Do you want workers on leave of absence to be able to access Learning?	You can restrict access to entire programs, courses, or specific topics for workers who are on leave.

Question	Considerations
Do you have external content from third-party providers that you want to include in your learning catalog?	You can apply topic-based segmented security to external content. When you configure external content, you map it to topics in your learning content. Any topic-based segment that applies to those topics also applies to the external content.
Do you need to provide access to learning content to people outside of your company?	The Extended Enterprise Learning product enables you to give external users limited access. You can configure segmented security to restrict access to learning content for extended enterprise learners.

Recommendations

When you create or edit programs, Workday recommends that you associate the same:

- Security categories with programs and the courses that they contain so that learners have access to all course content items.
- Topics with programs and the courses and stand-alone lessons that they contain so that learners have access to all content items.

You can create topic security segments associated with 1 or more topics. When learning content has multiple topics, learners can access the content if they have access to any of the topics. When you use topic-based segments to secure content, Workday recommends that you select only 1 topic on each program, course, or stand-alone lesson.

If you find that learners can access content that's restricted by a segment-based security group on the *Learning Access* domain, and they're not members of the segment-based security group, ensure that they're not members of an unconstrained security group on this domain. Unconstrained security groups on the *Learning Access* domain override all segment-based security access.

In Production tenants, a search indexing job runs every 12 hours. In non-Production tenants, this job runs every 24 hours. Depending on the size of your learning catalog, the job itself can take a few hours to complete. Ensure the appropriate amount of time passes in your tenant before testing changes to:

- Topic-based segmented security.
- Security categories.
- Segment-based security groups and domains.

Requirements

When you configure worklets on the Maintain Dashboards report for the Learning dashboard, ensure that the segment-based security groups on the Required for Groups prompt match the groups on the *Learning Access* domain.

Limitations

Learners can still view, but can't access, completed programs and courses in their enrollment history after you change the segmented security configuration to remove their access.

You can't create a proxy access policy for administrators that provides segmented security access to learning content. You can only use unconstrained security groups on proxy policies.

Tenant Setup

You can select the Enable Security Categories check box in the Learning section on the Edit Tenant Setup - HCM task to display a Security Category prompt when creating courses and programs.

Security

Domain	Considerations
Learning Access domain in the Learning Core functional area.	Provides access to the learning catalog for both self-service and administrative reports and tasks. When you add segment-based security groups to this domain, Workday restricts access to all content by security category or topic segment. Before you add any segment-based group to the domain, ensure that you consider all users. If you have any segment-based security groups on this domain when you create a new topic, you must add the topic to a topic segment on the domain.
Manage: Learning Content in the Learning Core functional area.	Provides access to learning content management tasks and reports.
Manage: Learning Course Enrollments in the Learning Core functional area.	Provides access to administrative-based enrollment tasks. You can configure unconstrained access for users or restrict access using security category or topic segments.
Set Up: Learning Catalog in the Learning Core functional area.	Provides access to the learning catalog for administrative reports and tasks.
Manage: Media Import in the Backpack Hub Service functional area.	Allows users to import large volumes of video and packaged content media files. This domain is only available when you enable Media Cloud in your tenant.

Business Processes

You can add segment-based security groups associated with topic and security category segments to the security policies on the *Manage Lesson* business process to enable them to create and edit stand-alone lessons.

Reporting

Segmented security in Learning primarily applies to the Learning Content report data source, which you can use to create or edit custom reports relating to your learning catalog. Workday also delivers these reports that use this data source:

Reports	Considerations
Browse Learning Content	Enables security groups with access to a particular security category segment to find the restricted content.
Courses and Lessons Created (Last 12 months)	Enables you to monitor the rate at which users create learning content.
Learning Content by Rating	Identifies the learning courses and stand-alone lessons that are performing poorly in terms of rating, as well as the highest performing content in your tenant.

Reports	Considerations
Manage Learning Security Segments	Use this report to view your Learning security set up. You can also configure: • Who can access your learning topics. • Which users are members of which security category.
Manage Learning Content	Enables learning administrators to view and edit learning content.
My Team's Peer Learning Content	Enables managers to view a summary of learning progress for all direct reports and pre-hires. You can configure the report to display on the My Team Management dashboard.

