of insurance coverage that employees receive. Workday uses the smallest amount as the guaranteed issue if you populate 1 or more of these fields: • Guaranteed Issue Amount • Guaranteed Issue Multiplier • Maximum Amount of Change Allowed without EOI To enforce EOI for any change, enter a value of 1 or 0.01. Workday ignores a zero value for Guaranteed Issue Amount.
Guaranteed Issue Multiplier	Enter the salary multiplier used to calculate the amount of insurance coverage that employees receive. You can define the salary on the Salary Source field on these tasks: • Create Insurance Coverage • Edit Insurance Coverage

Option	Description
	Workday uses the smallest amount as the guaranteed issue if you populate 1 or more of these fields: • Guaranteed Issue Amount. • Guaranteed Issue Multiplier. • Maximum Amount of Change Allowed without EOI. Workday determines the salary definition for the salary multiplier from the insurance coverage. Example: You have an increment of salary plan (10,000 USD through 500,000 USD in multiples of 10,000). The employee can elect up to 4x salary without triggering EOI. Workday evaluates the insurance coverage amount to determine how to calculate the employee's salary.
Set Guaranteed Issue Rule	Select the rule that defines how to apply the guaranteed issue amount or multiplier when the value doesn't match the defined coverage levels. Define if the employee should automatically use the exact values for 1 of these amounts: • *Guaranteed Issue Amount* • *Closest Coverage Over* • *Closest Coverage Under* Select *Guaranteed Amount* if your benefit plan doesn't mix multipliers and coverage amounts. If your benefit plan mixes multipliers and coverage amounts, determine if the guaranteed issue should be the closest coverage value over or under the Guaranteed Issue Amount. Example: your benefit plan offers 70,000 – 80,000 - 90,000 – 100,000 – 110,000 – 120,000 with a Guaranteed Issue of 3x Salary. An employee has a salary of 35,000 USD and elects 120,000 USD during enrollment. They automatically have 110,000 USD while pending EOI if you define the guaranteed issue to be the *Closest Coverage Over*. If you define the guaranteed issue to be the *Closest Coverage Under*, they automatically have 100,000 USD while pending EOI. Note: This rule doesn't apply to the Maximum Amount Allowed. Example: If you define the maximum amount to be 95,000 USD, the newly eligible employee doesn't automatically have 95,000 USD.
Default Coverage if Pending EOI	Select the rule that defines the insurance coverage for the worker while EOI is pending.

Option	Description
	Define the automatic coverage if the employee elects over the Guaranteed Issue Amount with one of these options: • *Current Coverage Amount* • *Elected Coverage Amount* • *Guaranteed Issue Amount* If you select: • *Current Coverage Amount*, the coverage automatically uses the employee's last approved coverage amount. • *Elected Coverage Amount*, the coverage automatically uses the full amount elected during enrollment. • *Guaranteed Issue Amount*, the coverage automatically uses the Guaranteed Issue Amount defined for the enrollment event.

5. On the Levels of Change - Currently Waiving and Levels of Change - Newly Eligible tabs, set up the rules for processing insurance coverage.

   The rules apply when an employee has previously waived coverage or just became eligible for coverage. Examples: A new hire, a new benefit plan, or a staffing change that affects eligibility.

   As you complete this tab, consider:

Option	Description
Maximum Level Allowed	Enter the maximum level of insurance coverage that employees can elect during enrollment for this event type. Example: Your benefit plan offers 6 levels of coverage (2x, 3x, 4x, 5x, 6x, and 7x salary). If you enter 4 for the Maximum Level Allowed value, the employee can elect a level of coverage up to 5x their salary.
Maximum Amount Allowed	Enter the maximum amount of insurance coverage that employees can elect. Example: If you enter 450,000 and the benefit plan allows up to 600,000, during enrollment the employee can only elect up to 450,000 for this event type. Make sure that there's a coverage option for this amount, otherwise the employee can't select 450,000.
Include All Benefit Plans in Coverage Type for EOI	Select to use the combined total election for all benefit plans in a coverage type to determine when to require EOI. If selected, you must select it on all of the Levels of Change tabs. Note: Don't select auto-enrolled insurance plans.

Option	Description
Guaranteed Levels Without EOI	Enter the maximum number of levels that employees can elect without requiring EOI. Used when you have a guaranteed issue level that changes by event type.
Guaranteed Issue Amount	Enter the amount of insurance coverage that employees receive. Used when you have a guaranteed issue level that changes by event type. Enter this amount on all 3 Levels of Change tabs.
Guaranteed Issue Multiplier	Enter the salary multiplier used to calculate the amount of insurance coverage that employees receive. Define salary in the Salary Source field on the Create Insurance Coverage task. Workday determines the salary definition for the salary multiplier from the insurance coverage. Example: You have an increment of salary plan (10,000 USD through 500,000 USD in multiples of 10,000). The employee can elect up to 4x salary without triggering EOI. Workday evaluates the insurance coverage amount to determine how to calculate the employee's salary.
Set Guaranteed Issue Rule	Select the rule that defines how to apply the guaranteed issue amount or multiplier when the value doesn't match the defined coverage levels.
Default Coverage if Pending EOI	Select the rule that defines the insurance coverage for the worker while EOI is pending.

6. On the Coverage Rules tab, you can restrict the benefit plan and coverage target changes that employees can make during an enrollment event.

   Example: You can enable employees to add new dependents following a birth. However, you can prevent them from changing their medical plan or adding dependents other than the new child.

   You can define these restrictions as broadly or narrowly as you want, depending on your business requirements. Example: Apply the same restrictions to all members of a benefit group, regardless of the event and coverage type. Or, define restrictions that vary by event and coverage type.

   As you complete this tab, consider:

Option	Description
Allowed Benefit Plan Changes	• *Can Select Any Plan:* Select any plan included in the specified benefit coverage types, including the option to waive. Note: Workday can create a benefit event for a job change that doesn't qualify for selecting benefits. You might

Option	Description
	need to change this selection to a more restrictive choice if that occurs. • *Current Plan Only:* Change only the details of the benefit plans that have currently enrolled workers. Doesn't include the option to waive. Can add or remove dependents. • *Current Plan or Option to Decrease:* (Only Spending or HSA) Decrease contributions or keep at the current level. Doesn't allow increases. • *Current Plan or Option to Increase:* (Only Spending or HSA) Increase contributions or keep at the current level. Doesn't allow decreases. • *Current Plan or Option to Waive:* Change only the details of the benefit plans that have currently enrolled workers, including the option to waive. Can add or remove dependents. • *Only on Eligibility Change:* Change only if eligible for a new benefit plan or lost eligibility for a previously elected benefit plan. • *No Changes Allowed*
Allowed Dependent Changes	• *Additional Dependents Allowed:* Add or remove new dependents to the selected coverage types. Example: You can give newly married employees the option to add their spouse to their benefit plan. • *Continue with Current Dependents:* Hides the option to waive. Prevents workers from adding or removing dependents. Example: For certain staffing changes, enable employees to switch from an HMO to a PPO, but not to change their covered dependents. • *May Remove Dependents:* The employee can remove dependents from the selected coverage types. Doesn't allow increases. Example: For a life event such as a divorce, you can require employees to remove their spouse from their covered dependents.
Dependent Types	Required if you selected *Additional Dependents Allowed* or *May Remove Dependent* in the Allowed Dependent Changes field.

Option	Description

Defaulting Rules	For Health Care, Insurance, Additional Benefits, and Retirement Savings plans only.
	
	Select the rule that Workday uses to populate default benefit plans and elections into an employee's enrollment pages. In addition, Workday automatically applies the default plans selected by these rules to employees that fail to submit their benefit elections. Available options are:
	
	• *Default to Current Elections, Priority Coverage or Waive*.
	• *Default to Current Elections or Waive*.
	• *Default to Current Provider/Classification or Waive*.
	• *Default to Priority Coverage or Waive*.
	• *Default to Waive*.
	• *Reinstate Previous Elections, Priority Coverage or Waive*.
	• *Reinstate Previous Elections or Waive*.
	
	Workday attempts to apply each component in the selected option, in the order in which it displays, until one of them passes. If a component fails, Workday evaluates the next one. This process repeats until Workday can apply a component.
	
	• *Default to Current Elections:* If the employee is eligible for their current elections, then roll those elections forward. If a plan has an annual amount, the annual amount carries forward.
	• *Priority Coverage:* Assign the health care and insurance plans as defined in the Maintain Benefit Defaults task when, both:
	    • The employee has lost eligibility for their current elections.
	    • The employee hasn't waived their elections.
	• *Default to Current Provider and Classification:* If an employee and their dependents are eligible for their current plan, then roll the plan forward. If they become eligible for Medicare, move them to an equivalent Medicare plan. If they enrolled in a Medicare plan and lose eligibility, move them to an equivalent plan.
	• *Reinstate Previous Elections:* If the employee is eligible for their previous elections, then reinstate those elections.

Option	Description
	• *Waive:* Set the election to waive.

Next Steps

- View detailed information for a specific rule using the Enrollment Event Rule report.
- Link the event rule to one or more benefit groups using the Create Benefit Group task.

2022R2 What's New Post: Enrollment Event Rules for Coverage Begin Dates

Create Conditional Messages for Enrollment Events

Prerequisites

- Reference: Edit Tenant Setup - Business Processes
- Reference: Edit Tenant Setup - Notifications

Context

To create notification and confirmation messages that are specific to an event type, use condition rules. You can create a new rule or select an existing rule. Example: You can create notifications that are specific to a retirement event, so that only employees included in that event receive the notification.

Steps

1. Access the business process to which you want to add the notification or confirmation.

   Example: *Change Benefits for Life Event*.
2. Select Business Process > Add Notification from the related actions menu of the business process.
3. Specify the notification Effective as of date.
4. In the Triggers section, select 1 of these options:
   - Trigger on Status and *Completed* to send the notification or confirmation on enrollment completion.
   - On Entry and a specific step to send the notification or confirmation when the step is initiated.
   - On Exit and a specific step to send the notification or confirmation when the step is complete.
5. (Optional) In the Conditions and Rules section, select an existing rule.

   Add a row in the Conditions grid and select a rule.

6. (Optional) Create a new condition rule.
    a) In the Recipient section, select 1 or more recipients.
    b) Click OK.
    c) Click Create Condition Rule.
    d) Complete the Rule Conditions grid:

Option	Description
Source Class Report Field or Sub Rule	Select *Enrollment Type* in the Benefits Category folder.
Relational Operator	Select *In the selection list*.
Comparison Type	Select *Value specified in this filter*.
Comparison Value	Select the enrollment event type for which you're defining the notification/confirmation.

Enrolling New Hires in Benefits

Context

The steps required to automate new hire enrollment vary depending on the roles to which you route enrollment tasks and the availability of employee self-service.

You can configure the *Hire* business process to support these routing options:

- Always route enrollment to a new hire (employee self-service is available to all employees).
- Always route enrollment to a Benefits Partner or Administrator (employee self-service isn't available).
- Route enrollment to some employees but not others (employee self-service is only available to some employees).

Steps

1. Add the *Create Workday Account* action to the *Hire* business process after the completion step.

   To always route enrollments to a new hire, set Optional to *No*. To route enrollments to some employees and not others based on condition rules, set Optional to *Yes*. To always route enrollments to a Benefits Partner or Administrator, set Optional to either *Yes* or *No*.
2. Add the *Change Benefit Elections* action to the *Hire* business process and set the value of Optional to *No*.

   Workday associates this action with the *If there is an effect on employee benefits?* condition rule, which determines whether an employee qualifies for benefits based on benefit group and benefit plan eligibility rules. If the condition is true, Workday can route the enrollment task to the employee.

   The *Change Benefit Elections* action should follow the *Create Workday Account* action, but doesn't need to follow it immediately. The best placement depends on all of these factors:

   - The condition rules associated with this action.
   - The benefit group.
   - The benefit plan eligibility rules used to determine benefit eligibility.

   Example: You create an eligibility rule that makes certain employees eligible for benefits based on their assigned compensation plan. The *Change Benefit Elections* action then follows the *Propose*

Compensation action in the business process. Otherwise, Workday can't determine whether an employee qualifies for benefits based on compensation data.

3. (Optional) To route enrollments to some employees but not others, use 2 instances of the *Change Benefit Elections* action. Create separate condition rules for each set of employees:
   a) Add these additional condition rules to the *Change Benefit Elections* action:
      - *Worker has Workday Account*.

        If this rule resolves to *True* and other condition rules are satisfied, Workday routes the enrollment task to the employee. Create this condition rule yourself.
      - Other condition rules required to route the enrollment task to the appropriate employees.

        Employees might need a valid Workday account along with additional conditions to have the enrollment task routed to them. You can define additional condition rules and add them to the *Change Benefit Elections* action.

        Example: Only salaried employees with valid accounts or employees in certain geographical areas can enter their own benefit elections. In this case, add additional rules and conditions to the *Change Benefit Elections* step to control which workers can enroll in benefits.
   b) Add the second instance of the *Change Benefit Elections* action immediately after the first. Use the same processing order:
      - *Worker does **not** have Workday Account* OR worker doesn't meet additional conditions specified in step 4.

        This multipart rule uses OR logic that includes the rule *Worker does **not** have Workday Account*. This rule determines if the new employee doesn't have a Workday account. If the rule resolves to *True OR* the additional conditions aren't met, Workday routes the enrollment task to the Benefits Partner or Administrator.

        Define the *Worker does **not** have Workday Account* condition and any other conditions you want to include in this multipart rule.
4. Assign the *Change Benefit Elections* action to a role. Examples: *Employee*, or *Benefits Partner* or *Benefits Administrator*.

   The role determines where Workday routes the enrollment task.

Discontinue Benefits on Termination

Prerequisites

Configure the *~Termination~* business process.

Context

You can automate the termination of benefits when you terminate an employee by adding the *Change Benefit Elections* action to the *Termination* business process.

Steps

1. Access the *Termination* business process, and from the related actions menu, select Edit Definition.

2. Add the *Change Benefit Elections* action and set the value of Optional to *No*.

   When you add this action to the *Termination* business process, Workday automatically associates the action with the *If there is an effect on employee benefits?* condition rule. This delivered rule determines whether a termination results in a loss of benefits based on both:

   - Benefit group.
   - Benefit plan eligibility rules.

   If so, Workday can route the benefit termination task directly to a Benefits Partner or Administrator.

   Note: In general, add actions and associated condition rules after steps that provide data or information evaluated by these rules.
3. Assign the *Change Benefit Elections* action to the *Benefits Partner*, *Benefits Administrator*, or other approved role.

   Workday routes an enrollment task to this role only if the termination event requires the Benefits Partner or Administrator to make an election on behalf of the employee.

Concepts

Concept: Termination Impact on page 710

Tasks

Steps: Set Up Termination on page 697

Terminate Employees on page 699

Concept: Enrollment Period for Benefit Events

You can define the benefit enrollment period for a specific type of benefit event. You can also restrict an employee's ability to report that benefit event after the enrollment period has expired.

When an employee reports a benefit event using Change Benefits, Workday uses the Days to Enroll Calculation field to determine if the start date begins on:

- The event date.
- The date the employee reports the event.

Workday adds the value entered in the Days to Enroll field to that date. This new date is the employee's Submit Elections By date.

Note: Workday only respects the value of Days to Enroll if the worker initiates a benefit enrollment event with the Change Benefits task. Workday recommends that you create a validation on the *Dependent Event* business process to enforce Days to Enroll. This validation is for when the worker initiates the Add Dependent task.

```
Days to Enroll Calculation (Event or Initiate Date) + Days to Enroll = Submit
Elections By
```

If you select the Employee Cannot Report After Days to Enroll check box and the date passes, the employee receives an error message and can’t proceed. You can use the Change Benefits task to report the benefit event on behalf of the employee. Workday uses the system date as the basis for calculating the enrollment period.

Note: Workday provides the Submit Elections By field as a guideline for employees to submit an event, but doesn’t enforce this date. Employees that start the benefit enrollment before the Submit Elections By date can submit benefit elections after the date, until you finalize the enrollment event.

Related Information

Tasks

Steps: Set Up Enrollment Events and Rules on page 1341

Concept: Coordination of Benefits Enrollment Events

Coordination of events ensures that Workday:

- Processes potentially conflicting events in the correct event date order.
- Preserves existing enrollments, when possible.

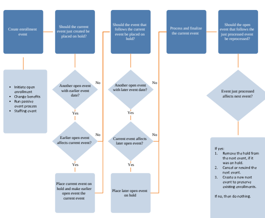
Coordination of events occurs after you initiate an open enrollment, change benefits, or run the passive event process. Workday attempts to process 1 event at a time in event date priority. The event date for:

- Open enrollment = the date entered on the Initiate Open Enrollment task.
- Life events (excluding passive events) = the date entered on the Change Benefits task.
- Passive events = the date when the scheduled passive event runs.

Note: Except for open enrollment events, if more than 1 benefit event occurs on the same day, Workday consolidates those events into 1 hybrid event.

You can enable coordination of events between web service events and future-dated events created in Workday. Select Enable Coordination of Events for the Change Benefits Web Service in the Benefits section of the Edit Tenant Setup - HCM task. When selected, Workday reprocesses eligible future-dated events when the web service creates earlier-dated events.

The coordination of events process compares 2 events at a time:



For an event to affect another event, one of these situations must occur:

- A change in eligibility: Loss or gain in coverage or a change in benefit group.

  Always reprocess an event when a change in eligibility occurs.
- An overlap in coverage types between the 2 events.

  Example: If Event A has health, dental, and vision, and Event B has health and insurance, there’s an overlap in health. Reprocess an event only when coverage types overlap.
- The Do Not Reprocess option is selected on the enrollment event.

  Workday doesn't place a new event on hold when comparing a new event (Do Not Reprocess selected) to an older open event. Workday processes both events together.

  Workday reprocesses the next event when comparing a new event to an older event (Do Not Reprocess selected).
- The Do Not Reprocess Future Events option is selected on the enrollment event.

  If Workday compares a just processed event (Do Not Reprocess Future Events selected) to a later event, Workday doesn't place the later event on hold. Workday processes both events together.

  If Workday compares a just processed event to a later event (Do Not Reprocess Future Events selected), Workday reprocesses the later event.

When you cancel or rescind the next event and create a new event, Workday sets the new event date to the date of the canceled event. To calculate the Submit By date, Workday adds the value in the Days to Enroll for Coordination of Events field to the creation date of the new event. For the new event, Workday bases any evidence of insurability on the current benefit elections.

Concept: Multiple Benefit Events on the Same Day

If a worker has more than 1 benefit event reported on the same day, Workday combines them into a consolidated (hybrid) benefit event. Workday can consolidate benefit, staffing, and passive events. The hybrid benefit event includes the most generous options available from all events and preserves any completed elections made up to that time.

This consolidation doesn't include events that coincide with open enrollment, or the Change Retirement Savings task that coincides with a benefit event. If Workday creates an open enrollment event before a benefit, staffing or passive event, then it must enter the nonopen enrollment events on another day. If Workday creates a life event before an open enrollment event, Workday automatically cancels or rescinds the life event. If a stand-alone Change Retirement Savings event and a benefit event include the same coverage types for retirement savings, they can't occur on the same day.

Examples:

- A worker reports the birth of a child on April 1. Workday creates a benefit event for the birth. That same day, the worker's manager submits a promotion for the worker. Workday cancels or rescinds the benefit event for the birth and creates a hybrid benefit event.
- A worker reports the birth of a child on April 1. Workday creates a benefit event for the birth. That same day, the worker's manager submits a promotion for the worker. The promotion requires an approval. If approved, Workday cancels or rescinds the benefit event for the birth and creates a hybrid benefit event. If denied, Workday doesn't create a hybrid benefit event and the benefit event for the birth remains intact.

  If one of the benefit events that make up the hybrid benefit event becomes invalid, you can either:

  - To support the remaining valid event, cancel or rescind the hybrid event and create a new event.
  - Use the Benefit Election History and select Full Process Record as a related action off the event. Select the Overall Process event link to cancel or rescind the appropriate event.

This table lists the priority Workday follows to provide the most generous options when creating the hybrid enrollment events:

Task	Option	Priority	Description
Maintain Enrollment Event Types	Route to Benefits Partner	1	Yes
		2	No
Create Enrollment Event Rule > Start or Waive Coverage	Coverage Begin Date	1	On the event date.
		2	First of the month on or after the event date.
		3	First of the month following the event date.
	Waiting Period	Always honor the waiting period, unless you select Ignore Waiting Periods.	
Create Enrollment Event Rule > Loss of Coverage	Coverage End Date	1	Last day of the month.
		2	On the half month.
		3	On the event date
	Grace Period	Same priority as Coverage End Date, but also using the least number of days as the grace period.	

Task	Option	Priority	Description
Create Enrollment Event Rule > Levels of Change	Maximum Level of Change Allowed	Always take the highest level across all events.	
	• Maximum Levels of Change Allowed without EOI	Always take the highest GI amount across all events.	
	• Guaranteed Issue (EOI required above this level)		
	• Maximum Amount of Change Allowed without EOI	Always take the highest GI amount across all events.	
	• Guaranteed Issue (EOI required above this amount of coverage)		
	Default Coverage if Pending EOI	1	Elected Coverage Amount.
		2	Current Coverage Amount.
		3	Guaranteed Issue Amount.
Create Enrollment Event Rule > Coverage Rules	Allowed Benefit Plan Changes	1	Can select any plan.
		2	Current plan or option to waive.
		3	Current plan only
		4	Current plan or option to increase.
		5	Current plan or option to decrease.
		6	Only on eligibility change.
		7	Only on beneficiary changes.
		8	No changes permitted.
	Allowed Dependent Changes	1	Additional dependents permitted.
		2	Can remove dependents.
		3	Continue with current dependents.
	Dependent Types	Include all coverage targets across all events.	
	Defaulting Rules	1	Default to current elections, priority coverage or waive.
		2	Default to current elections or waive.
		3	Default to priority coverage or waive.
		4	Default to waive

The consolidated event displays as 1 entry on the Benefit Election History. The entry lists both events in the Enrollment Event Type column.

If you're automating benefit eligibility checks, you must have enrollment event types and rules that correspond to life, staffing, and passive events.

Tasks

Steps: Set Up Enrollment Events and Rules on page 1341

Concept: Plan Changes and Waiting Periods

Benefit plans can have a waiting period that the employee must complete before receiving benefits. If the employee has an event that requires a change in plans, the new plan might have a different waiting period.

If the employee doesn't complete the waiting period before a plan change, Workday:

- Enforces the waiting period associated with the new plan.
- Credits the employee for any time spent waiting for the old plan to take effect.
- Uses the initial waiting period start date as the start date of the second waiting period.

  Example: The first waiting period begins on June 30, so the new plan uses the same June 30 start date for the waiting period.

If an employee completes their initial waiting period in a benefit group and moves to another benefit group, Workday waives the waiting period for the second group.

Employee Completes Waiting Period for One Plan Before Selecting a Different Plan

Bob begins at his new company on March 1 and elects medical and dental coverage. The plans have these waiting periods:

- Medical: 1 month (coverage begins April 1).
- Dental: 1 month (coverage begins April 1).

Then Bob goes through a second enrollment event on April 15.

Second Enrollment	Effect
Bob moves to a new benefit group and selects new medical and dental plans, each with 3 month waiting periods.	Coverage begins: • Medical: April 15 • Dental: April 15 Workday waives the waiting period for new coverage because Bob has completed the initial 1 month waiting period. When an employee satisfies a plan waiting period requirement and later elects a new plan of the same type, Workday waives waiting period requirements for the second plan. If the employee loses benefits due to a leave of absence, a reduction in work hours, or other change, Workday restarts the waiting period.

Employee Changes From One Plan to Another Before Completing the Initial Waiting Period

Federico begins working at his new company on March 1 and elects medical and dental coverage. The plans have these waiting periods:

- Medical Coverage: 3 months (coverage begins June 1).
- Dental Coverage: 4 months (coverage begins July 1).

Federico goes through a second enrollment event on April 15, before the waiting period completes. Depending on the plan changes, his coverage can begin on different dates.

Second Enrollment (April 15)	Effect
Federico moves to another state and elects to keep the same plans.	Coverage begins: • Medical: June 1 • Dental: July 1 Because the plans don't change, coverage still begins on the same dates.
Federico moves to another state and selects new medical and dental plans with the same waiting periods.	Coverage begins: • Medical: June 1 • Dental: July 1 Workday enforces the new waiting periods, but because the new periods are identical to the old, the begin dates remain the same.
Federico receives a promotion and selects new medical and dental plans. They've 2 and 3 month waiting periods, respectively.	Coverage begins: • Medical: May 1 • Dental: June 1 Workday enforces the new waiting periods, but credits Federico for time spent waiting under the old plans.
Federico receives a demotion and selects new medical and dental plans. They've 4 and 5 month waiting periods, respectively.	Coverage begins: • Medical: July 1 • Dental: August 1 Workday enforces the new waiting periods, but credits Federico for time spent waiting for the old plans to take effect.
Federico moves to a new benefit group and selects new medical and dental plans with 1 and 2 month waiting periods, respectively.	Coverage begins: • Medical: April 15 • Dental: May 1 Workday enforces the new waiting periods, but credits Federico for time spent waiting for the old plans to take effect. In this case, the waiting period for the new medical plan (1 month) is over by the time the second enrollment event takes place (April 15). Therefore, Workday begins medical coverage on April 15.

Tasks

Steps: Set Up Enrollment Events and Rules on page 1341

Reference: Benefit Deduction Begin Date Rules

When developing the rules for events that begin benefit coverage and deductions, consider how the coverage begin date can impact the deduction begin date. The deduction begin date rule determines the first pay period in which the deduction occurs. Sometimes, the rule depends on the coverage begin date. When using the Workday delivered rules, consider how the coverage begin date impacts the deduction begin date.

Example: Betty Liu creates enrollment event rules determined from coverage begin date and deduction begin date. She uses these dates and rules.

Dates:

- First Date of Employment: 7/1.
- Event Date: 7/2.
- Pay Periods and Pay Dates:
    - Period: 5/27- 6/10 Pay Date: 6/15
    - Period: 6/13 - 6/26 Pay Date: 7/1
    - Period: 6/27 - 7/10 Pay Date: 7/15
    - Period: 7/11 - 7/26 Pay Date: 8/1
    - Period: 7/27 - 8/10 Pay Date: 8/15
    - Period: 8/11 - 8/27 Pay Date: 9/1

Rules:

- Coverage Begin Date rule: *On Event Date*.
- Deduction Begin Date rule: *On Coverage Begin Date*.

The deduction begin date uses the coverage begin date value, which uses the event date. With the event date of 7/2, the deduction begin date is 7/2 and falls in the 6/27 - 7/10 pay period. The first pay date in which the deduction begins is 7/15. The pay dates occur on the 1st and 15th of each month.

This table displays the possible pay dates based on different coverage begin date and deduction begin date rules, where:

- CBD: Coverage Begin Date.
- DBD: Deduction Begin Date.

Deduction Begin Date Rules	Date	Coverage Begin Date Rules					
		First of Month Following Event Date	First of Month on or After Event Date	First of Month on or After the Later of Event or Submission Date	On Event Date	On Pay Period Beginning After Event Date	On Pay Period Begin On or After the Later of Event or Submission Date

Tasks

Create Enrollment Event Rules on page 1349

Reference: Benefit Deduction End Date Rules

The coverage end date can impact the deduction end date in event rules that terminate benefit coverage and deductions. The rule for the deduction end date determines the pay period in which the deduction ends. This rule can reference the coverage end date.

Example: Betty Liu creates enrollment event rules using the coverage end and deduction end date. She uses these dates and rules:

Dates:

- Event Date: 7/16
- Pay Periods and Pay Dates:
  - Period: 6/27 - 7/10   Pay Date: 7/15
  - Period: 7/11 - 7/26   Pay Date: 8/1
  - Period: 7/27 - 8/10   Pay Date: 8/15
  - Period: 8/11 - 8/27   Pay Date: 9/1

Rules:

- Coverage End Date rule: *On Event Date*.
- Deduction End Date rule: *End of the Month Containing Event Date*.

The deduction end date uses the end of the month in which the event date occurs. With the event date of 7/16, the deduction end date is 7/31 and falls in the next pay period. The pay date in which the deduction no longer occurs is 8/15.

This table displays the possible pay dates based on different rules for coverage end date and deduction end dates, where:

- CED: Coverage End Date.
- DED: Deduction End Date.

Deduction End Date Rules	Date	Coverage End Date Rules				
		Last Day of the Month	On Pay Period Begin After Event Date	On the Event Date	On the Half Month	Pay Period End on or After Event Date
End of the Month Containing Event Date	CED	7/31	7/27	7/16	7/31	8/15
	DED	7/31	7/31	7/31	7/31	7/31
	Pay Date	8/15	8/15	8/15	8/15	8/15
On Coverage End Date	CED	7/31	7/27	7/16	7/31	7/26
	DED	7/31	7/27	7/16	7/31	7/26

Create Enrollment Event Rules on page 1349

Example: Coordination of Benefits Events

Context

These common scenarios demonstrate how coordination of events works. These examples assume:

- You enter the events with the later event date first.

  Example: You enter the promotion before the beneficiary change.
- No overlap occurs in coverage types between the events.

  Example: If Promotion includes Health, and Beneficiary Change includes Insurance, there's no overlap in coverage types.
- There's no loss or gain in coverage eligibility.

If there's an overlap in coverage types or a loss or gain in eligibility, Workday always places the later event on hold. Workday reprocesses the later event after the earlier event completes.

An employee has these benefit enrollment events in the current year.

Date	Event
January 1	Open Enrollment (Completed)
April 1	Marriage
May 1	Beneficiary Change
September 1	Promotion
January 1 (next year)	Open Enrollment (In Progress)

Workday processes the events as shown:

Events	Don't Reprocess	Don't Reprocess Future Event	Result
Open Enrollment (In Progress) and the Promotion.	Open Enrollment = Clear Promotion = Clear	Open Enrollment = Clear Promotion = Clear	Both events process at the same time.
Open Enrollment (In Progress) and the Promotion.	Open Enrollment = Selected Promotion = Clear	Open Enrollment = Clear Promotion = Selected	Both events process at the same time.
Promotion is entered and completed before the Beneficiary Change.	Promotion = Clear Beneficiary Change = Clear	Promotion = Clear Beneficiary Change = Clear	Promotion stays completed and the beneficiary change completes as normal.
Promotion is entered and in progress before the Beneficiary Change.	Promotion = Selected Beneficiary Change = Clear	Promotion = Clear Beneficiary Change = Selected	Both events process at the same time.
Beneficiary Change is entered and in progress after the completed Open Enrollment.	Beneficiary Change = Clear Open Enrollment = Selected	Beneficiary Change = Selected Open Enrollment = Clear	Open Enrollment stays completed and the beneficiary change completes as normal.

Related Information

Tasks

Steps: Set Up Enrollment Events and Rules on page 1341

Troubleshooting: Coordination of Events and Changed Retirement Savings Elections

Changes to retirement savings elections for future-dated open enrollment or life events are missing.

Example: A worker has a contribution amount of 5 percent for a pension plan, effective January 1. On December 5, the worker changes the contribution to 10 percent. On January 1, the contribution reverts to 5 percent.

Cause: Changes to elections using the default event type for retirement savings (configured in Edit Tenant Setup - HCM) don't participate in coordination of benefit events.

Solution: Don't include retirement savings plan types in your benefit plan year definition for open enrollment. Instead, create an ongoing benefit plan year with the retirement savings plan types.

If Workday processes earlier-dated retirement savings elections after later-dated termination events, audit these situations and update the termination event as needed.

Troubleshooting: Enrollment Events

Workday doesn't create a benefit event for a qualifying job change.

Cause	Solution
You didn't configure the *Change Benefit Elections* step on the *Change Job* business process.	Edit Business Processes Add the *Change Benefit Elections* step.
Workday doesn't reach the completion step on the *Change Job* business process before evaluating the *Change Benefit Elections* step. Example: You might have a condition rule on an approval step that serves as the completion step. If the condition causes Workday to bypass the completion step, it can prevent Workday from evaluating the Change Benefit Elections step.	Edit Business Processes. Add a step that runs between the completion step and the *Change Benefit Elections* step. Example: Add a report.
You've added a custom condition rule to the *Change Benefit Elections* step that might be preventing Workday from creating the benefit event.	Create Business Process Condition Rules. Test the custom conditional rule by removing or revising it to determine if it prevents Workday from creating the benefit event.
Other steps in the business process block the benefit election step.	Security: *Worker Data: Historical Staffing Information* domain in the Staffing functional area. Access the View Worker History report to determine if another step, like an approval, is blocking the progress of the event.
You need to add the *Change Job* benefit event row in the event type of the benefit enrollment.	Security: *Set Up: Benefits* domain in the Benefits functional area. 1. Access the Maintain Enrollment Event Types report. 2. Select the event type of the job change.

Cause	Solution
	3. Add a row in the Events and Reasons grid and select *Change Job*.
The benefit event for the job change has reason restrictions, but the reason for the worker's job change isn't in the Restricted by Reason list.	Security: *Set Up: Benefits* domain in the Benefits functional area. 1. Access the Maintain Enrollment Event Types report. 2. Select the enrollment event type for the change job. 3. Do 1 of these actions: • Select the missing reason from the Restricted by Reason prompt in the Events and Reasons grid. • Unless you have different events for job changes, remove all of the reason restrictions.
There's a missing benefit coverage type on the benefit event type.	Security: *Set Up: Benefits* domain in the Benefits functional area. 1. Access the Edit Benefit Event Type task. 2. Select the missing coverage type from the Enrollment Offering Type prompt.
There are missing benefit coverage types on the coverage rule for the enrollment event rule.	Security: *Set Up: Benefits* domain in the Benefits functional area. 1. Access the Edit Enrollment Event Rule task. 2. On the Coverage Rules tab, add the missing benefit coverage types.

Workday creates a benefit event for a job change that doesn't qualify for selecting benefits.

Cause	Solution
Workday doesn't have a record that the employee waived coverage because: • The benefit type for the job change includes a coverage type that you haven't previously offered the worker through Workday. • Workday didn't load waive records when you imported benefits from a third-party vendor.	Ensure that Workday generates the waive record for the worker's benefit enrollment event. 1. Access the Edit Benefit Event Type task. a. Add all hire event coverage types for the benefit event of the job change. b. Add needed coverage types, or remove any unneeded ones, from the benefit event for the job change. Security: *Set Up: Benefits* domain in the Benefits functional area.

Cause	Solution
	2. Access the Create Passive Event Rule task. Configure a passive event rule that enrolls or waives the worker in the benefit plan when the worker becomes either: • Hired. • Eligible for benefits. Security: *Set Up: Benefits* domain in the Benefits functional area.
You selected the *Can select any plan* option on the coverage rule.	Security: *Set Up: Benefits* domain in the Benefits functional area. 1. Access the Edit Enrollment Event Rule task. 2. On the Coverage Rules tab, select *Only on Eligibility Change* from the Allowed Benefit Plan Changes prompt.

Default Coverage and Auto-Enrollment

Steps: Set Up Auto-Contribution Increase for Retirement Plans

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

The U.S. Federal Secure Act 2.0 requires organizations to enable workers to automatically increase their retirement savings contributions each year. You can set up auto-escalation for percentage contributions for retirement plans in Workday. Using passive events, you can enroll and enable new and existing workers. Workers can opt-out of the automatic increases during an enrollment event.

For a use case related to this topic, see ../../../use-case-library/use-case--set-up-auto-escalation-for-contribution-to-retirement-savings-plans.dita in the Use Case Library.

Steps

1. Configure auto-contribution increases for retirement plans by creating or updating retirement savings plans in Workday and specifying the auto-contribution increase percentages. See: Create Retirement Savings Plans on page 1302.
2. Enroll Workers into Retirement Savings Plans with Default Contribution Increases on page 1375
3. Add Opt Ins for Contribution Increases to Existing Retirement Savings Elections on page 1377

4. Increase Retirement Savings Contributions Annually for Workers Opted into Automatic Contribution Increases on page 1379.

Result

After running the passive event rule, workers receive a benefit event that brings forward their existing retirement savings contributions. Workers can also opt out of the auto-increase by unselecting the Auto Contribution Increase in the benefit event.

Example

Next Steps

Enroll Workers into Retirement Savings Plans with Default Contribution Increases

Prerequisites

- Create a retirement savings plan and enable the Auto Contribution Increase check box. See Create Retirement Savings Plans on page 1302.
- Security: *Set Up: Benefits* domain in the Benefits functional area.

Context

When managing retirement savings elections in Workday, you can create a passive event rule to enroll workers in the retirement savings plan at the default percentage.

This configuration also enables workers to:

- Waive the default contribution.
- Change the default contribution
- Opt out of the auto-increase.

Note: Ensure that you communicate with your workers about this event and what they need to do to waive or change the default contribution, or opt out of the auto-increase.

Steps

1. Create a benefit event type for the passive event rule.
   a) Access the Create Benefit Event Type task.
   b) Enter a name for the new benefit event type.

      You can prefix the name with *PASSIVE* to easily identify the purpose of the event.
   c) Select the applicable coverage types in the Enrollment Offering Type field.
   d) Select the number of days you want to allow workers to enroll in the Days to Enroll field.

      Once this date passes, run the Finalize Open Benefit Events process to finalize any events the workers did not submit.
   e) Click OK.
2. Create a benefit eligibility rule for the passive event rule.
   a) Access the Create Benefit Eligibility Rule task.
   b) Select Benefit Plan Eligibility Rule and click OK.
   c) Create a rule that identifies the workers that you want to enroll in the retirement savings plan at a default contribution. See Create Benefit Eligibility Rules on page 1255.

      Because you assign the passive event rule to benefit groups with a benefit group eligibility rule, you don't have to replicate the eligibility.

3. Create the passive event rule.
    a) Access the Create Passive Event rule.
    b) Enter a name.
    c) Select the benefit event type and benefit eligibility rule that you created.
    d) Select the benefit groups that are applicable to the rule and click OK.
4. Configure the benefit default.
    a) Access the Maintain Benefit Defaults task.
    b) Add the defaulting information for the relevant benefit groups and plans in the Retirement Savings tab.
    c) In the Employee Contribution Percentage field, enter the percentage at which you want to enroll new participants.
    d) Click OK.
5. Update the enrollment event rule.
    a) Access the Edit Enrollment Event Rule task for the relevant enrollment rule.
    b) On the Start or Waive Coverage tab, add a row for the passive benefit event.
    c) Enter values for the Benefit Coverage Type field, the Coverage Begin Date field, and the Deduction Begin Date field.
    d) On the Coverage Rules tab, add a row for the passive benefit event.
    e) Select a value for the Benefit Coverage Type field. Select *Can Select Any Plan* for the Allowed Benefit Plan Changes field if you are routing the event to the worker to take action or *No changes allowed* if you want the election to finalize automatically with no action from the worker. Select *Default to Priority Coverage or Waive* for the Defaulting Rules field.
6. Schedule the passive event rule.
    a) Access the Schedule Passive Events task.
    b) Select the run frequency you want and click OK.
    c) Enter a Request Name and select the Passive Event Rule you want to schedule.
    d) Set up the date and time parameters on the Schedule tab and click OK.

Result

Once the passive event schedule runs, the rule enrolls workers in the retirement savings plan at the default percentage. Workers will also have the option to waive the default contribution, change the default contribution, or opt out of the auto-increase.

Enroll Workers into Retirement Savings Plans Managed by Third-Party Providers

Prerequisites

- Security: *Set Up: Benefits* domain in the Benefits functional area.

Context

When managing retirement savings elections outside of Workday, you can create a placeholder retirement savings plan in Workday to enroll newly eligible workers at a default contribution. After workers enroll in the placeholder savings plan, you can then send demographic and eligibility information to the third-party provider. You can also third-party providers the default contribution amount.

If you already have a passive event rule that enrolls workers in the retirement savings plan at 0%, you need to create a benefit default to enroll them at a default amount, such as 3%. After creating the benefit default, update the defaulting rules for the event to an option that references priority coverage.

Steps

1. Configure a benefit default.
    a) Access the Maintain Benefit Default task.
    b) Add the defaulting information for the relevant benefit groups and plans in the Retirement Savings tab.
    c) Enter the percentage that you want to enroll new participants in the Employee Contribution Percentage field.
    d) Click OK.
2. Update the enrollment event rule.
    a) Access the Edit Enrollment Event Rule task for the relevant enrollment events rules.
    b) Locate the benefit event that you use for the passive event rule to enroll workers into retirement savings in the Coverage Rules tab.
    c) Ensure that the Allowed Benefit Plan Changes field has a value of *No Changes Allowed*.
    d) Select *Default to Priority Coverage or Waive* in the Defaulting Rules field for that event.
3. Run the passive event rule as you would normally.

Add Opt Ins for Contribution Increases to Existing Retirement Savings Elections

Prerequisites

- Create a retirement savings plan and enable the Auto Contribution Increase check box. See Create Retirement Savings Plans on page 1302.
- Security: *Set Up: Benefits* domain in the Benefits functional area.

Context

When managing retirement savings elections in Workday, you can create a passive event rule that sends a benefit event to workers. The benefit event will then bring forward their existing contributions with the Auto Contribution Increase check box selected. Workers can clear that check box during the benefit event. If workers don't make any changes, Workday flags their elections for auto-contribution increases when you finalize these benefit events.

Because this configuration updates all existing enrollments to comply with the Secure Act 2.0, you should only run this passive event rule one time.

Note: Ensure that you communicate with your workers about this event and what they need to do to opt out of the auto-increase.

Steps

1. Create a benefit event type for the passive event rules.
    a) Access the Create Benefit Event Type task.
    b) Enter a name for the new benefit event type.
    c) Select the applicable coverage types in the Enrollment Offering Type field.
    d) Select the number of days you want to allow workers to enroll in the Days to Enroll field.

       Once this date passes, run the Finalize Open Benefit Events process to finalize any events the workers didn't submit.
    e) Click OK.
2. Create a benefit eligibility rule for the passive event rule.
    a) Access the Create Benefit Eligibility Rule task.
    b) Select Benefit Plan Eligibility Rule and click OK.
    c) Create a rule that identifies the workers who are already enrolled in the retirement savings plan. See Create Benefit Eligibility Rules on page 1255.

       Because you assign the passive event rule to a benefit group, you don't have to replicate the benefit group eligibility in the passive event eligibility rule
3. Create the passive event rule.
    a) Access the Create Passive Event rule.
    b) Enter a name.
    c) Select the benefit event type and benefit eligibility rule that you created.
    d) Select the benefit groups that are applicable to the rule and click OK.
4. Update the enrollment event rule.
    a) Access the Edit Enrollment Event Rule task for the relevant enrollment rule.
    b) On the Start or Waive Coverage tab, add a row for the passive benefit event.
    c) Enter values for the Benefit Coverage Type field, the Coverage Begin Date field, and the Deduction Begin Date field.
    d) On the Coverage Rules tab, add a row for the passive benefit event.
    e) Select a value for the Benefit Coverage Type field. Select *Can Select Any Plan* for the Allowed Benefit Plan Changes field and *Default to Current Elections or Waive* for the Defaulting Rules field.
5. Run the passive event rule.
    a) Access the Schedule Passive Events task.
    b) Select *Run Now* as the Run Frequency and click OK.
    c) Enter a Request Name and select the Passive Event Rule you want to run.
    d) Select the Generate Passive Events check box and click OK.

Result

After running the passive event rule, workers will receive a benefit event that brings forward their existing retirement savings contributions. Workers can also opt out of the auto-increase by unselecting the Auto Contribution Increase in the benefit event.

Increase Retirement Savings Contributions Annually for Workers Opted into Automatic Contribution Increases

Prerequisites

- Create or edit a retirement savings plan and enable the Auto Contribution Increase check box. See Create Retirement Savings Plans on page 1302.
- Set up the Enroll in Retirement Savings EIB. See:../../../integrations/enterprise-interface-builder-eib-/inbound-eibs/dan1370797963228.dita and ../../../integrations/enterprise-interface-builder-eib-/Inbound-EIB-Template-Guidelines-and-Troubleshooting/benefits-administration-eibs/zdh1673529322156.dita
- Security:
  - *Set Up: Benefits* domain in the Benefits functional area.
  - *Custom Report Creation* in the System functional area.
  - *Manage: All Custom Reports* in the System functional area.
  - *Report Tag Management* in the System functional area.

Context

For each year, you can increase retirement savings contributions for workers opted in to automatic contribution increases. For the increases, extract the current elections, calculate the new contribution amounts, and then upload the new elections. Additionally, you can create an integration to automate this process.

Steps

1. Create and run a custom report to extract the retirement savings elections of workers who opted in to automatic contribution increases.
2. Extract the data to Excel and calculate the updated contribution amounts based on your policy.
3. Upload the updated elections using the Enroll in Retirement Savings EIB.

Set Up Default Benefits Coverage

Prerequisites

Security: *Set Up: Benefits* domain in the Benefits functional area.

Context

You can automatically enroll workers into these benefit plans if they don't complete their benefit elections:

- Health care.
- Insurance
- Retirement savings.
- Additional benefits.

Workday provides 2 strategies to ensure coverage:

Auto Enroll	Use auto enroll when the worker has no choice when making an election. During open enrollment, elections display as read-only.
Benefit Defaults	Use to assign a plan automatically during an event, but enable workers to waive or select another plan if offered.

	You can't use benefit defaults if you use allocation of retirement savings plans.

Steps

- To set up auto enroll:
  a) Access the Create Benefit Plan task.
  b) Select the Auto Enroll check box for the benefit plan.
  c) Access the Create or Edit Enrollment Event Rule task.
  d) Include the benefit event types and benefit coverage types in the Start or Waive Coverage tab.
  e) Select the *Default to Priority Coverage, Current Coverage or Waive* defaulting rule on the Coverage Rules tab if you use defaults for benefit plans.
- To set up benefit defaults:
  a) Access the Maintain Benefit Defaults task.
  b) For each type of benefit, consider:

Field	Description
Benefit Group	You can have more than 1 benefit group for each coverage type.
Coverage Type	Select only 1.
<name of benefit> Plan	Add 1 or more plans for each coverage type.
Coverage Target	For Health Care and Additional Benefits only. Select 1 target for each plan.
Priority	Enter the order that Workday uses to populate the employee's default benefit plan. The lower the number, the higher the priority.
Coverage Amount	For Insurance only. Select 1 coverage amount for each plan.
Employee Contribution Percentage	For Retirement Savings only. The percentage amount must conform to the plan minimum and maximum.
Employee Contribution Amount	For Retirement Savings only. The amount must conform to the plan minimum and maximum.
Amount Frequency	For Retirement Savings only. Automatically populates the frequency of the benefit group.
Amount Currency	For Retirement Savings only. Automatically populates the currency of the benefit group.

Result

Workday automatically populates the default plans and elections if you selected *Default to Priority Coverage or Waive* in the Defaulting Rules prompt on the Create Enrollment Event Rule task.

If there are multiple default plans, Workday attempts to give the employee the plan with the highest priority:

- If the employee is eligible for the plan with a priority of 1, assign plan 1.
- If the employee isn't eligible for plan 1, assign plan 2.
- If the employee isn't eligible for plan 2, set the default to waive.

Set Up Auto-Enrollment for Benefit Plans

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

Workday enables you to auto-enroll employees into health care, insurance, and additional benefits plans.

Steps

1. Access the Create or Edit Benefit Plan task.
2. Create or select an existing spending account plan.
3. Select the Auto Enroll check box for the plan.

   For health care plans, the auto-enroll feature covers the entire plan, not the plan and a specific coverage level.

   Note: Don't select Auto Enroll for insurance plans that require evidence of insurability (EOI).
4. Access the Maintain Benefit Coverage Types task.
5. Select Only One Election for the coverage type to which the plan in step 2 belongs.

   Example: To enroll workers automatically in 1 of several benefit plans, select Only One Election for the coverage type. Then select the Auto Enroll check box on the Create or Edit Benefit Plan task for the benefit plan in which you want to auto-enroll employees.

FAQ: How does Workday check for changed employee benefits?

Workday runs the *If there is an effect on employee benefits?* condition rule when you use this task or process:

- The Change Benefits task.
- The *Change Benefit Elections* business process as a step on another business process.

This condition rule determines whether to create a benefit event that enables affected employees and contingent workers to enroll in benefits. The rule asks 3 questions:

- Has there been a gain or loss in the employee's benefit coverage in their current elections?

  Using eligibility rules, Workday determines if the employee has lost or gained benefit coverage in their current elections. If yes, then Workday creates a benefit event.

  For a job change that affects benefits, Workday determines eligibility changes by evaluating eligibility as of the event date of the job change. Workday compares the event date to the current election package. Workday checks if:

  - The employee is eligible for the benefit plan as of the job change date?
  - There's an election or waive record in the current election package.

  If there's no election or waive record, Workday creates a benefit event.
- What is the default behavior?

  Workday checks the Defaulting Rules selected in the Coverage Rules tab on the Create Enrollment Event Rule task. If you select 1 of these rules, Workday creates a benefit event:

  - *Default to Priority Coverage or Waive*
  - *Default to Waive*
- What can the employee do?

  Workday checks the Allowed Benefit Plan Changes prompt selection in the Coverage Rules tab on the Create Enrollment Event Rule task. If you select 1 of these options, Workday creates a benefit event:

  - *Can Select Any Plan* (including waive).
  - *Current Plan Only*.
  - *Current Plan or Option to Decrease* (only Spending or HSA).
  - *Current Plan or Option to Increase* (only Spending or HSA).
  - *Current Plan or Option to Waive*.

  Workday creates an event if you select 1 of these options and the employee's current benefits have changed coverage or eligibility:

  - *Only on Eligibility Change*.
  - *No changes allowed*.

Workday finalizes the event 1 day after the termination date if it finds that either:

- Benefit coverage has terminated.
- Employees can't change the plan.

Workday doesn't automatically notify the employee. To send a notification, add a condition rule and a notification step to the business process.

Cross Plan Dependencies

Create Cross Plan Enrollment Prerequisites

Prerequisites

- Create benefit groups.
- Create benefit plans.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

You can make enrollment a requirement in 1 or more *primary* plans, or a restriction for enrollment in a *secondary* plan. Example: You can require employees to elect supplemental life insurance before dependent life insurance.

Note: You can't use cross-plan enrollment prerequisites if you use allocation of retirement savings plans.

Steps

1. Access the Create Cross Plan Enrollment Prerequisite task.
2. As you complete this task, consider:

<table>
<tr><th>Option</th><th>Description</th></tr>
<tr><td>Inactive</td><td>Select to inactivate the primary/secondary plan relationship.</td></tr>
<tr><td>Restricted to these Benefit Groups</td><td>Select the benefit groups to which the primary/secondary plan relationship applies.

If left blank, Workday assumes that the primary/secondary plan relationship applies to all benefit groups.</td></tr>
<tr><td>Primary Benefit Plan(s)</td><td>List the primary plans from which workers must select to qualify for the Secondary Benefit Plan(s).
If workers can select only 1 of the plans, select Only One Election on the Maintain Benefit Coverage Types task.
If workers can select multiple plans, clear the Only One Election check box on the Maintain Benefit Coverage Types task.
Select only 1 primary benefit plan in this field to require that workers enroll to qualify for the secondary benefit plan.

Note: Workday display only plans associated with the benefit groups listed in the Restricted to these Benefit Groups field.</td></tr>
<tr><td>Secondary Benefit Plan(s)</td><td>Select the plans that workers need to elect after selecting the primary benefit plan.

The Secondary Plan Rule determines whether a secondary plan is optional or required.</td></tr>
<tr><td>Secondary Plan Rule</td><td>If you want:
To make selecting a secondary plan optional, select May elect one or more secondary plan.

If you select this option, workers can elect or waive the secondary plan.</td></tr>
</table>

Option	Description
	• To require workers to elect one of the listed secondary plans, select *Must elect at least one secondary plan*. If selected, workers must select 1 secondary plan or waive the primary plan to complete their enrollment. • To require employees to elect either a primary or secondary plan, select *Only one primary or secondary plan can be elected*. If you select this option, workers can elect either a primary plan or a secondary plan, but not both.
Require the same Coverage Targets on all Health Care Plans	If selected, employees selecting coverage targets for 1 health care plan must select the same targets for related plans. Example: If the enrollee selects Family for medical coverage, Workday automatically populates the coverage target for dental as Family. You can't change this value.
Limit Display of Messages in Enrollment	Select to hide Workday-delivered cross-plan messages under Important Messages. Workday continues to display auto-waive and error messages.

Result

During the enrollment process, workers must submit benefit elections that conform to the cross-plan prerequisites defined for a benefit group.

Note: If an unsubmitted election package violates a cross-plan rule, Workday doesn't block or correct the invalid elections.

Next Steps

You can:

- Use the Edit Cross Plan Enrollment Prerequisite task to make updates to the plan details.
- Use the View Cross Plan Enrollment Prerequisite report to see the detailed information about a specific rule.

Tasks

Concept: Hiding Benefit Plans from Configuration Prompts on page 1318

Examples

Examples: Cross Plan Enrollment Prerequisites on page 1389

Create Cross Plan Insurance Coverage Maximums

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

Define the maximum amount an employee can elect in insurance coverage when enrolling in 2 or more insurance coverage plans.

Steps

1. Access the Create Cross Plan Insurance Coverage Maximum task.
2. As you complete this task, consider:

Option	Description
Inactive	Inactivates the cross plan rule for future use when it's no longer valid. Transaction currently in progress completes as normal.
Restricted to these Benefit Groups	Limits the rule to specific benefit groups. If you leave this field blank, then Workday applies the rule to all benefit groups.
Benefit Plans	You can only select benefit plans belonging to benefit groups listed in the Restricted to these Benefit Groups field.
Cross Plan Maximum	Enter the total amount of insurance coverage that employees can elect.
Allow Coverage Up to Maximum	Defines how employees elect 1 or more insurance plans during enrollment. • Select so employees can elect 1 or more insurance plans with coverage up to the maximum. During enrollment, Workday displays only those coverage amounts that are equal to or 1 level greater than the maximum coverage. Workday automatically adjusts the coverage amount so that total coverage doesn't go over the maximum. • Clear the check box to display all options that employees can select. Workday automatically adjusts the coverage amount so that total coverage doesn't go over the maximum.
Limit Display of Messages in Enrollment	Select to hide Workday-delivered cross-plan messages under Important Messages. Workday continues to display auto-waive and error messages.
Benefit Plan Calculation Order	Orders the plans according to how you want the maximum coverage amount allocated if there are more than 1 Benefit Plans.

Result

Workday ensures that workers submit benefit elections that meet the maximum coverage of the cross plan insurance defined for a benefit group. However, employees can save their elections and return to the enrollment event to correct them later.

Example

To limit the total coverage for Basic and Supplemental Life to $650,000:

1. In the Restricted to these Benefit Groups field, select the benefit groups to which the $1,000,000 limit applies.
2. In the Benefit Plan(s) field, select *Basic Life* and *Supplemental Life*.

   Note that the combined coverage in both plans can't exceed the amount in the Cross Plan Maximum field.
3. In the Cross Plan Maximum field, enter $650,000.

With these selections, Workday works 2 different ways depending on whether or not you selected the Allow Coverage Up to Maximum check box. For an employee who has a salary of 100,000, Basic Insurance coverage is 1X, 2X, 3X, 4X, 5X the employee salary. Supplemental insurance coverage is the same as Basic.

If you selected the check box, the employee sees all options available for Basic Insurance. The employee elects 3X. For Supplemental Insurance coverage, the employee only sees the 1X, 2X, 3X, and 4X options. 4X is available because it's the option that takes the employee insurance coverage to the maximum. The employee elects 4X. Because the maximum is $650,000, Workday automatically adjusts the coverage amount to $350,000 to prevent the total amount from exceeding the maximum.

```
Total Insurance Coverage = 650,000 (Basic = 3 X 100,000, Supplemental = 4 X
100,000) - (Workday's adjustment 50,000 to meet Cross Plan Maximum)
```

If you didn't select the check box, the employee sees all options available for Basic and Supplement. If the employee elected 3X for Basic and 4X for Supplemental, Workday would display an error when the employee submitted the elections. The employee has to go back into the enrollment form to correct the elections.

Tasks
Concept: Hiding Benefit Plans from Configuration Prompts on page 1318

Create Cross Plan Insurance Percentage Maximums

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

Define the maximum percentage amount that an employee can elect in insurance coverage when enrolling in 2 or more insurance plans.

Steps

1. Access the Create Cross Plan Insurance Percentage Maximum task.
2. When completing the task, consider:

Option	Description
Inactive	Inactivates the cross plan rule for future use. Transaction currently in progress complete as normal.
Restricted to these Benefit Groups	Limits the rule to specific benefit groups. If you leave this field blank, then Workday applies the rule to all benefit groups.

Option	Description
Controlling Benefit Plans	The plans that control the maximum amount of coverage that workers can elect in the plans you select for the Restricted Benefit Plans field. Workday requires that you include the coverage type of the controlling benefit plan in the same event type as the restricted benefit plans. Additionally, we recommend that you specify this coverage type in the enrollment event rule on the Start or Waive Coverage and Coverage Rules tabs. Specify it for all benefit groups affected by the controlling benefit plan.
Percent Limited To	The percentage of an employee's total coverage amount for the plans you select in the Controlling Benefit Plans prompt. Example: You select Voluntary Life as the controlling benefit plan and the Spouse Life as the restricted benefit plan. You restrict the Spouse Life plan to a 50% limit of what the worker elects for Voluntary Life.
Restricted Benefit Plans	The plans that use the limited coverage percentage, applied from the Percent Limited To field.
Allow Coverage Up to Maximum	Defines how employees elect 1 or more insurance plans during enrollment. • Select so employees can elect 1 or more insurance plans with coverage up to the maximum. During enrollment, Workday displays only those coverage amounts that are equal to or 1 level greater than the maximum coverage. Workday automatically adjusts the coverage amount so that total coverage doesn't go over the maximum. • Clear the check box so employees can elect coverages that go over the maximum. A warning displays and the employee must correct their elections.
Limit Display of Messages in Enrollment	Select to hide Workday-delivered cross-plan messages under Important Messages. Workday continues to display auto-waive and error messages.
Benefit Plan Calculation Order	Orders the plans according to how you want the maximum coverage amount allocated if there are more than 1 Restricted Benefit Plans.

Result

During enrollment, Workday automatically enforces the cross plan rules and adjusts the amount according to the defined configuration.

Example

To limit the life coverage of a spouse to 50% of the employee's income, enter:

Controlling Benefit Plans	Voluntary Life
Percent Limited To	50
Restricted Benefit Plans	Spouse Life

Concept: Hiding Benefit Plans from Configuration Prompts on page 1318

Create Cross Plan Retirement Savings Plan Contribution Maximums

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

Define the maximum amount that an employee can elect in 1 or more retirement savings plans.

Steps

1. Access the Create or Edit Cross Plan Retirement Savings Contribution Maximum task.
2. As you complete this task, consider:

Option	Description
Inactive	Inactivates the rule. Transactions currently in progress complete as normal.
Restricted to these Benefit Groups	Limits the rule to specific benefit groups. If you leave this field blank, then Workday applies the rule to all benefit groups.
Benefit Plans	You can only select benefit plans belonging to benefit groups listed in the Restricted to these Benefit Groups field.
Contribution Percentage Maximum	Enter the total contribution amount - percent of salary employees can elect.
Contribution Amount Maximum	Enter the total contribution amount - fixed amount employees can elect.
Limit Display of Messages in Enrollment	Select to hide Workday-delivered cross-plan messages under Important Messages. Workday continues to display auto-waive and error messages.

Result

Workers can only submit benefit elections that conform to the cross-plan rule defined for a benefit group.

Related Information
Tasks
Concept: Hiding Benefit Plans from Configuration Prompts on page 1318

Examples: Cross Plan Enrollment Prerequisites

You create 3 prerequisites for cross plan enrollments:

- Create a rule that makes the election of a High Deductible Health Care Plan (HDHPs) a prerequisite for electing a Health Savings Account Plan (HSA).

  You make the Limited HSA plan available to all workers who elect either the high deductible Gold Care or high deductible Silver Care plan. You allow only 1 HDHP election and require Workers to select the Limited HSA plan if they elect 1 of the HDHPs.

  Note: For the health care coverage types that include the Gold Care and Silver Care plan, you select the Only One Election check box on Maintain Benefit Coverage Types.

  Enter these values:

Field	Value
Primary Benefit Plan(s)	Gold Care Silver Care
Secondary Benefit Plan(s)	Limited HSA.
Secondary Plan Rule	Must elect at least one secondary plan.

- Make Election of an HDHP a prerequisite for electing both a required HSA and an optional catch up plan.

  You make 2 HSA plans available to workers over 55 who elect the high deductible Gold Care plan:

  - A General HSA plan.
  - A Catch Up HSA plan.

  Workers electing the Gold Care HDHP must enroll in the General HSA plan. You make the Catch Up HSA plan optional and available only to employees who have elected the Gold Care HDHP and the General HSA plan. Employees can only elect the Catch Up HSA plan by first electing the General HSA plan.

  Note: For the health care coverage types that include the Gold Care and Silver Care plan, you select the Only One Election check box on Maintain Benefit Coverage Types.

  1. Create a cross plan enrollment prerequisite rule that makes the Gold Care HDHP plan a prerequisite for electing the General HSA plan:

     Enter these values:

Field	Value
Primary Benefit Plan(s)	Gold Care
Secondary Benefit Plan(s)	General HSA
Secondary Plan Rule	Must elect at least one secondary plan.

  2. Create another cross plan enrollment prerequisite rule that makes the Gold Care HDHP plan a prerequisite for electing the Catch Up HSA plan:

     Enter these values:

Field	Value
Primary Benefit Plan(s)	Gold Care
Secondary Benefit Plan(s)	Catch Up HSA
Secondary Plan Rule	Can elect 1 or more secondary plans.

Field	Value
	Required because the Gold Care HDHP is a prerequisite not only for the General HSA plan, but for the Catch Up HSA plan.

3. Create a third cross plan enrollment prerequisite rule that makes he General HSA plan a prerequisite for enrolling in the Catch Up HSA plan:

   Enter these values:

Field	Value
Primary Benefit Plan(s)	General HSA.
Secondary Benefit Plan(s)	Catch Up HSA.
Secondary Plan Rule	Can elect 1 or more secondary plans.

- Create a cross plan prerequisite rule that allows an employee to elect a Spending Account or a Health Savings Account plan, but not both.

  Workers can elect the Silver Health Savings Account (HSA) or the Gold Health Care Spending Account plan, but not both.

  Note: During enrollment, the employee will only be able to submit their elections if they elect 1 of the plans.

  Enter these values:

Field	Value
Primary Benefit Plan(s)	Silver HSA
Secondary Benefit Plan(s)	Gold Health Care Spending Account
Secondary Plan Rule	Can elect only 1 primary or secondary plan.

Benefit Credits and Surcharges

Steps: Manage Benefit Credits and Surcharges

Context

You can configure how to apply benefits credits and surcharges during enrollment events. You can also specify the order in which Workday applies credit offsets to benefit coverage types that you configure. Workday can display the distribution of credit offsets so that workers can understand how the offsets reduce the cost of their benefit plans.

Steps

1. Assign users to security policies.

   See Concept: Security Policies.
2. Set up benefit credits.

   See Steps: Set Up Benefit Credits on page 1391.

3. Activate benefit credits.
    a) Access the Create or Edit Benefit Group task.
    b) On the Benefit Credits tab, select the Enable Benefit Credits check box.

    Security: *Set Up: Benefits* in the Benefits functional area.
4. Assign Benefit Credits to a Benefit Group.
5. Assign benefit credits to a health care, insurance, or additional benefit plan.

    See:

    - Create Health Care Plans on page 1289.
    - Create Insurance Plans on page 1295.
    - Create Additional Benefit Plans on page 1313.
6. Assign benefit credits to healthcare rates.

    See: Create Health Care Rates on page 1269.
7. Assign annual benefit credits to a worker.
    a) Select Benefits > Change Benefits Annual Credit from the related actions menu of the worker.
    b) Enter the type of benefit annual credit, currency, and amount.
8. Change Wellness Data on page 1399.
9. Set up benefit surcharges.

    See Steps: Set Up Benefit Surcharges on page 1392.

Result

Workers eligible for the benefit group or enrolled in the appropriate benefit plans receive the assigned credits.

If you select the Enable Remaining Benefit Credits and Display Benefit Credits in Enrollment check boxes, Workday displays:

- The total credits applied to each plan in the Elected Benefits grid on the Benefits Statement and Current Benefit Elections pages.
- These grids on the Review and Sign page:
    - A list of used credits by benefit plan, on the Costs Offset By Credits grid.
    - The net costs of elected benefits after Workday applies the credits in the Total Benefits Cost grid.

Next Steps

To see a list of workers that includes the name of credits they received, amount of credit, currency, and frequency, use the Credit Summary for Workers report.

Include Coverage Types in Total Benefit Costs on page 1400

Steps: Set Up Benefit Credits

Context

Define benefit credits and credit bundles.

Steps

1. Create Benefit Annual Credit Types on page 1393.

   Benefit annual credits enable you to award a specific credit amount to a specific employee.
2. Create Benefit Credits on page 1393.
3. Create Benefit Credit Bundles on page 1395.

   If you have a set of credits that are always going to be together, you can group them into a benefit credit bundle.

Related Information
Concepts
Steps: Manage Benefit Credits and Surcharges on page 1390

Steps: Set Up Benefit Surcharges

Context

For spouse/domestic partner and dependent relationships, Workday enables you to:

- Track whether the relationship is eligible or enrolled in their own health care plan.
- Create a flat amount surcharge and apply that surcharge to specific health care plans or rates.
- Create tobacco surcharges for the employee and their dependents.

Steps

1. Create Benefit Surcharges on page 1398

   Security: *Set Up: Benefits* in the Benefits functional area.
2. Add dependents.

   For spouses or domestic partners, you can select the check box for This person is or could be enrolled in Health Care coverage elsewhere. See Manage Dependents and Beneficiaries on page 1500.

   You can also indicate whether a spouse or domestic partner uses tobacco for Tobacco Use.
3. Assign benefit surcharges to a health care plan.

   See Create Health Care Plans on page 1289.
4. Assign benefit surcharges to health care rates.

   See Create Health Care Rates on page 1269.

Result

During enrollment, Workday checks for spousal and tobacco surcharges.

- For spousal surcharges, Workday checks:
  - If an elected health care plan or rates associated with the plan have a benefit surcharge associated with it.
  - If the employee has elected coverage for a spouse or domestic partner that has the This person is or could be enrolled in Health Care coverage elsewhere check box selected.
  - If the coverage target has a surcharge and covers spouses or domestic partners.

  If these 3 conditions are met, then Workday adds the surcharge to the cost of the benefits.
- Workday checks for tobacco use surcharges. If the employee, or spouse (or domestic partner), indicates tobacco use, Workday adds the surcharge.

Workday sends the surcharges to Workday Payroll or Payroll Interface as deductions.

Next Steps

Use the:

- Delete Benefit Surcharge task to delete surcharges that aren't assigned to a health care plan or rate.
- View Benefit Surcharge report to see detailed information about the surcharge.

Create Benefit Annual Credit Types

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

Use benefit annual credits when you want to define specific credit amounts that might vary from employee to employee or don't fit within the delivered benefit credit framework. A benefit annual credit awards an employee with a specific flat amount.

Create the benefit annual credit type, then assign the credit and a specific amount to the individual employee. Employees can be awarded more than 1 benefit annual credit. This provides the most flexibility in awarding credits to employees.

Steps

1. Access the Maintain Benefit Annual Credit Types task.
2. Enter a name and description.

Next Steps

Use the:

- View Benefit Annual Credit Types report to see detailed information.
- Maintain Benefit Annual Credit Types task to make any changes.

Related Information
Concepts
Steps: Set Up Benefit Credits on page 1391

Create Benefit Credits

Prerequisites

- Create benefit annual credit types.
- Create compensation elements.

  Complete this task if you're using percent-of-salary type credits and want to define employees' salary by a compensation element.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

You can create credits that are based on:

- A flat amount.
- Employee work-related information.

- Employee demographics.
- Dependent-related information.
- Enrollment information.

Benefit credits are based on Workday-delivered benefit credit types. These delivered credit types provide the criteria used to determine an employee's eligibility for the benefit credit and the applied amount.

Steps

1. Access the Create Benefit Credit task.
2. As you complete this task, consider:

Option	Description
Currency	If this currency value is different from the employee's currency, Workday converts the credit amount into the amount for the employee's currency.
Frequency	If the frequency for the benefit credit is different than the frequency on the benefit group, Workday converts the amount of the benefit credit according to the frequency.
Multiply Benefits Annual Credit by	For Benefits Annual Credit Based Credits only. Enter a number by which an employee's annual benefit credit is multiplied. The number can be less than 1. Example: If you want to divide the credit in half, then enter 0.5.
Benefit Annual Credit Type	For Benefits Annual Credit Based Credits only. Select the credit type required for an employee to receive this benefit credit.
Calculate As Of	For Benefits Length of Service Based Credits or Salary Source Based Credits: • *Coverage Begin or Plan Year Begin*: If the employee has coverage as of the start of the plan year, Workday uses this date. Otherwise, Workday uses the date the employee originally enrolled in the plan. • *Coverage Begin or Specific Date:* Workday compares the original enrollment date with the date entered in the Specific Month and Specific Day fields. Using the most recent date to retrieve the value, it assumes that the year is the current benefit plan year. If you want to use the prior plan year values, select the Of Prior Plan Year check box.
From/To (name of benefit credit type)	For credits that are based on information such as length of service or age. Build a table that associates the credit amount with a specific range.

Option	Description
	Avoid having a gap in the ranges defined by the rows in the table. Otherwise, Workday doesn't apply the credit amount if a value falls in the gap. Don’t use a From/To value in more than 1 row because it causes an overlap in the ranges. When there’s an overlap, Workday applies a credit for all rows that match the value, rather than just the row you intended.
Amount	For credits based on currency amounts, enter a positive amount only.

Next Steps

Use the:

- Edit Benefit Credit task to make changes.
- Delete Benefit Credit task to delete credits assigned to a benefit group, benefit plan, or credit bundle.
- View Benefit Credit report to see detailed information.
- Test Benefit Credit report to see if a credit provides the desired results.

  You can test credits based on employee demographic- or job-related information, or on dependent information. You can't test credits based on information from an enrollment event.
- Edit Benefit Group task to assign benefit credits to a benefit group.
- View Benefit Credit Change History report to see the changes for a credit.

Related Information
Concepts
Steps: Set Up Benefit Credits on page 1391

Create Benefit Credit Bundles

Prerequisites

- Define benefit credits.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

If you have a set of credits that will always be together, you can group them into a benefit credit bundle. The credit that is applied is the total of the individual benefit credits. Credit bundles save time when repeatedly assigning an identical group of credits.

Example: credits awarded for wellness plan participation, wellness score, and tobacco usage are often applied together. Including these three credits in a single bundle saves time and reduces configuration mistakes.

Steps

1. Access the Create Benefit Credit Bundle task.
2. Enter the:
    - Effective Date
    - Credit Name

3. Consider:

Option	Description
Currency	If the currency you enter here is different from the employee's pay currency, Workday converts the credit amount into the amount for the employee's currency.
Frequency	If the frequency you enter here is different from the employee's pay frequency, Workday converts the credit amount according to the employee's pay frequency.

Next Steps

Use the:

- Change the bundle with the Edit Benefit Credit Bundle task.
- View details about the bundle with the View Credit Bundle report.

Related Information
Concepts
Steps: Set Up Benefit Credits on page 1391

Assign Benefit Credits to a Benefit Group

Prerequisites

Select Flex Credits can be Applied for 1 or more of these coverage types for which you want to configure credit-offset deductions:

- Health Care
- Insurance
- Additional Benefits

See Manage Benefit Coverage Types.

Security: *Set Up: Benefits* in the Benefits functional area.

Context

You can assign benefit credits to a benefit group and then configure credits to offset the cost of the benefit plans the worker elects. Workday also provides options for how to display credit totals and offsets to workers. If you use a retroactive effective date when configuring credits for the benefit group, the changes apply to future dates as well.

Steps

1. Access the Create Benefit Group or Edit Benefit Group task.
2. From the Benefits Credits tab, select the Enable Benefit Credits check box to activate benefit credits for the benefit group.
3. (Optional) Select the Enable Remaining Benefit Credits check box to configure the order in which Workday applies benefit credit offsets.

   Workday applies the credit configuration to all benefit events associated with the benefit group.

   Note: You can select Excess Credits to Health Spending Accounts (Canada) only if you clear the Enable Remaining Benefit Credits check box.

4. (Optional) Select Display Benefit Credits in Enrollment to display the benefit credit totals.

   If you have also selected Enable Remaining Benefit Credits, Workday displays the remaining credits and the credits used to offset benefit costs to workers during an enrollment event and on their benefits statements.
5. (Optional) Add the coverage types from which you can select unused plan credits in the Source Coverage Type for Unused Plan Credits grid.

   Workday first applies plan credits to offset the cost of the associated plan. Any leftover credits become *unused credits*, and available for offsetting deductions for other coverage types.
6. (Optional) Assign benefit credits to the benefit group in the Benefit Group Credit section.
7. (Optional) Assign benefit credits to workers that are eligible, electing, or waiving specific coverage types in the Coverage Type Credits grid.
8. (Optional) Configure the order in which Workday offsets the deductions using benefit group or unused plan credits. Add the coverage type and the order number in the Offset Deductions with Benefit Credits grid.

   Example: Add coverage types of long-term disability and short-term disability. Specify 1 for short-term disability and 2 for long-term disability to indicate in what order coverage types get the credit offset. The cost of short-term disability is $20 and the long-term disability cost is $80. If the worker has a credit balance of $75, Workday applies $20 of the credit balance to the short-term disability plan. It then applies the remaining $50 to the long-term disability plan.

Result

Workday calculates the remaining credit amount based on the coverage types in the benefit events. When applying credits, Workday uses this priority order:

- Benefit plan credits.
- Unused plan credits.
- Benefit group credits, which also include coverage type credits.

When you select the Enable Remaining Benefit Credits check box, Workday displays:

- The remaining credit amount as a summary of remaining credits after the offset of the cost of benefit elections.
- The remaining credit amount as a summary of remaining credits after the offset of benefit plan cost.
- Plan Net Costs as $0.00 on the Review and Sign page when Workday completely offsets the costs, resulting in a zero balance.
- The total applied credits for each benefit plan on the Current Benefit Elections page.
- Applied credits per benefit plan, remaining credits, and net costs after Workday applies credits on the worker benefits statement.

Note: Workers can't view the new offset functionality of benefit credits from the Workday mobile app.

Next Steps

If you include an offset coverage type in a benefit event type, you need to add all offset coverage types in that event type.

Concepts

Steps: Manage Benefit Credits and Surcharges on page 1390

24R1 What's New Post: Benefit Credit Offsets

Create Benefit Surcharges

Prerequisites

- Create related person types for tobacco use surcharges.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

You can create surcharges for health care plans and rates. Workday delivers 2 surcharge types: Spouse and Tobacco Use. You can create tobacco use surcharges for workers and any dependents that use tobacco.

Steps

1. Access the Create Benefit Surcharge task and select the type of surcharge.

   As you complete the task, consider:

Option	Description
Currency	If the currency you enter is different from the currency of the employee, Workday converts the surcharge amount into the currency of the employee.
Frequency	Workday converts the amount of the benefit surcharge using the frequency of the benefit group, if it differs from the benefit credit.

2. (Optional) To create tobacco use surcharges for spouse or domestic partner and dependents, select Tobacco Surcharge Type.

   Create a surcharge for every individual or group of person types that a worker can select for their plan. You can create an individual person type (Example: Spouse) or a group of person types (Example: Employee + Spouse + 1 Child).

   Note: When a worker selects health care for certain target types during enrollment, Workday searches the rate bands for surcharges based on the person type. Workday first searches for a matching group. If it can't find a matching group, it searches individual person types. When it can't find any match, Workday applies the surcharges when:

   - The requested count is higher than the maximum configured count. Workday rounds down to the maximum count and applies the assigned surcharge.
   - The requested count is less than the maximum configured count. Workday applies a surcharge of zero.

   As you complete this section, consider:

Option	Description
Person Type	Select an individual person type by selecting from the prompt. Create a group of person types by adding additional rows that are associated with an Amount value.
Count	The number of individuals included in the person type. Example: For a child person type, you might select 2.
Amount	Can be the amount for an individual person type or a group.

Result

Workday creates the surcharges and makes them available for benefit plan rates.

Example

This example displays how Workday matches worker elections to tobacco surcharge types.

You create these surcharges:

Groups	Person Type	Count	Amount (USD)
	Employee	1	$10
	Spouse	1	$7
	1 Child	1	$5
	2 Children	2	$11
	4 Children	4	$15
Employee + Spouse	Employee	1	$20
	Spouse	1	
Employee + 1 Child	Employee	1	$18
	Child	1	

During enrollment, Alysse elects health care coverage for herself and her family. If she selects:

- *Employee + 1 Child*, Workday locates the matching group and applies a surcharge of $18 USD.
- *Employee + 2 Children*, Workday can't locate a matching group, so it searches for individual person types. Workday finds the matching person types of *Employee* and *2 Children* and applies a surcharge of $21 USD.
- *Employee+ 5 Children*, Workday finds *Employee*, but can't find a match for 5 children. Alysse's selection of 5 children is above the highest count for any child. Workday rounds down to the highest count and applies a surcharge of $25.
- *Employee+ 3 Children*, Workday finds *Employee*, but can't find a match for 3 children. Because the count for children is under the maximum number, Workday calculates a surcharge of zero for the children. Workday applies a surcharge of $10 for the employee.

Next Steps

Add surcharges to health care benefit plans and rates.

Concepts
Concept: Benefit Credits and Surcharges on page 1401
Create Health Care Rates on page 1269
Steps: Set Up Benefit Surcharges on page 1392

Change Wellness Data

Prerequisites

- Security: *Worker Data: Wellness* domain in the Benefits functional area.
- Define the relationships that you can add wellness information to.

  Select the Include Relationship for Wellness check box in the Maintain Related Person Relationships task.

Context

You can enter employee and dependent wellness information. You can also upload wellness information using the *Put Worker Wellness Data* web service.

Steps

1. Select Benefits > Change Wellness Data from the related actions menu of the employee.
2. Enter wellness information.

   Sections display for the employee and any dependents that have relationships defined in the Maintain Related Person Relationships task.

   As you complete the task, consider these items for both employee and dependent sections:

Option	Description
Participates in a Wellness Program	Select to measure eligibility for benefit credits based on *Employee Wellness Program Participation Based Credit*.
Wellness Score	Enter to measure eligibility for benefit credits based on *Employee Wellness Score Based Credit*.
Uses Tobacco	Select to measure eligibility for benefit credits based on *Employee Tobacco User Based Credit*. Note: If you hide the Tobacco Status (Dependent) localized field in the Maintain Localization Settings task, employees can't see this check box for dependents.

Related Information

Concepts

Steps: Manage Benefit Credits and Surcharges on page 1390

Include Coverage Types in Total Benefit Costs

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

If you use the benefits integration with Sun Life, you can select the coverage types that Workday uses to calculate an employee's total benefit cost.

Steps

1. Enable flex credits for a coverage type.
   a) Access the Maintain Benefit Coverage Types task.
   b) Select the Flex Credits can be Applied check box for Health Care and Insurance coverage types.
2. Access the Edit Benefit Groups task.

3. On the Benefits Credits tab and in the Offset Deductions with Benefits Credits section, consider:

Option	Description
Coverage Type	Select the Coverage Types you want included in the calculation of an employee's total benefit cost.
Benefit Credits Offset Order	Indicate the order in which to apply benefit credits to a worker's elections to reduce or eliminate benefit costs. A lower number indicates a higher priority.

Result

When sending benefit costs and credits to Sun Life, Workday looks at the coverage type and order to determine cost amounts.

Example: An employee has a benefit credit of 300.00 USD and costs for medical are 250.00 USD and dental are 75.00 USD. The order for medical is 1 and dental is 2. Workday sends no costs for medical and 25.00 for dental.

Related Information
Concepts
Steps: Manage Benefit Credits and Surcharges on page 1390

Concept: Benefit Credits and Surcharges

Workday delivers a flexible framework for applying benefit credits and surcharges. You can create benefit credits and apply them to a:

- Benefit group
- Coverage types within a benefit group
- Healthcare, insurance, or additional benefit plans
- Healthcare rates

Workday applies benefit surcharges to coverage targets on health care plans and rates when:

- The employee elects coverage for a spouse or domestic partner who has the This person is or could be enrolled in Health Care coverage elsewhere check box selected.
- The employee indicates that the employee and 1 or more dependents use tobacco.

You create the benefit credits based on Workday-delivered benefit credit types. These delivered benefit credit types are based on dependent, employee, and enrollment information. They provide a wide range of criteria by which you can award amounts. Examples:

- Length of service
- Dependent full-time student status
- Employee age
- Employee compensation package
- Flat amount
- Performance review
- Wellness score

You can group individual benefit credits into benefit credit bundles. The applied amount of the credit is the total of the individual benefit credits. Once you define and assign your benefit credits and surcharges, Workday applies them to eligible employees.

Benefit credits are cumulative: Total cost of benefits and any surcharges - Total number of benefit credits = The total cost to the employee.

If there’s an excess of credits, Workday applies that amount to the employee's taxable income.

When an employee eligibility change affects a credit or surcharge amount, Workday automatically reflects it in the employee's total cost of benefits. Workday automatically updates the employee's total benefit cost and notifies Workday Payroll and the Payroll Interface:

- For an added, updated or deleted credit from a benefit group, coverage type, or benefit plan.
- For a changed or deleted healthcare rate.

This table illustrates the relationship between Benefits, Payroll, and Payroll Interface:

<table>
<tr><th>Benefits</th><th>Relationship</th><th>Payroll / Payroll Interface</th></tr>
<tr><td>Benefit Costs
Medical
Life
Retirement Savings
Additional
Benefit Surcharges</td><td>Sent as Deductions</td><td>Deductions
Medical
Life
Retirement Savings
Additional
Benefit Surcharges</td></tr>
<tr><td>Benefit Credits
Medical
Life
Retirement Savings
Additional</td><td>Sent as Earnings</td><td>Earnings
Medical
Life
Retirement Savings
Additional</td></tr>
<tr><td>Excess Credits (if credits exceed costs)</td><td>Added to Taxable Income</td><td>Taxable Income</td></tr>
</table>

Note: To transfer benefit credit information to an external payroll system, use the Maintain External Payroll Earnings task.

Multiple Jobs

Steps: Set Up Multiple Jobs for Benefit Eligibility

Context

You can base benefit eligibility on information pulled from the employee's primary job, or any of their other jobs. To set up Workday so that you base benefits eligibility on multiple jobs, you can:

- Option A: Select the jobs Workday uses to determine benefit eligibility, 1 employee at a time.
- Option B: Create rules and assign the rule to a benefit group. Workday can automatically define which jobs to use to determine an employee's benefit eligibility.
- Option C: Use a combination of both methods. Let Workday automatically define the benefit jobs used and then override selected employees.

Steps

1. Access the Edit Tenant Setup - HCM task.

   Select *Multiple Jobs* in the Position Setup Options field. Verify that employees can have additional or international jobs. See Reference: Edit Tenant Setup - HCM for details.

2. Create Insurance Coverages on page 1272.

   Select the Combine Benefit Jobs for Salary Source check box to define how Workday calculates the employee's salary for insurance coverage.
3. Create Insurance Rates on page 1275.

   Create rate tables containing insurance plan costs based on amount of covered salary.
4. Create Custom Business Processes.

   (Option A) Configure the *Change Benefit Jobs* business process to meet the needs of your organization. Add the *Change Benefit Elections* to the business process for Workday to perform a benefit eligibility check when you use the *Change Benefit Jobs* task.
5. Edit Business Process Security Policies.

   (Option A Only) Review the security policy for the *Change Benefit Jobs* business process under the *Benefits* domain.
6. Create Enrollment Events on page 1343.

   (Option A Only) Create a benefit event that defines how Workday processes the changes made to employee jobs used to determine benefit eligibility.
7. Create Selection Rules for Benefit Jobs on page 1403.

   (Option B Only) Create condition rules that Workday uses to determine which employee jobs to use to determine benefit eligibility.
8. Assign Benefit Job Selection Rules to Benefit Groups on page 1404.

   (Option B Only) Assign the benefit job eligibility rule to a benefit group. Workday automatically determines which jobs to use to determine eligibility for all employees in the benefit group.
9. Change Jobs Used for Benefit Eligibility on page 1405.

   (Required for Option A, optional for Option B) Select 1 or more of the employee's jobs to use to determine benefit eligibility. For Option B, this selection overrides the automatic job selections made by Workday based on how you configured the Benefit Job Selection Rule.

Next Steps

- Use View Benefit Jobs report to see a list of jobs, by employee, that Workday uses to determine benefit eligibility as of a given date.
- Use the View Benefit Eligibility report to see what plans the employee is eligible for.
- Use the Benefit Jobs Eligibility and Position Summary report to see a list of employees, their current positions, and the jobs Workday uses to determine benefits eligibility.

Related Information

Tasks

Steps: Set Up Benefits on page 1237

Create Selection Rules for Benefit Jobs

Context

You can create condition rules that Workday uses to decide which jobs determine an employee's benefit eligibility.

Steps

1. Access Create Benefit Job Selection Rule.
2. As you create the rule, consider:

Option	Description
And/Or	Select the logic you want to apply between the conditions of the rule.

Option	Description
	• For And logic, a rule condition must always resolve to true for the rule to apply. • For Or logic, a rule condition requires that at least one *or* rule condition resolves to true for the rule to apply. Note: Only report fields marked with *Benefit Jobs* combine data across benefit jobs.
(	If you want to group one or more logical statements together, use the left-hand parentheses to indicate the beginning of the grouping.
Source External Field or Condition Rule	You can select: • A report field. • An existing condition rule.
Relational Operator	The type of report field or subrule determines available options.
Comparison Type	Specify whether the source is compared to another field or to a value that you enter in the Comparison Value column.
Comparison Value	Select a comparison field or enter the value that is compared to the source.
)	If you want to close the grouping of one or more logical statements, select the right-hand parentheses.

Related Information
Tasks
Steps: Set Up Multiple Jobs for Benefit Eligibility on page 1402

Assign Benefit Job Selection Rules to Benefit Groups

Prerequisites

- Create selection rules for benefit jobs.
- Security: *Set Up: Benefits* in the Benefits functional area.

Context

Assign the selection rule for the benefit job to a benefit group, using the criteria you specify in the benefit job rule. Workday automatically determines which jobs to use to determine employee benefit eligibility.

Note: You can use the *Get/Put Benefit Rule by Group* web services to attach multiple benefit job rules to a benefit group simultaneously.

Steps

1. Access Maintain Benefit Job Rules by Group.

2. Assign Benefit Job Selection Rules to Benefit Groups.

   You:

   - Can assign a rule to 1 or more benefit groups.
   - Can't assign a benefit group to more than 1 rule.

Next Steps

To view a rule and whether a specific employee meets the conditions of the rule, use View Benefit Eligibility Rule Results.

Related Information

Tasks

Steps: Set Up Multiple Jobs for Benefit Eligibility on page 1402

Change Jobs Used for Benefit Eligibility

Context

You can select the jobs held by an employee that you want Workday to use to determine benefit eligibility.

When enrolling or changing benefit elections, Workday uses these jobs to determine which plans the employee is eligible for.

Note: To upload the benefit job selections for many employees at a time, use the *Get/Put Benefit Jobs* web service.

Steps

1. Access the Change Benefit Jobs task.

   Enter the effective date and select the employee.
2. As you complete this task, consider:

Option	Description
Use Benefit Jobs	Select this check box if you want to use other jobs held by the employee to determine benefit eligibility. When you: • Select the check box, the Employee Jobs grid becomes available. • Clear this check box, Workday clears all selected jobs and makes the Employee Jobs grid unavailable.
Use for Benefit Eligibility	Select this check box if you want Workday to use this job to determine benefit eligibility.

Result

Workday creates an event called *Benefit Jobs Event* that you can view in the View Worker History report.

Steps: Set Up Multiple Jobs for Benefit Eligibility on page 1402

Open Enrollment

Setup Considerations: Open Enrollment

You can use this topic to help you make decisions when planning your configuration and use of open enrollment. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

The open enrollment workflow enables your workers to elect their benefits during the open enrollment period. Workers can make their elections from the Workday Mobile app or the Workday browser application.

Business Benefits

With Workday Benefits open enrollment, your workers can efficiently enroll in benefit plans during the annual enrollment window.

Use Cases

Use Case	Role
Configure annual open enrollment.	Benefits Administrator
Configure midyear open enrollment (Example: 07/01 - 6/30).	Benefits Administrator
Review benefit groups and update for the upcoming year.	Benefits Administrator
Configure provider updates and map old provider plans to new plans.	Benefits Administrator
Create or update rates for plans.	Benefits Administrator

Use Case	Role
Create or update cross-plan rules for new plans.	Benefits Administrator
Configure HSA and FSA enrollment.	Benefits Administrator
Configure autoenrollment of new plans.	Benefits Administrator
Create or maintain integrations with providers.	Benefits Administrator

Questions to Consider

Feature	Question	Considerations
Plan Year Definition	Have you created a new plan year definition?	If you've created new plans for the upcoming plan year, include them in the new plan year or a rolling plan year definition. Use the Create Benefit Plan Year Definitions on page 1418 task. Note: Changing the dates of an existing plan year definition can impact your employees' current benefit enrollments.
	Do you have benefit plans you aren't offering in the upcoming plan year?	Include only the plans that you're offering in the new plan year definition. Don't remove plans from an existing plan year definition. You can use the Do Not Use check box in the Edit Benefit Plan task to hide plans you're not offering from the Benefit Plan prompt.
Enrollment Instructions	Do you need to create or update your enrollment instructions?	You can configure open enrollment instructions using the Maintain Enrollment Instructions task. See Set Up Benefit Enrollment Instructions on page 1253. Workers see configured enrollment instructions on the pages where they select a plan and where they select coverage tiers and amounts.
Enrollment Configuration	Do you need to create or update your open enrollment event type?	Ensure that you include all coverage types that you're offering in the new plan year. See Manage Benefit Coverage Types on page 1243. Include any new coverage types and those types that you continue to offer from the previous plan year.

	Do you want to provide coverage details about each benefit plan?	You can configure the Expanded Plan Details section of the Edit Benefit Plan task.
	Are you planning to move to a new provider for any of your benefit plans?	Map old plans that you're no longer offering to the new plans. Mapping prevents Workday from waiving coverage. Use the Benefit Plan Mapping tab on Edit Benefit Group task.
	Have your rates changed?	Update the new rates using an effective date of when the rate change takes effect. Example: The first date of the new plan year. • For health care plans, you might need to edit a health care rate if you don't configure them on the benefit plan. See Create Health Care Rates on page 1269. • For insurance plans, edit the insurance plan rate because these plans don't let you configure rates directly on the plan. See Create Insurance Rates on page 1275.
	Do you need to hide the Tobacco Use question for dependents by country?	Update localization settings for the Tobacco Use (Dependent) field. See Maintain Localization Settings on page 144.
	Do you need to update electronic signatures?	You can create a unique electronic signature for each new coverage type.
	Do you need to define default benefit elections?	Typically, you need benefit elections if you require coverage for a specific type, when employees become eligible. Set up default benefit elections in the Maintain Benefit Defaults task. See Set Up Default Benefits Coverage on page 1379. You can set priority coverage on the enrollment event rule for default benefits. Use the Coverage Rules tab of the Edit Enrollment Event Rule task. See

		Create Enrollment Event Rules on page 1349.
	Do you need to update dependencies across plans?	If you set up new plans, update the cross-plan rules using the effective date for when the new plans take effect. Use these tasks: • Create Cross Plan Enrollment Prerequisites on page 1382 • Create Cross Plan Insurance Coverage Maximums on page 1384 • Create Cross Plan Insurance Percentage Maximums on page 1386 • Create Cross Plan Retirement Savings Plan Contribution Maximums on page 1388
	Do you have derived or nonderived coverage targets?	If you're switching from a nonderived coverage target to a derived coverage target, consider adding additional instructions for workers to select their dependents before selecting plans. See Set Up Benefit Enrollment Instructions on page 1253. Adding these instructions can prevent an employee's coverage from accidentally changing to employee-only because they didn't select any dependents.
	What are the latest IRS HSA and FSA limits?	Add limits to your plans. If the IRS has changed the HSA and FSA limits, update your existing plan with the new limits. See Create Health Savings Account Plans on page 1306 and Create Spending Account Plans on page 1310. Review deduction codes with Payroll to that make sure the HSA and FSA limits are correct, so deductions stop at the limit.
Pay Period Schedules	Are you offering flexible spending or health savings accounts?	Verify the setup of your pay period schedule for the new benefit year to ensure that the FSA and HSA plans calculate deductions correctly.

		To set up your pay period schedule, contact your payroll administrator.
Analytics	Do you want to add embedded analytics?	You can embed custom reports as step-related worklets in the open enrollment process so that you can provide relevant report information to your workers during enrollment. You can add worklets from the related actions menu of the Change Benefits for Open Enrollment business process.
Launching Open Enrollment	How do you want your employees to enter the open enrollment workflow?	With the Configure Announcements task, you can create an open enrollment announcement on their Home page. See ../../../manage-workday/tenant-configuration/navigation/tar1438106772604.dita. Workers can enter the open enrollment flow directly from the task in My Tasks or from the announcement.
Integrations	Do you need to create new or update existing integrations for the upcoming year?	For new integrations, check the Cloud Connect for Benefits catalog for an existing integration for the provider. Plan carefully and give yourself plenty of time to set up and test the integration with the provider.

Recommendations

Consideration	Recommendations
Enrollment Instructions	Create or update open enrollment instructions using the Maintain Enrollment Instructions task. • Consider creating a separate set of instructions restricted to an open enrollment event type and benefit group. Workday doesn't use effective dating for instructions. Any text changes take effect immediately and can affect other benefit event types. • You can configure questions, responses, and instructions for employee and dependent Tobacco Use. • You can use rich-text features to enhance your instructions. Workday recommends that you reduce the use of bold, italics,

Consideration	Recommendations
	and color to avoid distracting workers from reading all required content.
Testing	Give yourself enough time to test your open enrollment configuration thoroughly in a nonproduction environment. Test all areas thoroughly before moving the changes to a production tenant, including: • Eligibility rules and benefit groups. Make sure that your benefit groups are mutually exclusive. • Elections that you carry forward. • Coverage and deduction dates. • Rates and credits. • Contribution limits. • Benefit defaults. • Payroll deductions. • Remaining pay period deductions. Disable email notifications in the testing environment. Consider moving your tested configuration from the nonproduction tenant to your production tenant a few weeks before initiating open enrollment. This period gives you time to refresh the nonproduction tenant with the changes you made to the production setup. You can then test those changes before initiating open enrollment for all workers.

Requirements

Review the Workday Community: Open Enrollment Checklist. The checklist helps you verify that you have made all new and updated changes. It can help with your questions before you begin setup.

Verify that you have access to configure all external URLs that you require during open enrollment.

Limitations

Avoid making any benefit configuration changes after you initiate open enrollment. Most changes won't take effect, however, additionally, some might cause errors that prevent workers from enrolling. If you need to correct your benefit configuration after you initiate open enrollment, you might need to cancel and reinitiate open enrollment.

Tenant Setup

In the Edit Tenant Setup - HCM task, you can:

- Select the Enable Mobile Benefits check box to enable the open enrollment on the Workday Benefits mobile app.
- Select the Disable Emergency Contact, Dependent, and Beneficiary Linking check box.

  Note: Selecting this check box prevents changes to a linked relationship from overriding beneficiaries or dependents when the person has more than 1 role.

See Reference: Edit Tenant Setup - HCM.

Security

Domains	Considerations
Set Up: Tenant Setup - HCM in the Systems functional area.	Enables the administrator to enable or disable benefit configuration options in the Edit Tenant Setup - HCM task, including enabling enrollment events on the Workday mobile app.
Set Up: Benefits in the Benefits (Systems) functional area.	Enables the administrator to access open enrollment setup tasks.
Worker Data: Benefit Eligibility in the Benefits and Personal Data functional areas.	Enables the administrator to access the Benefits Eligibility by Worker report.
Worker Data: Benefits in the Benefits and Personal Data functional areas.	Enables the administrator to manage worker's benefit elections, including access to the Benefits tab on the worker profile.
Worker Data: Insurance Calculated Coverage in the Core Compensation functional area.	Gives the administrator access to the Calculated Coverage report field. Administrators can view individual worker's calculated coverage amounts for the plans they enroll in.
Self Service: Benefits in the Benefits functional area.	Enables employees to complete benefit elections

Business Processes

Configure the *Change Benefits for Open Enrollment* business process for the open enrollment work flow. You can add worklets for embedded analytics to business process steps, providing links to additional information.

Note: Ensure that you set up the worklets on this business process when using the redesigned Open Enrollment workflow. (Previously, you could set the worklets up on the Change Benefits for Life Event business process only.)

Reporting

Workday delivers these reports to help you prepare for and manage open enrollment:

Report	Description
Active and Completed Open Enrollment Status Report	Use this report to view and manage the status of active and completed enrollment election events. This report provides more detail than the Open Enrollment Status Report, but can take a long time to run. Workday recommends that you limit your use to managing enrollment elections *after* finalizing open enrollment events.
Benefit Corrections in Progress Audit	Use this report to view a list of benefit corrections that you've started, but not yet submitted.
Benefits Eligibility by Benefit Group	Use this report to view future-dated benefits groups. Run for each benefit group using the open enrollment event date. Compare the reports to ensure that no workers exist in more than 1 group.

Report	Description
Benefit Events Status Report	Use this report to view workers with benefit events and the status of those events.
Finalize Open Benefit Events	Use this task to clean up all outdated enrollment events.
Manage Evidence of Insurability Status	Use this task to clean up all outdated EOI requests.
Open Enrollment Status Report	Use this report before finalizing enrollment to view: • Workers with open enrollment events. • The status of the open events. This report provides better performance than the Active and Completed Open Enrollment Status Report.
Terminated Employees Eligible for Benefits	Use this report to view the terminated employees that can still receive benefits.
View Benefit Eligibility Rule Results	Use this report to troubleshoot to see why someone is or isn't meeting an eligibility rule.
View Workers in Multiple Benefit Groups Audit	Use this job to view workers eligible for more than 1 benefit group so that you can troubleshoot this issue. Don't use for future-dated benefit groups.
Workers for Benefit Group by Most Recent Benefit Event	Use this RDS to create a custom report that audits benefit enrollment data.
Workers no Longer Eligible for Open Enrollment	View workers who aren't eligible for benefits but currently have an open enrollment event.

Integrations

Before you set up a new benefit plan, consider if your plan will require an integration between Workday and the benefits provider. Careful planning is essential during open enrollment to ensure proper configuration and testing of benefit provider integrations. See Concept: Open Enrollment Integration Checklist.

Give yourself a lot of lead time for testing a new integration.

When using a new benefit provider, first check the Cloud Connect for Benefits catalog. The new provider might be in the network.

Ensure that you understand the time line and responsibilities, which can vary based on whether:

- The provider is already in the network.
- The provider is new to the Cloud Connect for Benefits catalog.

Don't change the name of an existing benefit plan or provider when creating new plans or providers. These changes impact current integrations and benefit enrollment history.

Ask your providers whether they've changed any benefit plan codes for the new plan year. You need to update your integration maps with any changes.

When you offer a new benefit plan with the same provider, link the plan to your existing integration. Likewise, if you discontinue a plan, remove the integration link.

Include payroll balances. Actual contribution amounts are only available to Cloud Connect for Benefits integrations from Workday Payroll. If you use a third-party payroll provider, benefit integrations send estimated amounts based on the benefit plan setup.

Maintain benefit provider integration maps to specify how values in Workday map to values in an external endpoint.

Connections and Touchpoints

Benefits open enrollment interacts with Payroll for plan-related deductions.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Open Enrollment Considerations for CCB

2022R1: What's New Post: Benefit Election Decision Support

Examples

Example: Add Expanded Details for Medical Plans on page 1320

Steps: Set Up Open Enrollment

Prerequisites

Set up benefits and benefit plans.

Context

Before creating and opening an enrollment event, enable mobile access, update business processes, verify eligibility for benefit groups, and assign rates.

Steps

1. (Optional) Enable open enrollment on the Workday mobile application:
    a) Access the Edit Tenant Setup- HCM task to enable Open Enrollment on the Workday mobile app.

       See Reference: Edit Tenant Setup - HCM. Enabling the mobile app also enables the Benefits worklet during an active Open Enrollment period.
    b) Access the Maintain Benefit Coverage Types task to map Workday-provided icons to coverage types. These icons display during an open enrollment event in the Workday mobile app.

    Security: *Set Up: Tenant Setup - HCM* in the Systems functional area.
2. Configure the *Change Benefits for Open Enrollment* business process.

    You can add step-related worklets with the Business Process > Maintain Step Related Worklets related action on the Change Benefits for Open Enrollment task. Base the worklets on these values:

    - Worker
    - Event Date
    - Enrollment Event

    See Reference: Embedded Analytics for HCM on page 2971.

    Consider adding a step delay for new hires that have a start date during or after the open enrollment event.
3. Review the Workday Community: Open Enrollment Checklist.
4. Access the Benefits Eligibility by Worker report.

    You can verify that eligibility rules are correct by checking the plans that a worker is eligible for.

    Security: *Worker Data: Benefit Eligibility* in the Benefits functional area.
5. Access the Benefits Eligibility by Benefit Group report.

    You can verify that eligibility rules are correct by checking the plans that workers within a specific benefit group are eligible for. Be sure to use the effective date for open enrollment.

    Security: *Manage: Benefits for Organizations* in the Benefits functional area.
6. Access the View Workers in Multiple Benefit Groups Audit report.

    Employees can only be eligible for 1 benefit group.

    Security: *Set Up: Benefits* in the Benefits functional area.
7. Create Benefit Plan Year Definitions on page 1418.
8. Assign benefit annual rates to employees.

    Select Benefits > Change Benefits Annual Rate from the related actions menu of the employee.
9. Set Up Decision Support for Medical Plans on page 1294.

    Create peer group data, based on demographic characteristics that you configure, so that workers can see which medical plans their peers selected in the previous open enrollment event.
10. (Optional) Designate or remove the spouse of an employee in Quebec as an irrevocable beneficiary using these tasks.

    - Add Beneficiary
    - Edit Beneficiary

    Employees can see their spouse listed as an irrevocable beneficiary of any employee insurance plan they select during benefit enrollment.

    See Concept: Irrevocable Beneficiaries for Quebec on page 1431.

    Security: *Worker Data: Irrevocable Beneficiaries* domain in the Benefits functional area.

11. (Optional) Create an enrollment announcement to display on the Home page. Your employees can launch open enrollment from the announcement in addition to the notification in My Tasks.
12. Turn off email notifications when testing the Open Enrollment process in your nonproduction tenant.

Related Information

Tasks

Steps: Set Up Workday Mobile Applications

Reference

Reference: Edit Tenant Setup - HCM

Workday 31 What's New Post: Benefits on Mobile

Steps: Manage Open Enrollment

Prerequisites

- Set up open enrollment.
- Review the Workday Community: Open Enrollment Checklist.
- Security: These domains in the Benefits functional area:
  - *Process: Open Enrollment*
  - *Manage: Benefits for Organizations*

Context

You can start open enrollment and then use the Open Enrollment Status Report and the Active and Completed Open Enrollment Status Report to:

- Add or remove employees to or from open enrollment.
- Send open enrollment reminders to employees.
- Extend, cancel, close, schedule to close, finalize, or rescind open enrollment.

Steps

1. (Optional) Determine if your event is large enough that you need to work with the Workday Production Readiness team.

   See Workday Community: Best Practices for Large Customer Events for guidelines about opening a Production Readiness case.
2. Start Open Enrollment on page 1419.

   You can initiate open enrollment immediately, or schedule an initiation date.
3. Enter employee benefit elections.

   Workday sends a notification to the role assigned to the *Change Benefits for Open Enrollment* business process. A Benefit Administrator or Partner can also use the Open Enrollment Status Report to enter employee elections.
4. Add Employees to Open Enrollment on page 1420.

   If an employee becomes eligible for open enrollment after it has started, you can still add the employee to open enrollment. You can add the employee after open enrollment has closed.
5. Remove Employees from Open Enrollment on page 1421.

   If an employee ceases to be eligible for an open enrollment event after it has started, you can remove that employee from open enrollment.

6. (Optional) Send Open Enrollment Reminders to Employees on page 1423.

   When you initiate open enrollment, Workday automatically sends notifications to all employees. During open enrollment, you can send notifications to either:

   - All participating employees
   - Employees with specific open enrollment status.
7. (Optional) Extend open enrollment.

   As long as open enrollment hasn't closed, you can change the end date to be later than originally set.

   Access the Open Enrollment Status Report, click View Details for the event, select Open Enrollment > Extend Open Enrollment as a related action, and set the End date.
8. (Optional) Cancel open enrollment.

   If you created an open enrollment event in error, you can cancel it.

   a. Access the Open Enrollment Status Report.
   b. Click View Details for the event.
   c. From the related actions menu for View Details, select Open Enrollment > Cancel Open Enrollment.
9. Close Open Enrollment on page 1424.

   Even though you specify a closing date for open enrollment, you must manually close open enrollment or close it by scheduling a closing date.

   Note: If you close your open enrollment on a Friday, Workday strongly recommends that you inform your employees that Workday is unavailable on Friday evenings for weekly updates. See the Workday Community: Event Calendar for details of scheduled outages.
10. Finalize Open Enrollment Elections on page 1425.

    You can enforce default benefit elections for employees who haven't submitted their benefit elections by the close of open enrollment.
11. (Optional) Reopen Open Enrollment.

    You can reopen an individual employee's open enrollment event after it's in the Closed or Finalized status.
12. (Optional) Rescind an open enrollment event for an individual employee.

    Access the employee's Workday profile. From the related actions menu, select Benefits > Benefits Election History.

    Locate the correct open enrollment event. From the related actions menu in the Event column, select Busines Process > Rescind.
13. (Optional) Rescind open enrollment.

    If you created an open enrollment in error, you can rescind the entire open enrollment after you've finalized it.

    Note: This action rescinds the enrollment event for all employees in the open enrollment. You can't reverse this action.

    To rescind the entire open enrollment event, access the Active and Completed Open Enrollment Status report. Click View Details for the event. From the related actions menu, select Open Enrollment > Rescind Open Enrollment.

14. (Optional) Correct an Employee's Open Enrollment Elections on page 1428.

    You can change an employee's benefit elections when open enrollment is:

    - Open
    - Closed
    - Finalized

    Note: Don't edit employee elections after you've sent their election information to the benefit providers or third-party payroll vendors.

FAQ: Open Enrollment on page 1431

Create Benefit Plan Year Definitions

Prerequisites

Security: *Set Up: Benefits* domain in the Benefits functional area.

Context

Define the collection of benefit plans that are offering during a given year or other plan period. Workers can only enroll in benefit plans that are part of the current benefit plan year.

Best Practice: You can hide benefit plans that you don't offer to avoid adding them to the benefit plan year. You can edit these plans and select the Do Not Use check box.

Steps

1. Access the Create Benefit Plan Year Definition task.
2. Specify the benefit plan year start and end dates:

Option	Description
Start Date	Enrollment in benefit plans can begin on this date. The effective date for benefit plans available in this benefit plan year definition must be earlier than or equal to this date.
End Date	Enrollment in the benefit plans terminates on this date.

   For benefit plans with enrollments that are ongoing, define a separate benefit plan year that has a December 31, 2099 end date. Example: retirement savings plans.

   Note: Changing these dates might impact your employees' current benefit enrollments.

   Don't add a benefit plan with an effective date later than the start date of the benefit plan year. Instead, create a new benefit plan year definition and run an open enrollment for that plan.

3. Add the plans that are valid for the plan year.

Next Steps

You can:

- Change the plan year definition with the Edit Benefit Plan Year Definition task.
- Run the View Benefit Plan Year Definition report to see the benefit plans included in a plan year definition.

Start Open Enrollment

Prerequisites

- Set up open enrollment.
- Security: *Process: Open Enrollment* in the Benefits functional area.

Context

You can start and manage the event by benefit group.

Note: Avoid any benefit configuration changes after you start open enrollment. While most changes won't take effect, some might cause errors that prevent employees from enrolling. If you must make a change, you most likely need to cancel and then reinitiate the open enrollment.

Steps

1. Access the Initiate Open Enrollment task.
2. Select whether to initiate open enrollment now or at a later date from the Run Frequency prompt. As you complete this task, consider:

Option	Description
Initiated On	Automatically populates the current date.
Open Until	The closing date for open enrollment. Note: If you close your open enrollment on a Friday, Workday recommends that you inform your employees that Workday is unavailable on Friday evenings due to weekly updates.
Event Date	The date you want the elections to take effect. Note: Verify that you select the correct effective date because you can't change it after you initiate open enrollment.
Exclude Workers in Waiting Period or Without Eligible Plans	Select this check box to exclude employees in a waiting period from an earlier enrollment event or that aren't eligible for any plans. Workday excludes employees in a waiting period when:

Option	Description
	• The waiting period end date is after the open enrollment event date. • The coverage types in the earlier event and the open enrollment match.

Result

Workday:

- Displays benefit plan mapping.
- Displays Eligible Workers.
- Coordinates how Workday processes multiple benefit events.
- Coordinates how Workday processes benefit events occurring on the same day.
- Sends a notification to the employee or the benefits administrator so that benefit elections can begin.
- Initiates open enrollment immediately or on the scheduled date.
- Adds scheduled initiation events to the Active Schedules: Initiate Open Enrollment tab of the Open Enrollment Status Report report.

Next Steps

To see differences between an employee's current and past benefit elections, run the Benefit Changes report.

To delete an active open enrollment initiation schedule, run the Open Enrollment Status Report. From the related actions menu of the schedule, select Scheduled Future Process > Suspend. You can then delete the schedule. Alternatively, select Scheduled Future Process > Run Now to initiate the event immediately.

2022R2 What's New Post: Open Enrollment Scheduling

Add Employees to Open Enrollment

Prerequisites

Start open enrollment.

Context

You can add employees to an open enrollment if they become eligible after the event has started or closed. Example: The employee is a new hire or recently moved into an eligible organization.

To find employees who can be added to open enrollment, access the Eligible Workers with no Open Enrollment report.

Steps

1. On the Open Enrollment Status Report, click View Details for the open enrollment to which you want to add the employee.

2. On the Open Enrollment Details View page, select Open Enrollment > Add Workers from the related actions menu of the open enrollment event.
3. On the Add Workers to Open Enrollment task, select the employee to add to the open enrollment event from the Eligible Workers prompt.

   You can add only the employees that are eligible for this open enrollment event and aren't already participating.
4. Specify an Open Until date to give the employees time to complete their open enrollment.

   Using the Open Until date prevents the open enrollment event from automatically closing for the added employees.

Next Steps

Manually close and finalize the open enrollment event for the added workers.

Related Information
Tasks
Close Open Enrollment on page 1424
Examples
Concept: Enrollment Status Indicators on page 1429

Remove Employees from Open Enrollment

Prerequisites

Find employees who were originally included in open enrollment but have since lost eligibility by running the Workers no longer eligible for Open Enrollment report.

Note: Coordination of Events handles most of these situations. Example: If open enrollment started on 11/1 and an employee is terminated on 11/5, Coordination of Events automatically cancels the open enrollment event for the employee after their termination is complete.

Context

If an employee ceases being eligible for an open enrollment event after it has started, you can remove that employee from the open enrollment. Example: The employee was terminated or transferred into an ineligible organization.

The only employees automatically included in open enrollment are those eligible at the time of the open enrollment.

Note: You can remove any employee from open enrollment, even if eligibility hasn't changed.

Steps

1. On the Open Enrollment Status Report, click a number in the Not Started, In Progress, or Submitted columns.

   Workday displays all the employees of that status for that particular open enrollment event.
2. Select Benefits > Cancel Enrollment from the related action of the employee's Employee Enrollment Event.

Result

The employee removed from open enrollment now has no open enrollment elections.

Send Benefits Messages

Prerequisites

Set up Benefits Messaging. See Steps: Set Up Benefits Messaging.