Integrations

You can use these web services to create and update segmented security for Learning:

- *Get Learning Security Categories*
- *Get Learning Topic Security Segments*
- *Put Learning Security Category*
- *Put Learning Topic*
- *Put Learning Topic Security Segment*

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Setup Considerations: Pre-Hire Access to Learning

You can use this topic to help make decisions when planning your configuration and use of pre-hire access to Learning. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

When pre-hires have a confirmed start date, you can grant them access to Learning content so they can start their training in advance.

Business Benefits

- Organizations can meet their compliance needs by enabling pre-hires to complete required training before their first day on the job.
- Pre-hires can experience the culture of their future workplace before they start.
- You can include pre-hires in audiences for learning campaigns.
- You can create a single learning catalog and restrict access for pre-hires to specific content, eliminating the need to create separate catalogs.
- You can update the security groups of pre-hires to employees or contingent workers, providing a smooth transition.

Use Cases

Pre-hires can:

- Complete required training such as safety regulations or a code of conduct course.
- Consume learning content relevant to their roles or organizations such how to operate a piece of machinery or use an application.

Questions to Consider

Questions	Considerations
Do you want to restrict access to your learning catalog?	You can provide access to the learning catalog and use segmented security to restrict pre-hire access to courses and topics. Example: You can restrict access to items that they can't complete until after they start.
What kind of pre-hires do you want to grant Learning access?	You can configure security and worklets to make content available for contingent pre-hires and full-time pre-hires on their dashboards before their start dates. If a pre-hire must complete the content before their start date, you can also configure the Required for You worklet on the Onboarding dashboard to make the content available.
Do you need to mass enroll pre-hires on a regular basis?	You can mass enroll large numbers of pre-hires using a custom report based on the Find Workers

Questions	Considerations
	report with modifications to the sort, prompts, and advanced settings.
Do you plan to use campaigns for pre-hire Learning content?	When creating a campaign, consider whether your audience is a pre-hire, employee, or both. Only include content that is relevant to their required learning.

Recommendations

- Restrict your learning catalog so that pre-hires are only able to access content that is relevant to them.
- Configure worklets on your Learning dashboard so that pre-hires can access learning content.

Requirements

Remove the *Enable dynamic removal and resend* option on the exclusion rule on learning campaigns to ensure that the campaigned content remains required learning when pre-hires transition to employees.

Limitations

You can only grant Learning access to pre-hires after you enter a confirmed start date for them in Workday.

Tenant Setup

No impact.

Security

Domains	Considerations
Learning Access in the Learning Core functional area	Users can: • Complete lessons. • Search the catalog. • Set preferences. • View content progress. • View content information.
Self-Service: Learning in the Learning Core functional area	Users can view their learning history transcripts.
Self-Service: Take Surveys in the System functional area	Users can access Workday surveys in learning course lessons.
Worker Data: Public Worker Reports in the Staffing functional area	Managers can search for their workers and view their pre-hire content completion on the worker profile.

Business Processes

To add pre-hires as a security group that can start or initiate a business process, configure these business processes and their security policies in the Learning Core functional area:

Business Process	Considerations
Drop Learning Enrollment	Enables learners to drop an enrollment for a program, a course offering, or a digital course (both internal and external).
Enroll in Content	Enables learners to enroll in a course offering or a digital course (both internal and external).

Reporting

When creating pre-hire audiences for learning campaigns, you can select custom reports that use the All Workers for Pre-Hires report data source (RDS). This RDS provides all workers with a future start date.

You can use these reports and dashboards:

Reports or Dashboards	Considerations
Browse Learning Content report	Pre-hires can run this report to search for learning content.
Learning dashboard	You can grant pre-hires access to this dashboard so they can complete learning content and self-service tasks.
Learning Admin dashboard	Access tasks, reports, and dashboards that enable you to create and manage content and campaigns for pre-hires.
My Library report	Pre-hires can view their learning paths on this report. Learning paths enable pre-hires to create a personal curriculum by adding relevant onboarding videos to their library as they consume learning content.

Integrations

You can use these web services to enroll pre-hires in learning courses:

Web Services	Considerations
Enroll in Learning Course	Enables you to enroll learners into blended or digital courses.
Put Learning Enrollment	Enables you to update an existing enrollment or create legacy enrollments.

Connections and Touchpoints

Features	Considerations
Staffing	You can create required learning campaigns to display on the Required for You worklet on the Onboarding dashboard.
Talent	You can enable learners and their managers to access their pre-hire learning history.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Concept: Security in Learning on page 1916

Tasks

Steps: Configure Pre-Hire Access to Learning Content on page 1916
Steps: Set Up and Launch Learning Campaigns on page 1973
Steps: Set Up Profiles and Profile Groups
Steps: Set Up Worker Onboarding on page 746

Steps: Set Up Security for Learning

Context

You can set up security to determine who can create, manage, and consume learning content. Workday Learning enables you to configure granular domain access for tasks and reports that your organization uses to manage:

- Learning content.
- Learning enrollments.
- Reminders for courses with expiration dates.

Steps

1. Create User-Based Security Groups.

   Create security groups for your learning administrators to support the level of granularity that you require to manage learning and assign users.
2. Access the Maintain Functional Areas task.

   Enable these functional areas:

   - Common Financial Management
   - Learning Core

   Security Configuration domain in the System functional area.
3. Edit Domain Security Policies.

   Configure security domains for Learning.
4. Edit Business Process Security Policies.

   Configure these business processes security policies:

Business Process	Edit
Enroll in Content	To enable primary and secondary instructors to approve enrollments, add the Internal Learning Instructor as Self and External Learning Instructor as Self security groups on the approval step. To enable assessors to manage training content, add the Learning Assessor as Self security group on the *Self-Service: On the Job Training* domain.
Manage Course Offering	To enable learning administrators or instructors to move instructor-led classroom training in course offerings online, add their security groups on the *Update Offering to Online Only* initiating action.

5. Activate Pending Security Policy Changes.

Concept: Security Groups

Concept: Expiry Periods for Learning Content on page 2014

Tasks

Create Business Process Condition Rules

Reference

Reference: Security Domains for Learning on page 1922

Reference: Learning Business Processes on page 1918

Steps: Maintain Access to Learning Content

Prerequisites

Read Concept: Security in Learning on page 1916.

Context

You can restrict access to learning content using segmented security based on:

- Security categories on courses.
- Security categories on programs.
- Topics.

Security categories on courses and programs provide more granular security. When you view a topic, you can only view programs or courses that you have permission to view based on the security category on the program or course. Programs and courses that have no security category are open to all users with access to Learning, provided they have access to the topic.

Topic-based segmented security applies separately to programs and courses. Learners can view a program when they have access to all of the topics associated with the program, but can only view each course within the program if they have access to the topics associated with the course.

Steps

1. Access 1 of these tasks:
    - Create Learning Security Category
    - Create Learning Security Segment

   Create security segments to restrict access by security category or topic, or both.

   Security: *Set Up: Learning Security Segments* domain in the System functional area.
2. Create Segment-Based Security Groups.

   If existing security groups don't meet your business requirements, create the security groups to associate with the security segments. Map these groups to 1 or more of the learning security category or topic security segments.

   The security groups that you grant access to in the Group Criteria section must be unconstrained.
3. Edit Domain Security Policies.

   Grant your learning segment-based security groups access on the *Learning Access* domain so that members of these groups can access content on the Learning dashboard.
4. Activate Pending Security Policy Changes.

5. Access the Edit Tenant Setup - HCM task.

   In the Learning section, select the Enable Security Categories option to display a Security Category prompt on these tasks:

   - Create Course
   - Create Program
   - Edit Course
   - Edit Program

   See Reference: Edit Tenant Setup - HCM.

Example

This example illustrates how to grant access for managers to a management-related topic and make other topics available to all.

1. Create 3 topics:
   - *Management*
   - *Health and Safety*
   - *Skills*
2. Create 2 learning topic security segments. Example:
   - Name the first segment *Topics for Managers* and select the *Management* topic.
   - Name the other segment *Public Topics* and select the *Health and Safety* and *Skills* topics.
3. Create 2 segment-based security groups: 1 for managers and 1 for everyone else. Example:
   - *Managers*
   - *Public*

   For each of these security groups, select:

   - 1 or more groups from Group Criteria. Example:
     - For *Managers*, select *Manager (Unconstrained)*.
     - For *Public*, select:
       - *All Contingent Workers*
       - *All Employees*
   - The learning topic security segments to grant access to in Access Rights. Example:
     - *Topics for Managers*
     - *Public Topics*

Next Steps

Create learning content such as:

- Programs, courses, and stand-alone lessons that contain topics.
- Programs and courses with security categories.

Test the security policy changes.

Note: In Production tenants, a search indexing job runs every 12 hours. In non-Production tenants, this job runs every 24 hours. Depending on the size of your learning catalog, the job itself can take a few hours to complete. The search indexing job is required to populate the Learning dashboard and for relevance searching in Learning. After configuring topic-based segmented security, security categories, and associated segment-based security groups and domains, ensure that you allow the appropriate amount of time to pass in your Production or non-Production tenant before testing these changes.