For workers to receive:

- An email, the recipient must have a work email address.
- A push notification, the recipient must be a Workday user.
- SMS messages, the recipient must have opted in to SMS texting on a mobile phone number.

Context

You can send employees ad-hoc messages related to their benefits through email, SMS, and push notifications.

Steps

1. Access the Send Benefits Messages task.

   As you complete the task, consider:

Option	Description
Workers	Select the workers to whom you wish to send a message. If you rerouted to this task from the Send Open Enrollment Reminders action, this field populates with the workers you already selected.
Contact Method	Select notification options for the message. This selection determines the message fields that Workday displays in the task. This field populates based on the Notification Routing Rule you create for the Benefits Notifications category. If you rerouted to this task from the Send Open Enrollment Reminders action, this field populates based on the delivery channels enabled from the Open Enrollment for Benefits notification type.
Email Branding	(Optional) Select a notification template you created for the Benefits Notifications notification type. If you rerouted to this task from the Send Open Enrollment Reminders action, select a notification template you created for the Open Enrollment for Benefits notification type.
Message Template	(Optional) Select a message template you created for the Benefits Notifications notification type. If you rerouted to this task from the Send Open Enrollment Reminders action, select a message template you created for the Open Enrollment for Benefits notification type.

Option	Description
(Email) From Display Name and Reply To	(Optional) Enter your desired display name and reply to email, if different from the information listed under From.
Message	For SMS messages, Workday recommends limiting content in this field to 160 characters.

2. (Optional) Select the Review Recipients button.

   See which workers you've selected have enabled the communication channels you wish to send your benefits message through.
3. Click Send Message.

Result

Selected employees receive a branded email, SMS message, or push notification relaying information related to their benefits, or open enrollment reminders

Example

2024R2 Feature Release Note: Benefits Messaging

Tasks

Steps: Set Up Benefits Messaging on page 1259

Send Open Enrollment Reminders to Employees on page 1423

Send Open Enrollment Reminders to Employees

Prerequisites

- Enter email addresses for all the employees you want to notify. Workday first looks for the one labeled as *Work*. If Workday doesn't find a work email address, it looks for the personal email addresses.
- Security: *Manage: Benefits for Organizations* in the Benefits functional area.

Context

When you initiate open enrollment, Workday automatically sends an email to all employees. You can send open enrollment reminders at a later point with email, SMS, and mobile push notifications to all employees participating in open enrollment. You can also send reminders to employees who have a particular open enrollment status at any point during open enrollment.

Steps

1. Access the Open Enrollment Status Report.
2. Select View Details for the open enrollment for which you want to send a notice.
3. On the Open Enrollment Details View page, click the Actions button and select Send Open Enrollment Reminders.
4. Enter the criteria by which Workday determines which employees receive the email.

Option	Description
On Hold	Available when the enrollment status is *Closed*, *In Progress*, or *Not Started*.

Option	Description
	Select this check box if you want to target employees that have this event placed on hold.
Start Date / End Date	Available when *Submitted* or *Finalized* is selected in the Enrollment Status field. Enter a date range that can span from the open enrollment event date to the open enrollment close date. For *Submitted*, it is the Electronic Signature Date that is compared to the date range. For *Finalized*, it is the event Finalized Date.

5. Click Create Message.

   Workday reroutes you to the Send Benefits Messages task, and carries over all selected workers. You can then select an option for these fields that you can enable for the Open Enrollment for Benefits notification type:

   - Contact Method
   - Email Branding
   - Message Template

   You can send your open enrollment reminder as an email, SMS, and mobile push notification. See Send Benefits Messages.
6. Click Send Message.

Result

Workday sends open enrollment reminders to the employees targeted by the criteria.

Tasks

Send Benefits Messages on page 1422

Close Open Enrollment

Prerequisites

Start open enrollment.

Context

You manually close open enrollment events, even if you specify a closing date for an open enrollment window. An open enrollment doesn't close automatically on the specified closing date unless you manually close it or schedule it to close.

Closing open enrollment enables you to audit and edits elections before finalizing them.

You can close open enrollment at any time.

Steps

1. Access the Open Enrollment Status Report .
2. In the Currently Active Events section, locate the event you want to close and click View Details.

3. In the Open Enrollment Processing section, select an option from the Actions menu:
    - Close Open Enrollment Now
    - Close Open Enrollment by Schedule
4. On the Close Event page, select a date for the Close Employees with Enrollments Open Until prompt to close enrollments that specify an Open Until date. Select the Close Submitted Events Only check box to close only submitted events.

    You might have given employees different Open Until dates when you added them to open enrollment. You can only close open enrollment for employees with a specific Open Until date that falls on or before the date you select.
5. (Optional) Close open enrollment by schedule.

    In the Schedule tab, select the Run Frequency and enter scheduling details. You can also finalize open enrollment immediately after it's scheduled to close by selecting the Finalize Events After Closing check box in the Open Enrollment Details tab.

Result

Employees can no longer change their benefits elections. Open enrollment notifications disappear from employees' My Tasks, and the Enroll in Benefits button disappears.

Note: After open enrollment closes, Benefits Partners and Administrators can still change employee elections.

Open enrollment closes immediately or on the scheduled date.

Workday adds scheduled closure events to the Active Schedules: Close Open Enrollment tab of the Open Enrollment Status Report report.

Depending on the status of open enrollment when you close it, Workday applies different default election values.

You might need to close and finalize open enrollment multiple times.

Next Steps

- Close open enrollment for any additional employees.
- Finalize the open enrollment elections for all employees, if you haven't already scheduled open enrollment finalization.

    Once you finalize open enrollment, all finalized elections become effective on the event date. Workers, administrators, and partners can no longer edit elections, but administrators and partners can use the Correct Benefits task to make updates to a finalized election.
- After closing and finalizing elections, run the Benefit Census report to view and record the benefit elections for all employees.
- You can use the Benefit Changes and Enrollment Count reports.

2022R2 What's New Post: Open Enrollment Scheduling

Finalize Open Enrollment Elections

Prerequisites

- Open enrollment has closed.
- Security: *Manage: Benefits for Organizations* in the Benefits functional area.

Context

You can enforce default benefit elections for employees who haven't submitted their elections by the close of the open enrollment window.

Steps

1. Access the Open Enrollment Status Report.
2. Select View Details on the open enrollment that you want to finalize.
3. On the Open Enrollment Details page, select Finalize Open Enrollment.
4. Finalize open enrollment by schedule.

   When closing open enrollment by schedule, select the Finalize Events After Closing check box in the Open Enrollment Details tab.

Result

After you finalize open enrollment, employees can't change their elections unless the Enable Reopen of Open Enrollment Event feature is enabled for the open enrollment event type; however, Benefits Partners and Benefit Administrators can correct an employee's open enrollment elections from the:

- Related action menu of the benefit event.
- Active and Completed Open Enrollment Status Report.

Workday:

- Automatically populates any necessary benefit elections to the employee and sets the status to *Finalized*.
- Determines whether the worker needs to provide Evidence of Insurability (EOI) based on the event rules. If the provider requires EOI, Workday starts the EOI process.
- Checks for events that have an event date following the finalized event with a status of *On Hold*. Workday cancels or rescinds that event, and creates a new event.
- Determines if an employee has a birthday or service anniversary that moves them to a new rate band before the end of the benefit plan year.

  To determine if the employee moves to a new rate band, Workday calculates if the Calculate As Of value for Health Care Rate or Insurance Rate equals *Event Date*. It then checks if the employee has a birthday or service anniversary before the end of the benefit plan year. If yes, Workday records that event in a transaction log with an event date of the birthday or service anniversary. Integrations based on the Payroll Interface Output File template process the event when payroll runs for that period.

View your events scheduled to be finalized under the *Finalize Events After Closing* column in the *Active Schedules: Close Open Enrollment* tab of the Open Enrollment Status Report.

Next Steps

To correct any enrollment elections after you finalize open enrollment, access the Active and Completed Open Enrollment Status Report.

You can access Benefit Premium Report - Health Care or Benefit Premium Report - Insurance to see a list of benefit plan costs for:

- A specific period.
- One or more benefit plans.
- A frequency.

Tasks

Reopen Open Enrollment on page 1427
Set Up Default Benefits Coverage on page 1379

Reopen Open Enrollment

Prerequisites

- Security: *Process: Open Enrollment* domain in the Benefits functional area for administrators to reopen an employee's open enrollment event.
- Create the *Reopen Open Enrollment Event* business process definition and security policy in the Benefits functional area. You can enable self-service users as well as administrators and partners to initiate the business process.
- Ensure the worker's open enrollment event is in a Closed or Finalized status.

Context

You can enable the reopening of an individual employee's open enrollment event. Once enabled, an employee can reopen their open enrollment event, or a benefits administrator can reopen it for them. This feature enables employees to resubmit closed or finalized open enrollment events within a specified time frame to make corrections to their elections, or upload required documentation.

You can't initiate the reopening of open enrollment events on mobile; however, employees can make benefit elections on mobile after the event is reopened on desktop.

Steps

1. Access the Create Open Enrollment Event Type task.

   Select the Enable Reopen of Open Enrollment check box.

   The greater the value in the Days to Enroll field, the greater the risk for the employee to have a lapse in coverage.

   To prevent lapses in coverage or discrepancies in payroll deductions, Workday recommends that you don't enable open enrollment events to be reopened past the actual open enrollment event date.
2. Access the Reopen My Open Enrollment task in the Tasks and Reports section of the Benefits and Pay Hub.

   Self-service users can access this task to reopen their open enrollment event if *Employee As Self* is allowed as an initiator on the business process security policy.
3. Access the Reopen Enrollment task from the related actions menu on the Open Enrollment Details View page.

   Benefits administrators and partners can access this task to reopen an individual employee's open enrollment event.

Result

Workday:

- Rescinds the employee's previous open enrollment event and generates a new one. The new event maintains the elections the worker last submitted.
- Updates the Submit By Date on the Reopen Open Enrollment Confirmation page to account for the value entered in the Days to Enroll field. The Submit By Date doesn't account for weekends or holidays, and only updates once the business process completes.

Example

Your original open enrollment window is 2024-01-01 to 2024-01-31, and the event date is 2024-02-28. You'd like to provide your employees an additional opportunity to reopen their open enrollment to upload documentation on their dependents. You enable the feature and, to prevent lapses in coverage and payroll discrepancies, you enter the value 27 in the Days in Reopen Period field so that employees can't request to reopen their event starting from the event date of 2024-02-28. In the Days to Enroll field, you grant employees 7 days to change their benefits after they reopen their event.

Next Steps

Create custom reports with the Open Enrollment Event is a Reopened Event report field to view open enrollment events created from a reopen event. Your custom report must use the Enrollment Events for Benefit Group data source to access this report field.

2024R1 What's New Post: Reopen Open Enrollment for Individual Employees

Tasks

Close Open Enrollment on page 1424

Finalize Open Enrollment Elections on page 1425

Correct an Employee's Open Enrollment Elections

Context

You can change the benefit elections an employee has made both before and after open enrollment closes.

Steps

1. Access the Open Enrollment Status Report.

   To change an employee's benefit elections *before* you finalize open enrollment, select a number in 1 of these columns:

   - Not Started
   - In Progress
   - Submitted
   - Closed With Changes
   - Closed With No Changes

   To change an employee's benefit elections *after* you finalize open enrollment, access Active and Completed Open Enrollment Status Report. Select a number in 1 of these columns.

   - Finalized with Changes
   - Finalized with No Changes

   If you have finalized open enrollment, you can also select Benefits > View Benefit Election History from the related action menu of the employee. Then select Benefits > Correct Benefits from the related action menu of the benefit event.
2. Select Edit Benefit Elections for the employee.
3. Correct the employee's benefit elections.

Next Steps

Use these reports:

- Benefit Correction In Progress Audit to see a list of employees with corrections to benefit elections in progress.
- View Benefit Elections History to see which events have had corrections made and then click the link to see the details of the correction.
- Benefit Changes to see if there are any future events that need correcting.

  Note: Check for future-dated events and manually correct those elections. Workday doesn't automatically apply these changes to future-dated events.

Concept: Benefits Enrollment Events on Mobile

You can enable Benefits on the Workday Mobile app for your employees. From the Benefits & Pay Hub, employees can:

- View their current benefits.
- Initiate benefit change requests.
- Update their elections during open enrollment or qualifying life events.
- View expanded plan details for benefit plans, when configured.

Employees can access an enrollment event from a notification in their My Tasks or the Benefits & Pay Hub, which displays the number of unstarted enrollment events. The mobile version streamlines the election process making it easy to navigate between the coverage cards on the landing page. The landing page summarizes:

- If an employee has reviewed or updated the benefit coverage options for a card.
- The status of each benefit plan: elected or waived.
- The estimated cost of selections by benefit group frequency.

Workday synchronizes between mobile and desktop sessions, enabling employees to start the enrollment event on 1 platform and continue on another.

Employees can view a summary of their recently submitted elections while an enrollment event remains open.

The Benefits & Pay Hub on the mobile app doesn't support:

- Excess credits for HSA. Workday pays the unused flex credits as cash.
- Employee and employer allocation of retirement savings across multiple providers. Employees can allocate their contributions by individual plan.
- Updates of the National ID for a covered dependent. Employees can update this field outside of the enrollment event through the Add Dependents task.

Steps: Set Up Workday Mobile Applications

Reference

Workday 31 What’s New Post: Benefits on Mobile

2023.18 What’s New Post: Mobile Life Event Enrollment

Concept: Enrollment Status Indicators

Workday displays these status indicators on the coverage cards during an election event to indicate whether the employee has reviewed or elected coverage:

- *Reviewed*: The employee selected the coverage card and returned to the landing page without electing and saving coverage.
- *Updated*: The employee selected the coverage card and saved an election that alters their coverage.

- The Mobile application doesn't display a status when an employee selects a coverage card but returns to the landing page without saving an election.
- If an employee becomes eligible for coverage with a default value of:
  - Select and selects Waive, the status displays *Reviewed* because there has been no change in coverage.
  - Waived and selects Select, the status displays *Updated*.

This example demonstrates how status indicators behave when an employee makes a change in coverage.

A new hire becomes eligible to enroll in benefits.

- They open the enrollment event, select a medical coverage card, and review the medical plans. The new hire returns to the landing page without making changes to review other coverage cards. The medical coverage card displays the *Reviewed* status because they haven't made any coverage changes.
- They select an insurance coverage card and select Elect for an insurance plan. When the new hire saves their election and returns to the landing page, the coverage card displays the *Updated* status because they have made a coverage change.
- The new hire reopens the insurance coverage card, selects Waive, and saves the change. The coverage card displays *Reviewed* because they've removed the change in coverage.

Related Information
Tasks
Start Open Enrollment on page 1419
Correct an Employee's Open Enrollment Elections on page 1428
Correct Benefits on page 1437

Concept: Integration Implications for Using Correct Benefits

The Correct Benefits related action enables you to make quick changes to employee elections before sending their data to benefit providers or third-party payroll vendors. This action can have down-stream impacts on your data.

If you make a correction to employee elections after sending their data, you must manually report any adjustments to benefit providers or third-party payroll vendors. Workday doesn't report such changes because it doesn't track the employee's previous elections.

Example:

A worker has a new hire event on March 1 and makes these benefit elections that go into effect on April 1:

- Medical with Provider A.
- Dental Plan with Provider B.
- Vision with Provider C.

The benefits administrator makes these corrections to the new hire benefit event after sending the elections data:

- Medical election waived.
- Dental election waived.
- Vision election waived.

The benefits administrator doesn't report the changes to the vendor. As a result, Workday has no record that the worker enrolled in these plans. The provider won't have the correct data for any future-dated benefit events.

The way in which you integrate Workday with a provider system determines how Correct Benefits affects provider data. If the provider replaces all data, updates resulting from Correct Benefits automatically update the provider data correctly. When the provider relies on an end date to remove coverage, Correct Benefits might not update provider data correctly because it doesn't provide an end date.

To ensure that provider records are in sync with Workday, contact your providers.

Concept: Irrevocable Beneficiaries for Quebec

For workers in Quebec, the Benefits Administrator or Partner can designate a spouse as an irrevocable beneficiary. *Additionally, when a worker designates their spouse as the primary beneficiary, Workday automatically sets the spouse as an irrevocable beneficiary.* The spouse is then listed as an irrevocable beneficiary on life insurance plans selected during benefit enrollment.

Workday enables you to create an irrevocable beneficiary, but doesn't assume responsibility for compliance. Consider:

- Only a Benefits Partner or Administrator can designate or overturn a spouse as an irrevocable beneficiary. But, a worker can affect the designation by adding their spouse as the primary beneficiary.
- A worker can have only 1 irrevocable beneficiary.
- A worker's irrevocable beneficiary is the only eligible primary beneficiary.
- An irrevocable beneficiary can't be a contingent beneficiary.

Specify the relationships that count as spousal using the Maintain Related Person Relationships task.

FAQ: Open Enrollment

- During open enrollment, why are employees enrolled in plans before making their elections? on page 1431
- During open enrollment, why aren't eligible employees automatically enrolled into the expected benefit plans? on page 1431
- Which employees are eligible for which plans in the open enrollment I'm about to start? on page 1432
- What happens to an employee who is on leave when I start open enrollment? on page 1432
- Why does Workday display a lower coverage amount for life insurance than the employee elected? on page 1432
- How do I handle workers that we hire after open enrollment closes, but before the elections take effect? on page 1432
- Why aren't the appropriate benefit plans available to employees during open enrollment? on page 1432
- How can I see the benefit elections employees made during open enrollment? on page 1432

During open enrollment, why are employees enrolled in plans before making their elections?

If you select the Auto Enroll flag of the plan, all eligible employees are automatically enrolled in the benefit plan when open enrollment starts.

To make sure that Workday doesn't automatically enroll employees in this plan:

1. Access the Edit Benefit Plan task.
2. Clear the Auto Enroll check box.

During open enrollment, why aren't eligible employees automatically enrolled into the expected benefit plans?

If you clear the Auto Enroll check box in the plan, Workday doesn't automatically enroll employees in the benefit plan when open enrollment starts.

To enroll employees automatically in this plan:

1. Access the Edit Benefit Plan task.
2. Select Auto Enroll.

Which employees are eligible for which plans in the open enrollment I'm about to start?

To determine which employees are eligible for the open enrollment after you start it, use the Benefits Eligibility report with the start date of the open enrollment window. The report lists employees by the benefit group eligible for open enrollment and benefit plans that they're eligible for, as of the start date of the planned open enrollment.

What happens to an employee who is on leave when I start open enrollment?

If eligible employees are on a leave of absence when you start open enrollment, they can make benefit elections as long as they can access Workday. Otherwise, Benefits Partners can enter elections on the employee's behalf.

Why does Workday display a lower coverage amount for life insurance than the employee elected?

During open enrollment, an employee might select a coverage amount higher than the minimum. Workday automatically sets the coverage to the amount defined by the Evidence of Insurability (EOI) rules. When the employee gets EOI approval, Workday restores the amount to the level originally specified by the employee.

How do I handle workers that we hire after open enrollment closes, but before the elections take effect?

You can enable the newly hired employee to participate in open enrollment, while enforcing any required waiting period. Complete the New Hire benefit event first and then add the employee to open enrollment.

Why aren't the appropriate benefit plans available to employees during open enrollment?

The most likely reasons are:

- You haven't added benefit plan to the benefit plan year definition. Access the Edit Benefit Plan Year Definition task and select the benefit plans that you want employees to select.
- You haven't added the employee's benefit group to the benefit plan. Access the Edit Benefit Plan task and add the benefit groups to which the employees belong to the Benefit Rates and Eligibility table.

How can I see the benefit elections employees made during open enrollment?

After finalizing open enrollment, you can see the benefit elections by running the Benefit Census report.

Benefit Changes

Change Benefit Elections

Prerequisites

- Assign benefit annual rates to employees.
- Security: *Worker Data: Benefits Annual Rate* in the Benefits functional area.

Context

Employees or administrators use the Change Benefit task when an event occurs that qualifies the employee to change their benefit elections. The benefits that an employee is eligible to enroll in depend on the specific benefit event that has occurred. Administrators can use the *Change Benefits* web service to bulk load multiple benefit changes.

Note: Because administrators use the Change Benefits web service for loading data, the web service completes processing automatically, even if you specify manual processing.

Steps

1. Access the Change Benefits task.
2. Select the Benefit Event Type.
3. Enter the Benefit Event Date.

   Workday:

   - Automatically calculates the Submit Elections By date using the days to enroll associated with the enrollment event type.
   - Displays the benefit plans for which the employee can change elections, based on the enrollment event rules.
   - Automatically calculates the Coverage targets if you select the Derived Coverage Targets check box.

Result

- Workday sends a Change Benefits notification to the employee or administrator.
- The employee or administrator enters new benefit elections. If the benefit elections automatically finalize when submitted, then Workday:
  - Determines whether Evidence of Insurability (EOI) is required based on the event rules. If required, Workday starts the EOI process.
  - Checks for events in progress or on hold that could conflict with this event.
  - Checks:
    - If a health care or insurance election uses a banded rate table based on age or length of service.
    - For a birthday or service anniversary that moves the employee into another rate band before the end of the benefit plan year.
  - Logs the event with an event date equal to the birthday or service anniversary, if both:
    - The date entered in the Calculate As Of field for Health Care or Insurance Rate equals *Event Date*
    - The employee has a birthday or service anniversary before the end of the benefit plan year.

  Integrations based on the Payroll Interface Output File template process the event when payroll runs for that period.
- You can view the Benefit Election History on the worker profile.

Next Steps

To delete the benefits annual rate and history for an employee permanently, access the Remove Benefits Annual Rate task.

To see differences between the current and past benefit elections, use the Benefit Changes report. In this report, the Election Status for All Effective Dates report field subfilter displays status by display order for elected and waived elections. The report field filters out future elections, while displaying current, previous, and historical elections. If 1 election meets 2 status conditions, Workday displays the first status in the displayed order.

You can set up Workday to determine if a specific staffing, position, or compensation event affects an employee's benefit coverage.

For compensation changes that impact benefits, you can use the *Change Benefit Election for Compensation Changes* action step in these business processes:

- Propose Compensation Change.
- Propose Compensation Hire.
- Request Compensation Change.
- Request Employee Merit Adjustment.
- Initiate Compensation Review Process. For this business process only, set up the step as a batch/ job step. (Security: Set Up: Benefits domain in the Benefits area).

2020R1 What’s New Post: Enrollment Events Redesign

2020R1 What’s New Post: Compensation Changes and Calculated Coverage Impact

Change Retirement Savings Elections

Prerequisites

- Create retirement savings plans.
- Security: These domains in the Benefits functional area:
  - *Set Up: Benefits*.
  - *Set Up Benefits: Retirement Savings Allocation Across Multiple Providers*.

Context

Employees or administrators use the Change Retirement Savings Elections task when an event occurs that qualifies the employee to change their retirement savings elections.

Steps

1. Access the Retirement Savings Elections report.

   You can also access Benefits > Change Retirement Savings from the related action of the worker.
2. For coverage types that enable workers to allocate employee or employer contributions to more than 1 benefit plan, consider:

Option	Description
Contribution Type	Displays if you set up the plan to have an employee contribution. Enter a contribution percent or amount. The amount must be within the applicable minimum and maximum contribution set up on the plan.

Option	Description
Employee Contribution Allocation	Specifies the employee contribution amount.
Employer Contribution Allocation	Displays if there's any employer contribution set up for the plan. Enter the portion as a percentage of the employer contribution to allocate to the plan. The total allocation must equal 100%. Example: The employer contributes 2000 USD to a retirement savings coverage type and that they can distribute among 3 plans. You can enter 30% to plan A, 20% to plan B, and 50% to plan C.

3. For coverage types that don't allow allocation of employee or employer contributions to more than 1 benefit plan, consider:

Option	Description
Employee Contribution	Enter a contribution percent or amount. The amount must be within any applicable minimum and maximum contribution defined on the plan.
Employer Contribution	Displays if there's any employer contribution defined for the plan and is view-only.
Auto Contribution Increase	For percentage contributions only. Enable workers to contribute automatically to the retirement plan. Workers can opt out.

4. Enter beneficiaries.

Next Steps

To see differences between an employee's current and past benefit elections, use the Benefit Changes report.

Finalize Open Benefit Event Elections

Prerequisites

Security: *Manage: Benefits for Organizations* in the Benefits functional area.

Context

You can finalize the benefit elections for employees who haven't submitted their benefit elections in time. When you finalize elections for employees who have missed the deadline, Workday elects the default benefits for the employee. You can finalize the elections manually, or set up schedules for Workday to finalize unsubmitted benefit elections automatically. You can create multiple schedules that finalize events for different benefit groups.

Steps

1. Access the Finalize Open Benefit Events task.
2. Select whether to run the task once manually, or run the task on a regular schedule.

   Select Daily Recurrence or Weekly Recurrence to schedule how often Workday automatically finalizes the open benefit events.
3. As you complete the Schedule Finalize Open Benefits Events tab, consider:

Option	Description
Benefit Groups	Select 1 or more groups with members affected by the open benefits event.
Generate Preview Alerts	Add 1 or more preview alerts to remind your employees that the event deadline is approaching or has passed. The preview alert is based on the benefit event date. You can send preview alerts until you finalize the enrollment event.

4. As you complete the Schedule tab, consider:

Option	Description
Daily Recurrence	Select every weekday or the number of days between each run. Example: Enter 1 to run everyday.
Weekly Recurrence	Select: • How often you want to run the task. Example: Every 3 weeks. • The weekdays you want the task to run on. • Which time zone to use. Workday uses the current date within the selected time zone to determine which events have passed their Submit By date.

Result

Workday:

- Automatically populates any default benefit elections to the employee and sets the status to *Finalized*.
- Determines whether employees need to provide Evidence of Insurability (EOI) based on the event rules. If so, Workday starts the EOI process.
- Checks for events that have an event date with a status of *On Hold* following the event being finalized. If Workday finds events, it cancels or rescinds them and creates new events.

- Determines whether to apply a new rate band before the end of the benefit plan year. Birthdays and service anniversaries can trigger changes for plans that use banded rate tables based on age or length of service. Workday:
    - Compares the *Event Date* with the Calculate As Of field on the Health Care or Insurance Rate tasks.
    - Changes the employee's rate band if both are true:
        - The 2 dates have equal values.
        - The employee has a birthday or service anniversary before the end of the current benefit plan year.
    - Records the event in the transaction log.
        - Workday uses the event to charge the rate at the appropriate time.
        - Integrations based on the *Payroll Interface Output File* template process the event during the period that includes the event date.

Next Steps

View benefit plan costs for a specific time period, 1 or more benefit plans, or a frequency using:

- Benefit Premium Report - Health Care
- Benefit Premium Report - Insurance

Workday 31 What's New Post: Automatically Finalize Open Benefit Events

Correct Benefits

Prerequisites

Security: *Manage: Benefits for Organizations* in the Benefits functional area.

Context

You can change an employee's benefit elections after the event is *closed* or *finalized*. This includes events created by open enrollment, the Change Benefits task, and passive events.

Steps

1. Select Benefits > View Benefit Election History from the employee's related actions menu.
2. Select Benefits > Correct Benefits from the related actions menu of the benefit event.
3. Change the benefit elections.

Result

When you click Submit, Workday:

- Retains a copy of the old benefit elections.
- Sends the changes to the Workday Benefits Network, Payroll Interface, or Workday Payroll.

Next Steps

Use the:

- Benefit Corrections In Progress Audit to see a list of employees with corrections to benefit elections in progress. If you corrected an employee's benefit elections, but that correction isn't appearing on the benefits page in their profile, run this audit to ensure the correction isn't still in progress.
- Benefit Election History tab to see which events have had corrections made, then click the link to see the details of the correction.

Note: Manually correct future-dated election events. Workday doesn't automatically apply these changes to future dated events.

Extend Benefits Coverage for an Individual Employee

Context

You can extend benefit coverage beyond the Workday-calculated end date for an event and coverage type.

Workday uses the End Date associated with an event and coverage type on the Create Enrollment Event Rule task to calculate the last day of coverage. If there’s a grace period associated with the event, Workday adds the grace period to the end date to determine the last day of coverage.

You can extend benefits only to employees that are losing eligibility for the benefit plan.

You can't extend benefits for an event if an employee has another enrollment event that falls at a later date. If necessary, you can rescind the later event and then extend lost benefits from the earlier event.

You can't extend benefits beyond the current benefit plan year for a terminated employee. Workday lets you select a coverage end date in a future plan year. But, it drops their coverage at the end of the current plan year. To avoid dropping the terminated worker's coverage, work directly with your benefit provider.

Steps

1. Select Benefits > View Benefits Election History from the employee's related actions menu.
2. Select Benefits > Extend Benefits Coverage from the related actions menu of the benefit event.

   This related action displays for *Finalized* benefit events, but Extend Coverage to Date is available only for terminated coverages.
3. In the Extend Coverage to Date column, enter a new coverage end date for the benefits you want to extend.

   The Extend Benefits Coverage task is available as a related action for all benefit events. However, the Extend Coverage to Date field is editable only where a benefit has an end date.

The Next Level: Fireside Chat: How COVID-19 Impacts Benefits

Concept: Change Benefits Web Services

Workday provides 2 web services that load mass changes for benefits elections:

- *Change Benefits*
- *Bulk Import Change Benefits*

Change Benefits Web Service

The *Change Benefits* web service is the older of the 2 web services and performs bulk uploads. It enables you to initiate and complete the *Change Benefits for Life Event* business process to generate benefit transactions for employees. The web service ignores any additional steps that you've configured on the *Change Benefits for Life Event* business process.

This web service is for mass uploads from an external system. We don't recommend that you use this web service for incremental benefit updates from a third-party benefits administration system. The web service works by waiving all of the worker benefits elections that match a specific benefit event type. It then replaces them with the benefit elections that you specify on the web service call. The purpose of the web service is to load benefits for an initial conversion or acquisition only. It doesn't participate in coordination of events, and if you load benefits out of order employees could have incorrect elections in Workday.

Bulk Import Change Benefits Web Service

The *Bulk Import Change Benefits* web service provides the same function as *Change Benefits*. However, it's more efficient and faster if loading very large volumes of data. The web service also provides a request ID so that you can track the request through the process monitor.

While this web service has a significant performance improvement, you can't specify processing order for multiple events for the same worker. If you need to submit multiple events for a worker in a particular order, you can either:

- Submit 1 template for each event.
- Use the *Change Benefits* web service.

How Should I Use These Web Services?

These web services upload large numbers of benefits elections. One of the required fields in the web service is the Benefit Event Type. This value lets the web services know which plans it can update.

Based on the request, the web services replace benefits for the specified event type with the benefits in the web service call. Essentially, they overwrite all plans for the benefit event type with the new plans on the request.

To avoid impacting elections that aren't part of an update, Workday recommends that you use a separate benefit event type for each request. Each request should contain only the benefits that you need to update. Example: Avoid using a general benefit event type like Admin Correction. The web service removes all benefits associated with that event type, before adding the plans on the request.

You can waive a benefit election by excluding replacement elections for the benefit coverage types in the event.

Supported Benefit Types

The *Change Benefits* and *Bulk Import Change Benefits* web services support these benefit types:

- Health Care
- Heath Savings Account
- Spending Account
- Insurance
- Retirement Savings
- Additional Benefits

Note: If the only plan type you're loading is Retirement Savings, consider using the *Enroll in Retirement Savings* web service.

Event Date and Coverage Begin Date

The web services ignore the values for the Coverage Begin Date and Deduction Begin Date fields. Workday calculates these dates based on the enrollment event rules. However, the web service requires that you populate the Coverage Begin Date field. Deduction Begin Date is optional.

You can include a value for the Original Coverage Begin Date and Original Deduction Begin Date fields if you need to capture either:

- The original date the worker enrolled in the benefit plan.
- The date of the worker's first deduction for the plan.

The dates loaded in these fields display in the Coverage Begin Date and Deduction Begin Date report fields in the user interface. Typically you only load these values when converting data from a legacy system to capture history. When loading a change for an existing plan, administrators typically want to capture a new coverage begin date for the change.

The Request and Response

Before creating the request, ensure you have all the reference IDs for the benefits you want to modify. Examples:

- Benefit Event Type ID
- Frequency ID
- Health Care Coverage Plan ID
- Health Care Coverage Target ID

Example: If you extend coverage from *employee* to *employee + child*, you need to add the dependent in Workday with its dependent ID, otherwise your request fails.

Tasks

Change Benefit Elections on page 1432

Example: Create and Send Alerts for Benefit Changes

You can create a notification reminding employees they must complete their benefit enrollment.

Context

In this example, we demonstrate how to create and send a reminder task to My Tasks for the new employee.

Steps

1. Access the Create Alert Rule task.
2. Select *Change Benefits for Life Event* in the Business Process Type prompt.
3. As you complete the task, consider:

Option	Description
Description	New Hire Enrollment
Source External Field or Condition Rule	Enrollment Type
Relational Operator	Any in the selection list
Comparison Type	Value specified in this filter
Comparison Value	New Hire

4. Access the Schedule Task Alert Notifications task so the employee can receive the email alert.
   a. Include the *Change Benefits for Life Event* business process and the New Hire Enrollment alert rule.
   b. Add the message for the employee.

Passive Events

Steps: Set Up Passive Events

Prerequisites

Assign benefit annual rates to employees.

Context

Create passive events to manage benefit gains and losses that result from the passage of time rather than from changes to employee data. Example: Set up a passive event to evaluate and manage benefit eligibility for employees turning 65 (retirement age). Based on their eligibility for benefits, Workday generates an enrollment event to record any benefit gains or losses.

Unlike most enrollment events, you don't have to manually report passive events. You can configure Workday to identify anyone who has benefits gains and losses resulting from an event. Workday automatically routes an enrollment task to the affected worker.

Steps

1. Create Enrollment Events on page 1343 for passive events.

   Example: Set up a passive event type called *Employees >= Age 65*.
2. Create Enrollment Event Rules on page 1349 for the passive event types.

   This might include defining:

   - Begin dates and waiting periods for passive events that result in benefit gains.
   - End dates and grace periods for passive events that result in benefit losses.
3. (Optional) Configure the passive event to automatically complete and finalize enrollment without sending an enrollment task to the Benefit Partner or employee:
   a) Set up benefit plan eligibility rules to ensure that any employee included in the event is eligible for only 1 plan per coverage type. Also, select *No Changes Allowed* in the Allowed Benefit Plan Changes field in the Create Enrollment Event Rule task for each coverage type included in the event.
   b) If the passive event confers eligibility for new health care or insurance plans, select a default rule for the event that includes: instructions to *default to priority coverage* and define default health care/insurance plans and priorities in the Maintain Benefit Defaults task.

   Workday automatically completes and finalizes passive events that result in a complete termination of benefits.
4. Set Up Passive Event Business Processes on page 1443.

   Note: When you automate a passive event, Workday ignores routing instructions for the event and automatically finalizes it without sending an enrollment task to a Benefit Partner or employee. However, you must still provide routing instructions for the event.
5. (Optional) Add worklets to the *Change Benefits for Life Event* business process.
6. Create Passive Event Rules on page 1443.

   Set up passive event rules to identify the employees to process in response to the event.
7. Schedule Passive Events on page 1445.

   Create a schedule to instruct Workday when and how often to search and process employees that meet passive event rule criteria. Example: Set up a schedule for Workday to search for and process employees who are turning 65 on the first day of each month.

The Next Level: Benefits - Passive Events and Derived Coverage Targets

Set Up Passive Event Business Processes

Context

Configure the *Passive Event* business process to instruct Workday where to route passive events. The passive event results in an enrollment task for an employee, a Benefits Partner, or other designated role.

Note: Route enrollment task using a passive event to a role or security group directly in the *Passive Event* business process definition.

Steps

1. Access the *Passive Event* business process definition.
2. As a related action on the *Passive Event* business process, select Business Process > Edit Definition.
3. Enter the Effective Date.
4. Access the *Change Benefit Elections* step and identify the role to which to route the enrollment task for passive events in the Group field.

   Don't delete the *Change Benefit Elections* step in the *Passive Event* business process.
5. Make the initiation step the completion step.
6. If you need to route different passive events to different roles:
   a) Create a condition rule for each event type.
   b) Define two or more steps with the same order and action = *Change Benefit Elections*.
   c) Associate a different condition rule and role with each step. The condition rules must be mutually exclusive.

   Depending on how you define a passive event, Workday might ignore routing instructions for the event. It might automatically finalize it without sending an enrollment task to a Benefits Partner or employee. However, you must still provide routing instructions for the event.

Example

To route passive events based on condition rules, assume that these events have different routing requirements:

- Route to employee: An employee becomes eligible for a benefit after 1 year of service.
- Route to Benefits Partner: A dependent reaches an age and becomes ineligible for benefits.

1. Insert 2 *Change Benefit Elections* steps in the *Passive Events* business process, 1 for each passive event with a different *Route To* role.
2. Assign the same order to both steps.
3. Create a condition rule for event type = *Employee 1 Year of Service* and associate it with the first instance of the *Change Benefit Elections* step. Select *Employee* in the Group field for this step.
4. Create a condition rule for event type = *Dependent Age Out* and associate it with the second instance of the *Change Benefit Election* step. Select *Benefits Partner* in the Group field for this step.

Create Passive Event Rules

Prerequisites

- Security: *Set Up: Benefits* in the Benefits functional area.
- Create benefit plan and dependent eligibility rules using the Create Benefit Eligibility Rule or Edit Benefit Eligibility Rule tasks.

  You can use existing benefit plan and dependent eligibility rules, or create new rules to use specifically for passive events.
- Create benefit event types for the passive event rules using the Create Benefit Event Type task.
- Create benefit groups using the Create Benefit Group or Edit Benefit Group tasks.

Context

Create passive event rules to:

- Identify employees to evaluate for benefit eligibility. Example: all employees >= age 65.

  Unlike eligibility rules associated with specific benefit plans, passive event rules don't confer or deny eligibility for health care, insurance, or other benefits. Instead, their purpose is to identify employees to evaluate for benefit eligibility due to retirement, seniority, or other changes related to the passage of time. Workday uses the eligibility rules for the benefit plan to determine if an employee who meets passive event rule conditions is eligible for a particular benefit.
- Schedule preview alerts to employees to inform them that a passive event is about to occur. You can instruct Workday to send alerts at regular intervals before the event occurs. Examples: 60 days before employees turn 65, 30 days before the event occurs, and again 15 days before the event occurs.

  Note: Preview alerts are email notices. Set up email addresses for your employees before you generate preview alerts.

Steps

1. Access the Create Passive Event Rule or Edit Passive Event Rule task.
2. Specify the Benefit Life Event Type.
3. Select a Benefit Plan or Dependent Eligibility Rule.

   The rule tells Workday which employees to evaluate for benefit eligibility and target for preview alerts.
4. Identify the Benefit Group(s) that use the passive event rule.
5. Consider:

Option	Description
Notify Prior to Event Date	Select the number of days, weeks, or months before the event date that you want Workday to send a preview alert. You can define multiple preview alerts for the same event. Example: Send 1 alert 30 days before an event takes place, and send another 15 days before the event takes place. To create alert frequencies, use the Maintain Calculated Dates task.
Subject	Configure the subject line of the email alert message.
Message Text	Configure the text of the alert to send to employees before the passive event. You can embed hyperlinks in the text of your message. However, you must use the full web address format. Example: `http://www.url.com`.

Next Steps

Define a schedule for:

- Generating enrollment events for employees who have benefit gains or losses resulting from a passive event.
- Generating preview alerts.

Related Information

Concepts

Concept: Passive Event Rules on page 1447

Schedule Passive Events

Prerequisites

Security: *Set Up: Benefits* in the Benefits functional area.

Context

Schedule passive events to:

- Identify and process employees who meet passive event rule conditions on demand or at regular intervals.
- Generate preview alerts.

Steps

1. Access the Schedule Passive Events task.
2. As you complete the task, consider:

Option	Description
Passive Event Rule	Select the Passive Event Rule to include in the process schedule. You can process passive event rules on demand or at regularly scheduled intervals. Workday searches for employees meeting passive event rule criteria according to the schedule and automatically creates an enrollment event for employees with benefit gains or losses. Create passive event rules using the Create Passive Event Rule or Edit Passive Event Rule tasks.
Generate Passive Events	Creates enrollment events for employees who: • Meet conditions of the rule identified in the Passive Event Rules field. • Have benefit gains or losses resulting from the passive event. You can generate passive events and preview alerts at the same time, or separately.
Generate Passive Alerts	Generates preview alerts for employees who satisfy the conditions of the Passive Event Rule on or after the preview interval. Specify the interval using the Create Passive Event Rule task. Example: You configure Workday to send a preview alert 1 week before a retirement event. Workday sends the alert if you schedule the alert and Workday processes it a week or less before an employee turns 65.

Option	Description
	Workday sends only 1 instance of a preview alert to an employee for a given event. Workday follows this rule even if you schedule and generate passive alerts multiple times leading up the event.

3. If the Run Frequency selected is *Run Now*, Workday processes the passive event rule and generates alerts and enrollment events when you save your work. If you selected any other Run Frequency, complete the frequency fields on the Schedule tab:

Run Frequency	Frequency Fields
Run Once in the Future	Specify a Start Date, Start Time, and a Time Zone for processing the passive event rule.
Daily Recurrence	• Select how often to process the event rule: Recurs Every Weekday or Recurs Every x Day(s), where *x* is any positive integer. • Select a Start Time and a Time Zone for processing the passive event rule. • Specify a Start Date and an End Date for processing the passive event according to the schedule you've created.
Weekly Recurrence	• Enter a processing frequency in the Recurs Every x Weeks field, where x can be any positive integer. • Select the Day(s) of the Week on which to process the passive event rule. • Select a Start Time and a Time Zone for processing the passive event rule. • Specify a Start Date and an End Date for processing the passive event according to the schedule you've created.
Monthly Recurrence	• Select the Month(s) on which to process the passive event rule. • Select the Day(s) of the Month or the Day of the Week on which to process the passive event rule. • Select a Start Time and a Time Zone for processing the passive event rule. • Specify a Start Date and an End Date for processing the passive event according to the schedule you've created.

Note: When scheduling passive events on a recurring basis, Workday doesn't permit you to add an End Date beyond December 31 of the next calendar year.

4. Review the information on each tab of the Scheduled Process:

Tab	Purpose
Passive Event Rules	• View workers who meet passive event rule conditions when you process a passive event. • View and manage enrollment events created for a passive event rule.
Process Info	View the status of the passive event process.
Messages	View error messages or warnings related to the passive event process.

Next Steps

- Access the Process Monitor to view the status of the passive event process run.
- Access the Benefits > View Passive Alerts from the worker's related action menu.

Related Information
Reference
The Next Level: Benefits - Passive Events and Derived Coverage Targets

Concept: Processing Passive Events for the First Time

The first time that you generate passive events for a particular passive event rule, it is best to schedule and generate preview alerts for a different time. Otherwise, some employees receive preview notices after they've met conditions specified in the passive event rule.

Example:

- You define a schedule for generating passive events and alerts every day for dependent children who age out of health coverage. You set up preview alerts to be sent out 3 weeks, 2 weeks, and 1 week before the date when a dependent turns 26.
- If you process the passive event rule for the first time on January 31, the initial process run identifies and sends the 3 preview alerts to all employees whose dependents turned 26 on or before January 31, even though some dependents have already met conditions of the event rule.

When a preview alert runs at the same time as a passive event, Workday can't identify the employees who have already met passive event rule conditions and sends alerts to everyone. To avoid this situation, schedule and run preview alerts separately from passive events the first time you process a passive event rule. In the Schedule Passive Events task:

- Select only the Generate Passive Events check box for the first run of a passive event rule. Workday generates enrollment events for anyone who has already met rule conditions without sending alerts.
- From then on, select both the Generate Passive Alerts and Generate Passive Events check boxes when you schedule and process the rule. Workday sends alerts to anyone who meets rule conditions in the future.

  Workday recognizes that employees processed in the first run of a passive event rule have already met its conditions and doesn't send preview alerts to those employees.

Concept: Passive Event Rules

When to Use

Passive event rules identify employees to evaluate against eligibility criteria associated with specific benefit plans. You can use them to automate plan changes when the employee meets new eligibility rules. You can also automate plan changes for when an employee no longer meets eligibility rules. Example: An employee turns 65 and no longer can use Long-Term Disability Plan A.

The rules don't need to duplicate the complexity of eligibility criteria associated with the plans themselves.

- Passive event rules *invert* eligibility rules associated with benefit plans that employees lose when the event takes place:

Benefit Plan Eligibility Rule	Corresponding Passive Event Rule
Only employees < age 65 are eligible for Long-Term Disability Plan A.	Identify employees >= age 65 and evaluate them for benefit eligibility.
Only dependents < age 25 are eligible for Health Care Plan C.	Identify dependents >= age 25 and evaluate them for benefit eligibility.

- Passive event rules *mirror* eligibility rules associated with benefit plans that employees gain when the event takes place:

Benefit Plan Eligibility Rule	Corresponding Passive Event Rule
Only employees with length of service >= 5 years qualify for Insurance Plan B.	Identify employees with length of service >= 5 years and evaluate them for benefit eligibility.
Only employees >= 65 qualify for Basic Disability Plan D.	Identify employees >= age 65 and evaluate them for benefit eligibility.

You can use the Schedule Passive Events task to:

- Generate an enrollment event for employees who lose or gain benefit eligibility as a result of a passive event.
- Schedule and run the passive event rule.

You can use the same schedule that you generate preview alerts or define separate schedules for alerts and events.

Dependent children have eligibility for Health Care Plan A if they are:

- Less than or equal to age 21.
- Less than 25 years of age and full-time students.

To evaluate dependents for eligibility, the passive event rule needs only this simple condition: *Dependent child greater than (>) age 21*.

This rule inverts the eligibility criteria associated with the health care plan by identifying the age at which Workday evaluates dependents for eligibility. Workday identifies all dependent children greater than age 21. The eligibility rule then determines whether a dependent:

- Loses eligibility because they're over 21 and no longer in school.
- Retains eligibility because they're less than 25 and a full-time student.

If the passive event rule in this example repeated the dependent eligibility rule, it would:

- Include dependents who you don't need to evaluate: *All dependent children less than or equal to age 21*.
- Miss the dependents who you do need to evaluate: *All dependent children greater than 21*.

Considerations

As you plan your passive events, consider:

- Workday generates enrollment events only for employees who:
    - Meet the conditions of the passive event rule on the day and time Workday runs the rule.
    - Satisfied rule conditions between the last and current runs of an event rule and that Workday missed in the previous run.

- Run event rules frequently enough to find employees that meet rule conditions before the current run or between run dates. Workday might miss preview notices for some employees if you don't run the event rule often enough.

  Example: You run a passive retirement event rule every other week on Monday. If an employee reaches retirement age mid week, Workday reads the event on its next scheduled run.

  Note: Workday recommends that you schedule and run passive event rules only frequently enough to meet your business needs. Too many runs might put an unnecessary burden on resources.
- Workday uses the date of the run that picked up the employee as the event date. This date might differ from the date that an employee first satisfies the passive event rule conditions. Example: A scheduled run picks up employees who met passive event rule conditions before the run date. The event date for these employees is the run date, not the date on which they first satisfied the rule conditions.
- Once Workday flags an employee as meeting the conditions of a passive event rule, it generates an enrollment event. Workday won't generate additional enrollment events related to that event rule.
- After Workday generates an enrollment event for an employee, it won't send any further preview alerts for that event.

Service Anniversary Events

When creating passive event rules based on service anniversary dates, you can calculate length of service from any of these dates:

- Hire.
- Continuous service.
- Original hire.
- Service.

Workday requires the Hire Date to process passive events based on continuous service dates, original hire dates, or seniority dates.

Concept: Preview Alerts for Passive Events

You can send out preview alerts to employees that they have a passive event that is approaching.

You can define a schedule for generating the alerts and generate preview alerts that match your schedule for generating enrollment events.

Workday sends alerts only to employees who:

- Meet the exact number of days, weeks, or months in the Notify Prior to Event Date field, before the date when Workday processes the event.
- Met rule conditions between the last and current process runs and Workday didn't flag the last time it processed alerts.

Using the Schedule Passive Events task, you schedule and process alerts for a retirement age event on January 4 and 18. You also set up preview alerts for Workday to send 2 weeks prior (January 10) and 1 week prior (January 17) to the date employees reach retirement age.

An employee turns 65 on January 24.

The first alert runs on January 4, and comes before the 1 and 2-week alerts scheduled for January 10 and 17. As a result, Workday doesn't generate preview notices. The second scheduled alert runs on January 17 comes after the employee meets rule conditions for both alerts. Workday consequently picks up and sends both preview notices on the 18th.

As you plan your preview alerts, consider:

- How often you schedule and generate alerts. You need to consider how frequently you generate alerts to match the scheduled preview for an event. If your schedule and alert generation timing don't match, Workday might miss preview notices for some employees.

  Example: You create preview alerts for Workday to send out 2 weeks before an employee reaches 65. However, you also schedule and generate passive alerts monthly on the 25th. The current date is December 25 and an employee turns 65 on January 21. Workday won't generate preview alerts for that employee. Workday next processes alerts on January 25. Workday can determine that it didn't flag the employee and can send the missed preview notice.

  Note: To avoid sending multiple preview alerts, consider scheduling alert runs more frequently. Or, you can reduce the alert frequency in the Generate Preview Alerts field.
- Workday sends only 1 instance of any preview alert to an employee. Example: You create 2 alerts to notify employees that a retirement event is about to occur. You schedule the first alert 1 a month before the event and the second 2 weeks before the event. Workday sends out only 1 instance of each alert.
- Workday stops sending alerts to the employee after Workday schedules an event rule and generates an enrollment event.

FAQ: Passive Events

How are passive events different from standard enrollment events?

How do I test a passive event rule to make sure that it selects the correct employees for processing?

What is the difference between eligibility rules associated with benefit plans and the eligibility rules used to define passive events?

How are passive events different from standard enrollment events?

Unlike most enrollment events, you don't have to report manually passive events for the affected employees. You can instruct Workday to identify and route an enrollment task to workers that have benefit gains or losses resulting from the event.

Passive events don't establish or determine eligibility for benefits only once, when Workday launches the event. During open enrollment, Workday assesses an employee's eligibility for benefits when initiating the enrollment event. Workday doesn't automatically re-evaluate the employee's eligibility and change their status following open enrollment. The employee or an administrator must report another event to force evaluation of the employee's eligibility for benefits. Example: A location change or job change event. By contrast, you can schedule passive events to evaluate employee eligibility at any time, either on demand or at regularly scheduled intervals.

You can define preview alerts for a passive event to notify automatically employees that an event is about to occur. Example: A 65th birthday or the aging out of a dependent is about to occur. You can generate these alerts at regular intervals before the event date.

How do I test a passive event rule to make sure that it selects the correct employees for processing?

To verify that a passive event rule identifies the correct employees, run the View Workers report. To access this report, select Passive Event Rule > View Workers as a related action on the passive event rule.

To verify that a passive event rule correctly identifies a particular employee, run the Test Workers report. To access this report, select Passive Event Rule > Test Workers as a related action on a passive event rule and select the employee.

What is the difference between eligibility rules associated with benefit plans and the eligibility rules used to define passive events?

Unlike eligibility rules associated with specific benefit plans, passive event rules don't confer or deny eligibility for health care, insurance, or other benefits. They identify employees for Workday to evaluate for benefit eligibility due to retirement, seniority, or other changes due to the passage of time. An employee who meets passive event rule conditions is eligible for a particular benefit only if they meet the eligibility rules associated with the benefit plan.

Example: A passive event rule for a retirement event identifies all employees who are 65 years old. The eligibility rule for the employees' health care plan determines whether they either:

- Can keep their current plan.
- Lose eligibility when they turn 65.

Troubleshooting: Passive Events

Passive events don't trigger benefit enrollment events.

Cause	Solutions
The worker hasn't had a change in eligibility that would trigger an enrollment event.	Security: *Manage: Benefits for Organizations* domain in the Benefits function area. 1. Access the Benefits Eligibility by Benefit Group report. 2. Run the report for past and current dates to check if the worker has gained or lost eligibility for the benefit plan.
The worker doesn't meet the requirements for the eligibility rule.	Verify that the worker is eligible for the enrollment event. Security: • *Set Up: Benefits* domain in the Benefits function area. • *Person Data: Personal Information* domain in the Personal Data functional area. 1. Open the profile of the worker. 2. To view benefit group and eligible benefit plans, select Benefits > View Benefits Eligibility from the worker's related actions menu. To view the current benefit enrollment information, select Benefits > View Current Benefit Elections from the worker's related actions menu. 3. Access the Edit Passive Event Rule task. 4. View the Benefit Eligibility Rule and compare the Benefit Groups with the groups the worker is eligible for.
The passive event doesn't meet the criteria to trigger the enrollment event.	Security: *Set Up: Benefits* domain in the Benefits function area. 1. Set up the *Set Up: Benefits* domain in the Benefits functional area.

Cause	Solutions
	2. Access the Edit Passive Event Rule task and check the event. 3. Click the Event Rule Type and Benefit Eligibility Rule links. Verify that they're compatible. Verify that the passive event rules: • Invert eligibility rules associated with benefit plans that employees lose when the event takes place. • Mirror eligibility rules associated with benefit plans that employees gain when the event takes place. • Meet the event date requirements. Workday uses the run date that picked up the employee as the event date. This date might differ from the date on which an employee first satisfies the passive event rule conditions. 4. Check whether you've scheduled the passive event to run. Access the Schedule Passive Events task. Make sure that the rule runs frequently enough, but not so frequently to cause performance impacts.
Workday can't rerun the passive event rule for the worker to register a change.	*Set Up: Benefits* domain in the Benefits function area. 1. Access the Edit Passive Event Rule task. 2. Select the Is Re-Runnable check box for the event.
The passive event rule schedule is inactive.	*Set Up: Benefits* domain in the Benefits function area. 1. Access the Schedule Passive Events task. 2. Reactivate the passive event schedule.

Tasks

Create Passive Event Rules on page 1443

Schedule Passive Events on page 1445

Evidence of Insurability

Steps: Set Up Evidence of Insurability

Context

Set up the levels of change an employee can make during enrollment that triggers the evidence of insurability (EOI) process.

Steps

1. Steps: Set Up Insurance Costs on page 1268
2. Create Insurance Plans on page 1295
3. Create Enrollment Event Rules on page 1349

Result

During enrollment, Workday determines whether to trigger EOI when an employee elects an insurance plan by identifying:

1. The event type.
2. Which loss of coverage rules apply based on whether the employee enrolled in an insurance plan, waived coverage, or newly eligible for a new plan.
3. Which benefit plans to use when determining whether to trigger EOI. Is the Include All Benefit Plans in Coverage Type for EOI check box selected for any of these sections on the Create Enrollment Event Rule task?

    - Currently Covered
    - Currently Waiving
    - New Eligible

    If yes, then use all the coverage levels from all benefit plans within the coverage type. If no, then only use the relevant benefit plan.
4. If the employee elected an amount that is greater than or equal to:

    - For Currently Covered:
        - Maximum Levels of Change Allowed without EOI
        - Maximum Amount of Change Allowed without EOI
        - Guaranteed Issue Amount
        - Guaranteed Issue Multiplier
    - For Currently Waiving or Newly Eligible:
        - Guaranteed Levels without EOI
        - Guaranteed Issue Amount
        - Guaranteed Issue Multiplier

Related Information
Tasks
Steps: Set Up Benefits on page 1237

Steps: Manage Evidence of Insurability

Prerequisites

- Set up enrollment event rules.

  To define rules for handling changes in insurance coverage, use the Level of Change - Currently Covered, Levels of Change - Currently Waiving, and Levels of Change - Newly Eligible tabs.
- Complete and finalize open enrollment or a benefit event.

Context

Track and record workers' evidence of insurability (EOI) status.

Steps

1. Access the Manage Evidence of Insurability Status task.
2. Search for workers with EOI activity.
3. Select the workers whose EOI status you want to review or update.
   - Select the Select All check box, if you want to review or update all the workers listed.
   - Select the Select check box next to each worker's name to review or update individual workers.
4. Select the action you want to take on the selected workers:

Option	Description
Approve for selected	Change the workers EOI status to *Approved*.
Deny for selected	Change the workers EOI status to *Denied*.
Email for selected	Send an email to the workers regarding their EOI status.

   You can also select the View Details link next to each worker.

Result

Workday displays a confirmation page, where you can create the email message. Email notifications are sent to the worker's primary work email address. If workers don't have a work email address, they won't receive EOI status notifications.

Depending on the selected action, Workday updates the insurance coverage to the:

- Full amount elected as defined in the EOI Takes Effect On Date field for the benefit group, when the action is *Approved*.
- *Waived*, when the action is *Denied* and the Guaranteed Issue Amount is zero.
- Guaranteed Issue Amount, when the action is Denied and the Guaranteed Issue Amount is greater than zero.
- Prior coverage amount, when the worker has prior coverage and that coverage amount is greater than the guaranteed issue amount.

Correct Employee EOI Approval and Denial Dates

Context

You can correct EOI approval and denial dates that were entered in error.

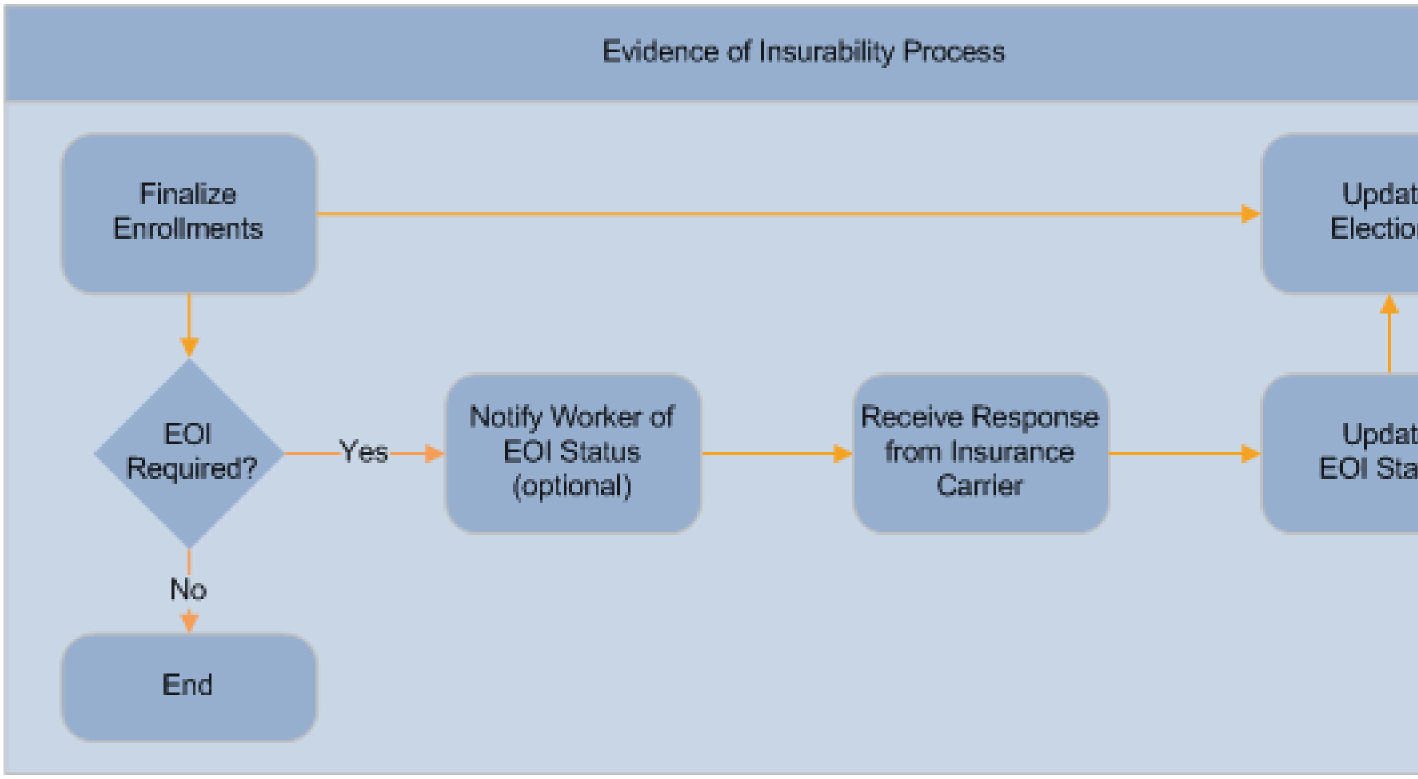
Steps

1. Access the Manage Evidence of Insurability Status task.
2. Click the View Details link for an employee with an EOI Status of *Approved* or *Denied*.
3. Select View Details > Evidence of Insurability > Correct Approval/Denial Date from the employee's related action menu.
4. Enter the correct approval or denial date in the Approve/Denied Date field.

Related Information
Tasks
Steps: Manage Evidence of Insurability on page 1454

Concept: Evidence of Insurability Processes

The EOI review and approval process is triggered automatically when an employee elects an amount or level of coverage over the guaranteed issue amount. The guaranteed issue amount is the maximum amount an employee can elect without evidence of insurability.



When the Benefits Administrator finalizes an enrollment event, Workday:

1. Identifies:

    - Employees that have elected coverage that is greater than the Guaranteed Issue Amount or Guaranteed Issue Multiplier.
    - Employees that had no insurance coverage before but have elected coverage that is greater than the Guaranteed Levels Without EOI.
    - Employees that had insurance coverage before but have elected coverage that is greater than the Maximum Levels of Change Allowed Without EOI or Maximum Amount of Change Allowed Without EOI.
2. If an employee elects an amount or level of coverage that requires evidence of insurability, the EOI process automatically sets the employee's EOI status to *Pending*.

    Use the Manage Evidence of Insurability Status task to search for employees with a status of *Pending*. You can also use this task to send an email notification that contains a link to the EOI form. The enrollment form Insurance section instructional text can also include a link to the EOI form.
3. When the status is *Pending*, Workday updates the employee's coverage during the EOI review period to:

    a. The elected coverage, if the Default Coverage if Pending EOI value is *Elected Coverage Amount*. The effective date of coverage is determined by the EOI Takes Effect on Date for the benefit group.

    b. The guaranteed issue amount, if the Default Coverage Pending EOI value is *Guaranteed Issue Amount*. The effective date of coverage is determined by the EOI Takes Effect on Date for the benefit group.
4. When the insurance carrier approves or denies the employee's EOI claim, the Benefits Administrator enters the employee's status (*Approved* or *Denied*) on the Manage Evidence of Insurability Status task.

    You can use the Manage Evidence of Insurability Status task to send an email notification informing the employee of their new status.
5. If the status is *Approved*, the employee's benefit coverage is updated to the elected coverage.
6. If the status is *Denied*, Workday updates the employee's coverage to:

    a. The guaranteed issue amount, if the guaranteed issue amount does not equal zero. The effective date of coverage is determined by the EOI Takes Effect on Date for the benefit group.

    b. The previous coverage, but only when the employee is changing plans.

    c. Waived, if the guaranteed issue amount equals zero.

Benefits Administrators can finalize open enrollment and other benefit change events while the EOI process is pending. This is because Workday tracks evidence of insurability outside of the enrollment process.

FAQ: How are coverage levels determined for evidence of insurability?

Normally, coverage levels are simply the coverage levels associated with a specific insurance plan. However, you might want the coverage levels in all benefit plans within a coverage type to be considered when determining changes in coverage levels. Selecting the Include All Benefit Plans in Coverage Type for EOI check box tells Workday to use all benefit plans.

Example: If you have a coverage type for Supplemental Health that has 3 benefit plans: Plan A, Plan B, and Plan C, coverage for these plans is:

Plan A	Plan B	Plan C
10,000	100,000	1 x Salary
25,000	200,000	2 x Salary
50,000	300,000	3 x Salary

Plan A	Plan B	Plan C
75,000	400,000	4 x Salary

Other rules for the event are:

- Maximum Levels of Change Allowed without EOI = 2
- The Include All Benefit Plans in Coverage Type for EOI check box is selected

An employee with a salary of 40,000 USD currently electing 25,000 USD in Plan A elects 2X in Plan C. The employee must go through EOI because going from 25,000 USD to 2X (80,000 USD) is a change of 4 levels.

Workday considers the levels as:

- 10,000
- 25,000
- 1X (40,000)
- 50,000
- 75,000
- 2X (80,000)
- 100,000
- 3X (120,000)
- 4X (160,000)
- 200,000
- 300,000
- 400,000

Tasks
Steps: Manage Evidence of Insurability on page 1454

COBRA

Steps: Set Up COBRA Automation

Prerequisites

Define how Workday designates COBRA eligibility.

Context

Workday enables you to track who is eligible for COBRA and provide the information for the integration with a third-party COBRA administrator. Workday isn't a COBRA administrator.

COBRA events result when Workday determines that an employee or dependent has lost benefit eligibility. Loss of eligibility can result from a:

- Passive event, such as a child turning 26 years old.
- Staffing event, such as a termination or reduction in hours.
- Life event, such as divorce.

You can create an employee or dependent COBRA record in 2 ways:

- Automatically, set up Workday to detect when an employee or dependent loses eligibility and create the COBRA records. You can optionally have an administrator review and update the COBRA records.

- Manually, by entering the COBRA information yourself selecting the Grant COBRA as a related action off the employee or dependent.

Steps

1. Set up your integration with a third-party COBRA administrator.

   See Concept: COBRA Integration.
2. Configure the security policy for the *Set Up: Benefits* domain in the Benefits functional area.
3. Set up COBRA eligible benefit coverage types.

   Set up the benefit coverage types that are eligible for COBRA by using the Maintain Benefit Coverage Types task. These types include:

   - Health care.
   - Insurance.
   - Spending accounts.
   - Additional benefit plans.

   If you want Workday to perform a COBRA eligibility check automatically, you must complete this step.
4. Set up COBRA eligibility reasons.

   Map specific benefit event types to COBRA eligibility reasons. If you want Workday to perform a COBRA eligibility check automatically, you must complete this step.
5. As you complete the Maintain COBRA Eligibility Reasons task, consider:

Option	Description
Benefit Event Type	Links the benefit event type to the COBRA eligibility reason.
Months of COBRA Coverage	If this field is blank, Workday automatically uses 18 months to calculate the COBRA coverage end date.

6. Add *Ex-Spouse* as a dependent relationship.

   Use the Maintain Related Person Relationships task.

   For a divorce, you might need to create a relationship for ex-spouse that isn't eligible for benefit coverage. Change the spouse's relationship to this relationship before you enter the divorce using the Change Benefits task.
7. Set up reasons for removing dependents.

   This step is specific to granting COBRA to dependents automatically. Add a Reason Category for removing dependents for the *Dependent Event* by using the Maintain Event Categories and Reasons task. Reasons could be *Dependent Over Age*, *Death*, or *Divorce*.
8. Create Enrollment Events on page 1343.

   If a benefit event can result with different months of eligible COBRA coverage, create a benefit event for each outcome. Example: a benefit event for Termination - 18 months COBRA and another for Termination - 36 months COBRA.

   Make sure that you create COBRA eligibility reasons for each event.
9. Create Enrollment Event Rules on page 1349.

   Define the coverage end date for the various benefit enrollment events. Workday uses this date to determine when the employee or dependent becomes eligible for COBRA coverage.

10. Steps: Set Up Automatic Benefit Eligibility Checks on page 1342

    If you want Workday to perform an eligibility check automatically, you must complete this step. Add the *Change Benefit Elections* business process as a step to an eligible business process.

    Note: Automate COBRA eligibility fully by removing the *Review COBRA Eligibility* steps from all business processes including the *Change Benefits for Life Events* business process.
11. To skip the review of COBRA records, remove the *Review COBRA Eligibility* business process as a step in the *Change Benefits for Life Events* business process.

Result

In business processes that include the *Change Benefit Elections* subprocess, Workday creates a COBRA record for each benefit plan that the new COBRA participant is eligible for. These records are available to any established third-party COBRA integrations.

Next Steps

After the participant receives COBRA, you can use the:

- COBRA Report to see a list of all COBRA participants for a specific date range.
- Correct COBRA Eligibility related action off the employee or dependent, to edit existing COBRA records.
- View COBRA Eligibility related action off the employee or dependent, to see detailed information about the COBRA participant.

The Next Level: Fireside Chat: How COVID-19 Impacts Benefits

Grant COBRA Eligibility

Prerequisites

Set up your integration with a third-party COBRA administrator.

Context

You can grant COBRA eligibility to an employee or an employee's dependent by entering the information yourself.

Note: You can also use the *Grant Cobra Eligibility* web service to grant COBRA eligibility to more than 1 person at a time.

Steps

1. Select Benefits > Grant COBRA Eligibility from the related actions menu of the employee or employee's dependent.
2. Add a separate record for each benefit plan the employee or dependent is eligible for.

Result

Workday creates a COBRA record for the new COBRA participant that any established third-party COBRA integrations picks up.

Next Steps

Use Correct COBRA to update COBRA eligibility records for an employee or dependent.

Related Information

Concepts

Concept: COBRA Integration

Correct COBRA Eligibility Records

Context

You can correct existing COBRA eligibility records or delete the entire record.

Steps

1. Select Benefits > Correct COBRA Eligibility as a related action off the employee or employee's dependent.
2. To revoke COBRA eligibility, clear the COBRA Eligibility check box for the plan that you want to revoke eligibility for.

Result

The existing COBRA record is either updated or removed.

Grant COBRA to an Ex-Spouse

Prerequisites

Create an employee relationship type to represent an ex-spouse using the Maintain Related Person Relationships task. The relationship can't be eligible for benefits.

Context

Grant COBRA to an ex-spouse.

Steps

1. Change the spouse's relationship to one that is not eligible for benefits. Example: Ex-spouse.
2. Enter the marital status change.

Result

If you have automated the COBRA eligibility check, Workday creates the COBRA record.

If you have not automated COBRA, then create the COBRA record using the Grant COBRA Eligibility task.

Related Information

Tasks

Manage Personal Relationship Types on page 1498

FAQ: How is the Qualifying Event Date determined?

When an employee or their dependents become eligible for COBRA, Workday provides these dates:

- Benefit Event Date: The date on which the employee or dependent becomes eligible for a change in benefit coverage. Or, the date when they're no longer eligible for coverage.
- COBRA Eligibility Date: The date that benefit coverage ends, as defined by the event rules, plus 1 day.
- (COBRA) Qualifying Event Date: The date the employee or dependent experienced an event that made them eligible for COBRA. Workday calculates the date as the benefit event date minus 1 day. For termination, it's the same day as the benefit event date.

- COBRA Coverage End Date: The date calculated by adding the value of the Months of Coverage field (from the Maintain COBRA Eligibility Reasons task) to the COBRA Eligibility Date.

Event Type	Description	Qualifying Event Date
Divorce	Employee enters a divorce effective September 25.	September 24
Loss of Hours	Employee's has hours reduced to part-time effective September 25.	September 24
Overage Child	Child turns 26 on September 25. Passive event runs on September 28.	September 27
Termination	Employee becomes terminated effective September 25.	September 25

Patient Protection and Affordable Care Act

Setup Considerations: Affordable Care Act Reporting

You can use this topic to plan your configuration and use of reporting to meet the requirements of the Patient Protection and Affordable Care Act (ACA). It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

- What It Is
- Business Benefits
- Use Cases
- Questions to Consider
- Recommendations
- Requirements
- Limitations
- Tenant Setup
- Security
- Business Processes
- Reporting
- Integrations
- Connections and Touchpoints

What It Is

The ACA regulates medical coverage for US employees. Workday enables you to report medical coverage to the Internal Revenue Service (IRS) to meet ACA reporting requirements.

Business Benefits

Workday helps you comply with ACA regulations by enabling you to prepare and transmit ACA forms to the IRS and to employees.

Use Cases

- You're an Applicable Large Employer (ALE) that needs to provide 1095-C forms each year to employees to summarize coverage.
- You need to create 1095-C and 1094-C forms to transport to the IRS for Affordable Care Act reporting.
- You have multiple ALE groups or a foreign ALE group.
- You have multiple companies under a single entity.
- You need to enable software partners to manage form transmissions.

Questions to Consider

Question	Considerations
How will you manage the printing and mailing of 1095-C forms?	You can configure an *ACA Mailing Connector* integration that sends ACA 1094-C and 1095-C data to an external mailing service provider. The vendor, CIC Plus, provides the mailing service support at an additional cost. You can access the Create ACA 1095-C Forms task to generate PDFs and print them.
Will you use software partners to manage transmission of forms to federal and state governments?	You can enable software partners to do form transmission when you create or edit the company configuration.
What funding method do your benefit plans use?	The 1095-C data creation process uses the funding method (self-insured or fully funded) of benefit plans as of the day that you run the process. You can edit the benefit plans to change the method before creating data when both: • The funding method of the plans changes. • You need to use the method as of the reporting year. After you've completed reporting, you can edit the plan to restore the funding method. Example: In plan year 2021, you change to the *Self Insured* funding method. However, when you transmit your 2020 1095-C reporting to the IRS, you need to change the funding method to *Fully Insured* to match the method used that year. You restore the funding method to *Self Insured* after you've completed the 2020-year reporting.

Recommendations

Consideration	Recommendation
Alternate Work Location	To ensure correct effective dating for residency requirements, use the Change Contact Information task instead of the Change Work Contact Information task.
Dependents of Deceased Employees for Self-Insured Medical Plans	You can hire surviving dependents as part-time employees if you're a self-insured organization. This method ensures that the 1G code populates correctly. For a large number of dependents, you can use the *Import 1095-C Forms Recipients Data* EIB.
EIB Configuration	To shorten address and name lengths, use the *Import 1095-C Form Recipients Data* EIB.
Importing Recipients	Use the *Import 1095-C Forms Recipients Data* EIB to load form data for covered participants whose enrollments you don't track in Workday. Example: COBRA recipients or retirees.
Legal Considerations	Consult with your legal team and benefit broker to determine: • Safe harbors for which you have eligible workers. • If you have populations to add or exclude from 1095-C data creation. • If you have multiple or foreign ALE groups or members that fall under the employer mandate. • If you have multiple companies that you need to report as a single entity. • Which configuration options to use for line 14, 15, and 16 codes in the Use coverage end date in month of termination check box, in the Create ACA 1094-C Company Configuration task.
Medical Plans	To ensure accurate codes for line 14, configure fields under the US Affordable Care Act Options section and the ACA Minimum Essential Coverage sections for medical plans.
Poverty Guidelines	Set up annual U.S. Federal poverty guidelines on the Affordable Care Reporting Configuration task to ensure accurate codes and line 15 values.
Retirees	You can verify that retirees have membership in a retiree organization when you select the Include Retirees check box on the Create ACA 1094-C Company Configuration task.
Tuning Rules	You can create Benefit eligibility rules that include or exclude types of employees from 1095-C reporting, called ACA 1095-C tuning eligibility

Consideration	Recommendation
	rules. Example: Exclude contractors from your reporting.
Waiting Periods	Configure waiting periods with enrollment event rules to ensure accurate 1095-C codes for the Limited Non-Assessment Period (LNAP).

Requirements

- Select the *Medical* option for the Health Care Coverage Type to enable the ACA-related fields.
- When using the *Import 1095-C Form Recipients Data* EIB, use the IRS country codes for international addresses. The IRS doesn't use ISO country codes.
- Speak with your internal legal team or benefit broker about ACA requirements.

Limitations

Workday provides 1094-C data, but doesn’t generate 1094-C PDF forms. Workday does generate 1095-C PDF forms.

Workday automatically makes 1094-C authoritative or not-authoritative. You can’t configure this criterion. Workday suggests importing other 1095-C data using the Import 1095-C Form Recipients Data EIB. You can send all of your 1095-C data collectively to the IRS under one authoritative transmission.

You might experience performance problems if you’ve configured more than 75 Payroll earnings on the Affordable Care Reporting Configuration task.

Starting in Tax Year 2020, these fields require you to use the Import 1095-C Form Recipients Data EIB to populate 1094-C and 1095-C forms:

- Plan Start Month: A 2-digit number for the month. Required starting in TY 2020.
- (Optional) Employee's Age on January 1: A whole number from 1 to 120.
- Line 14: Individual coverage Healthcare Reimbursement Accounts (ICHRA) codes.
- Line 17: A 5-digit zip code when Line 14 codes include codes for ICHRAs.

Tenant Setup

No impact.

Security

Domains	Considerations
Affordable Care Act (ACA) Administration - USA in the Benefits functional area.	Enables you to configure ACA: • ALE groups. • Company configuration. • Measurement periods. • Reporting. • Safe harbors. Benefits administrators can manage ACA 1094-C correction overrides and ACA ALE member order, as well as view ACA reports.
Integration Build in the Integration functional area.	Enables you to create and configure integrations that send ACA 1094-C and 1095-C data to the IRS.

Domains	Considerations
Manage: ACA Partner Integrations in the Benefits functional area.	Enables you to grant ACA data access to software partners for form transmission.
Process: ACA Tax Filing 1094-C/1095-C - USA in the Benefits functional area.	Enables you to run the annual tax filing process and can create 1095-C data and forms.

Business Processes

No impact.

Reporting

Reports	Considerations
View 1094-C Form Data	Enables you to verify: • The total number of 1095-C forms for the ALE. • Whether someone has corrected the 1094-C data after transmitting it to the IRS.
View 1094-C FTE and Total Count Details	Enables you to review all employees included in the total and full-time employee counts.
View 1095-C Form Recipient Data	Enables you to view corrections and external recipients loaded by the Import 1095-C Forms Recipient Data EIB.
View Current 1095-C Form Recipient Data	Enables you to view the same data as the View 1095-C Forms Recipient Data report, but displays only the most recent 1095-C form.
1095-C Eligible Employees by State or Region	Enables you to view 1095-C form data for selected workers by state or region. This report doesn't display workers that you add with EIB.

Integrations

Use these ACA connectors for the IRS Form 1094-C and 1095-C data:

- *ACA Information Returns (AIR) Connector* :
    - Sends ACA registration information to the IRS.
    - Submits ACA tax data under the Affordable Care Act Information Returns (AIR) Program.
    - Retrieves status update messages from the IRS endpoint.
- *ACA Mailing Connector* communicates with CIC Plus, Workday's external mailing service vendor. Set up a business relationship with CIC Plus approximately 2 months before the transmission deadline.

Use these web services to work with software partners that manage form transmission:

- *Get ACA Employer Data* : Retrieves company or employer ACA data for 1094-C state and federal filings.
- *Get ACA Employee Data*: Retrieves employee ACA data for 1095-C forms.

  Note: Workday doesn't mask employee Social Security Numbers (SSN) for the web service.
- *Put Federal ACA Transmission Status*: Generates federal transmission status and details to display in the *ACA Transmission Status* report.
- *Put State ACA Transmission Status*: Generates state transmission status and details to display in the *ACA Transmission Status* report.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

FAQ: Patient Protection and Affordable Care Act on page 1492

Workday Community: Affordable Care Act (ACA) Reporting Requirements Feature FAQ

Steps: Set Up Affordable Care Act Measurements and Eligibility

Prerequisites

To determine a worker's Affordable Care Act (ACA) benefit eligibility, Workday uses earning codes to retrieve hours of service from Workday Payroll or Payroll Interface. If you don’t use Workday Payroll, you can load hours using the *Affordable Care Act Workers Hours And Wages* EIB.

Set up earnings for:

- Paid hours worked.
- Paid hours not worked: vacation, personal leave, sick, FMLA, jury duty, military service.
- Adjunct faculty hours for unpaid hours not worked: FMLA, USERRA, jury duty, educational institution leave.

To ensure accurate codes:

- For line 14, map the configured spouse relationship type as *Spouse* in the Map Relationship to Workday field of the Maintain Related Person Relationships task.
- For line 16, configure safe harbors in Workday.

Context

Define the standards and other parameters Workday uses to identify and create benefit events for eligible workers.

Workday uses the look-back measurement method to identify full-time workers according to ACA standards.

Steps

1. Review Workday Community: Affordable Care Act (ACA) Checklist.
2. Edit Domain Security Policies.

   Set up the security policy for the *Affordable Care Act (ACA) Administration* domain in the Benefits functional area.
3. Manage Benefit Coverage Types on page 1243.

   For Health Care Coverage Types, select the Medical check box to indicate which coverage types you want Workday to consider as medical.

4. Create Benefit Eligibility Rules on page 1255.

   Create an ACA Measurement Period Eligibility Rule that defines the workers you want to measure. You might want more than 1 rule. Example: You can create rules for:

   - Collectively and noncollectively bargained workers.
   - Salaried and hourly workers.
   - Workers located in different states.

   Note: Don't use the Qualified As Full-time Based on ACA Measurement Periods report field in your new ACA Measurement Period Eligibility Rule.
5. Access the Edit Benefit Eligibility Rule task.

   Modify the existing benefit eligibility rules for benefit groups and plans offered to ACA-eligible workers (including variable and hourly workers).

   Security: *Set Up: Benefits* domain in the Benefits functional area.
6. For Payroll Interface users only, load payroll data using the *Put Affordable Care Act Worker Hours And Wages* web service.

   Enter 1 row for each payslip.
7. Create Affordable Care Act Measurement Periods on page 1475.

   Create a measurement period for new hires and ongoing workers. You need a measurement period for each group of workers that has an ACA measurement period eligibility rule.
8. Create Enrollment Events on page 1343.

   Create a benefit event to use in a passive event rule that sets the measurement period for workers using these criteria:

   - Enrollment Offering Type: Medical.
   - Days to Enroll Calculation: Initiate Date.
   - Days to Enroll:

     Configure this option based on the administrative period configured on the measurement period. The configuration depends on when coverage should begin: either on the first of the month after gaining eligibility, or after a waiting period.

     Set to 31 if the initial measurement administrative period is zero. Coverage begins on the first of the month, following the end date of the measurement period.

     Set to 1 if the initial measurement administrative period is 31 days, so that the submit by date equals the event date.

FAQ: Patient Protection and Affordable Care Act on page 1492

Workday Community: Affordable Care Act (ACA) Reporting Requirements Feature FAQ

Steps: Manage Affordable Care Act Measurements and Eligibility

Prerequisites

- Set up Affordable Care Act measurements and eligibility.

Context

The Affordable Care Act (ACA) requires employers to offer benefit coverage to employees that are considered full-time according to ACA standards. Worklets and reports help you identify employees and analyze your compliance with the ACA regulations. To offer benefits to eligible employees, run the ACA type passive event and open enrollment.

Steps

1. Schedule Passive Events on page 1445.

   Schedule and run passive events for the benefit event types that you use to track the eligibility of new hires and variable hour, part-time workers. Workday creates records of when eligible workers complete a measurement period.

   Workday recommends running the passive event for each measurement period definition every day to process workers who have a gain or loss of coverage.
2. Run the open enrollment process.

   Workday uses the open enrollment to offer benefits for eligible variable hour, part-time workers. See Steps: Manage Open Enrollment on page 1416.
3. Evaluate your workers' employment, health coverage, and compliance with ACA regulations.

   See Reference: Worklets and Reports for Affordable Care Act Compliance on page 1492.

Tasks

Steps: Set Up Affordable Care Act Measurements and Eligibility on page 1466

Steps: Set Up ACA Software Partner Transmission

Prerequisites

- Create ACA 1095-C data.
- Security: *Manage: ACA Partner Integrations* secured to the Benefits domain.

Context

You can enable ACA software partners to extract ACA data to transmit to federal and state entities in the Create 1094-C Company Configuration task. Workday provides web services that enable the ACA software partners to create an integration. We provide a security domain specifically for the ACA partner. You can configure the domain policy so that partners can only access data for the transmission.

Steps

1. *Role: Benefits Administrator* - Configure security for ACA software partners:
   a) Create the *Integration System User* account, which enables you to set up a Workday account for software partners.

      Select Do Not Allow UI Sessions to restrict the account for integrations only.
   b) Select the Security Profile related action from the new Workday account. Select Assign Integrations System Security Groups.
   c) Add the account to an existing or new integrations security group, which must be unconstrained.
   d) Edit the *Manage: ACA Partner Integrations* domain security policy and give the relevant security groups view or modify access.
   e) (Optional) Include the account on Manage Authentication Policies report.
   f) Access and run the Activate Pending Security Policy Changes task.

2. *Role: Benefits Administrator* - Provide an endpoint URL to the ACA Partner:

    a. Sign in to the tenant for your endpoint.
    b. Run the Public Web Services report and locate the ACA Partner Integrations (Public) web service.
    c. From related actions of the web service, select Web Service > View WSDL.
    d. Go to the end of the file and locate this line, where [*link*] is the WSDL ID that you provide.

    ```
    <soapbind:address location =“[link]”>
    ```
3. *Role: ACA Software Partner* - Set up the integration using these web services:

    - *Get ACA Employer Data*: Retrieves company or employer ACA data for 1094-C state and federal filings.
    - *Get ACA Employee Data*: Retrieves employee ACA data for 1095-C forms.

      Note: Workday doesn't mask employee Social Security Numbers (SSN) for the web service. However, the software partner can enter the value of 1 in the Mask SSN field for printing.
    - *Put Federal ACA Transmission Status*: Generates federal transmission status and details to display in the ACA Transmission Status Report.
    - *Put State ACA Transmission Status*: Generates state transmission status and details to display in the ACA Transmission Status Report.
4. *Role: Benefits Administrator* Create an ACA Company Configuration on page 1478.

    Enable federal and state transmissions by ACA software partners in the Enable External ACA Transmission section. When you select either option, you can add and save URLs.

    When you select the External ACA Federal Transmission check box, Workday locks transmissions from Workday to the IRS, which avoids duplicate transmissions.

Result

The ACA partner can access employee data to create IRS and state filings.

Next Steps

Look at the ACA Transmission Status Report to see ACA transmission status.

Related Information

Tasks

Create an ACA Company Configuration on page 1478

Steps: Set Up ACA Forms 1094-C and 1095-C

Prerequisites

Set up Affordable Care Act reporting.

Context

Workday enables you to comply with IRS 1094-C and 1095-C reporting requirements. You can:

- Identify health care plans that:
    - Are self-insured or fully funded.
    - Provide Minimum Essential Coverage (MEC).
    - Provide Minimum Value Coverage (MVC).
- Define employee populations with respect to 1094-C and 1095-C requirements.
- Configure Form 1094-C options by company.

- Create ACA Applicable Large Employer (ALE) groups.
- Create 4980H safe harbor eligibility rules.
- Configure 4980H safe harbors.
- Generate and distribute completed Forms 1094-C and 1095-C.
- Process ACA data for Single Legal Entity (SLE) companies.

Note: Make sure that you understand your compliance requirements before setting up Forms 1094-C and 1095-C. Workday enables you to create Forms 1094-C and 1095-C, but doesn't assume responsibility for compliance.

For details, see:

- About Form 1095-C, Employer-Provided Health Insurance Offer and Coverage Insurance.
- Individual Shared Responsibility Provision - Minimum Essential Coverage.

Steps

1. Access the Edit Benefit Plan task.

   For medical health coverage plans, in the US Affordable Care Act Options section, select:

   - The Funding Method.
   - The check box if the plan provides the ACA Minimum Value Coverage.
   - Whether the ACA Minimum Essential Coverage applies to the employee, the spouse, or dependents. You can also conditionally offer spousal coverage.

   Security: *Set Up: Benefits* domain in the Benefits functional area.
2. (Optional) Access the Create Benefit Eligibility Rule task.

   Determine the employee qualifications for 4980H safe harbor. Create 1 or more ACA 4980H safe harbor eligibility rules if you're going to create a 4980H safe harbor configuration.

   Workday determines the worker population for ACA 1094-C and 1095-C processing based on their full-time status. When you create ACA 1095-C tuning eligibility rules, you can include or exclude that population.

   Security: *Set Up: Benefits* domain in the Benefits functional area.
3. (Optional) Access the Create ACA 4980H Safe Harbor Configuration task.

   Match the 4980H safe harbor to selected employee populations with the 4980H eligibility rule that you created in the previous step. Indicate for which months these 4980H safe harbors apply to the eligible employee groups.

   Security: *Affordable Care Act (ACA) Administration* domain in the Benefits functional area.
4. Access the Create ACA ALE Group task.

   An Applicable Large Employer (ALE) can be a single entity or a group of related entities. A single entity is a company with an Employer Identification Number or a Designated Government Entity. A group of related entities is a parent company and its subsidiaries. Each entity must file a Form 1094-C with the IRS. Each ALE group is associated with 1 calendar year and 1 or more companies for 1 or more specified months.

   Workday uses this data to populate Form 1094-C automatically.

   Use the Maintain ACA ALE Member Order task to sort ALE members from all ALE groups for transmission to the IRS.

   Security: *Affordable Care Act (ACA) Administration* domain in the Benefits functional area.
5. Access the Calculate 1094-C Total and Full Time Employee Counts By Month task.

   For an SLE, Workday rolls up the counts to the main company.

   Security: *Process: ACA Tax Filing 1094-C/1095-C (Run)* domain in the Benefits functional area.
6. Create an ACA Company Configuration on page 1478.

   Define 1094-C company configuration information.

7. (Optional) Access the ACA 1094-C Form/Box Tester and ACA 1095-C Form/Box Tester reports.

   If you use ACA ALE Groups in Workday, the ACA 1094-C Form/Box Tester displays the sorted order of ALE members. You sort the order with the Maintain ACA ALE Member Order task.

   Note: The tester displays the most updated data in Workday, not the data last created from running the Create ACA 1095-C/1094-C Data task. After you complete a data correction, access the Create ACA 1095-C/1094-C Data task to create completed forms.

   Security:

   - *Affordable Care Act (ACA) Administration* domain in the Benefits functional area.
   - *Process: ACA Tax Filing 1094-C/1095-C (Reports)* domain in the Benefits functional area.
8. Access the Create ACA 1095-C/1094-C Data task.

   Workday collects the 1095-C/1094-C data from which you can create employee 1095-C forms. You can run the data creation job as often as necessary. Each time the data creation job runs, Workday overwrites any data that has changed since the previous run.

   Note: You can change the contact information on the 1094-C company configuration after you create the 1095-C data. If you select the Update 1094-C Data Only check box, Workday updates only the contact information when you recreate the 1095-C data. It doesn't update other 1095-C information, such as codes.

   After you create the 1094-C and 1095-C data, Workday provides the option to update the data using the Create ACA 1095-C/1094-C Data (Corrections) task. Select the Prevent 1095-C corrections for previously transmitted forms check box to update 1094-C data only. Workday generates corrections for untransmitted 1095-C forms when necessary, whether or not you select the check box.

   Use the View ACA 1095-C Form Data task to verify the data.

   Workday applies the sorted order of ALE members when you create or view the 1094-C form data.

   If the company is a Single Legal Entity (SLE), Workday creates only 1 1095-C form for each employee who worked in multiple companies within the SLE.

   Security:

   - *Process: ACA Tax Filing 1094-C/1095-C (Run)* domain in the Benefits functional area.
   - *Process: ACA Tax Filing 1094-C/1095-C (Reports)* domain in the Benefits functional area.
9. Import data for dependents that don't exist in Workday, such as COBRA participants and retirees, as well as required data that Workday doesn't generate.

   See Steps: Import ACA 1095-C Recipient Data on page 1473.

   Starting in Tax Year 2020, you need to populate these fields using the *Import 1095-C Form Recipients Data* EIB:

   - Employee's Age on January 1.
   - Line 14 Individual coverage Healthcare Reimbursement Accounts (ICHRA) codes.
   - Line 17.

   After you've imported the data to Workday, you can view it in Workday reports, create 1095-Cs, and send data to the IRS using the ACA Connectors.

   See Prepare ACA Recipient Data for EIB Upload on page 1480.
10. (Optional) Access the Publish Employee 1095-C Forms task.

    Release the forms to self-service employees for viewing and printing the PDF.

    Security: *Process: ACA Tax Filing 1094-C/1095-C (Reports)* domain in the Benefits functional area.

11. (Optional) To make it easier for employees to find the option on mobile devices, add: the 1095-C Printing Election option.

    You can display this option on:

    - The Benefits and Pay Hub with the Maintain Hubs task.
    - The Benefits worklet with the Configure Worklet task.

    Note: The Benefits worklet isn't available on Workday desktop.

    Security: *Set Up: System* domain in the System functional area.
12. (Optional) Access the Maintain ACA 1095-C Sorting Setup task.

    Configure the sorting of fields and where Workday splits files.

    Security: *Process: ACA Tax Filing 1094-C/1095-C* domain in the Benefits functional area.
13. Access the Create ACA 1095-C Forms task.

    Run this task only after employee and dependent data is up to date, and you're ready to send completed forms to the IRS. If you make changes to ACA data after creating 1095-C forms, data in Workday might no longer match the submitted forms.

    a. To send printed 1095-C forms to the IRS, select the Unmask Social Security Numbers check box. This option displays SSNs in the generated PDF.
    b. To include active employees who receive the electronic version, select the Include Workers Opted-Out of Paper Copy check box.

    Security: *Process: ACA Tax Filing 1094-C/1095-C (Run)* domain in the Benefits functional area.
14. Send Form 1094-C and Form 1095-C data to the IRS.

    See Steps: Set Up ACA Information Returns Connector.
15. View and Correct ACA Data Transmission Status on page 1482.

Result

Workday creates the 1094-C and 1095-C forms that you can then send to the IRS electronically. Workday creates separate 1095-C forms for each company that a worker has during the year.

Employees can select Change 1095-C Printing Election on the Benefits and Pay Hub, or the Benefits worklet (on the mobile app only). They can select to receive their completed 1095-C form in both paper and electronic (PDF) or electronic copy only.

Next Steps

View your created forms and 1094-C and 1095-C form data. In addition, access these reports:

- View 1094-C FTE and Total Count Details.

  You can view employee information from all related companies for an SLE.
- View 1095-C Form Recipient Data.

Access the Delete 1095-C Form Data task to delete selected 1095-C recipient data for a specified company and tax year. You can't delete previously transmitted 1095-C recipient data.

Some states in the US require that yo report to verify health coverage. Access the 1095-C Eligible Employees by State or Region report to view worker 1095-C data in a specific state or region.

Steps: Set Up a Single Legal Entity
Set Up Worklets

Reference

FAQ: Patient Protection and Affordable Care Act on page 1492

Steps: Import ACA 1095-C Recipient Data

Prerequisites

Set up ACA Forms 1094-C and 1095-C.

Context

You can import ACA Form 1095-C data into Workday to:

- Add to or update Workday-generated 1095-C data.
- Add COBRA participants who aren't already in Workday.
- Import or update data for retirees who aren't in Workday or aren't included in 1095-C processing.
- Import dependents who aren't in Workday or additional dependent 1095-C data for the employee.

Import recipient data before using the Create ACA 1095-C Forms task.

Steps

1. Edit Domain Security Policies

   Add the Benefits Administrator to Integration Permissions on the *Process: ACA Tax Filing 1094-C/1095-C* domain in the Benefits functional area.

   Select the Put check box.
2. Set Up Inbound EIB.

   Create an inbound EIB based on the *Import 1095-C Form Recipients Data (WS Background Process)* web service operation. Enter *Import 1095-C Form Recipients Data (WS Background Process)* in the Web Service Operation prompt.
3. From the related actions menu of the integration system for the upload, select Template Model > Generate Spreadsheet Template.

   To maintain the correct spreadsheet format, don't change the .xml file extension.

   Security: *Integrations: EIBs*, *Integration Configure*, and *Integration Event* domains in the Integration functional area.
4. Prepare ACA Recipient Data for EIB Upload on page 1480.
5. Launch EIB Spreadsheet Upload.

Next Steps

- Check the EIB spreadsheet upload for errors.
- Run the View 1095-C Form Recipient Data report for the employee or employees to verify the results of the upload. The Generation Source field displays:

WG	Workday Generated
EG	Externally Generated
WE	Workday Generated and then Externally Updated

Note: After import, the Create ACA 1095-C/1094-C Data task regenerates and overwrites WG data. The Delete ACA 1095-C/1094-C Data task deletes data, regardless of its source. Importing 1095-C recipient data overwrites WG data and previously imported EG and WE data.

- Access the View 1095-C Form Recipient Data report to verify the results of the upload. Revise the data in the EIB spreadsheet if necessary and upload again.

Concept: Integration Security in Workday

Tasks

Set Up EIB Spreadsheet

Customize EIB Spreadsheet Template

Configure Affordable Care Act Reporting

Prerequisites

Security: *Affordable Care Act (ACA) Administration* in the Benefits functional area.

Context

You can define the rules for Workday to use to generate the Affordable Care Act reports.

Steps

1. Access the Affordable Care Reporting Configuration task.
2. As you complete the task, consider:

Option	Description
Lookback Begin Date Lookback End Date	Displays in the Affordable Care Act Dashboard (Do Not Use). Workday uses Lookback Dates in combination with the Paid Hours Standard for Full-Time Status to determine full-time status. The ACA Qualified Employees Enrollment Count and Part-Time Employees Working More Than Federal Full-Time Standard reports use these dates to measure employees with variable hours. Note: These dates don't need to match the Measurement Period dates on the Create ACA Measurement Periods task because they are the dates you use to measure employee eligibility. You can change the lookback dates to look at different periods of times for reporting.
Standard for Paid Hours Per Week Standard for Paid Hours Per Month	Full-time status is based on the paid hours worked and not worked during the period defined by the Lookback Dates. Workday determines paid hours worked or not worked using the values in the Workday Payroll Hours Source: Payroll Calculations list or by using the data you've loaded from an outside source. Example: These amounts can be 30 hours per week and 130 hours per month.

Option	Description
Payroll Calculation for Paid Hours Worked Payroll Calculation for Paid Hours Not Worked (PTO)	For Workday Payroll only, select 1 or more Payroll calculations for each prompt: Paid Hours Worked and Paid Hours Not Worked.
Rehire Gap	When evaluating the employee for benefits eligibility, Workday treats a rehire as a new hire if their gap in service exceeds these amounts: • 13 Weeks • 26 Weeks Note: Only qualified educational institutions as defined in Treasury Regulation 4980H should use the 26-week rehire gap.
Use Rule of Parity	Select the Use Rule of Parity check box to treat rehired workers as new hires if their break in service is: • Greater than 4 weeks. • Fewer than the 13 or 26 weeks of the rehire gap you selected. • Greater than their preceding period of employment. Example: Ralph worked 12 weeks, was terminated, and started work again 16 weeks after termination. With the Use Rule of Parity check box selected, Workday treats him as a new employee for ACA reporting purposes. Ralph's break in service was 16 weeks, which meet all rule of parity criteria.
Includes Leaves of Absence	Select the Include Leaves of Absence check box to use leaves to determine the start date for the ACA initial measurement period.
Minimum Weeks	Set Minimum Weeks to 13 or higher.

Create Affordable Care Act Measurement Periods

Prerequisites

- Review the Affordable Care Act (ACA) Checklist.
- Security: *Affordable Care Act (ACA) Administration* in the Benefits functional area.

Context

You can define these periods in Workday for new hires and ongoing workers with variable hours:

- Measurement Period: The date interval used to determine a worker's eligibility for benefit coverage.
- Administrative Period: The date interval that employers can use to enroll ACA full-time eligible workers into benefit coverage.
- Stability Period: The date interval during which ACA full-time eligible workers are eligible for benefit coverage.

Depending on the groups of employees you want to measure, you might have more than 1 measurement period definition. Create new measurement period definitions every year.

Workday automatically adjusts administrative periods to adhere to these requirements:

- New hires: The stability start date must be 14 months or less from the start date of the measurement period.
- New hires and ongoing workers: The stability start date must be 91 days or less from the end date of the measurement period.

Steps

1. Access the Create ACA Measurement Period task.
2. As you complete the task, consider:

Option	Description
Measurement Period Eligibility Rule	A group of employees that are eligible through this measurement period definition.
Use 2015 Transition Measurement Period Rules	Workday sets the Stability Period Duration (Months) to 12 months if you select and enter a number between 6 and 12 for Measurement Period Duration (Months). Note: The Measurement Period Start Date must be on or before 2014-07-01.

3. As you complete the Ongoing Measurement Period section, consider:

   Workday generates measurement history for the ongoing measurement period when all of these conditions are true:

   - The Measurement Period Start Date is after the Initial Period Begin Date.
   - The Measurement Period End Date is before Today.
   - The Initial Stability End Date is before Today. Or, the Initial Stability Start date is on, or before, Today and the initial measurement period for ACA full-time employees is *No*.

Option	Description
Measurement Period Start Date	The measurement period dates don't need to match the Lookback dates on the Affordable Care Reporting Configuration task.
Administrative Period Duration (Days)	Number of days for workers to enroll in benefit coverage. The days can't be more than 90. Workday recommends that you set the Stability Period Start Date to coincide with your Open Enrollment Event Date and the Coverage Begin Date for new elections.
Stability Period Start Date Stability Period End Date	The dates through which you must offer coverage. For new hires, Workday automatically calculates the stability period start and end dates based on the worker's hire date. Automatically populated from the Measurement Period Start Date, Measurement Period Duration (Months), and Administrative Period Duration (Days).

Option	Description
Stability Period Duration (Months)	Automatically populated from the Measurement Period Duration (Months).
Include in Passive Event Processing	Select the check box when there's a change in eligibility and you want to: • Create a passive event. • Send passive alerts. Workday recommends enabling this option when your ongoing measurement periods don't align with open enrollment. Example: You have 6-month measurement and stability periods. Passive event processing creates a benefit event for ACA-eligible employees at the end of ongoing measurement periods. Clear the check box if the passive event overlaps with an active open enrollment. Example: You have a 12-month measurement period that aligns with open enrollment. Workday offers medical coverage to ACA-eligible employees during open enrollment.

4. As you complete the New Hire Measurement Period section, consider:

Option	Description
Measurement Period Duration (Months) Stability Period Duration (Months)	Workday derives the duration from the ongoing Measurement Period Duration (Months).
Admin Period Duration Before Measurement Period (Days) Admin Period Duration After Measurement Period (Days)	To meet the 14-month or partial administrative month rules, Workday might adjust the start date for the stability period when creating the benefit event.

Example

This example illustrates how to set up the Ongoing Measurement Period section with these settings:

- Stability start date as January 1.
- Stability end date as December 31.
- Measurement duration of 12 months.

Field	Enter
Measurement Period Start Date	November 1, 2014
Measurement Period Duration (Months)	12
Measurement Period End Date	Automatically populates with October 31, 2015.
Administrative Period Start Date	Automatically populates with November 1, 2015.
Administrative Period Duration (Days)	61
Administrative Period End Date	Automatically populates with December 31, 2015.
Stability Period Start Date	Automatically populates with January 1, 2016.
Stability Period Duration (Months)	Automatically populates with 12.
Stability Period End Date	Automatically populates with December 31, 2016.

Workday Community: Affordable Care Act (ACA) Checklist

Create an ACA Company Configuration

Prerequisites

- Configure each Employer Identification Number (company) or a Designated Government Entity (DGE) you're reporting on.
- Create ACA Applicable Large Employer (ALE) groups and calculate the 1094-C Total and Full-Time Employee Counts By Month.
- Create ACA tuning eligibility rules by accessing the Create Benefit Eligibility Rule task.
- Security: *Affordable Care Act (ACA) Administration - USA* in the Benefits functional area.

Context

The ACA company configuration defines your choices for ACA 1094-C and 1095-C forms and reporting. You can specify who receives a 1095-C form and select the eligibility tuning rules. You can also configure ALE and DGE groups for Part I, II, and III.

Steps

1. Access the Create ACA 1094-C Company Configuration task.
2. Select the Include Retirees check box to produce 1095-C forms for retired former employees that you track in a retiree organization.

   To ensure that retirees, get a 1095-C, they must meet these criteria. They:

   - Have been terminated from the company.
   - Belong to a Retiree Organization.
   - Have enrolled in self-insured medical coverage for at least 1 month during the reporting year.
   - Retired before the reporting year. Example: For the 2020 reporting year, employees must have become retired in 2019 or earlier. If they were terminated in 2019, but became officially retired in 2020, they won't receive a 1095-C.
3. (Optional) Select ACA 1095-C tuning eligibility rules that Workday uses to include or exclude the worker population for ACA 1094-C and 1095-C processing.

   Workday uses the date on which you create the ACA data to determine whether to include or exclude a subset of employees.

   Example: Workday determines that 3,496 workers are subject to ACA 1094-C and 1095-C processing. The Benefits administrator sets up an ACA 1095-C tuning eligibility rule using the Create Benefit Eligibility Rule task. They select a condition for the eligibility rule, which involves 196 workers. They then select that eligibility rule in the Exclude ACA 1095-C Tuning Eligibility Rule Workers field. This action removes 196 workers from the original 3,496. Workday then processes a total of 3,300 workers.

   Note: Using tuning eligibility rules can affect performance when creating or correcting 1095-C forms.

   Security: *Affordable Care Act (ACA) Administration* in the Benefits functional area.

4. In the Enable External ACA Transmission section, select the appropriate check box to enable third-party ACA software partners to handle transmission to federal or state agencies. See Steps: Set Up ACA Software Partner Transmission on page 1468.

   When you enable external transmissions, you can then add and save URLs.

   Workday prevents duplicate 1094-C and 1095-C transmissions to the IRS when:

   - You select the External ACA Federal Transmission check box in the Create 1094-C Company Configuration task. This check box indicates that you plan to use a certified software partner to manage your transmissions to the IRS.
   - Workday receives confirmation that the ACA Software Partner has transmitted the 1094-C and 1095-C data to the IRS and updates the ACA Transmission Status Report.

   Note: When ACA software partners extract employee data using the *Get ACA Employee Data* web service, Workday doesn't mask employee Social Security Numbers (SSN). However, the software partner can enter a value of 1 in the Mask SSN field to mask SSNs for printing.
5. Select the Use coverage end date in month of termination check box to display a coverage offer for the full month of termination.

   This option applies to terminated workers that get coverage for the full month and the termination occurs during a month in the reporting year. Selecting this check box:

   - Has no effect on months after termination.
   - Treats Line 14 as an offer, not 1H.
   - Populates Line 15 with the employee-required contribution value.
   - Treats Line 16 as 2C if the employee has enrolled in the offered coverage.
6. Select the 2-digit month number for the Plan Start Month field.

   Starting in Tax Year 2020, the IRS requires this value, which Workday uses for each employee. You can update the value for an individual employee in the *Import 1095-C Form Recipients Data* EIB.
7. If you enter content in any field in the Part I Applicable Large Employer Member (ALE Member) section, you must complete all of these fields:

   - Name of ALE Member (Employer)
   - Street address (including room or suite no.)
   - City or town
   - State or province
   - Employer ISO country code (2 letter)
   - Employer ZIP or foreign postal code
   - First name of person to contact
   - Last name of person to contact
   - Contact telephone number
8. As you complete Part III ALE Member Information—Monthly, consider:

Same Minimum Essential Coverage settings for all 12 months?	Select to provide the same minimum essential coverage for all 12 months.
Full-Time Employee Count for ALE Member (Calculated)	The Calculate 1094-C Total and Full Time Employee Counts By Month task populates this column. Zeroes indicate that you haven't run the task. Security: *Process: ACA Tax Filing 1094-C/1095-C (Run)* in the Benefits functional area.
Full-Time Employee Count for ALE Member (Override)	The Calculate 1094-C Total and Full Time Employee Counts By Month task doesn't affect the override values.

	Security: *Process: ACA Tax Filing 1094-C/1095-C (Run)* in the Benefits functional area.
Total Employee Count for ALE Member (Calculated)	The Calculate 1094-C Total and Full Time Employee Counts By Month task populates this column. Zeroes indicate that you haven't run the task. Security: *Process: ACA Tax Filing 1094-C/1095-C (Run)* in the Benefits functional area.
Total Employee Count for ALE Member (Calculated)	The Calculate 1094-C Total and Full Time Employee Counts By Month task doesn't affect the override values. Security: *Process: ACA Tax Filing 1094-C/1095-C (Run)* in the Benefits functional area.
(d) Aggregated Group Indicator	For a Company in an ALE group, Workday populates this column based on the Create ACA ALE Group task configuration.
ACA ALE Group(s)	For a Company in an ALE group, Workday populates this column based on the Create ACA ALE Group task configuration.
All 12 Months	Select to display *Yes* for the All 12 Months column on the 1094-C form.

Steps: Set Up ACA Software Partner Transmission on page 1468

Prepare ACA Recipient Data for EIB Upload

Prerequisites

Import recipient data and access the Create ACA 1095-C/1094-C Data task.

Context

Prepare 1095-C recipient data in an EIB spreadsheet to launch an EIB upload.

Steps

1. Access the View 1095-C Form Recipient Data report and export the results to an Excel file.

2. Copy the exported data into the Import 1095-C Form Recipients Data EIB spreadsheet template and modify.
    a) Start at the cell labeled Employee.
    b) Navigate to the cell labeled Row ID in the Line 17 Covered Individuals section (column BF). Select all the data to the end of the spreadsheet, and paste it 1 column to the right (column BG).
    c) Enter a numeric value in every row of the Header Key column to associate the employee or dependent with the correct Applicable Large Employer (ALE). The Header Key must match the Header Key in section 1 of the template.

        Examples:

        - Enter 1 in every row of the Header Key column if you have only 1 ALE.
        - Enter 1 in all rows for ALE 1 and 2 in all rows for ALE 2 if you have 2 ALEs.
    d) For each recipient you add to the spreadsheet, enter a valid Social Security Number (SSN) or Individual Taxpayer Identification Number (ITIN).

        Data exported from the View 1095-C Form Recipient Data report contains masked digits for the SSN or ITIN for security purposes.

        Don't correct SSNs or ITINs that you export to the spreadsheet from Workday. Correct them in Workday before running the View 1095-C Form Recipient Data report. This action keeps the SSNs updated at the source and prevents future discrepancies.
    e) In the Line Key column, enter a unique value for each employee.

        Start with 1 and increment each row by 1.

        Each employee has 1 row for them self and 1 or more rows for each of their dependents. Each dependent must have the same value for Line Key as the employee. Example:

Header Key	Line Key	Employee
1	1	Emp_0001
1	1	
1	1	
1	2	Emp_0002
1	3	Emp_0003
1	3	
1	3	

Header Key	Line Key	Employee
1	4	Emp_0004

f) Enter a unique Row ID for each covered individual.

Start at 1 for the employee and increment by 1 for each dependent.

Note: During the import, Workday generates and assigns a reference ID to each covered individual.

g) Enter a 2-digit numerical value for the month In the Plan Start Month column.

Starting in Tax Year 2020, the IRS requires this value, which Workday uses for each employee.

You can update individual employee values in the EIB, but not from the Create ACA 1095-C Company Configuration task.

h) (Optional) Enter a whole number from 1-120 in the Employee's Age on January 1 field. Required if you've used any of the codes for Individual Coverage Health Reimbursement Accounts (ICHRA).

i) Line 14: Enter these ICHRA codes, as needed.

- 1L
- 1M
- 1N
- 1O
- 1P
- 1Q

j) Enter the employee's zip code in all applicable month columns for Line 17, if you've used any of the codes for individual coverage HRAs.

Enter the zip code for the lowest cost silver plan used to calculate the Employee Required Contribution in line 15.

View and Correct ACA Data Transmission Status

Prerequisites

- Schedule an integration to transmit 1094-C and 1095-C data to the IRS.
- Security: *Process: ACA Tax Filing 1094-C/1095-C - USA* domain in the Benefits functional area.

Context

When you, or a third-party ACA Software Partner, transmit 1094-C and 1095-C forms, the IRS responds immediately upon receiving the data. While the IRS might take several days to process large volumes of data, you can view returned data and correct erroneous 1094-C and 1095-C forms. Internal transmissions are transmissions that you send. An ACA Software Partner manages external transmissions for you, including troubleshooting and resubmitting rejected transmissions.

Steps

1. Access the ACA Transmission Status Report.
2. As you complete this task, consider:

Option	Description
Transmission Type	The type of external state and federal transmissions. The value can be:

Option	Description
	• *Original*: The transmission by the ACA Software Partner for either state or IRS filing. • *Correction*: A transmission that the ACA Software Partner has corrected and resubmitted. • *Replacement*: A transmission that the ACA Software Partner has sent as a replacement for an erroneous transmission.
Correction	For internal transmissions, indicates that the transmission type is a correction.
Transmission Status	Indicates if the IRS or state entity has accepted the transmission. The value can be either *Accepted* or *Accepted with Errors*.

3. To view errors for internal transmissions:
    a) Click View Integration Event to display transmission errors or 1095-C records with errors.
    b) Select any 1095-C error record to view that worker's 1095-C information.
    c) Click View 1095-C to view the 1095-C form data for a worker or external recipient.
    d) Click View Transmission or View Authoritative Transmission to view transmission errors and included 1095-C records with errors for a worker or an external recipient.
4. Correct the errors in the 1095-C records:
    - For worker 1094-C and 1095-C data, access the Create ACA 1095-C/1094-C Data (Corrections) task.
    - For external recipient 1094-C and 1095-C data, edit the EIB spreadsheet.

    Note: Wait until all the transmissions are complete with an *Accepted* or *Accepted with Errors* status before you create the corrected 1095-C records.
5. Launch an integration to send the corrected data to the IRS after the IRS has completed processing all your data.

Tasks

Steps: Set Up ACA Forms 1094-C and 1095-C on page 1469

Concept: Worker Eligibility for Affordable Care Act Benefits

Workday uses passive events to identify eligible workers, based on average hours, records, and measurement history for benefits according to Affordable Care Act (ACA) standards. Using the ACA Measurement Period Eligibility Rule, Workday can determine whether:

- You must record a measurement period.
- A worker's hours during a measurement period qualify the worker as full-time.

Workday displays the result in the Qualified As Full-time Based On ACA Measurement Period field. The *If there is an effect on employee benefits?* condition rule then determines whether to create a benefit event or not.

For ongoing workers, Workday determine eligibility for variable-hour part-time employees and uses Open Enrollment to offer them coverage. When you add the Qualified As Full-time Based On ACA Measurement Period field to eligibility rules for the benefit group and plan, Workday considers those workers for open enrollment.

Record ACA History

Workday follows this logic to determine what to include in the history record.

1. Identify workers using the ACA eligibility rule assigned to the passive event.
2. Among the eligible workers, find any who have completed a measurement period. Example: Where today's date is later than the worker's measurement period end date.
3. For those workers, if the start and end dates don't already exist in history for the:
    - Initial measurement period, then write an initial history record.
    - Ongoing measurement period, then write a standard (ongoing) history record.

Define the Full-Time Workers Eligible for ACA Benefits

Workday follows this logic to populate the Qualified As Full-time Based On ACA Measurement Period field.

1. Identify workers using the eligibility rule from the passive event.
2. For each worker, evaluate the Qualified As Full-time Based On ACA Measurement Period field:
    a. Get the payroll hours applicable to the measurement period.
    b. Calculate Average Month or Average Week:
        - Average Month = total hours / # of duration months
        - Average Week = total hours / # of duration weeks
    c. On the Affordable Care Reporting Configuration task:
        - If *Average Month* ≥ Standard for Paid Hours Per Month, or
        - If *Average Week* ≥ Standard for Paid Hours Per Week

    Then the Qualified As Full-time Based On ACA Measurement Period field = *True*.
3. If the Qualified As Full-time Based On ACA Measurement Period field = *True*, then run the *If there is an effect on employee benefits?* condition rule to determine whether to create a benefit event or not.

Reference

FAQ: Patient Protection and Affordable Care Act on page 1492

Reference: Affordable Care Act 1095-C Form Codes

This page provides a quick reference to 1095-C code explanations, taken from the IRS Instructions for Forms 1094-C and 1095-C. The Workday Tips column provides quick reference information and additional information.

Seek the advice of your legal counsel regarding any concerns or differences in interpretation, as you're ultimately responsible for Affordable Care Act (ACA) compliance. Customers who need to report different codes (due to differences in interpretation, edge cases Workday doesn't support, or any other reason) need to load those codes using the *Import 1095-C Form Recipient Data* EIB.

Line 14: Offer of Coverage

Line 14 defines who was offered coverage and what type of coverage you offered. The codes apply when the offer of coverage is for all days of the month. Fill in this line for every month. Specify these values on the benefit plan definition:

- Plan funding type.
- Minimum value coverage and minimum essential coverage for employee, spouse, and dependents.
- Conditional spousal coverage.

Code	Explanation	Workday Tips	
1A	Qualifying offer includes these coverages and costs: • Minimum essential coverage providing minimum value offered to full-time employees. • The lowest cost for employee-only coverage is equal to or less than 9.5% (as adjusted) of the mainland single federal poverty line. • Minimum essential coverage offered to spouse and dependents.	Affordable coverage for only the employee and coverage for a spouse and dependents. Don't populate cost on line 15 if using this code. The IRS instructions note that the adjusted percentage is 9.61% for plan years beginning in 2022, and 9.12% for plan years beginning in 2023 (p. 13). Workday research indicates that the 2022 poverty line of $13,590 applies to coverage offered in the 2023 tax year. Thus affordable care is equal to or less than $103.28 per month, for employee only coverage. Enter the poverty line and adjusted percentage value on the Affordable Care Reporting Configuration page.	
1B	Minimum essential coverage providing minimum value offered to the employee only.	Employee only	
1C	Minimum essential coverage providing minimum value offered to the employee and at least minimum essential coverage offered to dependents (not spouses).	Employee + dependents (not spouse)	
1D	Minimum essential coverage providing minimum value offered to the employee and at least minimum essential coverage offered to spouse (not	Employee + spouse (no dependents)	

Code	Explanation	Workday Tips	
	dependents). Don't use code 1D if you offer the coverage for the spouse conditionally. Instead use code 1J.		
1E	Minimum essential coverage providing minimum value offered to the employee and at least minimum essential coverage offered to dependents and spouse. Don't use code 1E if you offer the coverage for the spouse conditionally. Instead use code 1K.	Employee + dependents and spouse	
1F	Minimum essential coverage *not* providing minimum value offered to the employee; employee and spouse or dependents; or employee, spouse, and dependents.	Cost of employee-only coverage doesn't meet affordability standard.	
1G	Offer of coverage for at least 1 month to an individual who doesn't meet 1 or more these conditions: • An employee for any month of the year. • An employee who wasn't a full-time employee for any month of the year and was enrolled in self-insured coverage 1 or more months of the year. This period might include 1 or more months in which the individual wasn't an employee.	Part-time employees or retirees in self-insured coverage. 1G applies to the entire year or not at all.	
1H	No offer of coverage. You didn't offer the		

Code	Explanation	Workday Tips	
	employee health coverage or you offered employee-offered coverage that: • Isn't minimum essential coverage. • Might include one or more months in which the individual wasn't an employee.		
1I	Reserved. Not applicable for TY2023.		
1J	Minimum essential coverage providing minimum value offered to the employee and at least minimum essential coverage conditionally offered to spouse; minimum essential coverage not offered to dependents.	Employee + spouse with conditional coverage (no dependents)	
1K	Minimum essential coverage providing minimum value offered to the employee; at least minimum essential coverage offered to dependents; and at least minimum essential coverage conditionally offered to spouse.	Employee + dependents and spouse with conditional coverage	
1L	Individual coverage HRA (ICHRA) offered only to the employee. Affordability based on ZIP code of employee's primary residence.	ICHRA for an employee only. Affordability based on employee residence. Workday doesn't derive this code. Load with the EIB.	
1M	ICHRA offered to the employee and dependents (not spouse). Affordability based on ZIP code of employee's primary residence.	ICHRA for the employee + dependents (not spouse). Affordability based on employee residence. Workday doesn't derive this	

Code	Explanation	Workday Tips	
		code. Load with the EIB.	
1N	ICHRA offered to the employee, spouse, and dependents. Affordability based on ZIP code of employee's primary residence.	ICHRA for the employee + dependents and spouse. Affordability based on employee residence. Workday doesn't derive this code. Load with the EIB.	
1O	ICHRA offered only to the employee. Using employee's primary employment site ZIP code affordability safe harbor.	ICHRA for an employee only. Affordability based on employee work site safe harbor. Workday doesn't derive this code. Load with the EIB.	
1P	ICHRA offered to the employee and dependents (not the spouse). Using employee's primary employment site ZIP code affordability safe harbor.	ICHRA for the employee + dependents (not spouse). Affordability based on employee work site safe harbor. Workday doesn't derive this code. Load with the EIB.	
1Q	ICHRA offered to the employee, spouse, and dependents. Using employee's primary employment site ZIP code affordability safe harbor.	ICHRA for the employee + dependents and the spouse. Affordability based on employee work site safe harbor. Workday doesn't derive this code. Load with the EIB.	
1R	ICHRA that is *not* affordable and offered to any of these combinations of covered individuals: • Employee only • Employee + Spouse/Partner • Employee + Dependent	ICHRA not affordable. Workday doesn't derive this code. Load with the EIB.	

Code	Explanation	Workday Tips	
	• Employee + Spouse + Dependent		
1S	ICHRA offered to an individual that isn’t a full-time employee.	ICHRA offered to an individual that isn't a full-time employee. Workday doesn't derive the code. Load with the EIB.	

Line 15: The employee's share of the lowest-monthly cost for employee-only coverage that you offered.

Line 15 answers the question: What was the cost of the offered coverage?

If the lowest employee-only coverage offered doesn’t meet the affordability standard, enter the lowest monthly cost. Populate this line only if one of these codes is in line 14:

- 1B
- 1C
- 1D
- 1E
- 1J
- 1K

Note: Enter 0.00 if employee cost is zero. Don't leave it blank.

Line 16: Applicable Section 4980H Safe Harbor

Line 16 answers these questions:

- Did the employee enroll in coverage?
- If the employee wasn't offered coverage, why not?

If the worker waived coverage and there are no applicable safe harbors, line 16 can be blank.

To apply the safe harbors:

1. Create a 4980H Safe Harbor Eligibility Rule to identify which workers the safe harbor provision (or provisions) applies to.
2. Create ACA 4980H Safe Harbor Configuration to designate the specific safe harbor provisions for the reporting year and apply the eligibility rules as appropriate.

Note: You can use affordability safe harbors to determine affordability based on the interim guidance for multiemployer arrangements. Use code 2E if the employer is eligible for the relief provided in the interim guidance for multiemployer arrangements.

Code	Explanation (IRS Text)	Workday Tips
2A	The person isn't an employee for any day during the month. Don’t use this code if the person was an employee on any day in the month, including the month in which you hired or terminated the employee.	Not employed.
2B	Employee isn’t a full-time employee. Enter code 2B if:	Not full-time.

Code	Explanation (IRS Text)	Workday Tips

	• Employee isn't full time for the month and didn't enroll in minimum essential coverage, if offered for the month
	• Employee is full time for the month. The offer of coverage (or coverage, if enrolled) ended before the last day of the month because they terminated during the month. Otherwise, the coverage, or offer of coverage, would have continued.
		For a month in which you terminated the employee before the last day, Workday:
		• Automatically derives the codes 1H and 2B.
		• Derives the codes applicable at termination if both:
		  ◦ The employee's coverage extends to the end of the month.
		  ◦ You select the Use coverage end date in month of termination check box on the 1094-C Company Configuration.
		For subsequent months, even if you extend the coverage after termination, the codes are 1H/2A.

2C	You employ and enroll the employee for all days of the month. Use regardless of whether any other code could apply (except for 2E). Don't use 2C: • 2C if 1G is applicable for full year on line 16 because the employee wasn't full time for any month. • For any month that an employee was in COBRA or other postemployment coverage (use code 2A). • For any month in which the multiemployer interim rule relief applies (enter code 2E). • For any month in which a terminated employee enrolls in COBRA continuation coverage or other postemployment coverage (use code 2A). • For any month in which the employee enrolled in coverage that wasn't	Enrolled in medical coverage.

Code	Explanation (IRS Text)	Workday Tips
	minimum essential coverage.	
2D	Employee in Limited Non-Assessment Period (regardless of whether employee is full-time or part-time). If employee is in LNAP AND employer is eligible for multiemployer interim rule relief for the month, use 2E.	In waiting period (LNAP).
2E	Multiemployer interim rule relief. For any month in which the interim guidance for multiemployer arrangements applies for the employee, regardless of whether any other code might apply.	Multiemployer interim rule relief
2F	Employer used the section 4980H Form W2 safe harbor to determine affordability for purposes of section 4980H(b) for this employee for the year. If you use this safe harbor for an employee, use it for all months of the calendar year during which the employee is offered health coverage.	Section 4980H affordability Form W-2 safe harbor
2G	Employer used the section 4980H federal poverty line safe harbor to determine affordability for purposes of section 4980H(b) for this employee for any months.	Section 4980H affordability federal poverty line safe harbor
2H	Employer used the section 4980H rate of pay safe harbor to determine affordability for purposes of section 4980H(b) for this employee for any months.	Section 4980H affordability rate of pay safe harbor
2I	Reserved. Not applicable for TY2023.	

Line 17: ZIP Codes for ICHRA Participants

When using ICHRA codes in Line 14, enter the ZIP code of the employee's residence, or the primary work site when using the work location safe harbor. Workday doesn’t derive these ZIP codes. Load them with the Import 1095-C Form Recipients Data EIB spreadsheet.

Steps: Import ACA 1095-C Recipient Data on page 1473

Reference: Worklets and Reports for Affordable Care Act Compliance

Workday provides worklets and reports for you to analyze compliance with ACA regulations for full- and part-time employees.

Report	Description
ACA Qualified Employees Enrollment Count	Lists employees not enrolled in a medical plan who are full-time, according to ACA standards.
Part-Time Employees Working More Than Federal Full-Time Standard	Displays part-time employees working full time according to set up in the Part-Time Evaluation section on the Affordable Care Reporting Configuration task.
View Affordable Care Act Workers Hours and Wages	Displays payroll data used to evaluate employee full-time status.
Benefits > View ACA Measurement History	Displays the ACA-defined initial, administrative, and stability periods used to evaluate the employee's full-time status. Access from the employee's related actions menu.
1095-C Eligible Employees by State or Region	Displays 1095-C form data for selected workers by state or region for the current tax year.

FAQ: Patient Protection and Affordable Care Act

- How does Workday determine who gets a 1095-C form? on page 1492
- How does Workday determine for ACA that a worker is employed full-time?
- How does Workday calculate Average Monthly and Weekly Hours?
- How does Workday Payroll or Payroll Interface coordinate with ACA requirements?
- How does Workday determine if coverage was offered for each month?
- How does Workday determine if the benefit plan meets ACA requirements?
- How does Workday process rehired workers?
- How do I handle adjunct faculty who work 10 months of a 12-month measurement period?

How does Workday determine who gets a 1095-C form?	Full-Time Employees that have weekly scheduled hours of 30 hours or more at any point in the calendar year. You can configure the number of hours on the Affordable Care Reporting Configuration page. Employees that qualify as Full-Time (FT) if the ACA Measurement Period field value has been Y at any point during the calendar year. This group is your part-time population who you don't automatically offer medical coverage. They're measured to evaluate eligibility over a measurement period. Part-Time Employees who don't qualify as ACA FT, and enroll in coverage under a self-insured plan. Note: Part-time employees receive a form if they're ACA FT-qualified, or if you offer them coverage in a fully funded plan.

How does Workday determine for ACA that a worker is full-time employee?	Workday considers a worker as full-time if: • Scheduled Weekly Hours is greater than or equal to the Standard for Paid Hours Per Week on the Affordable Care Reporting Configuration task. Workday reads these values on the first and last days of each month. • The worker has completed a measurement period, and the actual hours were greater than or equal to the Paid Hours Standard.

How does Workday calculate Average Monthly and Weekly Hours?	If you select the Use Scheduled Hours for Exempt Workers option on the Affordable Care Reporting Configuration task, Workday:
	• Uses this formula to calculate average monthly paid hours:
	`# Of Weeks within Date Range rounded to nearest 100th * Worker's Weekly Scheduled Hours / # Of Months within Date Range`
	• Uses this formula to calculate average weekly paid hours:
	`# Of Weeks within Date Range rounded to nearest 100th * Worker's Weekly Scheduled Hours / # Of Weeks within Date Range rounded to nearest 100th`
	If you select the Use Actual Payroll Hours for Exempt Workers option, Workday:
	• Uses this formula to calculate average monthly paid hours:
	`# Of Hours within Date Range / # Of Months within Date Range`
	• Uses this formula to calculate average weekly paid hours:
	`# Of Hours within Date Range / # Of Weeks within Date Range rounded to nearest 100th`
	Workday determines the:
	• Worker's Weekly Scheduled Hours from the position or job.
	• # Of Months within Date Range from the End Date - Start Date, rounded up to the month.
	• # Of Weeks within Date Range rounded to nearest 100th from the End Date - Start Date / 7.
	• # Of Hours within Date Range from Workday Payroll plus any imported hours.

How does Workday Payroll or Payroll Interface coordinate with ACA requirements?	When using the lookback method to determine employees full-time status (30 hours per week or 130 hours per month), you must: • Workday Payroll: Configure the ACA measurement period. Map both paid hours worked and paid hours not worked from Workday Payroll results. • Payroll Interface: Import paid hours worked and paid hours not worked from an outside source. To populate Form 1095-C, lines 14 and 16 correctly, Workday must accurately detect employees in an initial measurement period. An initial measurement period, known as a limited nonassessment period by ACA, is for these types of employees: • Variable-hour, part time. • Newly hired, full-time in a 3-month waiting period.
How does Workday determine if an employee received an offer of coverage for each month?	Workday uses the benefit event history to determine when the employee received an offer for medical plan coverage.
How does Workday determine if the benefit plan meets ACA requirements?	Workday determines a benefit plan meets ACA requirements if: • It's a medical coverage plan. • The Funding Method is *Fully-Funded* or *Self-Insured*. • The plan provides the Minimum Essential Coverage. • The Minimum Value Coverage applies to the employee, the spouse, or dependents.
How does Workday process rehired workers?	If you terminate and rehire a worker, Workday checks for a 13-week gap. For educational organizations, Workday uses a 26-week gap. • If the gap is greater than or equal to 13 weeks, then Workday processes the worker as a new hire. • If the gap is less than 13 weeks, Workday processes the worker as a rehire. If there’s payroll data that supports their eligibility for benefits, then Workday resumes regular benefit processing with the condition rule: *If there is an effect on the employee benefits?* This condition rule determines whether or not to create a benefit event, enabling the worker to enroll in benefits.
How do I handle adjunct faculty who work 10 months of a 12-month measurement period?	If an employee has any of these types of unpaid leave with unrecorded hours, you must account for the unrecorded hours:

- The Family and Medical Leave Act of 1993.
- Uniformed Services Employment and Re-employment Rights Act of 1994.
- Jury duty.
- Educational institutions with lapses in employment of at least 4 consecutive weeks.

Set up earnings and the related calculations to retrieve hours of service from Workday Payroll or Payroll Interface. Make sure to include lapses in employment that you want to account for in the Workday Payroll Hours Source: Payroll Calculations section on the Affordable Care Reporting Configuration task.

Tasks

Steps: Set Up ACA Forms 1094-C and 1095-C on page 1469

Reference

Workday Community: Affordable Care Act (ACA) Reporting Requirements Feature FAQ

Troubleshooting: 1095-C IRS Transmission Errors

Troubleshoot transmission errors when sending 1095-C data to the Internal Revenue Service (IRS).

Cause: 1095-C forms have incorrect or missing information.

Solution: Correct 1095-C forms using the *Import 1095-C Forms Recipients Data* EIB.

IRS Error Code	Solution
AIRBR625	Add missing Social Security Number (SSN) or Date of Birth (DOB) values.
AIRBR626	Correct any SSNs that have sequential numbers. Example: 123-45-6789.
AIRBR627	Correct any SSNs that have all the same digits. Example: 111-11-1111.
AIRBR628	Correct any DOB with a date in the past, as of the transmission date.
AIRBR804	Add employer missing phone number.
AIRBR835	Adjust either the full-time employee count or the total employee count for any month. The total number of employees must be greater than or equal to the number of full-time employees for the month.
AIRBR1006	Upload any missing Offer of Coverage values for workers.
AIRBR1011	Upload a cost for any months with an offer of coverage, but the coverage doesn't qualify for code 1A for missing workers.

IRS Error Code	Solution
	If Line 15 is blank for 1 or more workers with a 1B, 1C, 1D, or 1E in Line 14, then add the costs in Line 15 for the corresponding months.

Cause: Mismatches between Workday and IRS in the 1095-C data.

IRS Error Code	Issue
Shared-007	The name and birth date don't match for 1 or more covered individuals between Workday and the IRS.
Shared-008	The name and SSN don't match for one or more covered individuals between Workday and the IRS.

Solution: Check for typos to the name and DOB and upload the changes with the *Import 1095-C Forms Recipients Data* EIB. Contact the IRS to confirm the data on file in order to correct within Workday. IRS contact information:

- Email: airmailbox@irs.gov
- Telephone: +1(866) 937-4130

Cause: Errors in the company configuration - ALE groups.

Solution: Correct information in the Part I Applicable Large Employer Member (ALE Member) section of the 1094-C Company Configuration task.

IRS Error Code	Solution
AIRBR902	Add the employer contact name.
AIREX126, AIRTN500	Check for typos in the employee EIN; the listed EIN doesn't match the IRS information for the employer.

Cause: Section III coverage errors for months of the year.

Shared-001, Shared-002, Shared-003, Shared-004, Shared-005, Shared-006	The 1095-C for 1 or more workers has a date for covered individuals in Section III. However, you haven't listed coverage for the individuals in any of the months of the year.

Solution: Remove the date for covered individuals in Section III or add coverage in the 12 months boxes, using the *Import 1095-C Forms Recipients Data* EIB.

Medicare

Steps: Set Up Medicare Tracking

Context

You can track Medicare coverage and enrollment information for employees, retirees, terminated workers, and dependents. You can coordinate benefits based on Medicare coverage to determine the primary and secondary payer on medical expenses.

Steps

1. Create Custom Business Processes.

   Configure the *Manage Medicare Information* business process in the Benefits functional area.

   You can include the *Change Benefits for Life Event* subprocess to evaluate whether adding Medicare coverage affects existing benefit plans.
2. Edit Business Process Security Policies.

   You can configure the *Manage Medicare Information* business process on supervisory or retiree organizations.
3. Edit Domain Security Policies.

   Grant permission on these domains:

   - *Self-Service: Medicare* provides self-service users with access to the Medicare Information profile report on their worker profile. The report also has a link to view Medicare information for dependents.
   - *Person Data: Date of Death* displays the Date of Death field on the Manage Medicare Information task.
   - *Worker Data: Medicare - USA* secures the View Medicare Data and the Medicare Information for Profile reports.
4. Access the Maintain Event Categories and Reasons task.

   Create categories and reasons for tracking Medicare information.

   Security: *Set Up: Staffing* domain in the Staffing functional area.
5. (Optional) Access the Maintain Medicare Reporting Reasons task.

   Select the Self-Service check box for each reason to display on the Manage My Medicare Information task for employees and retirees.

   Security: *Set Up: Benefits* domain in the Benefits functional area.
6. (Optional) Steps: Set Up Profiles and Profile Groups.

   Add the Medicare Information report to the Benefits profile group on the worker profile.

Result

Employees and retirees can enter and manage their Medicare information by accessing:

- The Manage My Medicare Information task.
- Benefits > Change My Medicare Data from the related actions menu of their profile.

Administrators can enter and manage Medicare information for employees, retirees, terminated workers, and dependents by accessing:

- The Manage Medicare Information task.
- Benefits > Change Medicare Data from the person's related actions menu.
- The Change Medicare Part D EGWP Data task.

Manage Medicare Information

Prerequisites

Configure the *Manage Medicare Information* business process and security policy in the Benefits functional area.

Context

You can manage Medicare information in Workday so that you can incorporate Medicare coverage into benefits eligibility and changes to benefits enrollment.

Steps

1. Access the Manage Medicare Information task.

   You must have access on the *Person Data: Date of Death* domain to view the Date of Death field in the Personal Information section of the task.
2. Enter coverage dates and information in the Medicare Details section.

   When *Change Benefits* is a subprocess of the *Manage Medicare Information* business process, Workday uses the Event Date as the Benefit Event Date.

   You can't remove a section of Medicare data once it's submitted and approved. You can rescind or correct the *Manage Medicare Information* business process.

Result

You can view Medicare information on the:

- View Medicare History report.
- Recent Medicare History grid of the Manage Medicare Information task. The grid displays the last 5 Medicare events.

Dependents and Beneficiaries

Manage Personal Relationship Types

Prerequisites

Security: *Set Up: Contact and Personal Data* domain in the Contact Information functional area.

Context

Identify the type of relationships you want to make available when adding:

- Beneficiaries
- Dependents
- Emergency contacts
- Trusts

Examples:

- Daughter
- Spouse
- Step child
- Uncle

Note: Workday recommends that you disable linking between beneficiaries and dependents. If the employee makes changes to a linked relationship, the changes can override dependents or beneficiaries when the person has more than 1 role. You can disable linking in the Benefits section of the Edit Tenant Setup - HCM task. Example: A worker gets divorced and changes the emergency contact to their sister. With linking enabled for beneficiaries and dependents, the sister also replaces the spouse as a dependent even though the sister is ineligible as a dependent.

Steps

1. Access the Maintain Related Person Relationships task.
2. As you complete the task, consider:

Option	Description
Map Relationship to Workday	Select the appropriate Workday relationship to ensure that Workday recognizes the relationship name. If you leave this field blank, Workday assumes that the relationship name is a valid dependent, beneficiary, or emergency contact.
Restrict to Relationships	You can select more than 1 type of relationship. Workday uses this field to present only those relationship names as valid relationships in these tasks: • Add Dependent • Add Beneficiary • Maintain Insurance Coverage Targets • Maintain Health Care Coverage Targets
Restrict to Countries	Enables you to configure allowed relationships in a country. When you leave this field blank, Workday allows the selected relationship for all countries.
Include Relationship for Wellness	Enables you to add wellness information for this relationship type as a related action on the worker profile. Select Benefits > Change Wellness Data.
Usage Count	Includes any historical entries or references to the relationship type. You can't drill down into the usage count.

Next Steps

To see a list of all roles entered in Workday, use the Related Person Relationships report.

To see invalid relationships between a worker and a related person, such as a dependent, beneficiary, or emergency contact, see the Workers with Invalid Related Person Relationships report. When a relationship has an invalid value, the relationship is no longer allowed.

Related Information

Reference

Reference: Edit Tenant Setup - HCM

Manage Dependents and Beneficiaries

Prerequisites

- Set up the types of person relationships.
- Configure the *Dependent Event* and *Change Beneficiary* business processes and security policies in the Benefits functional area.
- Add localized information using the Edit Tenant Setup - Global task.
- Security:
  - *Self-Service Add Beneficiaries in Benefits Enrollment* domain in the Benefits functional area.
  - *Self-Service: Beneficiaries* domain in the Benefits functional area.
  - *Self-Service: Spousal Surcharge* domain in the Benefits functional area.
  - *Worker Data: Add Beneficiaries in Benefits Enrollment* domain in the Benefits functional area.
  - *Worker Data: Beneficiaries and Dependents* domain in the Benefits functional area.
  - *Worker Data: Spousal Surcharge* domain in the Benefits functional area.

Context

When adding a dependent or beneficiary, you can only select relationships where the Restrict to Relationship field on the Maintain Related Person Relationships task is:

- *Dependent*
- *Beneficiary*
- Blank

Workers might want to designate a legal trust as a beneficiary instead of individual persons. When adding beneficiaries, you can also add any beneficiary-related court orders.

You can inactivate, but not delete, a dependent or beneficiary if they've ever had a benefit plan enrollment. However, if they have a current enrollment or beneficiary designation, you must first remove them from the plan before you can inactivate them.

Workers can only view active dependents or beneficiaries. For Benefit Partners and Administrators, inactive dependents or beneficiaries display with (Inactive) appended to their name.

You can't reactivate dependents that have a date of death. For deceased dependents, you need to create a benefit event to remove any currently enrolled benefits.

If you hide dependent-related fields by country, Workday hides the fields in these areas:

- Adding or editing dependents, including open enrollment events: disability, full-time student status, and tobacco information.
- Enrollment events: tobacco-related enrollment instructions and the tobacco question for spouses and dependents
- Wellness data tasks - dependents: tobacco use information.

Steps

- Add a dependent.

  Select Benefits > View Dependents > Add from the related actions menu of the worker. As you complete this task, consider:

  - Select Use as Beneficiary to make the person available for designation as a beneficiary.
  - If you select spouse or domestic partner for Relationship, you must select Could Be Covered For Health Care Coverage Elsewhere if you want to add a benefit surcharge.
  - You can indicate whether the dependent uses tobacco for Tobacco Use.
  - You can select a dependent's verification status.

- Add a beneficiary:

  Select Benefits > View My Beneficiaries > Add from the related actions menu of the worker.

  If you:

  - Haven't selected the Disable Emergency Contact, Dependent, and Beneficiary Linking check box in the Edit Tenant Setup - HCM task, you can select Existing Dependent or Emergency Contact.
  - Selected the check box, you can only create new beneficiaries that aren't linked to other related persons.
- Inactivate a dependent or beneficiary:

  Select either Benefits > View Dependents or Benefits > View Beneficiaries from the related actions menu of the worker. Select Dependents > Inactivate or Beneficiary > Inactivate from the related actions menu of the dependent or beneficiary.
- Reactivate a dependent or beneficiary:

  Select either Benefits > View Dependents or Benefits > View Beneficiaries from the related actions menu of the worker. Select Dependents > Reactivate or Beneficiary > Reactivate from the related actions menu of the dependent or beneficiary.
- Delete a dependent or beneficiary:

  Select either Benefits > View Dependents > Delete or Benefits > View Beneficiaries > Delete from the related actions menu of the worker.

Next Steps

To add a Dependents link to the Personal Information worklet, use the Configure Worklet task.

You can also access these reports:

Report	Contents
Dependents Audit	Workers and their dependents by effective date, benefit group, last name range, or employee ID.
Dependents and Workers With Matching National IDs	Dependents with the same national ID as a worker by employee ID, last name range, or benefit group.
All Dependents With Same National ID	Dependents that share the same national ID.

Add or Delete Court-Ordered Benefits (QDRO)

Prerequisites

- Add and activate dependents and beneficiaries.
- Security: *Self-Service: Dependents* and *Worker Data: Dependents* in the Benefits functional area.
- Security: *Worker Data: Court Order Details* in the Benefits functional area to access the Court Orders section.

Context

You can enter 2 types of Qualified Domestic Relations Order (QDRO):

- Medical coverage for dependents
- Insurance coverage for beneficiaries

Steps

1. From the related actions menu of the worker, access either:
   - Benefits > View Dependents
   - Benefits > View Beneficiaries
2. Click Edit next to the dependent or beneficiary with the QDRO.
3. In the Court Orders section, complete:
   - Coverage Required
   - Start and End Date

Result

Adding a court-ordered benefit for a dependent creates a *Dependent Event*.

During a benefit change or open enrollment, Workday checks to see if the dependent:

- Has a court order.
- Is eligible for coverage.

Workday also verifies that the coverage begin date falls within the start and end date for the court order.

If these conditions are met, the employee must enroll the beneficiary or dependent in a benefit plan to complete the benefit enrollment process.

Next Steps

The Active Court Orders report displays employees with beneficiaries or dependents that have active court orders as of a specific date and for a specific benefit group. It also indicates whether the court order has been met.

Steps: Set Up Fair Market Value for Health Care Plans

Context

Under the Patient Protection and Affordable Care Act (ACA), dependents are eligible for health care coverage under their parent's plan, if:

- They're age 26 or under.
- Aren't full-time students.

States might want to tax this benefit.

Steps

1. Create an earning for the fair market value for the health care coverage.
   - For Workday Payroll, you must calculate the fair market value of dependent health care coverage.
   - For Payroll Interface, you must manage external payroll earnings.
2. Create Benefit Eligibility Rules on page 1255.
3. Steps: Set Up Passive Events on page 1441.
4. Create Health Care Plans on page 1289.
5. (Optional) For banded rates, enter the Fair Market Value per Dependent.

   See Create Health Care Rates on page 1269.
6. Steps: Set Up Enrollment Events and Rules on page 1341.

7. Access these tasks:
   - Open Enrollment
   - Change Benefits
   - Passive Events

Result

Dependents 26 years of age, or under, become eligible for health care coverage based on the eligibility rules and the health care plan setup.

Once enrollment is complete, this information is available to Workday Payroll and Payroll Interface.

Example: Calculate the Fair Market Value of Dependent Health Care Coverage (USA)

Assign a Verification Status to Dependents

Prerequisites

- Security:
  - *Self-Service: Dependent Verification* in the Benefits functional area to enable workers to view their dependent verification data.
  - *Worker Data: Dependent Verification* in the Benefits functional area.

Context

You can add an action step onto existing business processes to be notified of dependents needing review for verification when employees create new dependents or enroll their dependents into benefit plans.

Workday also enables you to assign verification statuses to existing dependents in bulk rather than 1 at a time.

Steps

1. Edit Business Process Security Policies.

   Select your desired roles from the Security Groups prompt of the *Verify Dependent Eligibility* action step for these business processes:
   - *Dependent Event*
   - *Change Benefits for Life Event*
   - *Change Benefits for Open Enrollment*

   The roles you assign to this action step determines who gets the task in My Tasks to assign dependents a verification status.
2. Access the Activate Pending Security Policy Changes task.

3. Edit Business Processes.

   Add the *Verify Dependent Eligibility* action after the initiation step as step *a1* for these business processes:

   - *Dependent Event*
   - *Change Benefits for Life Event*
   - *Change Benefits for Open Enrollment*

   (Optional) From the related actions menu of the new step, select Business Process > Set as Completion.

Result

For the *Dependent Event* business process, configured security groups will receive a task in My Tasks to review and assign a verification status to newly created dependents.

For the *Change Benefits for Life Event* and *Change Benefit for Open Enrollment* business processes, Workday applies the *Dependent Part of Benefit Package?* condition rule to the *Verify Dependent Eligibility* step. If this condition is true, the task in My Tasks includes both new and existing dependents when they're enrolled in an employee's benefit plans.

Next Steps

Create condition rules on the new action step that meet your specific needs. For example, you can create a condition rule so that the step only activates when a new dependent is added to an employee's benefit plans.

Access the Manage Dependent Verification Status task to update the verification status of existing dependents in bulk.

2023R2 What's New Post: Enable Dependent Verification in Business Processes

Purge Dependents and Beneficiaries for Active Workers

Prerequisites

- Create a custom purge report that returns active workers whose dependents and beneficiaries you want to purge. Add the *Purge* tag to the custom report.
- Open a service ticket with Workday Support requesting to enable the Workers Dependent and Beneficiary purgeable data type and include a list of purge instances from your custom report.
- Security: These domains in the System functional area:
  - *Custom Report Creation*
  - *Purge Person Data*

Context

You can purge all dependents and beneficiaries for a selected set of active workers. When you purge this data, Workday removes any references to the person from the tenant.

Note: This feature is available only by request, as purging this data is irreversible and can cause issues if done incorrectly. Always test the custom report and purge in your Sandbox environment before you purge any data in your Production environment.

To avoid affecting payroll, integrations, and reporting, we recommend that you don't purge dependents or beneficiaries that are active in current elections. Additionally, we recommend that you don't purge emergency contact and dependents and beneficiaries data at the same time. Purge emergency contact data first and then purge dependents and beneficiaries data afterwards.

Steps

1. (Optional) Create a purge plan.

   See ../../../authentication-and-security/data-privacy/data-purging/lub1590696272749.dita.

   Select *Worker* as the object to purge. We also recommend selecting All Active and Terminated Workers as the report data source.

   If you don’t create a purge plan, Workday will automatically select required purgeable data types to purge.
2. Access the Purge Person Data task.

   Select the custom purge report that you created. See ../../../authentication-and-security/data-privacy/data-purging/eoh1591731211014.dita.
3. From the Population to Purge (Report Definition) prompt, select the custom purge report for dependents and beneficiaries.

   Only reports with the *Purge* tag display.
4. Click View report on selected population to confirm the data to purge.
5. Select the check box for the Workers Dependent and Beneficiary purgeable data type and click OK.
6. Select the Confirm check box and click OK.

Result

Workday:

- Purges the dependents and beneficiaries data that matches your purge criteria. Run the report again to confirm the purge action.
- Removes all the dependents and beneficiaries data for active workers that match your criteria in the custom purge report.

  Note: When using the Workers Dependents and Beneficiaries purgeable data type, Workday will not purge data shared with an emergency contact.

Talent

Goals

Setup Considerations: Organization Goals

You can use this topic to help make decisions when planning your configuration and use of organization goals. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

Organization goals apply to a supervisory organization and to all workers in it. In contrast, individual goals apply to just 1 employee. Organization goals don't apply to subordinate supervisory organizations, but goals can be linked throughout the supervisory organization hierarchy.

Business Benefits

You can align organizational and individual goals, enabling workers to accomplish their initiatives and yours.

Use Cases

Managers can consistently align individual goals to an organization goal.

Workers and managers can:

- Align individual goals with organization goals.
- View goals aligned to their supervisory organization.
- View how individual and organization goals are aligned using the Navigate Goal report.
- Track overall progress against an organization goal with automatically calculated completion percentages.

Questions to Consider

Questions	Considerations
How do you want managers to link their organization goals to other organization goals in the organization hierarchy?	You can enable managers to link organization goals to just the immediate parent organization, or up through the whole organization hierarchy. You can also prevent linking organization goals by default.
Do you want to align individual goals in performance reviews to organization goals?	You can align individual goals to organization goals and then pull the individual goals into performance reviews. Or, managers and employees can link individual goals to organization goals during the *Set Content* step in performance reviews.
Who do you want to view organization goals?	You can create private organization goals so that only members of the supervisory organization hierarchy can see them. You can also configure organization goals so they're private by default.
How do you want to calculate goal completion?	You can manually calculate the completion percentage of an organization goal, or you can have Workday automatically calculate the percentage.

Questions	Considerations
How does Workday factor individual goal weight into the calculated completion percentage of organization goals?	Workday doesn't include individual employee goal weight when calculating the completion percentage of the organization goal. Map percentages to your goal completion statuses to enable calculation of completion percentages.
How do organization goals align with the company's fiscal year?	You can define specific timeframes in which an organization goal applies.

Recommendations

- Archive outdated organization goals to improve performance when running goal reports.
- Create alignment in your organization hierarchy by selecting an organization goal in the Organization Alignment field of the Add Goal to Employees task when cascading goals.
- Check organization goal progress on a quarterly basis to ensure you're on track to meet the goal.
- Allow organization alignment through the organization hierarchy when you set up your goals to avoid having to create an organization goal for every level of your supervisory organization. Employees can align their individual goal directly to an organization goal that is a few levels above.
- Allow automatic calculation of percent complete to have Workday automatically calculate the organization goal progress based on the statuses of aligned employee goals.

Limitations

- You can align an employee goal to only 1 organization goal at a time.
- The organization goals in the View Goals for Worker worklet only displays organization goals for the current goal period. To replace this task, you can create a custom report using the Configure Profile Group task.
- You can't hide the Supporting Initiatives field in an organization goal.
- You can only sort organization goals in alphabetical order by supervisory organization. You can't sort them by organization hierarchy. Example: You can only sort from the lowest supervisory organization to the highest supervisory organization in a hierarchy.
- Private organization goals restrict who is able to view and align to that organization goal.
- Workers with multiple jobs or positions can only align to goals of the primary position.
- Workday doesn't support organization goals for organization types outside of supervisory organizations.
- Workday doesn't support hiding or requiring fields for organization goals.

Tenant Setup

No impact.

Security

Configure these domains in the Performance Enablement functional area.

Domain	Considerations
Set Up: Goals	Set up this domain to support all goals, including both employee and organization goals.
Self-Service: Organization Goals	Workers secured to this domain can view organization goals.

Domain	Considerations
Worker Data: Organization Goals	Use this domain to manage and view organization goals. Administrators can restrict access using modify permissions to specific roles.
Performance and Goals: Contingent Worker Eligibility	Workers secured to this domain can participate in goals and to link their goals to organization goals.

Business Processes

No impact.

Reporting

Reports	Considerations
View Organization Goals	Use to view organization goals for 1 supervisory organization.
View Goals for Worker	Use the Organization Goals tab on this report to view all organization goals that apply to a worker in the current goal period. The Individual Goals tab also shows how individual goals are aligned to organization goals.
View Goal Alignment	Use to view the percent completion of an organization goal and a list of all workers that have individual goals aligned to an organization goal.

Integrations

Workday provides these web services for organization goals secured to the *Worker Data: Organization Goals* domain:

Web Services	Considerations
Get Organization Goals	Retrieve active and archived organization goals from your tenant.
Put Organization Goal	Upload active and archived organization goals to your tenant.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Related Information

Tasks

Steps: Manage Organization Goals on page 1515

Create or Edit Organization Goals on page 1516

Reference

The Next Level: Overview of Primary Position Designation Impact

Steps: Set Up Goals

Prerequisites

Security:

- *Set Up: Goals* domain in the Performance Enablement functional area.
- *Set Up: Tenant Setup - HCM* domain in the System functional area.
- *Set Up: Talent* domain in the Talent Pipeline functional area.
- *Performance and Goals: Contingent Worker Eligibility* domain in the Performance Enablement functional area to enable goals for contingent workers.

Context

You can use these types of goals in Workday:

Type	Description
Organization Goals	Goals assigned to supervisory organizations.
Individual Goals	Goals assigned to individual employees.
Cascaded Goals	Same goal assigned to 2 or more employees by an administrator or manager. Once a goal is cascaded, it becomes an individual goal for each employee.
Review Goals	Individual goals that are part of employee reviews.

Steps

1. (Optional) Access the Configure Profile Group task to update *Performance for Worker Profile* profile group.

   Select the Goals report to display goals in the card format on the Performance tab of the Worker Profile.
2. Access the Maintain Goal Setup task to set up options for individual goals, including hiding or requiring fields for all users, or for specific security groups.
3. Set Up Individual Goals on page 1510.
   - Add workers to the *Self Service: Employee Goals* domain so they can view their goals on the My Goals report.
   - Add workers to the *Worker Data: Employee Goals* domain so they can view goals for other workers on the View Goals for Worker report.
4. Set Up Goals for Employee Reviews on page 1511.
5. Set Up Organization Goals on page 1512.
   - Add workers to the *Self-Service: Organization Goals* domain so they can view their organization goals on the My Goals report.
   - Add workers to the *Worker Data: Organization Goals* domain so they can view organization goals for other workers on the View Goals for Worker report.
6. Set Up Goal Completion Statuses on page 1514.
7. Configure additional goal settings with these tasks accessible from the Maintain Goal Setup page:

Option	Description
Maintain Goal Units	Click to create or change unit types to track goal target, actual, minimum, and maximum values.

Option	Description
Maintain Goal Payout Bands	Click to create goal payout bands for the Net Attainment options when configuring the Goals section on the Configure Employee Review Template task.
Configure Talent Tags	Click to add the ability to link goals to competencies, development items, feedback, or flex teams using the Relates To field.
Maintain Goal Categories	Click to create or change goal categories. Categories simplify goal management and reporting. You can assign categories to individual goals, cascaded goals, and review goals.
Maintain Goal Periods	Click to define date ranges to associate with organization goals.

8. Configure goal templates.

   See Steps: Configure Goal Templates on page 1514.
9. Enable activity stream for the *Goal* and *Organization Goal* objects.

   See Steps: Enable Activity Stream.

Next Steps

- Access the View Goal Setup report to view details about the goal setup in your tenant.
- Create or Edit Organization Goals.
- Create or Edit Individual Goals.

Reference

The Next Level: Preparing for Goals User Experience Redesign

2024R2 Release Note: Goals User Experience Redesign for Mobile

Set Up Individual Goals

Prerequisites

Context

You can configure which options are available when you create, edit, view or archive individual and cascaded goals. You can hide or require fields for either:

- All workers.
- Workers in specific security groups.

Steps

1. Edit Business Process Security Policies.

   Set up initiating actions on the *Manage Goals* business process security policy to control what operations workers and managers can perform for goals.
2. Access the Maintain Goal Setup task.

   In the Configure Individual Goals section, add a row for each field you want to hide or require for individual goals.

   As you complete the grid, consider:

Option	Description
Field	Don't add optional fields to the grid. Workday enables all individual goal fields as viewable and optional for all workers by default.
Criteria	Workday doesn't display the *Require for All* option for all fields. When you select *Security Group*, specify the groups you want the field hidden from or required for.
Enforce Required in Web Service	(Optional) If you: • Require the goal field and select the check box, Workday sends a validation message in the web service when you don't include the goal field. • Require the goal field but don't select the check box, Workday doesn't send a validation message when you don't include the field in the web service.

   Security: These domains in the Performance Enablement functional area:

   - *Self Service: Employee Goals*
   - *Worker Data: Employee Goals*

2024R2 Release Note: Goals User Experience Redesign Multi-Management of Goals

Set Up Goals for Employee Reviews

Prerequisites

Security: *Set Up: Goals* and *Set Up: Employee Reviews* domains in the Performance Enablement functional area.

Context

You can set up options to control how workers create and update goals in employee reviews.

Steps

1. Access the Maintain Goal Setup task.
2. As you complete the options in the Configure Goals in Reviews section, consider:

Option	Description
Lock Goals Associated with In Progress Reviews	Select to prevent workers from editing individual goals included in employee reviews that are in progress.
Allow Deletion of Goals Associated with Reviews	Select to allow workers to delete goals included in completed or in progress employee reviews. If you also select Lock Goals Associated with In Progress Reviews, workers can only delete goals in completed reviews.
Allow Ordering of Goals in Reviews	Select to allow workers to change the order of goals in employee reviews at these steps: • *Set Review Content* • *Complete Self Evaluation* • *Complete Manager Evaluation* • *Update Manager Ratings* The goal order only applies to employee reviews and doesn't apply to goals displayed in the My Goals report and other goals reports.

Next Steps

Configure the Goals section of the employee review template.

Related Information
Tasks
Configure the Goals Section on page 1632

Set Up Organization Goals

Prerequisites

Security:

- *Self-Service: Organization Goals* domain in the Performance Enablement functional area.
- *Worker Data: Organization Goals* domain in the Performance Enablement functional area.

Context

You can configure which options are available when users create or edit organization goals. You can also link organization goals to other organization goals higher in the organization hierarchy.

You can enable aligning organization goals to other organization goals, and you can also enable workers to align individual goals to organization goals.

You can enable Workday to calculate the completion percentage of an organization goal, or you can track the completion percentage manually. When you configure Workday to calculate the completion percentage of organization goals automatically:

- Individual goal statuses pending approval aren't counted in the calculation.
- Individual goals without a status count as zero.

Steps

1. Access the Maintain Goal Setup task.
2. To enable workers to align individual goals to organization goals, you can include the Organization Alignment field in individual goals. If you don't specify the Organization Alignment field criteria in the Configure Individual Goals grid, Workday displays the field in all goals and is optional for workers to complete. See Set Up Individual Goals.
    - From the Field prompt, select Organization Alignment .
    - From the Criteria prompt, select *Require For All*, or select security groups to require or hide the Organization Alignment field in individual goals.
3. As you complete the task under the Configure Organization Goals section, consider:

Option	Description
Show Organization Goal Description Field	Select to display descriptions for organization goals. You can hide the description for organization goals by unselecting the check box.
Organization Alignment	Select to enable organization goals and to link to goals 1 level up in the organization.
Organization Goal Allows Organization Alignment Through Hierarchy	Select along with the Organization Alignment check box to link to goals up the entire organization hierarchy.
Default Organization Goal to Private	Select to make organization goals private by default when you create them.
Enable Percent Complete	Select to enable only manual entry of the completion percentage.
Allow Automatic Calculation of Percent Complete	Select along with the Organization Alignment and Enable Percent Complete check boxes to have Workday calculate the completion percentage. You can't hide the status field under the Configure Individual Goals section.

Result

Workday displays the enabled organization goal options on the Manage Organization Goals task.

Next Steps

Create or edit organization goals.

2024R2 Release Note: Organizational Goals Configuration

Set Up Goal Completion Statuses

Prerequisites

Security: *Set Up: Goals* domain in the Performance Enablement functional area.

Context

You can create statuses to evaluate how employees have progressed in their goals. Each status determines what items are eligible to move from 1 review to the next.

Workday recommends you map your goal statuses to percent complete values if you enable Workday to automatically calculate the completion percentage of organization goals. Otherwise, the percent complete will always be 0.

Steps

1. Access the Maintain Goal Completion Statuses task.
2. Select a value in the Map to Workday Status field if you want to move content from 1 employee review to another.

   This field is used with the Load Content from Previous Review and Load Relevant Goals fields in the Goals section on the Configure Employee Review Template task.

Next Steps

Access the Goal Completion Statuses report to view a list of all statuses. Use the employee review document to associate a status with a goal.

Limit the number of active goal completion statuses to 11 to display goals on the Track My Team's Goals worklet on the Team Performance dashboard and the Track My Goals worklet on the Talent and Performance dashboard.

Tasks

Steps: Set Up Development Plans on page 1692

Steps: Set Up Disciplinary Actions on page 1695

Steps: Set Up Performance Improvement Plans on page 1699

Steps: Set Up Performance Reviews on page 1679

Steps: Configure Goal Templates

Prerequisites

Security: *Set Up: Goals* domain in the Performance Enablement functional area.

Context

You can customize how Workday displays individual goals in the My Goals and View Goals for Worker tasks by creating goal rules and configuring a goal template:

- Goal rules define criteria for organizing goals, such as goal status, category, or due date.
- The goal template filters goals into sections according to the goal rules.

Workday provides a default template, Ad-Hoc Goal Template that displays all individual goals in 1 section. You can:

- Add sections.
- Provide your own section names, including a Default Goal Section Name for goals that don't meet any of the rules defined.
- Associate a unique rule with each section.

If a goal meets more than 1 rule, it can be in multiple sections. Set up your template rules so that each goal only meets 1 rule to prevent employee confusion when Workday displays the same goal in multiple sections.

Goals that don't match any of your rules are displayed in the default section. Workday hides the default section when empty, but the other sections are always visible.

The template applies to all individual goals and you can update your configuration at any time.

Changes you make to your goal template immediately impact employees.

Steps

1. Access the Create Goal Template Rule task.

   Create Rule Conditions to display goals in sections.

   Example: If you want to organize goals by status, create a rule for each goal completion status in your tenant. You can combine multiple conditions in 1 rule.

   Note: Report fields for the Goal *business object* exclude values from in-progress employee reviews. These fields only return values from completed employee reviews and in-progress or completed Manage Goal events.

   Setting up goal template rules can also impact how you can mass archive individual goals.
2. Access the Configure Goal Template task.

   Set up the goal template to define each section on a separate row.

   Example: Create sections named Not Started, In Progress, and Completed to match the goal status rules.

Result

Workday displays goals in these reports:

- My Goals and View Goals for Worker reports.
- View Goals for Worker report on worker profiles.

Next Steps

- Create goals for an individual employee.
- To update or delete goal rules, use the Edit Goal Template Rule and Delete Goal Template Rule tasks.

Tasks
Create Business Process Condition Rules

Steps: Manage Organization Goals

Prerequisites

Security: *Worker Data: Organization Goals* domain in the Performance Enablement functional area.

Context

You can create goals for supervisory organizations and align them with other supervisory organization goals 1 or more levels up in the hierarchy. You can then link individual goals to organization goals during the employee review process.

If you want to rename labels for goals, use the Maintain Custom Labels task.

Steps

1. Access the Maintain Goal Periods task to define date ranges to associate with organization goals.

   Security: *Set Up: Goals* domain in the Performance Enablement functional area.
2. Create or Edit Organization Goals on page 1516.
3. (Optional) Access the Copy Goal to Organization Goal task.

   Copy a goal to an organization goal. You can copy any type of goal to an organization goal and change it to suit your organization.
4. (Optional) Access the Copy Organization Goals task to copy a goal from 1 period to another.

   Select the Private check box to restrict visibility of this goal to members of the organization chain.
5. Link an individual goal to an organization goal:

   - In the Goals report on worker profiles.
   - In the My Goals and View Goals for Worker tasks.
   - When cascading goals with the Add Goal to Employees task, select an organization goal the individual goal supports.
   - In the *Set Review Content*, *Self Evaluation*, and *Manager Evaluation* phase during the employee review process.

Next Steps

View and track organization goals:

- Select Talent > View Organization Goals as a related action on a supervisory organization.
- Click Goals on organization profiles. If you enabled activity streams in the Edit Tenant Setup - System task, you can see comments from other users when you view each goal.

Workday also provides several standard reports to track goals. For a list, access Workday Standard Reports and select the *Goals and Reviews* and *Organization Goals* categories.

Concept: Employee Reviews on page 1652

Tasks

Enable Archiving Goals on page 1523

Create Custom Labels

Steps: Enable Activity Stream

Create or Edit Organization Goals

Prerequisites

- Set up default organization goal options using the Maintain Goal Setup task.
- Create goal periods with the Maintain Goal Periods task.

Security: *Worker Data: Organization Goals* domain in the Performance Enablement functional area.

Context

Create and maintain goals for supervisory organizations. You can:

- Link goals to goals that are 1 or more levels up in the organization hierarchy.
- View or manually enter a percent complete.
- Associate them with supporting business initiatives.

  Initiatives is only available as field if you have the Projects product.

Steps

1. Access the Manage Organization Goals task.
2. Select an Organization and Goal Period.
3. Create a new goal or change an existing organization goal.
4. As you complete the task, consider:

Option	Description
Percent Complete	Enter the completion percentage of the organization goal manually. Available if you select the Enable Percent Complete check box on the Maintain Goal Setup task.
Organization Alignment	Link this organization goal to goals that are 1 or more levels up in the organization hierarchy. To delete a link to another organization goal, clear this field. Available if you select the Organization Alignment check box on the Maintain Goal Setup task.
Supporting Initiatives	Select initiatives that aren't already associated with an organization goal.
Private	Only members of the organization chain can see the goal. Goals that have Supporting Initiatives can't be private. Automatically selected if you selected the Default Organization Goal to Private check box on the Maintain Goal Setup task.
Calculated	Enable Workday to calculate the completion percentage of the organization goal. If you check this field, the Percent Complete field becomes noneditable. Available if you select these check boxes on the Maintain Goal Setup task: • Organization Alignment • Enable Percent Complete • Allow Automatic Calculation of Percent Complete

Next Steps

- Associate an individual goal with an organization goal.

  Once you associate an organization goal with an individual goal, you can't delete an organization goal even if you delete the individual goal or remove the association.
- Use the View Goal Alignment task to view organization goal alignment with other goals in the same supervisory organization hierarchy. You can also drill down to see which workers and their respective individual goals align with the organization goal.

Create or Edit Individual Goals

Prerequisites

Configure the *Manage Goals* business process and security policy in the Performance Enablement functional area. See Steps: Configure Business Process Definitions.

Context

Create, edit, or delete individual goals for yourself or another employee on the Workday desktop or mobile app. You can delete individual goals when they're:

- Not part of in-progress or completed employee reviews.
- Marked as Editable when cascaded to employees.

To prevent editing of goals that are part of in-progress reviews, select Lock Goals Associated with In Progress Reviews on the Maintain Goal Setup task. Regardless of this setting, you can edit goals within employee reviews.

Goals that are in *Needs revising* state that you pull into a review will have the *Needs revising* status removed when the review is completed, but the original approval will still display in My Tasks of the approver.

Steps

1. Access the appropriate task or report:
    - View Goals for Worker
    - My Goals
2. Click Create Goal to create a new goal.
3. Add goals for any section, regardless of the section rule. Workday moves a goal to the appropriate section after it's approved. Access the appropriate task:
    - Edit Goal on the card of the goal that you want to update.
    - Click Manage Goals to update multiple goals.

    For users with access to the *Individual Goals* and *Archive Goals* initiating actions on the Manage Goals business process security policy, we provide a Bulk Update button.
4. As you edit the fields in the Goal Details tab consider:

Option	Description
Goal	Enter the Goal name.
Description	Available if you enable the Description field to be optional or required on the Maintain Goal Setup task.
Status	Available if you: • Set up goal completion statuses. • Enable the Status field as optional or required on the Maintain Goal Setup task. Goal statuses determine which goals are eligible to move from 1 employee review to the next.
Category	Available if you:

Option	Description
	• Create goal categories. • Enable the Category field as optional or required on the Maintain Goal Setup task.
Organization Alignment	Available if you: • Configure the *Self-Service: Organization Goals* and *Worker Data: Organization Goals* domains. • Enable the Organization Alignment field as optional or required on the Maintain Goal Setup task. Link this individual goal to any public organization goal, or to a private goal in your own supervisory organization.
Due Date	Available if you enable the Due Date field to be optional or required on the Maintain Goal Setup task.

5. As you edit the fields in the Additional Details tab consider:

Option	Description
Relates To	Available if you configure at least 1 talent tag (competency, development item, feedback, or flex team) for goals on the Configure Talent Tags task.
Weight	Available if you don't hide the Weight field on the Maintain Goal Setup task.
Associated Reviews	Displays reviews associated with the goal. Available if you don't hide the Associated Reviews field on the Maintain Goal Setup task.
Track By	Used to track goal progress where there are quantitative methods to measure whether a goal is achieved. Available if you don't hide any of these fields on the Maintain Goal Setup task. • Target • Actual • Minimum • Maximum

6. Click the Milestones tab (available if you don't hide the Milestones field on the Maintain Goal Setup task).
   - Click the + sign on the grid to add a Milestone row to the grid.
   - Enter information in the Milestone field and complete the Due Date and Status fields.
7. Click the History tab to view the history of the goal.
8. Click Submit to submit the goal changes or click Save for Later.

9. (Optional) To delete an approved goal, click the ellipses on the bottom right of a goal card and click Delete Goal.

   Once deleted, you can't recover a goal.

   After submission, Workday displays deleted goals in red strike-through font until approval, and they then disappear.

Result

After you submit goals, if an approval step is configured in the business process, workers can't edit the goals until the first change is approved.

The Next Level: Preparing for Goals User Experience Redesign

2023R2 What's New Post: Goals User Experience Redesign

2024R2 Release Note: Goals User Experience Redesign Multi-Management of Goals

Cascade Goal to Employees

Prerequisites

- Configure the *Cascade Goals* business process and security policy in the Performance Enablement functional area. See Steps: Configure Business Process Definitions.
- (Contingent workers only) Add workers to the *Performance and Goals: Contingent Worker Eligibility* domain in the Performance Enablement functional area.

Context

You can assign the same individual goal to a group of employees by cascading a goal. The cascaded goal for each employee is independent of copies of the same cascaded goal for other employees. You can prevent editing so recipients can't change the goal details.

You can cascade a goal to:

- Employees and contingent workers.
- Supervisory or custom organizations, including subordinates.
- Talent pool.

You can cascade public or private organization goals, or an individual goal that supports an organization goal. Goals that support a private organization goal can only be cascaded to employees in the same organization hierarchy. Example: If an employee has multiple positions, you can only cascade private organization goals for the primary position's supervisory organization.

You can also create filtering rules on a talent pool, and cascade goals to that talent pool.

If you want to assign a single previously cascaded goal to additional employees, use the Add Additional Employees to Goal task. Goals that you choose to be cascaded, regardless of whether they're organization or individual goals, all become individual goals after you complete the Add Goal to Employees or Add Additional Employees to Goal tasks.

Steps

1. (Optional) Determine if your event is large enough that you need to work with the Workday Production Readiness Team. See Workday Community: Production Readiness: Large Volume Events Best Practices for guidelines about opening a Production Readiness case.
2. Access the Add Goal to Employees task.
3. Use an Assign To list to select which employees will receive the goal:
    - Employees.
    - Talent Pool.
    - Organizations, with the option to include subordinate organizations.
4. As you complete the task, consider:

Option	Description
Goal	Limit the title length for best display.
Category	Available if you: • Create goal categories. • Enable the Category field as optional or required on the Maintain Goal Setup task.
Description	Available if you enable the Description field as optional or required on the Maintain Goal Setup task.
Organization Alignment	Available if you enable: • The *Self-Service: Organization Goals* and *Worker Data: Organization Goals* domains. • The Organization Alignment field as optional or required on the Maintain Goal Setup task. Link this individual goal to any public organization goal or to a private goal in your own organization.
Minimum / Maximum	Available if you enable the Minimum or Maximum fields as optional on the Maintain Goal Setup task. If you select a Track By option, Workday displays editable fields for tracking goals. Example: If you select Amount from the Track By field, Workday displays the Minimum Amount and Maximum Amount fields.
Weight	Available if you enable the Weight field as optional on the Maintain Goal Setup task. Indicate the goal priority using any weighting scale.
Due Date	Available if you enable the Due Date field as optional or required on the Maintain Goal Setup task.

Option	Description
Editable	Enables recipients to change their assign goal details after the goal has been cascaded. Regardless of this setting, you can change the Weight and Status of goals in employee reviews.

Example
If you create 2 goals in this task and assign them to 5 employees, Workday initiates 1 *Cascade Goals* business process. The *Cascade Goals* business process in turn initiates 5 *Manage Goals* subprocesses, 1 for each employee. Each *Manage Goals* subprocess includes 2 goals.

Next Steps

- You can select any combination of employees, talent pool, and organizations to receive a goal using the Add Additional Employees to Goal task.
- You can use the Correct related action to edit the instance of the *Cascade Goals* business process after saving your work. This only applies to cascaded goals that weren't marked as Editable.
- You can rescind the business process and start over to change a cascaded goal that isn't marked as Editable.

The Next Level: Overview of Primary Position Designation Impact

Add Additional Employees to Goal

Prerequisites

- Create a goal and cascade it to more than 1 employee.
- Configure the *Cascade Goals* business process and security policy in the Performance Enablement functional area. See Steps: Configure Business Process Definitions.

Context

You can redistribute a single, previously cascaded goal to another group of employees without changing the goal.

If you want to edit the goal first or assign more than 1 previously cascaded goal, use the Add Goal to Employees task instead.

Steps

1. Access the Add Additional Employees to Goal task.
2. Select any combination of employees, talent pool, and organizations to receive the goal.

   To view a list of employees who have already received the goal, click the Assigned To number.

Result

Workday initiates a *Cascade Goals* business process that includes 1 *Manage Goals* business subprocess for each employee you want the goal distributed to.

Related Information

Tasks

Create or Edit Individual Goals on page 1518

Enable Archiving Goals

Prerequisites

- Configure the *Manage Goals* business process and security policy in the Performance Enablement functional area. See Steps: Configure Business Process Definitions.
- Understand how to set up goal template rules.

Context

You can archive historical individual or organization goals, minimizing clutter in the user interface and improving goal management.

You can:

- Archive goals and restore previously archived goals for yourself and employees in your organization.
- Archive an individual goal using the Archive Goal related action on a goal card.
- Archive individual goals for a specified worker using the Archive Goals task.
- Archive organizational goals using the Archive Organizational Goals task.
- Mass archive individual goals based on a goal template rule (administrators) using the Mass Archive Goals task.

Archiving a goal removes it from:

- Reports.
- Tasks.
- Employee review template configuration settings.
- Prompts.

You can't archive or restore goals that are:

- Awaiting approval.
- Part of in-progress employee reviews, including goals that are saved for later.
- Part of other in-progress events.

Steps

1. To enable workers self-service access to archive individual goals, add them to the *Self-Service: Employee Goals* domain in the Performance Enablement functional area.
2. To enable workers to archive organization goals, add them to the *Worker Data: Organization Goals* domain in the Performance Enablement functional area.
3. To enable administrators to mass archive individual goals, add them to the *Set Up: Goals* domain in the Performance Enablement functional area.

Result

Workers in the assigned domains can archive goals.

Next Steps

- To mass archive individual goals, use the Mass Archive Goals task. See Mass Archive Individual Goals on page 1524.
- To report on archived goals, create a custom report with the Archived Goals by Organization report data source.
- Use the Configure Profile Group task to add the Archived Goals report to the Performance tab of the worker profile.

Mass Archive Individual Goals

Prerequisites

Security: *Set Up: Goals* domain in the Performance Enablement functional area.

- Configure the *Manage Goals* business process and security policy in the Performance Enablement functional area. See Steps: Configure Business Process Definitions.
- Understand how to set up goal template rules.

Context

You can mass archive all individual goals meeting a template rule in 1 operation. You can't archive goals for terminated workers, and the same restrictions for archiving goals also apply to mass archiving goals. Workday skips these goals during the mass archive operation and leaves them unarchived:

- Goals saved for later and not yet submitted.
- Goals that are part of an in-progress event. Examples: Goals included in-progress events using the *Manage Goals* business process, or goals included in in-progress employee reviews.

  To include the goals in the archive, complete or cancel the in-progress event.

Workday recommends you conduct advanced preparation and testing before starting the mass archive operation. For more information, see. Reference: Event-Specific Best Practices.

Steps

1. Access the Mass Archive Goals task.
2. Select one of these options:
   - Run Now.
   - Run Once in the Future.
3. Select an Organization and optionally select whether to include subordinate organizations.
4. Select a Goal Template Rule.
5. To run the task in the future:
   a) Define the Schedule priority.
   b) Set the Start Date, Start Time, and Time Zone for when to launch the mass archive action.

Result

Workday launches the process for mass archiving the individual goals. The task runs as a background process that automatically completes the *Manage Goals* business process, skipping all other steps.

Next Steps

To view the status of the mass archive process, access the Process Monitor report.

Related Information

Tasks

Steps: Configure Goal Templates on page 1514

Concept: Hide and Require Goal Fields by Security Group

Using the Maintain Goal Setup task, you can hide or require individual goal fields for workers in specific security groups.

- Security groups that you select from the *Required For* prompt inherit from the initiating actions of your *Manage Goal Business Process* security policy.
- Security groups that you select from the *Hidden For* prompt inherit from the initiating actions and View All section of your *Manage Goal Business Process* security policy.

  When a user such as a manager reviews goals for another individual, the goal fields that display on the task derive from the security group configuration of the reviewer.

When you specify a goal as *Hidden For* or *Required For* for workers in multiple security groups:

- For a field to be hidden for a worker, all the security groups the worker belongs to on the *Manage Goals Business Process* security policy must be specified in the *Hidden For* column.
- For a field to be required for a worker, the worker only needs to be in at least 1 of the specified security groups listed in the *Required For* column.
- If there are security groups specified under both *Hidden For* and *Required For*, and a worker belongs to security groups under both columns, the security group specified under *Required For* takes precedence.

Reference: Individual Goal Fields

This table describes the individual goal fields that you can hide or require for all workers, or hide or require for specific security groups using the Maintain Goal Setup task. If you don't specify a field to be hidden or required, Workday displays the field as optional to all workers.

Field	Description	Criteria Options
Actual	Select to track the goal Actual Amount , Actual Percent, or Actual Number of Units in the Track By field.	• *Hide for All* • *Security Group*
Associated Reviews	Select to display in-progress and completed reviews associated with the individual goal.	• *Hide for All* • *Security Group*
Category	Select to assign a category in individual goals. Create goal categories for this field using the Maintain Goal Categories task.	• *Hide for All* • *Require For All* • *Security Group*
Completed On	Select to set a completion date in individual goals when the goal status is completed.	• *Hide for All* • *Require For All* • *Security Group*
Description	Select to include a description for individual goals.	• *Hide for All* • *Require For All* • *Security Group*
Due Date	Select to set a due date in individual goals.	• *Hide for All* • *Require For All*

Field	Description	Criteria Options
		• *Security Group*
Maximum	Select to track the goal Maximum Amount, Maximum Percent, or Maximum Number of Units in the Track By field.	• *Hide for All* • *Security Group*
Milestone	Select to include milestones in individual goals. A due date and status can be defined for each milestone.	• *Hide for All* • *Security Group*
Minimum	Select to track the goal Minimum Amount, Minimum Percent, or Minimum Number of Units in the Track By field.	• *Hide for All* • *Security Group*
Organization Alignment	Select to associate the individual goal to an organization goal 1 level up in the organization hierarchy.	• *Hide for All* • *Require For All* • *Security Group*
Status	Select to include a goal status in individual goals. Create goal statuses using the Maintain Goal Completion Statuses task.	• *Hide for All* • *Require For All* • *Security Group*
Target	Select to track the goal Target Amount, Target Percent, or Target Number of Units in the Track By field.	• *Hide for All* • *Security Group*
Weight	Select to assign a weight to individual goals, which are also used in employee reviews. The weight must be a whole number greater than or equal to 0.	• *Hide for All* • *Security Group*

Example: Hide the Track By Field in Individual Goals

This example illustrates how to hide the Track By field in individual goal fields.

Context

When setting up individual goals, you want to hide the Track By field so workers can't enter goal units to track their progress. To hide the Track By field, you must hide all 4 options that use the field.

Steps

1. Access the Maintain Goal Setup task.
2. In the Configure Individual Goals grid, click the + icon to create a row.
    a) Select *Actual* in the Field column drop down.
    b) Select *Hide for All* in the Criteria column drop down.

3. Repeat step 2 for these options in the Field column drop down:
    - *Maximum*
    - *Minimum*
    - *Target*
4. Click OK and Done.

Result

Workday hides the Track By field in individual goals.

Next Steps

Example: Require Fields in Individual Goals

This example illustrates how to require fields in individual goals.

Context

You want to require certain fields for all workers while also requiring certain fields for workers in selected domains.

Steps

1. Access the Maintain Goal Setup task.
2. In the Configure Individual Goals grid, click the + icon to create a row.
    a) Select *Description* in the Field column drop down.
    b) Select *Require for All* in the Criteria column drop down.
3. Repeat step 2 for these options in the Field column that you want to be required for all workers.
    - *Description*
    - *Status*
    - *Due Date*
    - *Completed On*
4. Click the + icon to create a row.
    a) Select *Organization Alignment* in the Field column drop down.
    b) Select *Security Group* in the Criteria column drop down.
    c) In the Required For column, select these security groups from the drop down:
        - *Employee As Self*
        - *Contingent Worker as Self*
        - *Manager*
5. Click OK and Done.

Result

Workday displays the 4 goal fields in steps 2 and 3 with a red asterisk for all workers. Workday displays the Organization Alignment field as required for some workers.

Next Steps

FAQ: Individual Goals

How do the Cascade Goals and Manage Goals business processes work together?

Can the Manage Goals business process include different actions and notifications for different goal types?

How do I configure a review step for employees who receive cascaded goals?

Must the total weight of ad hoc goals equal 100?

How do the ***Cascade Goals*** and ***Manage Goals*** business processes work together?	The *Cascade Goals* business process automatically initiates 1 *Manage Goals* subprocess for each employee you assign the goals to. Each employee can have a different definition of the *Manage Goals* business process, depending on their supervisory organization. After initiation, the *Manage Goals* process runs all additional steps or notifications. If the process has no workflow steps, then *Manage Goals* is automatically completed. If *Manage Goals* includes notifications, the employee receives the notification at the specified workflow step.
Can the ***Manage Goals*** business process include different actions and notifications for different goal types?	Yes. You can create condition rules based on the Cascaded Goal and Contains only Editable Goals report fields to trigger workflow steps for specific goal types. Example: Build a condition rule that sends notifications only for cascaded goals, or include a review step only for cascaded goals that are editable.
How do I configure a review step for employees who receive cascaded goals?	Add a *Review Goal* action step to the *Manage Goals* business process and route the step to the *Employee as Self* security group. On the *Review Goal* step, build a condition rule using the Cascaded Goal report field to evaluate whether goals are cascaded before initiating the step.
Must the total weight of ad hoc goals equal 100?	No. You can establish a weighting scale for ad hoc goals by creating validation rules on the *Manage Goals* and *Cascade Goals* business processes. Weights are locked on non-editable cascaded goals, except when the review template requires that total weighting equal 100. When you pull goals into such a template, you can change the goal weighting. The My Goals and View Goals for Worker reports reflect the updated weighting when the review is completed.

Development Items

Create Development Items

Prerequisites

- Configure Development Items.
- Configure security for these domains in the Career and Development Planning and Performance Enablement functional areas:
  - *Self-Service: Development Items*
  - *Self-Service: Delete Development Item*
  - *Worker Data: Development Items*
  - *Worker Data: Delete Development Item*

Context

You can create Development Items to track progress of skills and experiences you want to improve, helping your career planning and professional development. You can associate Development Items with job profiles, job interests, competencies, or work experiences to highlight their purpose.

For Career Hub customers, Generative AI (GenAI) functionality is available to:

- Help employees draft and modify content for Development Items in Career Hub.
- Suggest Development Items to employees based on their career interests.

See Concept: Career Hub.

Steps

1. Access Development Items for yourself or your team members on these reports:
   - My Development Items
   - My Team's Development Items > Development Items
2. Click Add to create a new Development Item.
3. As you complete the task, consider:

Option	Description
Development Item	Describe the Development Item in 140 characters or less.
Skills to Develop	Select skills based on your job profile, a skill category, or skill interests. When you select skills, Workday adds them as skill interests on the worker profile if they aren't already listed. Your skill interests are also updated in your Career Hub profile. If you remove a skill as a skill interest, it will still remain associated with your Development Item. Also, if you remove a skill from the Development Item, the skill will remain as a skill interest.
Relates To	Select values from the categories that the Development Item supports. Examples: • Competencies.

Option	Description
	• Job interests. • Job profiles. • Work experiences. The prompt offers suggestions based on your current job profile, competencies, and work experiences, plus any job profiles that match your job interests.

Next Steps

You can:

- Include Development Items in talent or employee reviews. After you complete the review, Workday updates these items in profiles and reports.
- Edit Development Items that aren't in active employee or talent reviews:
    - From the My Development Items report, click the edit icon on the development item.
    - In the Career Hub, click Plan to view your development items, then click Manage Development Item.
- View changes to Development Items on these reports:
    - My Development Items Changed in Last Week (Include Delete and Not Applicable)
    - My Team's Development Items Changed in Last Week (Include Delete and Not Applicable)
- Create alerts for Development Items in custom reports. Example: Copy the My Team's Development Items Changed in Last Week (Include Delete and Not Applicable) report and Configure and View Alerts.

Tasks

Configure and View Alerts

Hide or Require Optional Fields

Example: Manage Development Items in Career Hub

Context

This example illustrates how workers can use Career Hub to manage all aspects of their Development Items. Amy Frost is a sales representative at Global Modern Services (GMS). She wants to create a Development Item to improve her French skills so she can build better relationships with her new French Canadian prospects. Amy can create or edit development items and view status updates and a personalized plan in Career Hub. Amy can also track the progress of her career as she completes Development Items.

Steps

1. The Talent Administrator configures the *Self-Service: Development Items* domain policy to enable workers to create their own Development Items.
2. From the My Development Items report, Amy clicks Manage in Career Hub.

3. She clicks Add New Development Item. She enters these values to create her French Language Development Item:

Option	Description
Development Item	*Focus on French language skills.*
Additional Information	*Overall Objective: Develop a conversational level of the French (Quebecois) language.* *Enroll in an online language course to gain a solid foundation in French verbal concepts and techniques.*
Skills to Develop	By Category and *French- Communication*
Relates To	*Communication (competency)*
Status	*In Progress*
Category	*Coursework* and *Training*
Start Date	*Today's date*
Completion Date	*12/31/2026*
Status Note	*09/01/2025* *Completed initial course.*

4. Amy clicks OK.
5. She clicks Manage Development Item to access the View Development Item report.
    - If she has more information to add, she clicks Edit Development Item to add or update information related to her Development Item.
    - Workday suggests learning and flex teams that are related to the skills specified on her Development Item to help her complete it.
    - When she feels comfortable with her French language skills, she clicks Mark Complete to close the development item from Career Hub. Workday prompts her to update her Worker profile with new skills.

Result

Now Amy can view and manage her Development Item in Career Hub.

Concept: AI-Generated Development Items

Workday provides AI assistance to help employees and managers create detailed, structured, and actionable development items that align with employees' career interests.

AI assistance is available in the Career Hub and Manager Insights Hub for drafting the Additional Details field in a development item.

Feature Availability

In the Career Hub, employees can access AI assistance when creating a development item, and they can also view suggested development items based on Skills Cloud skills and their career interests.

In the Manager Insights Hub, managers can create development items for their direct reports using AI assistance.

Generating development item content isn't available when:

- Editing a saved development item in the Career Hub.
- Creating a development item from the My Development Items report or from employee reviews.

Note: Note:

- Workday supports this feature in all languages supported by Career Hub. See Workday Community: Languages.
- Workday only supports generating and modifying development item content with AI on desktop. Employees can access suggested development items on desktop and mobile, however.

Output Format

The Additional Details content for AI-generated development items has a standardized format including:

- An objective.
- Additional related skills.
- Steps with examples.
- A suggested result.

Generating and Modifying Content with AI

Before generating content with AI, users must specify 1 to 3 Skills to Develop.

Employees can enter their own content and then modify it using AI, for example, to make the generated content more specific to their organization, role, or upcoming projects. Employees can also edit the AI-generated content before saving the development item.

After generating or manually entering content in the Additional Details field, users can modify it with AI using these options:

- Make More Challenging: For advanced skill development, this option can increase the complexity of the steps, the impact of the results, and the need for data to show successful completion.
- Make Easier: Makes the item simpler and easier to achieve, for developing skills at a more basic level.
- Generate Another: Generates a different development item based on the skills to develop.
- Revert to Original: Reverts to the first version of the AI-generated content for this development item. This option is unavailable for Suggested Development Items. This option also doesn't restore content that users entered manually.

Note: Note: Users get different results each time they use AI, and they can't restore their own content after modifying it with AI. Consider instructing users to copy any Additional Information text that they want to keep before modifying it with AI.

Source Data

Source data for the AI-generated content includes:

- The skills to develop.
- The title of the development item, if you enter one.
- The employee's current business title.
- The employee's worker skills.

For transparency, users can view details about the source data alongside the generated content. See Workday Community: Career Hub Generate Development Items AI Fact Sheet for details.

Creating Development Items for Direct Reports

In the Manager Insights Hub, managers can create development items for their direct reports, from the employee's:

- Development Items & Interests.
- Career Path, if the employee has shared a career path.

When an employee receives a development item from their manager, the employee has full control over it, including editing it, deleting it, and updating its status.

Suggested Development Items

When you enable AI-generated development items, Workday surfaces suggested development items to employees in the Career Hub based on Skills Cloud skills and employee career interests. Employees can view these suggestions in:

- The Plan > For Your Career Growth section, based on the employee's skill interests, business title, and job title. These suggestions don't use skills that are already part of an in progress development item.
- The Begin Working Toward Your Next Role section of a saved career path in Explore, if enabled, based on the worker's business title, their next role, and their skill gaps for this role.

Setup Considerations: Manager Insights Hub on page 2933
Setup Considerations: Career Hub on page 1543
2025R1 Release Note: Career Hub: Generate Development Items
2025R2 Release Note: Generate Development Items for Workers in Manager Insights Hub

Steps: Enable AI-Generated Development Items

Prerequisites

- Configure Development Items.
- Set up 1 or both of:
    - Career Hub
    - Manager Insights Hub

Context

Employees and managers can use AI assistance for drafting the Additional Details field in a development item.

AI assistance is available:

- In the Career Hub, for employees to generate their own development items.
- In the Manager Insights Hub, for managers to generate development items for their direct reports.

Steps

1. Configure security domains.
2. Depending on the functionality that you want to use, configure these domains:

Domain	Functional Area	Access	Considerations
Self-Service: GenAI Development Items	Career and Development Planning Career Hub	Modify	Enables employees to generate their own development items with AI. Required for AI assistance for development items in the Career Hub.

Domain	Functional Area	Access	Considerations
Worker Data: Development Items	Career and Development Planning Performance Enablement	Modify	Enables managers to view and add development items for their direct reports. Required for generating development items in the Manager Insights Hub.
Worker Data: GenAI Development Items	Career and Development Planning Manager Insights Hub	Modify	Enables managers to generate development items with AI for direct reports. Required for generating development items in the Manager Insights Hub.

Security: These domains in the System functional area:

- *Security Activation*
- *Security Configuration*

3. For all employees who need to use the feature, ensure that the Skills to Develop field is enabled for View Development Item. See: Hide or Require Optional Fields.

   Employees need access to this field to generate development item content and use Suggested Development Items. This field is available for all employees by default.

4. (Optional) Configure these options in the Talent section on the Edit Tenant Setup - HCM task:

Option	Description
Development Items Help Text	Enter text to replace the default help text for creating a development item with AI assistance.
GenAI Development Items Location Exclusion	Employees and managers with a primary or additional position in these locations cannot access AI assistance while creating development items.
GenAI Development Items Hierarchy Exclusion	Employees and managers with a primary or additional position within these regions cannot access AI assistance while creating development items.

Note: Note: Managers who are not in excluded locations can generate development items for direct reports in any location.

Next Steps

To enable managers to generate development items while viewing employees' shared career paths, set up the Career Hub and enable career path sharing.

See Steps: Set Up Career Hub on page 1549.

Career Interests

Steps: Set Up Interests

Prerequisites

- Configure the *Manage Interests* business process in the Career and Development Planning functional area.
- Security: *Self Service: Interests* and *Worker Data: Interests* domains in the Career and Development Planning functional area.

Context

Enables employees to add career interests to their profiles, including:

- Job interests.
- Skill interests.
- Travel preferences.
- Relocation preferences.

When employee interests are part of talent reviews or employee reviews, business leaders can use the information for organizational development and succession planning.

You can't update interests on the worker profile when an employee review or talent review is in progress. When the review is complete, Workday displays the updated information on the worker profile.

Workday doesn't support career or job interests for contingent workers.

You can add the Interests tab to the worker profile, see Steps: Set Up Profiles and Profile Groups.

Steps

1. Set Up Career Interests on page 1538.
2. Create a Public Job Catalog on page 1537.
3. Set Up Travel Preferences on page 1539.
4. Set Up Relocation Preferences on page 1540.
5. Configure the Career profile group on worker profiles and the Talent profile group on talent pools.

Result

You can view career interest information both when you compare workers and in the:

- Career profile group on worker profiles.
- Development worklet on the Home landing page.
- Talent profile group on talent pools.
- Talent area on worker preview cards.

You can also view them on:

- Completed employee reviews.
- Talent cards.
- The View Succession Plan for Position report.

Next Steps

(Optional) To enable workers to edit their career interests, configure the Interests report on the Career profile group of the worker profile.

FAQ: Opportunity Graph on page 1542

The Next Level: Cultivating Career Mobility

Steps: Set Up Opportunity Graph

Context

Opportunity Graph is a graphical report for Employee as Self users to view historical job transitions from their current primary job profile.

Steps

1. Create Job Profiles on page 573.

   As you create and edit job profiles, consider:

   - Give job profiles a meaningful and appropriate name and description to display in Opportunity Graph.
   - Select the Public Job check box for as many job profiles as you can. Data in the Opportunity Graph only generates from transitions to public job profiles.
   - Enter as many details on the job profile as you can, such as competencies, skills, and other qualifications.
2. Configure the *Set Up: Opportunity Graph* domain in the Career and Development Planning functional area.
3. Access the Opportunity Graph Job Profile Transitions report (secured to the *Set Up: Opportunity Graph* domain in the Career and Development Planning functional area).

   Use this report to preview all job profile transitions, public and not public, from a job profile before exposing the Opportunity Graph to your employees. Administrators can use this report as they consider making some job profiles public to expose more transitions to employees. The transitions exposed in the report update after the weekly background job.
4. Configure the *Self Service: Opportunity Graph* domain in the Career and Development Planning functional area.

   Secure the employee as self-security group.

5. (Optional) Configure the *Persons in Opportunity Graph Job Profile* domain in the Career and Development Planning functional area.

   Provide access to see the All Employees in Role table, which returns all current workers, when viewing a specific job profile.
6. (Optional) Configure the *Worker Data: Opportunity Graph* domain in the Career and Development Planning functional area.

   This domain secures the Opportunity Graph for Others report, which enables self-service users to view job profile movement for other workers.
7. (Optional) Configure the *Learning Access* domain in the Learning Core functional area.

   The *Learning Access* domain secures the Popular for this Role section. This section displays learning content that employees in the job profile transitions have completed or rated. The Popular for this Role section only displays when 5 or more employees that your employees have access to view complete or rate learning content for a job profile on Opportunity Graph.

Result

Workday refreshes job profile transition data for Opportunity Graph every Tuesday night at 11 p.m. Pacific Time. The Opportunity Graph job transition data is available after job completion following the initial configuration. If you set up Opportunity Graph after Tuesday, then you won't see Opportunity Graph populated until the job is completed the following Tuesday. If you're testing Opportunity Graph in Sandbox, Workday recommends that you perform the initial configuration after the most recent weekly service update but before the job is executed on Tuesday night.

Tasks

Configure Career Path Builder on page 1554

Create a Public Job Catalog

Prerequisites

Security: *Set Up: Job* domain in Jobs and Positions functional area.

Context

Set up a catalog of public jobs for employees to define their job interests. As a tool for individual development and career planning, employees can also compare their qualifications to those required for specific jobs.

Steps

1. Access the Create Job Profile or Edit Job Profile task.
2. Select the Public Job check box.
3. Configure these domain security policies:

Domain	Functional Area	Notes
Public Job: View (parent)	Jobs & Positions	Provides access to the job profile name and summary.
(Optional) *Public Job Qualifications: View*	Jobs & Positions	Secures the job qualifications for public jobs and is a child of the *Public Job: View* domain. Configure this domain only if

Domain	Functional Area	Notes
		you want to restrict access to job qualifications to different security groups.

Next Steps

- To confirm the security changes, access the Activate Pending Security Policy Changes task.
- View and select jobs from the public catalog:
  - Select Talent > Edit Job Interests from a worker's related actions menu.
  - On a worker profile, select Job Interests in the Career profile group and click Edit.
  - In talent reviews, complete the Jobs Interests section if it's part of the review template.
  - In employee reviews, complete the Career section if it's part of the review template.
- Compare qualifications to job interests. On a worker or talent profile, click Compare to Job on the Job Interests tab in the Career profile group.

Related Information
Tasks
Create Job Profiles on page 573

Set Up Career Interests

Prerequisites

- *Set Up: Talent* domain in Talent Pipeline functional area.
- *Worker Data: Career* (parent) domain in Career and Development Planning functional area.
- *Worker Data: Career Interests* domain in Career and Development Planning functional area.

Context

You can use career interests as directional categories for career growth. Employees can select career interests to indicate their interests in a specific category of growth, such as:

- Develop in their current role.
- Step into a new role.
- Broaden their knowledge and experience.

Steps

1. Access the Maintain Career Preferences task.
2. Specify a Name, ID, and Description for each career preference you create.
   The ID is for web services and integration purposes.
3. (Optional) To remove a preference from selection lists, select the Inactive check box.
   The preference remains valid for employees who have already selected it.

Example

Name	ID	Description
Broaden	BROADEN	Ready for different responsibilities with similar scope.

Name	ID	Description
Expand Beyond Role	EXPAND	Ready to take on a larger developmental role.
Develop At Level	DEVELOP	Likely to remain in current or similar role, dive deeper.
Too New to Rate	NEW	Not enough information to rate.

Next Steps

Specify career preferences:

- Select Talent > Edit Career Interests from a worker's related actions menu.
- On a worker profile, click Edit on the Career Interests tab in the Career profile group.
- In talent reviews, complete the Career Interests section if it's part of the review template.
- In employee reviews, complete the Career section if it's part of the review template.

Related Information
Tasks
Steps: Set Up Interests on page 1535

Set Up Travel Preferences

Prerequisites
Security:

- *Set Up: Talent* domain in Talent Pipeline functional area.
- *Worker Data: Career* (parent) domain in Career and Development Planning functional area.
- *Worker Data: Travel Preferences* domain in Career and Development Planning functional area.

Context

Define the amount of travel time that employees can select when they're willing to travel. These can be anything you determine, such as:

- Percentages.
- Number of days or weeks.
- Specific days of the week.

Steps

1. Access the Maintain Travel Amounts task.
2. Specify a Name, Amount, and ID for each travel amount you create.
   The ID is for web services and integration purposes.
3. (Optional) To remove an option, select the Inactive check box.
   The travel amount remains valid for employees who have already selected it.

Next Steps

- Specify travel preferences:
    - Select Talent > Edit Travel Preferences from a worker's related actions menu.
    - On a worker profile, select Travel in the Career profile group and click Edit.
    - In talent reviews, complete the Travel section if it's part of the review template.
    - In employee reviews, complete the Career section if it's part of the review template.

Related Information

Tasks

Steps: Set Up Interests on page 1535

Set Up Relocation Preferences

Prerequisites

Security:

- *Set Up: Talent* domain in Talent Pipeline functional area.
- *Worker Data: Career* parent domain in Career and Development Planning functional area.
- *Worker Data: Relocation Preferences* domain in Career and Development Planning functional area.

Context

You can define the areas that employees can select when they're willing to relocate. These can be anything you choose, such as:

- Business sites.
- Regions.
- Countries.

Steps

1. Access the Maintain Relocation Areas task.
2. Specify a Name, ID, and Description for each relocation area.

   The ID is for web services and integration purposes.
3. (Optional) To remove a relocation area, select the Inactive check box.

   The relocation area remains valid for employees who have already selected it.

Next Steps

Specify relocation preferences:

- Select Talent > Edit Relocation Preferences from a worker's related actions menu.
- On a worker profile, select Relocation in the Career profile group and click Edit.
- In talent reviews, complete the Relocation section if it's part of the review template.
- In employee reviews, complete the Career section if it's part of the review template.

Related Information

Tasks

Steps: Set Up Interests on page 1535

Concept: Opportunity Graph

Opportunity Graph is a graphical report for Employee as Self users to view historical job transitions from their current primary job profile. This report enables employees to explore potential career paths within your organization with learning content that's completed or rated by employees in job profile transitions. Contingent workers can't view this report.

Opportunity Graph for Others is a graphical report (secured to the *Worker Data: Opportunity Graph* domain) that enables employees to view historical job transitions for other workers to explore additional potential career paths. Managers can also use the Opportunity Graph for Others report to view historical job transitions for their team members to use during employee reviews.

What's My Next Move is a multi-tier report that enables employees to explore the historical job transitions for their job profiles, giving employees greater control over internal job movement and career planning.

Employees can access the What's My Next Move report to identify the possible job roles that others in the same job profile migrated to. Employees can access only public job profiles and explore up to 12 job transitions per job profile. Each job profile card displays the next job transition from that job profile, giving employees insights beyond their current job profile that they can use to plan their career trajectory.

Example: When a worker in the Quality Assurance job profile selects What's My Next Move, the report displays that 30% of the workers in the Quality Assurance job profile moved to the Support Analyst job profile. If the worker selects the Support Analyst job profile, the report displays that 70% of workers in the Support Analyst job profile moved to the Senior Support Analyst job profile.

These reports provide benefits to employees when:

- You create job profiles that include qualifications and job descriptions.
- The reports include many job transitions for employees to explore.
- The reports include many public job profiles, providing more transitions for employees to explore.

Note that both Opportunity Graph reports are based only on the job profile and aren't unique to a specific employee.

2023R2 What's New Post: Career Path Builder in Career Hub Explore

2022R2 What's New Post: Career Hub Suggested Opportunities for Job Profiles

The Next Level: Establishing a Talent Footprint

Concept: Interests

Interests in Workday enable employee as self users to create and maintain information related to their career and job interests. Using Interests, your employees can plan their career growth or job transitions within your organization. Workday doesn't support career or job interests for contingent workers.

Key Features

When you enable Interests in Workday, your employees can:

- Quickly create, revise, and post their interests through the Talent and Performance dashboard or the Career Profile.
- Plan their career trajectory by comparing their current role with other employees in your organization using the Compare Worker to Jobs report.
- Share career aspirations with managers to help plan the learning required to grow in their current roles or transition into other roles.
- Access the Opportunity Graph report to plan possible next moves for their career internally.

Business Benefits

Enable Interests in Workday to:

- Gauge employees career aspirations based on insights from interests data.
- Create strategies to enhance the on-job learning of your employees.
- Provide managers access to the Interest reports of their employees from the Development dashboard.
- Provide employees the avenue to explore career growth internally.

Interests Views

Workday provides these views to set up your employees' interests:

- Consolidated Interests - offers Career (consists of Job Profiles, Skills Interests, Career Preferences, and Career Interests), Travel, and Relocation sections under the new consolidated Interests report on the Career for Worker Profile profile group.

  Enable the *Manage Interests* business process (secured to the *Self Service: Interests* and *Worker Data: Interests* domains) to set up the consolidated interests view in the worker profile.
- Unconsolidated Interests - offers Career Interests, Job Interests (Job Profiles), Travel, and Relocation sections as separate reports in the Career for Worker Profile profile group. Workday recommends replacing these reports with the consolidated Interests report that simplifies the user experience for your employees.

Related Information

Tasks

Steps: Set Up Interests on page 1535

FAQ: Opportunity Graph

Does Opportunity Graph use an algorithm or machine learning? How does it work?	No. Opportunity Graph doesn't use an algorithm or machine learning. Instead, it exposes historical job profile transactions for every job profile in your Workday tenant. Opportunity Graph displays the percentage of moves from a worker's current job profile to other job profiles in your Workday tenant. The percentage generates using the following calculation: # of Transitions from Job Profile A to Job Profile B / # of Transitions from Job Profile A to all other Job Profiles Note that this calculation doesn't include terminations as transitions. There may be some variation depending on the timing of your calculation, as Opportunity Graph updates every Tuesday at 11:00 PM PST. Opportunity Graph data is based on all history available in your Workday tenant job profiles. There's no minimum time requirement for exposing job profile transitions. Workday includes historic transactions from inactive job profiles unless you remove them using the Edit Job Profile task. Over time, more data displays in Opportunity Graph as employees change job profiles.
Does Opportunity Graph track job change events, or job profile changes I make in Edit Position?	Yes, Opportunity Graph records job change edits as well as job profile edits to positions.
Does the Opportunity Graph include data from inactive job profiles?	Yes. Opportunity Graph uses data from public job profiles, including inactive ones. To remove inactive job profiles from Opportunity Graph, access the Edit Job Profile task and clear the Public Job check box for each inactive profile.
Does Opportunity Graph offer predictions or career advice?	No, Opportunity Graph is only based on historical job profile transitions. It doesn't predict the

	likelihood of an employee moving into a certain job profile, or recommend moves for specific employees based on a set of criteria.
Is Opportunity Graph a formal career path tool?	No, Opportunity Graph is a self-service exploration tool that employees can use to help them understand the possible transitions from their current job profile.

Career Hub

Setup Considerations: Career Hub

You can use this topic to help make decisions when planning your configuration and use of Career Hub. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Career Hub is a career development platform that enables employees to discover career opportunities, plan career steps, and explore relevant skills and jobs within your organization.

We support Career Hub in:

- Chinese (Simplified)
- Chinese (Traditional)
- Danish
- Dutch
- English
- Finnish
- French (Canada)
- French (France/Continental)
- German
- Italian
- Japanese
- Korean
- Norwegian
- Portuguese (Brazil)
- Spanish
- Swedish

Business Benefits

- Enables organizations to efficiently upskill internal talent.
- Improves talent mobility by providing personalized career development opportunities.
- Increases employee engagement and retention by encouraging self-directed career and skill development within your organization.

Use Cases

With the Career Hub, your employees can:

- Define their current skills, career focus, skills development interests, and job interests.
- Use the Suggestions for You section to build a career plan by:
    - Viewing job suggestions based on the skills on their profile.
    - Creating connections and meeting mentors.
    - Participating in flex teams and learning in the areas they're interested in developing.
    - Expressing interest in project opportunities that match the skills on their profile.
- Use the Plan section to initiate outreach to saved connections and mentors, save and manage goals and jobs, and take other actions to progress their career development.
- Use the Explore section to discover:
    - Career paths based on skills, skill interests, and internal historical job transitions.
    - Suggested skills to help them develop in their current role.
    - Suggested skills related to their job interests.
    - Skills mentioned frequently in internal job posts.
- Access flex team, job, and learning suggestions within the Career Hub, when you configure Opportunity Marketplace.
- Create development items with AI assistance, helping them create actionable plans for skill development and career growth.

Questions to Consider

Questions	Considerations
Which products can you configure while setting up Career Hub?	Workday recommends configuring these products as a part of your setup to access the full suite of career development experiences available in Career Hub: • Anytime Feedback • Career Connections • Development Items • Flex Teams • Manager Insights Hub • Mentorships • Opportunity Graph • Opportunity Marketplace • Learning • Recruiting • People Experience
Do you want to limit Career Hub access to certain types of employees?	You can set up security to define the employee group that can access Career Hub. Typically, full-time employees with self-service access are best suited for Career Hub use.

Questions	Considerations
	Managers can't access their employees' Career Hub information, but they have complete self-service access as Career Hub users to further their own career development.
Do you want to enable AI functionality for employees in the Career Hub?	You can enable employees to use AI functionality when creating development items in the Career Hub. You can set up the following optional tenant configurations: • Location and hierarchy exclusions, for example, if local regulations impact your organization's use of AI. • Custom help text to display when AI is available to create development items. See: Concept: AI-Generated Development Items on page 1531.

Recommendations

- Ensure that your employees update their worker profile and skills data. Encourage workers to add 10-20 skills and 5-10 skill interests on their worker profile so that Career Hub generates more accurate connection, flex team, job, learning, and mentor suggestions.
- To enhance Career Hub's ML inference and skill suggestions, update these sections and make them available to support machine learning analysis:
  - Anytime Feedback
  - Job History
  - Learning Activity
  - Position History
  - Project History
- Ensure job profiles are public and descriptive to make it easier for Career Hub users to express interest in the jobs associated with these job profiles. Adding 5-10 skills to job profiles can improve job suggestions during Career Hub profile setup. Skills that are explicitly added to job profiles are given higher priority in matching performed by machine learning, as opposed to implicit skills.
- Ensure that mentors make themselves available and update their mentor skills to give employees access to a wider pool of available mentors in Career Hub.
- Enter Skills Needed information when creating a flex team so that employees looking for development opportunities are more likely to see relevant suggestions in Career Hub.
- Set up Home page cards using People Experience to enable Career Hub to provide timely career-related suggestions and follow-ups to users.
- For customers who use Career Hub and are Recruiting customers:
  - Consider adding Jobs Hub tasks to the Career Hub Quick Links section.
  - The Browse Jobs report is available in global search. However, consider having users discover jobs directly in Career Hub.
  - Jobs Hub is searchable. Consider removing the Careers worklet and not adding Jobs Hub to the Workday home page menu.

Requirements

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

- You must set up Skills Cloud. See Steps: Set Up Skills Cloud on page 1852.

- You must be a Career Hub customer and meet certain requirements to use this feature. Contact your Customer Success Manager for information on Career Hub.

Limitations

- Career Hub doesn't support contingent workers.
- Match analyses and candidate recommendations only update every 24 hours, Monday through Friday, so when:
    - You expand access to flex teams to new workers, Workday can't immediately suggest them as flex team candidates.
    - Workers update their skills, their career development opportunities update immediately, but flex team hosts won't immediately see updated match analyses and candidate recommendations.
    - You create or update a job or flex team, workers' career development opportunities don't update immediately.
    - A worker is terminated, Workday won't immediately remove that worker from candidate recommendations.
- When creating or editing development items in the Career Hub, the *Generate with AI* and *Modify with AI* options are not available on mobile devices.

Tenant Setup

On the Edit Tenant Setup – HCM task, Talent section, you can:

- Enable flex team, project, and job options.
- Enable suggested learning courses for workers.
- Enable flex teams express interest notes to allow workers to create a customized message when expressing interest in a flex team.

Security

Consider the domains you want to enable as a part of your Career Hub setup.

See Reference: Career Hub Security on page 1563.

Business Processes

Business Process	Considerations
Manage Interests	Enables employees to set up the job profiles and skill interests they're interested in during the What roles are you interested in exploring profile setup. Workday recommends that you set up an initiation step and remove any approval steps so that your workers can view and select skill interests and job profiles, and have the ability to complete their Career Hub profile setup.
Manage Internal Career Apply	Gives employees the ability to apply for jobs. The Save to Plan action is available on job cards, enabling employees to begin and complete the job application process in the context of Career Hub.
Manage Goals	Enables employees to manage their individual goals. Employees have the ability to add and manage existing goals in their Career Hub Plan.

Business Process	Considerations
Manage Mentorship	Gives employees the ability to request mentorships from their saved mentors in the Plan section.

For additional business process considerations, see Setup Considerations: Talent Marketplace on page 1569.

Reporting

Reports	Considerations
Career Hub and Opportunity Marketplace Activity Metrics	Provides insights into an organization's Career Hub and Opportunity Marketplace user activity through a Workday delivered data source.
Saved Career Paths for My Organizations	Allows administrators to report on career paths saved by workers. The report includes multiple optional prompts and report fields.

Integrations

No impact.

Connections and Touchpoints

Features	Considerations
Anytime Feedback	You can enable feedback and endorsements for Career Hub users through the Quick Links section. Feedback is also available through flex team endorsements for employees.
Development Items	You can enable access to career planning and professional development-related action items for Career Hub users in the Plan section.
Goals	Employees with access to the *Self-Service: Employee Goals* domain can add existing individual goals to their Career Hub Plan. Goals with configured statuses that map to the metadata values of Not Started or In Progress are available for inclusion in Plan, and appear in the To Do tab when added. Goals that map to configured statuses of Completed or Not Applicable aren't available to add to Plan, nor are Archived goals.
Learning	Employees with access to the *Learning Access* domain can find and add learning content to their Career Hub Plan from Learning Home or My Learning. Content added to the Plan section appears as a To Do item. The View Course action allows users to mange their progress. Learning items in Plan remain in sync with those in the

Features	Considerations
	Learning Items in Your Career Hub Plan slider in My Learning. Employees can search for Learning content in the Suggestions for You and Explore sections of Career Hub.
Manager Insights Hub	The Suggested Opportunities section of the Manager Insights Hub suggests flex teams, mentors, connections, and learning opportunities for your direct reports. When you share an opportunity with a direct report through the Manager Insights Hub, it displays in their Career Hub with a Manager Suggested label. When employees share a saved career path, it is available for managers to view in the Manager Insights Hub.
Mentorships	You can use Career Hub to suggest mentors who can help employees develop their skills. Career Hub only suggests workers who opt in to mentoring. Employees can configure their mentorship preferences using the My Mentorship Preferences task.
Opportunity Graph	Opportunity Graph sources the historical data that reveal common career transitions in the Career Hub Explore section's job profile cards. Suggested career moves based on the most frequent job profile transitions from a worker's current role enables employees to explore potential career paths within your organization. The Featured Next Move and Explore Other Moves cards take users to the Job Profile Details page, where they can review suggestions for pursuing the job of interest through people connections, skills, job openings, learning content and flex teams.
People Experience	You can configure Home page cards to enable timely Career Hub reminders.
Recruiting	Employees with access to the *Internal Careers* and *Opportunity Marketplace* domains can find job suggestions in the Explore section. Job suggestions are based on the skills on a worker's profile. Employees have the ability to save jobs to their Career Hub Plan where they can begin the application process, or save the task for later. Jobs saved to Plan display the job description, posting date, primary location and job type. The job remains in the To Do tab until the application is submitted. The Remove related action is available if the employee is no longer interested in the job.

Features	Considerations
	Submitting the application moves the job to the Completed tab. A related action to view the job posting is available, and the Applied On date is viewable. The job card displays the the Browse Jobs action if the job becomes inactive, enabling users to continue their job search. Note that when browsing all opportunities, the Primary Location facet filter uses the primary location of the job posting.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Career Hub

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

- You must be a Career Hub customer and meet certain requirements to use this feature. Contact your Customer Success Manager for information on Career Hub.
- Set up Skills Cloud.
- Review the setup considerations for Career Hub.

Context

TheCareer Hub provides your employees with personalized mentoring, connections, skills, flex teams, projects, and job recommendations to advance their careers within your organization. You must be a Talent Marketplace customer to access flex teams and jobs within the Career Hub, and a Projects and Talent Marketplace customer to access projects within the Career Hub.

Steps

1. Access the Maintain Functional Areas task.

   Select the Enabled check box for the Career Hub functional area.

   Security: *Security Configuration* domain in the System functional area.

   See Steps: Enable Functional Areas and Security Policies.
2. (Optional) Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   On the Innovation Services Opt-In task, select the HCM ML Features and Third Party Connectors GA on the Available Services tab in the HCM category.

   On the Maintain Innovation Services Data Selection Opt-In task in the HCM ML Features and Third Party Connectors GA innovation service, select Career Hub from the View Data Categories for Feature prompt. Select the opt-in check boxes for the categories for which you want to contribute data for Machine Learning.

   As you complete the task, consider:

Option	Description
Talent Profile Data	Required for Career Hub. Enables contribution of talent profile setup data that helps define the talent information that you track for your workforce.
Worker Profile Data	Required for Career Hub. Enables Workday to extract skills from the relevant sources on a worker: • Job title. • Job description. • Work history. • Explicit skills from the worker profile.
Job Requisition Data	(Optional) Select if your company wants to enable job recommendations.
Learning Data	(Optional) Select if your company wants to enable learning recommendations.

Option	Description
Talent Opportunity Marketplace Data	(Optional) Select to enable flex team suggestions and flex team match analysis.
Skills Data	(Optional) Select to contribute tenant data that Workday requires for skills-based matching.

3. Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

   Security: *Set Up: Tenant Setup - Machine Learning* domain in the System functional area.
4. Access the Maintain Skills and Experience Setup task.

   In the Skills section, select:

   - Enable Workday Skills Cloud
   - Populate Suggested Skills for Workers
   - Include Tenanted Skills in Matching

   Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.

   See Steps: Set Up Skills Cloud on page 1852.
5. Access the Domain Security Policies for Functional Area report.

   Select Domain Security Policy > Enable from the related actions menu of the domain security policy for these domains:

   - *Opportunity Marketplace* in the Talent Marketplace functional area.
   - *Self-Service: Career Hub* in the Career and Development Planning and Career Hub functional areas.
   - *Self-Service: Interests* in the Career and Development Planning functional area.
   - *Self-Service: Skills* in the Worker Profile and Skills functional area.

   Security: These domains in the System functional area:

   - *Security Activation*
   - *Security Configuration*
6. Edit Domain Security Policies.

   Set up domain security policies for the features you want to enable in the Career Hub. For details, see Reference: Career Hub Security on page 1563. These domains are required for the Career Hub:

   - *Self-Service: Career Hub* in the Career and Development Planning and Career Hub functional areas.
   - *Self-Service: Interests* in the Career and Development Planning functional area.
   - *Self-Service: Skills* in the Worker Profile and Skills functional area.
7. Access the Business Process Security Policies for Functional Area report.

   Select Business Process Policy > Edit from the related actions menu of these business processes:

   - *Manage Interests*
   - (Optional) *Manage Mentorship*

   For workers to complete their Career Hub profile setup and have the ability to view and select skill interests and job profiles, set up an initiation step and remove any approval steps for the *Manage Interests* business process.

   Security: These domains in the System functional area:

   - *Security Activation*
   - *Security Configuration*

8. Activate Pending Security Policy Changes.
9. Access the Edit Tenant Setup – HCM task.

   As you complete the Talent section, consider:

Option	Description
Enabled Opportunities within Opportunity Marketplace	The *Flex Teams*, *Jobs*, and *Projects* options enable opportunity types in Career Hub.
Enable Learning within the Opportunity Marketplace	Provide learning suggestions as a part of match analysis within Career Hub.
Enable Additional Details within Job Match Analysis	Provide users more information on how they match with a job posting.
Enable Flex Teams Express Interest Notes	Select the option to enable workers to create a customized message when expressing interest in a flex team. If enabled, a custom note isn't required to express interest. Workers can write a custom note, or leave the message field blank. Disabling the option after a worker has expressed interest with a custom note removes the note from the worker's profile.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.
10. (Optional) Enable AI assistance for generating development items. See Steps: Enable AI-Generated Development Items on page 1533.
11. Access the Maintain Career Hub and Opportunity Marketplace task.

   As you complete the task, consider:

Option	Description
Edit Quick Links	Select Customized Configuration to configure Quick Links for Career Hub and Opportunity Marketplace. The Is Career Hub or Is Opportunity Marketplace options are required for each customized row. Select Task/Report or External Link to add an option that displays in the Quick Links section. Workday saves a Customized Configuration for later use if you select the Default Configuration.
Edit Browse Filters	Select Customized Configuration to configure filters for enabled opportunity types. The Label Override doesn't impact reporting. Modified labels display only on the Browse page for the applicable opportunity type. Custom labels aren't translatable. Filters available for the Customized Configuration option are only filters supported by the opportunity types.

Option	Description
	Workday saves a Customized Configuration for later use if you select the Default Configuration.
Edit ML Preferences	Select the Hierarchy to determine the seniority of job posting recommendations provided to workers through Career Hub Explore, in the Job Openings That Match Your Skills section. The Hierarchy doesn't apply to job profile suggestions found in the Featured Next Move and Explore Other Moves sections, or those in Career Path Builder. Workday suggests jobs consistent with the worker's current grade or level, or 1 grade or level higher, based on the selected hierarchy. Select the Enable ML Suggestion Dismissal option to allow workers to dismiss machine learning flex team suggestions. If this option is enabled, workers see the Remove Suggestion option on a flex team card on the Career Hub Suggestions for You page. The Remove Suggestion option is available on both simple and advanced flex teams. When a worker selects Remove Suggestion, they are presented with a confirmation card. Selecting Don't show me this message again prevents the confirmation card from surfacing when removing additional suggestions. Removed suggestions won't appear again on the Suggestions for You page. Workers can search for removed suggestions on the Browse All Opportunities page.
Edit Explore Preferences	All Explore sections are enabled by default. Select Customized Configuration to configure the sections enabled for Career Hub Explore. To remove access to a section, uncheck the Enabled option on the applicable row. Section headers are customizable and can be overwritten to provide an improved user experience for your organization's employees. Enter a value in the Header Override field to replace the Default Header text. To configure Career Path Builder Source Preferences, see Configure Career Path Builder on page 1554.
Edit Plan Preferences	The Goals Enabled option is enabled. When selected, this option enables employees to track individual goals in Career Hub Plan.

Option	Description
	The Goal Categories Enabled field appears when you select the Goals Enabled option. Select the tenanted goal categories employees can use when adding goals to their Career Hub Plan.

Security: *Set Up: Career Hub and Opportunity Marketplace* in the Career and Development Planning, Career Hub and Talent Marketplace functional areas.

12. (Optional) Add Jobs Hub tasks to the Career Hub Quick Links section.

    Recruiting customers who want their workers to search for and apply to jobs in the context of Career Hub can:

    - Access the Maintain Hubs task and configure Jobs Hub. On the Navigation Item Override tab, select Do Not Show for the Navigation Items.
    - Access the Maintain Career Hub and Opportunity Marketplace task. In the Edit Quick Links tab, select Customized Configuration and add the Manage Job Alerts and My Referrals reports for Career Hub.
13. (Optional) Add these Career Hub cards to the Home page:

    - Get Started with Career Hub
    - Career Hub - Suggested Mentor

    See Concept: Home Page Workspace.

    Security: *Set Up: People Experience Configuration* domain in the People Experience functional area.
14. (Optional) Configure the Career Hub worklet.

    See: Steps: Set Up Dashboards and Landing Pages.

Result

Your workers can access Career Hub to set up their profiles.

Related Information

Workday Community: Career Hub AI Fact Sheet
Workday Community: Career Hub Generate Development Items AI Fact Sheet

Configure Career Path Builder

Prerequisites

- Enable and configure Career Hub and Skills Cloud. Ensure that Career Pathing is enabled in the Edit Explore Preferences section of the Maintain Career Hub and Opportunity Marketplace task.
- Security: *Set Up: Career Hub and Opportunity Marketplace* domain in the Career and Development Planning, Career Hub, and Talent Marketplace functional areas.

Context

The Career Path Builder in Career Hub Explore enables workers to create career paths based on skills, skill interests, and internal historical job transitions.

Depending on which sources you want to use, consider these best practices to prepare your tenant for Career Path Builder:

- Ensure that your job profiles are populated with 5-10 explicit skills to improve the Skills and Skill Interests sources experiences.
  - Explicit skills are skills manually added to the job profile as a skill needed for that role. The Career Hub prioritizes explicit skills over implicit skills when matching and providing suggestions. Implicit skills are skills inferred by machine learning as needed for the role based on the job profile name and descriptive text.
- Instruct your employees to add 10-20 skills and 5-10 skill interests on their worker profile. Workers can also update their skills and skill interests from their Career Hub profile.
- To optimize the Paths Taken by Others in My Role source experience, Workday recommends having ample job transition history data. Job architecture refreshes can take an average of 12 months for the transition data to reflect the new career moves.
- Job profiles must be marked Public for suggested moves to appear when users select the Paths Taken by Others in My Role. This source uses Opportunity Graph data, and only public job profiles are suggested as possible career options. Review the Opportunity Graph calculation for details.