For each segment:

- Sign in as a user who's a member of a segment-based security group associated with a topic or security category.
- Verify that you can access the learning content for that segment.

Related Information

Reference

The Next Level: Learning Topic and Course Segmented Security

Steps: Configure Pre-Hire Access to Learning Content

Prerequisites

- Read Reference: Security Groups for Pre-Hires on page 630.
- Consider restricting access to your learning catalog and use segmented security to restrict the topics you display to your pre-hires.
- Security: *Security Configuration* domain in the System functional area.

Context

Set up access to enable pre-hires to consume learning content before their start date.

Steps

1. Configure access for the *All Pre-Contingent Workers*, *All Pre-Employees*, or *All Employees* security groups for these domains:
    - *Learning Access*
    - *Self-Service: Learning*
    - *Self-Service: Take Surveys*
    - *Worker Data: Public Worker Reports*
2. To add pre-hires as a security group that can start or initiate a business process, configure these business processes and their security policies in the Learning Core functional area:
    - *Drop Learning Enrollment*
    - *Enroll in Content*
3. Access the Maintain Dashboards report.

    In the Required for Groups prompt in the Worklets section of these dashboards, provide access to pre-hire security groups:
    - Learning
    - My Library (for access to the Learning Paths worklet)
    - Onboarding

    See Steps: Set Up Dashboards and Landing Pages.

Concept: Security in Learning

You can restrict access to learning content using:

- *Access Learning Media* as the Access Restriction for Authentication Condition rule on the Manage Authentication Policies report to restrict media access based on IP restrictions.
- Security category segments for programs and courses associated with a particular security category. Learners who are members of a security group with access to the segment can find the restricted content using the Browse Learning Content report.

- Topic security segments for learning content associated with a particular topic. Topic-based security creates a more contextual user experience for learners so that:
  - Only members of learning administrator groups with access to a specific topic segment can create content for topics within the segment.
  - Only learners with access to a specific topic segment can view content and create stand-alone lessons for topics within the segment.

If learners have access to a category on a program or course, but don't have access to the associated topic, Workday includes the content in the Browse Learning Content report, but excludes the topic from the Topics view.

If the security changes for a program or course after learners have completed the content, and those learners no longer have access, the content remains in their enrollment history, but they can't view the details.

The *Learning Access* domain in the Learning Core functional area provides segmented access to the catalog. If you add any segment-based security groups for security categories or topics to this domain, Workday restricts access to all content by security category or topic segment. Users can only access content associated with security categories or topics in those segments, if they're members of the security group within the Group Criteria of the segment-based group.

You can add groups based on these Workday-delivered security types to the *Learning Access* domain:

- *Public Groups*
- *Segment for Learning Category*
- *Segment - Learning Topic*
- *User-Based Groups*

Note: To provide access to all learning self-service tasks, learners need *View and Modify* access to the *Learning Access* domain.

Use the Manage Learning Security Segments report to view your Learning security set up. You can also configure:

- Who can access your learning topics.
- Which users are members of which security category.

Reference: Access to Learning Content by Report

You can use segment-based security to configure access to learning content, depending on your security requirements. Workday restricts access to content on some reports, depending on whether learners are members of security groups with access to a topic or security category.

Learner Access Scenario	Access by Report
Access to the topic on a course but not to the security category.	Learners can't access the course on these reports: • Browse Learning Content • Topics
Access to the security category on a program or course, but not to the topic.	Learners can access the program or course on the Browse Learning Content report, but can't browse to the content from the Topics report.
Access to the security category on a program, but not to the security category on a course content item.	Learners can access the program but not the course on these reports: • Browse Learning Content • View Learning Program
Access to the topic and security category on a program, but not to the topic on a course content item.	Learners can't access the course on the Topics report. However, they can access the program and the course on these reports: • Browse Learning Content • View Learning Program
Access to the topic on a program, but not to the security category on a course content item.	Learners can access the course on the Topics report, but can't access the course on these reports: • Browse Learning Content • View Learning Program

Concept: Security Groups

Reference: Learning Business Processes

Workday delivers these business processes in the Learning Core and Extended Enterprise for Learning functional areas. Use them to configure and define the security policies for learning in your organization and for your extended workforce.