Steps

1. Configure these domains:
   - The *Self-Service: Career Hub Job Profiles* domain in the Career and Development Planning and Career Hub functional areas.
     - View and modify permissions are required for users to save and remove career paths.
   - (Optional) The *Persons in Opportunity Graph Job Profile* and *Self-Service: Career Connections* domains in the Career and Development Planning and Career Hub functional areas.
     - View permission is required on both domains to see the Employees in Role field on the side panel, and the Connect With People in This Role row on the Job Details page.
     - View permission is required on both domains to see connections suggestions in the Begin Working Toward Your Next Role section for a recommended role in a saved career path.
   - (Optional) The *Flex Teams* domain in the Talent Marketplace functional area.
     - View permission is required to see flex teams suggestions in the Begin Working Toward Your Next Role section for a recommended role in a saved career path.
   - (Optional) *Worker Data: Career Path* domain in the Career and Development Planning and Career Hub functional areas.
     - View permission is required for managers to view shared career paths from their direct reports. Employees can only access sharing options for their saved career paths if their direct manager has permissions for this domain.

   For details, see Reference: Career Hub Security on page 1563.
2. Activate Pending Security Policy Changes.
3. Access the Maintain Career Hub and Opportunity Marketplace task.
4. Select the Edit Explore Preferences tab.
5. The Career Path Builder Source Preferences section enables you to set up source data and ranking criteria for career path suggestions. As you complete the task, consider:

Option	Description
Default or Customized	All career path sources are enabled when you first access the administrator task.

Option	Description
	(Optional) Select Customized to determine which sources are available for users to create career paths. When you select Customized, Workday displays the Hierarchy, Order, and Level Field Type sections.
Career Path Builder Sources Enabled	(Optional) Remove the sources that you don't want to appear in the Show Next Moves Based On menu in the Career Path Builder. At least 1 of the sources are required, regardless of whether you enable Career Path Builder. Note that the Hierarchy, Order, Job Family, and Level Field Type settings only apply to the *Skill Interests* and *Skills* options.
Hierarchy	Choose whether to apply seniority constraints on job profile recommendations provided to workers: • Default (ML Generated): Rank results primarily by skills match, and do not limit results by seniority level. • Job Level or Management Level: Limit career moves to be within 1 job level or management level of the active role. Career Path Builder prioritizes moves 1 level upwards in seniority from the active role. If no more suggested moves are available at this level, Workday surfaces moves at the same level of seniority, and then 1 level downwards.
Order	If you opt in to either the Job Level or Management Level options, specify whether seniority increases in Ascending or Descending order.
Limit by Job Family	If you opt in to either the Job Level or Management Level option, specify: • *Default (None)*: Employees get suggested job profiles from any job family. • *Limit by Job Family*: Employees only get suggested job profiles from the job family of their current primary position. • *Limit by Job Family Group*: Employees only get job profiles from the job family group of their current primary position.
Level Field Type	If you opt in to either the Job Level or Management Level options, specify the field that indicates the level's seniority:

Option	Description
	• Job Level or Management Level: Use the decimal-based prefix from this field to identify seniority in your organization. • Order: Use the Order field in a Job Level Hierarchy report or Management Level Hierarchy report as the primary indicator of seniority. You can view the level prefixes and the Order field for a hierarchy on the Management Level Hierarchy report, secured to the *Worker Data: Management Chain* domain, or the Job Level Hierarchy report, secured to the *Set Up: Job* domain. See: Set Up Management Level Hierarchies on page 526 and Set Up Job Level Hierarchies on page 527.

Result

Employees can create career paths by combining career steps from the 3 path sources.

Next Steps
Use the Saved Career Paths for My Organizations report to track career paths created by your employees. This customizable advanced report uses the Saved Career Paths data source, and contains multiple, optional prompts, and report fields.
Related Information
Concepts

Concept: Career Path Builder on page 1562

Workday Community: Workday AI Fact Sheet Career Hub

Tasks

Steps: Set Up Opportunity Graph on page 1536

Process: Refine Maintained Skills for Career Hub Matching

Prerequisites

Review the following topics:

- Setup Considerations: Skills Cloud, for an overview of Skills Cloud functionality.
- Steps: Set Up Career Hub, to complete the configuration requirements for Career Hub.

Configure these security policies in the Worker Profile and Skills functional area:

- *Manage: External Skills*
- *Set Up: Skills and Experience*

Context

This topic provides a checklist of tasks to clean up your skills data, with the result of improved machine learning skills-based recommendations.

Workday automates a portion of the skills curation and management process by automatically enabling the Duplicate Skills Management and Skill Synonym Management processes for all Skills Cloud customers. These features reduce the number of semantically similar skills by reconciling them to the most standardized form of the skill. This consolidation improves the quality of skills data in your tenant.

Workday recommends waiting a minimum of 2 weeks after the automated jobs have completed in Preview and Production before evaluating your maintained skills, and proceeding with the steps below.

Skills data differs for each tenant. Use the information below as a guide.

Steps

1. Review and refine maintained skills on worker profiles.
    a) In your Production tenant, export all worker skills using the *Get Manage Skills* web service. Filter for maintained skills by referencing the skills reference ID.

       Note: By default, Skills Cloud skills have reference IDs that look similar to "REMOTE_SKILL - xxx".
    b) In your Sandbox or Implementation tenant, inactivate all maintained skills using the *Manage Skills* web service.
    c) In your Sandbox or Implementation tenant, run the *External Skills* web service to load worker maintained skills. This will allow you to see alternative Skills Cloud skill suggestions.

       For more information and configuration steps, see the Import External Skills Community article, and the Talent Web Service Directory.
    d) Review the suggestions and determine the appropriate Skills Cloud skills to replace the applicable maintained skills.
    e) In your Production tenant:
        1. Delete the maintained skills from worker profiles using the *Manage Skills* web service.
        2. Load the applicable Skills Cloud skill replacements on the worker profiles using the *Manage Skills* web service.

       Note: Workday recommends that you test *Manage Skills* web services in your Sandbox or Implementation tenants prior to making changes in Production.
2. Review and refine maintained skills on other Workday objects, including job profiles, job requisitions, learning content, and others.
    - Repeat the steps above using the relevant object's web services.
    - A sample list of associated web services includes:
        - *Get Job Profiles/Submit Job Profile*
        - *Edit Job Requisition*
        - *Get Learning Course Offerings/Put Learning Course Offering*
3. Determine a cadence for your organization to proactively review and refine maintained skills for workers.
    a) In your Production tenant, export all maintained skills using the *Get Skills* web service.
    b) Review the output of existing maintained skills to determine which to delete or Inactivate.

       Note: Maintained skills can't be deleted, only inactivated, if they're used by other objects. Inactivating a skill prevents users from adding that skill in the future, and allows your organization to retain a history of those skills.
    c) In your Production tenant, delete or inactivate unwanted maintained skills using the *Put Skill* web service.

       Note: Workday recommends that you test *Put* web services in your Sandbox or Implementation tenants prior to making changes in Production.

4. After completing the initial review and refinement of maintained skills, you can include your maintained skills in machine learning driven matching and learning recommendations.

    a. Access the Maintain Skills and Experience Setup task.
    b. Select Include Tenanted Skills in Matching.

    Note: You must subscribe to Innovation Services to use this feature. Contact your Customer Success Manager to request the Innovation Services Addendum (ISA), or see Workday Innovation Services on Workday Community for more information.

    For more information, see Setup Considerations: Skills Cloud and Steps: Set Up Skills Cloud.

Workday Community: Automatic Duplicate and Synonym Skill Management for All Skills Cloud Customers

Tasks

Steps: Enable Importing of External Skills on page 1857

Concept: Career Hub

Career Hub combines Opportunity Marketplace, Flex Teams, Skills, and Learning functionality to offer a centralized career development platform for your workforce.

With career and job profile data, skills, and interests to power machine-learning inferences, Career Hub provides personalized career opportunities that can help your workforce manage their career development. Additionally, you can surface in-demand skills and flex teams to use the talent available within your company.

Your employees have the ability to select a career focus that helps them:

- Grow in their role by discovering new connections and mentors within your company, to help with the skills they need to develop.
- Grow beyond their current role by expanding their skill set through flex teams and learning content.
- Remain open to both improving in their current role as well as developing the capabilities necessary to explore new roles.

The Suggestions for You page provides employees with personalized job suggestions and career development opportunities that they can save and access in the Plan section. The opportunity types include:

- Networking: Suggests potential mentors who are skilled in the areas the employee is interested in developing. Career Hub also recommends co-workers to connect with who share similar skills with the employee.
- Learning: Provides personalized, skill-based learning content, as suggestions that help your employees develop their skill interests.
- Experiences: Suggests opportunities for employees to contribute to the organization and grow their skills with hands-on experience. Experiences include flex teams and projects. Flex teams can bring together employees from across an organization to contribute to short- or long-term nonbillable assignments, either alongside their regular work or as a full-time assignment. Projects are a way of planning and tracking work in Financial Management and can be nonbillable internal projects or billable projects that your organization carries out for its customers.

The Plan page displays saved career opportunities such as check-ins, development items, flex teams, individual goals, and learning. Employees can use the Plan section to:

- Track on-going mentorships and to meet with connections.
- Identify the specific career development actions that they should take to further their career interests, and use Generative AI (GenAI) to quickly fill any gaps between their interests and their development plan.

- Access on-going and completed career development items during career conversations.
- Track job opportunities they're interested in and have applied to.
- Track individual goals and manage their progress.
- View and manage learning content that remains in sync with the Learning application, ensuring they can keep track of their progress.

Development Items completed before the user set up their Career Hub profile aren't displayed in the Plan section. The Plan section also doesn't support projects.

The Explore page enables employees to discover skills mentioned frequently in internal job posts. The skills are related to their current role or job interests, improving their career opportunities and suggestions. Based on employee skill interests, we provide relevant connection, flex team, and job recommendations that employees can save to the Plan section to determine their next career steps.

Incorporating Opportunity Graph insights into Explore reveals common career transitions for workers, supporting greater internal job mobility. The Featured Next Move and Explore Other Moves sections suggest potential moves, based on the worker's current job profile and a comparison with the Opportunity Graph's historical job transitions in your organization. The Job Profile Details page provides visibility and potential interest in future job options by surfacing people connections, skills, job openings, learning opportunities and flex teams.

The Career Path Builder, in Explore, is an interactive career exploration tool that enables workers to visualize their future careers in your organization based on skills, skill interests, and historical job moves. A career path includes a progression of roles, and actionable suggestions to help employees upskill for the next step. These suggestions include GenAI development items that help employees make actionable plans to fill skill gaps for their next role.

Opportunity Marketplace in Career Hub

If you're an Opportunity Marketplace customer and have signed-on to Career Hub, you can access the flex teams, jobs, and projects features directly from the Career Hub. Opportunities that you previously created remain accessible within Career Hub. Flex teams, jobs, and projects functionality remain accessible to Opportunity Marketplace customers who aren't Career Hub customers.

Machine Learning Suggestions in Career Hub

Machine learning factors in the employee's career focus, experience, job profile interests, skill interests, and the skills they have to return personalized learning, flex team, job, project, networking, and skill recommendations that help the employee with up-skilling towards the next step.

AI-Generated Development Items in Career Hub

Career Hub includes AI assistance to help employees create detailed, structured, and actionable development items that align with their desired skill development, current role, and chosen career path. Employees can use AI assistance when drafting content in the Additional Information field of a development item, and view suggested development items in Career Hub > Plan and on saved career paths in Explore > Career Path Builder.

See: Concept: AI-Generated Development Items on page 1531.

2025R1 Release Note: Career Hub: Generate Development Items

The Next Level: Skills-Based Optimization Feature Demonstration

Workday Community: Workday AI Fact Sheet Career Hub

Workday Community: Workday AI Fact Sheet Career Hub Generate Development Items

Concept: Career Hub and Opportunity Marketplace Activity Metrics

Note: The solution described in this section isn't part of the Workday Service. See Legal Notice for details.

The Career Hub and Opportunity Marketplace Activity Metrics report provides you with insights into your organization's Career Hub and Opportunity Marketplace user activity through a Workday delivered data source. Workday collects, transforms, and delivers your internal activity metrics data through this advanced report, enabling you to better understand how your workers are interacting with both applications.

Due to the specific type of data collected, this report only displays data in your Production tenant. Workday refreshes the data on the third day of every month.

To account for potential delays or corrections of data irregularities, we recommend that you:

- Check the report on or after the sixth day of the month.
- Use this report as a supplementary tool in combination with other user activity data.

Workday provides you with counts of monthly unique visitors on these pages:

- Suggestions For You
- Plan
- Explore

The report also includes total counts of these data points. The count returned in the report represents the total number of times, per month, users:

- Viewed the side panel for connection, flex team, job, mentor, and learning cards after clicking the associated opportunity card.
- Selected the Save to Plan action for connection, flex team, learning, and mentor opportunities.
- Selected the Request as Mentor action from a mentor opportunity card, from the side panel, or from the Plan page.
- Selected the flex team Express Interest action from the side panel, or from the Plan page.

Note: The Save to Plan action from Explore job profile cards isn't included in the monthly count.

The report is secured to the *Reports: Career Hub* domain. Administrators and users with access to this domain can copy, edit, and filter the report to meet their requirements.

This advanced report returns counts for all data points, and doesn't contain any contextual worker information. Administrators and users can't drill into the counts, as they're presented as fixed data points for the applicable month.

The report contains a maximum of 24 months of data, starting with November 2023 as the earliest available month. When the report reaches 24 months of data, the oldest month is removed and replaced by the most recent month.

The report data source, Career Hub and Opportunity Marketplace Activity Data, and report fields, are available for use in creating custom reports and condition rules. Facets aren't supported for this data set if used in custom reporting.

You can add the report as a worklet to a dashboard. For example, to add this report to the Home dashboard, edit the report and select the Output tab. Select the Enable as Worklet option, and Home as the Available On option. Access the Maintain Dashboards task, and select Home. Edit the Content, and add a row to the Worklets. Select the Career Hub and Opportunity Marketplace Activity Metrics report.

Concept: Business Objects, Data Sources, and Fields

Tasks

Enable Reports for Related Worklets

Concept: Career Path Builder

The Career Path Builder in Career Hub Explore enables workers to create and save career paths based on skills, skill interests, and internal historical job transitions. Workday surfaces potential paths through a series of job profiles, with each step including actionable career development opportunities and suggestions. The Career Path Builder uses career and job profile data, the Skills Cloud, and skill interests to power machine-learning inferences and suggestions.

Career pathing enhances worker awareness of internal career options, which improves talent retention and career mobility. Engaged workers can identify and pursue specific skills that prepare them for future career moves.

Career Path Sources

Employees can create career paths by combining career steps from the 3 path sources:

- Paths Taken by Others in My Role displays the percentage of people who moved into the role from the worker's current role, based on historical job transitions.
- Skill Interests displays the number of skills on the job profile that match the worker's skill interests.
- Skills displays the number of skills on the job profile that match the worker's skills.

The Skill Interests and Skills source options use machine learning.

The first suggested move in the Career Path Builder is based on the worker's:

- Explicit skill interests or explicit skills on their worker profile, and
- Skills inferred by machine learning, as a result of reviewing details from the worker's current job profile, including the job title, job description, additional job description, job profile summary, and job family.

After a user selects the initial job profile suggestion, subsequent suggested moves are based on the explicit and inferred skills of the selected job profile, with machine learning taking into account recommended skills.

Career Path Builder suggests up to 15 moves for each step of the career path.

Sharing Career Paths

When you implement the Manager Insights Hub, you can also enable employees to share a career path with their manager, making it easier for managers to support employee upskilling, career growth, and internal mobility.

When employees first save a career path, it is private. When they share a career path, their manager receives a notification and can view the career path and a skills match analysis in the Manager Insights Hub.

An employee can share only 1 path at a time. If there is already a shared path, it becomes private when the employee shares a new one.

See Reference: Manager Insights Hub on page 2944 for details.

Maintain Career Hub and Opportunity Marketplace

Using the Maintain Career Hub and Opportunity Marketplace task, you can choose to rank suggested job profiles primarily by seniority instead of skills.

- You can select Job Level or Management Level to limit suggested job profiles to within 1 job level or management level of the active role, and prioritize them in order of:
  - Moves 1 level upwards.
  - Moves at the same level. Workday only surfaces these moves if there are no more suggestions available at 1 level upwards.
  - Moves 1 level downwards, if there are no more suggestions at 1 level upwards or at the same level.

  With this setup, skills match is a secondary criteria for ranking suggested job profiles.
- You can specify whether seniority is ascending or descending in the hierarchy.
- You can choose whether to determine the seniority of job or management levels using the levels' decimal-based prefixes or their Order.
- To increase the relevance of job suggestions, you can limit them to the employee's current job family or job family group.

Limitations

The Career Path Builder doesn't suggest next moves if:

- No historical transitions from the worker's current role exist, and
- The worker hasn't added skill interests or skills to their worker profile.

Reference: Career Hub Security

Workday provides these configurable domains that you can use to set up different features within Career Hub.

Domains	Access Modes	Considerations
The *Internal Careers* domain in the Recruiting functional area.	View	Enables: • Users to view job suggestions based on the skills in their profile. • Users to view jobs in the Completed tab of their Career Hub Plan for which they've submitted an application.
The *Learning Access* domain in the Learning Core functional area.	View and Modify	Enables: • Users to view recommended learning content based on specific skills.

Domains	Access Modes	Considerations
		• Access to the Grow Your Career and Learning Items in Your Career Hub Plan sliders on the Maintain Learner Experience task.
The *Opportunity Marketplace* domain in the Talent Marketplace functional area.	View and Modify	Enables access to the Opportunity Marketplace. When you're a Recruiting customer and have internal jobs posted, the *Opportunity Marketplace* domain provides access to internal job postings for Career Hub users. Enable the *Jobs* options on the Edit Tenant Setup - HCM task to view internal jobs in Career Hub.
The *Persons in Opportunity Graph Job Profile* domain in the Career and Development Planning functional area.	View	Permissions on the *Persons in Opportunity Graph Job Profile* and the *Self-Service: Career Connections* domains are required to: • View the Employees in Role field on the side panel, and the Connect With People in This Role row on the Job Details page. • View connections suggestions in the Begin Working Toward Your Next Role section for a recommended role in a saved career path.
The *Reports: Career Hub* domain in the Career and Development Planning and Career Hub functional areas.	View and Modify	Enables access to report data sources and fields for Career Hub and Career Path Builder. Secures access to the Saved Career Paths and Suggested Career Steps data sources, and the Saved Career Paths for My Organizations standard report.
The *Self-Service: Anytime Feedback* domain in the Performance Enablement functional area.	View and Modify	Enables users to request and view feedback.
The *Self-Service: Career Connections* domain in the Career and Development	View and Modify	Enables users to add career connections.

Domains	Access Modes	Considerations
Planning and Career Hub functional areas.		Permissions on the *Self-Service: Career Connections* and the *Persons in Opportunity Graph Job Profile* domains are required to: • View the Employees in Role field on the side panel, and the Connect With People in This Role row on the Job Details page. • View connections suggestions in the Begin Working Toward Your Next Role section for a recommended role in a saved career path.
The *Self-Service: Career Hub* domain in the Career and Development Planning and Career Hub functional areas.	Modify	Enables: • Users to set up their Career Hub Profile and have view and modify access to Career Hub data. • Users to save jobs to their Career Hub Plan.
The *Self-Service: Career Hub Job Profiles* domain in the Career and Development Planning and Career Hub functional areas.	View and Modify	Enables: • Users to view job profile suggestions in Career Hub Explore. • Users to save and remove career paths in the Career Path Builder. The domain is required for Career Path Builder.
The *Self-Service: Check-Ins* domain in the Performance Enablement functional area.	View and Modify	Enables users to manage their check-ins from the mentor card in Career Hub Plan.
The *Self-Service: Development Items* domain in the Career and Development Planning and Performance Enablement functional areas.	View and Modify	Enables users to add development items to progress career goals.
The *Self-Service: Employee Goals* and *Set Up: Goals* domains in the Performance Enablement functional area.	View and Modify	Enables: • Users with modify permission on the *Self-Service: Employee Goals* domain to add existing individual goals to their Career Hub Plan.

Domains	Access Modes	Considerations
		• Administrators with modify permission on the *Set Up: Career Hub and Opportunity Marketplace* and *Set Up: Goals* domains to Edit Plan Preferences.
The *Self-Service: GenAI Development Items* domain in the Career Hub and the Career and Development Planning functional areas.	View and Modify	Enables: • Users to create and modify content for development items using AI. • Users to access suggested development items with AI-generated content in the Plan page of the Career Hub and on saved career paths.
The *Self-Service: Mentoring* domain in the Career and Development Planning functional area.	View and Modify	Enables users to view and modify career actions relevant to connections, skills, and mentoring.
The *Self-Service: Skills* domain in the Worker Profile and Skills functional area.	View and Modify	Enables: • Users to view and modify their skill interests. • Users to view and modify their mentor skills on the My Mentorship Preferences task. This domain is required for the Career Hub.
The *Worker Data: Career Hub* domain in the Career Hub functional area.	View	Enables users to access data and report fields on another worker's Career Hub usage, including their Career Hub Profile status.
The *Worker Data: Career Path* domain in the Career and Development Planning and Career Hub functional areas.	View	Enables managers to view career paths that their direct reports share with them. When an employee's direct manager has access to this domain, the employee can share 1 of their saved career paths. See: Concept: Career Path Builder on page 1562. Managers view shared career paths in the Manager Insights Hub.

Domains	Access Modes	Considerations
These domains in the Career and Development Planning functional area: • *Self-Service: Interests* • *Worker Data: Interests*	View and Modify	Enables users to view and modify their career interests, and view other user's interests. *Self-Service: Interests* is required for the Career Hub.
These domains in the People Experience functional area: • *People Experience Access* • *Set Up: People Experience Configuration*	View	Enables users to view Workday Today Career Hub cards.
These domains in the Staffing functional area: • *Worker Data: Current Job Profile Information* • *Worker Data: Current Staffing Information* • *Worker Data: Time in Position* • *Worker Data: Job Family on Worker Profile* • *Worker Data: Business Title on Worker Profile*	View	Enables users to view information about another worker's staffing details, including job profile, length of service, time in position, job family, and business title.
These domains in the Talent Marketplace functional area: • *Flex Team Worker Data* • *Flex Teams* • *Manage: Flex Teams* • *Manage: Flex Team Types* • *Manage: Flex Teams Host Access* • *Profile Group: Flex Teams* • *Self-Service: Flex Teams* • *Set Up: Flex Teams* • *Set Up: Career Hub and Opportunity Marketplace* • *Worker Data: Flex Teams*	View and Modify	Enables: • Administrators and flex team hosts to create and modify flex teams. • Administrators to configure which flex team types a flex team host can create. • Career Hub users to access and express interest in recommended flex teams. • Career Hub users to see flex team suggestions in the Begin Working Toward Your Next Role section for a recommended role in a saved career path. • Administrators with modify permission on the *Set Up: Flex Teams* domain to configure flex team availabilities. • Administrators with modify permission on the *Set Up: Flex Teams* domain

Domains	Access Modes	Considerations
		to view flex teams created by other flex team hosts. • Administrators with modify permission on the *Set Up: Career Hub and Opportunity Marketplace* domain to configure browse filters, Quick Links, and job level preferences.
These domains in the Worker Profile and Skills functional area: • *Person Data: Education* • *Person Data: Job History* • *Person Data: Skills*	View	Enables users to view information about another worker's education, job history, and skills.
These domains in the Contact Information functional area: • *Person Data: Home Phone* • *Person Data: Work Phone* • *Person Data: Work Email*	View	Enables users to view another worker’s phone number and email address, for example when viewing available mentors or connections.

Concepts

Set Up Learning for Career Hub Plan on page 1944

FAQ: Career Hub

Does Career Hub use existing skills values after setup?	Career Hub uses the skills data present on the Worker Profile. You can import tenanted skill values into Career Hub by using the Maintain Skills and Experience Setup task.
What's the impact of each career focus option?	Your users can select the career focus option that best suits their career growth needs. Based on the career focus, job interests, and skill interests, Career Hub uses machine-learning inferences and talent trends within your company to provide personalized career opportunities such as connections, mentors, flex teams, jobs, and learning items. Users can take actionable next steps to incrementally gain expertise toward their career focus or explore career opportunities to develop skills. In the Grow Beyond Role option, Career Hub provides users with personalized career opportunities to pursue job interests beyond their current role. Using the available pool of job profiles in your company, Career Hub makes it possible for users to select job interests and add relevant skill interests to develop for the new role. This option is

	best suited for users looking to transition into other roles within your company. The Grow in Role option enables users to focus on developing the skills and capabilities necessary to perform better in their current role. Selecting this option surfaces customized career opportunities that users can act on to gain greater expertise within their role. The Open to Both option is suited for users that need the flexibility to grow in their current role while also making progress toward their job interests.
Why can't users see any suggestions? Is machine learning not working?	For users to see suggestions, ensure that you include sufficient skills in flex team descriptions and job profiles. Your users can see a wider pool of mentors when available mentors update their mentor skills. Users can improve their Career Hub suggestions for learning content and jobs by updating the skills on their worker profile and making themselves available for flex teams. Additional attributes such as job titles, education, and years of experience determine the machine learning based suggestions.
How often are suggestions updated in Career Hub?	Career Hub updates suggestions daily, Monday through Friday.

Talent Marketplace

Setup Considerations: Talent Marketplace

You can use this topic to help make decisions when planning your configuration and use of Talent Marketplace. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Talent Marketplace consists of the Opportunity Marketplace and Flex Teams applications, which connect your workforce with opportunities based on your workers' skills, experience, and interests. With Talent Marketplace, users can:

- Explore career growth opportunities by accessing jobs, flex teams, and projects, and associated learning content suggestions.
- Create and manage flex teams, forming internal teams with varying commitments and durations.

We support Talent Marketplace in:

- Chinese (Simplified)
- Chinese (Traditional)

- Danish
- Dutch
- English
- Finnish
- French (Canada)
- French (France/Continental)
- German
- Italian
- Japanese
- Korean
- Norwegian
- Portuguese (Brazil)
- Spanish
- Swedish

Business Benefits

Talent Marketplace uses machine learning and the Skills Cloud to help you:

- Create and manage internal opportunities based on skills.
- Find the right candidates for opportunities based on their identified skills.
- Optimize talent resources by identifying and matching workers with opportunities where they might have the most impact.
- Increase employee engagement by providing visibility into specific skills needed for opportunities.

Use Cases

Organizations can provide employees opportunities where they can use their skills and develop their interests.

Employees can use the Opportunity Marketplace to strengthen their talent profile, make connections, and grow their careers within an organization.

Contingent workers can use Opportunity Marketplace to browse and apply to suggested jobs and Flex Teams based on their skills.

Questions to Consider

Questions	Considerations
Do you have a global workforce?	The machine learning that Talent Marketplace uses for recommendations currently supports these languages: • Chinese (Simplified) • Dutch • English • French (Canada) • French (France) • German • Italian • Japanese • Korean • Portuguese (Brazil) • Spanish (Neutral)

Questions	Considerations
	You can create intersection security groups to limit access to locations or organizations that support these languages.
Will you include jobs in Opportunity Marketplace?	To ensure that employees and contingent workers get the best possible matches with job opportunities, confirm that your jobs have accurate: • Job titles • Job profile descriptions • Job profile summary • Skill qualifications
Will you include projects in Opportunity Marketplace?	For Workday Projects customers, Opportunity Marketplace includes a Projects to Work On section that helps employees find project assignments that match well with their skills. Project managers can enable their projects for display in Opportunity Marketplace. To surface projects to workers with the appropriate skills, they also need to add skills as project role requirements. To save time setting up projects for skills-based matching, consider adding skills as project role requirements for your project roles or resource plan templates. See: Create Projects.
How do you want to use skills with Talent Marketplace?	Talent Marketplace uses the Skills Cloud to determine what skills an employee might have from their current role, education, and job history. When suggesting flex teams to workers and workers to flex teams, Workday compares the skills on the flex team to the skills on the worker's profile. Machine learning identifies when workers' skills match the skills listed on the flex team, including if workers' skills are similar enough so as to provide coverage of skills listed on the flex team. Job suggestions are based on a comparison of the skills that the worker has explicitly added to their profile with the skills that Workday infers from the job requisition. When suggesting project opportunities to workers, Workday compares the skills on the worker’s profile to the skills on the project role requirements. Flex team hosts can provide skill endorsements for members of a completed flex team. When a flex team host endorses a skill, Workday adds the skill to the member's worker profile.

Questions	Considerations
Do you want to implement Flex Teams without Opportunity Marketplace?	When you implement Flex Teams without Opportunity Marketplace, workers can still access flex team opportunities using the Browse Flex Teams report. Implementing Opportunity Marketplace with Flex Teams helps connect workers to flex teams through skills-based suggestions.
Do you want contingent workers to participate in Flex Teams?	You can enable contingent workers to join or host Flex Teams. Contingent workers can access the Flex Teams Your Company Needs Help With section in Opportunity Marketplace to view suggested Flex Teams based on their skills, but they cannot access Flex Teams to Help You Develop. Note: Workday provides the ability to enable contingent workers to use Flex Teams as a configuration option for use at your discretion. You must always verify any configurations in your tenant and should consult with your own legal counsel to determine if the configurations meet your business and compliance needs. See: Steps: Set Up Security for Talent Marketplace on page 1585.
How do you want Flex Team hosts to give feedback to their team members?	When completing a Flex Team, hosts can provide skill endorsements and anytime feedback to their workers. See Steps: Set Up Feedback on page 1737 and Steps: Set Up Skill Endorsements and Ratings on page 1860. You can also enable Flex Team hosts as additional managers in performance reviews for their team members. See Steps: Set Up Additional Manager Evaluations on page 1683.

Recommendations

- When you implement Talent Marketplace for the first time, we recommend that you start with a small part of your organization. Use the feedback and experience from this group to develop your Talent Marketplace before introducing it to the broader organization.
- When you only enable flex team opportunities for the Opportunity Marketplace, configure a selection of available flex teams before giving workers access to the feature.
- When you enable jobs for contingent workers, create an internal career site for non-workers so they can search for and apply to jobs.
- For customers who use Opportunity Marketplace and are Recruiting customers:
    - Consider adding Jobs Hub tasks to the Opportunity Marketplace Quick Links section.
    - The Browse Jobs report is available in global search. However, consider having users discover jobs directly in Opportunity Marketplace.
    - Jobs Hub is searchable. Consider removing the Careers worklet and not adding Jobs Hub to the Workday home page menu.

- To ensure that opportunity matching works in your implementation tenant, access the Maintain Weekly Machine Learning Activation for Implementation Tenant task and select the HCM ML Features and Third Party Connectors GA service check box. This task enables Workday to refresh matches every Monday. To refresh matches manually once every 24 hours, access the Run On-Demand Machine Learning Activation for Implementation Tenant task. These tasks are specific to your implementation tenant only, and are not supported in Production or Sandbox tenants.
    - If you've opted into HCM Machine Learning Early Access (EA) Features using the Innovation Services Opt-In task, you must select both this service check box, and the GA option, when running the Maintain Weekly Machine Learning Activation for Implementation task.
    - Similarly, to refresh matches manually, you must select both GA and EA check boxes when running the Run On-Demand Machine Learning Activation for Implementation Tenant task.
    - If both GA and EA aren't selected when running either task, neither service will complete successfully, and models for both selections won't be created.

Requirements

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Limitations

- Workday only uses Skills Cloud skills when matching workers to opportunities.
- Career interests and suggested projects aren't supported for contingent workers.
- You can't configure help text for the *Add Flex Team Member* business process.
- Match analyses and candidate recommendations only update every 24 hours, Monday through Friday, so when:
    - You expand access to flex teams to new workers, Workday can't immediately suggest them as flex team candidates.
    - Workers update their skills, their career development opportunities update immediately, but flex team hosts won't immediately see updated match analyses and candidate recommendations.
    - You create or update a job, flex team, or project, workers' career development opportunities don't update immediately.
    - A worker is terminated, Workday won't immediately remove that worker from candidate recommendations.
- For Career Hub customers, the Save to Plan option isn't available for suggested projects.

Tenant Setup

On the Edit Tenant Setup - HCM task, in the Talent section, you can:

- Enable flex teams, jobs, and projects as opportunities within the Opportunity Marketplace.
- Enable suggested learning courses for workers viewing their flex team match analysis.
- Restrict suggested jobs to a worker's primary location. Selecting this option restricts suggested jobs to the worker's country, designated by the primary location for the worker. For example, if a worker's primary location is San Francisco, the worker will only see suggested jobs with a location in the United States.
- Enable flex teams express interest notes to allow workers to create a customized message when expressing interest in a flex team.

On the Edit Tenant Setup - Notifications task, in the Notification Delivery Settings section, HCM category, you can:

- Configure notification settings for Flex Teams and Marketplace Opportunity Promotion.

Security

Configure these security domains in the Talent Marketplace functional area.

Domains	Considerations
Flex Team Worker Data	Enables users to view a flex team candidate's availability, skills, and skill interests.
Flex Teams	Enables workers to: • Access flex teams. • Express or remove interest in flex teams. • Display as a candidate when they're a match for a flex team. • Receive notifications for flex team promotions. • Access the Flex Team Hosts prompt category when adding additional managers to a performance review.
Manage: Flex Teams Host Access	Enables users to access the Manage Flex Teams landing page, where they can: • Create flex teams. • View all flex teams that they manage.
Manage: Flex Teams	Enables users to view and edit their flex teams and flex team members. You can create and assign a: • Constrained role-based security group for flex team hosts to manage only the flex teams that they create. • User-based security group for flex team administrators to manage all flex teams across your tenant.
Manage: Flex Team Types	Secures flex team types. By default, users with the ability to create flex teams can create all flex team types. You can create a segment-based security group using the Flex Team Type security segment to restrict access to certain flex team types. When you configure segmented security, update the *Manage: Flex Team Types* domain security policy by adding the segment-based security group and removing the All Users security group.
Opportunity Marketplace	Enables employees and contingent workers to access Opportunity Marketplace.
Reports: Flex Teams	Enables users to access reports about the usage of flex teams and their impact in your organization. Some reports secured to this domain require additional domain access to view, because they contain data that is secured to a different domain.

Domains	Considerations
Self-Service: Flex Teams	Enables workers to view their own flex team history, including flex teams they've expressed interest or participated in.
Set Up: Flex Teams	Enables administrators to configure flex team availabilities utilizing the Maintain Flex Teams Availabilities task. Enables users to create categories and types for flex teams. To enable flex team administrators to view flex teams created by other flex team hosts, they must have Modify permission on the *Set Up: Flex Teams* domain.
Set Up: Career Hub and Opportunity Marketplace	Enables administrators to configure browse filters and job level preferences when running the Maintain Career Hub and Opportunity Marketplace task.
Worker Data: Flex Teams	Enables users to view a another worker's flex team history, including flex teams the worker expressed interest or participated in.

To ensure that Talent Marketplace works properly across your tenant, configure these domains.

Domains	Considerations
Candidate Data: Job Applications in the Recruiting functional area.	Enables users to access candidate job applications. Grant View permission to administrators who need to use the Internal Job Application Rate by Flex Team Membership report.
Worker Data: Historical Staffing Information in the Staffing functional area.	Enables users to access workers' historical information. Grant View permission to administrators who need to use the Internal Movement Rate by Flex Team Membership report.
Internal Careers in the Recruiting functional area.	When you enable job opportunities, ensure that employees have View permission so that they can view internal job postings in Opportunity Marketplace.
Learning Access in the Learning Core functional area.	Ensure that employees have View permission when you enable Workday to suggest learning courses to workers when they view their flex team match analysis.
Person Data: Skills in the Worker Profile and Skills functional area	Grant Administrator, Manager, and Partner security groups Modify permission to access another worker's skills.
Self-Service: Interests in the Career and Development Planning functional area.	Ensure that employees have Modify permission to access and manage their skills interests.

Domains	Considerations
Self-Service: Personal Data in the Personal Data functional area.	Ensure that workers have Modify permission to manage their own personal information.
Self-Service: Resource Management in the Projects functional area.	Enables employees to view projects and resource plans, including viewing and expressing interest in suggested projects in Opportunity Marketplace.
Self-Service: Skills in the Worker Profile and Skills functional area.	Ensure that workers have Modify permission so that they can add suggested skills to their profiles.
Worker Data: Anytime Feedback in the Performance Enablement functional area.	Grant Administrator, Manager, and Partner security groups View permission to see ad-hoc feedback for a worker.
Worker Data: Interests in the Career and Development Planning functional area.	Grant Administrator, Manager, and Partner security groups View permission to see workers' skill interests.
In the Performance Enablement functional area: • *Self-Service: Anytime Feedback* • *Self-Service: Feedback*	Ensure that workers have View permission on these domains so they can view feedback from a flex team.
In the Staffing functional area: • *Self-Service: Current Staffing Information* • *Worker Data: Public Worker Reports*	Ensure that workers have View permission on these domains so they can see public information on their worker profile and other workers' profiles.

Business Processes

Business Processes	Considerations
Add Flex Team Member	Configure to enable users to add workers to a flex team. We recommend adding an approval step for workers, including contingent workers if you want to enable them to join flex teams.
Manage Flex Team	Configure to enable users to create and edit simple and advanced flex teams. Ensure that users who can initiate this business process have access to either the *Manage: Flex Teams* or *Manage: Flex Teams Host Access* domains. Workday automatically assigns the flex team host role to the flex team creator. Workday recommends adding the same security groups to the Create Flex Team and Edit Flex Team business process initiating actions to ensure that flex team hosts can always edit their flex teams. To edit a flex team they've created, flex team hosts must be part of a security group secured to the Edit Flex Team initiating action that has the Workday assignable role of Flex Team Host.

Business Processes	Considerations
	Administrators and flex team hosts can edit a flex team from the Manage All Flex Teams or flex team detail page. The flex team Team Type is not editable after the flex team is created. Note: Note: Edit Flex Team automatically approves and doesn't use any of your configured approval steps or routing rules on the *Manage Flex Team* business process definition.
Give Feedback	Configure to enable flex team hosts to provide feedback for workers in a completed simple or advanced flex team. Flex team hosts can complete individual flex team roles from the flex team detail page. Administrators and flex team hosts can complete a flex team or flex team role that has at least one approved flex team member, or has the status of Fully Staffed.
Manage Interests	Configure for employees to edit their skill interests.
Project Express Interest	Configure to enable employees to express interest in projects.

Reporting

Reports	Considerations
Browse Flex Teams	Provides access to flex teams outside of Career Hub or Opportunity Marketplace. Workers can view and express interest in flex team opportunities.
Career Hub and Opportunity Marketplace Activity Metrics	Provides insights into an organization's Career Hub and Opportunity Marketplace user activity through a Workday delivered data source.
Manage Flex Teams	Flex team hosts can manage and create flex teams. Members of a user-based security group with access to this report can view all flex teams.
Flex Teams Participation Rate	Provides visibility into the rate at which workers participate in flex teams by organization.
Internal Job Application Rate by Flex Team Membership	Enables you to compare the internal job application rate for workers who participate in flex teams against workers who do not.
Internal Movement Rate by Flex Team Membership	Enables you to compare the rate of internal movement, such as transfers and promotions, of workers who participate in flex teams against workers who do not.
My Flex Team Events	Flex team hosts and administrators can view business process events and information,

Reports	Considerations
	including Flex Team Name, Flex Team Status, Flex Team Approved Members, Flex Team Start Date, and Flex Team End Date.
Simple and Advanced Flex Teams	Flex team hosts and administrators can report on flex teams across their organizations. Includes a calculated field, Team Type for Flex Team. The team type attribute is on the Flex Team related business object.
Total Number of Flex Teams by Status	Provides insights about the lifecycle of flex teams in your organization by showing the total number of flex teams by status.
Total Number of Flex Teams Created	Provides visibility into the total number of simple and advanced flex teams created.
View Recommended Projects from Opportunity Marketplace	Project workers use this report to find and express interest in project roles based on skills match. They can access this report from the Projects to Work On section of Opportunity Marketplace when projects are enabled there.

Integrations

Web Services	Considerations
Manage Flex Team	Enables you to create or update flex teams using the *Manage Flex Team* business process.
Get Flex Teams	Enables you to retrieve simple and advanced flex teams.
Complete Flex Team	Enables you to complete simple flex teams and flex team roles. Advanced flex teams become complete when all of the roles are complete.
Add Flex Team Members Get Flex Team Members	Enables you to add workers to flex team roles and simple flex teams, and to retrieve approved flex team members.
Get Flex Team Availabilities Put Flex Team Availability	Enables you to add, update, delete, and retrieve the levels of availability that your workers can set for flex teams, and to set the default availability for new Career Hub or Opportunity Marketplace users.
Get Flex Team Categories Put Flex Team Category	Enables you to add, update, delete, and retrieve the categories that are available when creating flex teams.
Get Flex Team Types Put Flex Team Type	Enables you to add, update, delete, and retrieve the flex team types that are available when creating flex teams.
Get Flex Team Endorsements Put Flex Team Endorsements	Enables you to upload and retrieve data for endorsements of flex team members, including specifying which worker is giving the endorsement.

Web Services	Considerations
	Flex team members can receive endorsements after their flex team or role is complete. Endorsements include: • Recommending the worker for other flex teams or not. • Optional public feedback. • Optional skill endorsements. These skills are added to the flex team endorsement but not to the worker's profile. Use the *Manage Skills* web service to add skills for a worker.

Connections and Touchpoints

Features	Considerations
Anytime Feedback	When flex team hosts mark simple or advanced flex teams as complete, they can give anytime feedback to each flex team member.
Interests	Opportunity Marketplace recommends flex teams that can help employees develop their skill interests.
Recruiting	You can enable Opportunity Marketplace to include internal job postings. Note that when browsing all opportunities, the Primary Location facet filter uses the primary location of the job posting. For the best matches, ensure that job profiles, positions, and job requisitions have appropriate titles, descriptions, and skill qualifications.
Learning	You can enable Workday to recommend learning courses to workers when they view their flex team match analysis. Workday recommends learning courses based on the skills required for the flex team that are missing from the worker's profile.
Projects	Workday Projects customers can enable suggested projects in Opportunity Marketplace. Employees can view and express interest in suggested projects from Opportunity Marketplace. Project managers can view interested employees and notify them when opportunities are filled.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Talent Marketplace

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

- Set up Skills Cloud.
- Review the setup considerations for Talent Marketplace.
- (Optional) To enable projects in Opportunity Marketplace, set up Projects and resource plans.

Context

With Talent Marketplace, you can:

- Create short- or long-term work assignments called flex teams and quickly identify the right talent for each of them.
- Provide access to Opportunity Marketplace, where workers can discover flex team, job, and project opportunities based on their talent data.

Steps

1. Access the Maintain Functional Areas task.

   Select the Enabled check box for the Talent Marketplace functional area.

   Security: *Security Configuration* domain in the System functional area.

   See Steps: Enable Functional Areas and Security Policies.
2. (Optional) Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   On the Innovation Services Opt-In task, select the HCM Machine Learning GA Features on the Available Services tab in the HCM category.

   On the Maintain Innovation Services Data Selection Opt-In task in the HCM: HCM Machine Learning GA Features innovation service, select Talent Marketplace from the View Data Categories for Feature prompt. Select the opt-in check boxes for the categories for which you want to contribute data for Machine Learning.

   As you complete the task, consider:

Option	Description
Worker Profile Data	Required for Talent Marketplace. Enables Workday to extract skills from the relevant sources on a worker: • Job title. • Job description. • Work history. • Explicit skills from the worker profile.
Job Requisition Data	(Optional) Select if your company wants to enable job recommendations in Opportunity Marketplace. To use Opportunity Marketplace, you must opt in to at least 1 of these categories: • Job Requisition Data • Projects Data • Talent Opportunity Marketplace Data
Projects Data	(Optional) Select if your company wants to enable project recommendations in Opportunity Marketplace. To use Opportunity Marketplace, you must opt in to at least 1 of these categories: • Job Requisition Data • Projects Data • Talent Opportunity Marketplace Data
Talent Opportunity Marketplace Data	(Optional) Select to include flex team suggestions and flex team match analysis. To use Opportunity Marketplace, you must opt in to at least 1 of these categories: • Job Requisition Data

Option	Description
	• Projects Data • Talent Opportunity Marketplace Data
Skills Data	(Optional) Select to include tenant data for skills-based matching.
Learning Data	(Optional) Select if your company wants to enable learning recommendations.
Demographics Data	(Optional) Select if your company wants to contribute workforce demographic data. This data is not required to enable product functionality. Workday uses it for machine learning product development, including monitoring and testing for impermissible bias.

3. Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

   Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.
4. Access the Maintain Skills and Experience Setup task.

   In the Skills section, select:

   - Enable Workday Skills Cloud
   - Populate Suggested Skills for Workers
   - (Optional) Include Tenanted Skills in Matching

   Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
5. Configure security for flex teams and Opportunity Marketplace.

   See Steps: Set Up Security for Talent Marketplace on page 1585.
6. (Optional) Edit Business Processes.

   Configure the default definition for the *Project Express Interest* business process. This business process enables workers to express interest in project opportunities.
7. Set up flex teams.

   See Steps: Set Up Flex Teams on page 1589.
8. Access the Edit Tenant Setup - HCM task.

   As you complete the Talent section, consider:

Option	Description
Enabled Opportunities within Opportunity Marketplace	Select opportunities to make available in Opportunity Marketplace. Enable at least one opportunity type. Flex team opportunities are available on the Browse Flex Teams report even when they're not available in Opportunity Marketplace.
Enable Learning within the Opportunity Marketplace	Select the option for Workday to suggest learning courses to employees viewing an opportunity.
Restrict Suggested Jobs to User's Primary Location	Limit suggested jobs to the worker's primary location. Selecting this option restricts suggested jobs to the worker's country,

Option	Description
	designated by the primary location for the worker. For example, if a worker's primary location is San Francisco, the worker will only see suggested jobs with a location in the United States. Enabling this option overrides the Suggested Jobs location options that workers select in Opportunity Marketplace Preferences. Workers can limit suggested jobs by Country, State or Region, or Office. All Locations is the default option.
Enable Flex Teams Express Interest Notes	Select the option to allow workers to create a customized message when expressing interest in a flex team. If enabled, a custom note is not required to express interest. Workers can write a custom note, or leave the message field blank. Disabling the option after a worker has expressed interest with a custom note results in the note being removed from the worker's profile.

Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

9. Access the Maintain Career Hub and Opportunity Marketplace task.

   As you complete the task, consider:

Option	Description
Edit Quick Links	Select Customized Configuration to configure Quick Links for Career Hub and Opportunity Marketplace. The Is Career Hub or Is Opportunity Marketplace options are required for each customized row. Select Task/Report or External Link to add an option that displays in the Quick Links section. Workday saves a Customized Configuration for later use if the Default Configuration is selected.
Edit Browse Filters	Select Customized Configuration to configure filters for enabled opportunity types. The Label Override doesn't impact reporting. Modified labels display only on the Browse page for the applicable opportunity type. Custom labels aren't translatable. Filters available for the Customized Configuration option are only filters supported by the opportunity types.

Option	Description
	Workday saves a Customized Configuration for later use if the Default Configuration is selected.
Edit ML Preferences	Select the Hierarchy to determine the seniority of job posting recommendations provided to workers. Job postings appear in Opportunity Marketplace Suggestions for You, in the Job Openings That Match Your Skills section. Workday suggests jobs consistent with the worker's current grade or level, or 1 grade or level higher, based on the selected hierarchy. Select the Enable ML Suggestion Dismissal option to allow workers to dismiss machine learning flex team suggestions. If this option is enabled, workers see the Remove Suggestion option on a flex team card on the Opportunity Marketplace Suggestions for You page. The Remove Suggestion option is available on both simple and advanced flex teams. When a worker selects Remove Suggestion, they are presented with a confirmation card. Selecting Don't show me this message again prevents the confirmation card from surfacing when removing additional flex team suggestions. Removed flex team suggestions won't appear again on the Suggestions for You page. Workers can search for removed suggestions on the Browse All Opportunities page.

Security: *Set Up: Career Hub and Opportunity Marketplace* in the Career and Development Planning, Career Hub, and Talent Marketplace functional areas.

10. (Optional) Configure projects for display in Opportunity Marketplace.

    When you enable projects in Opportunity Marketplace, employees see up to 9 suggested project roles in the Projects to Work On section. Project details in Opportunity Marketplace include the employee’s other projects and time off during the project. Employees can express interest in these roles, or in roles on the Recommended Projects report.

    - Using the Edit Project Summary task, select Display Project in Opportunity Marketplace for each project that you want to surface in Opportunity Marketplace.

      See Create Projects.
    - Create or edit a resource plan for the project.

      For each resource plan line that you want to display in Opportunity Marketplace, complete the Resource Plan Line section:

Option	Description
Start Date	Less than 1 year ahead of the current date.

Option	Description
End Date	Greater than the current date.
Allocation Type	Select Assign a Worker.
Worker assignments	Either no worker assignments on the resource plan line, at least 1 unnamed resource, or both.
Project Role Requirements	Add skills as project role requirements by: • Selecting *Prompt: Skills* as the Category. • Adding one or more Requirements. Workers receive project suggestions based on the match between their skills and the skills for the role, including skills marked as optional.

See Create Resource Plans.

11. (Optional) Add Jobs Hub tasks to the Opportunity Marketplace Quick Links section.

    Recruiting customers who want their workers to search for and apply to jobs in the context of Opportunity Marketplace can:

    - Access the Maintain Hubs task and configure Jobs Hub. On the Navigation Item Override tab, select Do Not Show for the Navigation Items.
    - Access the Maintain Career Hub and Opportunity Marketplace task. In the Edit Quick Links tab, select Customized Configuration and add the Manage Job Alerts and My Referrals reports for Opportunity Marketplace.
12. (Optional) Configure the Flex Teams and Opportunity Marketplace dashboards as worklets on the Home page.

    See Steps: Set Up Dashboards and Landing Pages.
13. (Optional) Access the Edit Tenant Setup - Notifications task.

    In the Notification Delivery Settings section, on the HCM category, configure notification settings for the Flex Teams and Marketplace Opportunity Promotion on the Notification Type grid.

    Security: *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.

Workday Community: Talent Marketplace AI Fact Sheet

Reference: Impacts of Primary Position Designation on page 889

The Next Level: Mastering Flex Teams with PNC

Steps: Set Up Security for Talent Marketplace

Context

You can set up security to determine who can:

- Access Opportunity Marketplace.
- Set up flex teams.
- Create and manage flex teams.
- Access projects in Opportunity Marketplace.

Note: Workday provides the ability to enable contingent workers to use Flex Teams as a configuration option for use at your discretion. You must always verify any configurations in your tenant and should consult with your own legal counsel to determine if the configurations meet your business and compliance needs.

Steps

1. Access the Domain Security Policies for Functional Area report.

   Select Domain Security Policy > Enable from the related actions menu of these domain security policies in the Talent Marketplace functional area:

   - *Flex Teams*
   - *Flex Team Worker Data*
   - *Manage: Flex Teams*
   - *Manage: Flex Teams Host Access*
   - *Opportunity Marketplace*
   - *Reports: Flex Teams*
   - *Self-Service: Flex Teams*
   - *Set Up: Flex Teams*
   - *Set Up: Career Hub and Opportunity Marketplace*
   - *Worker Data: Flex Teams*

   To enable projects in Opportunity Marketplace, select Domain Security Policy > Enable from the related actions menu of the *Self-Service: Resource Management* domain security policy in the Projects functional area.

   Security: *Security Activation* and *Security Configuration* domains in the System functional area.
2. Create User-Based Security Groups.

   Create a user-based security group named *Flex Team Administrator* and assign users.

   Note: Workers in the *Flex Team Administrator* security group that are also a member of a flex team do not retain their administrator privileges for that specific flex team.
3. Set Up Assignable Roles.

   As you complete the task, consider:

Option	Description
Role Name	Enter a name for the flex team host role or any other assignable role that you want to create.
Workday Role	Select *Flex Team Host* for the flex team host role. For other assignable roles, you can optionally leave this field blank when you don't want to map to a Workday role.
Enabled For	Select *Flex Team*.
Self-Assign	Select the Self-Assign check box for the flex team host role.

Option	Description
	For other assignable roles, you can optionally leave this check box unchecked.

4. Create Role-Based Security Groups.

   Create constrained and unconstrained role-based security groups for the flex team host role and any other assignable roles that you created.

   As you create a constrained role-based security group, consider:

Option	Description
Access Rights to Organizations	Workday recommends that you select Applies To Current Organization and Unassigned Subordinates.
Access Rights to Multiple Job Workers	Workday recommends that you select Role has access to the positions they support.

5. Edit Domain Security Policies.

   Configure these domains in the Talent Marketplace functional area:

Domain	Example Security Groups	Permission	Considerations
Flex Teams	All Contingent Workers All Employees	Modify	Adding contingent workers to this domain enables them to access and express interest in flex teams.
Flex Team Worker Data	Flex Team Administrator Flex Team Host (Unconstrained)	View	The Flex Team Host (Unconstrained) security group is required for the flex team host to provide skill endorsements to flex team members.
Manage: Flex Teams	Flex Team Administrator Manager	Modify	Also add the role-based security groups that you created for your assignable roles when you want them to view or edit flex teams and flex team membership.
Manage: Flex Teams Host Access	Flex Team Administrator Manager (Unconstrained)	Modify	
Opportunity Marketplace	All Contingent Workers All Employees	Modify	

Domain	Example Security Groups	Permission	Considerations
Reports: Flex Teams	Flex Team Administrator HR Administrator	View	To enable administrators to view flex team report data, grant View permission on these domains: • For the Internal Job Application Rate by Flex Team Membership report: *Candidate Data: Job Applications* in the Recruiting functional area. • For the Internal Movement Rate by Flex Team Membership report: *Worker Data: Historical Staffing Information* in the Staffing functional area.
Self-Service: Flex Teams	Contingent Worker As Self Employee As Self	Modify	Adding contingent workers to this domain enables them to view flex teams that they have expressed interest in or participated in.
Set Up: Flex Teams	Flex Team Administrator	Modify	
Set Up: Career Hub and Opportunity Marketplace	HR Administrator Talent Administrator	Modify	
Worker Data: Flex Teams	Flex Team Administrator	View	

Domain	Example Security Groups	Permission	Considerations
	Flex Team Host		

To enable projects in Opportunity Marketplace, configure the *Self-Service: Resource Management* domain in the Projects functional area:

Domain	Recommended Security Groups	Permission
Self-Service: Resource Management	Employee As Self	View

When you enable new workers to access flex teams, Workday doesn't suggest them as flex team candidates for up to 24 hours, until the match analysis data process updates, on business days only.

6. Edit Business Process Security Policies.

   Configure the security policies for these business processes:

Business Process	Description
Add Flex Team Member	• Add the role-based security groups that you created for your assignable roles to the initiating action when you want to enable them to invite others to join a flex team. • Add security groups to the View All, Approve, and Deny actions to enable them to approve or deny invitations to join flex teams. Workers must have this access to join a flex team.
Manage Flex Team	Add the role-based security groups that you created for your assignable roles to actions on the business process security policy.
Project Express Interest	Add security groups who explore and express interest in resource plan lines for projects, for example, All Employees.

7. Activate Pending Security Policy Changes.

2025R2 Release Note: Flex Teams Support Contingent Workers

2025R1 Release Note: Projects in Opportunity Marketplace

2023R2 What's New Post: Gig Roles

Steps: Set Up Flex Teams

Prerequisites

Review setup considerations for Talent Marketplace. See Setup Considerations: Talent Marketplace.

Review the Innovation Services setup details. See Steps: Set Up Talent Marketplace.

Context

You can set up the Flex Teams application so that administrators and flex team hosts can create temporary work assignments that they can promote to internal candidates. Flex Teams consist of either the simple or advanced team type. Workday uses machine learning to determine which workers have the best skills for each flex team.

To use custom labels throughout Talent, use the Maintain Custom Labels task. Create custom labels to replace the default Workday labels Flex Team and Flex Teams with your organization's terms. Refer to Create Custom Labels for details regarding search terms that don't update after a custom label change.

Steps

1. Access the Create Business Process Definition (Default Definition) task.

   Create and configure default definitions for these business processes in the Talent Marketplace functional area:

   - *Add Flex Team Member*
   - *Manage Flex Team*. When you want to create assignable roles for flex teams, add the *Assign Roles* allowed action on the business process definition.

   Security: *Business Process Administration* and *Manage: Business Process Definitions* domains in the System functional area.
2. (Optional) Set up Enterprise Interface Builder (EIB) integrations for the Flex Teams web service operations.

   See Steps: Set Up EIBs Using Templates from Web Service Operations.
3. (Optional) Create Custom Notifications.

   Configure a custom notification to notify a manager when their direct report initiates the *Manage Flex Team* business process.
4. Access the Maintain Flex Team Availabilities task.

   Configure flex team availabilities and select the default for Career Hub or Opportunity Marketplace onboarding. The Workday-owned flex team availability of *Not Available* is required and is always an option for workers when choosing their availability for flex teams.

   Security: *Set Up: Flex Teams* in the Talent Marketplace functional area.
5. Access the Maintain Flex Team Types task.

   Create flex team types to enable workers to filter flex teams by type in Opportunity Marketplace.

   Security: *Set Up: Flex Teams* in the Talent Marketplace functional area.
6. Access the Maintain Flex Team Categories task.

   Create flex team categories to enable workers to filter flex teams by category in Opportunity Marketplace.

   Security: *Set Up: Flex Teams* in the Talent Marketplace functional area.
7. Add the Manage Flex Teams report to the Career for Worker Profile profile group to display relevant flex teams and worker flex team histories.

   See Steps: Set Up Profiles and Profile Groups.
8. Set up anytime feedback to enable flex team hosts to provide feedback for flex team members.

   See Steps: Set Up Feedback on page 1737.
9. (Optional) Enable express interest notes to allow flex team candidates to add a custom message when expressing interest in a flex team.

   On the Edit Tenant Setup - HCM task, Talent section, select the option to Enable Flex Teams Express Interest Notes.

   Security: *Set Up: Tenant Setup - HCM* in the System functional area.

10. (Optional) Set up additional manager evaluations for performance reviews to enable flex team hosts to add comments to performance reviews for members of their teams. See Steps: Set Up Additional Manager Evaluations on page 1683.
11. (Optional) To enable linking individual goals to flex teams using the Relates To field for a goal, access the Configure Talent Tags task and add *Flex Team* to the Talent Tags for Goals.

    Security: *Set Up: Talent* in the Talent Pipeline functional area.
12. (Optional) Access the Configure Profile Summary task.

    Add the *Flex Teams* card to the Worker Profile.

    See Steps: Set Up Profile Cards.

Result

Users can access:

- The Browse Flex Teams report to view flex team opportunities. This report is available even when you don't enable flex teams for Opportunity Marketplace.
- The Manage Flex Teams report to create and manage flex teams. When a user creates a flex team, Workday automatically assigns them as the flex team host.

On a flex team's manage team page, the flex team host can use the Show Me filter to view interested candidates. From the related actions on the candidate card, flex team hosts can select View Express Interest Note to review the candidate's custom message. When a candidate is added to the flex team, the flex team host can view the interest note on the Flex Teams tab in the Career profile group of the worker's profile.

Next Steps

Enable flex team opportunities for Opportunity Marketplace.

Workday Community: Talent Marketplace AI Fact Sheet
The Next Level: Mastering Flex Teams with PNC

Create Flex Teams

Prerequisites

- Configure the Flex Teams application. See Steps: Set Up Flex Teams on page 1589.
- If your organization is using flex teams with Opportunity Marketplace, review the Setup Considerations: Talent Marketplace on page 1569 and Steps: Set Up Talent Marketplace on page 1580 topics.

- Security: These domains in the Talent Marketplace functional area:
  - *Flex Teams*
  - *Flex Team Worker Data*
  - *Manage: Flex Teams Host Access*
  - *Manage: Flex Teams*
  - *Self-Service: Flex Teams*
  - *Set Up: Flex Teams*
  - *Worker Data: Flex Teams*
- Configure the *Add Flex Team Member* and *Manage Flex Team* business processes and security policies in the Talent Marketplace functional area. See: Steps: Set Up Security for Talent Marketplace on page 1585.

Context

You can set up the Flex Teams application so that administrators and flex team hosts can create temporary work assignments they can promote to internal candidates. Workday uses machine learning to determine which workers have the best skills for each flex team.

Steps

1. Access the Create Flex Team task. You can also create a flex team from the Manage Flex Teams report.
2. As you complete the task, consider:

Option	Description
Team Type	Select either: • Advanced Flex Team: A flex team with roles, up to a maximum of 10 per flex team. • Simple Flex Team: A flex team without roles. The Team Type can't be modified once the flex team is created.
Title	Enter a title for the flex team.
Description	Enter a description for the flex team. The description field displays prominently on the flex team details page, and on flex team cards in Opportunity Marketplace and Career Hub.
Deliverables and Milestones	(Optional) Enter deliverables and milestones details. Details can include expectations and due dates.
Start Date	Enter the start date for the flex team. If you're creating an Advanced Flex Team, you can enter different start dates for the roles you create.
End Date	(Optional) Enter the end date for the flex team. Leave the value blank for an ongoing flex team.

Option	Description
Type	(Optional) Select the flex team type. Configure the type options by accessing the Maintain Flex Team Types task.
Display Image	Select a display image for the flex team. The image surfaces on the Manage Flex Teams report and the flex team detail page.
Attachments	(Optional) Upload an attachment to the flex team.

3. The options for the second part of the flex team creation process differ depending on the Team Type selected. As you complete the second part of the task, consider:

Option	Description
Required Skills	Simple Flex Team only. Enter the skills needed for the flex team. Workday uses the skills to find the appropriately skilled workers to staff the flex team.
Role Title	Advanced Flex Team only.
Role Description	Advanced Flex Team only. The Role Description content duplicates the information entered for the flex team. You can enter a description specific to the role or roles.
Skills Needed for Role	Advanced Flex Team only. The explicit skills selected for each role results in improved machine learning recommendations for both flex team hosts and candidates.
Start Date	Advanced Flex Team only. The Start Date field duplicates the value from the flex team Start Date field. You can enter different start dates for the role or roles.
End Date	(Optional) Advanced Flex Team only. The End Date field duplicates the value from the flex team End Date field. You can enter different end dates for the role or roles. Leave the value blank for an ongoing role.
Availability	(Optional) Select the availability option applicable to the flex team or role. Configure the availability options by accessing the Maintain Flex Team Availabilities task.
Number of Workers	(Optional) Enter the number of workers needed for the flex team or role.
Location	(Optional) Enter the location for the flex team or role. Simple flex teams are limited to 1 location. On the Manage Flex Teams report, the flex team's card displays the Multiple Locations attribute if more than 1 location is specified for all roles on an advanced flex team.

Option	Description
Onsite or Remote	(Optional) Select either or both values to indicate where flex team members are expected to spend their time while working.
Category	(Optional) Select the category for the flex team or role. The field is limited to a single value. Configure the category options by accessing the Maintain Flex Team Categories task.
Add Workers	(Optional) Add workers to the flex team or role. Workers receive a task in My Tasks to approve or deny the invitation. Workers are shown as Pending Approval on the flex team until they respond to the invite.

Result

Workday routes the flex team for approval, depending on your *Manage Flex Team* business process configuration.

Example

Rachel, a team leader, is asked to lead a market expansion initiative. This initiative requires skills that the team doesn't currently possess. As a result, Rachel creates an advanced flex team to locate internal talent that can assist her with completing the project. The flex team consists of multiple roles, including a business analyst, a marketing project manager, and a user experience designer. Rachel defines the skills needed for each role.

Bruce, a worker in the company, is contemplating new opportunities to grow within the organization. Bruce is interested in improving upon skills he possesses that aren't utilized in his current roles, but would also like to learn new skills that would contribute to his overall experience.

After creating the advanced flex team, Rachel uses the promote flex team process, with Workday machine learning having provided her with a list of possible candidates for each role. Bruce is notified about the opportunity, and also has the flex team recommended to him in Career Hub. He reviews the flex team description, and expresses interest in the business analyst role.

Rachel reviews the candidate suggestions for each role, as well as the workers who have expressed interest. She staffs each role, and adds Bruce as a team member on the business analyst role. Once the work is completed and the initiative is a success, Rachel completes the skill endorsements and feedback for each worker. Bruce sees the positive feedback on his worker profile, as well as new skills endorsements.

Next Steps

Flex team hosts can access the Manage Flex Teams report to view the advanced and simple flex teams they've created.

Administrators see the Manage All Flex Teams option on the Manage Flex Teams report, enabling them to browse all flex teams, or use the filters to find flex teams that meet their criteria. Users with permissions on the *Set Up: Flex Teams* domain can access the Maintain Flex Team Availabilities, Maintain Flex Team Types, and Maintain Flex Team Categories tasks from this page.

Actions on the flex team card include Manage Flex Team, and Share, View, Edit, and Cancel flex team. Select the flex team card to view the details page.

Access the Manage Flex Team page to:

- View the machine learning candidate recommendations for the flex team. Use the filters to find candidates that meet your criteria. Advanced flex teams have an additional *Role* filter, enabling the host to focus on the suggested candidates for the selected role.
- Promote the flex team or role to all suggested candidates, or those manually selected. Flex team hosts can create a customized notification title and message when promoting their flex team or role.
- Manually Add Worker to the flex team or role. The Add Worker option isn't available if the flex team or role is fully staffed.
- View the flex team or role team. Select the View Team option to add or remove workers.

Administrators and flex team hosts can access the My Flex Team Events report to view the business process details for advanced and simple flex teams.

When a flex team or role has the status of Fully Staffed, or has one approved member, the Complete Flex Team and Complete Role options are available. These options enable the flex team host to enter recommendations, feedback, and endorsements for team members. Additionally:

- Flex team hosts can complete a simple flex team using the flex team's action menu. Advanced flex team roles can be completed individually, with the Complete Flex Team option available on each role from the flex team's detail page.
- The host can close the complete window and return to the process at any time prior to the flex team or role being marked as Completed.
- Submitting feedback and endorsements for the final team member completes that specific flex team or role.
- Submitted feedback and endorsements aren't available for edit.
- Administrators can create a custom notification alerting flex team team members that feedback has been provided. Feedback is available on the worker profile and from the flex team detail page.

2023R2 What's New Post: Gig Roles

The Next Level: Optimizing Gigs with 2023R2+

Promote Flex Teams

Prerequisites

- Create flex teams and make them available to candidates.
- Security: *Manage: Flex Teams* in the Talent Marketplace functional area.

Context

You can promote to specific candidates, subsets of candidates, or all recommended candidates for a flex team from the Manage Flex Teams page. Recommended candidates surface on a flex team after Workday compares the skills listed on a worker's profile to the skills listed on a flex team as Skills Needed. The result, a Match Analysis, designates the worker as a Fair, Good, or Strong Match.

Steps

1. Access the Manage Flex Teams report.
2. Select Actions > Manage Flex Team on the flex team you want to promote.
3. (Optional) Use the Filters and Additional Filters to refine the list of candidates.
4. Select Promote.
5. Enter text for the title and message fields, or use the Workday-provided defaults.
6. (Optional) Deselect candidates from the promotion.

Result

Candidates receive a notification on their notifications page that contains the custom notification title and message, and the name of the flex team. The notification also includes a link to the flex team.

Next Steps

Administrators and flex team hosts can access the Manage Flex Teams report to manage their flex teams.

Cancel Flex Teams and Flex Team Roles

Prerequisites

- Create flex teams and make them available to candidates.
- Configure the *Manage Flex Team* business process and security policy in the Talent Marketplace functional area.

Context

Flex teams that have the status of In Recruiting or Fully Staffed are available for cancellation. You can't cancel flex teams with a status of Completed.

The process for canceling flex teams differs depending on the flex team type, simple or advanced.

To cancel a simple flex team, select the Actions menu from either the Manage Flex Teams report, or the flex team detail page. Select the Cancel Flex Team option. The flex team displays with the Canceled status on the Manage Flex Teams report and the flex team detail page.

You cancel the roles on an advanced flex team individually. Follow the steps below to cancel an advanced flex team.

Steps

1. As an administrator or flex team host, access the flex team detail page.
2. The flex team's roles are visible as tabs on the Roles card. Select the role that you want to cancel.
3. Click Cancel Role. The role displays with the Canceled status, and is no longer available to staff.
4. To cancel the advanced flex team, you must cancel all roles following the steps above. Canceling all roles automatically cancels the flex team. The Canceled status displays on the Manage Flex Teams report, and on the flex team detail page.

Next Steps

Administrators and flex team hosts can view the status of their flex teams in the My Flex Team Events report.

The Next Level: Optimizing Gigs with 2023R2+

The Next Level: Skills-Based Optimization Feature Demonstration

Process: Refine Maintained Skills for Talent Marketplace Matching

Prerequisites

Review the following topics:

- Setup Considerations: Skills Cloud, for an overview of Skills Cloud functionality.
- Steps: Set Up Talent Marketplace, to complete the configuration requirements for Talent Marketplace.

Configure these security policies in the Worker Profile and Skills functional area:

- *Manage: External Skills*
- *Set Up: Skills and Experience*

Context

This topic provides a checklist of tasks to clean up your skills data, with the result of improved machine learning skills-based recommendations.

Workday automates a portion of the skills curation and management process by automatically enabling the Duplicate Skills Management and Skill Synonym Management processes for all Skills Cloud customers. These features reduce the number of semantically similar skills by reconciling them to the most standardized form of the skill. This consolidation improves the quality of skills data in your tenant.

Workday recommends waiting a minimum of 2 weeks after the automated jobs have completed in Preview and Production before evaluating your maintained skills, and proceeding with the steps below.

Skills data differs for each tenant. Use the information below as a guide.

Steps

1. Review and refine maintained skills on worker profiles.
    a) In your Production tenant, export all worker skills using the *Get Manage Skills* web service. Filter for maintained skills by referencing the skills reference ID.

       Note: By default, Skills Cloud skills have reference IDs that look similar to "REMOTE_SKILL - xxx".
    b) In your Sandbox or Implementation tenant, inactivate all maintained skills using the *Manage Skills* web service.
    c) In your Sandbox or Implementation tenant, run the *External Skills* web service to load worker maintained skills. This will allow you to see alternative Skills Cloud skill suggestions.

       For more information and configuration steps, see the Import External Skills Community article, and the Talent Web Service Directory.
    d) Review the suggestions and determine the appropriate Skills Cloud skills to replace the applicable maintained skills.
    e) In your Production tenant:

        1. Delete the maintained skills from worker profiles using the *Manage Skills* web service.
        2. Load the applicable Skills Cloud skill replacements on the worker profiles using the *Manage Skills* web service.

       Note: Workday recommends that you test *Manage Skills* web services in your Sandbox or Implementation tenants prior to making changes in Production.

2. Review and refine maintained skills on other Workday objects, including job profiles, job requisitions, learning content, and others.

    - Repeat the steps above using the relevant object's web services.
    - A sample list of associated web services includes:

        - *Get Job Profiles/ Submit Job Profile*
        - *Edit Job Requisition*
        - *Get Learning Course Offerings/Put Learning Course Offering*
3. Determine a cadence for your organization to proactively review and refine maintained skills for workers.
    a) In your Production tenant, export all maintained skills using the *Get Skills* web service.
    b) Review the output of existing maintained skills to determine which to delete or Inactivate.

    Note: Maintained skills can't be deleted, only inactivated, if they're used by other objects. Inactivating a skill prevents users from adding that skill in the future, and allows your organization to retain a history of those skills.
    c) In your Production tenant, delete or inactivate unwanted maintained skills using the *Put Skill* web service.

    Note: Workday recommends that you test *Put* web services in your Sandbox or Implementation tenants prior to making changes in Production.
4. After completing the initial review and refinement of maintained skills, you can include your maintained skills in machine learning driven matching and learning recommendations.

    a. Access the Maintain Skills and Experience Setup task.
    b. Select Include Tenanted Skills in Matching.

    For more information, see Setup Considerations: Skills Cloud and Steps: Set Up Skills Cloud.

Concept: Flex Teams

Flex Teams help you improve collaboration, agility, and internal mobility in your company.

Using Flex Teams, your workers can create and join teams that operate across traditional internal boundaries such as location, function, and reporting structure. Instead, flex team recruitment primarily uses skills. We enable you to connect workers to flex team opportunities that match their skillsets and interests, helping them find new ways to grow their careers and contribute to organizational success.

Flex teams can vary by project length and commitment level, from intensive short-term work like development sprints to ongoing projects like employee resource groups.

Simple and Advanced Flex Teams

There are 2 types of flex teams:

- Simple flex teams have 1 set of requirements for all team members. This type is suited to teams where each member has similar tasks. Simple flex teams have existed since the Flex Teams application has been available to customers, and are still available for organizations that want to continue using their current framework and internal processes.

- Advanced flex teams consist of specific roles, each with its own set of requirements. This team type offers more customization and better machine learning matching for cross-functional teams. For example, the host of an advanced flex team for a video production project can create a presenter role, a director role, and an editor role, each with specific required skills, locations, and time commitments. Advanced flex teams can have up to 10 roles.

Flex team hosts choose the team type when creating the team. They cannot change it after the flex team is approved.

Flex Teams Skills Matching

To help your company staff flex teams, Workday provides machine learning suggestions to hosts, and to workers if Opportunity Marketplace is set up.

Workday uses Skills Cloud machine learning functionality to match workers to flex team opportunities. The match strength is based on the proportion of the worker skills that are an exact match, synonymous with, or similar to the skills on the flex team or flex team role. For more information, see Workday Community: Talent Marketplace AI Fact Sheet.

Note: Note: Worker availability and location do not affect how Workday machine learning matches workers to flex teams. Instead, these options are available as filters for hosts browsing candidates and workers browsing flex teams.

Flex Teams and Opportunity Marketplace

You can implement Flex Teams with Opportunity Marketplace, or on its own. Opportunity Marketplace enables machine learning suggestions for workers looking for flex team opportunities.

Capabilities Implemented	Machine Learning Functionality
Flex Teams only	Flex team hosts can view suggested candidates.
Flex Teams and Opportunity Marketplace	• Flex team hosts can view suggested candidates. • Workers can view suggested flex team opportunities.

Flex Team Hosts

When a worker creates a Flex Team, they become the team's host. From the Manage Flex Teams report, Flex Team hosts can:

- Staff their Flex Team, including viewing suggested candidates, inviting workers to join the team, approving candidates who express interest, removing team members, and promoting their Flex Team to candidates.
- Change the status of their team, including canceling or completing the team.
- Leave feedback for each member of a completed team, including:
    - Whether the host recommends the worker for other Flex Teams.
    - Optional skill endorsements and anytime feedback.

You can also enable Flex Team hosts to contribute to a performance review as an additional manager. For more information, see Steps: Set Up Additional Manager Evaluations on page 1683.

Reference: Flex Teams Notifications

Flex team candidates and members receive notifications about flex teams in their Workday notifications page. You can also send the notifications by email by accessing the Edit Tenant Setup - Notifications task. In the Notification Delivery Settings > HCM section, you can set up email notifications based on the notification types Flex Teams or Marketplace Opportunity Promotion. All notifications include a link to the flex team.

Flex team hosts can create a customized title and message when promoting a flex team. Workday sends the customized promotion notification to the worker's notifications page. For all other flex team notifications, you can't customize the notification content. Workday populates the notification with data such as:

- Flex team title.
- Flex team status.
- User names.

Flex Teams

Workday sends these notifications to flex team candidates and members:

Description	Example Notification
The flex team host receives a notification when someone expresses interest in their flex team.	Jane Snow is interested in your flex team Machine Learning and Skills.
The flex team host receives a notification when someone removes their interest in their flex team.	Dan Black has removed their interest in your flex team Machine Learning and Skills.
Anyone who has expressed interest in a flex team but isn't a member of the flex team receives a notification when the flex team is fully staffed.	The flex team Machine Learning and Skills has been fully staffed.
Flex team members receive a notification when the flex team host cancels the flex team.	Logan McNeil has cancelled the flex team Machine Learning and Skills.
Flex team members receive a notification when the flex team host completes the flex team. While completing the team, the host has the option to give feedback and skill endorsements.	Congratulations on completing the flex team Machine Learning and Skills. Logan McNeil has given you feedback on your work. Click to view their comments.
Flex team members receive a notification when the flex team host removes them from a flex team.	Logan McNeil has removed you from the flex team Machine Learning and Skills.
The flex team host receives a notification when a flex team member leaves the flex team.	Dan Black has left the flex team Machine Learning and Skills. Machine Learning and Skills status is In Recruiting. You can add another member to your flex team by going to the Manage Flex Team page or remove the open position by editing your flex team.

Marketplace Opportunity Promotion

Workday sends these notifications to flex team candidates and members:

Description	Example Notification
Recommended candidates receive a notification when a flex team host promotes a flex team.	We found a flex team that you might be interested in.

FAQ: Talent Marketplace

Does location affect how Workday matches candidates to flex teams?	No, location doesn't affect matching.
Does availability affect how Workday matches candidates to flex teams?	No, availability, or expected availability, doesn't affect matching. However, flex team hosts can filter candidates based on the availability they specify they can commit to flex teams.
Who receives flex team promotions and can I control who receives them?	You can send flex team promotions to specific, recommended candidates, subsets of candidates or all recommended candidates, up to 200, unless they set their availability to Not Available. You can only promote your flex team to the same candidates once. When you edit the skills required for a flex team, Workday refreshes the candidate recommendations, and you can promote the flex team again. A worker is a recommended candidate when: • They're a Fair, Good, or Strong Match for the flex team. • They have access to the *Flex Teams* domain. • They're an active worker. Workers who haven't completed onboarding can receive flex team promotions.
Can I opt out of the Flex Team Roles feature? Is there a way to prevent users from creating advanced flex teams?	Currently, there is no way to opt out of the flex team roles feature. However, if you want to restrict your employees from creating advanced flex teams, you can create a condition rule on the *Manage Flex Team* business process. This will trigger a critical warning that will force users to select the Simple Flex Team team type, instead of Advanced Flex Team, during the create flex team process. 1. On the *Manage Flex Team* business process, select the related action on the initiation step. 2. Select Business Process, then Create Condition Rule. 3. Create a description for the rule. 4. Select Team Type for the Source External Field or Condition Rule field.

5. Select in the selection list for the Relational Operator field.
6. Leave the Value specified in this filter option as defaulted in the Comparison Type field.
7. Select Advanced Flex Team in the Comparison Value field.
8. Select OK to create the rule.
9. Return to the *Manage Flex Team* business process. Select the related action on the initiation step.
10. Select Business Process, then Maintain Step Conditions.
11. Select the Effective Date, then OK.
12. Add a row to the Validation Conditions, and enter the rule you created above. To force users to select the Simple Flex Team team type only, select Critical for the Severity.
13. Return to the *Manage Flex Team* business process and confirm that your rule appears in the Validation column. Users who select the Advanced Flex Team team type when creating a flex team will see a critical warning, forcing them to change the Team Type selection from Advanced Flex Team to Simple Flex Team.

If a flex team host moves to another position or is terminated, how do I reassign the flex team host role?	Currently, if a flex team host moves to another position, or is terminated, the flex team they were hosting requires manual reassignment. An administrator completes this process by reassigning the flex team host role. Two possible approaches are: • From the related action on a worker, select Security Profile, then Assign Roles, then Change Assignments. Locate the flex team that requires reassignment by scrolling down the Role Enabled For column. Add or remove assignees as needed. • From the related action on a worker, select Security Profile, then View Role Assignments for Worker Position. Update the flex team host for any flex team using the related action for the applicable flex team and select Roles, then Assign Roles.
How do flex teams search filters work?	Workers can use the Flex Teams Your Company Needs Help With filter to find flex teams that align with the skills on their profile. The Flex Teams to Help You Develop filter helps workers find flex teams based on the skill interests on their profile. Using either filter and Flex Team Host, Flex Team Type, Location or other search facet filters enables workers to refine the list of available flex teams.

Why does Talent Marketplace require Workday Skills Cloud and how are opportunity matches made?	Skills Cloud uses machine learning to provide more relevant and appropriate opportunity recommendations for workers. Skills Cloud matches explicitly defined skills on the worker profile and skills on the opportunity. Skills Cloud also infers related skills that a worker has based on data points from their profile to match them to opportunities.

Career Profile

Setup Considerations: Career Profile

You can use this topic to help make decisions when planning your configuration and use of Career Profile. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Career Profile consolidates multiple tasks for managing talent data, enabling users to update their talent profile in a single page. You can configure Career Profile to consolidate the tasks for:

- Awards and activities
- Certifications
- Education
- Interests
- Job history
- Skills
- Work experience

Business Benefits

You can opt in to Career Profile to:

- Make it easier for users to update their talent profile.
- Reduce the number of stand-alone tasks that users need to access.
- Streamline the process of managing talent data.

Use Cases

You can use Career Profile to consolidate tasks that don't require custom workflows or validations.

Questions to Consider

Questions	Considerations
Do you have any business process definitions for any Career Profile sections?	Workday doesn't use custom business processes for Career Profile changes. For active sections, Workday automatically saves any changes made in Career Profile instead of acquiring approvals.

Questions	Considerations
	If you prefer using the stand-alone tasks or custom business processes for a specific section, you can inactivate a section through the Configure Career Profile task.
What happens to in-progress events when I opt in to Career Profile or make a section active?	Workday locks out any fields that have pending changes. Users can't make any changes to locked fields in Career Profile until the business process is complete.

Recommendations

When you first opt in to Career Profile, we recommend you inactivate sections that correspond to business process definitions that you want to keep using.

Requirements

Opt in to Career Profile through the Maintain Feature Opt-Ins report.

Limitations

Active Career Profile sections don't support:

- Custom business process configurations, including approvals, help text, and validation rules.
- Guided tours.

Users can't save their changes for later.

Career Profile is currently not available on mobile devices.

Tenant Setup

You can opt in or out of Career Profile at any time through the Maintain Feature Opt-Ins report. All sections are active the first time you opt in.

The Configure Career Profile task enables you to decide which sections are available. Workday consolidates the add, edit, and remove buttons for most active sections with an Edit button on profile cards and reports.

Security

Domains	Considerations
Set Up: System in the System functional area	Administrators can opt in to Career Profile.
Set Up: Skills and Experience in the Worker Profile and Skills functional area	Administrators can access the Configure Career Profile task to arrange the order of active sections or inactivate sections.
Self-Service: Interests in the Career and Development Planning functional area. These domains in the Worker Profile and Skills functional area: • *Self-Service: Achievements* • *Self-Service: Certifications* • *Self-Service: Education* • *Self-Service: Job History*	Academic affiliates, students, and workers can make changes in the corresponding Career Profile section for themselves.

Domains	Considerations
• *Self-Service: Skill Ratings* • *Self-Service: Skills* • *Self-Service: Work Experience*	
Worker Data: Interests in the Career and Development Planning functional area. These domains in the Worker Profile and Skills functional area: • *Person Data: Achievements* • *Person Data: Certifications* • *Person Data: Education* • *Person Data: Job History* • *Worker Data: Skill Ratings* • *Person Data: Skills* • *Worker Data: Work Experience*	Users with Modify permission can make changes in the corresponding Career Profile section for others.

Business Processes

Workday automatically completes the initiating actions of these business processes if its corresponding section is active in Career Profile:

- *Manage Awards and Activities*
- *Manage Certifications*
- *Manage Education*
- *Manage Interests*
- *Manage Job History*
- *Manage Work Experience*

Reporting

No impact.

Integrations

No impact.

Connections and Touchpoints

Career Profile interacts with these other areas in Workday:

Feature	Considerations
Academic Faculty	Ensure that academic affiliates have access to the correct domains when any of these sections are active: • Award and Activity • Certifications • Education • Job History
Students	Ensure that students have access to the correct domains when any of these sections are active: • Award and Activity

Feature	Considerations
	• Certifications • Job History • Skills

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Career Profile

Context

Career Profile enables academic affiliates, workers, and students to manage different parts of their talent profile through a single page. You can opt in and configure Career Profile to consolidate tasks for:

- Awards and activities
- Certifications
- Education
- Interests
- Job history
- Skills
- Work experience

Steps

1. Access the Maintain Feature Opt-Ins report.

   Opt in to the Career Profile.

   Security: *Set Up: System* domain in the System functional area.
2. Access the Configure Career Profile task.

   Configure which sections are available in Career Profile and organize the display order of active sections.

   Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.

3. Edit Domain Security Policies.

   Assign self-service security groups to the *Self-Service: Interests* domain in the Career and Development Planning functional area and these domains in the Worker Profile and Skills functional area:

   - *Self-Service: Achievements*
   - *Self-Service: Certifications*
   - *Self-Service: Education*
   - *Self-Service: Job History*
   - *Self-Service: Skill Ratings*
   - *Self-Service: Skills*
   - *Self-Service: Work Experience*

   Assign security groups to the *Worker Data: Interests* domain in the Career and Development Planning functional area and these domains in the Worker Profile and Skills functional area:

   - *Person Data: Achievements*
   - *Person Data: Certifications*
   - *Person Data: Education*
   - *Worker Data: Skill Ratings*
   - *Person Data: Skills*
   - *Worker Data: Skills and Experience*
   - *Worker Data: Work Experience*

   See Reference: Security for Career Profile Sections on page 1607.
4. Activate Pending Security Policy Changes.

Result

For active Career Profile sections, Workday:

- Consolidates any corresponding stand-alone add, edit, and remove tasks.
- Consolidates any add, edit, or remove buttons into a single edit button that directs users to the section.
- Doesn't use custom business process security policies and definitions.
- Automatically saves changes made by users when they navigate to another section.

Tasks

Steps: Set Up Skills and Experience on page 119

Steps: Set Up Interests on page 1535

Reference

The Next Level: Cultivating Career Mobility

The Next Level: Establishing a Talent Footprint

Reference: Security for Career Profile Sections

Workday secures Career Profile to multiple security domains. When a section is active in Career Profile, users must have Modify permissions on any of the corresponding domains to access that section. Active sections don't use business process security policies or definitions.

For sections that you inactivate in the Configure Career Profile task, Workday continues to use any corresponding business process policies, definitions, and stand-alone tasks.

There's no business process for skills, so the stand-alone Edit Skills task and Career Profile section share the same domain policies.

Use this table to determine which policies to configure based on whether a section is active or not.

Section	Business Process	Domains
Assess My Skills		*Self-Service: Skill Ratings* *Worker Data: Skill Ratings*
Award and Activity	*Manage Awards and Activities*	*Person Data: Achievements* *Self-Service: Achievements*
Certifications	*Manage Certifications*	*Person Data: Certifications* *Self-Service: Certifications*
Education	*Manage Education*	*Person Data: Education* *Self-Service: Education*
Interests	*Manage Interests*	*Self-Service: Interests* *Worker Data: Interests*
Job History	*Manage Job History*	*Person Data: Job History* *Self-Service: Job History*
Skills		*Person Data: Skills* *Self-Service: Skills*
Work Experience	*Manage Work Experience*	*Self-Service: Work Experience* *Worker Data: Work Experience*

Talent Reviews

Steps: Manage Talent Reviews

Context

Talent reviews enable you to gather, evaluate, and report on employee talent information, such as:

- Skills and experiences.
- Performance and potential.
- Career interests and mobility preferences.

You can create multiple talent review templates and customize them for different organizations or purposes. You can prepare for a talent review by printing talent cards with a summary of talent information for each employee.

You can also complete talent reviews using the Workday on iPad and Workday on iPhone apps and seamlessly move between your desktop and mobile device during the process.

Steps

1. (Optional) Determine if your event is large enough that you need to work with the Workday Production Readiness team.

   See Workday Community: Customer Events: Best Practices and Production Readiness for guidelines about opening a Production Readiness case.
2. Set up the individual components that you plan to include in talent reviews:

   - Steps: Set Up Interests on page 1535.
   - Steps: Set Up Skills and Experience on page 119.

3. Create Talent Review Rules on page 1609.
4. Create Talent Review Templates on page 1610.
5. Start Talent Reviews on page 1612.
6. Add Logo to Talent Cards on page 1614.
7. Mass Print Talent Cards on page 1614.

Create Talent Review Rules

Prerequisites

Security: *Set Up: Talent Review* domain in the Talent Pipeline functional area.

Context

Define employee eligibility for talent reviews by creating condition rules that you associate with talent review templates. You can assign the same rule to multiple templates, but each template can have only 1 rule.

Talent review rules evaluate whether employees match the criteria you specify, such as:

- Organization.
- Location.
- Job profile.
- Talent pool membership.

To organize talent review rules, create categories with the Maintain Condition Rule Categories task.

Steps

1. Access the Create Talent Review Rule task.
2. (Optional) Select a rule Category.
3. (Optional) To copy an existing condition, select a rule from the Copy Condition from Rule prompt.
4. In the Rule Conditions grid, build a condition rule that identifies employees who are eligible for a particular talent review.

Example

This condition rule identifies employees whose job profile is Outside Sales and whose location is in the United States:

And/Or	(	Field	Operator	Comparison Type	Comparison Value	)
And	(	Job Profiles	in the selection list	Value specified in this filter	Outside Sales	

And/Or	(	Field	Operator	Comparison Type	Comparison Value	)
And		Location Address - Country	in the selection list	Value specified in this filter	United States	)

Next Steps

- When you create the talent review template, select the rule in the Applies To field.
- To modify a talent review rule, use the Edit Condition Rule task.

Related Information

Tasks

Steps: Manage Talent Reviews on page 1608

Create Talent Review Templates

Prerequisites

Security: *Set Up: Talent Review* and *Talent Review* domains in the Talent Pipeline functional area.

Context

Set guidelines for a talent review by creating a template that defines:

- Who the review is for.
- What type of talent information to capture.
- How to organize the information.
- What employees and managers see when they complete the review.

To add sections to a talent review template, enable the *Talent Review* domain and the subdomain for each section. The subdomains inherit the permissions from the parent domain, which you can override. Example: *Talent Review* and *Talent Review: Competencies*.

Steps

1. Access the Create Talent Review Template task.
2. Click Configure Talent Review Template.
3. (Optional) Click Edit to specify the template audience and purpose:
    a) Click the Applies To prompt to select a rule that identifies the target population for this template.
    b) Enter a Company Statement that provides comments or a message for talent cards.

        This statement only displays on talent cards that you print for talent reviews based on this template.
    c) Click Save.
4. Click Configure Instructional Text to provide instructions for employees and managers or others who use this template.

Option	Description
Welcome Page Instructions	Enter instructions for employees and managers when they begin the talent review, and add a Welcome Page Title that distinguishes this review from other reviews.
Welcome Back Page Instructions	Enter instructions for employees and managers when they return to an in-progress talent

Option	Description
	review. You can also specify a unique Welcome Back Page Title to remind users that this review is in progress.
Summary Editor Page Instructions	Enter instructions for employees and managers to explain the summary editor page. You can also add a Summary Page Title.

If you leave a field blank, then the corresponding section has no instructions on the template for that role. Workday recommends that you provide a Welcome Page Title at a minimum and keep page titles concise for best display.

5. Click Configure Section Order to select and organize the template sections:
   a) Specify a Section Group Title.

      The title can be for a single section or a group of sections.
   b) Select the Display as One Section check box if you want to combine multiple sections into a group.

      With this option, the Guided Editor presents the section group as a single step, rather than as separate steps in the wizard flow. This setting doesn't affect the Summary Editor.
   c) Click the Section prompt to select the first section.
6. Configure each template section:
   a) Click Configure.
   b) Explain how to complete the section by providing Employee Instructions and Manager and Others Instructions.

      These instructions are only for the Guided Editor.
   c) (Competencies only) Select one or more Competencies for this template.

      You can select any number of competencies, but talent cards display a maximum of 8 competencies.

      In talent reviews, employees can only select the competencies configured on the template. They can't pull in competencies from job profiles, management levels, or other sources.
   d) (Languages only) Select the Language Ability Type for this template.

      In talent reviews, employees select their proficiency level for this ability type. If you have only 1 active language ability type, Workday automatically uses that type.
   e) (Talent Summary only) Specify which summary fields to display on the template and whether others can view or edit them.

      If you don't select at least 1 summary field for display, the section is empty.

      The Employee Talent Summary and Manager Summary fields are limited to 250 characters for optimal display on talent cards. The Talent Summary Details field has no character limit and doesn't display on talent cards.
   f) (Combined sections only) Click Configure in the Instructional Text column to provide Employee Instructions and Manager and Others Instructions.

Result

The Errors & Warnings section indicates whether the template is properly configured, including all section requirements and instructional text. Instructional text is optional but recommended.

After you launch a talent review, Workday locks the template to prevent changes. The Status section indicates whether the template is locked and in use, and displays how many talent reviews were initiated on the template. To see a list of in-progress talent reviews, who initiated them, and the initiation date, click the Initiations number.

Next Steps

- Launch the *Talent Review* process.
- Modify or inactivate a talent review template with the Configure Talent Review Template report.

  When a template is Inactive, you can no longer select the template from menu prompts. The template remains valid for in progress or complete talent reviews.

Related Information
Tasks
Steps: Manage Talent Reviews on page 1608

Start Talent Reviews

Prerequisites

- Configure the *Talent Review* business process and security policy in the Talent Pipeline functional area.
- In the Domain Security Policies for Functional Area report, configure the security policy for each section on the talent review template. To determine the appropriate permissions, consider each person's role in the talent review process.
- Security: *Talent Review* domain in the Talent Pipeline functional area.

Context

Launch a talent review for an individual, an organization, or a talent pool. Workday offers several choices to make the process simple and flexible, including 2 options for data entry:

- The Guided Editor is a wizard that takes you through individual steps, with an interactive navigation bar to move between sections.
- The Summary Editor gives you a single-page layout to enter all of your talent information.

Other options help you manage the process workflow. You can:

- Switch between editors at any time by clicking Guide Me or Go to Summary Editor.
- View the most recent comment, the comment history, and the process history at the bottom of the Welcome Page.
- Pause and resume the data entry process as needed.
- Confirm and submit your talent information when data entry is complete.

A worker can have only 1 talent review in progress at a time. If you launch a talent review for an organization, any member who already has a talent review in progress is ineligible for the second talent review. The process only starts for the eligible members of the organization.

Steps

1. Access the appropriate task:

    - Start Talent Review for Organization
    - Start Talent Review for Worker

2. Specify who the review is for and select the template.
    - If the review is for a Supervisory Organization, you can optionally:
        - Include subordinate organizations.
        - Select a calibration program to start simultaneously with this talent review.
    - If the review is for a Talent Pool, you can only select static talent pools, not dynamic pools.
    - If your tenant has fewer than 10,000 workers, Workday displays the worker counts and lists the first 50 eligible workers.
    - When you select a calibration program, Workday uses the rules and dates defined in the review template to determine employee eligibility.
3. (Workers and Managers) Complete the Update Profile task:

    Note: The Update Profile task name is generic to give you more control over the talent review terminology that workers see.

    a) Click the item in the All Items section of My Tasks.
    b) Select either Go to Guided Editor or Go to Summary Editor.
    c) Provide the applicable information in each section.
    d) (Workers) Click Submit when you complete your information.
    e) (Managers) Click Approve, Deny, Send Back, or Close.

        If a manager sends back a review for an employee to complete, much of the skills and experiences information that the manager entered is visible to the employee.

Result

- If you include a calibration program when you start a review, Workday includes the employee's potential assessment from the talent review.
- Managers can access the Talent Review Status Summary report to see key attributes of the talent review process for their team. Managers can take immediate action on assigned tasks. They also can see each employee's current performance rating and most recent potential assessment.

Next Steps

If necessary, you can cancel or rescind individual talent reviews. On a worker profile, click Talent Cards and either:

- Cancel a talent review that has a status of *In Progress*.
- Rescind a talent review that has a status of *Successfully Completed*.

Rescind is the only option to stop talent reviews for organizations and talent pools. Workday automatically starts the review process for every eligible member, completing the launch task event. Access the Mass Rescind Business Processes task.

If a talent review stalls because its participants are unable to complete their assigned tasks, you can manually advance the review. Access the Mass Advance Business Process task or from the related actions menu on the overall process, select Business Process > Advance Manually. You must have permission on the *Manual Advance* action in the *Talent Review* business process security policy.

Note: Workday assigns the *Update My Talent Profile* step to the administrator who advanced the review, not to the original assignee if you send it back after it was manually advanced.

FAQ: Talent Reviews on page 1620

Add Logo to Talent Cards

Prerequisites

Security: *Custom Report Creation* domain in the System functional area.

Context

Add your company logo to the Workday-delivered talent card layout. The logo must be in BMP, GIF, JPEG, or PNG format with a recommended size of 120 x 55.

You can add a different logo for each type of talent card:

- Current talent cards reflect all of a worker's talent data as of the current date.
- Event-based talent cards reflect data from a specific *Talent Review* event.

Note: To add a company statement to event-based talent cards, define the statement on the talent review template.

Steps

1. Access the Configure Business Form Layout task.
2. Select 1 of the talent card layouts:
    - *Talent Card for Profile*
    - *Talent Card for Review*
3. Add a row to the Token Substitution table.
4. Select the logo image and upload it.

Result

Workday includes the company logo at the top right of the printed talent cards.

Tasks

Create Talent Review Templates on page 1610

Mass Print Talent Cards

Prerequisites

Security:

- *Self-Service: Talent Card* in the Worker Profile and Skills functional area.
- *Worker Data: Talent Card* in the Worker Profile and Skills functional area.
- *Talent Review* in the Talent Pipeline functional area.

Context

View and print up to 250 talent cards in PDF format with a maximum size of 50MB that include:

- Individual talent cards.
- Mass printed current talent cards for an organization or a talent pool.

- Event-based talent cards for an in-progress or completed *Talent Review* event.

You can add your logo to the delivered talent card layout.

To override the standard print layout, create a custom layout in Workday Studio and add it to your Workday tenant.

Workday names mass-printed talent card PDFs after the processing worker and creation date.

To print individual talent cards, select Talent Cards in the Overview, Career, or Performance profile group, depending on your worker profile configuration.

If you want to display workers' job-related sections when they print their own talent cards, add the Employee As Self and Contingent Worker As Self security groups to the *Self-Service: Current Staffing Information* domain.

Steps

1. Access one of these tasks, depending on the talent cards you want to mass print:

Option	Description
For an Organization	Access the Print Talent Cards for Organization task. Alternatively, from the organization's related actions menu, select Talent > Print Talent Cards.
For a Talent Pool	Access the Print Talent Cards for Talent Pool task. Alternatively, from the talent pool's related actions menu, select Talent > Print Talent Cards.
For a Talent Review Event	Access the Print Talent Cards for Talent Review task.

2. Follow the on-screen prompts to filter and select workers.
3. Select OK or Submit.

Next Steps

- Access the Maintain Work Experience task to specify the Talent Card Sort Order for work experiences.
- To add talent cards to worker profiles, access the Configure Profile and Configure Profile Group tasks. See FAQ: Talent Reviews on page 1620.

Tasks

Steps: Set Up Profiles and Profile Groups

Examples

Add Logo to Talent Cards

Steps: Create Custom Talent Card Layouts

Steps: Create Custom Talent Card Layouts

Prerequisites

- Complete the prerequisites for creating a business form layout.

- Security: *Custom Report Creation* and *Set Up: Tenant Setup - HCM* domains in System functional area.

Context

Create a custom print layout for talent cards. You can create separate layouts for current talent cards and event-based talent cards.

Custom layouts aren't available when you print talent cards from your iPad or iPhone.

Steps

1. Copy each Workday-delivered layout to a custom report:
    a) Access the Copy Standard Report to Custom Report task.
    b) Select the *Talent Card for Worker* report to define the layout for current talent cards.
    c) Rename the report and save it.
    d) On the Share tab, share the report with users who can print talent cards.
    e) Repeat these steps to copy and rename the Talent Card for Review report, which defines the layout for event-based talent cards.
2. Save the report data and XML schema.
    - Select the reports that you created.
    - Specify any values as report parameters.
3. Download the standard layout *rptdesign* files at Workday Community: Talent Card.

    Use the most current version of the *rptdesign* files or your printouts might fail.
4. In Workday Studio, customize the business form layouts to meet your needs.
5. Attach the business form layouts to your custom reports and designate them as the default layouts.
6. Apply the custom layouts to your Workday tenant:
    a) Access the Edit Tenant Setup - HCM task.
    b) From the Talent Card for Talent Review Layout Override prompt, select the print layout for event-based talent cards.
    c) From the Talent Card for Worker Layout Override prompt, select the print layout for current talent cards.

Result

Workday applies the custom layouts to these print tasks:

Layout	Tasks
Talent Card for Talent Review Layout Override	Print Talent Cards for Talent Review Print (for talent cards on worker profiles)
Talent Card for Worker Layout Override	Print Talent Cards for Organization Print Talent Card for Talent Pool View (for talent cards on worker profiles)

Create a Business Form Layout in Workday Studio
Upload a Business Form Layout and Attach It to a Custom Report

Concept: Talent Reviews

A talent review is a 2-part process that collects talent information from both employees and managers.

Employees describe their:

- Education.
- Career interests.
- Job history.
- Job interests.
- Languages.
- Mobility preferences.

Managers describe their employees':

- Achievable level.
- Loss impact.
- Potential.
- Retention risk.

Both employees and managers add:

- Awards and activities.
- Certifications.
- Competencies.
- Current work experience.
- Development items.
- Free-form talent summary.
- Training.

Talent review templates provide the framework for a talent review. You can create as many talent review templates as you need, with any combination of sections. The template, together with the *Talent Review* business process and your security configuration, determines what actions employees and managers take during a talent review. You can further customize talent review templates by providing multiple instructions for employees and managers to explain the overall process and their role in each section.

This table lists the available sections and who typically completes them:

	Skills and Experience	Career Interests	Talent	Job Data
Employee	• Education • Job History • Languages	• Career Interests • Job Interests • Relocation Preferences • Travel Preferences		
Manager			Employee Potential	
Both	• Awards and Activities • Certifications		• Development Items	

	Skills and Experience	Career Interests	Talent	Job Data
	• Competencies • Current Appointments • Publications • Skills • Training • Work Experience		• Talent Summary	
View Only	Internal Job Profile History		Talent and Performance Details	Job Details

Rules identify the target population for a talent review. You assign a rule to a template during configuration. When you launch the review, Workday sends a My Tasks action to the employees who meet the eligibility criteria defined by the rule.

When a talent review is in progress, a comments toolbar is available at the bottom of the Welcome Page. To enable more effective communication, the comment bar displays:

- The last comment made.
- The comment history.
- The process history.
- Related links.

After you complete a talent review, you can print talent cards to summarize each employee's talent information. Organization leaders can use talent cards for succession planning and to predict workforce needs, identify capability gaps, cultivate leadership, and reward top performers.

Concepts

Concept: Talent Cards on page 1618

Tasks

Steps: Manage Talent Reviews on page 1608

Concept: Talent Cards

A talent card is a 1-page summary of a worker's key talent information. You can use talent cards as a tool for discussions on:

- Succession plans.
- Short-term and long-term business plans.
- Retention of top talent.

Talent cards contain this information:

Personal and Job Data	Includes: • Primary business title. • Supervisory organization. • Manager. • Primary position. • Additional jobs. • International assignments. • Location.

	• Job tenure. • Length of service. • Nationality. • Citizenship.
Skills and Experiences	Includes: • Job profile history. • Internal projects. • Work experience. • Job history. • Education. • Certifications. • Languages. • Awards and Activities. • Training.
Talent Summary	Includes: • Assessments (potential, achievable level, retention risk, and loss impact). • Talent matrix placement. • Last performance rating. • Performance over time. • Employee and manager comments. • Succession plans.
Competencies and Career Interests	Includes: • Competency charts (active and archived). • Travel and relocation preferences. • Career interests. • Development items. Competency charts are based on a 5-point scale. If you have more than 5 competency rating values for a proficiency scale, they map to this 5-point scale.

Talent card data is sorted by most recent completion date, with a few exceptions:

- Fluent language always comes first.
- Work experiences are sorted according to the Talent Card Sort Order in the *Maintain Work Experiences* report.
- Degrees are listed according to the Order in the Maintain Degrees task.

The standard talent card layout has 3 areas:

- The header area displays the worker’s name, photo, personal and job data, and talent summary.
- The left side displays the worker’s skills and experiences.
- The right side displays the worker’s competencies, mobility preferences, career interests, and development items.

In addition, your company logo, an optional company statement, and the print date display across the top. You can print talent cards, either individually or in groups. Two versions are available:

- Talent cards that reflect all of a worker's talent information as of the current date.
- Talent cards that reflect a worker's talent information from a specific talent review.

Talent cards based on the current date contain only completed talent information, not in-progress additions or changes. Only current talent cards are available to print from your iPad or iPhone.

Talent cards have an empty section if:

- A worker has no data in that area.
- The section wasn't part of the template from the *Talent Review* event (regardless of whether the relevant data exists in Workday).

Talent cards omit sections altogether if:

- You don't enable the domains to which they belong.
- The user printing the talent card can't access the data.

Example: The talent summary section displays different information for employees and managers, depending on security. Typically, employees only see performance ratings and talent summary comments, while managers also see the employee's:

- Potential.
- Achievable level.
- Retention risk.
- Talent matrix placement.

Optionally, you can replace the Workday-delivered print layout with a custom layout that you set at the tenant level.

FAQ: Talent Reviews

- General
- Talent Review Templates
- Talent Cards
- Talent Reviews with Calibration

General

Can both employees and contingent workers participate in talent reviews?	Yes, both types of workers can take part in talent reviews. Create a talent review rule that specifies which workers to include in the talent review. Associate the talent review rule with your talent review template. Include the *Contingent Worker as Self* security group in your configuration of the *Talent Review* business process and domain. The Career Interests, Job Interests, Relocation Preferences, and Travel Preferences sections aren't available to contingent workers. Workday hides these sections even if you include them on your talent review template.
Can I load historical talent reviews into Workday?	No, you can't load completed talent review events from another system. However, you can load historical talent data into Workday (including

	skills, experiences, and assessments) using the Enterprise Interface Builder (EIB).
How does information flow between talent reviews and worker profiles?	Workday pulls completed skill and experience information from an employee's worker profile into the talent review when you launch the review. After completing and approving the talent review, the profile displays updated information from the talent review. If the worker removes a skill or experience during the talent review, Workday also removes that information from the profile. During talent reviews, Workday locks talent information in the talent review to prevent changes from other skills and experience business processes. The *Talent Review* business process doesn't launch stand-alone skills and experience business processes.
How can I track talent reviews for my team?	Access the Talent Review Status Summary report to track the status of talent reviews and view completed ratings:

Talent Review	Talent Profile
• The most recent in-progress or completed talent review for each worker on your team. • Click a Review button to complete reviews waiting for your evaluation and approval.	• *Is High Potential* flag if the potential rating is set as *High Potential* on the Maintain Potential task. • The potential rating from the most recently completed *Assess Potential* event for the employee. • The performance rating from the most recently completed performance review for the employee.

Talent Review Templates

Can talent review templates have different security permissions?	No, the same security permissions apply to all talent review templates. To control view and edit access to individual sections, grant different permissions on each of the *Talent Review* subdomains.

Can I provide separate instructions for administrators on talent review templates?	Yes, use the Managers and Others Instructions fields for anyone other than employees. To provide instructions for multiple audiences, use the formatting toolbar to differentiate each set of instructions.
How do I configure competencies?	Use the Configure Competency task to set up competencies in your Workday tenant. Then add the Competencies section to the talent review template and specify which competencies to include on the template. If you want to capture different competencies for different groups of workers, create separate talent review templates for each group. Example: Executives have *Leadership* and *Strategic Vision* as competencies, while sales teams have *Negotiation* and *Presentation Skills*. See Steps: Set Up Skills and Experience on page 119.
Why is the selection list empty for job interests?	Identify which job profiles to make public for browsing and selection. To set up a public job catalog: 1. In the Create Job Profile or Edit Job Profile task, select the Public Job check box to identify a public job. 2. In the Domain Security Policies for Functional Area report, configure security for the *Public Job: View* and *Public Job Qualifications: View* domains. For detailed instructions, see Create a Public Job Catalog on page 1537.
Does Workday deliver a list of schools for the Education section?	Workday provides predefined school data that you can load into your tenant using the Enterprise Interface Builder. Alternatively, you can use the Create School task to set up schools on your own. The Workday school data includes over 19,000 schools in more than 180 countries. During talent reviews, workers can also add schools using free-form text fields in the Education section. Schools added manually are only available to the workers who add them.
Can I change the character limit on the Talent Summary fields?	No, those fields have a 250-character limit to optimize display on talent cards. Add the Talent Summary Details field to your template so that you can capture additional information. The text in this field doesn't display on talent cards.
If my template has warnings about incomplete instructional text, can I still launch a talent review?	Yes, the warnings are just a reminder that instructions are missing and don't prevent you from starting a talent review. Resolve any error

	messages listed at the top of a talent review template before you can launch a review.

Talent Cards

Can I change the layout of talent cards?	Yes, you can override the standard print layout with a custom layout that you create in Workday Studio. You can use 1 layout for all talent cards, or create 1 for current talent cards and 1 for event-based talent cards. See Steps: Create Custom Talent Card Layouts on page 1615. If you keep the standard print layout, you do have control over the content of talent cards from talent review events. The talent cards only include the sections of data that you configured on the talent review template.
Why are some talent card sections empty?	Sections on event-based talent cards are empty if workers don't have information in those areas. Current talent cards reflect a worker's available talent information. In this case, sections are empty if you enable the security domains but the information isn't available. In many cases, security permissions determine whether a section displays on a talent card at all. If you disable the security domain or the person printing the talent card doesn't have permission to view it, that section doesn't display.
How do talent cards sort information?	• Education is sorted by highest degree, based on the Order in the Maintain Degrees task. If a worker has 2 degrees with the same sort order, the most recent degree displays first. • Fluent language precedes other languages. • Workday sorts work experiences based on the Talent Card Sort Order in the Maintain Work Experiences task. • Workday sorts competencies alphabetically with a maximum of 8. • On event-based talent cards, the talent review competency rating comes first, followed by the rating from the next highest competency precedence. Current talent cards display ratings from the 2 highest competency precedences.
Why are some certifications missing from talent cards?	Talent cards exclude expired certifications. However, expired certifications are available in the talent review itself so that employees can update or remove them.
Can I select specific performance reviews to include on talent cards?	No, talent cards always reflect the most recent performance review.

Can I see a preview of my talent card?	Yes, click the print button in the Summary Editor to view a talent card with the current talent review information.
How do I add the Talent Cards tab to worker profiles?	Add the Career content group to the worker profile, then add the Talent Cards report to that group. Worker profiles can also display the Talent Cards report in the Overview or Performance content group. See Steps: Set Up Profiles and Profile Groups.
Can everyone in the management level hierarchy access a worker's talent card?	No, only the worker's direct manager can access the talent card. Others in the management level hierarchy only view the worker's talent card if you add the management chain to the talent card security policy.
Can I print talent cards in other languages?	Yes, Workday prints data and labels on talent cards in the current user's language.
Can I turn off talent cards?	Yes, disable the security policy on these domains: • *Self-Service: Talent Card* • *Worker Data: Talent Card* Note: Talent cards and talent reviews use the same security domains. To remove current talent cards from worker profiles, use the Configure Profile Group task. To turn off talent reviews and event-based talent cards, disable the security policy on the *Talent Review* domain. To remove talent card print tasks from menus and search, use the Hide Workday Delivered Report task. When you hide standard reports, Workday doesn't display them in searches. If you can't find a specific report, access the Hide Workday Delivered Report task to determine if you or another administrator hid it.

Talent Reviews with Calibration

Can I launch talent reviews with calibration?	Yes, you can launch talent reviews with calibration for an organization. When you select a calibration program on the Start Talent Review for Organization task, Workday concurrently launches the calibration program and the talent review.
Is the calibration for the same group of workers as for the talent reviews?	Yes, Workday uses the employee eligibility rules and dates defined in the talent review template instead of the calibration program rules.

How do I set up talent reviews with calibration?	If you have talent reviews and calibration set up for your organization, then talent reviews with calibration don't require any additional configuration.
How does information flow between talent reviews and calibration?	After a talent review with calibration event completes, Workday pulls potential information from the talent review into the calibration program. Configure the calibration program to use the *Potential - Talent Review with Calibration* report field as the default value for potential. After calibration is complete, the employee's worker profile displays the updated potential assessment from the calibration.

Employee Reviews

Common Employee Review Setup

Define Employee Review Types

Prerequisites

Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Context

You can create different types of employee reviews within the 4 categories of reviews in Workday. You can define as many review types within a review category as you want.

Steps

1. Access the Maintain Review Types task.
2. Provide information for each review type:

Option	Description
Review Type	Workday displays this name in review templates and when you roll out employee reviews.
Initiate on Individual Employee	Enables managers, HR Partners, and other authorized roles to start a review process of this type on a single employee rather than an entire organization.
Allow Employee to Self-Initiate	Enables employees to start their review on their own. This option applies when the Review Category is individual development plan or performance review.

Next Steps

Create employee review templates.

Steps: Set Up Performance Reviews on page 1679

Create or Edit Review Questions

Prerequisites

Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Context

You can create categories to organize your employee review questions. Then create an inventory of questions that you can pull into the Questions section in an employee review template.

Steps

1. Create review question categories.
    a) Access the Maintain Review Question Categories task.
    b) Create categories in the grid.
2. Create review questions.
    a) Access the Maintain Review Questions task.
    b) Enter each question in a new row.
    c) Select 1 or more categories for each question.
    d) (Optional) To view more details, drill down on Used in Templates.

Example

You can group questions according to the employee review categories:

- Development Plan
- Disciplinary Action
- Performance Improvement Plan
- Performance Review

Next Steps

- Add questions to an employee review template.

  When you edit review questions, the changes can affect the questions of in-progress reviews. Workday recommends that you don't modify review questions for reviews that are in progress. When you edit review questions, the changes also apply to past employee review templates that used the questions. If you don't want the edited questions to affect in progress or past reviews, create a new review template.
- To see a complete list of categories, run the Review Question Categories report.
- To see a complete list of questions, run the Review Questions report.

Employee Review Templates
Create Employee Review Section Types

Context

To include multiple sections of the same type in an employee review template, create tenanted section types based on these delivered types:

- Accomplishments
- Competencies
- Goals
- Questions
- Responsibilities

You can configure the sections independently on the review template. When you carry over or consolidate content from 1 review to another, Workday only pulls content between sections of the same type. Example: The *Career Goals* section in 1 review only maps to the *Career Goals* section in another review.

Steps

1. Access the Maintain Employee Review Section Types task.
2. Define each section type in a new row:
    a) Enter a Section Type Name.
    b) From the Based on Section Type prompt, select the section type.
    c) Expand Workday Delivered Section Types to view a list of all section types and which review templates use them.

Example

Create different sections for *Career Goals* and *Individual Goals* based on the Goals section type. Add the sections to a review template and select the carryover or consolidate option to move content from 1 review to another: *Career Goals* to *Career Goals*, and *Individual Goals* to *Individual Goals*.

Next Steps

- Add the tenanted section types to employee review templates.
- For a list of tenanted section types, access the View Employee Review Section Types report.

Related Information

Tasks

Steps: Set Up Development Plans on page 1692
Steps: Set Up Disciplinary Actions on page 1695
Steps: Set Up Performance Improvement Plans on page 1699
Steps: Set Up Performance Reviews on page 1679

Steps: Create Employee Review Templates

Prerequisites

- Define employee review types.
- Create employee review section types.
- Create rating scales.
- Create employee review rules.
- Create job profiles.
- Set up the reviews you want to use in your templates.
- Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Context

You can use the same elements in review templates for development plans, disciplinary actions, performance improvement plans, and performance reviews. Templates define what employees and managers see on the review document and how to process the information. Workday delivers these employee review template sections:

- Accomplishments
- Career
- Competencies
- Development Items
- Feedback
- Goals
- Overall
- Questions
- Responsibilities
- Supporting Documents

You can create up to 14 sections per template.

Steps

1. Access the Create Employee Review Template task.
2. Select the Review Type and specify the template Name.

   The available review types are the types you defined on the Maintain Review Types task.
3. Add sections to the review template and click OK.

   Changing the label in the Section Label Override field affects only this template and the employee reviews generated from this template. Both online and printed review documents have the new labels.
4. Click Configure Employee Review Template.
5. Click Edit to configure the Template Details for the template.

   See Reference: Employee Review Template Details Fields on page 1636.
6. (Optional) Configure the Accomplishments, Questions, and Responsibilities Sections on page 1629.
7. (Optional) Configure the Competencies Section on page 1629.
8. (Optional) Configure the Career Section on page 1630.
9. (Optional) Configure the Feedback Section on page 1630.
10. (Optional) Configure the Goals Section on page 1632.
11. (Optional) Configure the Overall Section on page 1632.
12. Define Help Text for Employee Reviews on page 1647.

Next Steps

- Start employee reviews based on this template.

Configure the Career Section

Prerequisites

- Set up career interests, job interests, travel, and relocation preferences.
- Create the employee review template.
- Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Steps

1. Access the Configure Employee Review Template report and click Configure Sections.
2. Add the Career section and click Configure Section in the grid.
3. Select the Section Configuration options.

   See Reference: Employee Review Template Section Configuration Fields on page 1637.
4. Select the Section Selection options:
   - Include Career Interest
   - Include Job Interest
   - Include Travel Preferences
   - Include Relocation Preferences

Related Information

Tasks

Set Up Career Interests on page 1538
Set Up Relocation Preferences on page 1540
Set Up Travel Preferences on page 1539

Configure the Feedback Section

Prerequisites

- Set up feedback options for confidentiality and privacy. See Set Up Confidential, Private, and Anonymous Feedback Options.
- Create feedback templates and assign them the *Feedback for Review* type to include them in performance reviews and development plans. See Steps: Configure Feedback Templates.
- Create the employee review template.
- Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Steps

1. Access the Configure Employee Review Template report and click Configure Sections.
2. Add the Feedback section and click Configure Section in the grid.
3. Select the Section Configuration options.

   See Reference: Employee Review Template Section Configuration Fields on page 1637.
4. Select Feedback Types and Dates. As you complete this section, consider:

Option	Description
Anytime Feedback	Enables you to include feedback on a worker given by others in the review (Give Feedback).
Include Role Requested Feedback	Enables you to include feedback on a worker requested by another worker in the review (Get Feedback on Worker). Workday includes confidential feedback, but only to the manager. Workday excludes private feedback.
Include Self Requested Feedback	Enables you to include feedback that workers request on themselves in the review (Get Feedback on Self). Workday excludes private feedback.
Include Skill Endorsements from Feedback	Enables you to include skill endorsements from role-requested and self-requested feedback. Requires Skills Cloud.
Include Skill Ratings from Feedback	Enables you to include skill ratings from role-requested and self-requested feedback. Requires Skills Cloud.
Date Range	Specifies whether to use the review period, enter a dynamic start date, or enter specific dates. Workday requires you select 1 option. When using Guided Experience, Workday doesn't display feedback once the date range ends. For more information, see Concept: Date Range for Feedback in Reviews on page 1635.

   Select at least 1 type of feedback to include in the employee review.
5. (Optional, for performance reviews and development plans only) Select the Default Template for Get Feedback from Review to include questions from a feedback template in the employee review.

   Workday populates this field with feedback templates assigned to the *Feedback for Review* type in the Create Feedback Template task. Workday doesn't use this field if you select only Anytime Feedback for the employee review.

Tasks

Steps: Configure Feedback Templates on page 1750
Steps: Set Up Skill Endorsements and Ratings on page 1860

Configure the Goals Section

Prerequisites

- Create the employee review template.
- Create goal payout bands for net attainment.
- Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Steps

1. Access the Configure Employee Review Template report and click Configure Sections.
2. Add the Goals section and click Configure Section in the grid.
3. Select the Section Configuration options.

   See Reference: Employee Review Template Section Configuration Fields on page 1637.
4. Select the Item Content options.

   See Reference: Employee Review Template Item Content Fields on page 1638.
5. Select the Ratings and Comments options.
6. Select the Weighting options:

   - Items Weighted
   - Section Weight

   See Reference: Employee Review Template Weightings Fields on page 1642.
7. (Optional) Select the Net Attainment options. As you complete this section, consider:

Option	Description
Goal Payout Band	Specifies a Payout Band you configured on the Maintain Goal Payout Band task.
Generate Net Attainment	Specifies how to generate net attainment: Workday calculates or manual entry.

   You can generate net attainment in only 1 Goals section in an employee review template.

Create Goal Payout Bands for Net Attainment on page 1650
Set Up Goals for Employee Reviews on page 1511

Configure the Overall Section

Prerequisites

- Create the employee review template.
- Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Steps

1. Access the Configure Employee Review Template report and click Configure Sections.

2. Add the Overall section and click Configure Section in the grid.
3. Select the Section Configuration options.

   See Reference: Employee Review Template Section Configuration Fields on page 1637.
4. (Optional) Select ratings options for the Overall section that apply to the overall review. As you complete this section, consider:

Option	Description
Rating Configuration	Select from these ratings options: • *Calculated Rating with No Overrides*: Workday calculates the overall rating. The employee or manager can't override this value. Select this option only if you configured 1 or more rated sections other than the Overall section in your review. • *Calculated Rating with Overrides*: Workday calculates the overall rating. The employee or manager can override this value with a new overall rating. Select this option only if you configured 1 or more rated sections other than the Overall section in your review. • *Manual Entry*: The employee or manager specifies their own value in the Rating field rather than selecting a value from a prompt. This value can have up to 2 decimal places and must fall between the specified rating scale. Select this option if your review doesn't have 1 or more rated sections, or you don't want Workday to calculate the overall rating. • *Prompt for Overall Rating*: The employee or manager selects a valid rating from the rating scale. Select this option if your review doesn't have 1 or more rated sections or you don't want Workday to calculate the overall rating.
Require Ratings For	Requires managers or employees to enter ratings in this section. Not available when you select the Calculated Rating with No Overrides or Manual Entry options.
Rating Scale	Uses the default rating scale that you set on the Edit Tenant Setup - HCM task. You can use a different rating scale from the scale used in other sections.
Calculated Rating uses Section Rating Precision	Calculates the overall rating using the Workday-calculated section summary rating values and not the mapped ratings from the rating scale. When you select this check box, Workday recommends that you also select the Display Section Rating check box in other sections.

Option	Description
	You can select either this option or the Calculated Rating uses Item Averaging option but not both.
Calculated Rating uses Item Averaging	Calculates the overall rating using an average rating of all rated items in the employee review. When you select this option, the Section Rated and Section Weight fields aren't available in other sections. You can select either this option or the Calculated Rating uses Section Rating Precision option but not both. If you select no option, Workday uses the weights set at the item or section level. Use the same rating scale across all sections to ensure consistent results. Use the rating scale option for the Competencies section because Workday doesn't include proficiency scales when calculating the average rating.
Show Rating Description	Displays the rating description below the rating.
Show Calculated Rating	Displays the Workday overall calculated rating.
Show Default Rating	Displays the default rating when you select the Calculated Rating with Overrides option in the Rating Configuration field. Clear this check box to hide default ratings in employee reviews.
Allow Employee Ratings	Enables employee ratings by employees. Clear this check box to exclude section ratings by employees in employee reviews.

Copy Employee Review Templates

Prerequisites

Create 1 or more employee review templates.

Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Context

Copy an existing employee review template to use as the starting point for another template.

Steps

1. Access the Copy Employee Review Template task.
2. Select the Employee Review Template to Copy.

3. In the Template Name for Copy field, enter the name of the new template.
4. Change the detailed information as necessary.

Next Steps

- Create employee review rules.
- Start employee reviews.

Related Information

Concepts

Concept: Object Transporter 2.0

Concept: Track Employee Reviews on page 1668

Concept: Date Range for Feedback in Reviews

When you configure the Feedback section for employee review templates, the Date Range option you select determines the time frame of feedback that's included in the employee review. The date range that you select only includes the feedback types you select. Example: if you select only Include Role Requested Feedback, Workday won't include any self-requested or anytime feedback received during the date range.

The Date Range options also determine the timing of skill endorsements and skill ratings included in an employee review.

The Feedback Types and Dates section of the Feedback section configuration includes these options:

- Use Review Period
- Enter Dynamic Start Date
- Enter Specific Dates

Use Review Period

When you select this check box, the employee review includes feedback received between the review start and end dates as specified in the employee review template. If you don't specify review period dates in the review template, the review template uses the review period dates you specify when launching the review.

Enter Dynamic Start Date

When you select this check box, the employee review includes feedback received from the specified number of months before the review period end date to the completion date.

Examples:

- When the Review End Date is within 6 months, Workday includes all the feedback of the selected types the worker has received in those 6 months. Example: The Review End Date is March 31 and the last business process steps are also completed on March 31. In this case, Workday only includes the feedback received between October 1, 2022 and March 31, 2023.
- When the review is completed before the Review End Date, any feedback given after the review completion date isn't included. Example: The review is completed on March 15 but the review end date is March 30. In this case, Workday doesn't include any feedback given after March 15.
- When the Review End Date has already passed and today is the review completion date, Workday includes any feedback given before the completion date. Example: If today is April 20, the review end date is March 30, and the review is completed on April 15, then Workday includes only feedback provided between March 30 and April 15.

Enter Specific Dates

When you select this check box, the employee review includes only feedback between the specific start and end dates.

Reference: Employee Review Template Details Fields

Template Details

Option	Description
Applies To	Specifies a condition rule that targets this review template to apply to a subset of employees.
Period Start/End Date	Specifies the start and end dates when all employees have the same review period. These dates display on the initiate review page and you can't change or delete them. When you leave start and end dates blank on the template, you must enter the dates when you launch the review. You can use this option when you start a review for individual employees and must specify the start and end dates at initiation time. These dates also determine which review Workday includes in the Performance Review Status worklet. The review doesn't automatically start or end on these dates. To start a review, use the Start task that corresponds to the type of review you're defining. The review process doesn't end until the business process is complete.
Inactive	Inactivates the template. You can't select an inactive review template, but the template remains valid for in-progress reviews.
Layout Override	Specifies a custom print layout created with Report Designer in Workday Studio to override the standard layout for employee reviews based on this template.

Other Reviewer Options

Option	Description
Enable Additional Reviewers for Competencies Section	(Performance Reviews and Development Plans only) Enables you to add additional reviewers in the Competencies section. Include the *Get Additional Reviewers* step in the *Start Performance Review* or *Start Development Plan* business process to enable additional reviewers. Also define the types of Additional Reviewers on the Maintain Additional Reviewer Types task.
Display Additional Reviewer Names	Enables the additional reviewers' names to be visible to both the employee and the manager. By default, additional reviewer names are anonymous, even if you disable anonymous feedback on the Maintain Feedback Setup task.

Option	Description
Display Additional Ratings to Employee	Enables employees to see ratings assigned by additional reviewers.
Display Additional Comments to Employee	Enables employees to see comments provided by additional reviewers.
Enable Additional Manager Evaluations for All Sections	(Performance reviews only) Enables comments from additional managers in all sections of the employee review.
Display Additional Manager Comments	Enables managers to see other managers' comments if you enable additional manager evaluations.
Display Additional Manager Names	Enables primary managers to see the additional managers' names if you enable additional manager evaluations.

Related Information

Concepts

Concept: Employee Reviews on page 1652

Reference: Employee Review Template Section Configuration Fields

Options	Description
Override Label	(All sections) Renames the section with the text that you specify in the Label field.
Section Comments	(All sections except Overall) Adds a Comment field to this section of the review document. When selected, Workday displays a section summary.
Require Section Comments For	(All sections except Overall) Requires managers, employees, or additional managers to enter comments in this section. In the Competencies section, you can also require additional reviewers to enter comments.
Use Comments	(Overall) Adds a Comment field to the Overall section of the document.
Require Comments For	(Overall) Requires, managers, employees, or additional managers to enter comments in this section.
Additional Reviewer Types	(Competencies) Selects from the additional reviewer types created with the Maintain Additional Reviewer Types task.
Employee View Option	(Accomplishments, Overall, Questions, Responsibilities, Supporting Documents) Determines whether the employee can view or modify this section. Specify 1 of these options: • *View and Modify*: Default behavior. • *View*: Applies to in progress or completed reviews.

Options	Description
	• *View Only on Completed Review*: The employee can't view the section until the review is completed. If you configure all review sections with this option, Workday hides the entire review from the employee until it's completed. • *Hide*: Always hide the section from the employee. If you configure all sections in the review with this option, Workday hides the entire review from the employee. The business process configuration for *Disciplinary Actions* and *Performance Improvement Plans* overrides what employees can view on a template. If any review business process substeps involve the employee (Examples: *Set Content*, *Complete Self Evaluation*), Workday displays the review to employees even if the template has hidden sections.
Rating Configuration	(Overall) See Configure the Overall Section.

Reference: Employee Review Template Item Content Fields

Field	Description
Load Content from Previous Review	Defines the method to move content from an employee review of the same type and within the same review period to the next review period. Options are: • (Accomplishments, Competencies, Goals, Questions, Responsibilities) *Carryover with Item Evaluation Content*: Moves content from the most recently completed review, including ratings and comments as configured. • (Accomplishments, Goals, Responsibilities) *Consolidate*: Consolidates and moves content from all previous reviews that falls within the review period start and end dates. For more information, see Concept: Load Content from Previous Review on page 1670.
Allow Delete of Previous Content	(Accomplishments, Goals, Responsibilities) Enables employees or managers to delete content moved from a previous review. Available when you select an option from the Load Content from Previous Review field.
Allow User to Add Existing Goals Manually	(Goals) Enables the employee or manager to pull in individual goals created outside of the review. If you've included more than 1 Goals section, you can add an individual employee goal to only 1

Field	Description
	section. When you select Load Relevant Goals, Workday automatically selects this check box.
Load Relevant Goals	(Goals) Adds all employee goals not already in the employee review to the review document. The automatic pull-in occurs at the beginning of the set content and evaluation phases. If you've included more than 1 Goals section, you can add employee goals to only 1 section. You can use this option on all Goals section types. You can: • Filter Relevant Goals by Category • Filter Relevant Goals by Goal Template Rule
Populated from Position	(Responsibilities) Adds responsibilities from the employee's primary position and the primary position's job profile. When you select this check box, you can also add new content at the time of the review. Workday pulls the responsibilities from the employee's primary position and the primary position's job profile.
Pull from Position	(Competencies) Adds competencies from the employee's job profile and position to the review. You can also add individual competencies defined with the Configure Competency task.

Reference: Employee Review Template Ratings and Comments Fields

Field	Description
Items Rated	(Accomplishments, Goals, Questions, Responsibilities) Enables the employee or manager to enter a rating for each item during the review process. When selected, enter a beginning and ending range for the rating scale.
Require Item Ratings For	(Accomplishments, Competencies, Goals, Questions, Responsibilities) Requires managers or employees to enter a rating for each item in this section. When you don't set up any conditions, you can require item ratings for the manager for all supported sections. When you select the Allow Employee Ratings check box for the Goals section, you can require employees to rate Goal items. When you select the Allow Employee Ratings check box and select *View and Modify* from the Employee View Option prompt, you can require employee item ratings for the Accomplishments, Questions, and Responsibilities sections. For the Competencies section, when you select the Use Proficiency Scales or Use Rating Scale

Field	Description
	check box, you can require item ratings for managers, employees, or additional reviewers. • When you set no conditions, you can only require item ratings for managers. • When you select the Allow Employee Ratings check box, you can require item ratings for employees. • When you select the Enable Additional Reviewers for Competencies Section template check box, you can require item ratings for additional reviewers.
Use Proficiency Scales	(Competencies) Enables the employee or manager to evaluate competencies using a proficiency scale defined with the Create Proficiency Rating Scale task.
Use Rating Scale	(Competencies) Enables the employee or manager to rate competencies using any tenanted rating scale defined with the Create Rating Scale or Edit Rating Scale task.
Section Rated	(Accomplishments, Competencies, Goals, Questions, Responsibilities) Enables the employee or manager to rate the section. Options are: • *Ratings With Overrides*: Workday displays the Rating field in the review section. If you selected Items Rated, Workday calculates and displays the section rating. You can change this value. If you didn't select Items Rated, you can enter a rating value. • *Ratings With No Overrides*: Workday calculates the rating and displays the value in the Rating field in the review section. You can't change this value. Available only when you select Items Rated. • *Prompt for Rating*: When selected, Workday prompts the reviewer to give the employee a rating for the section independent of the item ratings. Not available when you select Calculated Rating uses Item Averaging for the Overall section. When selected, Workday displays a section summary.
Proficiency Scale for Section Ratings	(Competencies) Selects a proficiency scale for rating the Competencies summary section.
Rating Scale	(Accomplishments, Goals, Questions, Responsibilities) Selects the rating scale for the section. You can set the default rating scale on the Edit Tenant Setup - HCM task. This rating

Field	Description
	scale doesn't need to match the rating scale used in other sections.
Require Section Ratings For	(Accomplishments, Competencies, Goals, Questions, Responsibilities) Requires managers or employees to enter section ratings. This option isn't available if you select the *Ratings With No Overrides* option from the Section Rated prompt. When you set no condition rules, you can only require section ratings for managers. If the Allow Employee Ratings check box is selected, you can require section ratings for employees for the Competencies and Goals sections. When you select the Allow Employee Ratings check box and set the Employee View Option field to *View and Modify*, you can require section ratings for employees for the Accomplishments, Questions, and Responsibilities sections. When you select the Enable Additional Reviewers for Competencies Section template configuration check box, you can require section ratings for additional reviewers for the Competencies section.
Show Rating Description	(Accomplishments, Competencies, Goals, Questions) Displays the description of the selected rating. Define rating descriptions on the Create Rating Scale or Edit Rating Scale task. Define competency rating descriptions on the Create Proficiency Rating Scale or Edit Proficiency Rating Scale task.
Allow Employee Ratings	(Accomplishments, Competencies, Goals, Questions) Enables employee ratings for these sections. Clear this check box to exclude item and section ratings by employees in employee reviews.
Show Calculated Rating Value	(Accomplishments, Competencies, Goals, Questions, Responsibilities) Displays the Workday-calculated summary rating in the section summary area. Available when you select Items Rated and a ratings value in the Section Rated field.
Show Mapped Calculated Section Rating	(Accomplishments, Competencies, Goals, Questions, Responsibilities) Displays the Workday-calculated section summary rating in the employee review document. Available when Section Rated is selected. Workday recommends this option when you select the Calculated Rating uses Section Rating Precision check box in the Overall section.

Field	Description
Item Comments	(Accomplishments, Competencies, Goals, Questions, Responsibilities) Options include: • *All Reviewers*. Enables managers, employees, and additional reviewers (if enabled) to enter comments for each item. • *Exclude Employee*. Enables only managers and additional reviewers (if enabled) to enter comments for each item. • *No Comments*. Excludes comments for the items in the section.
Require Item Comments For	(Accomplishments, Competencies, Goals, Questions, Responsibilities) Requires managers, employees, additional managers, or additional reviewers to enter comments for each item. When you set the Item Comments prompt to *All Reviewers* or *Exclude Employee*, you can require item comments for the manager for all employee review template sections that support this option. When you set the Item Comments prompt to *All Reviewers*, you can require item comments for the employee for the Competencies and Goals template sections. When you set the Item Comments prompt to *All Reviewers* and the Employee View Option prompt is set to *View and Modify*, you can require item comments for the Accomplishments, Questions, and Responsibilities template sections. When you set the Item Comments prompt to *All Reviewers* or *Exclude Employee*, and you select the Enable Additional Manager Evaluations for All Sections check box for template level configuration, you can require item comments for additional managers for all the employee review template sections that support this option. When you set the Item Comments prompt to *All Reviewers* or *Exclude Employee* and you select the Enable Additional Reviewers for Competencies Section check box for template level configuration, you can require item comments for the Competencies template section.

Reference: Employee Review Template Weightings Fields

Field	Description
Items Weighted	(Accomplishments, Competencies, Goals, Questions, Responsibilities) Enables weighting of individual items and identifies how to calculate the rating. Options are:

Field	Description
	• *Weighting Must Total 100*. Weight is calculated by dividing the assigned weight by 100. • *Weighting with No Limits*. Weight is calculated by dividing the assigned weight by the sum of all weights.
Section Weight	(Accomplishments, Competencies, Goals, Questions, Responsibilities) Defines the weight to assign to the section when calculating the overall rating. Available when you select the Show Calculated Rating check box in the Overall section and when you select a value in the Section Rated field in the section. Not available when you select the Calculated Rating uses Item Averaging check box in the Overall section. Workday defines section weights at the template level, not by the employee or manager. When used with the *Weighting with No Limits* option, you can specify the weight up to 12 integer places and 2 decimal places.
Hide Section Weight	(Accomplishments, Competencies, Goals, Questions) Hides section weights in employee reviews. Supported in templates configured to use Guided Experience only.

Example: Create Employee Reviews with Two Questions Sections

This example illustrates how to set up an employee review template with 2 Questions sections so you can customize different questions for employees and managers.

Context

You want to create an employee review template for performance reviews with different sets of questions for employees and managers. This example doesn't include configuration for ratings options or for setting weights for these sections.

Steps

1. Add review question categories using the Maintain Review Question Categories task.
2. Add review questions using the Maintain Review Questions task.
3. Configure the employee review template using the Configure Employee Review Template task.
4. Click Edit and select *Use Guided Experience* in the Default Editor Option field.
5. In the Template Section Configuration section, click Configure Sections.
6. Add the Questions and Questions 2 sections.

7. Configure the Questions section for managers.
    a) Rename the section Questions for Managers in the Label field for clarity.
    b) Select the Section Comments check box to enable managers to enter a comment for this section.
    c) Set the Employee View Option to *Hide* to prevent employees from seeing questions for managers.
    d) Add manager questions to the section from the questions that you created using the Maintain Review Questions task.
    e) Select an option for the *Item Comments* field. Select *Exclude Employee* to prevent employees from entering comments.
    f) Select the *Manager* option in the Require Items Comments For field to require managers to enter comments for this section.
8. Configure the Questions 2 section for employees.
    a) Rename the section Questions for Employees in the Label field for clarity.
    b) Select the Section Comments check box to enable employees and managers to enter a comment for this section.
    c) Set the Employee View Option field to *View and Modify* to enable employees to view and modify questions in this section.
    d) Set the Require Section Comments For field to require managers and employees to provide section comments.
    e) Add employee questions to the section from the questions that you created using the Maintain Review Questions task.
    f) Select an option for the *Item Comments* field. Select *All Reviewers* to enable employees, managers, and additional reviewers to view comments, or select *No Comments* to prevent displaying all comments.
    g) Select the *Manager* or *Employee* options in the Require Items Comments For field to require managers or employees to enter comments for this section.
9. Click Configure Help Text.
    a) In the Template Help Text tab, add template level help text for the *Set Content* step that will be viewed by both employees and managers.
    b) Add separate template level help text for employees and managers in the Employee Evaluation and Manager Evaluation fields.
    c) Add Employee Acknowledgment and Manager Acknowledgment help text.
    d) In the Section Help Text tab, click the Questions section and add help text for managers in the Set Content and Manager Evaluation fields.
    e) Click the Questions 2 section and add help text for employees in the Set Content and Employee Evaluation fields.

Create Rating Scales

Prerequisites

Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Context

Create rating scales to measure:

- Employee performance.
- Level of proficiency.

You can use rating scales in these sections of employee reviews:

- Accomplishments
- Competencies

- Goals
- Overall
- Questions
- Responsibilities

You can associate different rating scales with different sections in the same template. You can also use rating scales during the review evaluation process.

Steps

1. Access the Create Rating Scale task.
2. Enter a unique Rating Scale Name.
3. As you complete the task, consider:

Option	Description
Rating	Rating values can be alphabetic or numeric. Employees and managers see this value when they complete a review.
Exclude From Calculations	Select this check box to exclude items with this rating from calculations for section ratings or overall ratings.
Rating Value	Enter the value precisely to 2 decimal points. Workday uses this value to calculate the performance rating of the employee.
Begin/End Range	Enter these values with 2 decimal places. If you use ratings and have a section summary or an overall section in employee reviews, these ranges determine which rating value to use. Beginning and ending ranges can't overlap or have gaps. If you enter all zeroes for the Rating Value, Begin Range and End Range fields for more than 1 of the ranges in the scale, then Workday only uses the first rating in the table.
Description	If you select Show Rating Description on a review template, the employee review document displays this description.

Next Steps

- To change the rating scale, use the Edit Rating Scale task.

  If the rating scale is used in a template, you can only update the Display Order, Rating, and Description. You can update all fields for rating scales that aren't in use.

  When you edit a rating scale, the changes can affect the rating calculations of in-progress reviews. Workday recommends you don't modify rating scales used in reviews that are in progress. When you edit a rating scale, the changes also apply to historical ratings for past employee reviews that use that rating scale. If you don't want the edited rating scale to affect past reviews, create a new rating scale.
- To see detailed information for a specific rating scale, run the View Rating Scale report.

Steps: Set Up Disciplinary Actions on page 1695
Steps: Set Up Performance Improvement Plans on page 1699
Steps: Set Up Performance Reviews on page 1679

Define Employee Review Rules

Prerequisites

Security: *Set Up: Employee Reviews* domain in Performance Enablement functional area.

Context

Create rules to target an employee review to:

- A specific employee.
- Group of employees.
- Organization.
- Subset of employees in an organization.

The rule is associated with a specific employee review template.

The conditions of the rule define employee eligibility. You can base eligibility on characteristics of workers and positions, such as:

- Job profiles.
- Geographic location.
- Years of service.

Example: You can create a rule that limits participation in a review to only hourly employees.

Steps

1. Access the Create Employee Review Rule task.
2. Enter a rule Description.
3. (Optional) Select a rule Category.
4. To copy an existing condition, select a rule from the Copy Condition from Rule prompt.
5. In the Rule Conditions grid, build a condition rule that identifies workers who are eligible for a particular employee review.

   Employee review rules use Workday condition rules.

Next Steps

- Run the All Condition Rules report to see all employee review rules.
- Run the Employee Review Template Eligibility report to determine whether:
  - The rule selects the correct worker population for review. If the rule retrieves the wrong employees, or excludes eligible employees, change the selection criteria.
  - Multiple templates of the same type target the same workers. You can change the rule to eliminate possible double coverage.

Create Business Process Condition Rules

Define Help Text for Employee Reviews

Prerequisites

Security: *Set Up: Employee Reviews* in the Performance Enablement functional area or *Manage: Business Process Definitions* domain in the System functional area.

Configure the sections in the employee review template.

Context

You can provide help text for employee reviews in 3 places: at the template level, for a specific section, or for a specific field. In employee reviews, you can define separate help text specifically targeted for employees and managers at the template level and for specific sections.

Template Help Text	Workday displays this help text when workers start or return to these steps of the employee review business process: • *Set Content*. • *Complete Self Evaluation*. • *Complete Manager Evaluation*. • Acknowledgment steps.
Section Help Text	Workday displays section help text at the top of each page.
Field Help Text	Workday displays field help text for individual fields on employee reviews. You can tailor your field help text for these employee review business process steps: • *Complete Additional Manager Evaluation* • *Complete Manager Evaluation* • *Complete Self Evaluation* • *Set Content*

Employee reviews suppress help text defined on steps in the *business process definition*, since you have the flexibility to create template-specific help text.

Steps

1. Access the Configure Employee Review Template report.
2. Click Configure Help Text to define help text for the review.

3. Configure template help text in the Template Help Text tab and section help text in the Section Help Text tab.

   You can enter section-specific instructions for the *Set Content* and *Evaluation* phases of the employee review. Workday only displays sections that you've added to the template in the Section Help Text tab.

   As you complete this task, consider:

Option	Description
Set Content	Employees and managers see these instructions during the *Set Content* step. You can format the text and add links to external information. Not available for the Feedback, Supporting Documents, and Overall sections.
Employee Evaluation	Employees see these instructions during the *Complete Self Evaluation* step. You can format the text and add links to external information.
Manager Evaluation	Managers see these instructions during the *Complete Manager Evaluation* step. You can format the text and add links to external information.
Employee or Manager Acknowledgment	Explain how employees and managers can acknowledge that they've viewed each other's comments as part of the *Provide Manager Review Comments* and *Provide Employee Review Comments* steps. This text is part of a digital signature that includes: • An acknowledgment. • The person who completed the step. • A time stamp.

4. (Optional) Set Up Guided Tours.

   Configure field-level help text for your employee review sections and business process steps.

Change Labels on Employee Reviews

Prerequisites

Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Context

You can change the field labels that display in each section on the employee and manager review to meet your business needs.

Steps

1. Access the Maintain Employee Review Setup task.
2. Enter new labels on the Labels tab.

Result

When you change the label in a section, that change affects all employee reviews that include this section, regardless of the review type.

Related Information

Steps: Set Up Disciplinary Actions on page 1695
Steps: Set Up Performance Improvement Plans on page 1699
Steps: Set Up Performance Reviews on page 1679

Steps: Configure Additional Reviewers for Competencies

Prerequisites

Create an employee review template with a Competencies section.

Context

When you create an employee review template, you select which Competencies sections to send for additional review, but not specific competencies within each section. Additional reviewers can rate any or all of the listed competencies. Although Workday uses weighting to calculate results, this information isn't visible to reviewers.

You can include up to 3 additional reviewer types for each Competencies section.

Steps

1. Using the Maintain Additional Reviewer Types task, enter these fields for each reviewer type:
    - Name and ID. The Name is shown as the reviewer type in the *Get Additional Reviewers* subprocess. The reviewer type can represent the work relationship between the reviewer and the subject of the review. Examples are Team Members, Project Lead, Peers, or Direct Report.
    - Description. This type guides the review participants in selecting group members.
2. (Optional) Mark the reviewer type Inactive so it's not available as an option in review templates. To see which review templates use each additional reviewer type, click the Template Usage number. The order of the additional reviewer types controls the order in which they're displayed in the *Get Additional Reviewers* step of the business process.
3. Use the Configure Employee Review Template Section task to configure the review template as follows:
    - Select competencies for review when setting up the review template sections.
    - In the Other Reviewer Options section, select the Enable Additional Reviewers for Competencies Section check box and specify anonymity options.
    - In the Competencies section, select the Additional Reviewers check box in the Section Configuration section. This check box is available only if you selected Enable Additional Reviewers for Competencies Section in the Other Reviewer Options section. The Additional Reviewers types are configured with the Maintain Additional Reviewer Types task.
4. (Optional) Add the *Get Additional Reviewers* subprocess to a development plan or a performance review business process. A common configuration is to launch it in parallel with the self-evaluation step.

Result

Workers can add additional reviewers to Competencies sections in employee review templates.

Note: If an administrator enables the *Talent Effect* option in the leave type for an employee on a Leave of Absence, you can't select this employee as an additional reviewer for the Get Additional Reviewers subprocess.

Concept: Get Additional Reviewers for Competencies on page 1654

Examples

Example: Employee Initiates Get Additional Reviewers on page 1656

Example: Manager Initiates Get Additional Reviewers on page 1657

Create Goal Payout Bands for Net Attainment

Prerequisites

Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Context

You can create goal payout bands to use when you create employee review templates and start employee reviews. Workday supports negative numeric values in employee reviews, enabling you to set negative goal targets to track reduction-themed goals and goals that scale below zero.

Steps

1. Access the Maintain Goal Payout Bands task.
2. Select a Calculation Type to determine how Workday calculates net attainment:

Option	Description
Dual Slope	Uses the Minimum Payout Percent, Maximum Payout Percent, and Target Payout Percent.
Single Slope	Uses the Minimum Payout Percent and Maximum Payout Percent.
Target Only	Uses only Target Payout Percent.

The Minimum Payout Percent must be less than or equal to the Target Payout Percent, which must be less than or equal to the Maximum Payout Percent.

Maintain Employee Review Acknowledgement Statuses

Prerequisites

Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Context

When employees and managers complete an employee review, you can require them to acknowledge the review and are ready to finalize the review content. The acknowledgement step includes a drop-down status that employees and managers select and a comment field for entering comments. Use employee review acknowledgement statuses if you add the *Provide Employee Review Comments* and *Provide Manager Review Comments* steps in the *Complete Manager Evaluation for Performance Review* and *Complete Manager Evaluation for Disciplinary Action* business processes.

You can specify that an acknowledgement status only applies to employees or managers, or to specific review categories.

Steps

1. Access the Maintain Employee Review Acknowledgement Statuses task.
2. For each status, specify:
    - Order
    - Status
    - Description (for information purposes only)
    - Review Category

      Select 1 or more employee review categories for the status.
    - Action Step

      Select whether the status applies to the *Provide Employee Review Comments* or *Provide Manager Review Comments* action step, or both.

Example

To create an acknowledgement status that's only used by managers in conjunction with a Development Plan, you can create a status called Acknowledge Development Plan with Comments for the Individual Development Plan review category and assign it to the Provide Manager Comments action step. When the *Provide Manager Review Comments* step is run, Workday includes this status for Development Plans and for managers only.

Next Steps

To inactivate a status, access the Maintain Employee Review Acknowledgement Statuses task and select the Inactive check box for that status. When you inactivate a status, it's no longer available for in-process or new reviews. You can reactivate acknowledgement statuses.

Steps: Set Up Disciplinary Actions on page 1695
Steps: Set Up Performance Improvement Plans on page 1699
Steps: Set Up Performance Reviews on page 1679

Steps: Create Custom Employee Review Layouts

Prerequisites

Set up business form layouts.

Context

You can create a custom print layout to replace the standard employee review layout. You can also associate different print layouts with specific review templates.

Steps

1. Access the Copy Standard Report to Custom Report task.

   Copy the Employee Review Printout report to a custom report and share it with users who can print employee reviews.

   Security: *Custom/Standard Report Copy* domain in the Tenant Non-Configurable functional area.
2. Prepare a Custom Report to Be Used with a Business Form Layout.

   Save the report data and XML schema for the custom report you created.

   In Step 4, select an employee review with the template layout that you want to modify, specify the current date, and select both the Show Manager Review Content and Show Employee Review Content check boxes.
3. Download the custom review layout.

   The layout is a *.rptdesign* file. See Workday Community: Report Design Files and Configurations: Employee Review.
4. Create a Business Form Layout in Workday Studio.
5. Upload a Business Form Layout and Attach It to a Custom Report.
6. Access the Maintain Employee Review Setup task.

   On the Print Template Overrides tab, apply the print layout to:

   - All employee reviews by selecting the custom report as the Default Tenant Override.
   - Specific review templates by adding rows on the Template Override grid.

   Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Concept: Employee Reviews

The main components of employee reviews in Workday are:

- Review Categories and Types
- Review Templates and Sections

Review Categories and Types

Workday enables you to conduct employee reviews in 4 categories. Each review category can have as many review types within the category as your organization requires.

Note: Workday only generates employee reviews for the employee's primary job.

Review Category	Review Type Examples
Individual Development Plan	Career Development
Performance Review	Ad Hoc Performance Review Annual Focal Review Mid-Year Review
Performance Improvement Plan	Coaching Presentation Skills
Disciplinary Action	Attendance Quality Safety

Review Templates and Sections

Each review type can have different employee review templates that define the look and behavior of the review document. Templates have:

- General details that apply to the employee review as a whole.
- Individual sections that comprise the employee review.
- Instructions that guide employees and managers through the review phases and sections.

You can add these section types to review templates:

- Accomplishments
- Career
- Competencies
- Development Items
- Feedback
- Goals
- Overall
- Questions
- Responsibilities
- Supporting Documents

You can add multiple Accomplishments, Competencies, Goals, Questions, and Responsibilities sections to a template. To create your own sections, use the Maintain Employee Review Section Types task. The maximum number of sections per template is 14.

You specify whether the employee can view or modify these sections:

- Accomplishments
- Overall
- Questions
- Responsibilities
- Supporting Documents

You can hide a section from the employee permanently or until the review is complete.

Set Up Performance Worklets on page 1687

Embed Related Worklets in Business Processes

Concept: Employee Review Guided Experience Editor

Workday provides the Guided Experience editor for employees to complete information in their employee reviews. The Guided Experience is a wizard that enables employees to navigate between sections.

- The Autosave for Guided Experience Employee Reviews feature is available for the Guided Experience employee review template. The background process runs every 30 seconds for supported Guided Experience employee review sections. The autosave feature isn't available for the *Acknowledgment* or *Review and Submit* steps.
- You can configure separate help text targeted specifically for workers and managers.
- When configured, Workday displays a separate Acknowledgment section after the Summary or Review sections.
- Guided Experience supports hiding section ratings and weightings in Accomplishments, Competencies, Goals, and Questions sections.

Examples

Example: Integrate Career Interests into Guided Experience Employee Reviews

Concept: Get Additional Reviewers for Competencies

The *Get Additional Reviewers* business process enables you to establish a consistent and comprehensive approach for gathering feedback from additional reviewers on a worker's competencies. You can set up employees and contingent workers to serve as additional reviewers.

Set Up Business Processes for Additional Reviewers

You can include the *Get Additional Reviewers* business process as a subprocess on either of these business processes:

- *Start Performance Review*
- *Start Development Plan*

You can't deploy *Get Additional Reviewers* as a stand-alone business process. Depending on configuration, when you initiate it as a subprocess, either the employee or the manager selects the reviewers and reviewer type. Reviewer types are configurable, but typically represent relative roles such as peers and direct reports. The subprocess then contacts the additional reviewers, who can enter comments based on the configuration of Item Comments in the employee review template.

To enable contingent workers to be available as additional reviewers for performance reviews or development plans, configure either of these business process security policies:

- *Complete Additional Reviewer Evaluation for Performance Review*
- *Complete Additional Reviewer Evaluation for Development Plans*

View Additional Reviewer Results in the Manager Evaluation

The *Complete Manager Evaluation* step in the performance review or development plan business process:

- Provides a description of the rated competency section.
- Enables a rating assignment for each competency.

You can drill down to view additional reviewer comments.

Report on Average Additional Reviewer Ratings

You can create a custom report that returns average ratings by additional reviewer type in numeric form. You can create calculated fields for the Review Component business object using the *Average Rating by Additional Reviewer Type* report field.

Related Information

Tasks

Steps: Configure Additional Reviewers for Competencies on page 1649

Concept: Goal Net Attainment Calculation

You can manually calculate goal net attainment for employee reviews, or you can have Workday calculate it using 1 of these methods:

- Target Only
- Single Slope
- Dual Slope

These calculations are for both positive and negative slopes.

Target Only

Workday includes these fields in the calculation:

- Actual
- Target

Calculation: Actual/Target

Single Slope

Workday includes these fields in the calculation:

- Minimum
- Maximum
- Actual

Calculation:

- If Min <= Actual <Max OR Max < Actual <= Min
    - Attainment = Calculated point between Min and Max
- If Min <= Max <= Actual OR Actual <= Max <= Min
    - Attainment = Max %
- Any other case:
    - Attainment = 0%

Dual Slope

Workday includes these fields in the calculation:

- Minimum
- Target
- Maximum
- Actual

Calculation:

- If Min <=Actual <= Target OR Target <= Actual <= Min
    - Attainment = Calculated point between Min and Target
- If Target <= Actual <= Max OR Max < Actual <= Target
    - Attainment = Calculated point between Target and Max
- If Target <= Max <= Actual OR Actual <= Max <= Target
    - Attainment = Max %
- Any other case:
    - Attainment = 0%

Example: Add My Reviews Report to Custom Dashboards

This example illustrates how to add the My Reviews report to custom dashboards.

Context

Workers can search for the My Reviews report to access their employee reviews. As an HR administrator, you want to add the My Reviews report to a custom dashboard to help workers easily navigate to their employee reviews.

Steps

1. Access the Create Custom Dashboard task.
    a) Create a dashboard called My Reviews - Custom Dashboard.
    b) In the Domains field, select Workday Delivered Domains > Performance Enablement and then select these domains:
        - *Self-Service: Performance Reviews*
        - *Self-Service: Employee Reviews*
    c) In the Dashboard Icon field, select the *Performance Reviews* option.
    d) Click OK.
2. Access the Maintain Dashboards report.
    a) Navigate to the My Reviews - Custom Dashboard dashboard and click Edit.
    b) In the Content tab, click Add.
    c) In the Tab Name field, create the My Reviews - Custom Tab name.
    d) Click the + icon to add a row in the Menu section.
    e) In the Section Label field, create the My Reviews - Custom Section label.
    f) Click the + icon to open the Task prompt.
    g) In the Tasks field, select Create Custom Allowed Worklet Task.
    h) In the Select Task field, select Self-Service: Employee Reviews > My Reviews.
    i) Click OK.
    j) Click Done.

Result

Workers can now access the custom dashboard by selecting Menu > My Reviews - Custom Dashboard.

Tasks

Create Custom Dashboards

Example: Employee Initiates Get Additional Reviewers

This setup example enables an employee to initiate the *Get Additional Reviewers* business process as a subprocess for the *Start Performance Review (Default Definition)* business process. The *Get Additional Reviewers* business process is used for the Competencies employee review section only.

Context

Table 3: Start Performance Review (Default Definition)

Order	If	Type	Specify	Optional	Group
A		Initiation		No	
B		Action	Set Review Content	No	Employee as Self
C		Action	Complete Self Evaluation	No	Employee as Self
C	Employee Template Enables Additional Reviewers?	Action	Get Additional Reviewers	Yes	Employee as Self

Order	If	Type	Specify	Optional	Group
D		Action	Complete Manager Evaluation	No	Manager

Example: Manager Initiates Get Additional Reviewers

This setup example enables a manager to initiate the *Get Additional Reviewers for Performance Review (Default Definition)* business process. The *Get Additional Reviewers* business process is used for the Competencies employee review section only.

Context

Table 4: Get Additional Reviewers for Performance Review (Default Definition)

Order	Type	Specify	Optional	Group
A	Initiation		No	
B	Action	Review Get Additional Reviewers	No	Manager
D	Action	Complete Additional Evaluation for Performance Review	No	Employee as Self

Example: Set Up Average Additional Reviewer Ratings Report

This example enables an administrator to set up a report showing the average numeric ratings by additional reviewers for employee reviews measuring competencies.

Context

When you run a report for additional reviewer ratings for competencies, the report displays only the non-numeric rating (Example: Exceeds Expectations) from each additional reviewer. Using the *Average Rating by Additional Reviewer Type* report field on the Review Component business object, you can create a report that calculates the average rating for all additional reviewers into a numeric value.

Steps

1. Access the Create Calculated Field task and create a calculated field on the Review Component business object.

   Select the Lookup Field with Prompts function.
2. Define the calculation using the Average Rating by Additional Review Type source field.

   In the Additional Reviewer Type source field, select 1 of the additional reviewer types configured in your tenant. Example: select from these configured additional reviewer types:

   - Peers
   - Direct Reports
   - Other (for other reviewers)
3. Create additional calculated fields using the instructions in steps 1 and 2.

   Example: if you created a calculated field for Peers in step 2, create a new calculated field for Direct Reports.

   You can also create a calculated field and select all 3 values to calculate an average score of all the values.

4. Access the Create Custom Report task and create a report to display the results for the calculated fields.
    a) Select the *Advanced* option in the Report Type field and the *Employee Review* option in the Data Source field.
    b) In the Columns tab, add a column with the Content - Review Competency business object and the Competency Name in the field so the report will display the average ratings per competency.
    c) Set up the report columns with the business object as Content - Review Competency, with 1 of the calculated source fields you created in steps 2 and 3.
    d) Create the Column Heading Override labels to match the source fields:
        - Average Rating for Peers
        - Average Rating for Direct Reports
        - Average Rating for Other Reviewers
        - Average Rating for All Additional Reviewers
5. In the Prompts tab, select *Review Templates* for the Field column and *Determine default value at runtime* for the Default Type column.
6. In the Output tab, select the Output Type as *Table*.
7. (Optional) Select the Worklet Options option if you want to access the report on a dashboard.
8. In the Share tab, select the Share with all authorized users check box.
9. Run the report for a given worker to display the average competency rating numbers by additional reviewers.

Employee Review Process

Start Employee Reviews

Prerequisites

Configure these business processes and security policies in the Performance Enablement functional area:

- *Start Development Plan*
- *Start Disciplinary Action*
- *Start Performance Improvement Plan*
- *Start Performance Review*

Context

You can start development plans and performance reviews for an entire organization or an individual employee. Disciplinary actions and performance improvement plans are only for individual employees.

Employees can start employee reviews if the Allow Employee to Self-Initiate check box is selected on the Maintain Review Types task for a review type.

Employees can have only 1 employee review template with the same review type and period dates at a time. To start another review for the employee, create a template with a different review type or change the dates for the existing template.

Employee reviews can be performed or accessed by members of the security groups configured on related domains and business process policies, as long as the security groups can access the worker.

You can add worklets to the business process steps to provide relevant analytic information for these tasks.

Sections might be hidden depending upon the section configuration.

Steps

1. Access the appropriate task:

   - Start Development Plan for Employee
   - Start Development Plan for Organization
   - Start My Development Plan
   - Start Disciplinary Action for Employee
   - Start Performance Improvement Plan for Employee
   - Start Performance Review for Employee
   - Start Performance Review for Organization
   - Start My Performance Review

   You can schedule performance reviews and development plans to launch on a selected date and time (once or on a recurring basis). Run the Scheduled Future Processes report to view all scheduled reviews.
2. Specify who the review is for, what template to use, and the review period:
   a) Select the Employee or Organizations.
   b) Select the Review Template.
   c) Specify the Period Start Date and Period End Date.

      If you define the review period on the template, these dates are automatically populated.
   d) (Optional) To start performance reviews with calibration, select the applicable calibration program from the Calibration Program prompt.
      The selected calibration program starts simultaneously. Workday uses the rules and dates defined in the review template to determine employee eligibility.

   Workday sends a notification to the person who is assigned to the next step in the business process.

   When you hide all sections of a review from employees, Workday doesn't send business process notifications to employees as long as employees aren't assigned to any step in the business process. However, if you assign the *Employee as Self* security group to any step in the review business process, the employee receives a blank notification for that step. To avoid sending out notifications to employees when you hide all sections, create a condition rule on the business process using the Includes Editable Sections report field.
3. For the *Set Content* step, complete the sections that apply to your review document.

   If error messages display when you click Save for Later, Workday still saves all your changes. Correct the errors before you can submit the review.

Section	Description
Accomplishments	Describe accomplishments. If Load Content from Previous Review is selected on the template, previous accomplishments display automatically. Descriptions are visible to both employees and managers.
Career	Select different types of job responsibilities that represent career growth, describe career interests, select jobs from the public job catalog, and specify travel and relocation preferences. The available fields depend on template settings.
Competencies	Describe competencies. Items might already exist if Load Content from Previous Review is selected. You can't add new competencies if Pull from Position is selected on the template.

Section	Description
Development Items	When you start an employee review, Workday pulls development items from the worker profile into the review. You can't remove these development items from the review. Select the Use Existing Development Item check box to pull in development items that are added to the worker profile after the review is launched. You can individually select or remove these development items.
Goals	Add a goal or select the Add Existing Goal check box to load an existing goal. You can pull in existing goals only if Allow User to Add Existing Goals Manually is selected on the template. The Pull in Goal prompt lists goals that aren't already part of the review. Items might already exist if Load Content from Previous Review is selected on the template. Additional fields include the goal description, category (if categories are defined), supported organization goals, due date, status, and completion date.
Questions	Questions are defined on the template. Items might already exist if Load Content from Previous Review is selected on the template.
Responsibilities	Describe responsibilities. Items might already exist if Load Content from Previous Review is selected on the template. Descriptions are visible to both employees and managers.

If Items Weighted is checked on the template, you can specify the Weighting of items in the Accomplishments, Competencies, Goals, Questions, and Responsibilities sections.

You can't see the Feedback section in the *Set Content* step.

4. For the *Evaluation* steps, complete the sections that apply to your review document (as described in Step 3). Evaluate items in the Accomplishments, Competencies, Goals, Questions, and Responsibilities sections. (See Step 6 for the Overall evaluation.)

   You can evaluate individual items or entire sections, depending on the template settings. If you carried over items from a previous review, you can view and edit the previous comments and ratings (based on the template settings).

Option	Description
Weighting	Available if Items Weighted is selected on the template.
Rating	Available if Items Rated is selected on the template. The rating scale is defined using the Create Rating Scale or Edit Rating Scale task.
Rating Description	Available if Show Rating Description is selected on the template.
Level (Competencies)	Available if Use Proficiency Scales is selected on the template. The proficiency scale is

Option	Description
	defined using the Create Proficiency Rating Scale task. The effective date of the proficiency scale for a competency in the review is the start of the review. Changes you make to the proficiency scale after you start the review don't impact the competencies in the review.
Behavior (Competencies)	Available if Show Rating Description is selected on the template.
Overall Rating Weight (Summary)	Available if Section Weighted is selected on the template.
Calculated Rating (Summary)	Available if Show Calculated Rating is selected on the template.
Rating (Summary)	Available if Section Rated is selected on the template. The rating scale is defined using the Create Rating Scale or Edit Rating Scale task.
Rating Description (Summary)	Available if Show Rating Description is selected on the template.
Comment (Summary)	Available if Section Comments is selected on the template.

View (and comment on, if configured) the feedback received in the Feedback section. If the *Start Development Plan* or *Start Performance Review* business process includes the *Get Feedback from Review* step, view this feedback in the Feedback section. Drill down on Anytime Feedback and Requested Feedback for more details (available if configured on the template).

In the Competencies section, drill down on Feedback for detailed competency-related feedback.

5. If the review has a Supporting Documents section, click Documents for Review to download and view documents attached to the review template, or click Supporting Documents to browse for and upload additional documents.

   Workday doesn't add these documents to the worker document file. You must have security to view the employee review content before you can view documents uploaded or attached to a review.

   The supported file types are defined using the File Type Setup Instructions field of the Edit Tenant Setup - System task. For more information, see Reference: Edit Tenant Setup - System.
6. If the review has an Overall section, specify overall ratings:

Option	Description
Calibrated Review Rating	Available if the performance review is started with a calibration program.
I want to change the Rating	Available if Calculated Rating with Overrides is selected on the template.
Calculated Rating	Available if Show Calculated Rating is selected on the template.
Default Rating	Displays the overall rating value after the calculated rating is mapped to the rating scale using the beginning and ending ranges of the rating scale.

Option	Description
Rating Description	Available if Show Rating Description is selected on the template.
Comment	Available if Use Comments is selected on the template.

Result

- If you select a calibration program on the Start Performance Review for Organization task:
  - The manager's overall review rating is pulled into the calibration program.
  - The calibrated review displays in the performance review after you complete calibration.
- Once an employee review is in progress, you can only change these items on the template:
  - General description.
  - General and section set content help text.
  - General and section evaluation help text.
  - Section labels.

Next Steps

- Track review status and view results with Workday standard reports in the *Goals and Reviews* and *Talent* categories.
- For performance reviews only:
  - Managers can access the My Team's Performance Reviews report to send back or pull forward an in-progress review.
  - Administrators can manually send back an in-progress or completed review from the related actions menu of the performance review event.
  - Employees can access the My Competency Rating Assessment data visualization report to compare their competency ratings in a specific review. The competency section on a review template must be configured with a minimum of 3 and a maximum of 8 competencies. Also, an administrator must configure a default scale for Default Scale for Competency Assessment (3, 4, or 5 point scale) on the Edit Tenant Setup - HCM task.
- For disciplinary actions and performance improvement plans only, HR partners or administrators can access the Update Employee Review Dates task to:
  - Change the disciplinary action reason and the start and end dates for in-progress or completed disciplinary actions.
  - Change the start and end dates for in-progress or completed performance improvement plans.

Pause Employee Review After Set Review Content Step

Context

If you set up an employee review business process to include both *Set Review Content* and evaluation steps, Workday starts employee and manager evaluations as soon as the *Set Review Content* step completes.

You can pause the business process after the *Set Review Content* step and continue at a later date.

Steps

1. Select Business Process > Edit Definition from the related actions menu of one of these employee review business processes:
    - *Start Development Plan*
    - *Start Disciplinary Action*
    - *Start Performance Improvement Plan*
    - *Start Performance Review*
2. Add a new *To Do* step after the *Set Review Content* step.

Result

The person or security group assigned on the *To Do* step can manually launch the evaluation later in the review period.

Print Employee Reviews

Prerequisites

- Configure these applicable business processes and security policies in the Performance Enablement functional area:
    - *Start Performance Review*
    - *Start Development Plan*
    - *Start Performance Improvement Plan*
    - *Start Disciplinary Action*
- Security: *Worker Data: Employee Reviews* domain in the Performance Enablement functional area.

Context

Print an individual in-progress or completed employee review. Printing produces the employee version of the review unless you hide all sections of the review. If you hide individual sections of the review from the employee, Workday hides them in the printed version either unless you hide all sections. If you hide all sections, managers can print the review showing all sections and employee can't print or view their reviews. You can:

- Add the Employee Review Printout step to the *Employee Review* business process.
- Print a review for an individual employee.
- Mass print employee reviews for multiple organizations.
- Schedule performance review printing for an organization.

Steps

1. (Optional) Add the Employee Review Printout step to any of these business processes or subprocesses:
    - *Start Development Plan*
    - *Start Disciplinary Action*
    - *Start Performance Improvement Plan*
    - *Start Performance Review*
2. (Optional) Print a review for an individual employee.
    a) Access the View Printable Employee Review report.

       Security: *Worker Data: Employee Reviews* domain in the Performance Enablement functional area.
    b) Select an employee review.
    c) Click the Print icon.
3. (Optional) Mass print employee reviews for multiple organizations.
    a) Access the Print Employee Reviews for Organization task.

       Security: *Worker Data: Employee Reviews* domain in the Performance Enablement functional area.
    b) On the Organizations prompt, select the organizations for which you want to print reviews. You can select multiple organizations.
    c) Select a review template.
    d) Click OK.

       You can access the Process Monitor report to view the running background process.
4. (Optional) Schedule performance review printing for an organization.
    a) Access the Schedule Print for Employee Reviews task.

       Security: *Process: Employee Reviews* domain in the Performance Enablement functional area.
    b) On the Performance Review Organization Initiation prompt, select the performance review to print.
    c) Complete the Run Once in the Future section to schedule the date and time of the printing.

    You can access review PDFs printed using the Schedule Print for Employee Review task for 180 days if you use the Workday-delivered layout. If you use a custom layout, the review PDFs expire based on the value you configure on theResulting Document Expiration Offset (in days) report field on the business form layout. The maximum value allowed is 25,000.

    You can access the Process Monitor report to view the running background process. Workday makes the PDFs available to workers as a link on the View Printable Employee Review report.

Result

You can access the most recently generated PDF (based on business process security policy) on employee review reports on your worker profile.

Delegated workers can print employee reviews, but only when the delegated task is assigned to them. Delegated workers sign in as the worker, select the print icon to begin the print, and then switch to their primary account. Workday displays the print notification with the link to the PDF on the primary account.

Printed employee review reports aren't accessible on Workday on Android, Workday on iPad, and Workday on iPhone.

Related Information

Steps: Manage Disciplinary Actions on page 1697
Steps: Manage Performance Improvement Plans on page 1702
Steps: Manage Performance Reviews on page 1681

Concept: The Employee Review Process

The employee review process is flexible to meet the needs of your organization and the type of review you're completing.

Saving Employee Reviews

Workday sessions time out when inactive. We automatically saves in progress work for supported steps in employee reviews. The background process for the Autosave For Guided Experience Employee Reviews feature runs every 30 seconds. In addition to the Autosave feature, workers can manually save their work by clicking Save.

Start Review Process

The review process starts with one of these tasks, associated with a configurable business process:

Business Process	Related Task
Start Development Plan	Start Development Plan for Employee Start Development Plan for Organization Start My Development Plan
Start Performance Review	Start Performance Review for Employee Start Performance Review for Organization Start My Performance Review
Start Performance Improvement Plan	Start Performance Improvement Plan for Employee
Start Disciplinary Action	Start Disciplinary Action for Employee

Set Content

This step enables the manager and employee to discuss the content comprising the employee review. Managers and employees can add, edit, or delete:

- Accomplishments
- Career preferences
- Competencies
- Development items
- Goals
- Responsibilities

You can't change questions during the review because they're defined on the template. You can enable weighting for all sections except Career, Development Items, and Feedback.

Get Additional Reviewers

You can use *Get Additional Reviewers* to solicit and receive reviews on competencies. Add it to these business processes:

- *Start Performance Review*.
- *Start Development Plan*.

Employees or managers can initiate *Get Additional Reviewers*.

Get Feedback

Use this step to request feedback from 1 or more employees. You can add the *Get Feedback from Review* step to these business processes:

- *Start Performance Review*.
- *Start Development Plan*.

To view the list of requests and feedback received during the review, configure the Feedback section in the employee review template. Employees can't request feedback on themselves in a review.

Complete Employee Self-Evaluations and Manager Evaluations

Evaluations enable employees to complete their self-assessment and managers to assess their direct reports. They can:

- Add new content.
- View feedback.
- Enter comments.
- Link a goal to the goal of a supervisory organization.
- Provide item ratings.
- Specify an overall rating.

To manage reviews for employees who have multiple managers during a review period (such as during a promotion, transfer, or manager organization change), configure the Manager for Majority of Event security group on all applicable steps in the review business process. If the managers at the midpoint and end of the review period are the same, Workday routes the step to that manager. If not, Workday routes the step to the manager at the start of the review period.

Example: Bob is Tanya's manager at the start of the quarterly review period. If Tanya transfers mid-quarter to Jack's organization, Workday makes Jack the Manager for Majority of Event. If Tanya transfers after the midpoint of the quarter, Workday makes Bob the Manager for Majority of Event.

View Review Details and Submit

The effective date for an employee review is the end date of the review. You can configure each review business process step to control when employees see the review content:

- If the Employee as Self security group has:
  - *View All* access, employees can see review content at any stage of the review process.
  - *View Completed Only* access, employees can see review content after the review end date.

You can also control whether and when employees can view these employee review template sections:

- Accomplishments
- Overall
- Questions
- Responsibilities
- Supporting Documents

Note: The business process configuration for disciplinary actions and performance improvement plans overrides what employees can view on a template. If any employee review business process substeps involve the employee (Examples: *Set Content*, *Complete Self Evaluation*), Workday displays the review to employees even if the template has hidden sections.

Concept: Load Content from Previous Review on page 1670

Tasks

Create Custom Business Processes

Reference

Reference: Workday-Delivered Security Groups

Concept: Printed Employee Reviews

You can print the employee version of in-progress, completed, canceled, and rescinded reviews. Workday provides a defined print layout for employee reviews. You can also create your own custom print layout. The Workday-defined employee reviews provide:

- Key employee information.
- The overall evaluation and acknowledgment.
- Any other sections defined on the template in the order they display on the template.

  Note: Workday doesn't include the Supporting Documents section in the employee review printout (PDF), even if you enable section comments for the section. You can print the documents attached to the Supporting Documents section separately.

The acknowledgment section displays the acknowledgment step in the review process.

Generate a Print Document (PDF)

Print a review document using the Print or PDF icons depending on the review editor that you're using.

- If your review uses Guided Experience, generate the review PDF by clicking the Print icon in the left navigation pane. If you click the PDF icon in the section pane, Workday only prints the content of that section.
- If your review uses Guided Editor or Summary Editor, generate the review PDF by clicking the PDF icon.
- You can also generate the review PDF by clicking the PDF icon when you open the review in My Tasks.

Evaluation Content

The print document (PDF) contains content for self-evaluation and manager evaluation based on the current business process step and business process security policy. You must have *View All* permission on these business processes to print all evaluation information:

- *Complete Manager Evaluation*.
- *Complete Self Evaluation*.

Managers can view the self-evaluation content in an employee review printout when:

- They have view permission on the *Complete Self Evaluation* business process security policy.
- Employees submit the self-evaluation.
- The review is in progress or complete.

The printed review contains ratings and comments as configured in the employee review template that it uses.

Hidden Sections

When you configure the employee review template to hide 1 or more sections from the employee, those sections don't display on the review printout.

Feedback

To include the Feedback section in review printouts, include the Feedback section in the review template, plus:

Review Type	Configuration	Result

Performance Review and Development Plan	One of these options:
	• Configure the *Get Feedback from Review* step on the applicable business process:
	  ◦ *Start Performance Review*.
	  ◦ *Start Development Plan*.
	• Select Section Comments for the Feedback section on the Configure Employee Review Template task.
		Prints the feedback received from the review and section comments (if selected).
		The review printout includes only requested feedback received from the employee review as part of the *Get Feedback from Review* process.

Performance Improvement Plan and Disciplinary Action	(Optional) Select Section Comments for the Feedback section on the Configure Employee Review Template task.	Prints the section comments (if selected).

To exclude the Feedback section from employee review printouts, clear the Enable Feedback on Printout check box under Template Details on the Configure Employee Review Template task.

Concept: Track Employee Reviews

If your review is for a single employee, you can track it from the employee's related actions menu: Talent > View Employee Reviews. Workday provides standard reports for a supervisory organization, summarizing information at the organization, team, or template level.

You can also write custom reports that include report fields such as Last Review - Overall Rating and Review - Last Completed. To see the data returned by these fields, you must have 2 types of security permission:

- Access to the *Worker Data: Employee Reviews* domain.
- Access to the *Start Performance Review* and *Complete Manager Evaluation* business processes.

Report	Used By
Average Performance Rating by Supervisory Organization	A specific organization and its subordinates to view: • Average employee performance ratings for each of the last 3 review periods. • Individual employee ratings for each review period. • Details about the calculation for each review period. • Individual employee reviews by selecting Talent > View Employee Reviews from the related actions menu of an employee.

Report	Used By
Employee Review Ratings	One or more organizations and review templates to view the: • Total number of reviews in each rating category. Example: The number of employees with a rating of *Unsatisfactory*, *Needs Improvement*, or *Meets Expectations*. • Average rating by review template and organization. Use this report for review templates that track Overall ratings.
Employee Reviews	One or more organizations and review templates to view: • The overall status of *In Progress* reviews. • The person responsible for the next action or response, such an approval, a comment, or an evaluation. • Both *In Progress* and *Complete* evaluations for a given review cycle and organization.
Employee Review Status Summary	One or more review templates to view: • A list of employees in each status. • Individual employee reviews from the related actions menu of the employee. Note: This report supports dynamic reporting from the total counts.
Employee Review Summary	One or more organizations and review templates to view: • The number of reviews with *Not Started, In Progress*, or *Complete* status. • Detailed information about individual employees in each status. • Individual employee reviews by selecting Talent > View Employee Reviews as a related action on the name of an employee.
Employee Review Template Eligibility	A specific organization and 1 or more review templates to: • View all employees included in a review. • Determine whether employees were targeted for more than 1 review of the same type during the same period. This report only returns information on active workers.
My Team's Performance Reviews	Managers to view: • All in-progress and completed performance reviews for employees, including the review

Report	Used By
	event, manager and employee ratings, and period start and end dates. • The current step of an in-progress review and send it back or pull it forward between evaluation steps.
Performance Ratings Distribution	View a graphical representation of the performance review ratings within a supervisory organization and subordinate organizations.

Related Information

Tasks

Steps: Manage Development Plans on page 1694
Steps: Manage Disciplinary Actions on page 1697
Steps: Manage Performance Improvement Plans on page 1702
Steps: Manage Performance Reviews on page 1681

Concept: Load Content from Previous Review

You can load content from a completed review to a new review in these sections:

- Accomplishments
- Competencies
- Goals
- Questions
- Responsibilities

When configuring sections on the Configure Employee Review Template Section task, select 1 of these Load Content from Previous Review field options:

- Carryover with Item Evaluation Content (all section types)
- Consolidate (Accomplishments, Goals, and Responsibilities only)

You can't move content from an in-progress review. You can continue to work on in-progress reviews (without moving content) when the:

- In-progress review doesn't overlap with the new review period.
- Review templates have different section types.

Content Carryover

Use the Carryover with Item Evaluation Content option to carry over content from an employee's most recent completed review. You can only carry over content into the same review category. Example: You can't carry over Competencies content from a development plan to a performance review. These rules apply when carrying content over from 1 review to another:

General

- The end date of the previous completed review must be earlier than the start date of the new review.
- Workday carries over both review items and evaluation content (employee and manager comments and ratings).
- Once you carry the content over, you can allow employees and managers to add new comments to the existing content and also to change ratings.

Sections

- The previous review and the new review must use the same rating scale. If the review templates have different rating scales, adjust the previous ratings to the rating scale of the new review.

- You can only carry over content to the same section in the new review. Example: You can carry over Competencies content to the Competencies section in the new review, but you can't carry over Competencies content to the Goals section.

Goals

- The status of the content you're moving must be:
  - *Not Started* (NS).
  - *In Progress* (IP).
  - Blank.
- Move the most current version of the content.
- Workday excludes completed goals and archived goals.

Competencies

- Carry over items and comments, but not ratings, if the review templates use different evaluation methods (one uses a rating scale and the other uses proficiency scales).
- Carry over ratings with proficiency scales that use the same scale. Workday doesn't carry over competency proficiency ratings if the scale has changed since the last review.
- Carry over only items defined on the new review template. Workday doesn't carry over competencies pulled from position.

Questions

Carry over only items defined on the new review template.

Responsibilities

The employee or manager must make changes or comment in this section for items to carry over.

Consolidating Content

Use the Consolidate option to pull in items from all completed reviews. These rules apply when consolidating content:

General

The begin and end dates of the previous reviews must be equal to, or fall between, the begin and end dates of the new review.

Sections

- For applicable sections, move ratings and item comments as configured on the new review template.
- Move content from a section in all previous reviews to the same section type in the new review.

Goals

- The status of the content you're moving must be:
  - *Not Started* (NS).
  - *In Progress* (IP).
  - Completed.
  - Blank.
- Move the most current version of the content along with rating values, as configured on the new review template. The Consolidate option doesn't pull in comments in Goals sections.
- The review templates must have the same rating scales for correct mapping of goal ratings between the reviews. If the rating scales are different, Workday randomly assigns an initial rating to goals in the new review.

Related Information

Tasks

Steps: Create Employee Review Templates on page 1627

Concept: Employee Goals in Employee Reviews

You have 2 options when creating employee goals:

- Add them directly to an employee review. Goals created during the employee review process are always visible in the employee review document.
- Create goals outside of the review with the Add Goal to Employees task. You can add these goals to the employee review in 1 of these ways:
  - Manually select and add these goals.
  - Set up Workday to add these goals automatically.

You can't add goals that are pending approval to reviews if you enabled Lock Goals Associated with In Progress Reviews in the Maintain Goal Setup task.

On the Create Employee Review Template task, add a Goals section, and configure it in 1 of these ways:

Option	When You Start the Review
Load Content from Previous Review. Select from: • *Carryover with Item Evaluation Content*. • *Consolidate*.	Workday moves the most current version of the employee goal within the same section. The current review template settings determine the previous ratings and comments that you see. For more information, see Concept: Load Content from Previous Review on page 1670.
Allow User to Add Existing Goals Manually.	You can add a goal or select a goal from the Pull in Goal prompt during the *Set Content* and *Evaluation* steps. You can't add goals associated with in-progress reviews to the same worker.
Load Relevant Goals. (Optional) To filter relevant goals, select from: • *Filter Relevant Goals by Category*. • *Filter Relevant Goals by Goal Template Rule*.	Workday automatically loads goals at these 2 points in the review process: • Beginning of the *Set Content* phase • Beginning of the *Evaluation* phase.

On these options, Workday records all goal attributes but displays only the attributes you enable on the Maintain Goal Setup task:

- Carryover
- Consolidate
- Pull In Goal
- Load Relevant Goals

Allow User to Add Existing Goals Manually

The selection list includes goals that are:

- Added in all types of employee reviews and those added using the Add Goal to Employees task.
- Not already in the review.
- The most current version with any completion status.
- Not archived.

Load Relevant Goals

When you select Load Relevant Goals, you can optionally filter goals by category or by template rule. Regardless of whether you filter goals, Workday doesn't load goals associated with a previous review.

When you load goals but don't select a filter option, Workday loads goals that are:

- Created using the Add Goal to Employees task.
- Not already in this review or another review.
- The most current version (excluding in-progress changes) with any completion status except *Not Applicable*. For more information, see Set Up Goal Completion Statuses on page 1514.
- Due during the employee review start and end dates. If a goal has no due date, Workday adds goals created between the review start and end dates.
- Completed between the start and end dates of the employee review.
- Not archived.

When you load goals by category, Workday loads goals in the categories you select.

When you load goals by template rule, Workday loads goals using the above criteria that:

- Satisfy the goal template rule.
- Are active (not deleted or archived).
- Aren't associated with another in-progress review.

A goal can only be in 1 section at a time. When you configure more than 1 Goals section to load goals by the same or overlapping rule, Workday loads goals based on your configured section order.

When you use *Carryover with Item Evaluation Content* or *Consolidate* with Filter Relevant Goals by Goal Template Rule and Filter Relevant Goals by Category, Workday loads goals first by the Carryover or Consolidate criteria, then adds goals that satisfy the goal template rule.

If you make changes to a goal in an employee review, and make changes outside of the review (ad hoc goal management), Workday only displays the last set of changes for completed goals that have been made or approved. Workday doesn't display pending changes, such as goals awaiting approval.

You can view all goal changes in the:

- History section of the View Goal report.
- View Worker History by Category report on worker profiles.

Related Information

Tasks

Steps: Create Employee Review Templates on page 1627

Create or Edit Individual Goals on page 1518

Set Up Goals for Employee Reviews on page 1511

Concept: Route Review Steps for Workers with Additional Positions

For workers with multiple positions, you can route employee review business process steps to the worker's primary position manager or to the worker's additional position manager. Example: When a worker is on an international assignment, you can route business process steps to the worker's host country manager instead of the worker's home country manager.

You can configure routing modifiers for these steps when you edit the *Start Performance Review* business process definition:

- *Assess Potential*
- *Complete Manager Evaluation*
- *Complete Self Evaluation*
- *Get Additional Manager Evaluation*
- *Get Additional Reviewers*
- *Get Feedback from Review*

You can configure routing modifiers for these steps when you edit the *Start Development Plan* business process definition:

- *Complete Employee Plan*

- *Complete Manager Plan*
- *Get Additional Reviewers*
- *Set Plan Content*

You can configure routing modifiers for these steps when you edit the *Start Disciplinary Action* business process definition:

- *Complete Manager Evaluation*
- *Complete Self Evaluation*
- *Set Disciplinary Action Content*

You can configure routing modifiers for these steps when you edit the *Start Performance Improvement Plan* business process definition:

- *Complete Manager Plan*
- *Set Plan Content*

Workday recommends not to use routing modifiers if the additional position manager and the primary position manager are in the same organization. In this scenario, Workday will route the step to both managers.

Set Up Multiple Position Routing

Performance Reviews

Setup Considerations: Performance Reviews

You can use this topic to help make decisions when planning your configuration and use of performance reviews. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

You can use performance reviews to provide feedback on workers' performance to help improve worker effectiveness and engagement. You can also use performance reviews to assist in coaching and driving worker development.

Business Benefits

You can configure performance reviews to:

- Track your workers' performance and drive their development.
- Enable discussions with workers about their competencies, goals, and development items.
- Connect performance reviews to compensation, making it easier to reward workers when your organization uses performance-based compensation.

Use Cases

You can conduct performance reviews to run:

- Periodically to coordinate with the compensation process in your organization and align with your goals.

- On an ad hoc basis so workers can continue to develop outside of the scheduled review period.

Questions to Consider

Questions	Considerations
How often do you want to schedule periodic performance reviews?	Determine the frequency of your performance reviews based on who in your organization is participating and when the review period takes place. Set up different employee review templates for different review periods.
How do you want to organize performance review templates for specific worker groups?	Set up your domains and employee review templates to enable different requirements for specific worker groups. Example: Special review templates for sales workers.
Who do you want to initiate performance reviews?	Use the Maintain Review Types task to determine who can start performance reviews. Example: You can configure the task to enable workers to start their own performance reviews, or enable only managers or HR partners to initiate the reviews.
Are you moving content from a previous review to a review for a new period?	You can configure the Load Content from Previous Review prompt in your review templates to carry over or consolidate content from previous reviews.
Are you using net attainment of goals to help determine compensation?	Determine how to calculate the net attainment and include the Goals section in the performance review template.
How do you want to rate the component parts of your performance reviews?	You can assign ratings to individual items and sections on employee review templates, or on performance reviews. You can use Workday-provided rating scales or create your own custom scales to align performance reviews with Calibration, Compensation, or Succession.
Who needs to acknowledge and approve performance reviews?	You can configure business process steps to support approvals and acknowledgments. Acknowledgments only apply to managers and employees. You have more flexibility when setting up approvals so that other types of workers can approve a performance review.
Do you want to include calibration in your performance reviews?	Include the appropriate business process steps to support calibration.
How can you include embedded analytics in performance reviews to provide more reporting about your workers?	You can configure embedded analytics on the *Complete Manager Evaluation for Performance Review* and the *Get Additional Reviewers for Performance Review* business processes to provide custom reports you enable as worklets or use Workday preconfigured worklets. You can use these reports to provide more context and information about your workers' performance.
How can you conduct international reviews for workers with multiple positions when the	When workers have multiple positions in different countries, route steps to the home country

Questions	Considerations
primary and secondary managers are in different countries?	manager or the host country manager using business process routing modifiers.
What data do you want to gather with performance reviews and how do you want to measure it?	You can configure templates to require workers to complete specific fields. You can include summary sections or comments. You can set up templates to weight items and sections, or include item ratings and calculated ratings.
Do you want additional managers or reviewers to provide feedback?	You can set up your business processes to support additional manager evaluations. You can enable up to 2 additional managers to provide evaluation comments for workers. You can include the Competencies section in a template to enable additional reviewers. Additional reviewers can comment only on this section.

Recommendations

- Use care when setting the Period Start Date and Period End Date values for the *Start Performance Review* business process. Don't schedule an employee review with dates that overlap an existing employee review of the same review type.
- Select the Period Start Date and Period End Date values when you load content from a previous review and you configure the template with the *Carryover with Item Evaluation Content* or *Consolidate* option. These dates determine which content is eligible for the current review.

  The Period End Date value also controls worker access to review data when you select the *View Only On Completed Review* option in the Employee View Option prompt on the template. When you select this option, workers don't see their review data until after the Period End Date and the process is complete.
- Don't set the start date to before a worker's hire date.
- Copy the template before you launch the official review, because you can't edit review templates when reviews are in progress or complete.
- Test your employee review templates before launching the review. If you need to update a template during testing, cancel the reviews first and edit the template.

Requirements

- When you include the Questions section on your review template, you must configure question categories and questions for feedback and review.

Limitations

Workday doesn't support parallel steps on performance reviews because it can lead to inconsistent results.

Tenant Setup

No impact.

Security

Configure these domains in the Performance Enablement functional area:

Domains	Considerations
Self-Service: Performance Reviews	Provides workers self-service access to starting and updating their own performance reviews.
Set Up: Employee Reviews	Enables workers with the administrator role to configure all parts of the employee review process.
Performance and Goals: Contingent Worker Eligibility	Enables contingent workers to participate in employee reviews, including performance reviews.
Process: Employee Reviews	Enables workers to start and view employee reviews. Workday requires this domain for organization-level performance reviews. Example: Administrators or support roles such as HR Partner.
Set Up: Goals	Enables workers to add goals when you include the Goals section on the performance review.
Worker Data: Performance Reviews	Provides access for roles who need to view another worker's performance review. Example: Managers and support roles such as HR Partner or HR Administrator.
Worker Data: Review Event	Enables workers to complete performance reviews on behalf of other workers and run the My Team's Performance Reviews report.

Business Processes

Business Processes	Considerations
Complete Additional Evaluation for Performance Review	You can enable contingent workers to serve as additional reviewers for performance reviews when you include the Competencies section on employee review templates.
Complete Additional Manager Evaluation for Performance Review	You can configure steps that enable additional managers to add, change, or delete comments on the performance review.
Complete Self Evaluation for Performance Review	You can enable workers to evaluate themselves as part of a performance review.
Get Additional Manager Evaluation for Performance Review	You can enable workers to add up to 2 additional managers to the performance review.
Get Additional Reviewers for Performance Review	You can enable workers to add additional reviewers in Competencies sections.
Set Review Content for Performance Review	You can determine what actions workers and managers can perform in the performance review process.
Start Performance Review	Determine whether you want the performance review process to be simple or complex. Examples: You can include a Set Content step, or enable others to evaluate a worker's competencies.

Reporting

Reports or Dashboards	Considerations
My Team's Additional Manager Evaluations report	Enables you to report on worker evaluations by other managers. Workday doesn't display the primary manager's comments to additional managers.
My Team's Performance Reviews report	Enables managers to view performance reviews for their entire team in a single report.
Performance Review Status report	Enables managers to view the statuses of their workers' performance reviews. Managers can drill down on details for individual workers.

Integrations

Web Services	Considerations
Get Employee Reviews	Imports employee reviews for performance reviews.
Import Employee Reviews	Loads in-progress and completed performance reviews.
Load Employee Reviews	Loads the employee review information of a worker.
Put Employee Reviews	Loads performance reviews.
Put Review Type	Adds, edits, and removes review types, including performance reviews.
Start Performance Review	Creates in-progress or completed performance reviews.
Update Employee Review Rating	Loads overall ratings and overall manager comments for performance reviews for both workers and contingent workers.

Connections and Touchpoints

Performance reviews can touch the Compensation functional area in Workday. Performance reviews also interact with Manager Insights Hub. Managers can start and view information related to performance reviews within Manager Insights Hub. See Setup Considerations: Manager Insights Hub.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Examples

2025R2 Release Note: Flex Team Hosts as Performance Review Additional Managers

Steps: Set Up Performance Reviews

Prerequisites

Configure the *Start Performance Review* business processes and security policies in the Performance Enablement functional area.

Context

Set up employee reviews to support performance evaluation and personal development.

To use custom labels throughout Talent, use the Maintain Custom Labels task.

Note: In review documents, custom labels don't override labels created with the Create Employee Review Template and Maintain Employee Review Setup tasks.

Steps

1. (Optional) Determine if your event is large enough that you need to work with the Workday Production Readiness team.

   See Workday Community: Production Readiness: Large Volume Events Best Practices for guidelines about opening a Production Readiness case.
2. Define Employee Review Types on page 1625.
3. Set up the individual components that you plan to include in employee reviews:

Option	Description
Career	You can include: • Career interests. • Job interests. • Travel preferences. • Relocation preferences. Steps: Set Up Interests on page 1535
Competencies	Add competencies and rate them in employee reviews. • Create Proficiency Rating Scales on page 123 • Create or Edit Competencies on page 125
Development Items	You can include ad hoc development items in employee reviews. Create Development Items on page 1529
Feedback	The self-evaluation and manager evaluation forms can include feedback received during the employee review process (performance reviews and development plans only) and outside of it. Steps: Set Up Feedback on page 1737

Option	Description
Goals	Add goals directly into employee reviews or create them outside of the review process. You can also map your statuses that define a worker's progress toward completing a goal to the delivered Workday statuses. • Create or Edit Individual Goals on page 1518 • Set Up Goal Completion Statuses on page 1514
Questions	Include questions in employee reviews and create categories to organize them into related groupings. Create or Edit Review Questions on page 1626

4. (Optional) Create Rating Scales on page 1644.
5. Create review templates and define their content:
    a) (Optional) Create Employee Review Section Types on page 1627.
    b) (Optional) Define Employee Review Rules on page 1646.
    c) Steps: Create Employee Review Templates on page 1627.
    d) (Optional) Copy Employee Review Templates on page 1634.
    e) (Optional) Change Labels on Employee Reviews on page 1648.
6. (Optional) Maintain Employee Review Acknowledgement Statuses on page 1650.
7. (Optional) Set Up Performance Worklets on page 1687.
8. (Optional) Add performance reviews to dashboards.

    See Steps: Set Up Dashboards and Landing Pages.

    Set up the Team Performance dashboard to combine analytics and actions for managing teams and their performance from a single place. You can use the default menu as a starting point.
9. (Optional) Add performance review reports to profile groups.

    See Steps: Set Up Profiles and Profile Groups.

Steps: Set Up Performance Reviews for Contingent Workers

Prerequisites

Complete the setup procedure for performance reviews.

Context

Workday gives you the option to conduct performance reviews for contingent workers and enable them to participate in the review process the same way as employees do. This option enables you to conduct performance reviews for a wider population of your workers.

Steps

1. Add the security group with the contingent workers you want to include to *Performance and Goals: Contingent Worker Eligibility* domain to make them eligible for performance reviews.

   Example: Add the *Contingent Worker as Self: AMEA* security group to the *Performance and Goals: Contingent Worker Eligibility* domain.
2. Add the security group to the security domains that you use for performance reviews.

   Example: Add the *Contingent Worker as Self: AMEA* security group to the *Self-Service: Performance Reviews* domain.
3. Add the same security group to your performance review business process policy:
   - Initiating actions.
   - Actions.
   - Action steps.
4. Activate Pending Security Policy Changes.
5. Edit the *Start Performance Review* business process to include the security group for contingent workers on all self-service steps.

Result

You can include contingent workers in your performance review events.

Next Steps

Contingent workers use the Start My Performance Review task to self-initiate a performance review. Managers use the Start Performance Review for Employee task or the Start Performance Review for Organization task to start performance reviews for contingent workers.

Steps: Manage Performance Reviews

Prerequisites

Complete the setup procedure for employee reviews.

Context

You can add and edit content, manage ratings and weightings, and track progress within the 4 employee review categories in Workday:

- Performance Reviews
- Development Plans
- Disciplinary Actions
- Performance Improvement Plans

In addition, Workday enables you to complete performance reviews and development plans using the Workday on iPad and Workday on iPhone apps. Managers can also track review progress directly from the Team Profile on the iPad.

Steps

1. Start Employee Reviews on page 1658.

   See Concept: Employee Reviews on page 1652.
2. Pause Employee Review After Set Review Content Step on page 1663.
3. Send back or pull forward performance reviews.

   See Steps: Enable Sending Back or Pulling Forward Performance Reviews on page 1682.
4. (Optional). Access the Mass Advance Business Process task.

   Advance any performance review business processes.

   Security: *Business Process Administration* domain in the System functional area.
5. Track the status of employee reviews with reports.

   See Concept: Track Employee Reviews on page 1668.
6. Print Employee Reviews on page 1663.

Related Information

Concepts

Concept: Get Additional Reviewers for Competencies on page 1654

Concept: The Employee Review Process on page 1665

Tasks

Steps: Set Up Performance Reviews on page 1679

Steps: Purge Person Privacy Data

Steps: Enable Sending Back or Pulling Forward Performance Reviews

Context

You can use the My Team's Performance Reviews report to send back or pull forward performance reviews for your employees. Users with access on the *Manual Send Back* action of the *Start Performance Review* business process security policy can change the current step for in-progress reviews.

Send back and pull forward actions are only available for performance reviews and not the other employee review types.

You can only pull forward a performance review when the review is in progress and is on the *Complete Self Evaluation* initiation step.

Workday saves all review content including comments, but removes any acknowledgments. When a participant in a review has changed roles or organizations, Workday routes the action steps to the original participant, but sends approvals to the current incumbent.

Steps

1. Edit Domain Security Policies.

   Add managers to the *Worker Data: Review Event* domain.
2. Edit Business Processes.

   Enable pulling performance reviews forward. Configure the *Start Performance Review* business process definition so that the *Complete Self Evaluation* initiation step immediately precedes the *Complete Manager Evaluation* initiation step.

   The *Complete Self Evaluation* business process definition must contain only the initiation step.
3. Edit Business Process Security Policies.

   Enable administrators to perform manual send back. Add administrators to a security group specified in the *Manual Send Back* action of the *Start Performance Review* business process security policy.

Result

Managers can:

- Send a review back from the *Complete Manager Evaluation* initiation step by clicking Send Back.
- Pull a review forward from the *Complete Self Evaluation* step to the *Complete Manager Evaluation* step by clicking Complete On Behalf Of from the My Team's Performance Reviews report.

Administrators can manually send back a performance review event by selecting Business Process > Manual Send Back from the related actions menu.

Related Information

Concepts

Concept: Business Process Management

Concept: Performance Review Management

You can use 2 methods to manage the workflow of performance reviews:

My Team's Performance Reviews

With this report, managers can view all in-progress and completed performance reviews for their employees and send back or pull forward a performance review under specific conditions:

- At the *Complete Self Evaluation* initiation step, you can pull a review forward to the *Complete Manager Evaluation* step if it's the immediate next step.
- At the *Complete Manager Evaluation* initiation step, you can send a review back to the *Complete Self Evaluation* step if it's the immediately preceding step and the review is in progress.
- After the *Complete Manager Evaluation* initiation step but before the completion step, you can send a review back to the *Complete Manager Evaluation* initiation step. You must repeat the subsequent steps and the acknowledgment, but any comments that you previously entered are saved.

Manual Send Back

Administrators or other roles secured to the *Manual Send Back* action in the *Start Performance Review* business process security policy can:

- Move an in-progress review from any step to any step.
- Reopen a completed review and send it back to the *Complete Manager Evaluation* step. A manager then can use the My Team's Performance Reviews report to take further action.

  When you manually send back a completed review, Workday automatically skips:

  - The *Get Additional Reviewers* and *Get Feedback from Review* steps (if configured).
  - Steps that run concurrently with the *Complete Manager Evaluation* step.

Additional Manager Evaluations

Steps: Set Up Additional Manager Evaluations

Prerequisites

Configure the *Start Performance Review* business process and security policy in the Performance Enablement functional area.

Context

You can configure up to 2 additional managers to provide comments concurrently in a single employee review.

Steps

1. Enable Additional Manager Evaluations on page 1684.

2. Enable comments for 1 or more sections in the employee review template.

   You must have either section comments or item comments or both enabled for 1 or more sections.

   See Steps: Create Employee Review Templates on page 1627.
3. Configure the *Get Additional Manager Evaluation* business process and security policy in the Performance Enablement functional area.

   Add the *Complete Additional Manager Evaluation* action step to the *Get Additional Manager Evaluation* business process and assign the Employee as Self group to it. For contingent workers, assign the Contingent Worker as Self group to the action step of the business process.

   See Edit Business Process Security Policies.
4. Add the *Get Additional Manager Evaluation* subprocess to the *Start Performance Review* business process.

   Configure this subprocess to be before the *Complete Manager Evaluation for Performance Review* subprocess.
5. Add the Additional Manager Evaluations report to the My Team's Performance Reviews profile group.

   See Steps: Set Up Profiles and Profile Groups.

Result

You can add additional managers to provide comments in an employee review.

Note: If an administrator enables the *Talent Effect* option in the leave type for an employee on a Leave of Absence, you can't select the employee as an additional manager in the Get Additional Manager Evaluation business process.

Enable Additional Manager Evaluations

Prerequisites

Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Context

Enable additional manager evaluations in the review template as a part of setting up additional manager evaluations.

Steps

1. Access 1 of these tasks:
   - Create Employee Review Template to create a new template.
   - Configure Employee Review Template to edit an existing template.
2. Click Edit.
3. Select the Enable Additional Manager Evaluations for All Sections check box.
4. Select the desired check boxes:
   - Display Additional Manager Comments.

     When selected, additional managers can see each others' comments after they submit them. Workday doesn't display the primary manager's comments to additional managers.
   - Display Additional Manager Names.

     When left cleared, Workday displays managers' comments under the name *Anonymous*.

Next Steps

Configure these business processes and their security policies:

- *Get Additional Manager Evaluation for Performance Review*.
- *Complete Additional Manager Evaluation for Performance Review*.

Related Information
Tasks
Edit Business Process Security Policies

Manage Additional Manager Evaluations

Prerequisites

- Set up additional manager evaluations.
- Use the Configure Profile Group task to add the Additional Manager Evaluations report to the My Team's Performance Reviews profile group.
- Security: *Worker Data: Performance Reviews* and *Worker Data: Review Event* domains in the Performance Enablement functional area.

Context

The Additional Manager Evaluations report displays all in-progress and completed additional manager evaluations for your employees and enables you to pull forward and send back additional manager evaluations.

You can't pull forward or send back additional manager evaluations for completed performance reviews. Workday cancels outstanding additional manager evaluations after the *Start Performance Review* business process completes.

You can add this report to the My Team's Performance Reviews profile group.

Steps

- Access the Additional Manager Evaluations report.
- To pull additional manager evaluations forward, click Complete On Behalf Of.

  This action completes the *Complete Additional Manager Evaluation for Performance Review* business process.
- To send a review back, click Send Back.

  This action sends the review back to the initiation step of the *Complete Additional Manager Evaluation for Performance Review* business process.
- To revise a completed additional manager evaluation, select Correct from the related actions menu of the *Complete Additional Manager Evaluation for Performance Review* business process instance.

  You must belong to a security group that is secured to the *Correct* action on the *Complete Additional Manager Evaluation for Performance Review* business process security policy.

Related Information
Tasks
Steps: Enable Sending Back or Pulling Forward Performance Reviews on page 1682

Concept: Additional Manager Evaluations

You can make performance reviews more comprehensive by enabling up to 3 managers (the primary manager and up to 2 additional managers) to provide comments concurrently in a single review. You can set up both employees and contingent workers as additional managers.

Note: This feature is separate from the Multiple Managers feature that enables you to assign multiple managers to a supervisory organization.

Additional managers can provide section comments in all employee review sections supported by the editor. Workday supports only certain sections in specific editors. Additional managers can provide item comments in these sections:

- Accomplishments
- Competencies
- Goals
- Questions
- Responsibilities

Additional managers can add or delete items in these sections:

- Accomplishments
- Development Items
- Goals
- Responsibilities
- Supporting Documents

Get Additional Manager Evaluation

The *Get Additional Manager Evaluation for Performance Review* business process provides a Reviewers prompt where you can select a maximum of 2 additional managers to add comments in the manager evaluation. You can select any employee from the Reviewers prompt.

You can select a manager of a matrix organization to serve as an additional manager. See Assign Workers to a Matrix Organization for more information.

If your organization uses Flex Teams, hosts of the worker's Flex Teams are also available as additional managers. Users with access to the *Flex Teams* domain can view the Flex Team Hosts prompt category in the Reviewers prompt. See Concept: Flex Teams on page 1598 for more information about Flex Team hosts.

You can also select any contingent worker from the Reviewers prompt. Enable contingent workers by configuring the security group on the initiating action of the *Complete Additional Manager Evaluation for Performance Review* business process policy.

Complete Additional Manager Evaluation

The *Complete Additional Manager Evaluation for Performance Review* business process is a subprocess of the *Get Additional Manager Evaluation for Performance Review* business process. This subprocess enables additional managers to:

- Add, change, and delete items in the review sections.
- Enter, change, and delete comments for all items and sections enabled for comments.
- View each other's names and submitted comments (when configured on the review template).

Complete Manager Evaluation

The current manager can see all additional manager comments on the Complete Manager Evaluation document once submitted.

Additional Manager Evaluations Report

The Additional Manager Evaluations report enables you to manage the additional manager evaluation process. You can pull forward and send back additional manager evaluations from this report.

You can use the Configure Profile Group task to add the Additional Manager Evaluations report to the My Team's Performance Reviews profile group.

Concepts
Concept: Employee Review Guided Experience Editor on page 1653

Set Up Performance Worklets

Prerequisites

- Create employee review templates for performance reviews.
- Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Context

The Performance Review Status worklet displays the number of performance reviews that are:

- *Complete*
- *In Progress*
- *Not Launched*

These numbers display when you specify which performance review templates to include. The *Not Launched* number only includes workers who are eligible for performance reviews using the employee review templates you created.

When you access this worklet, Workday finds the performance review templates where the current date is:

- After the template start date.
- Before the template end date + 3 months.

Workday compares these templates to performance reviews for your direct reports. If a performance review status matches, it's included in the count. If the current date is after the template end date + 3 months, Workday won't find any performance reviews to display.

Steps

1. Access the Maintain Employee Review Setup task.
2. Click the Worklet tab. As you complete the task, consider:

Option	Description
Employee Review Templates used in Performance Worklets	Select the *Performance Review* templates you want to report in the worklet. Only templates for the Review Type of *Performance Review* are available. To hide the Performance Review Status numbers on the Team Performance dashboard, clear this field. You can include current fiscal year performance review templates in this field to report on recent performance reviews of your workers.
Reporting Target Rating Scale	Select the rating scale to use in reports when the performance review template doesn't include a default rating scale. Workday normalizes any ratings to this scale.
Review Templates Used in Performance Over Time Report Field	Used in the Performance Over Time reports or report fields. Select if you use Performance Over Time as an axis for a talent matrix report. Workday also uses this field to identify the 3 most recent performance reviews for the Review Rating report fields.

Option	Description
	The Performance Over Time calculation excludes ratings from templates that have an Overall section in which the Rating Configuration is set to *Manual Entry*.
Rating Scale Used in Performance Over Time Report Field	Select if you use Performance Over Time as an axis for a talent matrix report. Workday also uses this field to normalize performance ratings for the Review Rating report fields.

Reviews with Calibration

Steps: Set Up Reviews with Calibration

Prerequisites

- Configure:
  - The *Start Performance Review* business process and security policy in the Performance Enablement functional area.
  - The *Launch Calibration* business process and security policy in the Performance Enablement or Talent Pipeline functional areas.
- Security: *Set Up: Calibration* domain in the Performance Enablement and Talent Pipeline functional areas.

Context

Set up performance reviews with calibration to support calibrated performance ratings across your organization as part of your performance review business process.

Steps

1. From the related actions menu of the *Complete Manager Evaluation for Performance Review* business process:
   a) Select Business Process > Edit Definition.
   b) (Optional) Add the *Await Calibration Completion* service step after the *Initiation* step to pause the business process when the calibration program is launched and automatically resume the business process when the calibration program is submitted.

      Workday executes this service step only if the review includes calibration.
   c) Add the *Update Performance Review Ratings for Manager Evaluation* action step directly after the *Await Calibration Completion* service step and assign it to a manager group.

2. From the related actions menu of the *Launch Calibration* business process:
    a) Select Business Process > Edit Definition.
    b) Create a new *To Do* step before the shared participation step and Specify as *Hold for Review*.

       This step halts calibration and ensures that manager evaluations are complete before calibration launches. See Concept: To Do Step.
    c) Assign the *To Do* step to a security group with access to all employees in the calibration program. Workday recommends only adding Talent Administrators to this security group.
    d) Verify that this security group can access the Rating – Most Recent report field, secured to the Worker business object.
3. Set up a calibration program with the default rating fields applicable to reviews with calibration.
    a) Access the Create Calibration Program task.

       Specify the program name, nBox report, and other applicable information.
    b) Select the Calibration Default Values tab.

       From the Default value to choose prompt, select *Rating - Overall for Reviews with Calibration* and *Potential - Performance Review with Calibration*.
4. (Optional) If you want to include the Assess Potential step in calibration, select Potential - Performance Review with Calibration as a default value in the calibration program.
    a) From the related actions menu of the *Start Performance Review* business process, select Business Process > Edit Definition.
    b) Add the *Assess Potential* action step before the *Complete Manager Evaluation* To Do step and assign it to a manager security group.

Next Steps

Access the Start Performance Review for Organization task (secured to the *Process: Employee Reviews* domain in the Performance Enablement functional area) to begin reviews with Calibration.

(Optional) Verify the *Await Calibration Completion* step of the business process by confirming that Workday hasn't generated any tasks in My Tasks for managers and that the step is in progress. Submit the entire calibration event, not just the manager portion. Confirm that the business process has moved past the *Await Calibration Completion* step and onto the next step.

Edit Business Processes

Start Reviews with Calibration

Prerequisites

- Configure the *Start Performance Reviews* business process and security policy in the Performance Enablement functional area.
- Set up performance reviews with calibration.
- Security: *Process: Employee Reviews* domain in the Performance Enablement functional area.

Context

When you start performance reviews with calibration for an organization, calibration for the same population starts simultaneously. Workday pulls in the overall review rating and the potential assessment into the calibration. Workday displays the completed calibrated review rating in the manager evaluation.

If running Performance Reviews with Calibration, Workday recommends that you use the Facilitate Calibration task instead of Mass Operations Management (MOM) to either:

- Pull the calibration task forward.
- Enable the highest-level manager to Complete on Behalf of.

Steps

1. (Optional) Determine if your event is large enough that you need to work with the Workday Production Readiness Team. See Workday Community: Production Readiness: Large Volume Events Best Practices for guidelines about opening a Production Readiness case.
2. Access the Start Performance Review for Organization task.
3. Select the applicable organization, template, and review period.

   If the review period is defined in the template, Workday populates these dates automatically.
4. Select the applicable calibration program from the Calibration Program prompt.

   Workday uses the rules and dates defined in the review template to determine employee eligibility.

Result

The selected calibration program launches at the same time as the performance review event for the same group of employees.

Tasks

Steps: Calibrate Talent and Performance Ratings on page 1709

Resume Reviews on Hold

Prerequisites

Security: *Process: Employee Reviews* domain in the Performance Enablement functional area.

Context

During performance reviews with calibration, Workday places the *Update Performance Review Ratings for Manager Evaluation* business process on hold if the calibration event isn't complete. When you resume the on-hold reviews, Workday displays the calibrated review rating for these workers.

Administrators or other assigned roles can manually resume the on-hold reviews even if the calibration for all employees is still in progress.

When you include the *Await Calibration Completion* step, the review automatically resumes when you submit the calibration program.

Steps

1. Access the Resume Employee Reviews On Hold task.
2. Select the Employee Review Organization Initiation from the prompt.

   The background process to resume the reviews starts. You can drill down on *Performance Reviews on Hold* to see the reviews that are on hold.

Next Steps

Run the Process Monitor report to check the status of the resumed employee reviews.

Related Information

Concepts

Concept: The Employee Review Process on page 1665

Concept: Workday Scheduled Processes

Concept: Employee Reviews with Calibration

Performance reviews are the only employee review type that integrates with calibration. Integrating calibration simplifies the review process. You can:

- Calibrate the same population as the one you're reviewing.
- Pull the overall rating from a review into calibration.
- Place the review process on hold until the calibration event is complete.

  Note: Administrators can prevent delays in the process by resuming on-hold reviews before the calibration event is complete.
- View the calibrated rating in the manager evaluation of reviews.

Reviews with Calibration Process

When you start performance reviews with calibration for your organization, Workday simultaneously launches the calibration program. The rules and dates defined in the review template determine employee eligibility. Rules defined for reviews supersede rules that are defined for calibration. A *To Do* step on the *Launch Calibration* business process pauses calibration until the manager evaluations are complete. Workday then pulls the overall review ratings and potential assessment (if configured) from the review into the calibration.

Report fields specific to reviews with calibration determine the calibration default values for initial worker placement:

- *Rating - Overall for Reviews with Calibration*.
- *Potential - Performance Review with Calibration*.

You can now use the overall rating and potential assessment (if configured) from the review to compare, adjust, and plot worker placements in the calibration nBox.

After calibration is complete, the *Update Performance Review Ratings for Manager Evaluation* step in the *Complete Manager Evaluation* business process displays the calibrated review rating in the manager evaluation under Additional Details.

Entry conditions on this step:

- Prevent it from running when you don't select a calibration program on the Start Performance Review for Organization task.
- Place it on hold when the calibration event hasn't completed.
- Prevent it from running when the worker is included in a different calibration event.

You can use these report fields:

- *Status for Calibration* to create a validation rule on the *Update Performance Review Ratings for Manager Evaluation* subprocess.
- *Calibrated Rating - Manager* and *Calibrated Rating* to create an entry condition that skips the *Update Performance Review Ratings for Manager Evaluation* step when the calibrated rating and overall rating are the same.

You can perform the same actions on the *Update Performance Review Ratings for Manager Evaluation* step as the *Complete Manager Evaluation* step except Send Back.

Note: Workday doesn't include the calibrated review rating in performance review printouts.

Development Plans

Steps: Set Up Development Plans

Prerequisites

Configure the *Start Development Plan* business process and security policies in the Performance Enablement functional area.

Context

Set up employee reviews to support performance evaluation and personal development.

To use custom labels throughout Talent, use the Maintain Custom Labels task.

Note: In review documents, custom labels don't override labels created with the Create Employee Review Template and Maintain Employee Review Setup tasks.

Steps

1. Define Employee Review Types on page 1625.
2. Set up the individual components that you plan to include in employee reviews:

Option	Description
Career	You can include: • Career interests. • Job interests. • Travel preferences. • Relocation preferences. Steps: Set Up Interests on page 1535
Competencies	Add competencies and rate them in employee reviews. • Create Proficiency Rating Scales on page 123 • Create or Edit Competencies on page 125
Development Items	You can include ad hoc development items in employee reviews. Create Development Items on page 1529
Feedback	The self-evaluation and manager evaluation forms can include feedback received during the employee review process (performance reviews and development plans only) and outside of it. Steps: Set Up Feedback on page 1737

Option	Description
Goals	Add goals directly into employee reviews or create them outside of the review process. You can also map your statuses that define a worker's progress toward completing a goal to the delivered Workday statuses. • Create or Edit Individual Goals on page 1518 • Set Up Goal Completion Statuses on page 1514
Questions	Include questions in employee reviews and create categories to organize them into related groupings. Create or Edit Review Questions on page 1626

3. (Optional) Create Rating Scales on page 1644.
4. Create review templates and define their content:
   a) (Optional) Create Employee Review Section Types on page 1627.
   b) (Optional) Define Employee Review Rules on page 1646.
   c) Steps: Create Employee Review Templates on page 1627.
   d) (Optional) Copy Employee Review Templates on page 1634.
   e) (Optional) Change Labels on Employee Reviews on page 1648.
5. (Optional) Maintain Employee Review Acknowledgement Statuses on page 1650.
6. (Optional) Set Up Performance Worklets on page 1687.
7. (Optional) Add development plans to dashboards.

   See Steps: Set Up Dashboards and Landing Pages.

   Set up the Team Performance dashboard to combine analytics and actions for managing teams and their performance from a single place. You can use the default menu as a starting point.
8. (Optional) Add development plan reports to profile groups.

   See Steps: Set Up Profiles and Profile Groups.

Steps: Set Up Development Plans for Contingent Workers

Prerequisites

Complete the setup procedure for development plans.

Context

Workday gives you the option to create development plans for contingent workers enabling you to use development plans for a wider population of your workers.

Steps

1. Add the security group with the contingent workers you want to include to *Performance and Goals: Contingent Worker Eligibility* to make them eligible for development plans.

   Example: Add the *Contingent Worker as Self: AMEA* security group to the *Performance and Goals: Contingent Worker Eligibility* domain.
2. Add the security group with the contingent workers you want to include in the development plan to the security domains that you use for development plans.

   Example: Add the *Contingent Worker as Self: AMEA* security group to the *Self-Service: Development Plan* domain.
3. Add the same security group to your development plan business process policy:

   - Initiating actions.
   - Actions.
   - Action steps.
4. Activate Pending Security Policy Changes.
5. Edit the *Start Development Plan* business process to include the security group for contingent workers on all self-service steps.

Result

You can create development plans for contingent workers.

Next Steps

Contingent workers use the Start My Development Plan task to self-initiate a development plan. Managers use the Start Development Plan for Employee or Start Development Plan for Organization task to start development plans for contingent workers.

Steps: Manage Development Plans

Prerequisites

Complete the setup procedure for employee reviews.

Context

You can add and edit content, manage ratings and weightings, and track progress within the 4 employee review categories in Workday:

- Performance Reviews
- Development Plans
- Disciplinary Actions
- Performance Improvement Plans

In addition, Workday enables you to complete performance reviews and development plans using the Workday on iPad and Workday on iPhone apps. Managers can also track review progress directly from the Team Profile on the iPad.

Steps

1. Start Employee Reviews on page 1658.

   See Concept: Employee Reviews on page 1652.
2. Pause Employee Review After Set Review Content Step on page 1663.

3. (Optional). Access the Mass Advance Business Process task.

   Advance any development plan business processes.

   Security: *Business Process Administration* domain in the System functional area.
4. Track the status of employee reviews with reports.

   See Concept: Track Employee Reviews on page 1668.
5. Print Employee Reviews on page 1663.

Steps: Manage Disciplinary Actions on page 1697

Steps: Set Up Disciplinary Actions for Contingent Workers

Prerequisites

Complete the setup procedure for disciplinary actions.

Context

Workday gives you the option to conduct disciplinary actions for contingent workers enabling you to use disciplinary actions for a wider population of your workers.

Steps

1. Add the security group with the contingent workers you want to include to *Performance and Goals: Contingent Worker Eligibility* to make them eligible for disciplinary actions.

   Example: Add the *Contingent Worker as Self: AMEA* security group to the *Performance and Goals: Contingent Worker Eligibility* domain.
2. Add the security group with the contingent workers you want to include in the performance improvement plan to the security domains that you use for disciplinary actions.

   Example: Add the *Contingent Worker as Self: AMEA* security group to the *Self-Service: Disciplinary Action* domain.
3. Add the same security group to your disciplinary action business process policy:
   - Initiating actions.
   - Actions.
   - Action steps.
4. Activate Pending Security Policy Changes.
5. Edit the *Start Disciplinary Action* business process to include the same security group on all self-service steps.
6. Edit the *Complete Manager Evaluation for Disciplinary Action* business process to include the security group for contingent workers on all self-service steps.

Result

You can conduct disciplinary actions for contingent workers.

Next Steps

Managers use the Start Disciplinary Action for Employee task to start a disciplinary action for a contingent worker.

Steps: Manage Disciplinary Actions

Prerequisites

Complete the setup procedure for employee reviews.

Context

You can add and edit content, manage ratings and weightings, and track progress within the 4 employee review categories in Workday:

- Performance Reviews
- Development Plans
- Disciplinary Actions

- Performance Improvement Plans

In addition, Workday enables you to complete performance reviews and development plans using the Workday on iPad and Workday on iPhone apps. Managers can also track review progress directly from the Team Profile on the iPad.

Steps

1. Start Employee Reviews on page 1658.

   See Concept: Employee Reviews on page 1652.
2. Pause Employee Review After Set Review Content Step on page 1663.
3. (Optional). Access the Mass Advance Business Process task.

   Advance any disciplinary action business processes.

   Security: *Business Process Administration* domain in the System functional area.
4. Track the status of employee reviews with reports.

Maintain Disciplinary Action Reasons and Categories

Prerequisites

Security: *Set Up: Employee Reviews* domain in Performance Enablement functional area.

Context

Disciplinary categories and reasons provide a consistent list of disciplinary actions for managers to use. They're specific to a location.

Workday automatically includes a Disciplinary Action Information section in review templates. You don't need to configure it.

Steps

1. Access the Maintain Disciplinary Action Reasons and Categories task.
2. Select the Country or Country Region.
3. Reasons are organized by category. Create a new category for disciplinary actions or find the appropriate category for the reason. Category Name and Reason Category Code are required.
4. Create a reason under the appropriate category. Reason and Reason Code are required.

Example

Some examples of categories are:

- Attendance
- Drugs and Alcohol
- Theft

Some examples of reasons within the Attendance category are:

- More Than 30 Minutes Late
- Missed Entire Day
- Less than 30 Minutes Late

Next Steps

Start a disciplinary action.

Performance Improvement Plans

Steps: Set Up Performance Improvement Plans

Prerequisites

Configure the *Start Performance Improvement Plan* business processes and security policies in the Performance Enablement functional area.

Context

Set up employee reviews to support performance evaluation and personal development.

To use custom labels throughout Talent, use the Maintain Custom Labels task.

Note: In review documents, custom labels don't override labels created with the Create Employee Review Template and Maintain Employee Review Setup tasks.

Steps

1. Edit Business Processes.

   Performance improvement plans derive their security for comment steps from other employee review types by default. Edit the definition for the *Complete Manager Plan for Performance Improvement Plan* business process to enable employees and managers to provide comments.

   - Add an *Action* step and specify *Provide Employee Review Comments* and assign it to the *Employee as Self* group.
   - Add an *Action* step and specify *Provide Manager Review Comments* and assign it to the *Manager* group.
2. Define Employee Review Types on page 1625.
3. Set up the individual components that you plan to include in employee reviews:

Option	Description
Career	You can include: • Career interests. • Job interests. • Travel preferences. • Relocation preferences. Steps: Set Up Interests on page 1535
Competencies	Add competencies and rate them in employee reviews.