Business Process	Functional Area	Description
Cancel Course Offering	Learning Core	Initiates when you cancel a course offering. You can create condition rules and custom notifications on the *Cancel Course Offering* business process, using report fields for learning content on the Learning Course Offering Management Event business object.

Business Process	Functional Area	Description
Cancel Learning Enrollment	Learning Core	Initiates when you cancel an enrollment for a course offering. You can create custom notifications on the *Cancel Learning Enrollment* business process, using report fields for learning content on the Learning Enrollment Event business object. To be eligible for cancellation, ensure that the enrollment is not part of a *completed* program or has an associated: • Equivalency record. • Expiration date. • Learning assignment. • Pricing record.
Drop Learning Enrollment	Learning Core	Initiates when learners drop an enrollment for a program, a course offering, or a digital course (both internal and external). You can create condition rules and custom notifications on the *Enroll in Content* business process, using report fields for learning content on the Learning Enrollment Event business object. Example: Learners can drop on-demand courses without manager approval, but not if they're required learning (either campaigned courses or manager enrolled). Use these report fields to define a condition rule to remove manager approval for on-demand courses flagged as required learning: • *On Demand Enrollment* • *Required Learning Enrollment*
Edit Course Additional Data	Learning Core	Initiates when you enable selected security groups to approve the addition of custom fields to learning courses.
Edit Course Offering Additional Data	Learning Core	Initiates when you enable selected security groups

Business Process	Functional Area	Description
		to approve the addition of custom fields to learning course offerings.
Edit Program Additional Data	Learning Core	Initiates when you enable selected security groups to approve the addition of custom fields to learning programs.
Enroll in Content	Learning Core	Initiates when learners enroll in a course offering or a digital course (both internal and external). If a course is full, the *Waitlist in Course* initiating action enables learners to waitlist until a seat is available. When a course begins, Workday automatically drops learners from the waitlist. You can create condition rules and custom notifications on the *Enroll in Content* business process, using report fields for learning content on the Learning Enrollment Event business object.
Manage Course	Learning Core	Initiates when you create and edit learning courses and manage their versions.
Manage Course Offering	Learning Core	Initiates when you schedule or edit course offerings, or update offerings to a new course version. Configure the business process security policy to enable learning administrators or instructors to move instructor-led classroom training in course offerings online. Grant access to security groups for the *Update Offering to Online Only* initiating action. Configure the Copy Course Offering task by granting access to security groups for the *Copy Course Offering* initiating action on this business process to create a copy of an existing course offering.
Manage Equivalency Rule	Learning Core	Initiates when you create and edit equivalency rules.

Business Process	Functional Area	Description
Manage Extended Enterprise Learner	Extended Enterprise for Learning	Initiates when you create or edit extended enterprise learners.
Manage External Learning Assessor	Extended Enterprise for Learning and Learning Core	Initiates when you create or edit an external learning assessor.
Manage External Learning Instructor	Learning Core	Initiates when you create or edit external learning instructors.
Manage External Learning User	Extended Enterprise for Learning and Learning Core	Initiates when you create or edit external learning user accounts.
Manage Internal Learning Assessor	Learning Core	Initiates when you create or edit an internal learning assessor.
Manage Internal Learning Instructor	Learning Core	Initiates when you create or edit internal learning instructors.
Manage Learning Certification Rule	Learning Core	Initiates when you issue or update certifications for learning content.
Manage Lesson	Learning Core	Initiates when you create and edit internal stand-alone lessons.
Manage Program	Learning Core	Initiates when you create and edit learning programs and manage their versions.
Mass Cancel Learning Enrollments	Learning Core	Initiates when you cancel multiple enrollments for 1 or more course offerings. You can create custom notifications on the *Mass Cancel Learning Enrollments* business process, using report fields for learning content on the Learning Enrollment Event business object.
Mass Enroll	Learning Core	Initiates when: • Managers enroll their team members in learning courses. • Users with access to the Find Workers to Enroll report run the Learning Facilitated Enroll task. Once you configure this business process for Manager Enroll, Workday displays an Enroll My Team button on these reports: • View Course • View Digital Course

Business Process	Functional Area	Description
		For the Learning Facilitated Enroll task, Workday displays a Facilitated Enroll button on the Find Workers to Enroll report.
Request Extended Enterprise Learner	Extended Enterprise for Learning	Initiates when affiliation managers request learning access for new or existing users for their affiliations. Workday recommends first configuring these business processes, which are subprocesses on the *Request Extended Enterprise Learner* business process: • *Manage External Learning User* • *Manage Extended Enterprise Learner*

Edit Business Processes

Reference: Security Domains for Learning

You can configure these domains in the Learning Core and Extended Enterprise for Learning functional areas. They provide access to tasks and reports for Learning and Extended Enterprise Learning.