Option	Description
	• Create Proficiency Rating Scales on page 123 • Create or Edit Competencies on page 125
Development Items	You can include ad hoc development items in employee reviews. Create Development Items on page 1529
Feedback	The self-evaluation and manager evaluation forms can include feedback received during the employee review process (performance reviews and development plans only) and outside of it. Steps: Set Up Feedback on page 1737
Goals	Add goals directly into employee reviews or create them outside of the review process. You can also map your statuses that define a worker's progress toward completing a goal to the delivered Workday statuses. • Create or Edit Individual Goals on page 1518 • Set Up Goal Completion Statuses on page 1514
Questions	Include questions in employee reviews and create categories to organize them into related groupings. Create or Edit Review Questions on page 1626

4. (Optional) Create Rating Scales on page 1644.
5. Create review templates and define their content:
    a) (Optional) Create Employee Review Section Types on page 1627.
    b) (Optional) Define Employee Review Rules on page 1646.
    c) Steps: Create Employee Review Templates on page 1627.
    d) (Optional) Copy Employee Review Templates on page 1634.
    e) (Optional) Change Labels on Employee Reviews on page 1648.
6. (Optional) Maintain Employee Review Acknowledgement Statuses on page 1650.
7. (Optional) Set Up Performance Worklets on page 1687.
8. (Optional) Add performance improvement plan reports to dashboards.

    See Steps: Set Up Dashboards and Landing Pages.

    Set up the Team Performance dashboard to combine analytics and actions for managing teams and their performance from a single place. You can use the default menu as a starting point.

9. (Optional) Add performance improvement plan reports to profile groups.

   See Steps: Set Up Profiles and Profile Groups.

   Workday only displays the Performance Improvement Plans report tab on profiles when there is at least 1 completed or in-progress performance improvement plan for a given worker. Workday doesn't display the Performance Improvement Plans tab when:

   - The worker hasn't started or completed any performance improvement plans.
   - All previous performance improvement plans have been rescinded or canceled.

Related Information

Concept: Employee Reviews on page 1652

Tasks

Create Custom Labels

Steps: Manage Performance Improvement Plans on page 1702

Steps: Set Up Performance Improvement Plans for Contingent Workers

Prerequisites

Complete the setup procedure for performance improvement plans.

Context

Workday gives you the option to complete performance improvement plans for contingent workers.

Steps

1. Add the security group with the contingent workers you want to include to *Performance and Goals: Contingent Worker Eligibility* to make them eligible for performance improvement plans.

   Example: Add the *Contingent Worker as Self: AMEA* security group to the *Performance and Goals: Contingent Worker Eligibility* domain.
2. Add the security group with the contingent workers you want to include in the performance improvement plan to the security domains that you use for performance improvement plans.

   Example: Add the *Contingent Worker as Self: AMEA* security group to the *Self-Service: Performance Improvement Plan* domain.
3. Add the same security group to your performance improvement plans business process policy:
   - Actions.
   - Initiating Actions.
   - Action steps.
4. Activate Pending Security Policy Changes.
5. Edit the *Start Performance Improvement Plan* business process to include the same security group on all relevant steps.

Result

You can create performance improvement plans for contingent workers.

Next Steps

Managers use the Start Performance Improvement Plan for Employee task to start a performance improvement plan for contingent workers.

Steps: Manage Performance Improvement Plans

Prerequisites

Complete the setup procedure for employee reviews.

Context

You can add and edit content, manage ratings and weightings, and track progress within the 4 employee review categories in Workday:

- Performance Reviews
- Development Plans
- Disciplinary Actions
- Performance Improvement Plans

In addition, Workday enables you to complete performance reviews and development plans using the Workday on iPad and Workday on iPhone apps. Managers can also track review progress directly from the Team Profile on the iPad.

Steps

1. Start Employee Reviews on page 1658.

   See Concept: Employee Reviews on page 1652.
2. Pause Employee Review After Set Review Content Step on page 1663.
3. (Optional). Access the Mass Advance Business Process task.

   Advance any performance improvement plan business processes.

   Security: *Business Process Administration* domain in the System functional area.
4. Track the status of employee reviews with reports.

   See Concept: Track Employee Reviews on page 1668.
5. Print Employee Reviews on page 1663.

Employee Review Ratings and Weightings

Concept: Ratings and Weightings

In Workday, you can assign a rating to either an individual item or the entire section for these sections:

- Accomplishments
- Competencies
- Goals
- Questions
- Responsibilities

You can also assign a rating to the entire employee review, which summarizes all the section ratings.

You can assign different rating scales to different sections in the same template. The Workday-calculated overall rating will normalize the rating scales. Assigning a rating value of *Not Applicable* excludes these items from calculation.

You can also assign a weight to each individual item and section, specifying that total weight:

- Must equal 100.
- Has no restriction.

Workday uses these 2 values to generate a section summary rating and overall rating.

When you pull individual goals into a review, you can override the existing goal weights if the template requires the total goal weight to equal 100. Workday updates the My Goals report to reflect the new weighting after the review is complete.

Note: If you change the status of a weighted section to *Not applicable* when *Weighting must total 100*, adjust the weighting of all weighted items to a total value equal to 100.

Related Information

Tasks

Steps: Create Employee Review Templates on page 1627

Create Rating Scales on page 1644

Create Proficiency Rating Scales on page 123

Concept: Hide Section Weights and Ratings

In employee reviews configured to use Guided Experience, you can hide section weights or ratings so they're not visible to employees and managers by configuring the template section settings using the Configure Employee Review Template task. You can hide section weights or ratings in these sections:

- Accomplishments
- Competencies
- Goals
- Questions

To hide section weights, you must enable calculated ratings in the Overall section, enable 1 of the options in the Section Rated field, and select the Hide Section Weight check box.

You can also hide ratings in a template section of employee reviews when you configure the employee review template to use calculated ratings. Workday hides or displays section ratings depending on your settings:

- When you set the Section Rating field to *Ratings with No Overrides*, Workday hides the ratings in the section.
- When you set the Section Rating field to *Ratings with Overrides* or *Prompt for Rating*, Workday displays both the rating and the calculated rating in the Summary section. You can hide the section ratings by clearing the Show Calculated Rating Value and Show Mapped Calculated Section Rating check boxes.

Reference: Employee Review Template Weightings Fields on page 1642

Example: Calculating Section Summary Ratings

This example shows how you calculate section summary ratings for goals.

Context

The formula for calculating the section summary rating is:

(Sum of each (rate X associated weight)) / total weight

Example: You're using a 5 Point Rating Scale to evaluate goals that use goal rating and weighting:

Goal	Rate	Weight = 100	Weight = Unlimited
1	4.0	25	50
2	4.0	25	25
3	3.0	50	50

The calculation when using weighting equals 100 is:

((4 X 0.25) + (4 X 0.25) + (3 X 0.5)) = 3.5

The calculation when using weighting equals unlimited is:

((4 X 0.5) + (4 X 0.25) + (3 X 0.5)) / (0.5 + 0.25 + 0.5) = 3.6

Note: In these examples, if Goal 3 had a rating that was set up on the rate table with the Exclude From Calculations check box, the calculation would be:

(4 + 4) / 2 = 4

To determine the Section Summary Rating, Workday maps the 3.5 or 3.6 values to a 4 - Exceeds Expectations rating on the 5 Point Rating Scale:

Rating Name	Rating Value	Begin Range	End Range
1 - Does Not Meet Expectations	1	0	1.49
2 - Needs Improvement	2	1.5	2.49
3 - Meets Expectations	3	2.5	3.49
4 - Exceeds Expectations	4	3.5	4.49
5 - Company Maker	5	4.5	5

Related Information

Tasks

Steps: Create Employee Review Templates on page 1627

Create Rating Scales on page 1644

Example: Calculating the Overall Rating Using Mapped Section Ratings and Weightings

This example shows how to calculate the overall rating using mapped section ratings and weightings. To enable this option, don't select the Calculated Rating uses Section Rating Precision check box in the Overall section on the employee review template.

Context

The calculation for the Overall Rating is the same formula as the calculation for the Section Summary Rating:

(Sum of each (rate X associated weight)) / total weight

When you use different rating scales in your sections, Workday normalizes those section summary ratings to the rating scale used by the Overall section. That formula is:

Normalized section rating = overall section's lowest rating scale value + ((section summary's rating - section summary's lowest rating scale value) X (overall section's highest rating scale value - overall section's lowest rating scale value) / (section summary's highest rating scale value - section summary's lowest rating scale value))

Example: You have 3 sections that use section weighting (Accomplishments, Goals, and Questions) and an Overall section. You can use this data to calculate the Overall Rating:

Table 5: Rating Scales

Rating Scale Name	Rating Name	Rating Value	Begin Range	End Range
3 Point Scale	1 - Does Not Meet Expectations	1	0	1.49
	2 - Meets Expectations	2	1.5	2.49
	3 - Exceeds Expectations	3	2.5	3
5 Point Scale	1 - Does Not Meet Expectations	1	0	1.49
	2 - Needs Improvement	2	1.5	2.49
	3 - Meets Expectations	3	2.5	3.49
	4 - Exceeds Expectations	4	3.5	4.49
	5 - Company Maker	5	4.5	5

Table 6: Employee Review

Section	Rating Scale	Section Weight	Mapped Rating
Accomplishments	5 Point Scale	40%	4
Goals	5 Point Scale	40%	3
Questions	3 Point Scale	20%	2
Overall	5 Point Scale	*not applicable*	*Calculated*

The normalized rating for each section is:

Section	Calculation for Normalized Rating
Accomplishments	1 + ((4 - 1) X (5 - 1) / (5 - 1)) = 4
Goals	1 + ((3 - 1) X (5 - 1) / (5 - 1)) = 3
Questions	1 + ((2 - 1) X (5 - 1) / (3 - 1)) = 3

Workday can use the standard formula to calculate the Overall Rating:

(4 X 0.4) + (3 X 0.4) + (3 X 0.2) = 3.4

Next, Workday maps 3.4 to the corresponding rating on the 5 Point Scale:

3.4 maps to 3 - Meets Expectations. So the Overall Rating is 3 - Meets Expectations.

Related Information

Concepts

Concept: Ratings and Weightings on page 1702

Tasks

Steps: Create Employee Review Templates on page 1627
Configure the Overall Section on page 1632

Example: Calculating the Overall Rating Using Calculated Section Ratings and Weightings

This example shows how you calculate overall rating of a worker using calculated section ratings and weightings.

Context

The calculation for the Overall Rating is:

(Sum of each (rate X associated weight)) / total weight

When you use different rating scales in the sections, Workday normalizes those section summary ratings to the rating scale used by the Overall section.

Note: For this calculation method, Workday uses the calculated section summary rating and not the mapped rating.

The formula for that is:

Normalized section rating = overall section's lowest rating value + ((section summary's rating - section summary's lowest rating value) X (overall section's highest rating value - overall section's lowest rating value) / (section summary's highest rating value - section summary's lowest rating value))

Example: You have 3 sections that use section weighting (Accomplishments, Goals, and Questions) and an Overall section. We can use this data to calculate the Overall Rating:

Table 7: Rating Scales

Rating Scale Name	Rating Name	Rating Value	Begin Range	End Range
3 Point Scale	1 - Does Not Meet Expectations	1	0	1.49
	2 - Meets Expectations	2	1.5	2.49
	3 - Exceeds Expectations	3	2.5	3
5 Point Scale	1 - Does Not Meet Expectations	1	0	1.49
	2 - Needs Improvement	2	1.5	2.49
	3 - Meets Expectations	3	2.5	3.49
	4 - Exceeds Expectations	4	3.5	4.49
	5 - Company Maker	5	4.5	5

Table 8: Employee Review

Section	Rating Scale	Section Weight	Calculated Rating
Accomplishments	5 Point Scale	40%	3.9
Goals	5 Point Scale	40%	3
Questions	3 Point Scale	20%	2.5
Overall	5 Point Scale	*not applicable*	*Calculated*

The normalized rating for each section is:

Section	Calculation for Normalized Rating
Accomplishments	1 + ((3.9 - 1) X (5 - 1) / (5 - 1)) = 3.9
Goals	1 + ((3 - 1) X (5 - 1) / (5 - 1)) = 3
Questions	1 + ((2.5 - 1) X (5 - 1) / (3 - 1)) = 4

Workday can use the standard formula to calculate the Overall Rating:

(3.9 X 0.4) + (3 X 0.4) + (4 X 0.2) = 3.56

Next, Workday maps 3.56 to the corresponding rating on the 5 Point Scale:

3.56 maps to 4 - Exceeds Expectations. So the Overall Rating is 4 - Exceeds Expectations.

To enable this option, select the Calculated Rating uses Section Rating Precision check box in the Overall section on the employee review template.

Related Information

Tasks

Steps: Create Employee Review Templates on page 1627

Configure the Overall Section on page 1632

Example: Calculating the Overall Rating Using Item Averaging

This example shows how to calculate the overall rating of a worker using item averaging. To enable this option, select the Calculated Rating uses Item Averaging check box in the Overall section on the employee review template.

Context

You can calculate an Overall Rating that is just a simple average of all individual items in an employee review, regardless of the section from which they belong. The Overall Rating calculation is:

Sum of each individual rate / # of items

When you use different rating scales in the sections, Workday normalizes the ratings to the rating scale used by the Overall section. The formula for that is:

Normalized section rating = overall section's lowest rating scale value + ((section summary's rating - section summary's lowest rating scale value) X (overall section's highest rating scale value - overall section's lowest rating scale value) / (section summary's highest rating scale value - section summary's lowest rating scale value))

Example: You have 3 sections: Accomplishments, Goals, and Questions. You can use this data to calculate the Overall Rating:

Table 9: Rating Scales

Rating Scale Name	Rating Name	Rating Value	Begin Range	End Range
3 Point Scale	1 - Does Not Meet Expectations	1	0	1.49
	2 - Meets Expectations	2	1.5	2.49
	3 - Exceeds Expectations	3	2.5	3
5 Point Scale	1 - Does Not Meet Expectations	1	0	1.49
	2 - Needs Improvement	2	1.5	2.49
	3 - Meets Expectations	3	2.5	3.49
	4 - Exceeds Expectations	4	3.5	4.49
	5 - Company Maker	5	4.5	5

Table 10: Employee Review

Section	Rating Scale	Item Rating
Accomplishments	5 Point Scale	4
Goals	5 Point Scale	3
Questions	3 Point Scale	2

Section	Rating Scale	Item Rating
Overall	5 Point Scale	*Calculated*

The normalized rating for each section is:

Section	Calculation for Normalized Rating
Accomplishments	1 + ((4 - 1) X (5 - 1) / (5 - 1)) = 4
Goals	1 + ((3 - 1) X (5 - 1) / (5 - 1)) = 3
Questions	1 + ((2 - 1) X (5 - 1) / (3 - 1)) = 3

Now Workday can use the formula to calculate the Overall Rating:

(4) + (3) + (3) / 3 = 3.333

3.333 maps to 3 - Meets Expectations on the 5 Point Scale used by the Overall section.

FAQ: Employee Reviews

How does content carry over when multiple employee reviews have the same review period end date?

You can move content from a review section with the most recent period end date to the same section type in the new review. When multiple reviews have the same period end date, content from the review with the most recent initiation date or completion date timestamp carries over to the new review.

Can I configure the employee self-evaluation and manager evaluation in the same step of the employee review business process?

For best results, we recommend that you configure the *Complete Self Evaluation* and *Complete Manager Evaluation* subprocesses as separate steps on these business processes:

- *Start Development Plan*
- *Start Disciplinary Action*
- *Start Performance Improvement Plan*
- *Start Performance Review*

Do employee review rules apply to supervisory organizations?

Workday applies employee review rules to employees, not organizations.

Example: Create an employee review rule called *Rule for 2000 Executive Management* that targets the 2000 Executive Management supervisory organization. Apply this rule in the *2000 Executive Org Review* template. Start a performance review for the 4000 Human Resources organization using the Start Performance Review for Organization task. Select the *2000 Executive Org Review* template.

Workday doesn't generate a review event for employees in the 4000 Human Resources organization because it's using a template that applies the *Rule for 2000 Executive Management* rule.

Can contingent workers participate in employee reviews?

Your organization can configure development items, disciplinary actions, performance improvement plans, and performance reviews to include contingent workers. If you configure employee reviews to include contingent workers, you can use the same tasks, reports, web services, and worklets for contingent workers as you do for employees. Contingent workers can use the Start My Development Plan and Start My Performance Review to self-start these review types.

Talent and Performance Calibration

Steps: Calibrate Talent and Performance Ratings

Prerequisites

Configure the Competencies section in the employee review template if you want to use a rating scale, not a proficiency scale.

Context

You can set up and manage calibration to compare and adjust employee talent and performance ratings. You can perform these types of calibration:

- Talent calibration places employees in a 2-rating matrix, for succession planning and employee development.
- Performance calibration distributes employees across a rating scale based on a single rating value from performance reviews.

Steps

1. Access the Launch Calibration task.

   Workers can only be part of 1 calibration event at a time. If your tenant has fewer than 10,000 workers (active or otherwise), you can see how many are eligible or ineligible for the calibration program in the selected organizations. You can also include subordinate organizations below the top level you select and your calibration program.

2. (Managers) Access the Calibrate Team task in their My Tasks.

   Managers receive an individual Calibrate Team task in their My Tasks for each organization they manage, unless an organization is a subordinate of another. As they work with this task, they can:

   - Drag and drop workers into boxes.
   - Select search facets to filter workers.
   - Zoom in or out of boxes.
   - Collapse or expand the side panels.
   - Hover over target icons in boxes to view target percentages, if available.
   - Toggle between the nBox view and the list view.
   - View worker preview cards and access-related actions.
   - View and manage the status of subordinate organizations that they can complete calibration on behalf of or send back inbox events.
3. (Optional) Hide Calibration Workers on page 1725.
4. Access the Facilitate Calibration report.

   HR Partners can view in-progress calibration events and calibrate employees. They can also manually advance tasks or send them back in the calibration process.

   Security: *Facilitate Calibration* domain in the Performance Enablement and Talent Pipeline functional areas.
5. Access the Manage Calibration report.

   HR or Talent Administrators can adjust for organizational, worker, and role changes that occur after launching calibration, and view the status of all tasks.

   Security: *Set Up: Calibration* domain in the Performance Enablement and Talent Pipeline functional areas.
6. Access the My Tasks item to submit the calibration.

   The HR Administrator submits the final calibration from My Tasks, after all managers submit their My Tasks items, or when the event is manually advanced.

Next Steps

View the final calibration values for employees using the Worker Calibration History and My Team's Calibration History reports.

Create custom reports to analyze in-progress calibration data.

Concepts

Concept: Manage Calibration on page 1726

Tasks

Create Custom Labels

Reference

The Next Level: Engaging Talent

Examples

Example: Calibration nBox Placement on page 1730

Configure Custom Organizations for Calibration

Prerequisites

Create assignable roles and security groups for the facilitator and the participants.

Context

Custom organizations enable you to calibrate talent and performance ratings for a group of workers when there isn't a supervisory organization that captures the desired employee structure.

Steps

1. Access the Maintain Organization Types report.
2. Click the Custom tab.

   Create custom organizations with multiple levels for calibration using a custom hierarchy that:

   - Is similar to a supervisory hierarchy where all organizations are of the same custom organization type.
   - Is similar to a cost center hierarchy where the organization hierarchy has a parent organization type that contains no workers and a child organization type that contains workers.
3. As you create the custom organization, consider:

Option	Description
Allows Hierarchy	Select if you want to conduct reorganizations and include them on the Manage Calibration report after launching calibration.
Allow Reorganization Tasks (like Move Workers, Assign Workers)	Select if you want to conduct worker changes and include them on the Manage Calibration report after launching calibration.
Show in Change Organization Assignments and Job Requisition	Select if you want to be able to conduct worker assignment changes and include them in the Manage Calibration report after launching calibration.
Position Assignment Unique	(Required for custom organizations for calibration.) Select to limit workers to 1 custom organization in the hierarchy for calibration. Select this value for custom organization types that can contain workers. Workday requires this option because calibration needs custom organizations to have workers belong to a singular organization to properly execute the calibration.
Rolls Up Organization Type	(Optional) Enter the rollup organization type if your custom organization hierarchy contains 2 organization types.

   You can't change these settings if there's an in-progress Calibration event on the custom organization type. You can't configure membership rules for custom organizations if you plan to perform calibration on the members of the organization.

Next Steps

Create a *Launch Calibration* business process definition that uses this custom organization.

Setup Considerations: Calibration nBox Reports

You can use this topic to help make decisions when planning your configuration and use of the nBox report feature for calibration. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

An nBox report is a 2-dimensional grid where administrators can adjust the placement of workers, based on predetermined ratings. When used in Calibration to evaluate talent and performance ratings, nBox reports enable managers to view, share, and adjust the ratings of their workers.

When you create an nBox report, link it to a calibration program, and launch calibration, Workday enables you to update the data in that calibration program until your calibration event is complete.

Business Benefits

When you use nBox reports in calibration, you can:

- Design and deploy performance reviews for your employees that best fit the needs of your organization, including a calibration process to ensure fair ratings for all workers across your organization.
- Identify candidates for succession planning.
- Perform talent or performance calibrations using real-time reports for informed decision-making across your organizational hierarchy.

Use Cases

- Managers can assess their workers' performance and potential to determine their placement in organizational succession planning.
- HR Partners and managers can share the calibration assessment of workers.

Questions to Consider

Questions	Considerations
What attributes can I customize in an nBox report?	You can customize these aspects of the nBox report: • Custom row and column values. • Rating values to calibrate. • Worker display options. • Fields for the list view. • Search facets to filter workers. • Tenant calibration values mapping in the grid. • Box labels in the grid.

Questions	Considerations
What types of users can assist managers with their Calibrate Team tasks in My Tasks?	Users such as Talent Administrators, HR Partners, or Talent Partners can assist managers when you add them to user-based or role-based security groups on the *Facilitate Calibration* domain security policy. These users can access the Facilitate Calibration task to assist managers with their Calibrate Team task in My Tasks.
What's the difference between talent and performance reviews?	Talent reviews are forward-looking and take into account the worker's potential, career trajectory, and placement in succession planning. Performance reviews evaluate the worker's past performance over a specific period of time.
What's the difference between an in-progress calibration nBox report and a post-calibration nBox report?	Workday treats calibration events as in-progress events until they're complete. In-progress calibration events use a dynamic nBox report, which enables you to update the report's contents. When a calibration event is complete, you can use a talent matrix nBox report to view the calibration results using the most recent data available within a static report. You can use the Rating - Current report field on the Talent Matrix Placement nBox report to view most recent calibration data.

Recommendations

- Design your nBox reports using the Workday-delivered Talent Matrix reports available in your tenant.
- Determine the drillable fields and detail data you would like to include in your nBox reports to display additional details about workers.
- Determine the facets you'd like to configure on your nBox reports. The facets you select impact the analysis you can perform on calibration results. You can't include additional facets on a completed calibration event.
- For large-scale calibration events, Workday recommends running routine performance tests on nBox report definitions. Consider the performance impact of using calculated fields as you run performance tests.

Requirements

Don’t copy or import nBox reports into a tenant. You can corrupt the report, making it unusable in calibration. Instead, create a new calibration program and link it to an nBox report.

Limitations

- You can configure only 1 value to each axis of an nBox report for calibration.
- You can't copy or import nBox reports into a tenant.

Tenant Setup

You can disable calibration quick tips information for your tenant on the Edit Tenant Setup - System task.

Security

Configure these domains in the System functional area:

- *Custom Report Administration*

- *Custom Report Creation*

Business Processes

No impact.

Reporting

Reports or Dashboards	Considerations
Calibration Dashboard	Configure this dashboard to enable: • HR Administrators or Talent Administrators to access the calibration values of workers for a completed calibration event. • Managers to view and track the status of their organization's in-progress calibration events.
Manage Calibration	Displays the count of events in each calibration status and the changes made to the organization, workers, and roles. Drill into the counts to view more details for each status during calibration.

Consider setting up:

- The Indexed In Progress Worker Calibration Placements report data source to enable users to access the calibrated values of a worker who is part of an in-progress calibration event.
- The Indexed In Progress Worker Calibration Events report data source to enable users to view updated calibration values on nBox reports in real-time. All nBox reports use this report data source to launch calibration events.

Integrations

No impact.

Connections and Touchpoints

Features	Considerations
Employee Reviews	Set up to enable performance reviews as an employee review type within calibration to review, compare, adjust, and plot worker placements in the calibration nBox report.
Talent Reviews	Set up to include talent review criteria, based on employee eligibility rules and dates defined in the talent review template, into the calibration program to display updated employee potential assessment ratings post calibration.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Concepts

Concept: The Employee Review Process on page 1665

Tasks

Steps: Set Up Reviews with Calibration on page 1688

Create Calibration nBox Reports

Prerequisites

Security:

- *Custom Report Creation* domain in the System functional area.
- *Worker Data: Calibration* domain in the Performance Enablement and Talent Pipeline functional areas.

Context

Create the framework for talent and performance calibration by customizing these features in a calibration nBox report:

- Rating values to calibrate.
- Worker display options.
- Fields for the list view.
- Search facets to filter workers.

Facet values are based on worker attributes when calibration launches.

Steps

1. Create or copy a calibration nBox report using the Indexed In Progress Worker Calibration Placements data source with 1 of these tasks:

    - Create Custom Report
    - Copy Custom Report
    - Copy Standard Report to Custom Report

    Workday recommends using the Create Custom Report task when building your nBox reports. You can use the same calibration nBox report for multiple calibration programs if you don't change the calibration values of the nBox report.

    Note: Workday recommends against importing nBox reports for use in calibration.
2. On the Matrix tab, select the calibration values and calibration nBox report layout.
    a) In the Row Grouping section, select a calibration field as a Group by Field.

       For performance calibration, you must select *Calibration: Default Performance Axis*.
    b) In the Column Grouping section, select another calibration field as a Group by Field.

       For performance calibration, this field typically is *Calibration: Overall Performance Rating*.
    c) In the nBox Display section, specify whether to display an Image only or Image and text for workers in the nBox view.
       Workday displays a:

        - Generic image for workers who don't have photos.
        - Crowd icon when a box has too many workers to display individual images.

       Each box displays up to 2,000 images.

3. On the Drill Down tab, configure the drill-down fields to display in the calibration list view.

   Detail Data fields define the columns in the list view. These fields display additional information about workers. Your nBox report must include the Worker field. Other useful fields include:

   - Photo.
   - Organization.
   - Worker's Manager.
   - Time in Position.
   - Retention.
   - Succession Plans.
4. On the Prompts tab, add:

Field	Default Type	Required
Calibration Node for nBox	No default value	Yes

5. On the Share tab, select 1 of these options to share the report with calibration participants:

   - Share with all authorized users provides access based on the security groups defined on the *Worker Data: Calibration* domain.
   - Share with specific authorized groups and users limits access to selected Authorized Groups or Authorized Users. The groups and users should match the security groups that have permission in the Shared Participation step on the *Launch Calibration* business process.
6. On the Advanced tab, configure search facets for the calibration activity.

   Facet Filters enable participants to navigate the target population and filter workers on criteria such as:

   - Supervisory organization.
   - Management chain.
   - Talent pool.

Result

You can update the nBox report definition after launching calibration, so you can adjust it to improve performance as you conduct calibration. To improve the performance of the Calibrate Team and Facilitate Calibration tasks:

- Define your nBox report so it only includes fields in Detail Data and necessary facets for the calibration decision process.
- Minimize the use of calculated fields in your nBox report definition.
- Limit the number of organization levels in the Restrict Organization Level View prompt to the fewest levels you require.

Next Steps

- Configure mappings and labels with the Set Up nBox Report task.
- To modify the calibration nBox report definition, use the Edit Custom Report task.

Related Information

Tasks

Steps: Calibrate Talent and Performance Ratings on page 1709

Set Up Calibration nBox Reports

Prerequisites

- Create the Calibration nBox report.

- Security: *Custom Report Administration* domain in the System functional area.

Context

The calibration values you map onto an nBox report determine the report fields that Workday updates after calibration is complete. You can:

- Map tenanted calibration values to the nBox grid.
- Define box labels.
- Add help text to guide managers with employee placement during the calibration activity.

Example:

- The *Calibration: Potential* value updates the *Potential* field.
- The *Calibration: Talent Based Performance Rating* value updates the *Talent Matrix Review Rating* field.

Complete these steps for every nBox report you use for calibration.

Steps

1. Access the Set Up nBox Report task.
2. Select the calibration nBox report you want to configure.

   Don't use nBox reports referenced in ongoing calibration events. Instead, Workday recommends that you create a new calibration program and link it to a new nBox report with the updated calibration values.
3. In the Define the Rows and Define the Columns sections, add labels and map calibration values.

   If an nBox report is used in a completed or in-progress calibration event, don’t change the values in the Define the Rows and Define the Columns sections.

   In the Source Value, map a single field value in your Workday tenant to each column and row in the grid. The source field is the Group By Field that you selected for rows in the calibration nBox report definition. The Source Value represents the final value that writes back to the worker after Calibration is completed.
4. (Optional) Click Continue and define box names and help text for the calibration nBox report.

   Each row represents a box in the nBox grid with the row and column mappings shown. Each box is labeled with the Box Name and displays the Help Text when you hover over the label.

Example

Define the Rows

Field: *Calibration: Overall Performance Rating*

Row Axis Label: Performance

Row Label	Source Values
Exceeds	4 - Exceeds Expectations
Meets	3 - Meets Expectations
Below	1 - Doesn't Meet Expectations

Define the Columns

Field: *Calibration: Potential*

Row Axis Label: Potential

Column Label	Source Values
Low	Placement Issue
Medium	Correctly Placed
High	High Potential

Define the Box Names

Row	Column	Box Name
Performance: Exceeds	Potential: Low	Workers
Performance: Exceeds	Potential: Medium	Contributors
Performance: Exceeds	Potential: High	Stars
Performance: Meets	Potential: Low	Blockers
Performance: Meets	Potential: Medium	Transitionals
Performance: Meets	Potential: High	Emergers
Performance: Below	Potential: Low	Detractors
Performance: Below	Potential: Medium	Placeholders
Performance: Below	Potential: High	Latents

Next Steps

When you create the calibration program, select the configured calibration nBox report in the nBox field.

Related Information
Tasks
Steps: Calibrate Talent and Performance Ratings on page 1709

Define Calibration Program Rules

Prerequisites

Security: *Set Up: Calibration* domain in the Performance Enablement or Talent Pipeline functional area.

Context

Create condition rules to define worker eligibility for calibration programs. You can use the rule to restrict the worker population in the calibration event. Calibration automatically excludes contingent workers and inactive organizations, and only includes workers' primary positions. If a condition rule changes after calibration launches, the Manage Calibration task only includes worker changes that meet the revised condition rule.

Calibration rules are similar to employee review and talent review rules. The rule evaluates whether employees match the criteria you specify, such as hire date. You can also create categories to organize calibration rules with the Maintain Condition Rule Categories task.

If your calibration program rules limit the workers that can participate in calibration, Workday evaluates these rules every time you run the Manage Calibration report. If your program uses a rule with many conditions or calculated fields, this task might take time to load.

Steps

1. Access the Create Calibration Program Rule task.
2. Enter a Description to distinguish the rule.
3. (Optional) Select a rule Category.
4. To copy an existing condition, select a rule from the Copy Condition from Rule prompt.
5. In the Rule Conditions grid, build a condition rule to identify employees eligible for a particular calibration program.

Next Steps

- When you create the calibration program, select this rule in the Applies To field.
- To modify the rule, use the Edit Calibration Program Rule task.

Related Information

Tasks

Steps: Calibrate Talent and Performance Ratings on page 1709

Create Business Process Condition Rules

Reference

The Next Level: Overview of Primary Position Designation Impact

Set Up Calibration Programs

Prerequisites

- Set up the calibration nBox report.
- Security: *Set Up: Calibration* domain in the Performance Enablement or Talent Pipeline functional area.

Context

A calibration program defines each aspect of the calibration activity, including:

- Target population rules.
- Calibration nBox report.
- Calibration value mappings that determine the default position of the worker on the calibration nBox report when you launch calibration.
- Any target box percentages.
- Default calibration values.

You can create any number of calibration programs. You can also use the same program for multiple calibration events.

Steps

1. Access the Create Calibration Program task.
2. To label calibration tasks and events, enter a Program Name.

3. (Optional) Specify a Due Date to use to create query alerts that notify managers or other roles when the due date is near. This date doesn't end the calibration event.
4. Select the nBox report.
5. As you complete the task, consider:

Option	Description
Hide nBox Summary View	This option hides the nBox summary view on the Submit Calibration summary page, improving calibration program performance.
Applies To	Select a rule that determines employee eligibility for the calibration program. You can create the options in this prompt using the Create Calibration Program Rule task. If you leave this field blank, the program includes all eligible employees in the organization that you select at launch.
Unplotted Help Text	You can provide information about unplotted workers not populated in the grid view.
Allow update of Assess Potential during Calibration	This option adds up to 6 employee attributes to the calibration list view: • Achievable Level. • Loss Impact. • Notes. • Potential (if not used as an axis in the calibration nBox report). • Retention Risk. • 2 configurable Potential Assessment Value fields you can set up using the Maintain Talent Matrix Setup task.
Restrict Organization Level View	To restrict the number of workers displayed in the nBox and list views of a calibration session, enter a value of *1* or *2*. A value of: • *1* displays the manager’s direct reports and workers 1 level below. • *2* displays the manager's direct reports and workers 2 levels below. • *Zero* displays all workers in the organization. A worker with a role at multiple levels of the organization, such as an HR business partner, can see 1 or 2 levels below the lowest level. This worker can also see all levels above the lowest level.
Autocomplete First Participant	You can skip the first participant when calibration launches.
Select Validation for Unplotted Worker	You can configure 2 types of notices for Workday to alert calibration participants if any workers remain unplotted using the Restrict Organization Level View population size.

Option	Description
	Select Warning to warn calibration participants with an alert that at least 1 or more workers are unplotted, but allow them to proceed. Select Error to stop calibration participants with an alert that at least 1 or more workers are unplotted, and require they fix the error before submitting.
Select Validation for Target Percentage Population	You can configure 2 types of notices for Workday to alert calibration participants if any target percentages populations aren't met in each box using the Restrict Organization Level View population size. Select Warning to warn calibration participants with an alert that any target percentages populations aren't met in each box, but allow them to proceed. Select Error to stop calibration participants with an alert that any target percentages populations aren't met, and require they fix the error before submitting.

6. (Optional) On the Calibration Value Mapping tab, map rating values to the source field defined in nBox setup to define initial worker placement.

   Leave this tab blank if you want to start the calibration activity with all workers unplotted.
7. (Optional) Click Target Percentages to recommend the percentage of the target population to place in each box.

   You can set targets for all boxes or just a subset of boxes.

   Workday converts the percentages into numbers when it renders the calibration nBox report, but only enforces the percentages if you configure the Select Validation for Target Percentage Population field to issue a warning or error message. Workday also rounds down the target numbers to provide more conservative estimates.
8. (Optional) Click Calibration Default Values to select different rating fields as the basis for initial worker placement.

   You can override the default values for:

Default Value	Report field Used if No Value Specified
Calibration: Overall Performance Rating.	Rating- Current
Calibration: Talent Based Performance Rating.	Talent Matrix Review Rating
Calibration: Potential.	Potential
Calibration: Row Section Rating.	n/a

Default Value	Report field Used if No Value Specified
Calibration: Column Section Rating.	n/a

Select another field from the Default value to choose prompt.

If you select *Calibration: Column Section Rating* or *Calibration: Row Section Rating* on the calibration nBox report, you must select:

- *Review Section Rating - Most Recent* as the default value.
- A Workday-delivered or tenanted section from the Employee Review Section Type prompt.

Note: Repeat Step 6 to map the new rating values to the calibration nBox report.

Example
You want to calibrate ratings from completed performance reviews, but your organization uses different employee review templates and rating scales to evaluate different groups of workers. To pinpoint which review template and rating scale is the basis for initially plotting workers on the calibration nBox report, override the default value for the Calibration: Overall Performance Rating field with Review Rating - Current Configured. This field finds the most recent review template and normalizes performance ratings based on your settings in the Maintain Employee Review Setup task.

Next Steps

- Launch the calibration program.
- To view the number of launched sessions, access the View Calibration Program report.
- To change or inactivate a calibration program, use the Edit Calibration Program task.
- To copy a calibration program so you can reuse it for another calibration event, use the Copy Calibration Program task.

2022R2 What's New Post: Calibration

Steps: Set Up Calibration

Prerequisites

Make sure there's an employee assigned to every role on all organizations participating in calibration, such as:

- Managers as calibration participants.
- HR Partners as calibration facilitators.
- HR Administrators as calibration controllers.

Context

You can set up calibration to enable managers, HR partners, and talent administrators to evaluate your workers' performance and assess their growth potential within your organization. You can launch a calibration event by supervisory or custom organization.

Steps

1. (Optional) Determine if your calibration event is large enough that you need to work with the Workday Production Readiness team.

   See Workday Community: Production Readiness: Large Volume Events Best Practices for guidelines about opening a Production Readiness case.
2. Set Up Assignable Roles.

   Create assignable roles for:

   - Managers who use the Calibrate Team task in their My Tasks to calibrate their team members.
   - HR Partners who use the Facilitate Calibration task to calibrate workers.
   - Talent Administrators who use the Manage Calibration task to oversee the entire calibration process and complete the final calibration submission.
3. (Optional) Create Role-Based Security Groups.

   As you complete this task, create:

   - A security group hierarchy that is similar to your company's management chain to calibrate using a custom organization.
   - A role-based security group for managers so they can view employees in levels below their direct reports.
   - Role-based security groups for HR Partners and Talent Administrators.
4. (Optional) Configure Custom Organizations for Calibration on page 1710.
5. Edit Business Process Security Policies for these business processes:

Business Process	Recommendations
Launch Calibration	• Configure the initiating action on the *Launch Calibration* business process to include security groups that you intend to delegate any steps to. • Select the *Security Group* that you want to act as the calibration facilitator in the *View All* action under the Who Can Do Actions on Entire Business Process section. • Add users in the HR Administrator role to these security groups.
Worker Calibration	• Add security groups to actions in the Who Can Do Actions on Entire Business Process section. • Select the Security Group for the Rescind action. • Add users in the HR Partner role to these security groups.

6. Activate Pending Security Policy Changes.

7. From the related actions menu of the *Launch Calibration* business process, select Business Process > Edit Definition.
    a) Add *Shared Participation* as the Type and Specify the *Calibration Participation Details* step. You can only have 1 shared participation step in your business process definition.
    b) Select *Configure Participation* in the Calibration Participation Details step.
        - You can create custom *Launch Calibration* business process definitions for supervisory organizations and assign specific groups such as HR Administrators and HR Partners. You can create separate business process definitions for each organization type.
        - Select *Supervisory* or *Custom* from the Organization Type to Use prompt and specify 1 security group as the participant in the Group prompt. Participants in these security groups receive inbox notifications for the calibration events that they manage.
        - The Group prompt displays the role-based security groups with permission on the *Worker Data: Calibration* security domain.
    c) (Optional) Add an approval step after the *Launch Calibration* initiation step to approve the process initiation before starting calibration. Assign this step to someone with access to all employees in the calibration, such as an HR Administrator.
8. Create Calibration nBox Reports on page 1715.
9. Set Up Calibration nBox Reports on page 1716.
10. (Optional) Define Calibration Program Rules on page 1718.
11. Set Up Calibration Programs on page 1719.

    Select a calibration nBox report and configure the calibration program.
12. (Optional) Access the Maintain Calibration Flags task.

    Define the Calibration Flags that display in the calibration list view in the Calibrate Team task in your My Tasks.
13. (Optional) Set up an activity stream to support calibration.

    Access the Edit Tenant Setup - System task and select the *Activity Stream for Calibration* option in the Activity Stream Settings field. This setting enables calibration participants to enter and view comments on the worker for in-progress calibration events in the activity stream. Workday recommends that if you enable activity streams in calibration, you instruct managers to frequently refresh their Workday My Tasks.

    See Steps: Enable Activity Stream.

Result

Users in this security group receive the Calibrate Team tasks in their My Tasks to calibrate workers in their organization when you launch the calibration. Managers who manage multiple organizations receive:

- 1 instance of the Calibrate Team task, if the organizations have a hierarchical relationship where 1 is the parent and the other is subordinate.
- Individual instances of the Calibrate Team task, for the organizations that don't share the same parent organization.

Next Steps

Create Calibration nBox reports and configure them for calibration.

2022R2 What's New Post: Calibration

Hide Calibration Workers

Prerequisites

- Create the calibration nBox report with the required filter and prompt conditions.
- Set up and launch the calibration program.
- Security: *Worker Data: Calibration* domain in the Performance Enablement or Talent Pipeline functional area.

Context

During calibration sessions, you can hide workers to prevent them from seeing their own or their peers' placement. This option enables a senior manager or HR Partners to host calibration sessions that focus on lower levels of the organization hierarchy while keeping direct reports out of view. Managers can then roll up the calibration session results for the entire organization to a superior level.

When you remove workers from view, they remain hidden for the duration of the calibration session, even if you save and come back later. The box counts exclude hidden workers.

Steps

1. Access the Calibrate Team task in your My Tasks or the Facilitate Calibration task, depending on your role in calibration.
2. Select Actions > Hide Workers.
3. Select the Workers to remove from view and click Hide Workers.

Next Steps

Unhide the workers before submitting calibration.

Related Information
Tasks
Steps: Calibrate Talent and Performance Ratings on page 1709
Create Calibration nBox Reports on page 1715

Concept: Calibration nBox Placement

Placing workers on the nBox report enables you to view, compare, and adjust employee talent and performance ratings. You can see both your direct and indirect reports in the calibration nBox report. You can't plot your indirect reports until after their direct manager plots them or the facilitator completes on behalf of the direct manager. Workday saves your work after every change, displays a timestamp, and updates both the nBox and list views.

The set of employees you see in the calibration nBox report and list views depends on the configuration of the Restrict Organization Level View field on the Create Calibration Program task. The larger the number of employees you can see, the more time it takes to display the nBox report.

All managers in the hierarchy below you must complete their calibration tasks before you can submit yours. Workday doesn't automatically send managers a notification to their My Tasks when managers below them submit the Calibrate Team task in their My Tasks. Set up custom notifications in the Launch Calibration BP definition to notify the participants when calibration tasks actions occur. Review worker placements directly in your calibration nBox report.

If you select the Allow Update of Assess Potential during Calibration check box on the Create Calibration Program task, use the list view to update employee potential attributes. If you use potential as an axis in Calibration, you can't evaluate it as a standalone field when you enable Assess Potential in Calibration.

If you select a calibration program for talent or performance reviews with calibration:

- On the Start Performance Review for Organization task, Workday pulls in the manager's overall rating and potential assessment (if configured) from the review into the calibration nBox report.
- On the Start Talent Review for Organization task, Workday pulls in the potential assessment from the review into the calibration nBox report.

Related Information
Examples
Example: Calibration nBox Placement on page 1730

Concept: Manage Calibration

Use the Manage Calibration report to account for changes in the organization hierarchy, workers, and role changes during the calibration process. Run this report as often as needed to capture the changes as they occur. If a change occurs that you don't want to account for in calibration, don't process the changes. You can submit calibration without processing the changes in the Manage Calibration report.

Workday runs the scheduled background job that updates the data for the Manage Calibration report 3 times a week early morning PST on Mondays, Wednesdays, and Fridays.

Organization and Worker Calibration

The Manage Calibration report displays the count of events in each calibration status and the changes made to the organization, workers, and roles. Drill into the counts to view more details for each status. Click Process Organizations, Process Workers, or Role Change to process the changes to reflect them in calibration. If you don't process the changes, calibration continues as if they didn't occur.

Calibration supports these worker changes with effective dates that occur on or after the date the calibration launched:

Worker Changes	Supported Organization Types
Hire an employee.	Supervisory.
Terminate an employee.	Supervisory and Custom.
Change an employee's job.	Supervisory.
Move an employee to a different organization.	Supervisory and Custom.
Assign an employee to an organization.	Custom organizations where Show Change in Organization Assignment is Yes on the Maintain Organization Types task.

Calibration supports these organization changes with effective dates that occur on or after the date the calibration launched:

Organization Changes	Supported Organization Types
Assign superior organization.	Supervisory and Custom where Allows Hierarchy is Yes on the Maintain Organization Types task.
Create subordinate organization.	Supervisory and Custom where Allows Hierarchy is Yes on the Maintain Organization Types task.
Divide organization.	Supervisory and Custom where Allows Hierarchy is Yes on the Maintain Organization Types task.

Organization Changes	Supported Organization Types
Inactivate organization.	Supervisory and Custom.
Activate organization.	Supervisory and Custom where Allows Hierarchy is Yes on the Maintain Organization Types task.
Assign included organization.	Custom organizations that are container organizations without workers.

Worker and organization changes that happen through events not listed are ineligible for processing in the Manage Calibration report. The Manage Calibration report doesn't account for rescinded worker or organization events after processing them.

When you process organization changes for a worker, Workday:

- Updates the Calibrate Team task.
- Creates, removes, or changes the task as required depending on whether the manager is already participating in calibration.

When you process worker changes in an organization, Workday:

- Adds or removes workers from their manager's Calibrate Team task as appropriate.
- Unprocessed workers remain in their previous manager's nBox.

Workday recommends you process organization and worker changes 1 step at a time. Example: Add an organization and then process the change, and then move workers into a new organization and process those changes. Performing multiple events first and then processing them can cause unexpected results.

If you launch calibration and an event occurs after launch and is later rescinded, the Manage Calibration report doesn't display the event. Example: If you launch calibration for Organization A, and you later move Worker1 to Organization C, but you later rescind the move, Workday doesn't account for the change in the Manage Calibration report. But if Worker2 is moved after you launch calibration, Workday will display the move when you later run the Manage Calibration report.

Reassign Calibration

If there's a role change with an effective date on or after launching calibration, you can reassign the Calibrate Team task to the new manager. In the Manage Calibration report, click Reassign Tasks to change the employee roles for calibration using the Manage Role changes under Calibration task. To manage role changes, you must be included in the *Business Process Administration* domain. You can only reassign My Tasks tasks to workers in the same security group that have a role on the organizations. This ensures that they calibrate the same workers.

Ad hoc Calibration

Workday recommends using the Process Workers button on the Manage Calibration report to add or remove workers ad hoc from in-progress calibration events. You can also use the report to override Calibration Program rules and Employee Review Template rules when adding or removing workers. To add workers ad hoc, they must be a part of the supervisory organization that's included in the calibration hierarchy.

When you add a worker ad hoc to an in-progress calibration event launched with a performance or talent review, Workday automatically creates a corresponding review for the worker. You can only add or remove workers who belong to the supervisory organization included in the calibration event.

If you remove a worker ad hoc from a calibration event with an in-progress performance or talent review, you must cancel their review.

You can't ad hoc add terminated workers back into an in-progress calibration event.

Note:

Workers terminated after calibration launches continue to display in the calibration event, enabling you to calibrate them.

Use the Manage Calibration report to remove terminated workers from appearing in all nBox reports.

Workday recommends running the Manage Calibration report frequently to prevent an accumulation of worker, organization, and role changes. Don't process the changes if you don't want the change reflected in the calibration event. Example: if a new hire is too new to calibrate.

Concept: Calibration Facilitation

Managers receive Calibrate Team tasks in their My Tasks and complete the calibration for their team members. Workday doesn't support managers delegating Calibrate Team tasks. HR Partners or other users can assist managers with in-progress calibration events by using the Facilitate Calibration task to:

- Plot employees in the nBox.
- Save faceted searches within the nBox.
- Complete calibration events on behalf of a manager.
- Send back an My Tasks item after pulling it forward.

Users can access the Facilitate Calibration task when they have:

- View All permission on the *Launch Calibration* business process security policy.
- View and Modify permission on the *Facilitate Calibration* security domain.

You can use role-based security groups (unconstrained) and role-based custom security groups in this domain.

When you access the Facilitate Calibration task:

- Only in-progress calibration events that contain at least 1 organization where you have a role display in the Calibration Event prompt.
- The organizations prompt displays the organizations that you have a role on for the selected calibration event.
- If the selected organization isn't on the hierarchy's lowest level, you can calibrate workers in the selected organization and its subordinates.
- The facilitator sees the nBox view for the selected organizations and has the ability to move employees' calibration placements.

Depending on the manager and hierarchy configuration, facilitators might see more organizations than they selected. If multiple organizations have the same manager where an organization is subordinate to the other, the facilitator always sees the employees for all organizations. This facilitator's nBox matches the manager's nBox. Create a facet to filter the workers on the nBox.

Example: To give Shelly, an HR Partner, facilitator access to her organization's calibration event, add her security group to:

- The *View All* action of the *Launch Calibration* business process security policy.
- The *Facilitate Calibration* security domain.

Calibrate Team Members

Use the Facilitate Calibration task to calibrate workers for an in-progress calibration in the selected organization.

You can drag and drop workers into the nBox view to calibrate them the same way managers would from the Calibrate Team task in their My Tasks. You can hide selected workers in calibration to prevent them from seeing their placement or their peers' placement during a calibration session.

Complete on Behalf of

Use the Facilitate Calibration task to pull forward individual calibration events for a subordinate organization 1 level below the selected organization, including the organization itself and its subordinates. Optionally, you can complete on behalf of all organizations, and their subordinate organizations, shown in the Calibration Status grid.

- Select the organization and click Complete on Behalf Of to complete on behalf of an individual organization.
- Select Complete on Behalf of All to complete all calibration events for the organizations listed, including subordinate events.

Pulling forward enables the facilitator to have full control over the calibration event and takes the Calibrate Team task out of the manager's My Tasks.

Send Back

You can use the Facilitate Calibration task to send calibration back to the supervisory organization 1 level below the current organization after pulling it forward. Sending the organization back includes the selected organization itself. You can only send back the selected calibration event, not including its subordinates. Facilitators can edit employee calibrations at any point before the controller submits the final calibration, including after the manager submits the calibration. You can't use the Facilitate Calibration task to submit calibration. The controller must submit from their calibration My Tasks item.

Related Information

Reference

The Next Level: Engaging Talent

Examples

Example: Calibration nBox Placement on page 1730

Concept: Calibration Results

Calibration is complete when the participants finish plotting employees in the nBox report for all of the organizations and the controller submits calibration. Completion occurs when:

- Workday writes the final calibration values to the workers and maps:
  - The Calibration: Potential value to the Potential report field.
  - The Calibration: Talent Based Performance Rating value to the Talent Matrix Review Rating report field.
  - The default report field specified in the calibration program.
- If the calibration event launches with an employee review, Workday adds a value based on your calibration nBox report configuration as the Calibrated Review Rating in the manager evaluation:
  - Calibration: Talent Based Performance Rating
  - Calibration: Overall Performance Rating

If you used these calibration fields, you must create calculated fields to retrieve the calibration values from the event:

- Calibration: Overall Performance Rating
- Calibration: Row Section Rating
- Calibration: Column Section Rating

Reporting

To view the final calibration values for employees, copy the Worker Calibration History and My Team's Calibration History reports (secured to the *Worker Data: Calibration* domain) to custom reports. If you have multiple types of calibration events with different axes values, each type requires its own custom version of these reports. Copy these reports to a custom report for each unique type of calibration event. Complete the nBox setup for each custom report.

Concept: Calibration Dashboard

The Calibration dashboard enables managers to track in progress calibration events for their organizations. This dashboard is secured to the *Management Dashboard: Calibration* domain in the System functional area. It provides these worklets:

- In Progress Calibration Status: Displays the current status of each Calibrate Team event for an in progress Calibration event. This report is intended for unconstrained roles, such as HR Administrator or Talent Administrator.
- My Team's Calibration History: Displays historical calibration values for your current direct reports for a completed Calibration event. This report is intended for managers.
- Worker Calibration History: Displays historical calibration values for workers for a completed Calibration event. This report is for unconstrained roles, such as HR Administrator or Talent Administrators.
- Worker Calibration Placement Trend: Displays the entire history of calibrated values from completed Calibration events for a specific worker.

The Dashboard Menu on the Calibration Dashboard also helps you to navigate quickly to relevant tasks, such as Facilitate Calibration, Manage Calibration, and Calibration Distribution.

You can use the Maintain Dashboards task to configure the Calibration dashboard. Managers can display it on the Home landing page for quick access.

Related Information
Tasks
Steps: Set Up Dashboards and Landing Pages

Example: Calibration nBox Placement

This example illustrates 1 way to calibrate employees in an nBox report.

Context

Bill, a manager, calibrates the performance and potential ratings for his 2 employees, Maria and Robert. Their initial ratings are:

- Maria: Performance = 4, Potential = Medium.
- Robert: Performance = 2, Potential = Low.

The nBox view has a 3 x 3 grid with performance on the vertical axis and potential on the horizontal axis.

Steps

1. Glenn, the HR partner, creates the calibration program mapping performance ratings to rows (the vertical axis) as:
    - 1-2 to the bottom row.
    - 3 to the middle row.
    - 4-5 to the top row.
2. The calibration program maps potential ratings to columns (the horizontal axis) as:
    - Low to the left column.
    - Medium to the middle column.
    - High to the right column.

    This places Maria in the top center box and Robert in the bottom left box.

3. During calibration, Bill keeps Maria in the same box, but moves Robert to the bottom center box to indicate higher potential.

Result

Based on the mappings defined in the calibration nBox report, Maria's performance and potential ratings remain the same. Robert's performance rating stays the same, but the potential rating changes to Medium after the controller submits calibration.

FAQ: Talent and Performance Calibration

- What determines which workers display in the Calibrate Team task?
- Can I launch multiple concurrent calibration events?
- Are there any calibration events that don't support worker or organization changes?
- Does calibration support reorganizations on the top-level organization?

What determines which workers display on the Calibrate Team task?	Workday displays workers on the Calibrate Team task based on the manager's contextual security. Facilitators can use the Facilitate Calibration report to view processed workers who move to a new organization. Contextual security still applies if the Manage Calibration report doesn't process the worker or organization move.
Can I launch multiple concurrent calibration events?	Yes, you can have multiple calibration events for supervisory or custom organizations in progress at a given time. However, you can only calibrate workers in 1 calibration event at a time.
Are there any calibration events that don't support worker or organization changes?	You can't change worker or organization assignments in calibration events initiated as part of a performance review (after launching the *Start Performance Review* business process).
Does calibration support reorganizations on the top-level organization?	No. Top-level organizations shouldn't experience any reorganizations during calibration.

Feedback

Setup Considerations: Anytime Feedback

You can use this topic to help make decisions when planning your configuration and use of anytime feedback. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

You can use Workday to enable anytime feedback for workers to give ad hoc unsolicited feedback to other workers.

Business Benefits

- Encourages workers to provide feedback to colleagues outside of formal employee reviews, fostering communication and teamwork.
- Enables workers to provide feedback to other workers outside of constrained roles for greater transparency in your organization.
- Enables workers to provide unsolicited feedback to include in employee reviews.

Use Cases

Managers can encourage their workers to use anytime feedback to recognize other workers' accomplishments or provide feedback for areas of improvement.

Workers can give unsolicited feedback to any other worker, including workers across different functions.

Questions to Consider

Questions	Considerations
How can you use anytime feedback to promote your company culture?	Anytime feedback can foster a corporate culture of openness and communication across roles and hierarchy. Example: Individual contributors can provide unsolicited feedback to managers in a different organization. If your company uses a more controlled and structured approach, such as enabling only managers to provide feedback, you might want to use only role-requested feedback.
How can you control confidentiality, privacy, and anonymity for anytime feedback?	Workday enables settings for privacy and confidentiality by default so that givers of anytime feedback can share their feedback with the feedback recipient or other workers. You can disable privacy and confidentiality settings so that feedback givers can't share their feedback. Workday also enables by default anonymous feedback, in which feedback givers can choose to display their name or remain anonymous. You can also disable anonymous feedback so that Workday always displays the names of feedback givers.
Do you want to pull anytime feedback into employee reviews?	You can configure employee review templates to include anytime feedback that's not private or confidential.

Recommendations

- Set up feedback notifications so that workers can inform other parties that they provided feedback.
- Encourage your workers to use feedback badges to promote positive recognition of their peers.
- To limit feedback reports from getting too long over time, create custom reports that report worker anytime feedback for a specific period on worker profiles. Example: Create a custom report that displays only anytime feedback given in the past year.
- When you configure anytime feedback options with intersection security groups, users in some groups might not be able to give or view anytime feedback. We recommend consulting Workday Community resources when using anytime feedback with intersection security.

Requirements

No impact.

Limitations

- You can't configure feedback templates for anytime feedback.
- When users give anytime feedback, the Give Feedback task provides a text field to enter feedback but you can't configure the *Give Feedback* business process to include questions or other help text.
- You can't prevent workers from giving anytime feedback to multiple recipients at the business process level. To prevent or discourage workers from giving anytime feedback to multiple recipients, set up condition rules to add a step or issue a validation message before they complete the task.
- Anytime feedback can be private, confidential, or anonymous when sent to a single recipient but not when sent to multiple recipients.
- Workday doesn't include anytime feedback on the View Worker History report for an employee.
- Workday doesn't support giving anytime feedback to terminated workers.
- The Anytime Feedback worklet on the Talent and Performance dashboard might not display correctly in mobile applications.

Tenant Setup

Use the Give Feedback notification type in the HCM section of the Edit Tenant Setup - Notifications task to enable users to notify other workers when they provide feedback.

Security

Configure these domains in the Performance Enablement functional area:

Domain	Considerations
Self-Service: Anytime Feedback	Enable self-service access for workers to provide and view anytime feedback.
Self-Service: Feedback	Enable workers to give and get feedback.
Worker Data: Anytime Feedback	Enable workers to view anytime feedback for another worker.
Worker Data: Confidential Feedback	Enable workers to view confidential anytime feedback about another worker.
Worker Data: Private Feedback	Enable workers to view private anytime feedback that's not visible to managers about another worker.

Business Process

Configure the *Give Feedback* business process in the Performance Enablement functional area to enable workers to provide anytime feedback.

Reporting

Reports or Dashboards	Considerations
Feedback on My Team report	Enables managers to view anytime feedback for their team members.

Reports or Dashboards	Considerations
Feedback Received report	Enables workers to view feedback they received for all feedback types, including anytime feedback. This report is also available on the worker profile.
Talent and Performance dashboard	Add the Anytime Feedback worklet so workers can view the anytime feedback they gave and received.

Integrations

Web Services	Considerations
Give Feedback	Enables you to import historical anytime feedback data from another Workday tenant into Workday.
Put Feedback Badge	Enables you to import, add, edit, and remove feedback badges.

Connections and Touchpoints

Features	Considerations
Employee Reviews	You can set up employee review templates to include anytime feedback in employee reviews.
Manager Insights Hub	Managers can use Manager Insights Hub to access information about feedback that their direct reports have received.
Workday Skills Cloud	Workday uses anytime feedback as a source for generating skills suggestions in Workday Skills Cloud.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Concepts

Concept: Intersection Security Groups

Setup Considerations: Manager Insights Hub on page 2933

Tasks

Configure the Feedback Section on page 1630

Reference

Setup Considerations: Skills Cloud on page 1844

Setup Considerations: Requested Feedback

You can use this topic to help make decisions when planning your configuration and use of requested feedback. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday provides 2 types of requested feedback:

- Role-requested feedback, which enables a worker to request feedback on other workers, including feedback for employee reviews. Role-requested feedback can be confidential but not private.
- Self-requested feedback, which enables workers to request feedback on themselves. Self-requested feedback can be private but not confidential.

Business Benefits

- Create specialized feedback templates for different purposes and events.
- Enable workers to take the initiative and solicit feedback on themselves.
- Use feedback to foster workers' personal and career development.

Use Cases

- Workers can request feedback on themselves from other workers and include the feedback in performance reviews.
- Managers can request feedback on their workers from other team members or other managers to include in performance reviews or development plans.
- Managers can request confidential feedback about workers to use in performance improvement plans and disciplinary actions.
- Administrators can create a specific feedback template for the end of a project, with specific questions tailored to gather information from members of the project. You can enable workers to request feedback on themselves from other workers.
- Administrators can create a specific feedback template for development, where workers request feedback on themselves. You can encourage the feedback provider to private feedback for candid and constructive input.
- Set up mass feedback events for large groups of workers.
- To obtain quantifiable feedback results, create questions with different answer types, including multiple choice multi-select, multiple choice single-select, date, and numeric.

Questions to Consider

Questions	Considerations
Who can initiate feedback on behalf of others?	You can set up your security domains so that designated employees such as managers can request feedback on behalf of others.
What groups of workers do you want to view confidential or private feedback?	You can assign security to specific groups such as HR partners and managers to view confidential or private feedback.

Recommendations

- Delete *Give Requested Feedback* events using the mass operation management Cancel Feedback Requests job to limit the size of your reports.
- Use care when securing domains for feedback notifications to prevent workers from seeing notifications they shouldn't see.
- To ensure that workers only see feedback intended for them, enable the confidential feedback options on the Maintain Feedback Setup task and have workers select it when providing confidential feedback.

- When setting up custom feedback notifications for the *Get Feedback on Worker* and *Get Feedback on Self* business processes, set up notifications for the *Give Requested Feedback* business process also to ensure that workers get notified at each step in the process.
- To indicate who can view feedback, provide help text for the *Get Feedback on Worker* and *Get Feedback on Self* business processes. Because these business processes are secured to different domains, the help text should include security information. The feedback provider can receive different types of feedback requests for the same person (both *Get Feedback on Worker* and *Get Feedback on Self*), and the help text can clarify who can view the feedback for each event.
- When you change confidential or privacy settings on your feedback business processes, update business process help text that states who can view feedback.
- Add help text to feedback templates to provide helpful tips and guide users through the feedback event.

Requirements

No impact.

Limitations

- Workday doesn't provide a way to limit the number of feedback providers.
- Workday doesn't indicate whether workers are providing anonymous role-requested or self-requested feedback. You can use a condition rule on business process help text to inform feedback providers whether their feedback is anonymous.
- Workday doesn't support feedback badges for role-requested and self-requested feedback. Workday supports feedback badges for anytime feedback only.
- Workday doesn't support hiding feedback from workers and showing feedback to managers on employee review templates. To ensure that only designated workers can view feedback, you can set all feedback for the *Get Feedback for Review* business process event as confidential.
- Workers can’t reassign a request to give feedback. Workday displays the Reassign Tasks action as supported on the *Give Requested Feedback* business process policy but has disabled the action.

Tenant Setup

Configure tenant-wide settings for requested feedback, including confidential and private feedback, on the Maintain Feedback Setup task.

Security

Configure these domains in the Performance Enablement functional area:

Domain	Considerations
Self-Service: Feedback	Enables workers to give and receive feedback.
Self-Service: Role Requested Feedback	Enables workers to view feedback that they request from other workers.
Self-Service: Self Requested Feedback	Enables workers to view feedback that they request on themselves.
Worker Data: Confidential Feedback	Enables workers to view confidential, role-requested feedback on other workers
Worker Data: Private Feedback	Enables workers to view private, self-requested feedback about themselves.
Worker Data: Role Requested Feedback	Enables workers such as managers to view requested worker feedback.

Domain	Considerations
Worker Data: Self Requested Feedback	Enables workers such as managers to view feedback that other workers request about themselves.

Business Processes

Business Processes	Considerations
Get Feedback on Self	Set up steps for self-requested feedback.
Get Feedback on Worker	Set up steps for role-requested feedback.
Give Requested Feedback	Enables workers to provide requested feedback. Although similarly named, the *Give Feedback* business process only applies to anytime feedback.

Reporting

Reports	Considerations
Feedback on My Team	Add to the Team Performance dashboard to enable managers to view role-requested feedback given to their team members.
Feedback Received	Use to view all feedback types received by a worker.

Integrations

Web Services	Considerations
Get Feedback Questions	Enables you to export feedback questions.
Put Feedback Question	Enables you to import questions for use in feedback templates.

Connections and Touchpoints

Requested feedback interacts with Manager Insights Hub. Managers can use Manager Insights Hub to access information about feedback that their direct reports have received. Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Related Information
Concepts
Setup Considerations: Manager Insights Hub on page 2933

Steps: Set Up Feedback

Context

Workday has 3 types of feedback:

- Anytime Feedback: Unsolicited feedback associated with the *Give Feedback* business process.

- Feedback on Worker (role-requested feedback): Requested by another worker (typically a manager). Associated with the *Give Requested Feedback* subprocess for the *Get Feedback on Worker* business process.
- Feedback on Self (self-requested feedback): Requested by the worker. Associated with the *Give Requested Feedback* subprocess for the *Get Feedback on Self* business process.

You can use feedback for:

- Peer recognition.
- Performance reviews.
- Personal development.
- Ongoing career conversations.

Steps

1. Set Up Feedback Security on page 1739.
2. Set Up Feedback Business Processes on page 1740.
3. Set Up Confidential, Private, and Anonymous Feedback Options on page 1741.

   Access the Maintain Feedback Setup task to configure settings for confidential, private, and anonymous feedback.
4. (Optional) Set Up Anytime Feedback Notifications on page 1756.
5. Activate Pending Security Policy Changes.
6. (Optional) Edit Business Processes.

   Add a *Get Feedback from Review* step to the *Start Performance Review* or *Start Development Plan* business process to request feedback as part of reviews. The *Get Feedback from Review* step behaves the same as the *Get Feedback on Worker* business process.
7. (Optional) Steps: Set Up Workteams.

   Set up workteams so that workers can select from the *My Workteams* option in the Workers prompt or the From Workers prompt when giving or requesting feedback.
8. (Optional) Steps: Set Up Profiles and Profile Groups.

   Add these reports to the worker profile or to the Performance or Feedback profile groups:

   - Feedback Given
   - Feedback on My Team
   - Feedback Received
   - Feedback Requested
   - View Feedback Received
9. (Optional) Add the *Get Feedback* action to the My Team and Performance worklets.

   See Steps: Set Up Dashboards and Landing Pages.
10. Configure feedback templates used in role-requested and self-requested feedback.

    See Steps: Configure Feedback Templates on page 1750.
11. (Optional) Add and configure the Feedback section in your employee review templates.

    See Steps: Create Employee Review Templates on page 1627.
12. (Optional) Access the Configure Talent Tags task.

    Configure *Competency* as a Relates To prompt option for feedback.

    Relate feedback questions in requested feedback to a specific competency.

    Security: *Set Up: Talent* domain in the Talent Pipeline functional area.

13. (Optional) Access the Maintain Feedback Badges task.

    Set up feedback badges using any of the Workday-delivered badge icons. You can disable badges on the Maintain Feedback Setup task. Workday displays feedback badges on only the Give Feedback task.

    Security: *Set Up: Employee Reviews* in the Performance Enablement functional area.

Result

Your workers can now:

- Provide and receive feedback.
- Request feedback for themselves or other workers.
- View another worker's feedback.
- Relate feedback to competencies and include this information in employee reviews.

Employees on a leave of absence can't provide or receive feedback if an administrator enables the *Talent Effect* option in the leave type. In this case, a worker can't select the employee on leave of absence as a feedback provider or feedback recipient for these tasks:

- Get Feedback on Self
- Get Feedback on Worker
- Ask Others for Feedback on Self
- Ask Others for Feedback on Worker
- Revise Get Feedback
- Review Get Feedback on Self
- Review Get Feedback on Worker

2021R1 What's New Post: Quantifiable Feedback

Set Up Feedback Security

Context

Set up domains in the Performance Enablement functional area to control who can participate in different types of feedback.

Workday enables confidential feedback and private feedback by default. Add workers to the *Worker Data: Confidential Feedback* domain and the *Worker Data: Private Feedback* domain to enable them to view confidential feedback or private feedback. Disable confidential feedback and private feedback using the Maintain Feedback Setup task.

Steps

1. Set up security for the *Self-Service: Feedback* domain in the Performance Enablement functional area for all feedback types.
2. Set up security for these domains for anytime feedback.

    - *Self-Service: Anytime Feedback*
    - *Worker Data: Anytime Feedback*
    - *Worker Data: Confidential Feedback*
    - *Worker Data: Private Feedback*
    - (Optional) *Self-Service: Edit Feedback*

3. Set up security for these domains for role-requested feedback.
    - *Self-Service: Role Requested Feedback*
    - *Worker Data: Role Requested Feedback*
    - *Worker Data: Confidential Feedback*
4. Set up security for these domains for self-requested feedback.
    - *Self-Service: Self Requested Feedback*
    - *Worker Data: Self Requested Feedback*
    - *Worker Data: Private Feedback*

Next Steps

Set up feedback business processes.

Reference: Feedback Security Domains on page 1760

Set Up Feedback Business Processes

Prerequisites

Security: *Self-Service: Feedback* domain in the Performance Enablement functional area.

Context

Configure feedback business processes and their security policies in the Performance Enablement functional area.

Steps

1. Configure the *Give Feedback* business process for anytime feedback.

    (Optional) Enable workers to edit feedback given to others within a 1-hour time frame from when they originally submitted it. Configure the *Give Feedback* business process by adding the Employee as Self security group to the *Self-Service: Edit Feedback* domain and *Edit Feedback* initiating action in the business process security policy.

    If you have condition rules on the *Give Feedback* business process, set up similar condition rules for the *Give Feedback to Multiple Recipients* business process.
2. Configure these business processes for role-requested feedback:
    - *Get Feedback on Worker*
    - *Give Requested Feedback*

    You can enable contingent workers to provide feedback. Configure security groups on the initiating action of the policy for the *Give Requested Feedback* business process.
3. Configure these business processes for self-requested feedback:
    - *Get Feedback on Self*
    - *Give Requested Feedback*
4. (Optional) Enable workers to ask additional workers to participate in a previously submitted Get Feedback on Self or Get Feedback on Worker request. Configure the *Get Feedback on Self* and *Get*

Feedback on Worker business process security policies and add the Employee As Self security group to the Ask Others for Feedback initiating action.

When you configure this initiating action, Workday displays the Ask Others button on the Feedback Requested report. You can configure the Feedback Requested report to be included on the worker profile.

Next Steps

Set up options for giving and getting feedback, and configure feedback templates.

Example: Condition Rule to Prevent Feedback to Multiple Recipients on page 1763

Confidential, Private, and Anonymous Feedback

Set Up Confidential, Private, and Anonymous Feedback Options

Prerequisites

Security: These domains in the Performance Enablement functional area:

- *Self-Service: Feedback*
- *Worker Data: Confidential Feedback*
- *Worker Data: Private Feedback*

See Set Up Feedback Security.

Context

Workday enables anonymous, confidential, and private feedback by default. You can control which visibility option workers can select on feedback tasks. Use the Maintain Feedback Setup task to control settings for anonymous, confidential, and private feedback.

Changing these settings only affects future feedback events, and doesn't change the anonymity, confidentiality, or privacy of existing feedback. Example: You disable confidential feedback. Future feedback isn't confidential but existing confidential feedback stays confidential.

Steps

1. Access the Maintain Feedback Setup task.
2. As you complete the Give Feedback section, consider:

Option	Description
Default: Give Feedback to Confidential	Defaults to confidential feedback on Anytime Feedback. For Give Requested Feedback tasks, select the *Enable Confidential Feedback for Give Requested Feedback* option to default to confidential feedback.

Option	Description
	Workers can still select Share with others for both Anytime Feedback and Give Requested Feedback tasks.
Disable Confidential Feedback	Prevents workers from providing confidential feedback on the Give Feedback task for anytime feedback. When you select this check box, Workday: • Hides the Don't share with [*feedback recipient*] check box on the Give Feedback task. • Allows workers to view all future feedback submissions about themselves. • Hides existing confidential feedback from the feedback recipient but displays it to users with access on the *Worker Data: Confidential Feedback* security domain.
Disable Anonymity	Prevents workers from giving or requesting anonymous feedback in these business processes: • *Give Feedback* • *Get Feedback on Worker* • *Get Feedback on Self* When you select this check box, Workday: • Hides the Show my name? check box on the Give Feedback task. • Hides the Make Feedback Anonymous check box on the Get Feedback on Worker and Get Feedback on Self tasks and the Show my name? check box on the *Give Requested Feedback* step. • Displays the names of feedback providers in future feedback submissions. • Hides feedback providers' names in existing anonymous feedback.
Disable Decline Feedback	Removes the option to decline feedback requests sent through the *Get Feedback on Worker* and *Get Feedback on Self* business processes.
Disable Private Feedback	Prevents workers from providing private feedback on the Give Feedback task for anytime feedback. When you select this check box, Workday: • Hides the Share with [*feedback recipient*] check box on the Give Feedback task.

Option	Description
	• Displays existing private feedback to users with access on the *Worker Data: Private Feedback* security domain.
Enable Confidential Feedback for Give Requested Feedback	Enables feedback providers to make their feedback confidential when responding to a *Give Requested Feedback* My Tasks task as part of the *Get Feedback on Worker* business process. When you select this check box, Workday: • Displays the Don't share with [*feedback recipient*] check box in the Give Requested Feedback task. • Automatically selects the Disable Confidential Feedback check box in the Get Feedback section of the Maintain Feedback Setup task.
Enable Private Feedback for Give Requested Feedback	Enables feedback providers to mark their feedback as private when responding to a *Give Requested Feedback* My Task item as part of the *Get Feedback on Self* business process. When you select this check box, Workday: • Displays the Share with [*feedback recipient*] check box in the *Give Requested Feedback* step. • Automatically checks the Disable Private Feedback check box in the Get Feedback section of the Maintain Feedback Setup task.

3. As you complete the Get Feedback section, consider:

Option	Description
Disable Confidential Feedback	Prevents feedback requestors from requesting confidential feedback from feedback givers on the Get Feedback on Worker task. When you select this check box, Workday: • Hides the Don't share with [*feedback recipient*] and Share with others check boxes on the Get Feedback on Worker task. • Allows workers to view all future feedback submissions about themselves. • Hides confidential feedback to the feedback recipient, but allows users with access to the *Worker Data: Confidential Feedback* security domain to view it.
Disable Private Feedback	Prevents workers from requesting private, peer-to-peer feedback on the Get Feedback on Self task. When you select this check box, Workday:

Option	Description
	• Hides the Share with me and Share with others check boxes on the Get Feedback on Self task. • Displays existing private feedback to users secured to the *Worker Data: Private Feedback* security domain.
Default: Get Feedback on Worker is Confidential	When you select this check box, Workday automatically selects the Don't share with [*feedback recipient*] check box in the Feedback Sharing section. The feedback requestor can still select the Share with Others check box.

Result

Depending on your settings, your feedback requestors and feedback givers can or can't request or provide anonymous, confidential, or private feedback.

Concept: Confidential Feedback

Workday enables you to configure feedback visibility using domain security policies and the Maintain Feedback Setup task. Confidential feedback and private feedback are mutually exclusive; feedback can be 1 or the other but not both. Confidential feedback can be anonymous.

Everyone with access on the *Worker Data: Confidential Feedback* domain can view confidential feedback, except the feedback subject. Managers typically use confidential feedback for career development purposes. The ability to give or request confidential feedback is only available on these business processes:

- *Give Feedback*
- *Get Feedback on Worker*

To enable confidential feedback, add roles to the *Worker Data: Confidential Feedback* security domain in the Performance Enablement functional area. Example: Add roles such as managers and HR partners.

Use the Maintain Feedback Setup task options to determine who can request confidential feedback on the *Get Feedback on Worker* business process. These options are mutually exclusive. Do 1 of these actions:

- Clear the Disable Confidential Feedback check box in the Get Feedback section so the feedback requestor selects whether the feedback is confidential.
- Select the Enable Confidential Feedback for Give Requested Feedback check box in the Give Feedback section so the feedback giver selects whether the feedback is confidential.

Feedback Sharing

Depending on your settings for confidential feedback, Workday displays different Feedback Sharing options for the feedback requestor and feedback provider. Workday displays feedback sharing options for the Give Feedback task only when giving feedback to a single recipient. When giving feedback to multiple recipients, Workday doesn't display feedback sharing options.

This table illustrates the effects of the Give Feedback options on the Maintain Feedback Setup task.

Check box Selection	Feedback Task or Step	Feedback Sharing Options Displayed
Disable Confidential Feedback cleared	Give Feedback task	Feedback provider (single recipient only): • Don't share with [*recipient*]

Check box Selection	Feedback Task or Step	Feedback Sharing Options Displayed
		• Share with [*recipient*] • Share with others
Disable Confidential Feedback selected	Give Feedback task	Feedback provider (single recipient only): • Share with [*recipient*] • Share with others
Both: • Disable Confidential Feedback selected • Disable Private Feedback selected	Give Feedback task	Feedback provider: no options displayed.
Enable Confidential Feedback for Give Requested Feedback cleared	Give Requested Feedback step	Feedback provider: no options displayed
Enable Confidential Feedback for Give Requested Feedback selected	Give Requested Feedback step	Feedback provider: • Don't share with [*recipient*] • Share with others

This table illustrates the effects of the Get Feedback options on the Maintain Feedback Setup task.

Check box Selection	Feedback Task or Step	Feedback Sharing Options Displayed
Disable Confidential Feedback cleared	Get Feedback on Worker	Feedback requestor: • Don't share with [*recipient*] • Share with others
Disable Confidential Feedback selected	Get Feedback on Worker	Feedback requestor: no options displayed

You're an HR Administrator at Global Modern Services and want to use confidential feedback to drive workers' career development. You clear the Disable Confidential Feedback check box on the Get Feedback section of the Maintain Feedback Setup task. You then add the Manager security group to the *Worker Data: Confidential Feedback* security domain and the business process security policy for *Get Feedback on Worker*. Managers at GMS can now request confidential feedback about their direct reports using the Get Feedback on Worker task. Their direct reports can't see confidential feedback on themselves.

Aparna is an engineer at Global Modern Services. Aparna's manager, Joe, wants to hear about Aparna's performance on a recent project she's been working on with Irene, a different manager. Joe doesn't want Aparna to see the confidential feedback. Joe uses the Get Feedback on Worker task to request feedback about Aparna from Irene. In the request, Joe selects the Feedback Sharing option not to share Irene's feedback with Aparna.

Related Information

Tasks

Steps: Set Up Feedback on page 1737

Examples

Example: Set Up Confidential Role-Requested Feedback on page 1748

Concept: Private Feedback

Workday enables you to configure feedback visibility using domain security policies and the Maintain Feedback Setup task. Confidential feedback and private feedback are mutually exclusive; feedback can be 1 or the other but not both. Private feedback can be anonymous.

The feedback recipient, the feedback provider, and users with access on the *Worker Data: Private Feedback* domain can view private feedback. Workers typically use private feedback to give peer-to-peer feedback not visible to the recipient's manager. The ability to give or request that private feedback is only available on these business processes:

- *Give Feedback*
- *Get Feedback on Self*

Add roles, such as HR Partners and HR Administrators, to the *Worker Data: Private Feedback* domain in the Performance Enablement functional area to enable them to view private feedback. To ensure that managers can't see peer-to-peer feedback, don't add managers to this domain.

On the *Get Feedback on Self* business process, the Maintain Feedback Setup task option you select determines who can request private feedback. These options are mutually exclusive. Do 1 of these actions:

- Clear the Disable Private Feedback check box in the Get Feedback section so the feedback requestor selects whether the feedback is private.
- Select the Enable Private Feedback for Give Requested Feedback check box in the Give Feedback section so the feedback provider selects whether the feedback is private.

Feedback Sharing

Depending on your settings for private feedback, Workday displays different Feedback Sharing options for the feedback requestor and feedback provider. Workday displays feedback sharing options for the Give Feedback task only when giving feedback to a single recipient. When giving feedback to multiple recipients, Workday doesn't display feedback sharing options.

This table illustrates the effects of the Give Feedback options on the Maintain Feedback Setup task.

Check box Selection	Feedback Task or Step	Feedback Sharing Options Displayed
Disable Private Feedback cleared	Give Feedback task	Feedback provider (single recipient only): • Don't share with [*recipient*] • Share with [*recipient*] • Share with Others
Disable Private Feedback selected	Give Feedback task	Feedback provider (single recipient only): • Don't share with [*recipient*] • Share with others
Both: • Disable Confidential Feedback selected • Disable Private Feedback selected	Give Feedback task	Feedback provider: no options displayed
Enable Private Feedback for Give Requested Feedback cleared	Give Requested Feedback step	Feedback provider: no options displayed

Check box Selection	Feedback Task or Step	Feedback Sharing Options Displayed
Enable Private Feedback for Give Requested Feedback selected	Give Requested Feedback step	Feedback provider: Don't share with [*feedback recipient*]

This table illustrates the effects of the Get Feedback options on the Maintain Feedback Setup task.

Check box Selection	Feedback Task or Step	Feedback Sharing Options Displayed
Disable Private Feedback cleared	Get Feedback on Self task	Feedback requestor: • Share with Me • Share with others
Disable Private Feedback selected	Get Feedback on Self task	Feedback requestor: no options displayed

You're an HR Administrator at Global Modern Services and want to use private feedback to drive workers' career development. You clear the Disable Private Feedback check box in the Get Feedback section of the Maintain Feedback Setup task. You then add the Employee as Self security group to the business process security policy for *Get Feedback on Self*. To encourage private, peer-to-peer feedback, you don't secure the Manager security group to the *Worker Data: Private Feedback* security domain. Employees at GMS can now request private feedback about themselves using the Get Feedback on Self task. Employees' managers can't see private feedback their direct reports request about themselves.

Aparna is an engineer at Global Modern Services. After completing a project, Aparna wants to request private feedback about herself that her manager, Joe, can't see. Aparna uses the Get Feedback on Self task to request feedback about herself from Sue, one of his project teammates. In the request, Aparna selects the *Share with me* option in the Feedback Sharing section so that the feedback is private and Joe can't see the feedback.

Related Information

Tasks

Steps: Set Up Feedback on page 1737

Examples

Example: Set Up Private Self-Requested Feedback on page 1749

Concept: Anonymous Feedback

Workday enables workers to provide anonymous feedback. Feedback providers or requestors can select whether or not Workday displays the feedback provider's name alongside their feedback. You can give or request anonymous feedback on these business processes:

- *Get Feedback on Worker*
- *Get Feedback on Self*
- *Give Feedback*

Anonymous feedback can be private or confidential, meaning feedback is only visible by certain users and Workday doesn't display the feedback provider's name.

When feedback is anonymous, Workday replaces the requestor's or feedback provider's name with *Anonymous* in reports. When you disable anonymous feedback using the Maintain Feedback Setup task, Workday displays the requestor's or provider's name in future feedback events.

You're an HR Administrator at Global Modern Services and want to use anonymous feedback to drive workers' career development. On the Maintain Feedback Setup task, on the Give Feedback section clear the Disable Anonymity check box. Employees at GMS can now give or request anonymous feedback. If an employee gives anonymous feedback, no one will know that the employee gave the feedback. If an employee requests anonymous feedback on another worker or themselves, Workday won't display the feedback giver's name.

Mike is an engineer at Global Modern Services. After completing a project, Mike wants to give constructive feedback to his teammate, Mary, but wants it to be anonymous. Mike uses the Give Feedback task to give anonymous feedback to Mary. In the request, Mike clears the check box in the Show my name? section so that Anonymous displays on the feedback instead of Mike's name. Mike then selects the *Share with Mary* option under the Feedback Sharing section.

Related Information
Tasks
Steps: Set Up Feedback on page 1737

Example: Set Up Nonconfidential and Nonprivate Anytime Feedback

This example illustrates how to set up the Give Feedback task so that workers can give anytime feedback that's nonconfidential and nonprivate.

Context

As an HR administrator, you want to foster communication among work teams by enabling workers to provide anytime feedback that's always nonconfidential and nonprivate. You want Workday to always display the feedback givers' names, and you want to create a new badge that workers can use when giving feedback to teammates who display environment consciousness.

Prerequisites

Set up anytime feedback notifications to populate the Workers to Notify field of the Give Feedback task. See Set Up Anytime Feedback Notifications on page 1756.

Configure the *Give Feedback* business process in the Performance Enablement functional area.

Security: These domains in the Performance Enablement functional area:

- *Self-Service: Feedback*
- *Self-Service: Anytime Feedback*
- *Worker Data: Anytime Feedback*

Steps

1. Set up the badges that workers can use to assign to feedback:
    a. Access the Maintain Feedback Badges task.
    b. Click the + icon to add a row, and enter these values:

Name	Icon
Environment	*icon-resourceful*

2. Access the Maintain Feedback Setup task and select these check boxes to enable workers to provide feedback that's nonanonymous, nonconfidential, and nonprivate:
    - Disable Anonymity
    - Disable Confidential Feedback
    - Disable Private Feedback

    Clear all other check boxes in the Give Feedback section.

Example: Set Up Confidential Role-Requested Feedback

This example illustrates how to enable workers to request confidential feedback about another worker.

Context

As an HR administrator, you want to enable managers to request confidential feedback about another worker for sensitive issues. You want the feedback requestor, but not the feedback giver, to be able to select to submit the feedback confidentially. You want only managers and HR administrators to view confidential feedback.

When a manager or HR administrator initiates the Get Feedback on Worker task, they can select the Don't Share with [*Feedback Recipient*] check box, and the manager can require that the feedback is confidential. When the feedback giver provides feedback, Workday doesn't provide the option to share it with the feedback recipient.

Prerequisites

Configure these business processes in the Performance Enablement functional area:

- *Get Feedback on Worker*
- *Give Requested Feedback*

Security: These domains in the Performance Enablement functional area:

- *Self-Service: Feedback*
- *Self-Service: Role Requested Feedback*
- *Worker Data: Role Requested Feedback*

Steps

1. Add groups for managers and HR administrators to the *Worker Data: Confidential Feedback* domain so they can view the confidential feedback.
2. Access the Maintain Feedback Setup task.
3. In the Give Feedback section, leave the Enable Confidential Feedback for Give Requested Feedback check box unchecked.

   When you select this check box, the feedback requestor can't set the feedback as confidential. The feedback giver, not the feedback requestor, selects whether the feedback is confidential at the *Give Requested Feedback* business process step.
4. In the Get Feedback section, leave the Disable Confidential Feedback check box unchecked.
5. Select the Default: Get Feedback on Worker is Confidential check box.

   When you enable this option, Workday automatically selects the option to not share feedback with the feedback recipient, meaning the feedback is confidential. Feedback requestors can clear this check box to share the feedback with others.

Example: Set Up Private Self-Requested Feedback

This example illustrates how to set up the Get Feedback on Self task so that workers can request private feedback about themselves.

Context

As an HR administrator, you want to enable workers to request private feedback about themselves. You also want to prevent the feedback giver from sharing that feedback with others.

Prerequisites

Configure these business processes in the Performance Enablement functional area:

- *Get Feedback on Worker*
- *Give Requested Feedback*

Security: These domains in the Performance Enablement functional area:

- *Self-Service: Feedback*
- *Self-Service: Self Requested Feedback*
- *Worker Data: Private Feedback*

Steps

1. Set up a default template that workers can use when asking for private feedback:
    a. Access the Create Feedback Template task, and enter these values:

Type	*Feedback on Self*
Name	*Self-Requested Feedback Template*

    b. In the Questions grid, click the + icon to add a row and select these values:

Question	Relates To
How can I be a better team member?	Teamwork (Competency)
What is the 1 area or skill that I should focus on improving?	Job Competence (Competency)

2. Enable private feedback in the feedback setup:
    a. Access the Maintain Feedback Setup task.
    b. In the Give Feedback section, clear these check boxes:
        - Disable Private Feedback
        - Enable Private Feedback for Give Requested Feedback
    c. In the Get Feedback section, clear the Disable Private Feedback check box.
    d. In the Default Templates section, select the *Self-Requested Feedback Template* in the Feedback on Self field.
3. Provide instructions to your workers that when initiating the Get Feedback on Self task, select the *Share with me* option to ensure that the feedback is private.

Feedback Templates

Steps: Configure Feedback Templates

Context

You can use feedback templates to get and give specific and consistent feedback on job performance by adding questions you create. You can create 3 types of feedback templates:

- Feedback for Review. Available on the Feedback Template prompt in the Get Feedback task when you include the *Get Feedback on Review* step in performance reviews or development plans.
- Feedback on Self. Available on the Get Feedback on Self task.
- Feedback on Worker. Available on the Get Feedback on Worker task.

Steps

1. Create and Manage Feedback Questions on page 1752.

    Create a library of questions that you can use in your feedback templates.
2. Create and Manage Feedback Templates on page 1753.
3. Set Up Feedback Template Rules and Defaults on page 1754.

Result

Workday populates these tasks with the questions defined in the default templates if configured on the Maintain Feedback Setup task:

- Get Feedback on Self.
- Get Feedback on Worker.

Steps: Set Up AI-Generated Feedback Suggestions

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Context

You can set up AI-generated suggestions for workers providing requested feedback to write more effective and actionable feedback by providing guidance based on the Situation-Behavior-Impact (SBI) framework. This only applies to text-based questions within a feedback template or ad hoc feedback questions. Workday reviews the feedback provider’s content to identify areas where the feedback can be improved. The worker maintains full control of their feedback responses.

Steps

1. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   Select the HCM ML Features and Third Party Connectors GA service in the Innovation Services and Data Selection Opt-In report.
2. Access the Maintain Feedback Setup task and select Enable Generative AI for Feedback Suggestions.
3. Create and Manage Feedback Templates

   Set up your feedback template and select which text-based questions you want to provide feedback providers AI-generated support.

4. Edit Manage: AI-Generated Feedback Suggestions domain in the Performance Enablement and Worker Profile and Skills functional areas to enable workers to access AI-generated suggestions for requested feedback events in My Tasks.

Result

If a user has access to AI-generated feedback suggestions, Workday displays the Suggest Response Improvements button for requested feedback in My Tasks.

Example

Next Steps

Create and Manage Feedback Questions

Prerequisites

Security: *Set Up: Employee Reviews* domain in the Performance Enablement functional area.

Context

The Manage Feedback Questions task enables you to create a library of questions for feedback templates that are used for requested feedback and feedback for employee reviews.

To generate both qualitative and quantifiable feedback, you can create questions with these answer types:

- Text.
- Multiple choice single-select.
- Multiple choice multi-select.
- Date.
- Number.

Steps

1. Access the Maintain Question Tags task.

   Create question tags to associate feedback questions to.
2. Access the Manage Feedback Questions task.
3. Click Create New Question.

   When you create a question, consider:

Option	Description
Question Body	You can format your question body with rich text options.
Possible Answer	For each multiple choice question, enter 2 to 25 options. Each possible answer must be unique.
Score	For multiple choice questions, you can add a Score beside each Possible Answer. Scores can be any positive or negative integer. Workday calculates the total score for completed feedback questions by adding the integers for the selected answers.

Option	Description
Question Tags	You can associate multiple tags with a question.

4. (Optional) Click Edit Question to update the question.

   If the question is used in a feedback template, you can edit the Question Name and Question Tags only. If the question isn't used in a feedback template, you can edit all question attributes.
5. Click the number in the Usage column of the Manage Feedback Questions report to find out what templates currently use the question.
6. To delete a question, select Delete Question from the Edit Question drop-down.

   You can only delete questions that haven't been used in a feedback event (marked No in the Used in Feedback column).

Result

You can add your questions to feedback templates.

Example

You can have a question that's not being used in a feedback template but you're unable to delete it. You can create a question, add it to a template and use it in a feedback event, and then later remove the question from the template. In this case, the Usage column indicates zero and the Used in Feedback column indicates Yes. Although the Usage column indicates that the question isn't currently used in a template, you can't delete the question because it's been used in a past feedback event.

Create and Manage Feedback Templates

Prerequisites

Create feedback questions to add to a template. See Create and Manage Feedback Questions.

Security: *Set Up Employee Reviews* domain in the Performance Enablement area.

Context

When you use a feedback template, you can add and group questions that you create for your organization. You can create 3 types of feedback templates:

- Feedback for Review
- Feedback on Self
- Feedback on Worker

Steps

1. Access 1 of these tasks:
   - Create Feedback Template to create a new template.
   - Configure Feedback Template to update an existing template.
2. As you complete this task, consider:

Option	Description
Lock Template	Select the check box to ensure that users can't add, change, or delete questions in feedback requests.

Option	Description
	If you leave a template unlocked, a feedback requestor can change the content of the question body in text, date, and numeric questions. If you translate questions in an unlocked template, feedback requesters can change the content, causing inconsistencies with the original translation. Workday doesn't retranslate updated questions in unlocked feedback templates.
Inactive	Select the check box when you don't want to use the template in future feedback events. You can't update an inactive template using the Maintain Feedback Setup task or assign the template to a condition rule.
Template Help Text	Create help text to display in *Give Requested Feedback* events. Workday displays business process help text first when you create both business process help text and feedback template help text.

3. Add questions and competencies to the template on the Questions grid.

   Select a competency relating to a feedback question from the Relates To prompt. Feedback on questions related to a competency display on the manager evaluation step for an employee review.

Result

Workers can select the template when they request feedback.

Next Steps

Set up default feedback templates and condition rules to determine which templates apply to specific groups.

Set Up Feedback Template Rules and Defaults

Prerequisites

Create feedback templates. See Steps: Configure Feedback Templates.

Security: *Set Up Employee Reviews* domain in the Performance Enablement area.

Context

You can set up condition rules to control which feedback templates workers in different groups, such as regions or countries, can select from. You can set up default feedback templates or require workers to use specific templates in feedback events. Example: Create a condition rule for a feedback template that takes account of privacy regulations affecting European workers.

Steps

1. Access the Maintain Feedback Setup task.
2. (Optional) To require workers to use feedback templates, select 1 or more options from the Require Feedback Template prompt.

   When you require feedback templates, workers can't add ad hoc questions to a feedback request.

3. (Optional) Select default feedback templates from the Feedback on Self or Feedback on Worker prompts.

   Workday displays the default feedback template on the feedback request, but workers can select a different template, where available. If you don't require a feedback template, the worker can clear the default feedback template and add other questions instead.
4. Set up condition rules for *Get Feedback on Self* and *Get Feedback on Worker* events.

   In the Condition Rule field, select an existing condition rule or click the *Create Feedback on Self Template Condition Rule* or *Create Feedback on Worker Template Condition Rule* option.
5. On the Get Feedback on Self or Get Feedback Worker grid, create, or update a condition rule to determine which workers or groups can use the template.

   Set your rules to control which workers or groups can use the template. Assign the feedback template to the condition rule in the table.

   You can assign more than 1 feedback template to a condition rule. When you create multiple condition rules, add each rule in the order you want Workday to process the rule. Workday evaluates each rule in the table and initiates the first rule that meets the condition.

Result

When a worker initiates a *Get Feedback on Self*, *Get Feedback on Worker*, or *Feedback from Review* step, Workday displays the configured templates and options.

If you create condition rules and also select a default template, when the criteria match the condition rule, Workday displays the templates specified in the condition rule. When the criteria don't match, Workday displays the default template, but workers can select other active templates from the Feedback Template prompt drop-down. The precedence of conditional rule criteria also applies to mass operation feedback events, even when you specify a template in the Mass Operation Management task.

Example

You create a Get Feedback on Worker condition rule that applies to workers in Europe only and assign 2 feedback templates customized for Europe to it. When a worker in Europe initiates a Get Feedback on Worker request, Workday displays the relevant 2 feedback templates.

Tasks

Create Business Process Condition Rules

Reference

2021R2 What's New Post: Rules Based Defaulting of Feedback Templates

Example: Create Condition Rules for a Feedback Template

This example illustrates how to set up condition rules for a feedback template.

Context

As an HR administrator, you want to set up a Feedback on Worker template specifically for workers in Australia. You want to set up a condition rule so that feedback givers are presented only with this template when providing feedback on workers based there.

Steps

1. Set up a feedback template for Australian workers.
   a) Access the Create Feedback Template task, and enter these values:

Type	*Feedback on Worker*

Name	Feedback for Australian Workers

b) Select Lock Template to prevent workers from adding or editing questions.
c) Enter instructions in the Template Help Text field.
d) In the Questions grid, click the + icon to add questions to the template specifically for workers in Australia.
e) Click OK.

2. Set up the global feedback settings that will be applied to your template.
   a) Access the Maintain Feedback Setup task.
   b) In the Give Feedback section, select these options to enable feedback givers to select whether feedback is confidential or private:
      - Enable Confidential Feedback for Give Requested Feedback
      - Enable Private Feedback for Give Requested Feedback
   c) In the Get Feedback section, select the *Feedback on Worker* option in the Require Feedback Template field.
   d) In the Default Templates section, clear the Feedback on Worker field.
3. Assign a condition rule to the template.
   a) Click the Get Feedback on Worker tab.
   b) Click the + icon to create the condition rule.
   c) In the Feedback Template field, select the Feedback for Australian Workers template.
   d) In the Condition Rule field, select *Create Feedback on Worker Template Condition Rule*.
   e) Click OK.
4. Set up the condition rule.
   a. In the Create Feedback on Worker Template Condition Rule task, enter *Feedback for Australia Workers* in the Description field.
   b. In the Copy Condition from Rule field, select the *Workers located in Australia* option.

      Workday populates these values in the first row of the Rule Conditions grid:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	Location Address - Country	in the selection list	Value specified in this filter	Australia

   c. Click OK.

Result

When a worker submits a Get Feedback on Worker request for a worker in Australia, that feedback giver can only select the Feedback for Australian Workers template.

Tasks

Create Business Process Condition Rules

Set Up Anytime Feedback Notifications

Prerequisites

Enable email notifications and mobile push notifications. See Reference: Edit Tenant Setup - Notifications.

Security: *Set Up: Tenant Setup - BP and Notifications* domain.

Context

When you enable anytime feedback notifications, workers can send notifications to other parties that they provided the feedback. Workers can send feedback notifications only when the feedback isn't anonymous or private. Workday displays the Workers to Notify prompt on the Give Feedback task:

- When workers select the *Show my name?* and *Share with others* options to give feedback to a single recipient.
- When workers give feedback to multiple recipients.

Workers must be in the *Worker Data: Anytime Feedback* domain to be selected in the Workers to Notify prompt. When a worker provides feedback to multiple recipients and sends feedback notifications, the notified workers receive separate notifications for each feedback recipient.

Steps

1. Add workers to the *Worker Data: Anytime Feedback* domain so they can be selected in the Workers to Notify prompt on the Give Feedback task.
2. Access the Edit Tenant Setup - Notifications task.
3. Select *HCM* in the Notification Delivery Settings section, and then select the Override Parent Notification Type Settings check box for the Give Feedback notification type.
4. Select the *Notification Routing Rule for Give Feedback Notification Category* routing rule to enable the Workers to Notify prompt on the Give Feedback task.
5. From the related actions menu of the *Notification Routing Rule for Give Feedback Notification Category* routing rule, select Notification Routing Rule > Edit.
    - Enable mobile push notifications by selecting *Mobile Push Notifications* from the Channel prompt and *Immediately* on the Default Frequency prompt.
    - Enable email notifications by selecting *Email* from the Channel prompt and *Immediately* on the Default Frequency prompt.
6. To mute feedback notifications and prevent Workday from displaying the Workers to Notify prompt, clear the Override Parent Notification Type Settings check box for the Give Feedback notification type, and set the parent Default Frequency to Mute.

Result

Workers can notify other parties when giving anytime feedback to another worker.

Tasks
Set Up Mail Servers for Email Notifications
Set Up Mobile Push Notifications

Steps: Set Up Mass Operation Feedback Events

Prerequisites

Security: These domains in the System functional area:

- *Business Process Administration*
- *Custom Report Creation*

Context

You can encourage continuous feedback by scheduling mass feedback events for multiple workers at once. You can configure these mass feedback events:

- *Launch Get Feedback on Self*: Mass launches the *Get Feedback on Self* business process to enable groups of workers to request feedback on themselves.
- *Launch Get Feedback on Worker*: Mass launches the *Get Feedback on Worker* business process to enable managers to request feedback on workers from a target audience. Collecting feedback on managers from their direct reports, or on employees from their mentors and connections can be useful.
- *Cancel Feedback Requests*: Mass cancels incomplete or expired *Give Requested Feedback* events to remove them from My Tasks for feedback providers.

Steps

1. Edit Business Process Security Policies.

   or *Launch Get Feedback on Self* or *Launch Get Feedback on Worker* events only, update the *Get Feedback on Self* or *Get Feedback on Worker* business process security policy for mass launch and add:

   - The *Employee as Self* security group to the *Get Feedback on Self - Mass Launch* action step on the *Get Feedback on Self* business process security policy.
   - A role-based security group, like Manager or HR Partner, to the *Get Feedback on Worker - Mass Launch* action step on the *Get Feedback on Worker* business process definition.
2. Create a Segment-Based Security Group for Mass Operations.

   Select:

   - The *Talent Administrator* security group, or another unconstrained security group, from the Security Groups prompt.
   - The *Launch Get Feedback on Self* or *Launch Get Feedback on Worker* from the Access to Segments prompt.
3. Grant *View and Modify* permission to your segment-based security group on the *Mass Operation Management* domain in the System functional area.
4. Create Custom Reports.

   Set up a custom report to use as the input report in the Mass Operations Management task. As you complete the report for your mass operations, consider:

Operation	Considerations
Launch Get Feedback on Self	Create a report for the feedback requestors. The report must use the Indexed All Workers report data source (RDS) and return fewer than 50,000 workers.
Launch Get Feedback on Worker	Create a report for the feedback recipients or the people you're requesting feedback about. When creating the custom report, select the *Currently Active* filter from the Field prompt to ensure that Workday only requests feedback for active workers. The report must also use the Indexed All Workers RDS and return fewer than 50,000 workers.
Cancel Feedback Requests	Create a report for *Give Requested Feedback* events to cancel. To cancel only expired feedback requests, you can copy the Expired Feedback Requests report to a custom report. Configure the: • Give Requested Feedback Events RDS.

Operation	Considerations
	• *All Give Feedback Requested Events Secured for Processing Person* data source filter. • Expiration Date report field. • Get Feedback Event report field.

5. Set Up Mass Operations.

   As you complete the task, consider:

Option	Description
Mass Operation Type	Select the mass operation: • *Launch Get Feedback on Self* • *Launch Get Feedback on Worker* • *Cancel Feedback Requests*
Input Report	Select your custom report.
Run Frequency	If your run frequency isn't *Run Now*, you can configure run frequency details on the Schedule tab. To encourage continuous feedback, select a recurring frequency.
Feedback Template	(Optional) Workday populates this field if you defined a default feedback template in the Maintain Feedback Setup task for the *Get Feedback on Self* or *Get Feedback on Worker* business process. If you have condition-rule based feedback templates defined on the Maintain Feedback Setup task and also have a feedback template specified on the Mass Operation Management task, when the worker receiving the feedback request matches any condition rule, the condition-rule based template will populate the feedback request. If you assign multiple feedback templates to a condition rule, Workday displays the first template on the condition rule list in the feedback request, but workers can select a different template. For workers that don't meet any condition rules, the template specified on the Mass Operation Management task will populate the feedback request.
Feedback Requestors	(Get Feedback on Worker only) Select the users who will receive the Get Feedback tasks in My Tasks. Workday displays available role-based security groups based on the security policy for the *Get Feedback on Worker - Mass Launch* action step in the default business process definition.
Feedback Providers	(Get Feedback on Worker only) Enter feedback providers for Workday to populate the From Workers prompt in the *Get Feedback* task in My

Option	Description
	Tasks. The available feedback providers are based on the feedback recipients' relationships defined in Workday (mentors, mentees, connections, or direct reports). If you don't specify this field, then Workday leaves the From Workers prompt blank.

Result

- Mass Launch Get Feedback on Self: Workers receive task My Tasks that they can use to request feedback from another worker. The task includes the feedback template if you selected one when you ran the mass operation.
- Mass Launch Get Feedback on Worker: Feedback requestors, like managers, can open the *Get Feedback on Worker* event from their My Task. Once the feedback requestor submits the request, the feedback provider then receives a task in My Tasks and completes the feedback request.
- Mass Cancel Feedback Requests: Workday removes outdated or ignored feedback requests from the My Tasks of feedback providers. When there's only 1 Give Requested Feedback subprocess, Workday also cancels the parent business process event.

Workday notifies you if you include an inactive feedback template in a mass launch. The mass launch operation still launches successfully, but feedback requestors must manually select an active template or create their own questions. This limitation only applies for daily, weekly, or monthly run frequencies.

Note: If an administrator enables the *Talent Effect* option in the leave type for an employee on a Leave of Absence, Workday doesn't include the employee in team reports for mass operation feedback events.

Concept: Give Feedback to Multiple Recipients

Workers can give anytime feedback to more than 1 person in the same operation by selecting multiple recipients in the Give Feedback task. When a worker selects multiple recipients for feedback, Workday launches the *Give Feedback to Multiple Recipients* business process, which initiates a separate *Give Feedback* event for each recipient.

Note: Workers can give feedback to multiple recipients only when accessing the Give Feedback task through global search or from the Anytime Feedback worklet on the Talent and Performance dashboard.

Feedback for multiple recipients can't be confidential, private, or anonymous. The Maintain Feedback Setup task settings for these feedback types don't apply once a worker's action launches the *Give Feedback to Multiple Recipients* business process. If a worker edits, corrects, or cancels the feedback for 1 of the recipients, the change applies to all recipients.

You can edit the *Give Feedback to Multiple Recipients* business process to add an approval step. The approval step must be configured before the completion step. To enable feedback recipients or other users to approve the feedback, add an approval step on the *Give Feedback* business process definition.

When you're purging feedback for active workers sent to multiple recipients, you can purge feedback for 1 of the recipients but keep it for the others. Example: if Michelle gives feedback to John, Sally, and Miguel, you can purge the feedback for John but keep that same feedback for Sally and Miguel.

Example: Condition Rule to Prevent Feedback to Multiple Recipients on page 1763

Reference: Feedback Security Domains

Workday delivers these security domains in the Performance Enablement functional area so you can control what types of feedback workers can give, receive, and view.

Security Domain	Description
Self-Service: Feedback.	Provides workers self-service access to their feedback. This domain is the parent domain for all Self-Service feedback domains.
Self-Service: Anytime Feedback.	Provides workers self-service access to view nonprivate, and nonconfidential feedback given by others.
Self-Service: Edit Feedback.	Provides workers self-service access to edit anytime feedback given to others through the Give Feedback task within a 1-hour timeframe.
Self-Service: Role Requested Feedback.	Provides workers self-service access to view nonconfidential feedback on themselves that was requested from others using the *Get Feedback on Worker* business process.
Self-Service: Self Requested Feedback.	Provides workers self-service access to view nonprivate feedback that they requested on themselves using the *Get Feedback on Self* business process.
Worker Data: Anytime Feedback.	Provides access to view nonprivate and nonconfidential feedback for another worker given as part of the *Give Feedback* business process.
Worker Data: Confidential Feedback.	Provides access to view confidential feedback about another worker given as part of the *Give Feedback* or *Get Feedback on Worker* business processes.
Worker Data: Private Feedback.	Provides access to view private peer-to-peer feedback about another worker given as part of the *Give Feedback* or *Get Feedback on Self* business processes.
Worker Data: Role Requested Feedback.	Provides access to view nonconfidential feedback about a worker requested through the *Get Feedback on Worker* business process.
Worker Data: Self Requested Feedback.	Provides access to view nonprivate feedback about a worker that was requested about themselves through the *Get Feedback on Self* business process.

Reference: Feedback Business Processes

Workday delivers these business processes in the Performance Enablement functional area so you can enable workers to receive and provide feedback:

Business Process	Description
Give Feedback.	Enables workers to provide unsolicited, anytime feedback.
Give Feedback to Multiple Recipients.	Enables a worker to provide nonanonymous, nonconfidential, and nonprivate feedback to multiple recipients. Workday automatically

Business Process	Description
	enables this business process and you can't opt out of it.
Get Feedback on Self.	Enables workers to request feedback about themselves from another worker.
Get Feedback on Worker.	Enables workers (usually managers) to request feedback on another worker (usually direct reports).
Give Requested Feedback.	Enables workers to provide feedback in response to a request from another worker. *Give Requested Feedback* is a subprocess of *Get Feedback on Worker* and *Get Feedback on Self* and doesn't run as a standalone process. If you enable employees to decline feedback requests, you can require a reason. Use the Decline Reason Missing report field in a condition rule on the business process.

Reference: Feedback Reports

You can view feedback using these reports:

Report	Feedback Type	Searchable	Related Action from a Worker	Where It's Available
Feedback for Skills	Feedback on Self Feedback on Worker	No	None	Available for the Feedback group in worker profiles. See Steps: Set Up Skill Endorsements and Ratings on page 1860.
Feedback On My Team	Anytime Feedback on Worker Feedback on Self	No	None	Available as Feedback for the Performance and Talent worklets. Available for the Feedback for Worker Profile profile group in worker profiles.
Feedback Received	Anytime Feedback on Worker Feedback on Self	No	Talent > View Feedback	Available for the Feedback and Performance groups in worker profiles.
Feedback Requested	Feedback on Worker Feedback on Self	Yes	Talent > View Feedback by Request	Available for the Feedback and Performance

Report	Feedback Type	Searchable	Related Action from a Worker	Where It's Available
				groups in worker profiles.
Requested Feedback Responses	Feedback on Worker Feedback on Self	Yes	None	Use this standard report to create a custom report and add it to the Worker Profile.
View Feedback Given to Others	Anytime Feedback on Worker Feedback on Self	No	Talent > View Feedback Given to Others	Available as Feedback Given for the Performance group in worker profiles.
View Feedback Received	Anytime Feedback on Worker Feedback on Self	Yes	Talent > View Feedback Received	Available as View Feedback Received in the Performance and Feedback for Worker Profile profile groups in worker profiles.

Steps: Set Up Feedback on page 1737

Reference

Workday Community: Creating a Custom Report from the Requested Feedback Responses Standard Report to Display on the Worker Profile

Example: Condition Rule to Prevent Feedback to Multiple Recipients

Workday automatically enables the *Give Feedback for Multiple Recipients* business process when a user accesses the Give Feedback task and selects multiple recipients. You can't opt out of the *Give Feedback to Multiple Recipients* business process. This example illustrates how to create a condition rule to prevent or discourage users from giving feedback to multiple recipients. You must have administrative privileges to create this condition rule.

Context

You want to prevent users from selecting multiple recipients when giving feedback. When users select more than 1 recipient, you can set up a condition rule to issue a validation message and prevent them from submitting the task. Alternatively, you allow users to select multiple feedback recipients, but you want to warn them that this feedback is publicly visible. You can set up a condition rule to create a validation message to provide that warning.

Steps

1. Access the *Give Feedback to Multiple Recipients* business process definition.
2. In the Business Process Steps tab, click the magnifying glass for the *Initiation* step and select the Business Process > Create Condition Rule related action.

3. Enter a description for the condition rule and set the Rule Conditions to And with a value of 1=0. Click OK.
4. Navigate back to the business process definition and click the magnifying glass for the *Initiation* step and select the Business Process > Maintain Step Conditions related action. Click OK.
5. In the Validation Conditions grid, add a condition rule row and select *Create Condition Rule* in the Rule field.
   - To prevent users from giving feedback to multiple recipients, select the *Critical* option in the Severity field.
   - To enable users to give feedback to multiple recipients but display a validation message only, select the *Warning* setting in the Severity field.

   Click OK.
6. On the *Create Condition Rule* step:
   a) Enter the condition rule description. Example: Feedback to Multiple workers isn't allowed.
   b) In the Source External Field or Condition Rule field, enter 1=0 (the value created in step 3).
   c) In the Relational Operator field, select *equal to*.
   d) In the Comparison Type field, select *Value specified in this filter*.
   e) In the Comparison Value field, select *No*.
7. (Optional) Create the validation message that's displayed when users initiate the Give Feedback task and select multiple recipients.
   a) Navigate back to the business process definition and click the magnifying glass for the *Initiation* step and select the Business Process > Maintain Step Conditions related action.
   b) Select Validation > Configure Validation Message.
   c) Select the *Text* option in the *Text/External Field and enter the validation text you want to display.

Result

When users access the Give Feedback task and select multiple recipients, they receive a validation message and are prevented from submitting the task. They click Cancel to return to the task and then select a single feedback recipient. If you created the condition rule to issue only a validation message, the message displays in a pop-up window. Users can give feedback to multiple recipients after viewing the message.

Note: The step and validation message preventing the feedback to multiple recipients will happen after the user submits the feedback request. The user must return to the Give Feedback task and re-enter the feedback content.

Check-Ins

Setup Considerations: Check-Ins

You can use this topic to help make decisions when planning your configuration and use of check-ins. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

Check-ins enable workers to hold 1-on-1 continuous conversations with managers, peers, and mentors. Managers can use check-ins and check-in topics for informal coaching and career conversations with their workers.

Business Benefits

In Workday, check-ins:

- Are easy to set up and use because they don't require business process configuration.
- Provide a supplement to more formal employee review and feedback events with less administrative overhead.
- Enable you to encourage more frequent and personal communication in your organization.
- Provide comprehensive supporting details for more thorough performance reviews.

Use Cases

Users can:

- Create and schedule check-ins, and create individual check-in topics to share information and track discussions.
- Associate check-in topics with multiple check-ins with a participant.
- Create and edit check-ins and check-in topics on Workday and Workday on Android, iPad, and iPhone.
- Attach documents to check-ins and check-in topics to supplement discussions.

Questions to Consider

Questions	Considerations
How do you enable workers to participate in check-ins?	Workers secured to the *Self-Service: Check-Ins* domain can create and view check-ins.
How can you integrate check-ins into performance reviews?	You can create a custom report for check-ins and check-in topics and embed it as a check-ins analytic worklet in performance review business processes.

Recommendations

- Create analytics to sort by check-in topic instead of by check-in date to analyze data by subject.
- To more effectively track conversations, inform users to manually add name or date and time stamps in Shared Notes on specific comments.

Requirements

Set up domains to enable workers to participate in check-ins.

Limitations

Workday doesn't support:

- Sharing a topic with multiple participants.
- Deleting a check-in by anyone other than the person who created it.
- Recovering deleted content in a check-in or check-in topic.
- Disabling Shared Notes.
- Disabling the ability of workers to overwrite the other participant's content in Shared Notes.

- Disabling My Notes for participants' private notes.
- Mass archiving of check-ins or check-in topics.
- Tracking user edits or deletions for check-ins or check-in topics. Workday doesn't support audit trails or a history of changes for check-ins and check-in topics. Example: the creator of a check-in topic can delete it with no record of the deletion.

  Administrators secured to the *Auditor* security group can perform audits of individual check-ins or check-in topics.

Tenant Setup

You can set up routing rules for check-ins notifications on the Edit Tenant Setup - Notifications task.

Security

These domains in the Performance Enablement functional area:

Domains	Considerations
Self-Service: Check-Ins	Add workers to this domain so they can create and view their own check-ins and check-in topics.
Worker Data: Check-Ins	Add managers to this domain so they can manage check-ins of other users in their organization.
Set Up: Check-Ins	Add administrators to this domain so they can set up help text for check-ins.

Business Processes

No impact.

Reporting

Reports	Considerations
My Check-Ins	Enables self-service access for workers to view their check-ins and check-in topics.
View Check-Ins	Enables managers to view check-ins and check-in topics for selected participants. My Notes entered by participants are private and not included in the report.
Check-Ins	Enables managers to view a report of all check-ins for an organization.
Check-In Topics	Provides a report of all check-in topics for an organization. Administrators can use the report to track check-in topics for each worker.

You can use the Check-In report data source to create custom reports.

Integrations

Workday provides these web services for check-ins:

- *Get Check-Ins*
- *Put Check-Ins*
- *Get Check-In Topics*

- *Put Check-In Topics*

Connections and Touchpoints

Check-Ins interact with Manager Insights Hub, where managers can view and manager check-ins for their direct reports. Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Concepts
Setup Considerations: Manager Insights Hub on page 2933

Steps: Set Up Check-Ins

Context

Check-ins provide an informal method of 1-on-1 communication between workers to supplement formal employee review and feedback events. You can use check-ins for communication between managers and workers that's less structured than formal employee review or feedback processes. You don't need to configure any business processes to set up check-ins.

A check-in includes 2 participants: the user who creates the check-in and the user who receives the check-in. Workers can create only 1 check-in for a given date for each participant. Check-in dates can be in the past or in the future, and participants can change the date at any time. Workers can create multiple check-in topics for each check-in. Check-in topics can contain both notes shared with other workers and notes workers keep for themselves (My Notes). Workers can add and remove attachments to check-ins and to check-in topics.

You can set up check-ins so that workers secured to the *Self-Service: Check-Ins* domain can send and receive check-ins to other workers secured to that domain, not just their managers.

Workers can create and edit check-in topics on the Workday mobile app.

Steps

1. Edit Domain Security Policies.

   Set up check-ins for these domains in the Performance Enablement functional area:

   - *Self-Service: Check-Ins*
   - *Worker Data: Check-Ins*
2. (Optional) Set up push notifications and notification settings for check-ins and check-in topics.
   a) Access the Edit Tenant Setup - Notifications task.
   b) Set Up Mobile Push Notifications.
   c) Select HCM in the Notification Delivery Settings section to override the parent notification type delivery settings. Create a notification routing rule for check-ins to enable or disable the Notify Participants check box.

      See Create Notification Routing Rules.
3. (Optional) Configure these profile groups to display check-ins on the Performance tab or the Career tab of the Worker profile:

   - Career for Worker Profile
   - Performance for Worker Profile

   See Steps: Set Up Profiles and Profile Groups.

4. (Optional) Add the View Check-Ins report to the Team Performance Dashboard and the My Check-Ins report to the Talent and Performance Dashboard.

   See Steps: Set Up Dashboards and Landing Pages.

5. (Optional) Access the Maintain Check-Ins Setup task to add help text that displays on the My Check-Ins report.

   Security: *Set Up: Check-Ins* in the Performance Enablement functional area.

Result

Workers can create, view, edit, delete, and archive check-ins and check-in topics.

You can customize the Check-Ins and Topics labels on the Maintain Custom Labels task.

Succession

Setup Considerations: Succession

You can use this topic to help make decisions when planning your configuration and use of succession. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Succession is the process of identifying candidates who are ready to move into a position. You can track the preparedness of internal and external candidates to take up a position using:

- Succession plans.
- Succession pools.

Business Benefits

Tracking succession candidates helps:

- Reduce the days to fill vacancies for important roles.
- Ensure that these roles are continuously occupied.

Developing internal candidates for succession contributes to employee engagement and advancement.

Use Cases

You can use succession plans to fill:

- High-level leadership positions in the organization.
- Positions requiring advanced knowledge of proprietary technology.
- Positions requiring specialized skills, crucial for business success.

Succession pools track candidates that qualify for particular job profiles and are suitable for filling lower-level jobs such as first- or second-level managers.

Questions to Consider

Questions	Considerations
What's the difference between talent pools and succession pools?	Succession pools enable you to assess the readiness of internal candidates and consider external candidates for job profiles. You can use talent pools more generally. Example: to organize workers for development, tracking, and planning purposes. You can configure talent pools to manually or automatically populate workers based on certain qualifications, whereas you must manually populate succession pools. You can populate succession plans from talent pools but not succession pools.
Who can you add to succession pools and plans?	You can add internal and external candidates who have potential to develop into the positions you're tracking. You can create confidential prospects to add to succession pools and plans.
Which roles should you prioritize for succession?	To ensure a smooth succession, prioritize roles that are key for business success such as the executive and leadership levels. The further you go down the organization for succession planning, you must track candidates for a greater quantity of positions.
Who is responsible for managing succession?	You can assign roles to help manage succession, including: • Succession partners who perform succession management tasks for assigned organizations and approve business process events. • Succession pool managers who perform succession management tasks for assigned succession pools. This role doesn't have approval authority, which is assigned to the creator of the succession pool. • Talent administrators who create and maintain all talent setup data. This role has approval authority for talent management business processes.
How do succession plans and pools differ for different staffing models?	You can consider these differences when determining whether to use succession plans, pools, or both in your organization. When a worker leaves a position in a job management organization, the succession plan no longer persists with that position, and you must populate another plan for that position. In a position management organization, the succession plan persists until the position closes, regardless of whether or not a worker occupies the position. However, when a succession plan separates from the position in either staffing

Questions	Considerations
	model, you can restore the succession plan using the Move Succession Plan task. Succession pools apply only to job profiles, which associate well with the job management staffing model. However, both staffing models support succession pools.
What helps inform succession?	You can use these measures of employee performance and development to inform succession planning in your organization: • Assess potential. • Calibration. • Performance review. • Talent review.

Recommendations

Assess potential as part of succession to provide additional insight into existing candidates and identify new candidates for succession.

Enable nomination tracking so that managers can nominate employees to job profiles as part of potential assessment. Talent administrators can view nominees by filtering workers using the Nominations facet filter on the Find Workers report, and decide to add them to succession pools or plans.

To ensure an organization-wide approach to succession, create succession strategies and assign them to candidates.

Enable the critical job check box on job profiles and position restrictions. Critical roles inform succession-related reports, such as:

- Critical Open Positions
- Find Workers
- Succession Plans for Critical Positions

Base succession planning on supervisory organizations and not on intersection, location, and other related security groups and roles.

Requirements

Define readiness values to make them available to select on succession plans. You can't add candidates on succession plans unless you select a readiness value.

Limitations

Succession plans and pools don’t auto-populate or suggest candidates based on skills related to the position. However, you can configure dynamic talent pools to populate succession plans.

Tenant Setup

No impact.

Security

Talent pool domains enable the same functionality as succession pools.

Domains	Considerations
Indexed Data Source: Positions in the Jobs & Positions functional area.	Grants access to the Find Positions Without Succession Plans report.
Mass Operation Management in the System functional area.	Enables you to conduct potential assessments for a large number of supervisory organizations by mass launching the Assess My Team's Potential.
Set Up: Recruiting in the Recruiting functional area.	Enables you to define prospect categories for succession pools, such as Succession Candidate. Categories enable you to filter and search for external succession candidates.
Set Up: Succession in the Talent Pipeline functional area.	Enables you to create values that define candidates' readiness to move into a position. You can also enable nomination tracking, identify external candidates, and create succession strategies.
Set Up: Talent in the Talent Pipeline functional area.	Enables you to create values that define candidate attributes, such as: • Potential • Retention • Loss impact • Achievable levels
Talent Pool: Create in the Talent Pipeline functional area.	Enables you to create succession pools.
Worker Data: Succession in the Talent Pipeline functional area.	Enables administrators and partners to manage and view succession plans for the positions they support.
Worker Data: Succession Plan-Any in the Talent Pipeline functional area.	Enables managers to view the succession plans workers are in, but not the details within the plans.

Business Processes

Business Processes	Considerations
Manage Succession Plan	Enables you to track succession plan candidates.
Remove Worker From Talent	Enables you to automatically remove workers from succession plans and succession pools upon termination.
Start Development Plan	You can include potential assessment as a subprocess of *Start Development Plan*. You can use the results of the potential assessment to inform succession.
Start Performance Review	You can include potential assessment as a subprocess of *Start Performance Review*. You can use the results of both performance review and potential assessment to inform succession.

Reporting

Report	Considerations
Find Workers	You can directly compare up to 5 workers to assess candidates for succession.
Succession Planning Summary	You can view details of all succession plans for the organization.
Succession Profile	You can view and edit the worker succession plans and add workers to other succession plans.

You can add these reports to your Talent dashboard to view analytics for succession:

- Average # of Successors for Position
- Retirement Eligibility by Critical Job
- Top Talent on Succession Plans
- Succession Plans at Risk

Integrations

No impact.

Connections and Touch points

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Reference: Succession Planning Reports on page 1781

Steps: Set Up Succession

Context

Succession helps identify candidates for critical positions in your organization. You can track a candidate's level of readiness to move into a position and other attributes in succession plans and pools.

Steps

1. Access the Maintain Readiness task.

   Create the codes that define candidates' readiness to move into a position identified for succession planning.

   Security: *Set Up: Succession* domain in the Talent Pipeline functional area.
2. (Optional) Hide or Require Optional Fields.

   Select the fields you want to remove from the tasks and reports in the Talent Pipeline functional area.
3. (Optional) Access the Maintain Succession Plan Setup task.

   Configure your succession plans to include nomination tracking, external candidates, and skills.

   Security: *Set Up: Succession* domain in the Talent Pipeline functional area.

4. (Optional) Edit Business Processes.

   Configure the *Remove Worker From Talent* business process to automatically remove terminated workers from succession pools and plans.
5. (Optional) Edit Business Process Security Policies.

   Configure the *Remove Worker From Talent* business process security policy.
6. (Optional) Activate Pending Security Policy Changes.

2025R2 Feature Release Note: Skills in Succession Plans

Steps: Set Up Assess Potential

Context

Assessment values enable you to identify good candidates for succession. These values can include:

- Achievable promotion level relative to current position.
- Perceived risk of leaving the company.
- Potential.
- Potential impact of loss.
- Custom values.

You can assess employee potential independently or as part of:

- Calibration.
- Employee reviews.
- Talent Reviews.

To assess potential during calibration, create a calibration program that enables you to update potential assessment during calibration.

To assess potential during employee reviews, include the *Assess Potential* subprocess in these business processes:

- *Start Performance Review*.
- *Start Development Plan*.

To access the Assess Potential task on mobile, configure the task as a:

- Step on the *Start Performance Review* business process.
- Section on the talent review template.

Steps

1. Access the Maintain Potential task.

   Create the codes that define the potential to move into a position identified for succession planning.

   Security: *Set Up: Talent* domain in the Talent Pipeline functional area.
2. Access the Maintain Readiness task.

   Create the codes that define candidates' readiness to move into a position identified for succession planning.

   Security: *Set Up: Succession* domain in the Talent Pipeline functional area.
3. Access the Maintain Retention task.

   Create codes that define employees' risk of leaving the company.

   Security: *Set Up: Talent* domain in the Talent Pipeline functional area.

4. Access the Maintain Loss Impact task.

   Create the codes that define the impact of losing an employee.

   Security: *Set Up: Talent* domain in the Talent Pipeline functional area.
5. Access the Maintain Achievable Levels task.

   Create the codes that define levels to advance to the position identified for succession.

   Security: *Set Up: Talent* domain in the Talent Pipeline functional area.
6. (Optional) Access the Maintain Talent Matrix Setup task.

   Enable the configurable Potential Assessment Value fields that you want to use, and enter labels for them.
7. (Optional) Access the Maintain Succession Plan Setup task.

   Enable nomination tracking to nominate employees to job profiles during potential assessment.
8. Edit Business Processes.

   Configure these business processes:

   - *Assess Potential*
   - (Optional) *Assess My Team's Potential*
   - (Optional) *Start Potential Assessment*

   The *Start Potential Assessment* business process enables you to start the performance review with a potential assessment.
9. Edit Business Process Security Policies.

   Configure these business process security policies in the Career and Development Planning, Performance Enablement, and Talent Pipeline functional areas:

   - *Assess Potential*
   - (Optional) *Assess My Team's Potential*
   - (Optional) *Start Potential Assessment*
10. Activate Pending Security Policy Changes.

Next Steps

Access the Employee Potential report to review employee attributes.

Assess your team's potential. The Organizations prompt only displays the organizations you manage.

Steps: Set Up Mass Operations for Assess Potential

Prerequisites

Security: *Mass Operation Management* domain in the System functional area.

Context

You can use the Mass Operations Management framework to create, launch, and cancel assess potential events in mass, enabling you to conduct assessments for a large number of supervisory organizations.

You can launch Assess My Team's Potential events, independent of performance reviews, in mass to the specific supervisory organizations listed in a custom report.

Steps

1. Create a Segment-Based Security Group for Mass Operations.

   As you complete the task, consider:

Option	Description
Type of Tenanted Security Group	Select *Segment-Based Security Group*.
Name	Workday recommends naming the security group *Mass Assess My Team's Potential*.
Security Groups	Select these groups: • *Business Process Administrator* • *HR Administrator* • *Talent Administrator*
Access to Segments	Select *Assess My Team's Potential*.

2. Edit Business Process Security Policies.

   In the Who Can Do Action Steps in the Business Process section of the *Assess My Team's Potential* business process, add *Manager* to the Security Group of the Assess My Team's Potential - Mass Launch action step.
3. Activate Pending Security Policy Changes.
4. From the related actions menu of the *Assess My Team's Potential* business process, select Business Process > Edit Definition.

   Add a row in the Business Process Steps section.

   As you complete the business process steps, consider:

Option	Description
Order	Specify the completion order of this step. Example: ab.
Type	Select *Action* as the step type for the business process.
Specify	Select *Assess My Team's Potential - Mass Launch* as the allowed action for the business process.
Group	Select *Manager*.

5. Create Custom Reports.

   As you complete the task, consider:

Option	Description
Report Type	Select *Simple* as the report type.
Data Source	Select *Supervisory Organizations* as the data source.
Optimized for Performance	Clear this check box to include *Supervisory Organizations* as the data source.
Columns	Select *Supervisory Organization* as the report field.
(Optional) Filter	Select *Supervisory Organization* as the report field.

Option	Description
(Optional) And/Or	Select *And*.
(Optional) Operator	Consider the operator option you want for your custom report. To exclude specific supervisory organizations from receiving mass assess potential events, select *not in the selection list* as the operator option and enter the supervisory organizations you want to exclude under Comparison Value.

Mass Assess My Team's Potential supports only supervisory organizations.

6. Access the Mass Operation Management task.

   As you complete this task, consider:

Option	Description
Mass Operation Type	Select *Mass Assess My Team's Potential* as the mass operation type.
Input Report	Select the custom report you created.
Run Frequency	Select *Run Now*.

7. (Optional) Select Business Process > Cancel from the related actions menu of an in-progress *Assess My Team's Potential* business process.

   Select any associated assess potential events that you want to cancel.

   Security: *Business Process Administration* domain in the System functional area.

Result
Workday launches Assess My Team's Potential events for the supervisory organizations listed in your custom report. You can view the completion status of this event in your notifications. Managers receive Assess My Team's Potential events in My Tasks.

Next Steps

You can review the Data Not Processed report to identify unprocessed supervisory organizations.

Reference: Filter Operators

Steps: Set Up Succession Pool Security

Context

Succession pools help track candidates for one or more job profiles. Workday delivers a Succession Pool Manager role to manage succession pools. You can also create custom roles and configure the security for succession pool management.

Steps

1. Set Up Assignable Roles.

   Select *Succession Pool* on the Enabled for prompt.

2. Create Role-Based Security Groups.

   Create a constrained role-based security group for the role you created.
3. Edit Domain Security Policies.

   Add the new security group to the security policies of these domains:

   - *Talent Pool: Create*
   - *Talent Pool: Manage Membership*
   - *Talent Pool: View and Edit*

   (Optional) To enable managers to view succession plans outside their organizations, grant the *Manager* security group view access to the *Worker Data: Succession Plan - Any* security domain.
4. Access the Configure Profile task.

   Enable the groups for the Succession Pool profile.

   Add the Overview for Succession Pool group to the Succession Pool profile.

   Security: *Set Up: System* domain in the System functional area.
5. Access the Configure Profile Group task.

   Enable reports for the Overview for Succession Pool profile group.

   Add the Succession Pool Candidates report to the Overview for Succession Pool profile group.

Result

You can now:

- Assign workers to succession management roles.
- Create succession pools for individual job profiles.

Next Steps

View succession related reports in succession pool profiles.

Related Information

The Next Level: Building and Retaining a Healthy Pipeline

Steps: Manage Succession Plans

Prerequisites

Configure the *Manage Succession Plan* business process and security policy in the Talent Pipeline functional area.

Context

Succession plans help track candidates for critical positions.

A succession plan provides information about:

- Employees who are candidates to fill a position.
- Employee readiness to step into the position.
- The candidate identified as the top successor to fill the position.

Steps

1. Access the Find Positions Without Succession Plan report.

   Identify positions that don't have any succession plans.

   Security: *Indexed Data Source: Positions* domain in the Jobs & Positions functional area.

2. Access the Create Succession Plan task.
   Create Succession plans for positions that need them.
   Security: *Search: Find Succession Plans* and *Set Up: Succession* in the Talent Pipeline functional area.
3. Access one of these tasks:
   - Manage Succession Plan
   - Copy From Another Plan

   Update the succession plan by manually adding candidates or copying candidates from 1 succession plan to another.
4. (Optional) Access the Move Succession Plan task.
   Move candidates from 1 succession plan to another.
5. (Optional) Add external or confidential candidates to the succession plan.
   See: Steps: Manage Succession Candidates on page 1779.

Result

You can now track candidates in succession plans.

Steps: Manage Succession Pools

Prerequisites

Create roles and configure the security for succession pool management.

Context

Succession pools help track candidates for critical job profiles.

A succession pool provides information about:

- Employees who are candidates for a job profile.
- Employee readiness to step into the job.
- The candidate identified as the top successor to fill the job.

Steps

1. Access the Create Succession Pool task.
   Create succession pools for job profiles.
   You're automatically assigned the Succession Pool Manager role for the created succession pool.
   Security: these domains in the Talent Pipeline functional area:
   - *Talent Pool: Create*
   - *Worker Data: Succession Plan - Any*
2. Access the Find Workers Report.
   Select workers and add them to succession pools.
   Security: *Search: Find Worker* in the Worker Profile and Skills functional area.
3. (Optional) Add external or confidential candidates to the succession pool.
   See: Steps: Manage Succession Candidates on page 1779.

Result

You can now track candidates in succession pools.

Related Information

Tasks

Steps: Set Up Succession Pool Security on page 1776

Steps: Manage Succession Candidates

Prerequisites

Create 1 or more succession pools or plans.

Context

In addition to internal workers, you can add these types of candidates to succession pools and plans:

- Internal confidential.
- External confidential.
- External.

Steps

1. (Optional) Access the Maintain Prospect Types task.

   Define a category of prospects for succession pools and plans.

   Security: *Set Up: Recruiting* domain in the Recruiting functional area.
2. (Optional) Access the Maintain Succession Plan Setup task.

   Enable external candidates for succession pools and plans.
3. Access 1 of these tasks:

   - Create Confidential Prospect to create internal or external confidential candidates.
   - Create Prospect to create external candidates.

   Select *Succession Candidate* on the Type prompt to make candidates available for succession pools and plans.

   Security: *Create Confidential Prospects* in the Recruiting functional area.

   Security: *Prospects* in the Recruiting and Talent Pipeline functional areas.
4. (Optional) Access the View Succession Pool report.

   Click the Edit Candidates button and add confidential or external candidates to the succession pool.

   Security: *Talent Pool: View and Edit* in the Talent Pipeline functional area.
5. (Optional) Access the Manage Succession Plan task.

   Add confidential or external candidates to the succession plan.

   Security: *Manage Succession Plan* business process in the Talent Pipeline functional area.

Result

You can now track external and confidential candidates in your succession pools and plans.

Steps: Set Up Succession Planning in HR Partner Hub

Prerequisites

Steps: Set Up HR Partner Hub on page 958

Security: *Worker Data: Succession* domain the Talent Pipeline functional area.

Context

You can configure the Succession Planning report in HR Partner Hub for an overview of succession planning information for the organizations HR Partners support. The Succession Planning report displays your highest level organization or the organizations selected in the filter on the Overview page by default. You can change what organizations are displayed by using the filter at the top of the page.

Note: You must have the same security group access to the *Worker Data: HR Partner Hub* and *Worker Data: Succession* domains to view organizations in Succession Planning in the HR Partner Hub. This feature only supports displaying data for users in constrained role-based, intersection, or aggregation security groups. See: Reference: HR Partner Hub Security and Data Sources.

Steps

1. Access the HR Partner Hub, and use the menu to navigate to Organizational Health > Succession Planning.
2. As you review the cards in the Succession Planning section, consider:

Option	Description
Succession Plans	Displays the total number of succession plans.
Top Organizations	The fill rate of positions with succession plan candidates on the plan at the time of the job change for your organizations. We order this card to display the top 4 organizations. This card displays the data from the Succession Plan Candidate Fill Rate report. Security: *Worker Data: Headcount Reports* and *Worker Data: All Positions* domains in the Staffing functional area.
Plans Without Updates in the Past 6 Months	Displays existing succession plans without updates in the past 6 months.

3. In the Succession Plans, we display a maximum of 3 cards. As you review the cards, you can select:
   - Manage Plan to access the Manage Succession Plan task for the succession plan on the card. See: Steps: Manage Succession Plans.
   - The View All Plans button to navigate to the View All Succession Plans report in a pop-up.
4. The Positions Without Succession Plan section, displays all positions without succession plans in this order:
   - Positions marked as critical.
   - Organization name.
   - Position ID.

   Select the Create Plan button to access the Create Succession Plan task.

Example

Fill Rate Calculation

We calculate the Fill Rate in the View All Succession Plans report with the following formula:

Fill Rate = Total Successful Job Changes / Total Job Changes

Total Successful Job Changes: This is the number of completed, inbound job changes where the incoming worker was a candidate on the organization's succession plan. The job change must have occurred after the succession plan was created and have an effective date on or before the current date. The candidate must have been listed on the most recently completed succession plan event before the job change's effective date.

Total Job Changes: The total number of completed, inbound job changes for all positions within organizations that have position restrictions and a succession plan. This only returns data for job changes after the creation of a succession plan.

You're an HR Partner accessing the Succession Plan Candidate Fill Rate report. Reviewing Organization A to see how the calculation works.

- Organization A has three positions with restrictions: Position A, Position B, and Position C.
- Position A and Position B have succession plans. Position C does not.
- The system only looks at positions that have both Position Restrictions and a succession plan, so we only count data from Position A and Position B.

Position A has 4 job change events. Of these, only 2 meet the criteria for a valid job change. The job changes were completed and inbound, and happened after the plan was created. Out of those 2 valid events, only 1 was considered successful because the incoming worker was a candidate on the succession plan.

Position B has 2 job change events, both of which meet the valid criteria. However, neither was considered successful.

Position C has 20 job change events, but since it has no succession plan, these are not included in the calculation.

The result:

- Total Successful Job Changes = 1 (from Position A)
- Total Job Changes = 4 (2 from Position A + 2 from Position B)

Based on the formula, Organization A's Fill Rate is 1 out of 4, or 25%.

Next Steps

Review the Succession Plan Candidate Fill Rate report.

2025R2 Feature Release Note:Succession Planning in HR Partner Hub

Reference: Succession Planning Reports

Workday delivers reports that help you track and manage succession plans.

Report	Description
Find Positions Without Succession Plan	Finds positions that don't have a current succession plan in place. Use this report to create succession plans for selected positions. Administrators and human resource partners should use this report. Secure human resource partners and administrators to the *Search: Find Succession Plans* domain. Secure talent administrators to the *Indexed Data Source: Positions* domain.
Find Succession Plans	Find plans for organizations, positions, or both. Administrators and human resource partners should use this report. Secure HR Partners to the *Search: Find Succession Plans* domain to enable them to search for, inactivate, and delete succession plans.

Report	Description
	Secure administrators to both the *Set Up: Succession* and *Search: Find Succession Plans* domains.
My Team's Succession Plans	Details include the organization, position, and incumbent.
Navigate Succession Plans	View the position hierarchy for an organization and who currently fills each position. Drill down to see the workers associated with the succession plan for a position. You can access detailed information about: • The succession plans to which the worker belongs. • Current job information. • Skills and experience. • Job history.
Succession Planning Summary	Succession plans by organization. Details include the position, organization, candidates identified as successors for the position, and information about the candidates.
Succession Plans for Critical Positions	Critical positions in a selected organization and their succession plans. You can also use this report to identify critical positions without succession plans.
Succession Pool Membership Tracking	Track changes to succession pool candidates, including: • Candidates added or removed. • The date. • Who made the change.
Succession Profile	A list of succession plans and pools for a specific employee. You can use this report to: • Edit a succession plan. • Add the employee to another succession plan. • Tag the employee into other succession pools.
View Succession Plan for Position	A list of candidates and their readiness for a specific succession plan.
View Succession Pool	Details about current and potential succession candidates. You can: • Add or remove candidates. • Indicate readiness. • Identify top candidates. • Add notes about each candidate.

Tasks

Steps: Manage Succession Plans on page 1777

FAQ: Succession Plans

- How do I add a worker to a succession plan?
- How do I delete a succession plan?
- Why can't I see a succession plan?
- Why are terminated workers showing on succession plans?
- What happens to a succession plan during a transfer?
- How do I create or edit external succession candidates?

How do I add a worker to a succession plan?	You can tag workers for membership in succession pools from worker preview cards or the Find Workers report. You can also add workers to succession plans using the: • Manage Succession Plan task. • Succession Profile report. • View Succession Pool report.
How do I delete a succession plan?	You can't delete a succession plan if the plan has prior events associated with it. Inactivate a succession plan to prevent employees and managers from using it. Select the Inactive check box in the: • Find Succession Plans report for positions. • Edit Succession Pool task.
Why can't I see a succession plan?	Access to a succession plan is based on security for the position associated with the succession plan. If you give managers permission on the *Worker Data: Succession Plans - Any* domain, they can view the names of succession plans that their employees are candidates on. Access to succession pools requires that you have a role on the pool.
Why are terminated workers showing on succession plans?	Because succession plans often include external candidates, Workday doesn't automatically remove terminated workers from succession plans. You can configure the *Termination* business process to remove workers from succession plans and pools on their termination date or last day of work. To manually remove a terminated worker, access the Manage Succession Plan task.
What happens to a succession plan during a transfer?	If you're transferring a worker to a new organization without changing their job or position, the succession plan stays with the job or position. If the transfer only moves the worker and not the job or position, then:

	• The job in a job management staffing model closes and the succession plan isn't active. • The position in a position management staffing model remains open and the succession plan is active.
How do I create or edit external succession candidates?	There are 3 ways to set up external succession candidates: • The Create Prospect task. • The Edit Prospect task. • The View Succession Pool report.

Concept: Termination Impact on page 710

Tasks

Steps: Manage Succession Plans on page 1777

Steps: Set Up Talent Data Removal for Terminated Workers on page 1813

Mentors and Connections

Steps: Set Up Mentorships

Prerequisites

Configure these security policies in the Career and Development Planning and Worker Profile and Skills functional areas:

- *Compare Mentors*
- *Self-Service: Mentoring*
- *Set Up: Mentoring*
- *Self-Service: Skills*
- *Worker Data: Mentoring*

Context

Workday mentorships give structure to informal 1-on-1 relationships between workers. Employees and contingent workers can act as mentors and mentees.

Steps

1. Edit Business Process Security Policies.
    a) Configure the *Manage Mentorship* business process security policy to enable employee self-service for mentorships.
    b) Add the *Employee As Self* security group to the *Add a Mentor*, *Create Mentorship*, *Edit Mentorship with*, and *Close Mentorship with* initiating actions.
2. Configure the *Manage Mentorship* business process in the Career and Development Planning functional area.

    Workday recommends adding the Mentor security group on the *Review Mentorship* or *Approve* step.
3. Activate Pending Security Policy Changes.

4. Access the Maintain Connection Types task.

   As you complete the task, consider:

Option	Description
Enable Mentor Availability Option	Give workers the ability to opt out of being a mentor. Workday refreshes mentor availability every 6 hours in implementation and sandbox tenants, and every hour in production tenants.
Default Mentor Availability	Specify whether the Available for Mentoring field on the My Mentorship Preferences task is set to Yes or No by default. Workers can mark themselves as unavailable for mentorships without changing current mentorships from the My Mentorship Preferences task.
Inactive	Select Inactive to temporarily remove a connection type from use. At least 1 connection type must be active to use mentorships.

   Note: You can create only 1 mentorship event for a worker with the same mentor and mentor type.
5. Access the Maintain Close Mentorship Reasons task.

   Create reasons for ending mentorships.
6. (Optional) Access the Maintain Custom Labels to rename mentor, mentee, and mentorships throughout Talent.
7. (Optional) Edit Business Processes.

   Add the Configure Questionnaire step to the *Manage Mentorship* business process to enable questionnaires for mentors and mentees.
8. (Optional) Configure Questionnaires and Questions.
9. (Optional) Access the Configure Guided Tours task to set up guided tours for *Mentorship Preferences*.
10. (Optional) Access the Configure Profile Group task to add *My Mentorships* to the *Career for Worker Profile* profile group.
11. (Optional) Access the Maintain Dashboards task to add the *Mentorship Events Awaiting Action* worklet to the *Talent and Performance* dashboard or custom dashboards.

Next Steps

- Employees, contingent workers, managers, HR Partners, and administrators can assign a mentorship for a worker using the *Find Mentor* report.
- Employees and contingent workers can request a mentor on the Add a Mentor task.
- Employees and contingent workers can search for and add a mentor, and set their mentorship preferences, using the *My Mentorships* report.
- Employees and contingent workers can view details of their in progress mentorship events using the Mentorships Events Awaiting Action worklet.
- Managers and administrators can assign a mentorship for a worker on the Add a Mentor for Worker task.
- Managers can request feedback on a worker from the worker's mentors or mentees using the Get Feedback on Worker task.
- Administrators can Cancel the *Manage Mentorship* subprocess. For example, administrators can remove mentorship tasks for terminated workers that were assigned as part of the *Hire* business process.

- Administrators, employees, and contingent workers can close a mentorship using the *My Mentorships* report. Select the View/Edit action on the mentor row, then Close Mentorship. Enter the Start and End dates, and the Reason.
- (Optional) To purge mentorship preferences data, access the Purge Person Data task.

Concept: Connections

Connections capture informal networking between workers in your organization. These connections provide insight into the interpersonal relationships within your organization and help increase employee engagement.

Connections are different from mentor-type connections. They're 1 way connections that don't require approval by the worker selected as a connection. For example, Ashlee adds Caleb as a connection. Caleb doesn't have to approve the connection, nor is Caleb aware of the connection, unless Ashlee tells him. However, because Jessica is Caleb and Ashlee's manager, she can view the connection between them and create custom reports on their connection data.

To start tracking connections in Workday, enable these domains in the Career Development and Planning functional area:

Domain	Description
Self-Service: Connections	Provides workers with access to the Add Connections, My Connections tasks, and the Connections worklet on the Talent and Performance dashboard.
Set Up: Connections	Provides administrators with access to the Maintain Connection Types task.
Worker Data: Connections	Provides managers, HR partners, and administrators with view access to workers' connection data.

Talent Highlights

Setup Considerations: Talent Highlights

You can use this topic to help make decisions when planning your configuration and use of Talent Highlights. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

Talent Highlights are draft lists of strengths and growth opportunities for employees, created by generative AI. Managers can generate this draft content to view quick insights about their direct reports or to help prepare for career conversations.

Managers can edit the content and must confirm their review for human oversight.

Source data for Talent Highlights, which is limited to what the manager can access, displays alongside the content itself for transparency.

Business Benefits

Managers save time gathering data from different areas of Workday when preparing for career conversations with their direct reports and looking for upskilling opportunities for their team.

Employees and managers benefit from effective career conversations that are enriched by insights from Talent Highlights, helping to drive career development and team performance.

Talent Highlights can help guide new managers, making it faster and easier for them to approach their first rounds of career conversations.

Use Cases

Managers can:

- Use the strengths and growth opportunities from Talent Highlights to quickly prepare for career conversations like check-ins and performance reviews.
- Include Talent Highlights as part of a journey for new managers to ensure that they start to become familiar with their direct reports.
- Generate or view Talent Highlights in context while completing business processes related to talent and performance on the Worker business object.

Questions to Consider

Question	Considerations
What languages does your workforce use?	Talent Highlights supports only English, both for source data and for the content that the feature generates.
Do local regulations impact your organization's use of generative AI in one or more locations?	You can exclude employees from the feature based on their location or location hierarchy.
Do you want to show specific instructions, such as guidelines or policies for the use of AI tools in your organization?	You can configure help text to give specific instructions to managers while they generate and view Talent Highlights content.
How many workers in your organization are eligible for Talent Highlights?	For managers to generate Talent Highlights for a worker, the worker needs to meet eligibility conditions including worker type, location, and amount of recent talent data. See Concept: Talent Highlights on page 1791. Consider creating a custom report using the Eligible for Talent Highlights report field to determine the level of eligibility in your organization.
Where do you want to surface Talent Highlights?	Talent Highlights provide the most value when used in context where managers complete their work. To make Talent Highlights easier to access, you can set up the Manager Insights Hub, embed Talent Highlights elsewhere in Workday, or both. When you set up the Manager Insights Hub, managers have quick access to generating Talent Highlights, viewing the content, and seeing employee eligibility, alongside other common manager tasks.

Question	Considerations
	You can also enable managers to view and generate Talent Highlights elsewhere in Workday, such as in journeys, business processes, and dashboards. Example: You add the Most Recent Talent Highlights for Worker report as an embedded analytic in a performance review.
Which product areas does your Workday subscription include?	To use Talent Highlights, your Workday subscription must include the Talent Optimization product area.
How does Talent Highlights work with other Talent features?	You can generate and view Talent Highlights content in other areas of Workday through embedded analytics and direct links to the Generate Talent Highlights task. Managers can then use Talent Highlights as background context or a starting point for their work. Example: Managers can copy the content into an employee review.

Recommendations

To provide a more convenient entry point to Talent Highlights tasks and reports, Workday strongly recommends implementing the Manager Insights Hub. See Steps: Set Up Manager Insights Hub on page 2940.

You can also add Talent Highlights tasks and reports to business processes, journeys, or dashboards for easier access.

Requirements

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

- Your Workday subscription must include the Talent Optimization product area.
- To provide source data for Talent Highlights, you must enable performance review comments or public feedback.

Limitations

- Talent Highlights supports English only, both for source data and for the content it generates.
- Contingent workers are not eligible.
- AI assistance is not available if an employee's valid source data exceeds the capacity of Workday's AI model, typically over 100,000 words.
- Talent Highlights supports Workday data only for source data.
- Talent Highlights are unavailable in the Workday mobile application and in mobile browsers.

Tenant Setup

(Optional) Use the Edit Tenant Setup - HCM task to configure these settings for the Generate Talent Highlights task:

- Location exclusions.
- Location hierarchy exclusions.
- Help text.

Security

Configure these domains in the Manager Insights Hub functional area:

Domains	Considerations
Worker Data: Talent Highlights	Enables users to view, generate, edit, and delete Talent Highlights for their eligible direct reports, and to see their team's eligibility.
Set Up: Talent Highlights	Enables users to set up Talent Highlights, view employee eligibility, and view Talent Highlights content from different supervisory organizations.

Business Processes

No impact.

Reporting

Reports	Considerations
My Team's Talent Highlights Eligibility	View details about worker eligibility and access the Generate Talent Highlights for Employee task.
Most Recent Talent Highlights for Worker	View the worker's most recent talent highlights content. This report is enabled as a related worklet, so you can embed it in a business process that is based on the Worker business object and supports embedded analytics.
View Team Talent Highlights	View Talent Highlights content for workers by supervisory organization.

The Talent Highlight Data Source report data source (secured to the *Worker Data: Talent Highlights* domain) enables you to create custom reports showing data about Talent Highlights.

The Eligible for Talent Highlights report field (secured to the *Set Up:Talent Highlights* and *Worker Data: Talent Highlights* domains) enables you to create custom reports showing the eligibility of workers in your organization.

Integrations

No impact.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Examples

Workday Community: Talent Highlights AI Fact Sheet

2025R1 Feature Release Note: Talent Highlights

Steps: Set Up Talent Highlights

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

- To use Talent Highlights, your Workday subscription must include the Talent Optimization product area.
- Review Setup Considerations: Talent Highlights on page 1786.

Steps

1. (Optional) Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   On the Innovation Services Opt-In task, select the HCM Machine Learning GA Features on the Available Services tab in the HCM category.

   Note: Opting in to the HCM Machine Learning GA Features service is required for MSA customers to enable Talent Highlights, but no additional data category contributions are required.
2. Edit Domain Security Policies.

   Configure these domains in the Manager Insights Hub functional area:

   - *Worker Data: Talent Highlights*: Managers need View and Modify permissions to view, generate, edit, and delete Talent Highlights for their eligible employees, and to see their team's eligibility.
   - *Set Up: Talent Highlights*: Administrators need View and Modify permissions to set up Talent Highlights and to see Talent Highlights content by supervisory organization.
3. Activate Pending Security Policy Changes.
4. (Optional) Complete the Edit Tenant Setup - HCM task.

Option	Description
Talent Highlights Help Text	Add help text to the Generate Talent Highlights for Employee and View Talent Highlight tasks.

Option	Description
Talent Highlights Location Exclusion	Select locations to exclude from Talent Highlights. Employees with an active primary or additional position in an excluded location are ineligible for Talent Highlights.
Talent Highlights Location Hierarchy Exclusion	Select location hierarchies to exclude from Talent Highlights. Employees with an active primary or additional position within an excluded location hierarchy are ineligible for Talent Highlights.

Security: *Set Up: Tenant Setup - HCM* in the System functional area.

5. (Optional) Add Talent Highlights tasks and reports elsewhere in Workday.

   For example:

   - Add the Generate Talent Highlights task as a To Do item in business processes related to employee reviews. To exclude ineligible workers, you can configure a business process rule based on the Eligible for Talent Highlights report field.
   - Add the Generate Talent Highlights task as a step in a journey for managers.
   - Add the Most Recent Talent Highlights for Worker report as an embedded analytic in a business process based on the Worker business object. See Add Worklets to Business Processes on page 2969.

Next Steps

- Configure data purge for Talent Highlights content. Depending on location, purging Talent Highlights data helps you comply with local and national policies and regulations.

  Talent Highlights data is included in these purgeable data types when running a purge task or creating a purge plan on the Worker business object:

  - For active workers: Talent Highlights. Purging this data type does not purge the source data used to generate the Talent Highlights content.
  - For terminated workers: Talent - All Worker's Performance, Goal and Skill Data.

  See Steps: Purge Person Privacy Data.
- For MSA customers, consider opting in to the updated Worker Profile Data category to contribute the Talent Highlights for Active and Terminated Workers collection. Workday uses this data for ongoing feature evaluation, improvements, and for additional product support troubleshooting.

Related Information

Concepts

Concept: Talent Highlights on page 1791

Examples

Workday Community: Talent Highlights AI Fact Sheet

Concept: Talent Highlights

Talent Highlights are draft lists of an employee's strengths and opportunities, generated by AI from the employee's recent talent data in Workday. Managers can use Talent Highlights to:

- Save time preparing for career conversations.
- Get insights about the employee's performance from across multiple sources of talent data.
- Start to get to know a new direct report.
- Learn about how to approach career conversations as a new manager.

Talent Highlights content surfaces in a rich text editor, so managers can edit it. To ensure human oversight, managers must also confirm their review of the content before they save it. Managers can use the content in other talent- and performance-related tasks and processes. Example: They can copy and paste content as comments in a performance review or use it for talking points during a check-in meeting.

Manager Insights Hub

Manager Insights Hub is the recommended entry point to Talent Highlights. Cards in the Overview and Performance section show the team's eligibility for Talent Highlights. For each eligible team member:

- The Talent Highlights tab shows the existing Talent Highlights content.
- A suggested action for support links to the Generate Talent Highlights for Employee task when they have no new Talent Highlights within the past 90 days.

Talent Highlights Content

Talent Highlights consist of Strengths and Opportunities, and each section can have up to 5 list items.

Each strength displays with a description, and each opportunity displays with a description and up to 3 suggested actions for addressing it.

Data Sources Panel

To increase the transparency of Talent Highlights content, managers can view the source data alongside the generated content. Workday surfaces the source data at the time of content generation on the Generate Talent Highlights for Employee and View Talent Highlight tasks. This data is a snapshot, and does not show subsequent changes.

Eligibility for Talent Highlights

Managers can only generate Talent Highlights for eligible direct reports.

Workers must meet all of these eligibility criteria:

Criteria	Details
Minimum data requirement	The worker needs a combined total of 150 words of valid talent data from 1 or both of these sources: • Public feedback. • Worker and manager comments on performance reviews. To determine what data is valid for Talent Highlights, see Reference: Talent Highlights Source Data on page 1793.
Worker type	Employees only. Contingent workers aren't eligible.
Location	Workers can't have an active primary or additional position in excluded locations, which you can configure in the Edit Tenant Setup - HCM task. See Steps: Set Up Talent Highlights on page 1790.

Reporting is available to check worker eligibility:

- You can check worker eligibility by creating a custom report with the Eligible for Talent Highlights report field, secured to the *Worker Data: Talent Highlights* and *Set Up: Talent Highlights* domains.

- Managers can check their team's eligibility and see reasons for ineligibility using the My Team's Talent Highlights Eligibility report, secured to the *Worker Data: Talent Highlights* domain.

AI assistance is not available if an employee's source data exceeds the capacity of Workday's AI model, typically over 100,000 words. When a manager accesses the Generate Talent Highlights for Employee task for this employee, Workday displays an error message in the Talent Highlights text editor. The manager can still view the employee's source talent data and enter Talent Highlights content manually.

Related Information

Concepts

Setup Considerations: Talent Highlights on page 1786

Tasks

Steps: Set Up Talent Highlights on page 1790

Reference: Talent Highlights Source Data

Considerations for Data Validity

To understand valid data sources for Talent Highlights, consider these criteria:

Consideration	Valid Data
Source type	Content from these Workday sources only: • Performance reviews. • Goals. • Public feedback. • Development items. • Job details. • Skills. • Skill interests. • Job interests. • Opportunity Graph recommendations.
Language	English data only.
Security	Only data that the manager can view.
Date	Data from the past 18 months. For some sources, only current data is valid.
Business process status	No data from incomplete business processes.
Source system	Workday data only.

Source Content Details and Date Criteria

Talent Highlights uses specific content from each type of source data, and applies specific date restrictions in each case.

Source Data Category	Valid Content	Date Criteria
Performance Reviews	Content from performance review sections and items. These comments from the employee and their primary manager: • Section comments.	Completion date within the past 18 months.

Source Data Category	Valid Content	Date Criteria
	• Item comments on Accomplishments, Competencies, Goals, Questions, and Responsibilities. Does not include comments from additional managers and reviewers.	
Public Feedback	• Public anytime feedback. • Public requested feedback. • Questions that have received public feedback.	Completed On date, when the employee received the feedback, within the past 18 months.
Goals	This content from active individual goals: • Name. • Description. • Status. • Category.	Created or updated within the past 18 months.
Development items	• Name. • Description. • Status. • Category. Does not include deleted development items.	Last Updated date within the past 18 months.
Job Details	This content from the employee's primary job profile, job interests, and suggested job profiles from Opportunity Graph: • Job profile name. • Job profile summary. • Job description. • Skill attributes.	Current data only.
Skills	• Skills. • Skill interests.	Current data only.

Tasks

Steps: Set Up Talent Highlights on page 1790

Talent Matrix Reports

Steps: Set Up Talent Matrix Reports

Prerequisites

- Configure access to these security domains in the Performance Enablement functional area:
  - Person Data: Competencies
  - Worker Data: Performance Reviews
- Configure access to these security domains in the Talent Pipeline functional area:
  - *View: Talent Matrix*
  - *Worker Data: Talent Matrix Placement*
  - *Worker Data: Talent*
- Configure access to the *Manage: Initiatives* domain in the Projects functional area.
- (Optional) Rename terms throughout Talent using the Maintain Custom Labels task.

Context

View and interact with worker-specific talent data in your organization with talent matrix reports. You can use the Workday-delivered talent matrix reports or create custom reports using the Workday Report Writer.

- A worker's talent matrix placement displays in:
  - Profiles.
  - Worker preview cards.
  - Talent cards.

To use talent matrix reports, configure security, talent rating options, and the underlying nBox report definitions.

Steps

1. Access the Maintain Talent Matrix Setup task.

   Select a primary Talent Matrix Placement nBox Report. This report is on the Worker business object and is basis for showing a worker's talent matrix placement in Workday. If you want all talent reviewers to use a single ratings scale, select the Display Talent Matrix Review Rating check box and select the default rating scale.

   Security: *Set Up: Talent* domain in Talent Pipeline functional area.
2. Access the Maintain Employee Review Setup task if you use Performance Over Time as an axis for the talent matrix report.

   On the Worklet tab, specify the templates and rating scale to use for both Performance Over Time report types.

   Security: *Set Up: Employee Reviews* domain in Performance Enablement functional area.
3. Access the Configure Competency task if you use the Workday-delivered Talent Matrix-Performance Over time by Competency nBox report.

   Select the Use for Talent Matrix check box to specify the competency to use with the report.

   Security: *Set Up: Skills and Experience* domain in Worker Profile and Skills functional area.
4. Access the Set Up nBox Report task.

   Map rating values to each box in the talent matrix grid.

   Security: *Custom Report Management* domain in System functional area.

Next Steps

Run Talent Matrix reports.

Related Information

Concepts

Concept: Talent Matrix Reports on page 1801

Tasks

Create Custom Labels

Set Up Performance Worklets on page 1687

Create or Edit Competencies on page 125

Configure nBox Reports on page 1798

Steps: Enable Manual Talent Matrix Placement

Prerequisites

Security:

- The *Custom Report Creation* domain in the System functional area.
- The *Set Up: Talent* domain in the Talent Pipeline functional area.

Context

Managers can plot a worker's talent matrix placement with the Assess Potential task instead of having Workday determine the placement based on the worker's performance rating and potential.

Alternatively, you can create calibration programs to manage talent matrix placement.

Note: Manual talent matrix placement doesn't update after calibration completes. It only updates after completion of the *Assess Potential* business process.

Steps

1. Create a custom nBox report.
   a) Access the Copy Standard Report to Custom Report task.
   b) In the Standard Report Name prompt, select *Talent Matrix - Performance by Potential*.
   c) Give the report a meaningful Name.
   d) Click the Drill Down tab, add a row to the Drillable Fields grid, and select the *Talent Matrix Review Rating* field.
   e) Click the Matrix tab. From the Group by Field prompt under Row Grouping select the *Talent Matrix Review Rating* field.
   f) From the Group by Field prompt under Column Grouping, select the *Potential* field.
   g) Click the Drill Down tab. Add 2 rows to the Columns grid under Detail Data and select the *Potential* and *Talent Matrix Review Rating* fields.
2. Access the Set Up nBox Report task.

   Map rating values to each box in the talent matrix grid.

3. Configure the selection list for the Talent Matrix Placement prompt:
    a) Access the Maintain Talent Matrix Setup task.
    b) Click the Talent Matrix Placement nBox Report prompt and select the report you created in Step 1.
    c) Select the Enable Manual Talent Matrix Placement check box.
    d) For each box in your talent matrix, add a row to the grid, define a Box Name and ID, select a Potential value and a corresponding Review Rating, and optionally add a Description. For example:

Box Name	ID	Potential	Review Rating
Critical Talent	1	High Potential	3- Outstanding Performance
Rising Star	2	High Potential	2- Meets Expectations
Needs Coaching	3	High Potential	1- Needs Improvement
Emerging Talent	4	Medium Potential	3- Outstanding Performance
Solid Contributor	5	Medium Potential	2- Meets Expectations
Questionable	6	Medium Potential	1- Needs Improvement
Expert	7	Low Potential	3- Outstanding Performance
Specialist	8	Low Potential	2- Meets Expectations
Unsatisfactory	9	Low Potential	1- Needs Improvement

4. Access the Set Up nBox Report task to specify values for the Box Name fields you defined in Step 3d.

    This makes the *Talent Matrix Placement* report field return the correct values.

Result

(Managers) Access the Assess Potential task to select an employee's talent matrix placement. Talent matrix placement replaces the employee's potential rating. The Talent Matrix Placement field replaces the Potential field and lists the Box Names from the nBox configuration in Step 3. You can view the employee's talent matrix placement:

- On the Employee Potential report.
- On worker profiles in the Overview, Career, or Performance profile group.

Related Information
Tasks
Steps: Create nBox Reports
Steps: Calibrate Talent and Performance Ratings on page 1709
Steps: Set Up Assess Potential on page 1773

Configure nBox Reports

Prerequisites

Security: *Custom Report Management* domain in the System functional area.

Context

Each talent matrix report is based on an nBox report definition that you configure to meet your needs. You can:

- Map values for the rows and columns.
- Define labels.
- (Optional) Specify help text.

Steps

1. Access the Set Up nBox Report task.
2. Select the nBox Report that you want to configure.
3. Define the rows and columns of the nBox report.

   You can't change the source fields for the rows and columns. However, you can edit both the Row Axis Label and the Column Axis Label.

   The Field for the rows in the Talent Matrix - Performance by Potential report is *Rating - Current*. However, you can edit the Row Axis Label above the nBox Value Mapping for Vertical Axis (top to bottom) grid. You can map values for the rows of the talent matrix report:

   a) Because the talent matrix grid can range from a 2 x 2 grid up to a 5 x 5 grid, you must define and map a minimum of 2 rows and columns.
   b) Enter a Row Label and Column Label to display in the talent matrix report.
   c) Specify a Source Value for each row and column. You must map every value defined in your Workday tenant for the source field to a row or column in the nBox definition, even if the values aren't used. If you leave any source field values unmapped, you won't be able to save the nBox report definition.
4. (Optional) Define a Box Name and Help Text for each box on the talent matrix.

   Note: If you select the Enable Manual Talent Matrix Placement check box in the Maintain Talent Matrix Setup task, specify values for the Box Name in this task. If you don't, the *Talent Matrix Placement* report field displays empty values.

   Each row in the Define the Box Names section corresponds to a box in the talent matrix report. The Row and Column values are displayed to help you understand where the box displays in the matrix. You can enter a Box Name and Help Text for each box on the matrix.

Next Steps

When you run a talent matrix report, you can:

- View the nBox setup associated with the report. Select nBox > View nBox Setup from the related actions menu.
- Edit the nBox report definition for the report. Select nBox > Set Up nBox Report from the related actions menu.

Related Information

Concepts

Concept: Talent Matrix Reports on page 1801

Tasks

Steps: Set Up Talent Matrix Reports on page 1795

Run Talent Matrix Reports

Context

Talent matrix reports are based on current ratings data in Workday and have many interactive qualities. While viewing a talent matrix report, you can:

- Apply filter criteria for instant results.
- Drill down on several items in the report to see and interact with the underlying worker details.

You can't drag and drop workers from 1 box to another using Workday's delivered talent matrix reports. Placement in a particular box depends on each worker's ratings data in Workday. However, you can:

- Create a calibration program based on a talent matrix report.
- Enable manual talent matrix placement with the Assess Potential task.

Steps

1. Access a Talent Matrix report and specify report criteria.
2. Click the numbers on the talent matrix to view matrix report details:
   - The number in each box on the matrix represents the total number of workers who meet the criteria for the box. Click this number to view the list of workers who are summarized by the number. You can also tag workers for membership in a talent pool from this list.
   - The Total number in the upper right corner represents the number of workers eligible for display on the talent matrix. This is the total number of workers who belong to the organizations you selected for the talent matrix, reduced by any faceted search criteria you've applied. Click this number to view the total list of eligible workers.
   - The number of workers Not Shown indicates how many workers are not displayed in the matrix, out of the total number eligible to be shown. Workers might not be shown for various reasons. 2 common causes might be that the worker lacks talent information or that you do not have the appropriate security to view all the worker talent data available for the selected organizations. Click this number to view the list of workers excluded from the matrix.

   Add the number of workers displayed in all of the boxes on the talent matrix to the number of workers Not Shown to get the Total number.
3. Click an employee image or the crowd icon to view worker details.

   Each box in the matrix displays up to 100 worker images who meet the criteria for the box, based on the nBox report definition. The number of employees shown depends on your screen resolution. It might be impossible to show 100 workers on your particular display. Regardless, whenever the maximum number of worker images is reached for a particular box, a crowd icon is displayed instead of the worker images. If no employees meet the criteria for inclusion in a particular box, a zero displays and no images are shown.
4. Filter workers based on different facets.

   Faceted search enables you to dynamically filter workers and view a subset of the workers. As you apply facets to your talent matrix report, the Not Shown and Total numbers update automatically based on the current criteria.

   The faceted search area to the left of the talent matrix enables you to dynamically filter workers. Selecting specific facet values, like a specific job profile or a particular location, helps you narrow down the results so that you see only the subset of workers you want to see in the talent matrix. Next to each facet value is a number that represents how many workers meet the criteria associated with the facet value. As you apply facets to your talent matrix report, the Not Shown and Total numbers are updated automatically based on the current criteria.

Concepts

Concept: Talent Matrix Reports on page 1801

Tasks

Add Members to Static Talent Pools on page 1806
Steps: Calibrate Talent and Performance Ratings on page 1709
Steps: Enable Manual Talent Matrix Placement on page 1796

Set Up Talent Matrix Placement Indicator

Prerequisites

Security:

- *Set Up: Talent* domain in the Talent Pipeline functional area.
- *Worker Data: Talent Matrix Placement* domain in the Talent Pipeline functional area.

Context

You can create an analytic indicator to provide a visualization of talent matrix placement in custom reports. The analytic indicator is based on the primary nBox report in your tenant. The visualization is only available for nBox reports that have a 3 x 3, 4 x 4, or 5 x 5 grid.

Steps

1. Access the View Talent Matrix Setup report.

   Determine which talent matrix report is the primary nBox report for your tenant in the Talent Matrix Placement nBox Report field.
2. Access the View nBox Setup report.

   In the nBox Box Labels grid, make a note of the values in the Box Name and Help Text columns.

   You can also export the data to Microsoft Excel.
3. Access the Create Analytic Indicator task.
   a) At the Business Object prompt, select *Worker*.
   b) At the Field prompt, select *Talent Matrix Placement*.
   c) Create a Display Option Name, such as `Talent Matrix Visualization`.
   d) For the Visualization Type, select the size of your primary nBox report, such as *nBox - 3x3*.
   e) For the Default Visualization, select *Empty Box*.
   f) (Optional) In the Default Help Text field, specify text to display when you hover over the visualization.
   g) In the Display Conditions grid, add a row for each box in your nBox grid and specify:
      - Control Field = *Talent Matrix Placement*
      - Condition = *equal to*
      - Condition Value = the box label you found in Step 2
      - Visualization = the box position
      - Help Text = the help text you found in Step 2
4. Add the analytic indicator to the Talent Matrix Placement field in custom reports.
   a) Access the Edit Custom Report task.
   b) On the Columns tab, find the Talent Matrix Placement field, click the Options prompt, and select the visualization you created in Step 3. The selection list identifies the visualization by its Display Option Name.

Example

The display conditions for a 2 x 2 talent matrix might look similar to this table:

Condition Field	Condition	Condition Value	Visualization	Help Text
Talent Matrix Placement	equal to	Needs Coaching	Row 1 Column 1	Consider reassignment
Talent Matrix Placement	equal to	Solid Contributor	Row 1 Column 2	Delivers what is required for current position
Talent Matrix Placement	equal to	Rising Star	Row 2 Column 1	Highly valued, seasoned professional
Talent Matrix Placement	equal to	Critical Talent	Row 2 Column 2	Capable of senior management

Concept: Talent Matrix Reports

Workday delivers 5 talent matrix reports that enable you to view and interact with worker-specific talent data in your organization:

- Talent Matrix - Performance by Initiative Importance
- Talent Matrix - Performance by Potential
- Talent Matrix - Performance by Retention
- Talent Matrix - Performance Over Time by Competency
- Talent Matrix - Performance Over Time by Potential

Talent matrix reports use a special type of report definition called an nBox report. A matrix can be from 2 x 2 boxes up to 5 x 5 boxes in size, depending on the underlying report definition. Each box on the grid represents an employee rating.

The talent matrix grid helps you manage your workforce by providing:

- A graphical depiction of the talent strength of the organization.
- Decision support for managers, so that they create a high-performing and engaged workforce.
- A consistent structure in which to calibrate and communicate the analysis of the overall talent pool.

Talent Matrix Benefits

The Workday talent matrix reports provide specific advantages:

- You don't need to integrate or manually duplicate data to use a talent matrix.
- The Workday configurable security governs access to talent matrix reports.
- You can customize each talent matrix report type to the needs of your organization using the Set Up nBox Report task.
- A worker's talent matrix placement also displays in:
  - Profiles.
  - Worker preview cards.
  - Talent cards.
- Talent matrix reports are dynamic. You can apply filters while viewing the report to refine the results instantly.
- To tag members of the box for talent pool membership, drill down on the number in any box.

- You can print a formatted talent matrix report that duplicates the view of the talent matrix on your display, and adds:
  - Header.
  - Footer.
  - Date/time stamp.

Custom nBox Talent Matrix Reports

You can create custom talent matrix reports using the Workday Report Writer. With a custom nBox report, you define the:

- Source fields and value mappings for each axis.
- Runtime prompts.
- Drillable fields.
- Facet filters.

Note: From the related actions menu, copy a delivered talent matrix report and change the report to meet your needs.

Talent Matrix Security

The Talent Matrix security domains are:

Domain	Functional Area	Notes
View: Talent Matrix	Talent Pipeline	To view talent matrix reports
Worker Data: Talent Matrix Placement	Talent Pipeline	To view a worker's talent matrix on their talent profile
Worker Data: Performance Reviews	Performance Enablement	To view the performance overall rating in the Talent Matrix - Performance by Potential and Talent Matrix - Performance by Retention reports
Worker Data: Talent	Worker Profile and Skills	To view: • Employee potential in the Talent Matrix - Performance by Potential report • Worker retention in the Talent Matrix - Performance by Retention report
Person Data: Competencies	Performance Enablement	To view competency in the Talent Matrix - Performance Over Time by Competency report
Manage: Initiatives	Projects	To view initiatives in the Talent Matrix - Performance by Initiative Importance report

Tasks

Configure nBox Reports on page 1798

Run Talent Matrix Reports on page 1799
Steps: Create nBox Reports

Concept: Talent Matrix Worklets

For easier access to talent matrix information, you can deploy custom nBox reports as worklets and add them to:

- The Home landing page.
- Dashboards, such as the Talent Management Dashboard, Workforce Planning Dashboard, and custom dashboards.
- Business processes, such as *Talent Reviews*, as embedded intelligence.

Except for faceted search, talent matrix worklets have the same characteristics as standard talent matrix reports.

You can optimize the appearance of a talent matrix worklet to accommodate its size constraints. In the Create Custom Report or Edit Custom Report task, specify values in the Worklet Options section to control:

- The maximum number of rows to display.
- How the report behaves when maximized.
- How often data refreshes.
- Whether to display table borders and column.

You can also personalize talent matrix worklets. Example: Managers can view different segments of their organization from a talent matrix worklet that defaults to the highest level of their organization hierarchy.

Talent Pools

Steps: Manage Talent Pools

Context

There are 2 different ways that you can staff a talent pool:

- Static: You manually select workers to add them to talent pool membership.
- Dynamic: Workday determines pool membership based on the results of a saved search.

Steps

1. Create Talent Pools on page 1804.
2. (Optional) Add Members to Static Talent Pools on page 1806.
3. Select a talent pool to take action on it.

   These actions apply to all talent pool members. To exclude members, remove them from the talent pool before completing the action.

   You can't take actions or change membership on an inactive talent pool.

Related Action	Security Policy Configuration Prerequisites
Talent > Add Talent Pool to Succession Plan	*Worker Data: Succession* domain security policy.

Related Action	Security Policy Configuration Prerequisites
Talent > Remove Talent Pool from Succession Plan	*Worker Data: Succession* domain security policy.
Talent > Add Goal to Employees	*Cascade Goals* business process and security policy.
Talent > Give Award and Activity	*Give Award and Activity* business process and security policy.
Talent > Start Potential Assessment	*Start Potential Assessment* and the *Assess Potential* business processes and security policies.
Talent > Start Development Plan	*Process: Organization Development Plans* domain security policy, and set up development plans.
Talent > Start Performance Review	*Process: Employee Reviews* domain security policy, and set up performance reviews.

4. View and print talent pools.

   See Reference: Talent Pool Reporting on page 1812.
5. (Optional) Edit or inactivate talent pools.

   Access 1 or both of these tasks:

   - Edit Talent Pool

     Security: *Talent Pool: View and Edit* domain in the Talent Pipeline functional area.
   - Edit Private Talent Pool

     Security: *Private Talent Pool: View and Edit* domain in the Talent Pipeline functional area.
6. (Optional) Delete talent pools.

   Access 1 or both of these tasks:

   - Delete Talent Pool

     Security: *Talent Pool: View and Edit* domain in the Talent Pipeline functional area.
   - Delete Private Talent Pool

     Security: *Private Talent Pool: View and Edit* domain in the Talent Pipeline functional area.
7. (Optional) Access the Edit Tenant Setup - Notifications task to enable talent pool notifications.

   Configure the *Talent Pool: Communications* domain in the Talent Pipeline functional area.

Related Information

Concepts

Concept: Talent Pool Security on page 1808

Tasks

Create Custom Labels

Examples

Example: Give Administrators Access to Restricted Talent Pools on page 1810

Create Talent Pools

Prerequisites

- Use the Maintain Assignable Roles task to create a Talent Manager role, enable it for the *Talent Pool* organization type, and select the Self-Assign check box for the role.

- For dynamic talent pools, use the Find Workers report to create a saved search or a custom report to select from when creating the dynamic pool. Workday defines which workers are pools members based on the report criteria selected.
- For private talent pools, configure the security policy on the *Private Talent Pool: Create* and *Private Talent Pool: View and Edit* domains in the Talent Pipeline functional area.
- Security: *Talent Pool: Create* domain in the Talent Pipeline functional area and *Talent Pool: View and Edit* domain in the Recruiting and Talent Pipeline functional area.

Context

Create a talent pool and define whether its membership is static or dynamic. If you enable self-assignment, Workday automatically assigns you a role on the talent pools you create. You can also enable users to create private talent pools that only they can view, in which they can only see workers in their supervisory organization.

You can also use the Enterprise Interface Builder (EIB) to create and populate new talent pools or edit the membership of existing talent pools. Use the Create EIB task to generate a spreadsheet from the *Put Talent Pool* web service.

Steps

1. Access the Talent Pools report.
2. Click either Create Pool or Create Private Talent Pool to create a new talent pool.
3. (Optional) Enter a Description for the pool, which the Talent Pools report displays along with the name.

   For private talent pools, click Find Workers to begin adding members to the pool.
4. (Optional) Select the Restricted View check box.

   You can limit a manager’s view of the talent pool membership list to just those workers who are in their supervisory organization.
5. Select the method for determining talent pool membership:

   - Add members based on manual selection to create a static talent pool whose members you manually update. Static talent pools can have up to 5,000 members.
   - Add members based on saved search creates a dynamic talent pool whose members are the result of a saved search on the Find Workers report. You can only use the Saved Search report and Advanced Report within saved searches when adding members to a dynamic talent pool. A dynamic talent pool can contain up to 50,000 members.

   Note: If you use a custom report to create saved searches for dynamic talent pools, Workday recommends that you exclude the All Talent Pools and Talent Pools - Any report fields as they return workers on both static and dynamic talent pools.

   Workday displays the talent pool type in the Talent Pools task to make it easy to identify whether a talent pool is static or dynamic.
6. For a dynamic talent pool, select a Saved Search from the prompt.

   To view a dynamic talent pool or take action on it, you must have access to all the facets on the associated saved search.
7. (Optional) Use the Assign Roles grid to assign additional roles to the talent pool. As the creator of the talent pool, you automatically have access to the talent pool.

   Workday recommends that you don't remove yourself from talent pools that you create.

Next Steps

- If you created a restricted talent pool, enable the security policy on the *Talent Pool: Restricted View* domain.
- If you created a static or private talent pool, click Find Workers to begin adding members.

Related Information

Concepts

Concept: Finding Workers on page 111

Tasks

Steps: Manage Talent Pools on page 1803

Examples

Example: Give Administrators Access to Restricted Talent Pools on page 1810

Add Members to Static Talent Pools

Prerequisites

- Security:
    - *Talent Pool: Manage Membership* domain in the Talent Pipeline or Recruiting functional area.
    - *Search: Find Worker* domain in the Worker Profile and Skills functional area.
- Add the *Add to Pool* mass action under the "Advanced" tab in the report definition on custom search reports that use a data source whose primary *business object* is:
    - *Worker*
    - *Contingent Worker*
    - *Employee*
    - *External or Internal Candidate*

Context

You can add workers to static talent pools:

- Directly from the *Worker*'s profile.
- From a dynamic talent pool.
- Using the Add to Pool mass action on:
    - The Find Workers report.
    - A custom search report.

Static talent pools can have up to 5,000 members.

Note: You can also use the Enterprise Interface Builder (EIB) to add or update talent pool members. Use the Create EIB task to generate a spreadsheet from the *Put Talent Pool* web service.

Steps

- Directly from the Worker's Profile
    a) Click the tag icon:
        - Next to the worker's photo
        - On the preview card that you access from a worker's related actions menu.

    b) Select 1 or more talent pools from the prompt.
- From a Dynamic Talent Pool
    a) Access the View Talent Pool report.
    b) Select a dynamic talent pool.
    c) Click the Members tab.
    d) Click the tag icon, and then select 1 or more static talent pools from the prompt.

- Using the Find Workers Report or a Custom Search Report
    a) Access the Find Workers report or your custom search report.

       The custom report must use a data source with a primary business object listed in the prerequisites.

       Enable *Add to Pool* in the Mass Actions section on the Advanced tab of the report definition of the custom report.
    b) Select the facets to filter workers.
    c) Select individual or all workers from the results.
    d) Click Add to Pool.
    e) Select 1 or more talent pools from the prompt.

Next Steps

To remove a member from a static talent pool, click Actions for the talent pool and select Edit Members. Select the members that you want to remove from the pool.

Related Information

Concepts

Concept: Finding Workers on page 111

Tasks

Steps: Manage Talent Pools on page 1803

Steps: Set Up EIBs Using Templates from Web Service Operations

Concept: Talent Pools

A talent pool enables you to create and act on a group of employees, without regard to organizational boundaries. You can establish the criteria that determine the membership of a talent pool. Examples are:

- Potential for inclusion in a special project.
- Potential to contribute individually at a higher level than peers.
- Particularly strong management potential.
- Need to be placed on a development plan.
- Education, certification, or experience that could be applied to a new business venture.
- Specific training, work history, or skills that could make the workers valuable outside of their current supervisory organization.

Unlike supervisory organizations, which define hierarchical structure, talent pools define a loose association of members that cut across organizational lines. You can create as many as you need, for any purpose you want, and members can belong to multiple pools.

You can create static or dynamic talent pools. You add members manually to static talent pools. Dynamic talent pools are based on the results of saved searches on the Find Workers or similar custom reports.

When you take related actions on talent pools, the same action starts for all members in the pool at the same time. Workday initiates and completes a set of individual business processes in parallel for each member of the talent pool. Based on how the business process is configured, it may follow a different approval or management chain for each member in the pool.

The only exception occurs when you give a non-monetary award to a static talent pool. In this case, the business process runs as a single process on the entire pool and completes automatically. You can tailor this business process. Example: Add an approval step. Perform a mass cancel on this process.

Related Information

Tasks

Steps: Manage Talent Pools on page 1803

Concept: Talent Pool Security

Talent pool information is only visible to users who have a role on the talent pool, regardless of their access to the workers or workers' organizations. To control access to talent pool information, you can:

- Create restricted talent pools.
- Create private talent pools.
- Use intersection security groups.

Talent Pool Domains

Talent Pools use these domains to secure the Talent Pool tasks:

Domain	Description
Talent Pool: Create in the Talent Pipeline functional area	Determines who can create new talent pools.
Talent Pool: Restricted View in the Talent Pipeline functional area	Restricts a manager's view of the talent pool membership list to just those workers who are in their supervisory organization. Enable this domain to manage private talent pools.
Private Talent Pool: Create in the Talent Pipeline functional area	Determines who can create private talent pools.
Private Talent Pool: View and Edit in the Talent Pipeline functional area	Determines who can view, edit, and delete private talent pools.
Talent Pool: View and Edit in the Recruiting and Talent Pipeline functional areas	Determines who can view, edit, and delete existing talent pools.
Talent Pool: Manage Membership in the Recruiting and Talent Pipeline functional areas	Determines who can tag, add, and remove members from static talent pools.
Worker Data: Succession Plan - Any in the Talent Pipeline functional area	Determines who can view talent pools in custom reports without edit access. To create a view only role for talent pools, create a custom report secured to the *Worker Data: Succession Plan - Any* domain.
Private Talent Pool (Limited Owner Access) in the Talent Pipeline functional area	Note: Workday recommends that you only enable the *Private Talent Pool (Limited Owner Access)* domain to provide users with access to private talent pools that they created after they've been removed from a role. Provides users with access to deleting private talent pools that they created after they've been removed from a role. This domain also provides them with limited access to viewing and editing some attributes, such as name, description, and inactive status. Workday recommends adding an intersection security group that includes Employee as Self and the applicable unconstrained security group that has permission to create private talent pools. See Example: Set Up the Private Talent Pool (Limited Owner Access) Domain on page 1810.

Talent Pool Roles

Since workers assigned to talent pool roles have access to talent pool member information, use caution when assigning them. A common set of roles involved in talent pools are Managers, Talent Pool Administrators, and HR Partners.

- Steve is a manager with several talent pools.
- Maria is a Talent Pool Administrator who can see all of Steve's talent pools including the members in the pools. Maria can also see the information you've configured in the talent pool reports.
- Jill is the HR Partner for Steve's organization. Although Jill also has modify permission on the *Talent Pool: Create* and *Talent Pool: View and Edit* domains, she can't see Steve's talent pools because she doesn't have a role on the talent pool.
- Maria gives Jill a talent pool role to enable her to access Steve's talent pools. Jill can see the other worker's data in the talent pool, including workers outside her organization.
- Jill creates a new talent pool for Steve's organization. Because she creates the talent pool, she automatically has a role on the talent pool.

Restricted Talent Pools

You can create a restricted talent pool to limit access to its member information. Only workers with a role on the talent pool secured to the *Talent Pool: Restricted View* domain can see restricted talent pools:

- In tasks and reports.
- At the tag prompt.
- On worker preview cards.

Restricted Talent Pools provide managers and other designated roles insight into talent pools for workers in their organizations. This restriction enables them to only access information about their own employees within the talent pool.

Private Talent Pools

Use the Create Private Talent Pool task to create private talent pools. You're the only person who can view the private talent pools that you create, and they only display the workers in your supervisory organization. You must also have security access to these domains in the Talent Pipeline functional area:

- *Private Talent Pool: Create*
- *Private Talent Pool: View and Edit*
- *Talent Pool: Restricted View*

Intersection Security for Talent Pools

To restrict access to talent pool member compensation details, you can create an intersection security group. This group restricts managers so that they can only view compensation information for workers that they manage, but enables them to view other information for the talent pool members that they don't manage.

Intersection security for talent pools requires Managers and Talent Managers to have roles and constrained role-based security groups. After you create the intersection security group for the 2 roles, replace the Manager security group on all compensation domains with the new Manager and Talent Manager intersection group. Add the Talent Manager security group to the domain.

Related Information

Concepts

Concept: Intersection Security Groups

Tasks

Steps: Manage Talent Pools on page 1803

Example: Set Up the Private Talent Pool (Limited Owner Access) Domain

This example illustrates how to set up the *Private Talent Pool (Limited Owner Access)* domain in the Talent Pipeline functional area.

Context

Managers at Global Modern Services (GMS) have permission on *Private Talent Pool: Create* and *Private Talent Pool: View and Edit* domains, enabling them to create, view, edit, and delete their own private talent pools. GMS wants to give managers the added ability to work with private talent pools that they created when they've been removed from a role on them.

Note: Workday recommends that you only enable the *Private Talent Pool (Limited Owner Access)* domain to provide users with access to private talent pools that they created after they've been removed from a role.

Prerequisites

Security: *Security Configuration* domain in the System functional area.

Steps

1. Edit Domain Security Policies.

   Add the Employee as Self security group to the *Private Talent Pool: View and Edit* domain in the Talent Pipeline functional area. Provide Employee as Self with View and Modify permissions.
2. Create an intersection security group that includes the Employee As Self and Manager (Unconstrained) security groups.
   a) Access the Create Security Group task.
   b) From the Type of Tenanted Security Group prompt, select *Intersection Security Group*.
   c) In the Name field, enter *Managers With No Role*.
   d) Click OK.
   e) From the Security Groups to Include prompt, select *Employee As Self* and *Manager (Unconstrained)*.
   f) Click OK and Done.
3. Create a security policy for the *Private Talent Pool (Limited Owner Access)* domain.
   a) Access the Create Security Policy for Domain task.
   b) From the For Domain prompt, select the *Private Talent Pool (Limited Owner Access)* domain.
   c) Select the Confirm check box.
   d) Click OK.
   e) Add a row to the Report/Task Permissions table.
   f) From the Security Groups prompt, select the *Managers With No Role* intersection security group.
   g) Select the View and Modify check boxes.
   h) Click OK and Done.
   i) Activate Pending Security Policy Changes.

Result

Managers can delete private talent pools that they created after they've been removed from a role. They also have limited view and edit access. They can edit attributes such as name, description and active status, and view attributes such as members, name, and description.

Example: Give Administrators Access to Restricted Talent Pools

This example illustrates 1 way to grant administrators full access to the members of a restricted talent pool, while limiting the access of managers to only their employees within the talent pool.

Context

Shelly is a security administrator at Global Modern Services (GMS), which has a restricted talent pool called Top Talent in its Sales and Marketing organization. Managers with permission on the *Talent Pool: Restricted View* domain can access this talent pool, but can only view their own employees in the talent pool.

Julie is the Talent Administrator for GMS and needs full access to all members of the Top Talent restricted talent pool to support the succession planning activities at GMS. Because the *Talent Pool: Restricted View* domain is limited to constrained role-based security groups and administrator roles have unconstrained access, Shelly can't add the Talent Administrator role to this domain. Shelly creates a new constrained role-based security group to give Julie access to all Top Talent talent pool members.

Prerequisites

Security: *Talent Pool: Restricted View* domain in the Talent Pipeline functional area.

Steps

1. Shelly creates a new role by:
   a) Accessing the Maintain Assignable Roles task.
   b) Creating a new role called *Restricted Talent Pool Administrator* and select *Supervisory* from the Enabled for prompt.
   c) Selecting *Security Administrator* from the Assigned by Security Groups prompt.
2. Shelly assigns the role at the level of GMS Julie needs to access.
   a) From the related actions menu of the Sales and Marketing organization, she selects Roles > Assign Roles.
   b) Shelly keeps the current date as the effective date.
   c) She assigns Julie to the *Restricted Talent Pool Administrator* role.

   Note: For access to all workers, Shelly would assign the role at the level of Global Modern Services.
3. Shelly creates a new role-based security group (constrained) for the role.
   a) She accesses the Create Security Group task.
   b) She selects Role-Based Security Group (Constrained) for Type of Tenanted Security Group.
   c) She enters *Restricted Talent Pool Administrator* for Name, and clicks OK.
   d) In the Group Criteria section, Shelly selects *Restricted Talent Pool Administrator* from the Assignable Role prompt.
   e) In the Access Rights to Organizations section, she selects Applies To Current Organization And All Subordinates.
   f) In the Access Rights to Multiple Job Workers section, she selects Role has access to the positions they support.
4. Shelly gives Julie permission to view and modify all members of the talent pool.
   a) From the related actions menu of the *Talent Pool: Restricted View* security domain, she selects Domain > Edit Security Policy Permissions.
   b) Shelly adds the Restricted Talent Pool Administrator security group to the Report/Task Permissions section and selects Modify.
5. Shelly accesses the Activate Pending Security Policy Changes task to confirm changes.
6. From the related actions menu of the Top Talent talent pool, she selects Roles > Assign Roles and assigns Julie a Talent Manager role.

Result

Now that Julie can view all the members of the Top Talent restricted talent pool, she can view their skills and experience and consider them for succession plans.

Create Talent Pools on page 1804
Create Role-Based Security Groups

Reference: Talent Pool Reporting

You can use these reports to:

- View and manage talent pools.
- Track changes to membership.

Note: To view or take a related action on a dynamic talent pool, you must have access to all the facets that make up the associated saved search.

Report	Description	Security
Succession Plans for Talent Pool	View any succession plans associated with a talent pool. Only static talent pools can be associated with Succession Plans.	*Worker Data: Succession* domain in the Talent Pipeline functional area.
Talent Pools	View all talent pools that you own or can access. By default, you own all talent pools that you create. From this report, you can create and take action on talent pools.	*Talent Pool: View and Edit* domain in the Talent Pipeline functional area. My Private Talent Pools section: *Private Talent Pool: View and Edit* domain in the Talent Pipeline functional area.
Talent Pool Membership Tracking	Includes members that were added or removed, the date, and who made the change.	*Talent Pool: View and Edit* domain in the Talent Pipeline functional area.
View Talent Pool	View the membership of a specific talent pool, along with the associated job, talent, compensation, and spend information for each member. Use the Configure Profile Group task to configure the reports that display in each section of this report.	These domains in the Talent Pipeline functional area: • *Private Talent Pool: View and Edit* • *Talent Pool: View and Edit*

Tasks
Steps: Set Up Profiles and Profile Groups

Talent Data Across Workday

Steps: View Talent Across Organizations

Context

You can set up access to talent-related information for all workers across all organizations. To set up access, you can use the grade of your company or management level hierarchy.

Tiered security groups can't run:

- nBox reports.
- Calibration programs.
- The Find Workers report.
- Custom reports based on indexed data sources.

Steps

1. (Optional) Create a Compensation Grade Hierarchy on page 994.
2. (Optional) Create a management level hierarchy.

   See Set Up Management Level Hierarchies on page 526.
3. Assign the grades or management levels to your workers.
4. Create Level-Based Security Groups.

   Define the members of the compensation grade or management level-based security group:

   - *Applies to All Levels* grants membership to all grade or management levels in the hierarchy.
   - *Applies to Levels* grants membership to only the listed grade or management levels in the hierarchy.
5. Edit Domain Security Policies.

   Add the security group to the appropriate talent domain policy.

Result

Members of the level-based security group can see information for workers across organizations that have a grade or management hierarchy level below their own.

Related Information
Tasks
Create Compensation Grades on page 989

Steps: Set Up Talent Data Removal for Terminated Workers

Prerequisites

Configure the *Termination* business process and security policy in the Staffing functional area.

Context

You can configure your *Termination* business process to remove workers on the termination date or last day of work from:

- Succession plans.
- Succession pools.
- Talent pools.

Note: If you rescind the termination, Workday doesn't return the employee to the succession plans, succession pools, and talent pools.

Steps

1. Access the *Remove Worker from Talent* business process definition.

   Configure one or more of these actions or service steps:

   - *Remove Terminated Employee from Succession Plan*.
   - *Remove Terminated Employee from Succession Pool*.
   - *Remove Terminated Employee from Talent Pool*.
2. (Optional) Create Custom Notifications for the steps.

   Notifications for talent pools or succession pools must trigger On Exit and use one of these report fields as the Related Instances:

   - Succession Pools Affected by Remove Worker from Talent.
   - Static Talent Pools Affected by Remove Worker from Talent.
3. Access the *Termination* business process definition.
   a) Add the *Remove Worker from Talent* action step after the completion step of the business process definition.
   b) (Optional) From the related actions menu on the *Remove Worker from Talent* step, select Business Process > Maintain Step Delay to execute this step on the last day worked.
4. (Optional) Access the Edit Succession Pool or Edit Talent Pool task.
   a) Select a Succession Pool or static Talent Pool to exclude from the termination process.
   b) Select the Exclude from Termination check box to prevent Workday from removing terminated workers from the pool.

      Security: *Talent Pool: View and Edit* domain on the Talent Pipeline functional area.

Workforce Metrics

Create Custom Metrics for HCM

Prerequisites

- Set up a fiscal schedule using the Create Fiscal Schedule task.
- Create and configure metric sets by organization type using the Maintain Analytic Scorecard Profiles and Metric Sets task.
- Security: *Metric Management* domain in the System functional area.

Context

Create custom metrics for workforce scorecards to give executives and HR leaders insight into the health of their organizations. You can create multiple custom metrics based on the delivered metric calculations. You can then add these metrics to scorecard dashboards that tailor to meet the needs of different audiences.

The delivered metric calculations use information that exists in Workday, making them easier to set up than metrics based on external data. You also have greater control over sensitive data because the metrics adhere to your existing security configuration.

Steps

1. Access the Create Custom Metric task.
2. Specify basic metric information:

Option	Description
Metric Set	Select the metric set to associate with the custom metric. The metric set defines the organization type, fiscal schedule, and other configurations.
Metric	Enter a custom metric name.
Workday Metric Calculation Name	Select the Workday-defined metric calculation.

3. On the Edit Custom Metric page, configure the metric on these tabs:

Option	Description
Metric Source	In the Actual Amount field, select *Workday Algorithm*. Optionally, specify whether to track target and benchmark amounts.
Calculation Configuration	Customize the metric calculation to meet your needs. The available options vary by metric type. Not all delivered metric calculations are configurable.
Thresholds	Create thresholds and limits that determine the metric status displayed on the scorecard.
About This Metric	Enter a description that helps scorecard users understand how to interpret the metric. The description displays when you hover over the metric value on the scorecard. You can also provide links to standard or custom reports as drill-to reports.
Recommended Actions	Specify actions that business leaders can take when the metric status is Bad, Warning, or Good. The recommended actions display on all scorecards that include the metric, whereas the comments added by scorecard reviewers are specific to a particular organization and time period.

Next Steps

- Create composite reports to display the metrics on a scorecard dashboard.
- Update the metrics for each scorecard period by following these steps:
    - Initialize and calculate metric values.
    - Optionally, review metrics and add explanatory comments for scorecard users.
    - Publish the metric values.

Steps: Create Custom Metrics and Scorecards

Reference

Workday Community: Retired Functionality Details for Workforce Metrics and Executive Workforce Scorecard

Concept: Management Reporting Dashboard

The Management Reporting Dashboard (secured to the *Management Dashboard: Management Reporting Dashboard* domain in the System functional area) is a configurable workspace that gives managers quick visual insight into their workforce operations with a set of reports. Use the Maintain Dashboards task to configure the dashboard and select up to 6 reports to display on the dashboard.

To use the scorecard metric reports, you must:

- Enable scorecards in your Workday tenant.
- Configure access to the *Management Dashboard: Management Reporting Dashboard* and *Metrics Published* domains in the System functional area.
- Activate and configure the *HCM* metric set.
- Initialize, calculate, review, and publish metric values for the Workday-delivered metrics in the *HCM* metric set.

Once you configure it, managers can place this dashboard as a worklet on their Workday Home landing page.

Workday provides these reports for you to display on the dashboard as worklets:

Report	Description	Domain
Are we Paying for Performance?	Displays the base pay range segments by performance rating for workers in the selected organization.	*Worker Data: Headcount Reports* domain in the Staffing functional area.
Compensation History for Worker(s)	Displays compensation changes for the selected workers.	*Reports: Manager* domain in the Staffing functional area.
Dashboards	Displays links to launch other dashboards.	*Worklet: Dashboard* domain in the System functional area.
Direct Reports Compensation Summary	Displays compensation summary for all direct reports of the user.	*Reports: Manager* domain in the Staffing functional area. *Worker Data: Compensation for Managers* domain in the Core Compensation functional area.
Expenses for My Organizations	Displays the monthly expenses for your organizations.	*Worker Data: Expense Report* domain in the Expenses functional area.
Headcount and FTE by Month	Displays headcount and FTE by month.	*Trended Worker Data* domain in the Staffing functional area.
Headcount by Years of Service	Displays the headcount by years of service for the selected organization.	*Worker Data: Headcount Reports* domain in the Staffing functional area.

Report	Description	Domain
My Direct Reports Staffing History	Displays the staffing changes for all of your direct reports.	*Reports: Manager* domain in the Staffing functional area.
New Hire Turnover	Displays the turnover count by termination quarter and the service time completed by the workers at the time of the termination.	*Worker Data: Active and Terminated Workers* domain in the Staffing functional area.
Open Job Requisitions by Organization - Indexed	Displays open job requisition details of the selected organization.	*Indexed Data Source: Job Requisitions* domain in the Pre-Hire Process and Staffing functional areas.
Organizational Attrition Within Last 6 Months	Displays attrition data within the last 6 months by termination quarter.	*Worker Data: Active and Terminated Workers* in the Staffing functional area.
Organizational Headcount by Location by Management Level	Displays the worker headcount per management level, per location.	*Worker Data: Headcount Reports* in the Staffing functional area.
Organization Members (with Photo)	Displays general roster information for the selected organization.	*Worker Data: Headcount Reports* in the Staffing functional area.
Outstanding Actions for My Direct Reports	Displays the outstanding business process events for your direct reports.	*Reports: Manager* domain in the Staffing functional area.
Processes Awaiting Me	Displays the first 50 business process transactions awaiting your action.	*Workday for Outlook* domain in the System functional area.
Scorecard Metric Trend	Displays past and current values of a metric over a specified number of scorecard periods.	*Metrics Published* domain in the System functional area.

Tasks

Steps: Create Custom Metrics and Scorecards

Steps: Set Up Dashboards and Landing Pages

Reference: Workforce Composition Dashboards

Secured to the *Trended Worker Data* domain in the Staffing functional area, workforce composition dashboards help with understanding historical trends for workforce metrics. Composition dashboards help leaders, HR business partners, and managers understand historical trends.

You can configure 5 dashboards that contain a total of 30 worklets built on the Trended Workers data source. The Trended Workers data source is a prerequisite in order to turn on these dashboards in your tenant.

Required prompt settings for all dashboards:

- Organization - Multi-Instance

- Include Subordinate Organizations
- Start Date
- End Date - This value must be the last day of a historical month to populate values of the dashboards.

You can configure these 5 dashboards using the Maintain Dashboards task:

- Distribution Trends and Analysis Dashboard

  Security: *Management Dashboard: Distribution Trends and Analysis* domain in the System functional area.

Worklet Name	Domains	Calculations
Global Footprint	*Worker Data: Current Staffing Information*	• Ending Headcount
Growth Rate by Job Family Group	*Worker Data: Current Staffing Information*	• Ending Headcount
Headcount and Average YOS by Age Range	*Person Data: Date of Birth* *Worker Data: Current Staffing Information*	• Ending Headcount • Average Length of Service in Years including Partial Year
Headcount by Management Level	*Worker Data: Current Stating Information*	• Ending Headcount
Headcount Growth and Analysis		• Ending Headcount
Workforce Tenure - Yearly Trend	*Worker Data: Current Staffing Information*	• Ending Headcount

- Diversity Dashboard

  Security: *Management Dashboard: Diversity* domain in the System functional area.

Worklet Name	Domains	Calculations
Employee Population Trend by Gender	*Person Data: Gender*	• Ending Headcount
Ethnicity / Management Level Analysis	*Person Data: Ethnicity* *Person Data: Ethnicity*	• Ending Headcount
Male / Female Distribution	*Person Data: Gender*	• Ending Headcount
Male / Female Workforce Majority by Country	*Person Data: Gender*	• Ending Headcount
Manager Composition by Ethnicity and Years of Experience	*Person Data: Ethnicity* *Worker Data: Compensation by Organization* *Worker Data: Current Staffing Information*	• Ending Headcount • % Managers • Average compa-ratio • Average Years in Position
People Manager Proportions	*Person Data: Gender*	• Ending Headcount

- Headcount Movement Dashboard

  Security: *Management Dashboard: Headcount Movement* domain in the System functional area.

Worklet Name	Domains	Calculations
Hires by Age Group	*Person Data: Date of Birth*	• Hire Count
Promotion Rate		• Promotion Rates = Promotion Count / Ending Headcount
Voluntary Terminations by Management Level	*Worker Data: Current Staffing Information* *Worker Data: Active and Terminated Workers*	• Voluntary Termination Count
Quarterly Turnover Rates	*Worker Data: Active and Terminated Workers*	• Voluntary Turnover Rates = Sum Voluntary Termination Count / ((Ending headcount of previous period + ending headcount)/2) • Involuntary Turnover Rates = Sum Involuntary Termination Count / ((Ending headcount of previous period + ending headcount)/2)
Employee Movement	*Worker Data: Organizations*	• Hire Count • Transfer In • Transfer Out • Termination Count • Ending Headcount

- Performance and Potential Dashboard

  Security: *Management Dashboard: Performance and Potential* domain in the System functional area.

Worklet Name	Domains	Calculations
Retention for High Potential Employees	*Worker Data: Talent*	• Ending Headcount
Avg. Compa-Ratio by Potential	*Worker Data: Talent* *Worker Data: Compensation Pay Range*	• Average Compa-ratio
Avg. Compa-Ratio by Performance Over Time	*Worker Data: Performance Reviews* *Worker Data: Compensation Pay Range*	• Average Compa-ratio
Management Level by Potential	*Worker Data: Current Staffing Information* *Worker Data: Talent*	• Ending Headcount

Worklet Name	Domains	Calculations
Performance by Hiring Source	*Worker Data: Current Staffing Information* *Worker Data: Performance Reviews*	• Ending Headcount
Terminations by Performance	*Worker Data: Performance Reviews*	• Terminations Count

- Structure Dynamics Dashboard

  Security: *Management Dashboard: Structure Dynamics* domain in the System functional area.

Worklet Name	Domains	Calculations
Worker Proportion Trends	*Worker Data: Current Staffing Information*	• Manager Count • Employee Count = (Ending Headcount - Manager Count)
Manager Headcount by Management Level	*Worker Data: Current Staffing Information*	• Ending Headcount
Span of Control by Job Family Group	*Worker Data: Current Staffing Information*	• Average Span of Control (default displayed on charts) = (Ending Headcount - Manager Count) / Manager Count • Average Span of Control (Headcount to Manager) = Ending Headcount / Manager Count
Span of Control by Range of Direct Reports	*Worker Data: Current Staffing Information*	• Manager Count
Span of Control - Manager Outliers	*Worker Data: Public Worker Reports* *Worker Data: Current Staffing Information*	• Number of Direct Reports (~Employees~)

Set Up Worklets

FAQ: HCM Metric Calculations

How do metric calculations for a cost center hierarchy count workers on subordinate nodes?	Cost center hierarchy nodes don't contain workers. The metric calculations only count workers in the cost centers that are part of the subordinate nodes.
Why don't my metric values match my custom matrix report results?	Calculated metric values might differ from custom matrix report results that you use as a benchmark source for your metrics. Reports use the latest

data from the data source when you run the report, while analytic metric values are a snapshot from the time that you calculate the metrics. Analytic metric values don't include any data that has:

- An effective date after the date of the snapshot.
- An effective date before the date of the snapshot, but hasn't been processed at the time of the snapshot.

Scorecards also remove inactive organizations by default, while custom reports don’t. However, you can configure your report to filter out inactive organizations.

Talent Insight Apps

Steps: Set Up the Retention Risk Insight Application

Prerequisites

Minimum requirements include:

- At least 18 months of historical data on voluntary termination, compensation, and employee talent and performance transactions in Workday.
- Each organization selected during configuration must have a minimum 250 current employees. Workday recommends using larger organizations.

Context

The Retention Risk Insight Application identifies key talent likely to leave based on attributes similar to workers that left the organization. You can use the reports as worklets on the Retention Analysis dashboard.

Note: Retention risk analysis is restricted to only full-time employees. All workers included in retention risk analysis must have FTE = 100 percent.

Steps

1. Edit Domain Security Policies.
    a) Configure security for these domains in the Talent Insight Apps functional area:
        - *Retention Risk*
        - *Retention Risk Factors*
    b) Configure security for these domains in the System functional area:
        - *Management Dashboard: Retention Analysis*
        - *Set Up: Tenant Setup - Insight Applications*
    c) Configure security for the *Trended Worker Data* domain in the Staffing functional area.

2. Configure Talent Insight Applications on page 1822.

   Configure the Retention Risk Insight Application to meet your business requirements. You can:

   - Enable analysis.
   - Select the supervisory organizations you want to include. Selected organizations must have at least 250 workers and can't be a subordinate of another selected organization.
   - Filter employees out of the analysis. Example: European Union workers.
   - (Optional) Override the default report fields with your own calculated or custom fields.
3. Access the Activate Pending Security Policy Changes task to confirm changes.
4. Steps: Set Up Dashboards and Landing Pages.

   Set up the Retention Analysis dashboard. Add worklets as needed.

Next Steps

Access the Retention Analysis dashboard to gain insight into retention risk data for your organization.

Configure Talent Insight Applications

Prerequisites

Security: *Set Up: Tenant Setup – Insight Applications* domain in the System functional area.

Context

Depending on the Insight App you're using, you can analyze a variety of tracked data supporting predictive analytics. This data can range from employee termination reasons to total amount due for an invoice. You can configure which data your Workday Insight Applications use within your Workday tenant.

Steps

1. Access the Configure Insight Application task.
2. As you complete the task, consider:

Option	Description
Enable Analysis	The data you need to complete the analysis might not be available when you configure an Insight Application. We recommend that you enable the analysis after: • You complete the configuration process. • You're confident the data is available.
Exclude from Analysis	Select a calculated field. The calculated field must use the *business object* displayed in the Filter and a true/false function.
Default Report Field	Clear the Enabled check box to exclude tenant data from your analysis. If the Default Report Field doesn't contain the data you need, select an Override Report Field that returns the data class you need.
Override Report Field	The Override Report Field calculated field must use the same effective-dated business object as the business object of the Data.

Result

Workday runs Insight Apps analysis on a specific schedule that depends on the type of data your app is tracking. For details about when your Insight App results are available, see the documentation for your specific app.

Next Steps

Set up your Insight App.

Tasks
Steps: Set Up Dashboards and Landing Pages
Reference
The Next Level: Analyzing Talent with Dashboards, Reports, and Mobile Devices

Concept: Retention Risk Insight Application

The Retention Risk Insight Application (secured to the *Retention Risk* and *Retention Risk Factors* domains in the Talent Insight Apps functional area and the *Management Dashboard: Retention Analysis* domain in the System functional area) identifies key talent likely to leave based on attributes similar to workers that left the organization.

You can understand:

- The number of people that have voluntarily and involuntarily left the organization over the past year.
- Top termination reasons listed for the organization.
- The location with the highest number of terminations.
- Most important factors contributing to employee's retention risk in the organization.

Retention Analysis Dashboard

The Retention Risk Insight Application comprises the Retention Analysis dashboard with these worklets:

- Terminations by Tenure Category
- Top Termination Reasons
- Trending Terminations by Location
- Trending Terminations by Organization

You can access the Retention Analysis dashboard and worklets on these mobile apps:

- Workday on iPad.
- Workday on iPhone.

Related Information
Reference
The Next Level: Analyzing Talent with Dashboards, Reports, and Mobile Devices

Reference: Worklets on the Retention Analysis Dashboard

You can add these worklets to the Retention Analysis dashboard (secured to the *Management Dashboard: Retention Analysis* domain in System functional area).

Worklet	Description	Security
Terminations by Tenure Category	Displays the terminations for the selected organization and time period by these tenure categories: • Zero to 1 year.	*Trended Worker Data* domain in the Staffing functional area.

Worklet	Description	Security
	• 2 to 5 years. • 5 to 10 years. • 10 to 15 years. • 15 to 20 years. You can drill into each termination count to see the worker in the count.	
Top Termination Reasons	Displays a data visualization of the top reasons terminated employees gave for leaving the organization.	*Trended Worker Data* domain in the Staffing functional area.
Trending Terminations by Location	Displays a line graph that represents the trend of the terminations in the 5 biggest locations over time for the organization.	*Trended Worker Data* domain in the Staffing functional area.
Trending Terminations by Organization	Displays the termination counts in the selected organizations and time range. This worklet displays these termination types: • Involuntary • Regrettable • Voluntary You can drill into each termination count to see the workers in the count.	*Trended Worker Data* domain in the Staffing functional area.

Professional Profiles

Steps: Set Up Professional Profiles

Prerequisites

Security: *Security Configuration* domain in the System functional area.

Context

Add the *Professional Profile* to the worker profile so that workers can share a record of their skills, work experience, and education.

Steps

1. Edit Domain Security Policies.

   Provide access to the *Professional Profile* and each of its content areas:

Domain	Functional Area	Permissions
Person Data: Talent Statements	Worker Profile and Skills	For Report/Task Permissions, set View to Yes.

Domain	Functional Area	Permissions
Self-Service: Talent Statements		
Person Data: Education *Self-Service: Education*	Worker Profile and Skills	For Report/Task Permissions, set View to Yes.
Person Data: Job History *Self-Service: Job History*	Worker Profile and Skills	For Report/Task Permissions, set View to Yes.
Self-Service: Anytime Feedback *Worker Data: Anytime Feedback*	Performance Enablement	For Report/Task Permissions, set View to Yes.
Self-Service: Project *Worker Data: Project*	Projects	For Report/Task Permissions, set View to Yes.
Self-Service: Internal Project Experience *Worker Data: Internal Project Experience*	Worker Profile and Skills	For Report/Task Permissions, set View to Yes.
Self-Service: Skills *Person Data: Skills*	Worker Profile and Skills	For Report/Task Permissions, set View and Modify to Yes.

2. (Optional) Enable workers to import data from their resumes to their *Professional Profile*.

   See Steps: Set Up Upload My Experience on page 1826.
3. Edit Business Processes.

   Configure the *Give Feedback* business process and its security policy in the Performance Enablement functional area, as well as these business processes in the Worker Profile and Skills functional area:

   - *Manage Talent Statements*
   - *Manage Education*
   - *Manage Job History*
   - *Manage Internal Projects*
   - *Manage Work Experience*

   Skills aren't associated with business processes. Workers can add or update these items without approval.

   Note: The *Manage Education* and *Manage Job History* business processes only apply to information that you add directly to Workday, not information imported from resume upload. You can configure approvals and notifications on the *Professional Profile* business process.
4. Set up talent statements so workers can add them to their *Professional Profile*.

   See Steps: Set Up Talent Statements on page 141.
5. Enable workers to manage their education record on their *Professional Profile*.

   See Steps: Set Up Education on page 137.
6. Set up a list of job history companies.

   See Steps: Set Up Job History Companies on page 137.
7. Create a list of recognized skills.

   See Steps: Maintain Skills on page 1828.
8. Steps: Set Up Profiles and Profile Groups.

   Add the *Professional Profile* report to the worker profile in the Overview, Career, or Job profile group.

9. Configure the *Professional Profile* cards you want to display on the worker profile summary.

   You can configure these cards to display on the worker profile summary.

Card Name	Description
Education	Displays the worker's education history.
Feedback	Displays direct public feedback received by the worker.
Internal Projects	Displays the internal projects the worker contributed to.
Job Details	Displays the worker's current job details.
Job History	Displays the companies that the worker has worked for.
Skills	Displays the skills the worker added to his or her profile.
Talent Statements	Displays the talent statement for the worker.
Things in Common	Displays on another worker's *Professional Profile*, showing companies, schools, and skills that the workers have in common.
Upload My Experience	Displays on a worker's own *Professional Profile*, enabling them to upload job history and education information from a resume file.

   See Steps: Set Up Profile Cards.

Result

Workday displays the *Professional Profile* in the selected profile group of the worker profile and the Professional Profile cards on the worker profile summary. Workers can add, change, or delete their own *Professional Profile* information and upload their experience. Other workers can view the profile and provide feedback.

Related Information

Concepts

Concept: Access to Worker Information on page 76

Reference

The Next Level: Finding Your Perfect Match - How to Identify and Track Talent for Your Employees

Steps: Set Up Upload My Experience

Prerequisites

Security: *Security Configuration* and either *Business Process Administration* or *Manage: Business Process Definitions* domains in the System functional area.

Context

Enable workers to upload their work experience and education information securely from their .pdf, .doc, .docx, .htm, or .txt resume files to their profiles. Upload My Experience doesn't support image-based files.

Note: Worker data from resume files is secured as customer data without exposing it to Workday, Inc.

Steps

1. Set up profile cards to display experience on worker profiles.

   See Steps: Set Up Profile Cards.
2. Edit Domain Security Policies.

Domains	Permissions	Description
Self-Service: Upload My Experience • *Self-Service: Upload My Experience - Education* • *Self-Service: Upload My Experience - Job History* Functional Area: Worker Profile and Skills	For Report/Task Permissions, set View and Modify to Yes. For Integration Permissions, set Get and Put to Yes.	Controls whether the Upload My Experience button displays on the profile and enables workers to perform the task. The subdomain permissions enable or disable import of each subset of data. You can specify permission for the subdomain or allow it to inherit the parent's permission. Consider adding the same security groups as on the *Worker Data*-related domains related to the profile. Note: Configure integration permissions to enable workers to import their data.
Worker Data: Upload My Experience • *Worker Data:Upload My Experience - Education* • *Worker Data: Upload My Experience- Job History* Functional Area: Worker Profile and Skills	For Report/Task Permissions, set View to Yes.	Enables review of the imported information as part of the *Professional Profile* business process. The subdomain permissions enable or disable import of each subset of data. You can specify permission for the subdomain or allow it to inherit the parent's permission.

3. Create Custom Business Processes.

   Customize the *Professional Profile* business process.
4. Edit Business Process Security Policies.

   Edit the *Professional Profile* business process security policy:

   - Grant permissions to the *Employee as Self* group on these actions:
     - *Upload My Experience*
     - *Review Import Professional Profile*
     - *View All*
   - If you included an approval step in the *Professional Profile* business process, grant permissions to the roles assigned to this step. Assign these roles to the *Review Import Professional Profile*, *View All*, and *Approve* actions.

Result

Workers can add or update education and work experience by clicking Upload My Experience in their Professional Profile.

If you configure the *Professional Profile* business process to include approvals, the review steps are routed to the assigned role after each successful data import.

Skills and Skills Cloud

Skills

Steps: Maintain Skills

Prerequisites

Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.

Context

You can use the Maintain Skills report to manage and track skills that are important to your organization. This report lists all the maintained skills in your tenant. Through this report, you can access tasks that enable you to:

- Create and edit maintained skills that Workday adds to the report.
- Delete maintained skills you no longer want to track.
- Merge duplicate maintained skills.

Workers and candidates can create crowdsourced skills and add them to their profiles. You can use the Find Skill report to view crowdsourced skills and delete them or merge them with a maintained skill.

Note: You can also import skills from a spreadsheet with the Enterprise Interface Builder (EIB).

Steps

1. Access the Maintain Skills report.

Option	Description
Skill Category	Groups related skills in categories.
Inactive	Indicates if the skill is inactive.
Hide from Candidates	Indicates if Workday hides the skill from candidate searches on external career sites. If you enable Skills Cloud, Workday no longer displays maintained skills on external career site searches.
Exclude from Synonym Management	Indicates if Workday excludes the maintained skill from being converted into a Skills Cloud skill if it's synonymous. Workday displays this option even if you haven't enabled Skills Cloud.
In Use	Indicates if the skill is in use as a skill-enabled object or on a candidate or worker profile.
Duplicates	Indicates the number of any known duplicates merged with the maintained skill.
Mapped to External Skills	Indicates the number of external skills mapped to a maintained skill. Requires Skills Cloud.

2. Click Add or Edit to access the Create Maintained Skill task.

   Add maintained skills to the skills table.

3. (Optional) Click Edit for a skill in the report to access the Edit Maintained Skill task.

   Edit a maintained skill. To inactivate a skill, select the Inactive check box. When you inactivate a skill, Workday moves it from the Active Skills tab to the Inactive Skills tab.
4. (Optional) Click Delete to access the Delete Skill task.

   This task displays a usage count of the different areas that use the skill. Workday prevents you from deleting an active maintained skill if the skill is referenced by any of these functions:

   - Candidate Job Alerts
   - Condition rules
   - Saved search facets
   - Skill ratings
   - Skills feedback questions
   - Job profile worksheets
   - Project role requirements
   - Candidate filters
5. Click Find to access the Find Skill report.

   Delete crowdsourced skills from worker profiles or merge them with a maintained skill.

Result

- All active maintained skills are available for workers to add on their profiles.
- Candidates can add any active maintained skill that's visible to them on their profile.
- Workday automatically converts instances of the merged skills to use the parent skill on the candidate and worker.

Example

A worker enters MS Word as a skill on her profile. A candidate enters Word on his candidate profile. Using the Merge Skills task, an administrator can convert them to the maintained version of the skill called Microsoft Word.

Reference
The Next Level: Skills versus Competencies
The Next Level: Establishing a Skills Blueprint
The Next Level: Power of Skills

Steps: Maintain Skill Categories

Prerequisites

Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.

Context

Create skill categories to organize and easily report on multiple skills. You can assign individual skills to multiple categories. You can also organize skill categories into category groups.

If you enabled Skills Cloud:

- You can search for Skills Cloud skills to add to categories.
- Workday displays suggested skills for your categories based on skills you select.
- Access Workday-delivered skill categories and skill category groups. See Steps: Set Up Workday-Delivered Skill Categories and Skill Category Groups.

Steps

1. Access the Maintain Skill Categories report.
   Define the skill categories in your tenant.
2. Access the Maintain Skill Category Groups task.
   Manage the category groups to organize your skill categories.

Next Steps

Access the Find Workers by Skill Category report to identify workers who have skills under skill categories.

Steps: Manage Skill Profiles

Prerequisites

Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.

Context

Skill profiles provide an easy way to organize qualifications for jobs and career paths. You can use skill profiles for reporting purposes to build a profile for a job or role. You can also use the qualifications of a skill profile as facets when you click Find Workers on the View Skill Profile report.

You can build skill profiles based on:

- Certifications
- Competencies
- Education
- Languages
- Responsibilities
- Skills
- Training
- Work Experience

Example: You frequently hire Customer Service Representatives and want to make it easier to create job requisitions. You create a Customer Service Representative skill profile specifying that candidates must have 2+ years of customer service experience, English and Spanish language comprehension, and advanced communication competency.

Workday doesn't support attaching skill profiles to job profiles or workers.

Steps

1. Access the Maintain Skill Profile Categories task.
   Create categories to organize your skill profile templates.
   Examples: Retail Sales, Implementation Projects, Corporate Marketing, and Corporate Finance.
2. Access the Create Skill Profile task.
   Create a skill profile with the applicable qualifications. Create as many skill profiles as you need.
3. To make changes to a skill profile, access the Edit Skill Profile task.
4. To view detailed information about a skill profile, access the View Skill Profile report.

Steps: Set Up Skills Fit Analysis

Prerequisites

Security: *Worker Data: Skills Reporting* domain in the Worker Profile and Skills functional area.

Context

The Skill Fit Analysis report allows you to evaluate how a subset of your workforce aligns with the skills required for a specific job profile or up to 20 skills. The report calculates the percentage of skills overlap and sorts employees accordingly, helping you quickly identify skill gaps and make data-driven talent decisions. While including skills on job profiles is recommended, it is not a prerequisite for using this task. You can optionally include machine learning (ML) suggested skills.

Steps

1. (Optional) Access the Maintain Skills and Experience Setup task, and ensure the following options are selected to include ML suggested skills:
   - Populate Suggested Skills for Workers
   - Populate Suggested Skills for Job Profiles
2. Access the Skills Fit Analysis report.
3. Review the Include Machine Learning Skills Suggestion check box. This check box is enabled by default.
4. In the Skills to Compare section, select to compare your workforce against a Job Profile or Skills. As you complete the Skills to Compare section, consider:

Option	Description
Job Profile	Select a job profile to compare.
Skills	Select up to 20 skills.

5. In the Filter Worker Population section, select filters to create a subset of your workforce to compare against skills on a job profile or selected skills. You must select 1 or more filters. The maximum number of workers supported is 10,000.
6. (Optional) Configure the Skills Fit Analysis report for users with access to the HR Partner Hub and Job Architecture Hub. If a user has access to both, the Skills Fit Analysis report defaults to display in the HR Partner Hub.
   - Job Architecture Hub is secured to the *Manage: Job Architecture Hub* domain in the Jobs and Positions functional area. See Steps: Set Up Job Architecture Hub.
   - HR Partner Hub is secured to *Worker Data: HR Partner Hub* domain in the Staffing functional area. See Steps: Set Up HR Partner Hub.

Result

Review the selected skills with the subset of your workforce. Review the Skills Fit column to determine which workers have the highest percentage of overlap with the targeted skills. You can export to an Excel spreadsheet for further analysis.

Example

Skills Fit Calculation

To determine the Skills Fit value, we divide the number of skills on the worker profile by the number of skills on the job profile or the number of skills selected in the Skills to Compare section.

Formula: (Matching Skills / Total Number of Skills) * 100

For example, you're a HR Partner accessing the Skills Fit Analysis report. You select a job profile that has 20 skills. The skills on the job profile are a mix of explicit required skills, explicit optional skills, and Workday ML inferred skills. After you submit your comparison criteria, Workday displays where your target population falls in the Worker Summary section. You see that 1 of the workers in the targeted population has 10 skills, and 6 skills in common with the job profile you selected and is displayed in the 21%-40% range in the Worker Summary.

Skills Fit for the Worker: (6/20) * 100 = 30%

The 6 skills the worker has in common with the job profile puts them in the 21%-40% range, the worker's overlap percentage with the job profile is 30%.

Workday AI Fact Sheets: Suggested Skills on Worker Profile

Set Up Critical Skills

Prerequisites

Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.

Context

Skill criticalities enable you to group and classify skills that are critical in your workforce. You can create skill criticalities for certain contexts, such as specific job profiles or supervisory organizations. You can then create custom reports to identify workers with critical skills your workforce.

Skill criticalities can have maintained skills and Skills Cloud skills.

Steps

1. Access the Maintain Skill Criticalities report.
2. Click Add.
3. As you complete the Create Skill Criticality task, consider:

Option	Description
Context Type	Select the context type for the criticality. You can only assign 1 context type for a criticality.
Context	Select the job families, job profiles, or organizations where these skills are critical. This prompt doesn't display for tenant-wide criticalities.

Result

Critical skills can only be viewed through the Maintain Skill Criticalities report or in custom reports. You can view the skills of a skill category from the related actions of a skill category.

Example

You want to define a skill criticality for 2 job profiles in product development. You created 2 skill categories named *Complex Problem Solving* and *Technical* that contain skills you want to mark as critical for the job profiles. You also want to add an uncategorized *Presentation* skill to the criticality.

Field	Value
Name	*Product Developers*
Context Type	*Job Family*
Context	*Associate Product Development*

Field	Value
	Product Development
Skill Categories	*Complex Problem Solving* *Technical*
Skills	*Presentation*

Next Steps

Create a custom report to assess the critical skills in your tenant.

Manage Skills and Experience

Prerequisites

- Set up the individual skills and experiences that you want to track.
- Add skills and experience to worker profiles with the Configure Profile Group task.
- Security: *Set Up: System* domain in the System functional area.

Context

You can add, remove, and report on past and present skills and experience for workers.

Example: During talent reviews, managers and workers can have informed and specific discussions about how workers' skills and competencies have developed over time, and can discuss whether workers are ready for promotions by comparing their current skills and competencies to those required by higher job titles.

You can manage workers':

- Achievements
  - Awards
  - Activities
  - Publications
- Certifications
- Competencies
- Education
- Job History
- Internal Projects
- Languages
- Professional Affiliations
- Skills
- Training
- Work Experience
- Worker Projects

Steps

1. Add skills and experience for a worker:
    a) From the worker's related actions menu, select Talent > View Skills and Experience.
    b) Add each type of skill or experience on a separate tab.

    For certifications, competencies, professional affiliations, and schools, you can select values or create new ones if needed.

    You can also upload certification documents and view them in the Maintain Worker Document report.
2. Compare a worker's competencies to the competencies associated with their job:
    a) From the worker's skills and experience, select the Competencies tab.
    b) Click Compare to Job.

    This option is only available for workers assigned to jobs. 1 chart displays the competencies required for the job and the other chart displays additional competencies.
3. View the history of a worker's competencies:
    a) From the worker's Skills and Experience, click the Competencies tab.
    b) Click History.

Next Steps

- You can remove a worker's skills and experience unless they have pending actions.
- You can't remove competencies from a worker.
- Access the Business Process Security Policies for Functional Area report to give security groups permission to remove skills and experience.

The Next Level: Establishing a Skills Blueprint

The Next Level: Skills versus Competencies

Tasks

The Next Level: Establishing a Skills Blueprint

Steps: Set Up Profiles and Profile Groups

Concept: Skills and Competencies Comparison

Comparing Skills with Competencies

Skills describe what tool sets workers need to perform the job, while competencies describe how well workers perform the job. Skills are specific learned abilities. Examples:

- Cloud Applications
- Cloud Security
- Python
- Software as a Service (SaaS)

Competencies are proficiencies workers use to achieve role objectives. Examples:

- Building Talent
- Championing Innovation
- Leadership
- Results Orientation

You can use skills and competencies to track the capabilities that users acquire from various sources. Examples include education, certifications, and languages. Knowledge of these capabilities can help you to make smart decisions in growing your organization. Skills and competencies provide different levels of configurability and insight. Familiarize yourself with both features to learn how each can support your organization.

You can use skills or competencies, or both, depending on your use cases and objectives.

Skills and competencies provide different approaches to administrative control and worker development.

Approach	Skills	Competencies
Administrative Control	Provide a user-driven approach to understanding the capabilities of your workforce. When you enable Skills Cloud, you can organize your skills catalog with less administrative maintenance. Skills Cloud also contributes to machine learning products and solutions.	Provide a high degree of control defined by the organization, and relies on administrative configuration to maintain the catalog. Competencies contribute to selected machine learning solutions for suggested learning, connections, and mentors.
Worker Development	Skills support discovery and growth for your workers. Examples: • How to bridge the skill gaps between an employee's current role and targeted future roles. • Determining what resources might support the employee in building more skills. • How to match the right people to the right job.	Competencies help improve evaluations, including reviews and retrospective conversations. Examples: • How did your competency rating compare to your target? • How do competency ratings impact overall performance ratings and compensation?

Use Cases and Maintenance

Skills and Competencies address different use cases and require different levels of maintenance.

	Skills	Competencies
Use Cases	• You need to optimize your talent (such as building, buying, or redeploying talent) based on a wide variety of technical skills, knowledge, and capabilities. • You need to build a broad and deep understanding of your workers' skill data, gaps, and trends. • You need to help your workforce understand their skill gaps to help them increase their skills. • You need to encourage a career development	• You need to rate all employees at specific, defined levels or compensation grades on 8 leadership competencies defined by your organization. • You need to rate targeted employees on 4 core values that you define for your organization. • You need detailed control over all definitions and descriptions, including proficiency rating scales, to evaluate employees by specific bands.

	Skills	Competencies
	experience based on a wide variety of technical skills, knowledge, and capabilities.	• You need to conduct assessments of various worker populations to meet compliance requirements.
Maintenance	If you don't enable Skills Cloud, or if you have customer-specific skills (such as unique or proprietary skills), you must maintain the skills in your tenant. If you enable Skills Cloud, Workday continuously maintains and updates Skills Cloud skills.	You must maintain the competency catalog in your tenant. Workday supports Competencies business processes, so you can set effective dates for any changes.

Functionality

You can use Skills and Competencies to address different methods for evaluating workers.

Function	Skills	Competencies
Assign to employees	Mark skills as critical for employees based on supervisory organization, job family, and job profile. You can also assign skills as being critical to all employees.	Assign competencies based on worker's compensation grade and management level.
Ratings	You can set ratings using skill levels. Skills support peer-to-peer rating, manager-to-direct-report rating, and self-rating. You can apply weights to different skill rating sources. You can add the *Get Feedback* step in employee review business processes to include skill ratings and surface ratings in employee reviews.	You can set targets by a worker's management level or compensation grade. Rating scales might vary by competency. Descriptions on ratings might vary based on compensation grade and management level. You can also change ratings over time and set effective dates for them.
Definitions	Skills don't support definitions. Skills Cloud skills are skills in Workday that are commonly understood in the market.	Competencies support definitions. You can change competency names and descriptions over time, and set effective dates for them.
Categorization and structure	You can set skill item categories and category groups to create an internal skills hierarchy. You can also mark skills as critical for a specific context. Examples: Job families, job profiles, or supervisory organizations.	You can set up competency classes and categories to organize a competency catalog.

Skills Cloud Features

You can use skills with or without enabling Skills Cloud. We recommend using Skills Cloud to take advantage of Workday's machine learning capabilities to:

- Collect the data to help you understand the skills of your workforce.
- Gain insight to plan for future organizational growth, including developing existing workers and hiring new ones.
- Optimize your programs for adding new skills and increasing expertise in existing skills of your workers.

Skills Cloud provides additional features when you enable it.

Features without Skills Cloud	Features with Skills Cloud
• Administrators maintain a list of skills that users can add to their profile. • Workers and candidates can create crowdsourced skills that they can't find, and add them to their profile.	• Increases the number of skills users can add to their profile. • Returns related skills based on a person's search. • Automatically performs regular background jobs that can reduce the number of skills to maintain. • Prepares your tenant for machine learning solutions from Workday.

Note: You can't disable Skills Cloud once you enable it.

For more information, see Setup Considerations: Skills Cloud on page 1844.

The Next Level: Establishing a Skills Blueprint

The Next Level: Skills versus Competencies

Tasks

Steps: Set Up Competencies on page 122

Reference

The Next Level: Skills versus Competencies

Concept: Crowdsourced Skills and Experience Management

Administrators maintain libraries of recognized skills and experience that users can search for and add to their profiles. You can find recognized skills and experience on these reports:

- Maintain Certifications
- Maintain Job History Companies
- Maintain Schools
- Maintain Skills

If candidates and workers can't find certain skills and experience in your tenant, they can create crowdsourced versions to add on their profile. Crowdsourced skills and experience enable users to expand their profiles, but variations of the same crowdsourced skills and experience can create redundancies. Example: A worker creates Math as a crowdsourced skill, and a candidate creates Arithmetic.

Workday stores crowdsourced skills and experience on these reports:

- Find Certifications
- Find Job History Companies
- Find Schools

- Find Skill

To manage crowdsourced data, you can use these reports to merge crowdsourced skills and experience with recognized versions. Workday updates profiles to use the recognized versions.

You can prevent workers from creating crowdsourced skills by selecting the Disable Create New Skill for Edit Skills check box on the Maintain Skills and Experience Setup task.

If you enable this option, candidates can still create crowdsourced skills, but Workday won't migrate these crowdsourced skills to other person types. Example: When the candidate is hired, Workday won't copy crowdsourced skills from the candidate's skill profile to the worker's profile. The crowdsourced skills remain on the candidate's skill profile.

Reference: Skills Terminology

Terms	Descriptions
Canonical skills	Skills Cloud skills.
Critical skills	You can group and classify skills that you consider critical to specific contexts, such as job profiles and supervisory organizations. You can then create custom reports to identify workers and candidates with these critical skills. Critical skills can include: • Skills Cloud skills • Maintained skills See Set Up Critical Skills.
Crowdsourced skills	There are 3 types of skills: • Skills Cloud skills • Maintained skills • Crowdsourced skills Crowdsourced skills, also called unrecognized skills, are added by workers. Example: The Marketing team starts using a new video production software called ShadowBox. Workers update their profiles to list ShadowBox as one of their skills and it becomes a Skills Cloud skill. Workday Skills Cloud then manages the crowdsourced skill by automatically merging duplicates and synonyms with the Skills Cloud skill. Workday doesn’t include crowdsourced skills in search results or faceted reports. See Concept: Crowdsourced Skills and Experience Management.
Deprecated skills	Skills Cloud automatically deprecates skills when they no longer meet Workday’s standards in terms of labor market relevance and professional development usage. When Skills Cloud deprecates a skill, Workday:

Terms	Descriptions
	• Creates an inactive maintained skill with the same name as the deprecated skill. • Transfers usage data in your tenant from the deprecated skill to the new maintained skill. • Removes the deprecated skill from your tenant. See Concept: Automated Skill Management.
Duplicate skills	Duplicate skills are: • Multiple identical entries of a maintained or crowdsourced skill. • Maintained or crowdsourced skills that are exact matches to a Skills Cloud skill. Workday Skills Cloud uses machine learning to automatically merge duplicate and synonymous skills, reducing redundancies. See Concept: Automated Skill Management.
External skills	Skills that you import into Workday from a third-party system, enabling you to consolidate your skills data into 1 place and create a cohesive skills experience for your workers. See Steps: Enable Importing of External Skills.
Maintained skills	There are 3 types of skills: • Skills Cloud skills • Maintained skills • Crowdsourced skills Maintained skills, also called tenanted skills, are skills specific to your organization that you define in Workday. Administrators can add, edit, and remove maintained skills using the Maintain Skills report. Example: Your organization uses a proprietary programming language called Yukon to build software, so you add the skill Yukon Proficiency to the Maintain Skills report. See Steps: Maintain Skills.
Required skills	You can label some skills required for job profiles and job requisitions. Example: You create a job requisition for a Project Manager. You specify that Time Management is a required skill but Outlook isn't, because you know Outlook can easily be taught to the right candidate. See Concept: Candidate Skills Match.

Terms	Descriptions
Skill categories and category groups	You can group multiple skills by categories and category groups using the: • Maintain Skill Categories report. • Maintain Skill Category Groups task. Example: You create 2 skill categories called Sales and Production. In each category, you add skills relevant to that department, such as: Sales: • Customer Relations • Networking • Social Media Production: • Blueprints • Certifications to operate heavy machinery • Safety awareness You can now use skill categories to more quickly create job profiles. See Steps: Maintain Skill Categories.
Skill endorsements and ratings	Skill endorsements are when others endorse a worker's skills. When workers give feedback, they can select up to 100 skills to endorse for the feedback recipient. Workday Skills Cloud uses machine learning to suggest skill endorsements based on the skills included in the recipient’s profile and the feedback request. Skill ratings are numbers, between 1 and 5, assigned to each skill to represent proficiency. Workers can give skill ratings: • To themselves, for example as part of an quarterly performance review. • To other workers when you configure anytime feedback templates to enable skill ratings. See Steps: Set Up Skill Endorsements and Ratings.
Skill gaps	When workers’ current skills or skill levels fall short of those listed on their job profiles or don't align with the business needs of the organization. When you perform a skill gap analysis, you assess workers’ skills to identify opportunities for training, restructuring, or talent recruiting. See Concept: Candidate Skills Match.
Skill levels	The proficiency level that Workday Skills Cloud calculates for each skill, based on the skill’s sources and the weightings that you configure

Terms	Descriptions
	for each source type on the Maintain Skill Level Setup task. There are 5 customizable skill levels: 1. Beginner 2. Intermediate 3. Experienced 4. Advanced 5. Expert Note: You must enable skill ratings for Workday to calculate skill levels. Example use cases for skill levels: • You want to hire an Assistant Manager. On the job profile, you specify that the position requires level 3 leadership skills. • A year after you hire the Assistant Manager, they apply for a promotion because they've grown their leadership skills to a level 4, making them eligible for a promotion to Manager. See Steps: Set Up Skill Level.
Skill profiles	Enable you to organize qualifications for jobs and career paths. You can build skill profiles based on: • Certifications. • Competencies. • Education. • Languages. • Responsibilities. • Skills. • Training. • Work Experience. You can use skill profiles to: • Build job profiles and job requisitions. • Search for candidates and workers by the qualifications in a skill profile when you click Find Workers on theView Skill Profile report. See Steps: Manage Skill Profiles.
Skill sources	Sources are a type of skill validation. They demonstrate the worker’s proficiency with a skill and can include any relevant data from the worker's profile, such as certifications and work history. You can click any skill on a worker’s profile to see its sources.

Terms	Descriptions
	Example: When you click a worker's People Management skill, Workday opens a modal listing any people manager positions included in their work history. See Reference: Skill Sources.
Skills	An ability or application of knowledge that is needed for work. Skills are learned with practice and skill proficiency can change over time. You can add Workday skills to: • Candidate profiles. • Gigs. • Job profiles. • Job requisitions. • Learning courses. • Worker profiles. Example: An IT engineer can add skills like these to their worker profile: • JavaScript • Project management • Data encryption • Cybersecurity Then they can work on developing certain skills to match their career goals.
Skills Cloud	Workday's AI-powered tool that helps you manage skills by: • Automatically resolving duplicate and synonymous skills. • Suggesting relevant skills when you add or endorse skills on job profiles, job requisitions, and worker and candidate profiles. • Providing a database of approximately 60 thousand general skills for your workers to choose from, informed by public data sets, purchased data sets, and cross-industry customer data. See Setup Considerations: Skills Cloud.
Skills Cloud skills	There are 3 types of skills: • Skills Cloud skills • Maintained skills • Crowdsourced skills Skills cloud skills are general, tenant-nonspecific skills maintained by Workday's AI-powered Skill Cloud database, such as: • Leadership • Search engine optimization (SEO)

Terms	Descriptions
	• Time management • Word processing
Skills ontology	The structure of an organization's skills database including skill hierarchies and the relationships between jobs, skills, and workers. Example: An ontology might categorize the skill Recruiting under the larger Human Capital Management category, and specify that you can find the skill on certain job and worker profiles. When you import external skill data into Workday, you map your existing skills onto Workday's skill ontology. The Workday Skills Cloud ontology uses machine learning to continuously update itself, adapting in real time to changes both within your organization and across the labor market.
Suggested skills	You can enable Skills Cloud to use machine learning to suggest relevant skills for: • Job profiles. • Job requisitions. • Worker and candidate profiles. To view suggested skills for job profiles access the Suggested Skills for Job Profiles report, which suggests skills based on: • Text data in the job profile. • Text data (including required and optional skills) from the 10 most recently edited job requisitions under that job profile. Workday suggests up to 10 skills from each data source and updates suggestions hourly. See Concept: Skills Verification.
Synonymous skills	Synonymous skills are: • Multiple entries of a maintained or crowdsourced skill that are synonymous, but not exact matches. • Maintained or crowdsourced skills that are exact matches to Skills Cloud skill synonyms. Example: Skills Cloud may classify these as synonymous skills: • HR • Human Resources • Human Capital Management • Employee Management • People Resource Center If Human Resources is the canonical Skills Cloud skill, then Skills Cloud automatically merges all

Terms	Descriptions
	usages of the synonymous skills under the single Human Resources skill, reducing redundancies. See Concept: Automated Skill Management.
Tenanted skills	Maintained skills.

Skills Cloud

Setup Considerations: Skills Cloud

You can use this topic to help make decisions when planning your configuration and use of Workday Skills Cloud. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Skills Cloud is a machine-learning-powered remote collection of skills for workers and candidates to select from. You can use Skills Cloud to build qualification requirements and talent data without the need for additional maintenance. You can also use Skills Cloud to enable workers to tag skills to learning content, job catalogs, flex teams, and projects.

Business Benefits

Skills Cloud makes it easier for you to:

- Identify workers and candidates based on the skills that they select.
- Maintain skills data.

Skills Cloud also makes it easier for workers and candidates to search for relevant skills.

Use Cases

With the Skills Cloud, you can:

- Convert crowdsourced and maintained skills to Skills Cloud skills.
- Conduct structured skill assessments for workers.
- Import external and third-party skills and tag them as equivalent to Skills Cloud skills.
- Increase the number of skills for users to add to their profile without the need to maintain the Skills Cloud.
- Report on users based on the Skills Cloud skills they select.
- Improve the quality of skills data in your tenant.

Questions to Consider

Questions	Considerations
Do proprietary skills go to the cloud?	No. Workday ensures not to add proprietary skills from customer tenants to the Skills Cloud.

<table>
<tr><th>Questions</th><th>Considerations</th></tr>
<tr><td>If I opt in to contribute data from my Preview tenant, does that data go to a Preview Workday Graph?</td><td>There's only 1 Workday Graph that receives data from both Preview and Production tenants.</td></tr>
<tr><td>How does Skills Cloud impact web services?</td><td>You can load Skills Cloud skills in web services by entering reference IDs or an exact text match of a Skills Cloud skill. If there's no exact match to your text entry and no reference ID, Workday creates a:
Crowdsourced skill for workers and candidates.
Maintained skill on non-crowdsourced enabled objects.
Web services that support the Skills Cloud will continue to support crowdsourced and maintained skills.</td></tr>
<tr><td>How does Skills Cloud suggest skills to workers?</td><td>Skills Cloud displays skill suggestions when workers add and edit skills on their profiles.

For each worker, Skills Cloud suggests explicit skills culled from these sources, in this order:
Current Job Profile
Completed Projects
Previous Job Profiles
Completed Flex Team Roles
After workers add all the suggested skills from these sources, Skills Cloud uses machine learning to suggest additional AI-inferred skills.

See Suggested Skills on Worker Profile for more information.</td></tr>
<tr><td>What happens to existing skills in my tenant when Workday converts duplicate skills to Skills Cloud skills?</td><td>Workday runs a regular background job to convert duplicate skills to Skills Cloud skills. The background job only identifies crowdsourced and maintained skills as duplicates if they have an exact text match to a Skills Cloud skill.

When the background job runs, Workday deletes duplicate skills and replaces them with the corresponding Skills Cloud skill. Workday migrates usages from the deleted skill to the Skills Cloud skill.

Workday preserves tenanted translations for duplicate tenanted skills, then replaces them with Skills Cloud skills if Skills Cloud doesn't support the language.</td></tr>
<tr><td>What happens to existing skills in my tenant when Workday converts synonymous skills to Skills Cloud skills?</td><td>Workday runs a regular background job to convert synonymous skills to Skills Cloud skills. The background job identifies skills in your tenant that are synonymous with skills already in Skills Cloud.</td></tr>
</table>

Questions	Considerations
	When the background job runs, Workday deletes synonymous skills and replaces them with the corresponding Skills Cloud skill. Workday migrates usages from the deleted skill to the Skills Cloud skill. Synonymous skills no longer display on the Maintain Skills report. The background job runs hourly and evaluates 1000 skills at a time. You can exclude individual maintained skills from being converted by selecting the Exclude from Synonym Management check box on the Maintain Skills report.
How often does Workday review the skills in my tenant for matches to the latest version of the Skills Cloud?	Workday reviews the skills in your tenant on the first Wednesday of February, May, August, and November. When evaluating skills in your tenant, Workday compares the latest Skills Cloud skill in English and your tenant default language for matches.
What report fields should I use when I enable the Skills Cloud?	You can use these report fields on the *Worker* business object to report on different skill types: • All Skills for Skills Cloud skills, crowdsourced skills, and all maintained skills. • Internal Skills for all maintained skills. • Skills for Skills Cloud skills and all maintained skills.
Where does the Skills Cloud get its data?	Skills Cloud gets its data from: • Contributed data from Innovation Services Data Contribution. • Public data sets. • Purchased data sets.
What type of machine learning is the Skills Cloud?	Workday applies word representation machine learning to the Skills Cloud.
What is the difference between the HCM ML Features and Third Party Connectors GA and the Workday Graph innovation services?	The HCM ML Features and Third Party Connectors GA innovation service is a newer innovation service that supports machine learning for a variety of HCM features. With this innovation service, you can enable Skills Cloud without any data contributions. The Workday Graph innovation service specifically gives you access to Skills Cloud. With this innovation service, you must opt in to at least 1 data category to enable Skills Cloud. You need to opt in to either 1 of these innovation services to enable Skills Cloud, not both. Workday recommends opting in to the HCM ML Features and Third Party Connectors GA innovation service to enable Skills Cloud.

Recommendations

- Once you enable the Workday Skills Cloud, you can't disable it. Workday recommends you first enable Skills Cloud in a non-Production environment before enabling it in Production. Enabling the Skills Cloud can't be reversed.

  When you enable Workday Skills Cloud, Workday automatically begins evaluating skills in your tenant for potential matches, either exact or synonymous with Skills Cloud skills. Workday's automated skill management approach ensures that your users and administrators are using the most market relevant forms of skills that can be leveraged in Workday's skills-based machine learning applications. This process results in irreversible migration and replacement of tenanted skills with the most standardized form of the skill from the Workday Skills Cloud.
- After you enable Skills Cloud, to give the background jobs enough time to migrate your duplicate and synonymous skills, Workday recommends waiting at least 2 weeks before reviewing your remaining tenanted skills.
- If your tenant has more than 2,000 maintained skills, Workday recommends that you reduce the number of skills before enabling Tenanted Skills in Matching. This recommendation is to ensure the quality of the feature.

Requirements

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Limitations

- You can only upload and retrieve Skill Cloud skills in English using Workday Web Services.
- You can't export or view a list of skills from the Skills Cloud library.
- You can't configure what Skills Cloud skills users can view and select. You can prioritize maintained skills over Skills Cloud skills when searching for skills.
- The Tenanted Skills in Matching feature:
  - Is only available in English.
  - Doesn't support Candidate Skills Match and Skills in People Analytics.
  - Only applies to maintained skills that are on 20 different worker profiles or job requisitions that also have a Skills Cloud skill.

Tenant Setup

On the Maintain Skills and Experience Setup task:

- From the Indicate Primary Skill Search Results prompt, you can select:
  - *Skills Cloud* if you want users to select Skills Cloud skills more than maintained skills.
  - *Tenant Skills* if your tenant has a large library of maintained skills that you want prioritized in skill searches.
- Select the Include Tenanted Skills in Matching check box for Workday to use maintained skills in addition to Skills Cloud skills when calculating suggestions and recommendations. This feature impacts the results of other features, such as Career Hub and Talent Marketplace.

Security

Configure these security domains in the Worker Profile and Skills functional area:

Domains	Considerations
Set Up: Skills and Experience	Users can enable Skills Cloud and enable suggested skills to workers. Workday's

Domains	Considerations
	background jobs automatically convert duplicate skills and synonymous skills to Skills Cloud skills.
Person Data: Skill Assessment Data	Users can view skill assessment data for specified workers from the *Assess Skills* business process.
Person Data: Skills	Users can view and enter Skills Cloud skills for other users.
Self-Service: Skill Assessment Data	Users can view their skill assessment data from the *Assess Skills* business process.
Self-Service: Skills	Users can select Skills Cloud skills in the Edit Skills task.
Suggested Skills	Users can report on skill suggestions of other workers.
Person Data: Skill Level	Users can view the estimated skill level that's been generated for another worker's skills.
Person Data: Skill Sources	Users can view or select skill sources for other users.
Self-Service: External Skill Source	Users can view their own external skill source information.
Self-Service: Skill Endorsements	Users can view endorsements for their skills.
Self-Service: Skill Level	Users can view the estimated skill level that's been generated for their skills.
Self-Service: Skill Ratings	Users can view their skill ratings.
Self-Service: Skill Sources	Workers can edit skill sources on their profile.
Worker Data: External Skill Source	Workers can view external skill source data for other workers.
Worker Data: Skill Endorsements	Users can view skill endorsements for other workers.
Worker Data: Skill Ratings	Users can view skill ratings for other workers.
Manage External Skills	Use this domain to secure imported external skills and mapped external skills. This domain controls access to the web services that you use to manage external skills and mappings.

In addition to the skill source domains, users must have access to these domains to view sources on the View Skill Detail report and Edit Skill Sources task:

Domains	Considerations
In the Performance Enablement functional area: • *Self-Service: Anytime Feedback* • *Worker Data: Anytime Feedback*	Enables users to view or select public anytime feedback as a skill source.
In the Worker Profile and Skills functional area: • *Person Data: Certifications*	Enables users to view or select certifications as a skill source.

Domains	Considerations
• *Self-Service: Certifications*	
Flex Teams in the Talent Marketplace functional area	Enables users to view or select completed flex teams as a skill source.
In the Worker Profile and Skills functional area: • *Person Data: Job History* • *Self-Service: Job History*	Enables users to view or select jobs from a worker's job history as a skill source.
In the Learning Core functional area: • *Person Data: Learning* • *Self-Service: Learning*	Enables users to view or select completed learning courses as a skill source.
Worker Data: Historical Staffing Information in the Staffing functional area	Enables users to view or select positions from a worker's staffing history as a skill source.
Worker Data: Project in the Projects functional area	Enables users to view or select completed projects as a skill source.

Business Processes

You can use the *Assess Skills* business process to conduct structured skill assessments for workers. Using a 1-5 proficiency scale, you can rate job profile skills, worker profile skills, and other skills for workers. See Concept: Skill Assessments.

Reporting

Access the Innovation Service Data Details report to view which report fields you contribute for each Innovation Service data category.

You can filter by Skills Cloud skills in these reports:

- Find Candidates
- Find Mentor
- Find Workers
- Find Workers by Skills

You can also build custom reports to view skill assessment data from completed *Assess Skills* business process events.

Integrations

Use these web services to manage Skills Cloud and skills added to Skills Cloud:

Web Services	Considerations
Get External Skill Mapping	Imports skill mappings between external skills and existing Workday skills.
Get External Skill Sources	Imports external skill sources.
Get Manage Skills	Enables you to retrieve existing skills for a worker.
Get Skill Profiles	Exports skill profiles from the tenant.
Get Skill Profile Categories	Exports all skill profile categories from the tenant.
Get Skill Source Precedences	Imports all skill source precedences.

Web Services	Considerations
Get Skill Vendor	Imports skill vendors that are tagged to external skills.
Get Skills	Retrieves skill items.
Import External Skill	Imports external skills into Workday.
Import External Skill Mapping	Imports skill mappings between external skills and existing Workday skills.
Import External Skill Sources	Imports external skill sources.
Manage Skills	Allows adding and removing the skills for a worker.
Put Skill	Adds or updates maintained and remote skills if using Skills Cloud.
Put Skill Profile	Creates and edits skill profiles.
Put Skill Profile Categories	Allows you to add, edit, and remove skill profile categories.
Put Skill Vendor	Loads external skill vendors that are tagged to external skills.

These web services for other features support Skills Cloud skills but aren't dependent on Skills Cloud:

Web Services	Considerations
Create Evergreen Requisition	Creates an evergreen requisition.
Create Job Requisition	Creates a job requisition for a position in a position management supervisory organization.
Create Position	Creates and opens a position for a supervisory organization using the position management staffing model.
Edit Evergreen Requisition	Edits an evergreen job requisition.
Edit Job Requisition	Edits an existing job requisition.
Edit Position Restrictions	Edits an existing position restriction.
Get Candidates	Returns information for candidates specified in the request.
Put Candidate	Adds or updates a candidate with the information supplied in the request.
Submit Job Profile	Adds or updates a job profile.
Submit Recruiting Agency Candidate	Submits a candidate using the recruiting agency candidate process with the information provided in the request.

Connections and Touchpoints

Skills Cloud interacts with these other features in Workday:

Features	Considerations
Career Hub	Skills Cloud provides skills and suggested skills in onboarding, and Career Hub uses that data to suggest mentors, connections, and learning content.
Compensation	You can include skills-related fields in compensation review grids.
Learning	You can tag Learning lessons, courses, and programs with skills recommended by Skills Cloud. Workday provides suggested skills to administrators for learning content. Workday also uses skills to suggest learning content in Workday Learning.
People Analytics	You can use Skills Cloud to build qualification requirements and track worker capabilities in the Skills topic.
Projects	You can select Skills Cloud skills as requirements on: • Dynamic resource pools. • Project roles. • Resource plans.
Qualifications	You can select Skills Cloud skills as qualifications on: • Confidential job requisitions. • Evergreen requisitions. • Job profiles. • Job requisitions. • Positions. • Position restrictions. Workday also provides suggested skills for job profiles and job requisitions. You can also select Skills Cloud skills when creating skill profiles.
Talent Marketplace	The Opportunity Marketplace and Flex Teams applications require you to enable Skills Cloud. Workday uses Skills Cloud to recommend flex teams and job opportunities to workers. Workday also provides skill suggestions to users accessing Opportunity Marketplace for the first time. Completed flex teams are available as a skill source when a flex team host endorses a worker for a skill.
Talent Reviews	You can add Skills Cloud skills to talent review templates to collect skills data.
Workday Recruiting	You can select Skills Cloud skills for:

Features	Considerations
	• Candidates. • Confidential prospects. • Job applications. • Prospects. • Recruiting agency candidates. • Referrals. Skills Cloud also provides skills for calculating Candidate Skills Match.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Workday Skills Cloud Resources

The Next Level: Power of Skills

The Next Level: Establishing a Skills Blueprint

The Next Level: Skills versus Competencies

Steps: Set Up Skills Cloud

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Review setup considerations for Skills Cloud.

Context

You can set up your tenant to access Skills Cloud, a library of customer-contributed worker skills that Workday shares across all Skills Cloud-enabled customer tenants.

Enabling Skills Cloud:

- Increases the number of selectable skills in your tenant.
- Reduces the need to manage maintained skills.
- Replaces duplicate and synonymous skills in your tenant with standardized Skills Cloud skills.

When a worker or recruiter adds or edits a skill in a Skills Cloud-enabled tenant, Workday:

- Returns relevant skills from Skills Cloud, in addition to skills in your tenant.
- Uses data from selections to improve future searches.

Note: After enabling Skills Cloud, your tenant continues to return Skills Cloud results even if you later decide to opt out.

Steps

1. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   On the Innovation Services Opt-In task, select either of these services on the Available Services tab in the HCM category.

Option	Description
HCM ML Features and Third Party Connectors GA	Opt in to this service if you want to enable Skills Cloud without any data contributions.
Workday Graph	If you opt in to this service, you must also opt in to at least 1 of these data categories to enable Skills Cloud: Setup Data, Worker Profile Data, Candidate Profile Data.

   Workday recommends that you opt in to the HCM ML Features and Third Party Connectors GA innovation service to enable Skills Cloud.

   On the Maintain Innovation Services Data Selection Opt-In task, click Next.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   While not required, Workday recommends you opt in to contributing data for Machine Learning. On the Maintain Innovation Services Data Selection Opt-In task, select the check boxes to opt in to Skills Data and User Feature Delivery Data, and at least 1 additional category in either of these services in the HCM category.

   If you want to enable Tenanted Skills in Matching, you must opt in to these categories in the HCM: HCM ML Features and Third Party Connectors GA category:

   - Talent Profile Data
   - Job Requisition Data or Worker Profile Data

   When you opt out of data contribution, Workday purges your data within 30 days.

   Security: *Manage: Innovation Services* domain in the Innovation Services functional area.
2. Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

   Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.

3. Enable Skills Cloud on page 1854.

   Turn on Skills Cloud and configure additional features.
4. Set up Workday so you can import external skills using Enterprise Interface Builder (EIB).

   See Steps: Enable Importing of External Skills on page 1857.
5. Edit Domain Security Policies.

   If you enabled suggested skills for workers, configure these domains in the Worker Profile and Skills functional area:

Domain	Purpose
Suggested Skills	Enables you to report on the skill suggestions of workers. Note: you don't need to contribute data through the Innovation Service for it to operate.
Person Data: Skill Sources	Enables users to view or edit the skill sources of other workers.
Self-Service: Skill Sources	Enables workers to verify skills by adding skill sources.

6. Configure the domains that secure skill source data.

   See Reference: Skill Sources on page 1869.
7. Activate Pending Security Policy Changes.
8. Configure feedback templates to include skill endorsements and skill ratings.

   See Steps: Set Up Skill Endorsements and Ratings on page 1860.
9. Generate skill levels for workers' skills.

   See Steps: Set Up Skill Level on page 1861.
10. Review and activate Workday-delivered skill categories and skill category groups. See Steps: Set Up Workday-Delivered Skill Categories and Skill Category Groups.

Result

If a user has access to skill sources, Workday directs them to the Edit Skill Sources task or View Skill Detail report when they click a worker skill. Worker skills also display the number of sources that they have.

Workday Community: Workday Machine Learning

Workday AI Fact Sheets: Suggested Skills on Worker Profile

Workday AI Fact Sheets: Suggested Skills for Job Profiles

Enable Skills Cloud

Prerequisites

Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.

3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Context

When you enable Skills Cloud, Workday automatically begins evaluating skills in your tenant for potential matches, either exact or synonymous with Skills Cloud skills. This process results in irreversible migration and replacement of tenanted skills with the most standardized form of the skill from the Workday Skills Cloud.

Note: Once you enable Skills Cloud, you can't disable it. Workday recommends you first enable Skills Cloud in a non-Production environment before enabling it in Production.

Steps

1. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.
2. Access the Maintain Skills and Experience Setup task.
3. Select the Enable Workday Skills Cloud check box.
4. (Optional) As you complete the Skills section, consider:

Option	Description
Indicate Primary Skill Search Results	Select the type of skill that you want prioritized when a user searches for a skill. If you don't make a selection, Workday automatically prioritizes Skills Cloud skills.
Exclude Maintained Skills from Synonym Management by Default	Select this check box so that all new maintained skills created using the Maintain Skills task are excluded from the synonym management background job by default. You can clear the check box for individual skills on the Maintain Skills report. Selecting this check box doesn't automatically exclude maintained skills from synonym management when creating new maintained skills using the *Put Skills* web service.
Populate Suggested Skills for Workers	Select this check box to enable: • Skill suggestions for workers. • Workers to add sources of evidence to their skills.

Option	Description
	• Workers to view any sources of a skill on the Worker profile.
Populate Suggested Skills for Internal Candidates	Select this check box to enable Workday to provide skill suggestions to employees applying to internal job postings.
Populate Suggested Skills for External Candidates and Prospects	Select this check box to enable suggested skills when external candidates upload their resumes for job applications or external prospects upload resumes on prospect forms. To display suggested skills on prospect forms, select Enable Skills in the Prospect Introduce Yourself section of the external career site. See Create External Career Sites.
Include Tenanted Skills in Matching	Select this check box for Workday to consider maintained skills from your tenant when providing suggestions and recommendations.
Populate Suggested Skills on Job Requisitions	Select this check box to enable Workday to provide skill suggestions based on the job requisition details.
Populate Suggested Skills for Job Profiles	Select this check box to provide suggested skills for job profiles on the *Manage Job Profile* business process and in the Suggested Skills for Job Profile report. The skill suggestions update hourly and provide up to 10 suggested skills for each reporting item. You can view suggested skills for job profiles based on: • Job profile text data • Job requisition text data • Job requisition skill data
Enable Skills Self-Assessment on Worker Profile	Select this check box to enable workers to self-assess their proficiency level for skills on their worker profile. Available when you select the Populate Suggested Skills for Workers check box. Note: Separately from this option, you can also enable self-assessments on the *Assess Skills* business process.

5. (Optional) To enable Workday to suggest skills for workers based on Position History, access the Maintain Feature Opt-Ins report and opt into Position History for Skill Suggestions and Verification.

Result

Users can now select Skills Cloud skills on:

- External career sites.
- Job applications.
- Job profiles.
- Job requisitions.
- Learning.

- Positions.
- Prospects.
- Recruiting agency candidates.
- Referrals.
- Skill profiles.
- Worker profiles.

If you selected the Populate Suggested Skills for Workers check box, workers can select Workday-generated skills in the Suggested Skills section on the Edit Skills task.

Next Steps

- Configure the security policies for skill suggestions and skill sources domains.

Workday AI Fact Sheets: Suggested Skills for Job Profiles

Steps: Enable Importing of External Skills

Prerequisites

Enable Skills Cloud.

Context

Workday enables you to import skills from external vendors using web services. Configure these steps before setting up these web services for importing skill vendors, external skills, and external skill mapping:

- *Get Skill Vendor*
- *Put Skill Vendor*
- *Import External Skill*
- *Get External Skill Mapping*
- *Put External Skill Mapping*

External skill mappings establish a relationship between an external skill and a skill that exists within Workday. This relationship establishes an equivalence between skills tracked in your third-party system and the Workday skill that reflects an equivalent meaning. You must load and establish external skill mappings before you can import externally calculated skill levels using the *Import External Skill Sources* web service.

Steps

1. Access the Maintain Skills and Experience Setup task.

   Select the Populate Suggested Skills for Workers check box.

   Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
2. Edit Domain Security Policies.

   Configure the *Manage External Skills* domain in the Worker Profile and Skills functional area to secure external skills and mapped external skills.
3. Access the Maintain Skill Vendors task.

   Enter a Skill Vendor Name to add a vendor. Workday assigns an internal reference ID to use when you import external skills from that vendor.

Result

You can now import external skills from the vendors you added.

The Next Level: Leveraging Skills Interoperability

Steps: Set Up Workday-Delivered Skill Categories and Skill Category Groups

Prerequisites

Enable Skills Cloud.

Context

You can use Workday-delivered skill categories and skill category groups to report on foundational Skills Cloud skills. The categories and category groups were created by:

- Identifying foundational Skill Cloud skills through extensive analysis to ensure they are highly relevant and valuable across a wide range of industries and roles.
- Mapping foundational Skills Cloud skills to a curated hierarchy of skills from the Occupational Information Network (O*NET). For more information, see the O*NET Resource Center O*NET 29.3 Database and CC BY 4.0 License.
- Grouping semantically similar skills.
- Using AI and publicly available sources to review and update labels for the Workday-delivered skill categories and skill category groups.

This dataset includes information from the O*NET 29.3 Database by the U.S. Department of Labor, Employment and Training Administration (USDOL/ETA). Used under the CC BY 4.0 license. O*NET® is a trademark of USDOL/ETA. Workday has modified some of this dataset. USDOL/ETA has not approved, endorsed, or tested these modifications.

We display all Workday-delivered skill categories and skill category groups as inactive. You can review the Workday-delivered categories and category groups, and activate the ones that fit your requirements.

Steps

1. Access the Maintain Skill Categories report to view Workday-delivered skill categories in the Inactive Skill Categories tab.
2. Access the Maintain Skill Category Groups task and review the Workday-delivered skill category groups.

Steps: Set Up Mass Populate Skills for Workers

Prerequisites

Enable Skills Cloud.

Context

The Mass Populate Skills for Workers task allows you to efficiently build a comprehensive skills inventory and enhance worker profiles. By mass populating skills, you save time and effort while improving talent identification and strategic talent management.

Note: If you are enabling Skills Cloud for the first time, we recommend waiting at least 2 weeks until the initial data processing is complete before running this task. See Setup Considerations: Skills Cloud on page 1844.

Steps

1. (Optional) Access the Maintain Skills and Experience Setup task and in the Skills section, consider:
    - Populate Suggested Skills for Job Profiles
    - Populate Suggested Skills for Workers
2. (Optional) Create a custom notification message that workers receive when this task identifies skills to add to their profiles. You can set up your message in Custom Notification Message for Mass Populate Worker Profile Skills in the Maintain Skills and Experience Setup task. If you don't create a custom notification message, Workday delivers a default message.
3. Edit Domain Security Policies.

    Configure access to the *Set Up: Mass Populate Worker Profile Skills* domain in the Worker Profile and Skills functional area.
4. Access the Mass Populate Worker Profile Skills task. As you complete Define Worker Population section, consider:

Option	Description
Location	(Optional) Select the physical location of a business site.
Supervisory Organization	(Optional) Select the supervisory organization. You can include subordinate organizations once this option is selected.
Workers with Fewer than Specified Number of Skills	Enter the minimum number of skills on the worker profile.

5. As you complete the Select Skills Source > Job Profile section, consider:

Option	Description
Skills from the Worker's Primary Job Profile	(Optional) Add the skills from the worker's primary job profile to their worker profile. Workday includes all of the skills from the Job Profile source.

6. As you complete the Select Skills Sources > Suggested Skills section, consider:

Option	Description
Suggested Skills for Job Profile	(Optional) Add the suggested skills based on the worker’s primary job profile.
Suggested Skills for Worker Profile	(Optional) Add the suggested skills based on the worker user profile.
Maximum Number of Suggested Skills to be Added	Enter the number of suggested skills you want to add to the worker profile. By default, we set this value to 10. You can include up to 20 suggested skills from the Suggested Skills sources. Workday includes up to the specified number of suggested skills for job profiles and worker profiles based on the relevance of the suggestions.

7. Select the Confirm You Understand This Action Can't Be Undone check box. Once you run this task, you can't rescind it. Applies to all workers who meet the criteria specified in the Define Worker Population section.

Result

Workday creates a notification for workers to review the skills populated for their worker profile. Workers retain full control of the skills on their worker profile, and can remove any skills added by the Mass Populate Worker Profile Skills task.

2025R1 Feature Release Note: Mass Populate Worker Profile with Skills

Workday AI Fact Sheets: Suggested Skills for Job Profile

Workday AI Fact Sheets: Suggested Skills on Worker Profile

Steps: Set Up Skill Endorsements and Ratings

Prerequisites

Enable Skills Cloud and skill suggestions for workers. See Enable Skills Cloud.

Context

You can configure feedback templates that enable feedback providers to either endorse or rate skills for workers.

Steps

1. Edit Domain Security Policies.

   Configure these domains in the Worker Profile and Skills functional area:

   - *Self-Service: Skill Endorsements*
   - *Self-Service: Skill Ratings*
   - *Worker Data: Skill Endorsements*
   - *Worker Data: Skill Ratings*
2. Access the Create Feedback Template task.

   Select either *Enable Skill Endorsements* or *Enable Skill Ratings* in the Skills in Feedback prompt.

   Security: *Set Up: Employee Reviews* in the Performance Enablement functional area.
3. Add the Feedback for Skills report on the Feedback for Worker Profile profile group.

   See: Steps: Set Up Profiles and Profile Groups.

Result

Your workers can request feedback using any templates you configured with skill endorsements or skill ratings. When requesting feedback, workers can select up to 100 skills based on the feedback recipient's:

- Skills from their worker profile and job profile.
- Skill interests.
- Critical skills.

Based on the selected skills from the feedback request, feedback providers can:

- Select a rating or decline to rate each skill.
- Select up to 100 skills to endorse. Workday provides suggestions based on the skills from the feedback request and the skills of the feedback recipient.

Next Steps

Enable Workday to use skill ratings to calculate skill levels.

Related Information

Tasks

Steps: Set Up Feedback on page 1737

Reference

2021R2 What's New Post: Skill Level, Skill Ratings, and Skill Endorsements

Steps: Set Up Skill Level

Prerequisites

- Enable Skills Cloud.
- Select Populate Suggested Skills for Workers on the Maintain Skills and Experience Setup task.
- Enable user access to view and edit skill sources. See Reference: Skill Sources.

Context

You can enable Workday to calculate skill levels for worker skills that users can view. When workers click a skill on a worker profile, Workday displays:

- The calculated skill level.
- Different skill level sources depending on your configuration.
- A breakdown of the skill level calculation and a link to the Skill Detail report for the skill.

Workday doesn't display this information when workers click a skill on a career profile, or on Workday on Android, iPad, or iPhone. When you enable skills self-assessment on the worker profile, workers can self-rate their skill level.

Steps

1. Edit Domain Security Policies.

   Configure these domains in the Worker Profile and Skills functional area:

   - *Person Data: Skill Level*
   - *Self-Service: Skill Level*
2. Enable skill level sources. You must set up at least 1 of these sources:

Skill Level Source	Setup Information

Skill Assessment Rating	• Set up skill assessments. See Concept: Skill Assessments on page 1864.
	• To enable users to view the ratings, add them to these domains in the Worker Profile and Skills functional area:
	  ◦ *Person Data: Skill Assessment Data*
	  ◦ *Self-Service: Skill Assessment Data*
	When calculating the skill level, Workday only includes the worker's most recent skill assessment rating for each skill.

Requested Feedback Ratings	• Set up skill ratings in feedback templates. See Steps: Set Up Skill Endorsements and Ratings on page 1860.

<table>
<tr><th>Skill Level Source</th><th>Setup Information</th></tr>
<tr><td></td><td>To enable users to view the ratings, add them to these domains in the Worker Profile and Skills functional area:
Self-Service: Skill Ratings
Worker Data: Skill Ratings
When calculating the average rating for this source, Workday includes the latest rating from each user who rates the worker on this skill.</td></tr>
<tr><td>Self Assessment</td><td>Enable self-assessment on the worker profile or as a step within skill assessments. See Enable Skills Cloud on page 1854 and Concept: Skill Assessments on page 1864.
To enable users to view the ratings, add them to these domains in the Worker Profile and Skills functional area:
Self-Service: Skill Ratings
Worker Data: Skill Ratings
When calculating the skill level, Workday only includes the worker’s most recent self-assessment rating for each skill.</td></tr>
<tr><td>Externally Calculated Skill Level</td><td>Import externally calculated skill levels using the Import External Skill Sources web service. See Steps: Enable Importing of External Skills on page 1857.
Add workers to these domains in the Worker Profile and Skills functional area to enable them to view external skill levels:
Self-Service: External Skill Source
Worker Data: External Skill Source</td></tr>
</table>

3. Maintain Skill Level on page 1863.

   Specify weightings for skill level calculation and configure custom labels for skill levels.
4. (Optional) Add workers to these domains in the Worker Profile and Skills functional area and set up skill ratings in feedback templates:

   - *Self-Service: Skill Ratings*
   - *Worker Data: Skill Ratings*

   See Steps: Set Up Skill Endorsements and Ratings on page 1860.
5. (Optional) Add workers to these domains in the Worker Profile and Skills functional area to enable them to select external skills as a skill source:

   - *Self-Service: External Skill Source*
   - *Worker Data: External Skill Source*

Result

Workday calculates the skill level by averaging skill sources based on the weightings you configured on the Maintain Skill Level Setup task. If there are no sources available for a skill, Workday displays the Skill Level field as Not Applicable on the Skill Detail report.

Related Information
Reference
2021R2 What's New Post: Skill Level, Skill Ratings, and Skill Endorsements
2023R1 What's New Post: Skill Level User Interface Modal

Maintain Skill Level

Prerequisites

- Set up skill levels and enable the skill ratings that you want to use as sources to determine the overall skill level. See Steps: Set Up Skill Level on page 1861.
- Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.

Context

Workday can calculate skill levels from different types of sources. To enable skill levels, you must configure calculation weightings for 1 or more sources.

You can also create custom labels for Workday to display on a worker's skill details instead of the default skill level labels.

Steps

1. Access the Maintain Skill Level Setup task.
2. As you complete this task, consider:

Option	Description
Skill Level Rating Name Override	(Optional) Enter a custom label to use as an override for a skill level rating name. Each field corresponds to the default label that you can override. Leave these fields blank if you want to use the default rating name.
Skill Level Rating Description Override	(Optional) Enter a custom description for the rating, up to 100 characters long. Workday displays the custom description only when you access a skill from the worker profile. When you access a skill from the Career Profile, Workday displays the default rating descriptions for the self-rating scale and skill level description if an override isn't configured. Note: Workday doesn't display skill level rating description overrides on the Assess My Skills task.
Skill Level Calculation	Enter the weightings for the skill level sources that you plan to use: • Requested Feedback Ratings

Option	Description

	• Self Assessment: Workers' ratings of their own skills, which they can enter:
	  • On the Assess My Skills task on their worker profile.
	  • From My Tasks as an action in the *Assess Skills* business process.
	• Externally Calculated Skill Level
	• Skill Assessment Rating: Ratings from the Assess Skills task, which users access as an action in the *Assess Skills* business process.
	
	The weighting must total 100 percent for all the skill sources. If you don't enter a weight for 1 skill level source, Workday won't include the source when calculating skill level. If you don't enter a weight for any source, Workday won't calculate a skill level.
	
	Entering zero for the weighting does not remove the skill level source from a worker's skill level details. Users can still view the ratings for each source that they have access to.

Reference

2022R2 What's New Post: Import Externally Calculated Skill Levels

Concept: Skill Assessments

You can use the *Assess Skills* business process to conduct structured skill assessments for workers. Skill assessments can help you better understand your workforce and facilitate better career growth conversations between workers and managers.

Using a 1-5 proficiency scale, you can rate job profile skills, worker profile skills, and other skills for workers.

Use Cases

You can enable:

- Assessors to rate skills for individual workers.
- Administrators to initiate skill assessments for up to 50,000 workers at once using the Launch Assess Skills for Worker Mass Operation Type on the Mass Operation Management task. Workday recommends that you run the mass operation on desktop rather than mobile.
- Workers to self-assess their own skills.
- Administrators to include skill assessment ratings in skill level calculations.

Requirements

To use the *Assess Skills* business process, you must set up:

- Skills Cloud. See Steps: Set Up Skills Cloud.
- The *Assess Skills* business process definition using the Create Business Process Definition (Default Definition) task.

You must set up a new or existing segment-based security group to enable managers to run the Launch Assess Skills for Worker Mass Operation Type.

Limitations

The *Assess Skills* business process doesn't support crowdsourced skills.

Mass operation skill assessments don’t process workers with:

- In-progress skill assessments, including when you launch multiple skill assessment operations at the same time that include the same worker.
- More than 100 skills selected to assess.
- No skills selected to assess.

Tasks

You can configure the Assess Skills for Worker task as an initiating action on the *Assess Skills* business process. Access this task from:

- Global search.
- The related actions menu on a worker's profile.

You can configure these tasks as allowed actions on the business process:

- Assess My Skills. Enables workers to rate their own skills.
- Assess Skills. Enables assessors to rate skills for workers.

You can use these tasks to view and report on skill assessment data:

- My Skill Assessments. Enables workers to view their own skill assessments.
- View Skill Assessments. Enables managers to view skill assessments for specified workers.

Reporting

You must set up security on these domains to enable skill assessment reporting:

- *Person Data: Skill Assessment Data*
- *Self-Service: Skill Assessment Data*

You can build custom skill assessment reports for workers using these report fields:

Business Object	Report Fields
Assess Skill Event	• Assessed Skill Ratings • Declined to Rate • Self-Assessed Skill Ratings • Skills Selected to Assess • Skills to Add to Worker Profile
New Skill	• Skill Level - Skill Assessment • Skill Level Value - Skill Assessment
Skill Ratings	• Skill Rating Source
Worker	• Assess Skill Events For Worker • Self-Ratings from In Progress Skill Assessment. Available with Embedded Analytics. • Skill Ratings for Worker

2024R2 Release Note: Skill Assessments

2024R2 Release Note: Mass Operation Skill Assessments

Concept: Skills Verification

Workday can suggest skills to workers based on data from their worker profile, and you can enable workers to add sources of evidence on a skill.

Skill Suggestions

Skill suggestions make it easier for workers to find relevant skills based on their experience.

You can select the Populate Suggested Skills for Workers check box on the Maintain Skills and Experience Setup task to enable the suggested skills background job. Workday runs the background job hourly every day and suggests Skills Cloud skills based on a worker's:

- Completed learning courses
- Completed projects
- Job history
- Public anytime feedback
- Skills

To enable Workday to suggest skills based on Position History, you can opt into Position History for Skill Suggestions and Verification on the Maintain Feature Opt-Ins report.

Workday displays up to 10 skills in the Suggested Skills section on the Edit Skills task. The skill suggestions refresh and improve each time a worker adds a skill.

Workday doesn't suggest skills based on a worker's Certifications. Workers can manually select Certifications that contribute to skills on their worker profile.

Skill Sources

Workers can verify their skills by adding sources of evidence, such as their:

- Certifications
- Completed flex teams with a skill endorsement
- Completed learning courses
- Completed projects
- Job history
- Position history
- Public anytime feedback
- Skill endorsements
- Skill ratings

Once you enable skill suggestions, you can set up security for skill sources. In addition to the skill sources domains, users must have access to the corresponding domains of each skill source. Users can click a skill to access either the Edit Skill Sources task or View Skill Detail report, depending on their security access.

Workday automatically selects a skill source for a skill if a worker adds a suggested skill that Workday based on a skill source.

Related Information

Reference: Skill Sources on page 1869

Concept: Skills Cloud Translations

Workday supports Skills Cloud in these languages to support your global workforce:

- Chinese (Simplified)
- Chinese (Traditional)
- Danish
- Dutch
- English
- Finnish
- French (Canada)
- French (France)
- German
- Italian
- Japanese
- Korean
- Portuguese (Brazil)
- Norwegian
- Spanish (Neutral)
- Swedish

You can enable these languages in the Edit Tenant Setup - Global task. When a user sets their preferred language to one of these languages, they can search for and select Skill Cloud skills in that language.

Workday automatically translates Skills Cloud skills to improve the visibility of skills across your tenant. If translations are available for a Skills Cloud skill, Workday displays that skill in a user's preferred language. Example: Dennis, whose preferred language is German, uses the Edit Skills task to search for skills in German and adds them to his profile. Betty, whose preferred language is French (France), visits Dennis' profile and sees his skills in French.

Workday displays Skills Cloud skills in English when:

- A translation isn't available for another language.
- A user's preferred language isn’t supported for Skills Cloud.

Workday supports Skills Cloud translations in:

- Recruiting
- Learning
- Projects
- Talent
- Talent Marketplace

Tasks
Steps: Set Up Skills Cloud on page 1852

Concept: Automated Skill Management

Overview

Workday Skills Cloud performs regular automated background processes to clean up and maintain skills in your tenant. These background processes perform:

- Duplicate Skill Management
- Synonym Skill Management
- Deprecated Skill Management

These background processes reduce the number of skills in your tenant that are synonyms or duplicates of Skills Cloud skills, and increase the usability of skill data in your tenant. Once you enable Skills Cloud in your tenant, you can't opt out of these background processes.

The background processes evaluate 1,000 skills in each hourly batch, so tenants with large numbers of skills or new skill translations will require additional time to complete the duplicate and synonymous skill conversions. Workday recommends waiting a minimum of 1 week after first enabling Skills Cloud before reviewing your remaining tenanted skills.

Duplicate Skill Management

Duplicate Skill Management reduces the number of crowdsourced and maintained skills in your tenant. Workday performs a series of background jobs that regularly evaluates all skills in your tenant for any that are exact matches to a Skills Cloud skill. If a match is found, Workday automatically:

1. Creates the canonical Skills Cloud skill in your tenant if it doesn’t already exist.
2. Migrates usages of the duplicate tenanted skill to the matching Skills Cloud skill.
3. Migrates comments on the duplicate tenanted skill to the matching Skills Cloud skill.
4. Keeps the highest entered skill level for the Skills Cloud skill.
5. Deletes the duplicate tenanted skill.

The Duplicate Skill Management background process runs every hour and identifies skills as duplicates if they're an exact textual match to a Skills Cloud skill. Workday replaces duplicate skills with the Skills Cloud skill of the same name and removes them from the Maintain Skills and Find Skill reports. If there's a merged skill on a duplicate skill, Workday removes the merged skill from the Maintain Skills report.

Workday converts translations of duplicate skills in languages supported by Skills Cloud into Skills Cloud skills. Workday doesn't convert tenanted translations of duplicate skills in languages not supported by Skills Cloud, but we continue to display the translated skill to users.

Example: When an English maintained skill that has a Spanish tenanted translation converts to a Skills Cloud skill, Workday removes this skill from the Maintain Skills report. However, users with Spanish as their preferred language continue to see that skill in Spanish, as previously configured.

This background process affects skills used on all skill-enabled Workday objects.

Synonymous Skill Management

Synonym Skill Management enables a series of background jobs that regularly evaluate all skills in your tenant for any that are a synonym of a Skills Cloud skill. If a match is found, Workday automatically:

1. Creates the canonical Skills Cloud skill in your tenant if it doesn't already exist.
2. Migrates usages of the synonymous tenanted skill to the matching Skills Cloud skill.
3. Migrates comments on the synonymous tenanted skill to the matching Skills Cloud skill.
4. Keeps the highest entered skill level for the Skills Cloud skill.
5. Deletes the tenanted skill.

The Synonym Skill Management background process runs every hour and identifies skills in your tenant that are synonymous with a Skills Cloud skill. Workday removes these skills from your tenant and replaces them with the synonymous Skills Cloud skill. This conversion affects all crowdsourced, maintained, and Skills Cloud skills in your tenant except for those skills used by candidates.

This background process affects skills used on all skill-enabled Workday objects.

You can exclude individual skills from being converted by editing the skill on the Maintain Skills report and selecting the Exclude from Synonym Management check box. When first enabling Skills Cloud, Workday will automatically exclude all maintained skills from synonym management by default. Workday recommends using the Put Skills web service to change this option for maintained skills in bulk.

Deprecated Skill Management

Skills Cloud skills can be marked as Deprecated and removed from the Skills Cloud. Workday deprecates skills when they no longer meet Workday's definition of a skill, including checks for labor market relevance, ambiguity, and relevance for professional development. When Skills Cloud deprecates a Skills Cloud skill in use in a customer tenant, Workday:

1. Creates an inactive maintained skill with the same name as the deprecated skill.
2. Moves over the usages from the deprecated skill to the newly created inactive maintained skill.
3. Keeps the highest entered skill level for the Skills Cloud skill.
4. Removes the deprecated skill from the customer's tenant.

Workday creates inactive maintained skills to ensure that any customer usages against the deprecated skill are preserved. Workday won't delete customer usages of a skill on their behalf.

This background process replaces the deprecated skills in your tenant with inactive maintained skills. Workday automatically enables this background process when you enable the duplicate skills conversion background process.

Additional Information

A usage is a connection between a skill and another object in Workday. Examples of usages include:

- Skills in skill categories
- Skills on workers
- Skills on candidates
- Skills on job profiles

Workday automatically migrates all usages on behalf of customers.

Additional notes to consider:

- You can't exclude crowdsourced skills. Workday automatically replaces crowdsourced skills if they're a duplicate or a synonym of a Skills Cloud skill,
- Workday doesn't change the skills on the candidate person type. When Workday finds a skill on a candidate that's a synonym of a Skills Cloud skill, Workday will create a crowdsourced skill to represent the candidate skill item. Workday migrates and replaces all other usages of the synonymous skill on every other object.
- When you mark a maintained skill as a duplicate of another maintained skill, Workday automatically deletes the duplicate skill and merges all of its usages.

Related Information

Reference

The Next Level: Power of Skills

Reference: Skill Sources

Skill sources in the Edit Skill Sources task and View Skill Detail report are only visible to users with access to the corresponding domains. You access the Edit Skill Sources task or View Skill Detail report by clicking on a skill. If you enable skill level, workers access the task or report from the skill-level modal.

Skill Source	Domains	Notes
Anytime Feedback	In the Performance Enablement functional area: • *Self-Service: Anytime Feedback* • *Worker Data: Anytime Feedback*	Workday suggests skills based on public anytime feedback text.
Certifications	In the Worker Profile and Skills functional area: • *Person Data: Certifications*	Workday doesn't suggest skills based on certifications, but workers can add skills based on their certifications.

Skill Source	Domains	Notes
	• *Self-Service: Certifications*	
External Skill Sources	In the Worker Profile and Skills functional area: • *Self-Service: External Skill Source* • *Worker Data: External Skill Source*	Workday doesn't suggest skills based on external skill sources but workers can add their own external skill source information.
Flex Teams	*Flex Teams* in the Talent Marketplace functional area	Flex Teams are only available as a skill source when a flex team host endorses the worker for a skill.
Job History	In the Worker Profile and Skills functional area: • *Person Data: Job History* • *Self-Service: Job History*	Workday suggests skills based on job titles and descriptions.
Learning Courses	In the Learning Core functional area: • *Person Data: Learning* • *Self-Service: Learning*	Workday suggests skills based on the tagged skills or recommended skills of a completed learning course.
Position History	*Worker Data: Historical Staffing Information* in the Staffing functional area	Workday suggests skills based on your current position title and description when you opt into Position History for Skill Suggestions and Verification on the Maintain Feature Opt-Ins report. When the job description and job description summary are blank on the position, Workday suggests skills based on the corresponding job profile. Don't use Position History as a skill source if you're using the *Manage Job History* subprocess for any of these business processes: • *Add Additional Job* • *Change Job* • *Hire* • *Title Change*
Projects	*Worker Data: Project* in the Projects functional area	Workday suggests skills based on completed project information, such as the: • Project name and description. • Worker's project role name, description, and skill requirements.

Skill Source	Domains	Notes
Skill Assessments	In the Worker Profile and Skills functional area: • *Person Data: Skill Assessment Data* • *Self-Service: Skill Assessment Data*	Workday adds skill assessments as a skill source once an assessor completes a skills assessment for a worker using the *Assess Skills* business process.
Skill Endorsements	In the Worker Profile and Skills functional area: • *Self-Service: Skill Endorsements* • *Worker Data: Skill Endorsements*	Workday adds endorsements as a skill source once a feedback provider endorses a worker for a skill. You can't make changes to skill endorsements from the Edit Skill Sources task.
Skill Ratings	In the Worker Profile and Skills functional area: • *Self-Service: Skill Ratings* • *Worker Data: Skill Ratings*	Workday adds ratings as a skill source once a feedback provider rates a worker's skill. You can't make changes to skill ratings from the Edit Skill Sources task.

Learning

Learning Setup and Maintenance

Setup Considerations: Learning

You can use this topic to help make decisions when planning your configuration and use of Learning. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday Learning combines development, peer learning, and required training into a single platform. It enables you to manage:

- Delivery of learning content for specific users or the entire workforce.

- Storage of learning materials.
- Worker and external users engagement and progress.

Business Benefits

Workday Learning:

- Helps ensure users only access appropriate content.
- Makes it easy to find and use material by providing an intuitive and configurable interface.
- Streamlines your employees' career development by enabling them to check available learning opportunities when setting goals, or recommend courses when they change positions.
- Helps you keep your learning catalog up to date by enabling subject matter experts to create their own content.
- Uses machine learning to suggest content that can help develop or improve existing skills.
- Maintain standards by adding steps to your business process requiring approval before you make content available.
- Maximize efficiency as you mass drop learners from a course offering or digital course.

Use Cases

- Organize your learning into categories relevant to specific skills to find content more easily.
- Enable learners to set personal preferences, such as improving specific skills. Workday Learning suggests courses that are relevant to their interests.
- Curate content for specific skills or expertise.
- Define an approval process for new content.
- Enroll team members or entire teams in programs or courses.
- Require learners to take lessons or courses.
- Create courses that instructors deliver in person, have digital content, or a combination of both.
- Inform potential learners when courses are available and configure reminders when they enroll.
- Report on the usage, progress, or pass rate of your learning content.
- Capture a learner's progress by entering scores, grades, or feedback with a training activity.
- Enable your learners to provide feedback through questionnaires or ratings.

Questions to Consider

Question	Consideration
How do you want to organize your learning catalog?	Categorize courses, lessons, and programs into topics that your learners can browse. Administrators can tag specific skills to learning content. The content can display on worklets as recommendations to learners for skills they want to improve, or develop. Workday delivers standard topic icons that you can use to help workers find relevant content. You can also collate content using: • Campaigns to highlight learning content. You can then send your campaigns to a specific audience, and configure notifications to remind them of due dates. Example: A manager creates a campaign to ensure that his team members complete a course on a new release process.

Question	Consideration
	• Learning paths to enable learners to create their own personalized curriculum from the learning catalog. • Learning programs to define a group of courses and lessons, and create 1 assignment for a group of workers. Example: You can create an Onboarding program for new hires.
Where do you train your learners?	You can create courses that are: • Instructor-led. These courses are held in person in a specific location. • Digital or online. Example: Create a digital course when you have learners in many time zones. • Blended. These courses have a combination of instructor-led, digital, webinar, and training segments.
How do you want to enroll learners?	Along with enrolling individual workers, managers can mass enroll learners by: • Role. Example: Enroll managers in a course on conducting employee reviews. • Team. Example: Enroll your Absence team in a learning course about configuring time off plans. Learners can also enroll themselves in available courses or programs. If you make an error when enrolling workers, you can also mass drop learners from a course offering or digital course.
How do you want to publicize available learning opportunities?	You can use worklets to: • Inform workers of required courses or lessons. Example: Compliance with a company policy. • Recommend learning content that is relevant to your workers' skills development, career path, or interests. You can also create campaigns, which are a combination of lessons, programs, and courses that you can send to a group of users. You can configure notifications to announce the campaign, its purpose, and send them as emails to prospective learners.
What existing content do you want to import from external systems?	Cloud Connect for Learning and Public Learning Content enable you to import third-party media content. Workers can also access external content by search, or linked as a recommended course. You can load media into Workday using:

Question	Consideration
	• The Workday Learning interface to documents or graphics to an existing course or lesson. • Media importer or web services to bulk load external learning content. Configure Workday to import Skillsoft content and: • Automatically add new content. • Activate or deactivate content. • Update existing course materials.
Who can access or create your training materials?	You can use segmented security to provide access to, and ability to edit, learning content for different types of workers. Examples: • All employees. • Contingent workers. • External learners. • Managers. • Pre-hires. You can also: • Restrict course content based on different criteria. Example: Restrict access based on a worker's location, role, organization, or job. • Suggest equivalent courses for workers if they don't have access to one they're interested in. Example: A user experience developer wants to access a software testing course. You can create an equivalency to display a quality assurance fundamentals course as an alternative. • Create prerequisites, requiring learners to complete a content item before they start. Example: A confidentiality agreement. • Structure your content sequentially when you want your learners to complete courses in a certain order. Configure business processes to add approval steps when workers: • Create learning content. • Edit learning content. • Manage learning content versions.
Who are your instructors?	You can have your course or lessons given by: • Internal instructors. • External instructors. • Subject matter experts who you can assign as instructors for specific lessons. External instructors can't: Enroll in content, unless they are also extended enterprise learners.

Question	Consideration
	• View worker profiles or details about a worker that aren't relevant to the courses that they teach.
Do you charge for your courses?	Workday enables you to configure pricing and price display options for learning courses and course offerings. You can configure prices in different currencies and use condition rules to set prices for groups of learners and extended enterprise learners. You can also configure e-commerce capabilities to allow learners to purchase courses through a third-party payment processor. You can track and measure the value of interdepartmental training programs as well.
When do you schedule your learning opportunities? How do you assess your learners?	You can assign roles to plan schedules and assess learners: • Learning assessors manage schedules along with the grading and attendance roster from their dashboards. They can also enter grading and attendance results for learners enrolled in a course offering. You can also create external learning assessors from existing external learning users. • Instructors can enter results for learners who attend their lessons. • Primary instructors and learning administrators can override each result.
How often do you update your courses and lessons?	Whenever you update an existing lesson, or add content to a course, you can set a date for the update to become effective. Example: Create a lesson describing a new feature and create an effective date for the release date. You can also create versions for blended courses. Example: You can send legacy blended courses to learners who are working on an earlier version of your software.

Recommendations

- Consider performance impacts when adding learners or courses or creating campaigns. Workday restricts you to fewer than 50,000 learners on any learning campaign. We recommend that you have fewer than 250,000 courses in your learning catalog. This number doesn't include imported records or content.
- To help increase efficiency, we recommend that you plan to create your learning campaigns at an early stage in your implementation.

Requirements

Create topics before you create courses or lessons to improve the catalog search and browsing experience. Learners search by topic for learning materials. Example: Create a topic named HR before creating the relevant learning content.

Limitations

- You can't delete topics, you can only inactivate topics. Workers can't search for topics you inactivate.
- You can only apply version control for blended courses.
- You can only add 1 standard icon per topic.
- You can't purge learning content from your tenants.

Tenant Setup

Use the Edit Tenant Setup - HCM task to configure tenant-wide options for:

- Course and lesson rating.
- Learning paths.
- Language preferences for learning recommendations.
- Packaged content. Example: SCORM digital courses.
- Enabling pricing configuration on content for specific workers.
- Segmented security.
- Declarations of interest in a course or lesson.
- Virtual classroom integration.

You can use the Edit Tenant Setup - System task to configure tenant-wide options for:

- Acceptable media use policy text.
- Comments on courses or lessons.
- Default video playback quality.
- Download and upload of content to Drive.
- Video captioning.

You can use the Edit Tenant Setup - Notifications task to configure tenant-wide notifications for:

- Campaigns.
- Changes to Drive. Examples: Adding or removing content and changing access.
- Expirations.
- Reminders.
- Surveys.

Security

You can use:

- Workday-delivered security groups to provide users access only to specific learning content.
- A user-based security group to provide learning administrators with access to all learning content.
- A segment-based security group to provide access to learning content for different types of workers.

To view the different security domains for Learning, access the Domain Security Policies for Functional Area report and select a Learning functional area.

Functional Area	Considerations
Learning Core	Security domains in this functional area enable users to configure and use core learning features. They can view the contents of your learning catalog and create or edit: • Assignments. • Campaigns. • Content. • Grades for learners. • E-Commerce.

Functional Area	Considerations
	• Enrollments. • Instructors and assessors. • Integrations with third-party software. • Pricing. • Reports. • Waitlists.
Backpack Hub Service	Security domains in this functional area enable users to configure and use basic media content features in Learning, including: • Accessing media tracking data. • Configuring content synchronization. • Creating, editing, and viewing. • Expiring out-of-date packaged content.
System	Security domains in this functional area enable users to configure and use Workday features with learning, such as: • Downloading iCal files for Microsoft Outlook calendars. • Drive. • Segmented security. • Surveys. • Questionnaires.
Worker Profile and Skills	Users with access to the *Set Up: Skills and Experience* domain can access details such as: • Certifications. • Education. • Skills tagging for relevant content. • Training. • Work experience.

Business Processes

Business Process	Description
Cancel Course Offering	Create condition rules and custom notifications.
Enroll in Content	You can create condition rules and custom notifications using report fields for learning content on the Learning Enrollment Event business object. Example: Learners can drop on-demand courses without manager approval, but not if they're required learning (either campaigned or manager-enrolled courses).
Waitlist in Course	If a course is full, the *Waitlist in Course* initiating action enables learners to join a waitlist until a seat is available. When a course begins, Workday automatically drops learners from the waitlist.
Manage Course	You can add approval steps when workers:

Business Process	Description
Manage Lesson *Manage Program*	• Create learning content. • Edit learning content. • Manage learning content versions.
Manage Course Offering	You can configure the business process security policy to enable learning administrators or instructors to move instructor-led classroom training online in course offerings.
Mass Enroll	You can configure this business process to enable managers to enroll their teams in a course. Users with access to the Find Workers to Enroll report can enroll specific workers.
Manage External Learning Assessor	You can use this business process to create new external learning assessors from existing external learning user accounts.
Manage Internal Learning Assessor	You can use this business process to create new internal learning assessors from an existing worker or contingent worker.

Reporting

To view the available reports for Workday Learning, access the Workday Standard Reports report.

Report or Dashboard	Description
Courses and Lessons Created (Last 12 Months)	Use this report to monitor the rate at which users create learning content. Example: Use this information to plan for which department requires more courses.
Learning Admin	Use this dashboard to provide an administrative view of learning content with access to: • Tasks and reports that enable you to maintain the learning catalog. • Learning content reports and employee self-service tasks for learners. • Reports that provide insight into the value and effectiveness of training.
Learning by Length of Service	Use this report to analyze learning engagement across the organization by worker length of service. Example: Identify whether there are sections of the worker population who aren't engaging with learning.
Learning Content by Rating	Use this report to identify: • How learning courses and stand-alone lessons are performing. • The highest performing content.
Learner Engagement	Use this report to evaluate learner engagement in terms of enrollments and completions, so you can examine why some learners engage more than others.

Report or Dashboard	Description
	The report only displays data for the last complete month.
Learning Trainer	Use this dashboard to enable trainers to: • View your schedule and the course offerings that they're teaching. • Manage your training activities. • Find workers to enroll in content. • Manage waitlists. • Manage grading and attendance.
My Express Interest on Courses	Use this report to identify expressions of interest. Example: Use this information to build a learning campaign when workers in your team express interest in the same courses.
My Library	Use this dashboard to enable learners to create, access, and manage their learning paths.
My Team's Learning	Use this report to display a summary of learning progress for all direct reports and pre-hires, including: • Attendance status. • Completion status. • Enrolled content.

Integrations

Workday provides multiple web services and integrations for common learning inputs and configurations. Consider these fundamental web services and integrations when configuring Workday Learning.

Web Service	Consideration
Manage External Learning Instructors *Manage Internal Learning Instructors*	Use these web services to create internal instructors from workers inside your tenant or external instructors.
Manage Course Offering *Manage Learning Course* *Manage Learning Program* *Manage Lesson*	Use these web services to convert learning content, or how you offer available courses to potential learners. Use the Legacy check box on the *Manage Learning Course* web service to enable a course to display as a legacy course on reports and identify when it uploads as a legacy course. This check box is noneffective dated. If you uncheck it in the future, all versions of the course will be unchecked.
Manage External Learning Assessor *Manage Internal Learning Assessor*	Use these web services to create or update external or internal learning assessors.
Put Learning Imported Content *Put Learning Imported Record*	Use these web services to bulk load existing content or enrollments into Workday.
Put Learning Topic	Use to create learning topics.

Web Service	Consideration
Put Media Settings	Use to update the Restrict Access check box setting for a specific media item.

Workday also supports integrations with third-party media content providers, including:

- Coursera
- Go1
- Harvard ManageMentor®
- LinkedIn Learning™
- OpenSesame
- Pluralsight
- Skillsoft Percipio
- Udemy Business
- YouTube

Connections and Touchpoints

Touchpoint	Consideration
Absence	When an employee attempts to enroll in a scheduled course, Workday checks their approved absences. When there's a conflict, Workday displays a warning message so the worker can adjust their absence or enrollment.
Opportunity Graph	Workday Learning helps learners identify courses ranked most highly by those workers in positions on their Opportunity Graph.
Talent	You can: • Use the survey functionality from Talent as a lesson type within a course. Surveys enable you to get feedback on the course, that you can use to improve your learning content. • Use Talent Marketplace and Career Hub to suggest learning content to help close skills gaps. • Use Manager Insights Hub to suggest learning content that managers can share with their direct reports. • View the learning content that you completed to achieve a competency, and suggestions for other content.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Setup Considerations: Campaigns

Tasks

Reference

The Next Level: Prepare for a Workday Learning Deployment
2024R1 What's New Post: External Learning Assessors

Setup Considerations: Learning Instructors

You can use this topic to help make decisions when planning your configuration and use of learning instructor functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday learning instructor functionality enables you to select and configure settings for instructors who:

- Manage waitlists.
- Give lessons.
- Grade learners' course work.

Business Benefits

- Intuitive interface that makes it easy for instructors to manage their schedule and classes.
- Configure dashboards and notifications to keep instructors informed about their upcoming classes.
- Reduce administrator maintenance by enabling instructors to manage the enrollment waiting list and by bulk uploading existing instructors into Workday.
- Maintain security over your learning catalog and worker information.
- Enable instructors to create lessons and schedule course offerings.
- Maintain standards by including approval steps before you publish lesson content.
- Improve your learner experience by assigning external users or SMEs as instructors.

Use Cases

- Enable instructors to enter grades, scores, and attendance for learners on their course.
- Assign instructors to individual courses or lessons.
- Generate PDFs of each course roster.
- Configure alerts to notify instructors when you assign them to a course offering.
- Upload existing instructors into Workday.

Questions to Consider

Question	Consideration
Who are your instructors?	You can have your courses or lessons given by: • Internal instructors. • External instructors. Example: Subject matter experts who you can assign as instructors for specific lessons. External instructors can't: • Enroll in courses, unless they're also extended enterprise learners. • View worker profiles or details about a worker that aren't relevant to the courses they teach.
How do you want to inform instructors of classes?	You can let instructors know about upcoming classes by configuring: • Your instructors' learning dashboard to display upcoming classes on their calendar. Instructors can export details to add to third-party calendars. • Notifications for new course offerings that you assign to them. • Schedules to send reminders to your instructors. Example: Set up reminders to notify instructors who haven't taken attendance on courses.
How do you assess your learners?	You can assign an instructor to grade work, and record attendance in individual lessons. You can also assign primary instructors when scheduling a course offering. These instructors mark the overall grade and attendance in the course. Primary instructors can review passing grades and override the results if necessary.
How do you manage your training materials?	You can enable instructors to create and edit learning content. Instructors can also verify their content by viewing it as a learner. You can also restrict access to course content based on different criteria. Example: Restrict access based on an instructor's location. You can configure business processes to add approval steps when instructors: • Create learning content. • Edit learning content. • Manage learning content versions.

Recommendations

No impact.

Requirements

Create external learning user accounts for external learning instructors.

Limitations

Learners don't receive automatic notifications when you convert an instructor-led classroom training lesson to a webinar.

You can't assign instructors by role-based groups.

You must display instructor names to learners on course offerings.

Tenant Setup

No impact.

Security

You can use:

- Workday-delivered security groups to provide instructors access only to specific learning content.
- A segment-based security group to provide access to learning content for instructors.

Domains	Considerations
Self Service: Learning Instructor	Users with access to this domain can use roster management tasks and reports such as: • Instructor schedules. • Grading and attendance for course offerings. • Waitlists.
Manage: Create and Edit Learning Roles	Users with access to this domain can access administrative tasks and reports to manage learning instructors.

Business Processes

Business Process	Description
Manage Course Offering	You can configure the business process security policy to enable learning administrators or instructors to move instructor-led classroom training online in course offerings.
Manage External Learning Instructor *Manage Internal Learning Instructor*	You can configure these business processes to designate external third-party users as external instructors and workers as internal instructors.

Reporting

Use the Learning Trainer dashboard to enable instructors to:

- View your schedule and the course offerings that they're teaching.
- Manage your training activities.
- Find workers to enroll in courses.
- Manage waitlists.
- Manage grading and attendance.

You can use the Learning Instructors report data source when creating custom reports on learning instructors.

Integrations

Web Service	Consideration
Manage External Learning Instructors *Manage Internal Learning Instructors*	Use these web services to designate workers inside and outside of your tenant as instructors.
Get External Learning Instructors *Get Internal Learning Instructors*	Use these web services to view instructors in your tenant.
Manage Learning Instructor From Worker	Use this web service to add or inactivate instructors.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Reference

2021R2 What's New Post: Manage Internal Learning Instructors

Steps: Set Up Learning

Prerequisites

Review setup considerations for Workday Learning.

See: Setup Considerations: Learning Content on page 1947.

Context

You can set up Workday Learning to enable:

- Learning administrators to create and manage learning content and enrollments.

  See: Steps: Manage Learning Content on page 1969.
- Learners to consume content and create stand-alone lessons for peer learning.

  See: Setup Considerations: Learning Lessons on page 1956.

Steps

1. Configure security for Learning.

   See Steps: Set Up Security for Learning on page 1913.

2. Access the Manage Topics task.

   Create topics that categorize your learning content.

   Security: *Set Up: Learning Catalog* domain in the Learning Core functional area.
3. (Optional) Translate Business Data.

   Configure translations for field values on the *Learning Topic* business object in the *Learning: Learning Core* category to support global learning.
4. (Optional) Maintain Drop Course Event Categories on page 1900.

   You can create categories for drop reasons and subcategories when dropping learning enrollments.
5. (Optional) Steps: Configure Microsoft Outlook Calendar for Learning on page 1966.

   You can create and send calendar invites when you schedule classroom training and webinars in course offerings.
6. (Optional) Steps: Configure Google Calendar for Learning on page 1964.

   You can create and send calendar invites when you schedule classroom training and webinars in course offerings.
7. (Optional) Create and send Zoom meeting invites when you schedule classroom training and webinars in course offerings.

   Steps: Set Up Virtual Classroom Integration with Zoom on page 1980.
8. (Optional) Steps: Configure Translation Templates for Calendar Email Invites on page 1968.

   Create and send email translation templates in the specified language of a course offering.
9. (Optional) Maintain Learning Unit Types on page 1900.

   You can create other unit types for learning courses and course offerings.
10. (Optional) Enable learners to express interest in specific course offerings.

    See Steps: Set Up Express Interest for Learning Courses on page 1893.
11. (Optional) Maintain Learning Validations for Learning Enrollments on page 1898.

    You can create and maintain custom validation messages for learning enrollments.
12. (Optional) Configure segmented security to restrict access to learning content.

    See Steps: Maintain Access to Learning Content on page 1914.
13. Configure the Learning report on the Career for Worker Profile profile group to enable:

    - Learners to access their learning history through self-service.
    - Managers to access the learning history of their direct reports.

    See Steps: Set Up Profiles and Profile Groups.
14. Access the Copy Standard Report to Custom Report task.

    Copy the Find Workers report to create a custom report.

    On the Advanced tab, add a Mass Actions row and select *Learning Mass Enroll* from the Workday Supplied Mass Actions prompt, enabling you to mass-enroll learners. The search report must use a data source with *Worker* as the primary business object.

    Security: *Set Up: Learning Catalog* domain in the Learning Core functional area.
15. Configure Learning Dashboards on page 1897.

    Configure these dashboards to set up content containers as worklets and display relevant reports:

    - Learning
    - Learning Admin
    - Learning Trainer
    - My Library

    The user interface on the Learning Admin dashboard enables learning administrators and trainers to run administrative tasks. Select the View as Admin button on learning content reports to view the content as an administrator and to enable Workday to remember this setting preference. If you want to view content as a learner, select the View as Learner button on learning reports or access the content through the Learning dashboard.

16. Create learning instructors.

    See Steps: Set Up Learning Instructors on page 1888.

17. (Optional) Add approval steps that enable administrators or managers to review new:

    - Courses
    - Programs
    - Stand-alone lessons
    - Enrollments
    - Equivalency rules

Business Process	Option
Manage Course	Configure the *Reset Expiration Date on Enrollments for Course* action step as a completion step after any approval steps on this business process. This configuration initiates the Reset Expiration Date on Enrollments task when you update a course that has completed enrollments. You can configure condition rules on this step when you want it to apply to specific events on the business process. Configure the *Edit Additional Data* action step if you want to set a value for custom fields on learning courses.
Manage Course Offering	Configure the *Reset Expiration Date on Enrollments for Course Offering* action step as a completion step after any approval steps on this business process. This configuration initiates the Reset Expiration Date on Enrollments task when you update a course offering that has completed enrollments. Configure condition rules on this step to apply to specific events on the business process. Example: You can create a condition rule using the *Initiated by Update Offering to Version* report field that applies when the Update Offering to Version task initiates this business process. Configure the *Edit Additional Data* action step if you want to set a value for custom fields on learning course offerings. You can rescind an event for this business process once there are no outstanding: • Enrollments in the course offering. • Events for the course offering in progress. • Mass enrollment events in progress for the course offering. • Newer events you must rescind.

Business Process	Option
Manage Program	Configure the *Edit Additional Data* action step on this business process to set a value for custom fields on learning programs.

See Edit Business Processes.

18.(Optional) Create Locations.

Create training rooms for learning instructor-led classroom training lessons.

19.(Optional) Steps: Set Up Learning Assessors.

Assign workers or external learning users as learning assessors for course offerings with training activity lessons.

20.(Optional) Access the Edit Tenant Setup - Global task.

Enable supported language options for learning content search results.

Security: *Set Up: Tenant Setup - Global* domain in the System functional area.

21.(Optional) Configure translations in your tenant.

See Steps: Manage Translations.

22.(Optional) Configure e-commerce capabilities.

See Steps: Set Up E-Commerce for Learning on page 1932.

23.Create content for the learning catalog.

See Steps: Manage Learning Content on page 1969.

24.Enable activity streams on these objects so that learners can collaborate using comments after they enroll in or complete courses or stand-alone lessons:

- *Enrollable Learning*
- *External Lesson*
- *Learning Lesson*

See Steps: Enable Activity Stream.

25.(Optional) Set up email analytics for Learning to view how learners interact with emails you send from Workday.

See Steps: Set Up Email Analytics.

26.Manage tenant-wide settings for learning.

See Reference: Edit Tenant Setup - HCM.

27.Access the Edit Tenant Setup - System task.

In the System Setup section, for the File Type Setup Instructions option, ensure that you include *.ics* to enable learners to download the iCalendar (.ics) file type.

Next Steps

Import third-party material to add to your learning courses.

See: Setup Considerations: Packaged Content for Learning on page 2064.

The Next Level: Prepare for a Workday Learning Deployment

2024R1 What's New Post: External Learning Assessors

Steps: Set Up Learning Instructors

Context

You can designate existing:

- External learning users as external learning instructors.
- Workers as internal learning instructors.

Workday automatically assigns them to appropriate security groups.

External learning instructors can't:

- Enroll in courses, unless they're also extended enterprise learners.
- View worker profiles or details about a worker that aren't relevant to the courses that they teach.

Steps

1. Edit Business Processes.

   Configure 1 or both of these business processes in the Learning Core functional area:

   - *Manage External Learning Instructor*
   - *Manage Internal Learning Instructor*
2. Edit Business Process Security Policies.
3. Edit Domain Security Policies.

   Configure the security policy for these domains:

   - *Self Service: Learning Instructor* in the Learning Core functional area.
   - (Optional) *Self-Service: Certifications* in the Worker Profile and Skills functional area.
4. Configure Dashboard Content.

   Configure these worklets for 1 or both of the External Learning Instructor as Self and Internal Learning Instructor as Self security groups:

   - My Course Offerings on the Learning Trainer dashboard.
   - Learning Trainer on the Home dashboard.
5. (Optional) To create external learning instructors:
   a) Create External Learning Users on page 2127
   b) Access the Create External Learning Instructor task.

      Activate the external learning instructor persona on external learning user accounts.

      Security: *Manage External Learning Instructor* business process in the Learning Core functional area.
6. (Optional) To create internal learning instructors, access the Create Internal Learning Instructor task.

   Security: *Manage Internal Learning Instructor* business process in the Learning Core functional area.

Result

Workday assigns new external learning instructors to these security groups:

- All External Learning Instructors.
- External Learning Instructor as Self.

Workday assigns new internal learning instructors to these security groups:

- All Internal Learning Instructors.
- Internal Learning Instructor as Self.

Next Steps

Assign instructors to courses.

2021R2 What’s New Post: Manage Internal Learning Instructors

2021R2 What’s New Post: Unified System Account for External Learning Personas

Steps: Set Up Learning Assessors

Context

Learning assessors evaluate and manage training activity lesson content on course offerings, including grading work and recording attendance. You can designate existing:

- Workers as internal learning assessors.
- External learning users as external learning assessors.

Workday allows you to add multiple assessors for each enrollment on course offerings with training activity lessons.

Workday automatically assigns internal and external learning assessors to appropriate security groups.

Steps

1. ../../../manage-workday/business-processes/customize-business-processes/dan1370797384762.dita.

   Configure either or both of these business processes:

   - *Manage Internal Learning Assessor* business process in the Learning Core functional area.
   - *Manage External Learning Assessor* business process in the Extended Enterprise for Learning and Learning Core functional areas.
2. Edit Business Process Security Policies.

   Configure the security policy for either or both of these business processes: *Manage Internal Learning Assessor*, *Manage External Learning Assessor*.

   - You can configure the Create Internal Learning Assessor and Edit Internal Learning Assessor tasks as initiating actions on the *Manage Internal Learning Assessor* business process. You can designate a worker as an internal learning assessor only when the worker isn't already an internal learning assessor, and there aren't any *in progress* internal learning assessor events for the worker.
   - You can also configure the Create External Learning Assessor task as an allowed action on the *Manage External Learning User* business process. You can designate an external learning user as an external learning assessor only when the user isn't already an external learning assessor, and there aren't any *in progress* external learning assessor events for the user.

3. Edit Domain Security Policies.

   Configure the security policy for these domains:

   - *Self-Service: Learning Assessor* in the Extended Enterprise for Learning and Learning Core functional areas. Grant the External Learning Assessor as Self security group View permissions to enable them to view their Extended Enterprise profile.
   - *Self-Service: On the Job Training* in the Learning Core functional area. Grant the External Learning Assessor as Self security group Modify permissions to enable them to access the Learning Trainer worklet and manage grading and attendance for course offerings.
4. Configure Dashboard Content.

   Configure these worklets for the Learning Assessor as Self and the External Learning Assessor as Self security groups:

   - My Course Offerings on the Learning Trainer dashboard.
   - Learning Trainer on the Home dashboard.
5. (Optional) Access the Create Internal Learning Assessor task.

   Create internal learning assessors.
6. (Optional) Access the Create External Learning Assessor task.

   Create external learning assessors.

Result

Workday adds new internal learning assessors to these security groups:

- All Learning Assessors.
- Learning Assessor as Self.

Workday adds new external learning assessors to these security groups:

- All External Learning Assessors.
- External Learning Assessor as Self.

Steps: Manage External Learning Instructors and Assessors in Bulk on page 1890

Reference

2024R1 What's New Post: External Learning Assessors

Steps: Manage External Learning Instructors and Assessors in Bulk

Prerequisites

Security: *Mass Operation Management* domain in the System functional area.

Context

You can use a mass operation to activate or inactivate up to 50,000 external learning instructors and assessors at once based on criteria specified in a custom report.

Workday excludes external learning users who are archived, have in-progress *Manage External Learning Assessor* or *Manage External Learning Instructor* events, or already have an active external learning assessor or external learning instructor role. It also doesn't update external learning users who don't have an active assessor or instructor role when the role is revoked.

Steps

1. ../../../manage-workday/business-processes/manage-business-processes/ske1468876236571.dita

   You can create a new security group or edit an existing one and enable members to manage external learning instructors and assessors.

   Select the *External Learning Instructors and Assessors Account Management* security segment
2. ../../../authentication-and-security/configurable-security/security-policies/dan1370797389950.dita

   Grant the new segment-based security group Modify permissions on the *Mass Operation Management* domain.
3. ../../../authentication-and-security/configurable-security/security-change-control/dan1370796405018.dita
4. ../../../reporting-and-analytics/custom-reports-and-analytics/set-up-reports/dan1370797785951.dita

   Create a custom report based on the External Learning Users report data source that defines the criteria for the users you want to activate or deactivate.
5. Access the Mass Operation Management task.

   Complete these options:

Option	Description
Mass Operation Type	Select the Manage External Learning Instructors and Assessors operation type. Workday only displays this option when the user is a member of the segmented security group with access to the *External Learning Instructors and Assessors Account Management* segment.
Input Report	Select the custom report that you created.
Run Frequency	Configure the operation to run now, in the future, or on a regular schedule.

6. Complete the Mass Operation Configuration tab:

Option	Description
Select a Role	Select the role you want to manage.
Inactivate	(Optional) Select this check box when you want to deactivate roles.
Complete Business Process	(Optional) Select this check box to bypass any approval steps in the business process for the created events.

7. (Optional) In the Schedule tab, enter the operation frequency.
8. Click Done.

Steps: Manage Internal Learning Instructors and Assessors in Bulk

Prerequisites

Security: *Mass Operation Management* domain in the System functional area.

Context

You can use a mass operation to activate or inactivate up to 50,000 internal learning instructors and assessors at once based on criteria specified in a custom report.

Workday excludes from this operation workers who are terminated, have in-progress *Manage Internal Learning Assessor* or *Manage Internal Learning Instructor* events, or already have an active internal learning assessor or internal learning instructor role. It also doesn't update workers who don't have an active assessor or instructor role when the role is revoked.

Steps

1. ../../../manage-workday/business-processes/manage-business-processes/ske1468876236571.dita

   You can create a new security group or edit an existing one and enable members to manage internal learning instructors and assessors. Select the *Internal Learning Instructors and Assessors Account Management* security segment.
2. ../../../authentication-and-security/configurable-security/security-policies/dan1370797389950.dita

   Grant the new segment-based security group Modify permissions on the *Mass Operation Management* domain.
3. ../../../authentication-and-security/configurable-security/security-change-control/dan1370796405018.dita
4. ../../../reporting-and-analytics/custom-reports-and-analytics/set-up-reports/dan1370797785951.dita

   Create a custom report based on a Worker report data source that defines the criteria for the users you want to activate or deactivate
5. Access the Mass Operation Management task.

   Complete these options:

Option	Description
Mass Operation Type	Select the Manage Internal Learning Instructors and Assessors operation type. Workday only displays this option when the user is a member of the segmented security group with access to the *Internal Learning Instructors and Assessors Account Management* segment.
Input Report	Select the custom report that you created.
Run Frequency	Configure the operation to run now, in the future, or on a regular schedule.
6. Complete the Mass Operation Configuration tab:

Option	Description
Select a Role	Select the role you want to manage.
Inactivate	(Optional) Select this check box when you want to deactivate roles.
Complete Business Process	(Optional) Select this check box to bypass any approval steps in the business process for the created events.
7. (Optional) In the Schedule tab, enter the operation frequency.
8. Click Done.

Steps: Set Up Express Interest for Learning Courses

Prerequisites

Configure the *Manage Course Offering* business process and security policy in the Learning Core functional area.

Context

You can enable learners to:

- Express interest in course offerings with specific dates and locations that suit them.
- Configure email notifications to tell them when these offerings become available.

Steps

1. (Optional) Configure the Location field on the Configure Optional Fields task.
2. Access the Edit Tenant Setup - HCM task.
   In the Learning section, select the Enable Express Interest check box.
   Security: *Set Up: Tenant Setup - HCM* in the System functional area.
3. Create 3 calculated fields for the *Manage Course Offering* business process:
   a) Use these values for the first calculated field:

Business Object	*Learning Course Offering Event*
Function	*Lookup Related Value*

   b) Select these prompt options on the Calculation tab:

Lookup Field	*Course Offering*
Return Value	*Matching Interests*

   c) Use these values for the second calculated field:

Business Object	*Learning Interest*
Function	*True/False Condition*

   d) On the Calculation tab, add a condition with these values:

Field	*Matching Course Offerings*
Operator	*count is less than or equal to*
Comparison Type	*Value specified in this filter*
Comparison Value	*2*

   Note: This comparison value ensures that a learner only gets 1 notification per interest expressed.

   e) Use these values for the third calculated field:

Business Object	*Learning Course Offering Event*
Function	*Extract Multi-Instance*

   f) Select these prompt options on the Calculation tab:

Source Field	Select the first calculated field you created.

Condition	Select the second calculated field you created.

4. Access the *Manage Course Offering* business process definition.
    a) From the related actions menu, select Business Process > Add Notification.
    b) Add the third calculated field to the Related Instances field in the Repeat On section.
    c) From the Trigger on Status prompt, select *Completed*.
    d) From the Recipients prompt, select *Learners*.
5. (Optional) Add the Expression of Interest in Learning Courses report to the Learning Admin dashboard.

    See Steps: Set Up Dashboards and Landing Pages.

Result

Learners can:

- Specify suitable course offering dates and locations.
- Receive a notification when an offering becomes available.

Next Steps

- Run the Expression of Interest in Learning Courses report to view learner demand.
- Schedule offerings based on the data.
- (Optional) Select the Disable Express Interest check box on the Create Course task.

Steps: Set Up Learning Discovery Boards

Prerequisites

- Review set up considerations for learning content and enrollments.
- Set up your tenant for Drive.

    See: ../../../manage-workday/tenant-configuration/content-management/drive/ymp1498691345885.dita.
- Security: These domains in the System functional area:
    - *Discovery Boards: Administration*
    - *Discovery Boards: Create*
    - *Discovery Boards: Manage Delivered Discovery Boards*

Context

Discovery Boards improve how you track and report on the quality of your learning content. You can configure and customize them to monitor ratings and learner engagement according to your organizational needs.

Steps

1. Access the Delivered Discovery Boards task.
2. Select Learning from the list of discovery boards available in your tenant.
3. Select Make a Copy and save it in your Drive.

4. Configure your Learning discovery board and select filters as you see fit.

   Workday updates indexed data sources and fields every hour.

Result

You can view detailed insights on learning content and enrollments for your organization.

Next Steps

You can:

- Customize the discovery board for your organization by adding visualizations and sheets.
- Share the discovery board with your learners.

Steps: Set Up Machine Learning for Learning Recommendations

Prerequisites

Add 1 or more of these worklets to your Learning dashboard:

- Based on Your Skills to Develop
- Recommended for You

Note: The steps for enabling this feature depend on your organization’s subscription service agreement. To determine your subscription service agreement, a Community user can:

1. Access your profile avatar on Community.
2. Select the Profile button.
3. On your profile page, select your organization's name underneath your name and to the right of your title.
4. View the Subscription Service Agreement value.

If the value is:

- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contribution step.
- *UMSA*, you can skip the optional Enable Innovation Services Features and Machine Learning Data Contribution step.

Context

Provide more relevant content recommendations for learners by enabling machine learning on these worklets:

- Based on Your Skills to Develop
- Recommended for You
- You Might Also Be Interested In

You can also enable machine learning to display Suggestions for You on learning paths. You must enable the Learner Experience learning paths feature to use this functionality.

See: Steps: Set Up Learning Paths on page 1943.

Steps

1. ../../../manage-workday/tenant-configuration/Machine-Learning-and-Innovation-Services/enable-innovation-services-feature-and-data-contribution.dita.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   On the Innovation Services Opt-In task, select the HCM ML Features and Third Party Connectors GA service on the Available Services tab in the HCM category.
2. Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

   Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.
3. Access the Edit Tenant Setup - HCM task.

   Select the Enable Related Content Recommendations check box to enable the You Might Also Be Interested In worklet.

   The related learning content displays to all learners, including pre-hires.

Result

Workday updates machine learning data every 24 hours, Monday through Friday.

For the Based on Your Skills to Develop worklet, Workday:

- Enables you to configure it using the Maintain Learner Experience task.
- Focuses more on recommendations which will have more emphasis on learning content where the relevant skills are tagged to the content.
- Generates recommendations using the skills tagged on the content, those discovered using machine learning, and the learner's skill interests.
- Requires you to opt into the Learning Data category but provides a non-Machine Learning version of recommendations if you don't opt into it.
- Still uses inferred skills for recommendations but displays them further down in the ranking order. If a relevant skill isn’t tagged to a piece of learning content, Workday uses inferred skills for all recommendations.

The Recommended for You worklet provides learners relevant content based on the:

- Previous content the learners completed.
- Learner's Workday profile, including job profile, skills, resume, and education details.
- Learning patterns in content completed by workers in similar roles.

This worklet requires you to opt into the Learning Data and Worker Profile Data categories. Access the Maintain Innovation Services Data Selection Opt-In task and select the HCM: HCM ML Features and Third Party Connectors GA prompt to find the Data categories. Use the Maintain Learner Experience task to configure it.

The You Might Also Be Interested In worklet displays related content that learners might be interested in when they access or complete a course. Workday:

- Requires you to opt into the Learning Data category to use this worklet.
- Uses machine learning to identify related content based on characteristics such as the title, description, skills, and topics.

Suggestions for You displays recommendations for content to add to your learning paths. You must have at least 1 piece of learning content in your path to receive machine learning suggestions.

Configure Learning Dashboards

Prerequisites

Enable the security domains you want to use to secure your dashboards.

Security: These domains in the Learning Core and System functional areas:

- *Learning Access*
- *Manage: Learning Content*
- *Manage: Learning Course Enrollments*
- *Self-Service: On the Job Training*
- *Self-Service: Learning Instructor*
- *Set Up: Learning Catalog*
- *Set Up: Tenant Setup - Worklets*

Context

Learning dashboards consolidate administrative tasks and reports in a single location. Users access these dashboards based on configurable security.

Steps

1. Access the Maintain Dashboards report.
2. As you complete the report, consider:

Option	Description
Learning	Mobile and desktop experiences require separate configuration: • To display recommendations and required or optional learning to learners on the Worday mobile app, click Edit to access learning content reports and employee self-service (ESS) tasks for learners. • To configure the Learning dashboard on desktop, access the Maintain Learner Experience task. View Steps: Set Up Learner Experience on page 1940.
Learning Admin	Select worklets for administrative tasks and reports to: • Maintain the learning catalog. • Track the value and effectiveness of training. Workday displays menus for:

Option	Description
	• Training Activities: To view and maintain content for training activity lessons. • Campaigns: To create and edit audiences and message templates for campaigns.
Learning Trainer	Click Edit to enable assessors and instructors to manage lessons and enrollments for course offerings.
My Library	Click Edit to enable learners to manage their learning paths and create a personalized curriculum from the learning catalog.

Next Steps

Create or assign internal trainers.

Maintain Learning Validations for Learning Enrollments

Prerequisites

Security: *Set Up: Learning Catalog* domain in the Learning Core functional area.

Context

A validation message is the message Workday displays to users when they can't drop or enroll in a course. Validation rules grant or prevent the drop or enroll action based on a predetermined set of parameters. You can use them to streamline workflows in situations that don't require the additional review or approval steps a business process might include.

Workday displays help text above any validation messages that trigger, so consider both the help text and the validation messages in context. If using together, use the help text for general informational purposes only and use individual learning validation messages to provide troubleshooting information for specific validation contexts.

You can use the Maintain Learning Validations report to create and manage custom validation messages for these business processes:

- *Drop Learning Enrollment*
- *Enroll in Content*

Steps

1. Access the Maintain Learning Validations report.
2. Select a course validation context.
3. Set a Severity level for the new validation:
   - *Critical:* Prevents users from dropping or enrolling in a course.
   - *Warning:* Alerts users but enables them to continue.

4. As you complete the Add New Custom Validation task, consider:

Option	Description
Description	The message that Workday displays to users when they can't drop or enroll in a course if you haven't configured a separate validation message. To configure a validation message for a *Critical* or *Warning* message, select Validation > Configure Validation Message from the related actions menu in the Validations column.
Category	(Optional) Assign a category to make the validation rule easier to find later. Create *Custom Validation Rule* categories on the Maintain Condition Rule Categories task.
Derived Logic	The statement that you've defined through the rule conditions. The field displays: • Existing statements. • New statements after you define and save them.
Copy Condition from Rule	(Optional) Copy and modify an existing validation rule to create a new one.

5. To ensure that the validation rules apply to the correct learning content type, configure rule conditions that specify the *Course Type* as either:

   - *Course Offering*
   - *Digital Course*

   You can only create validation rules for digital courses that require enrollment.

Example
To prevent workers from enrolling in a course offering when their primary location differs from the location of the course.

Description: The location of the course you have selected is different from your primary work location.

Derived Logic: Primary Location none in the selection list Location And Primary Location is not empty.

Field	Value
And / Or	And, And
Source External Field or Condition Rule	Primary Location, Primary Location
Relational Operator	none in the selection list, is not empty
Comparison Type	Value from another field, Value specified in this filter
Comparison Value	Location

Next Steps

- Select the Maintain Validations button on the Maintain Learning Validations report to view and manage changes to your validation rules.
- Use the Maintain Help Text task to configure help text for the business process.

Related Information

Tasks

Set Up Custom Validation Severity and Conditions

Maintain Drop Course Event Categories

Prerequisites

Security:

- *Set Up: Configure Optional Fields* domain in the System functional area.
- *Set Up: Learning Catalog* domain in the Learning Core functional area.

Context

You can create event categories to enable learners and learning administrators to provide reasons why they're dropping enrollments. Categorizing drop course reasons enables you to understand potential issues with learning content.

Steps

1. Access the Maintain Drop Course Event Categories task.
2. Enter a Reason Category such as *Difficulty Level* on the category row for the drop course reason.
3. Enter a Reason such as *Too Advanced* on the row for the drop course event subcategory.
4. (Optional) Access the Configure Optional Fields task.

   You can require the Learning Drop Course Reason field on the Drop Learning Enrollment task.

Related Information

Tasks

Hide or Require Optional Fields

Maintain Learning Unit Types

Prerequisites

- Security: *Set Up: Learning Catalog* domain in the Learning Core functional area.

Context

Workday Learning provides these standard unit types that you can add as units to courses and course offerings:

- *Continuing Education*
- *Continuous Professional Development*
- *Course Units*

If your organization needs additional unit types, you can create and manage them. When you add units to a course or course offering, we display them on the View Course report so that learners understand the units associated with the content and their value.

Steps

1. Access the Manage Other Unit Types task.
2. Configure the additional unit types that you require and set a value for each type.

Next Steps

You can add these unit types to the Units grid on these tasks:

- Create Course
- Edit Course
- Schedule Course Offering
- Edit Course Offering

Concept: Learning Topics

Topics enable you to categorize learning content, improving the learning catalog search and browsing experience for learners. You can associate topics with learning content when you:

- Create or edit a program, blended course, digital course, or stand-alone lesson.
- Configure external content.

You can configure segmented security for learning topics, if required.

From the Learning dashboard, learners can:

- Select Topics to browse learning content by topic.
- Set topic preferences to enable Workday to suggest personalized related content in the Based on Your Interests worklet.

Use the Create Learning Topic task to create topics that meet your learning catalog requirements, associating an icon or custom image with each topic. As a convenience, Workday delivers these standard topic icons:

- *Compliance and Legal*
- *Data Privacy and Security*
- *Finance and Administration*
- *Health and Safety*
- *IT and Software*
- *Management*
- *Marketing and Sales*
- *Operations*
- *Productivity*
- *Project Management*
- *Skills*
- *Team and Culture*

You can reuse the icons across multiple topics if you need to create additional topics beyond this list. You can only add 1 image per topic.

The ideal image size for a course, lesson, or topic cover image is within our 10,240 KB size restriction, and follows and aspect ratio of, or close to 1.79, where the width > height.

You can enter up to a maximum of 50 characters for your topic title. There's no limit set on how many topics you can create in Workday.

Example: Create a Custom Report for Learning Unit Types

Context

You want to report on learning units associated with learning enrollments.

Steps

1. Access the Create Custom Report task.
2. Enter these values:

Option	Description
Report Name	*Unit Types for Learning Enrollments*
Report Type	*Advanced*
Data Source	*Learning Enrollments*

3. On the Edit Custom Report task, as you complete the Columns tab, add these rows:

Business Object	Field
Learning Enrollment	Learning Enrollment Learner
Learning Enrollment	Enrolled Content
Enrolled Content	Description
Learning Enrollment Record	Completion Status
Learning Enrollment Record	Completion Date
Learning Enrollment Record	Current Instructor
Learning Enrollment	Learning Units
Learning Units	Type
Learning Units	Value

4. On the Filter tab, add this row:

Field	Operator
Learning Units	*is not empty*

5. Click OK.

Reference: Learning Content Organization

Workday enables you to consolidate your learning content items on the dashboards of your learners. For optimal user experience, we limit the number on your Learning dashboard to 6.

Option	Description
Based on Your Interests	Displays content based on topics that learners select on the Learning Preferences task.

Option	Description
	Only displays programs, courses, and stand-alone lessons when available. Workday sorts content by: • Third-party external publication date. • Workday creation date.
Based on Your Skills to Develop	Displays recommendations and content relevant to the skills that a worker wants to develop or improve. Workday: • Focuses more on recommendations that will have more emphasis on learning content with the relevant skills. • Still uses inferred skills for recommendations but displays them further down in the ranking order. If a relevant skill isn't tagged to a piece of learning content, Workday uses inferred skills for all recommendations. You can enable machine learning on this worklet to provide more relevant content recommendations.
Continue Learning	Displays *in progress, not started,* and *unsuccessfully complete* learning content. If you opt into Learner Experience, add Continue Learning to your My Learning page to display in progress and not started content.
Highlights	Promotes content based on condition rules that you configure for specific learner groups on the Configure Learning Content Highlights task. Highlights display to learners when: • There's active highlighted content in your tenant to display and 1 or more rules apply to learners. • You haven't exceeded 6 items on your dashboard. Workday removes content when learners complete it.
Learning Paths	Displays personalized learning paths that learners can create from the learning catalog.
Most Popular	Workday bases popularity calculations for: • Blended courses, on the number of approved enrollments that aren't on a waitlist, but aren't complete. • Digital courses and programs, on the number of enrollments. • Stand-alone lessons, on the number of views.

Option	Description
	Only displays programs, courses, and stand-alone lessons when available.
My Learning	Displays complete, in progress, and not started learning content.
My Team's Learning	Displays learning progress for all direct reports in a single place.
Popular in your Role	Displays content that other workers in the learner's role have enrolled in. Workday runs a weekly job that gathers all completed content per job profile. We display image thumbnails for the top 20 learning content items and enable learners to view up to 100. We display this worklet for learners when: • There are 5 or more people in the role. • There's content in the learning catalog to recommend. • The job profile is public. • You haven't exceeded the limit on the dashboard. Extended Enterprise learners can't view this worklet on their dashboards because they don't have job profiles in Workday. We order content by popularity, taking into account the number of enrollments and their ratings. If you've disabled the Opportunity Graph and Popular in your Role and want to enable this functionality, use these domains to configure it: • *Self-Service: Opportunity Graph* • *Worker Data: Opportunity Graph* You'll experience a lag period until the next Workday maintenance service window before the learning content displays on your interface.
Progress	Displays learning history and enrolled content to learners.
Recently Added	Displays content added to your tenant recently through the user interface or web services. We display the content in order by creation date. Courses that require enrollment must be open.
Recommended for You	To display the Recommended for You worklet, you must enable machine learning. The Recommended for You worklet provides learners with relevant recommendations for content based on the:

Option	Description
	• Previous content the learners completed. • Learner's Workday profile, including job profile, skills, resume, and education details. • Learning patterns in content completed by workers in similar roles. When there are no recommendations available, Workday doesn't display the worklet.
Required for You	Workday creates these assignments for: • Manager enrollment. • Mass enrollment. • Retraining purposes. • Required learning campaigns. Only displays learning assignments with an open status.
You Might Also Be Interested In	Displays related content that learners might find interesting when they access or complete a course. You can configure machine learning to identify related content based on characteristics such as the title, description, skills, and topics. The related learning content displays to all learners, including pre-hires.

Learning Security

Setup Considerations: Segmented Security for Learning

You can use this topic to help make decisions when planning your configuration and use of segmented security in Learning. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday segmented security enables you to provide specific users permission to create and access learning content.

For a use case related to this topic, see ../../../../use-case-library/use-case--learning-security-segments.dita in the Use Case Library.

Business Benefits

- Increase the effectiveness of learning in your organization as you can adopt a more targeted approach.
- Helps ensure confidentiality of sensitive learning content.
- Improves the user experience as they only access content that is relevant to them.
- Reduces administrative overhead as you assign content to the correct audience.
- Help keep your learning catalog up to date by enabling subject matter experts to create their own content.

Use Cases

- Provide access to learning content for different types of workers.
- Restrict access based on a worker's location, role, organization, or job.
- Provide different training course selections for sales and marketing as well as product development.
- Create different learning administrator groups to ensure that only subject matter experts can maintain subject matter courses.

Questions to Consider

Question	Considerations
What content do you want to secure?	You can secure: • At the program and course level by associating the content with a security category segment. • At the topic level. • At the catalog level, which includes all the applicable lessons, courses, and programs. You can also do a combination of topic and security category-based segmented security. Access to a security category on a program or course takes precedence over access to a topic. If you want to enable learners to select from the complete list of topic preferences, don't restrict access on a topic-by-topic basis.
Which content do you want to provide to different learning administrators and learners?	When configuring segmented security, consider which level of granularity administrators will need to maintain the learning catalog. You can create multiple copies of the Learning Administrator security group to achieve this level of granularity. You can then select the relevant Learning Administrator group when creating or editing a segment-based security group.