Domain	Description
Learning Access	Provides access to learning self-service tasks and reports. Learners with access to this domain can: • Search for learning content. • View programs, courses, and lessons. • Set their learning preferences. • Complete learning surveys. • View their progress for learning content. • Express interest in courses. • Add content to learning paths.
Maintain Archived External Learning User	Provides access to the Unarchive External Learning User task, which enables users to unarchive external learning users who aren't active workers.
Manage: Create and Edit Learning Roles	Provides access to administrative tasks and reports to manage learning assessors and instructors.
Manage: E-Commerce for Learning	Enables administrators to set up and configure the learning content payment processor.

Domain	Description
Manage: Extended Enterprise	Provides extended enterprise learning administrators with the ability to manage affiliations, job profiles, and dashboard access.
Manage: Extended Enterprise Affiliation Learners	Provides affiliation managers access to extended enterprise learners in their affiliation.
Manage: Extended Enterprise Learner Type	Provides users with the ability to create and manage extended enterprise learner types. Users with View access on the *Manage: Extended Enterprise* domain can view the learner type you assign to an extended enterprise learner.
Manage: Facilitated Enrollments	Provides selected users with access to the Find Workers to Enroll report to manage enrollments for blended and digital courses. We recommend that users with access to this domain don't have access to the *Manage: Learning Course Enrollments* domain. This ensures they can only enroll learners that they have access to. You can add a validation on the *Mass Enroll* business process definition to prevent selected user groups from enrolling learners into required learning.
Manage: Learner Content Subscriptions	Provides access to learning content subscription functionality for extended enterprise learners who need to access learning content for a certain time period.
Manage: Learning Additional Data	Provides administrator access to create and manage custom objects for learning content.
Manage: Learning Assignment	Provides administrator access to manage campaign record assignments and learning assignment waive reasons. Configure this domain to grant *View* and *Modify* permission to the Learning Administrator security group.
Manage: Learning Certifications	Provides access to administrative tasks and reports to manage Learning and Talent certifications.
Manage: Learning Content	Provides access to some administrative tasks and reports to manage learning content.
Manage: Learning Course Enrollments	Provides access to administrative based enrollment tasks. You can configure the domain security policy to provide access for users in an unconstrained user group. These users aren't Learning Administrators, but can mass enroll and mass drop learners from courses in the organizations they support. You can also restrict access using learning security category or topic segments.

Domain	Description
Manage: Learning Pricing	Provides access to most tasks for configuring pricing enablement, including: • Training credit mappings. • Learning organization payment configurations. • Prices and advanced pricing rules on courses and course offerings.
Manage: Learning Pricing Rules	Provides access to create condition rules for pricing enablement.
Manage: Learning Virtual Classroom Integration	Provides access to web services that manage the virtual classroom integration for your tenant. Workday recommends that you create an Integration System User (ISU) and grant them *View* and *Modify* permission on the new domain. We recommend using these user names for virtual classroom integration with Microsoft Teams: • For the ISU: *Learning_Integrations_User*. • For the ISSG: *Learning_Integrations_Group*.
Manage: Mass Enrollments	Provides constrained access to these tasks: • Mass Drop by Role • Mass Enroll by Role
Self Service: On the Job Training	Provides access to tasks, reports, and data related to training activity lessons. You can configure this domain to grant *View* and *Modify* permission to these security groups: • Self Service - External Learning Assessor • Self-Service - External Learning Instructor • Self Service - Internal Learning Instructor • Self-Service - Learning Assessor
Manage: Self-Registration	Provides extended enterprise learning administrators with the ability to manage and report on self-registration URLs.
Manage: Unrestricted Mass Enrollments	Provides unrestricted access to the Find Workers to Enroll report and these tasks: • Learning Mass Enroll • Mass Drop
Person Data: Certifications	Provides access to another person's certification information.
Person Data: Learning	Provides access to another person's learning transcript.
Reporting: Learning Pricing	Provides access to data sources for reporting on pricing configuration and enrollment pricing records.

Domain	Description
Reports: Archived External Learning Users	Provides access to reports that display information on archived external learning users.
Reports: Extended Enterprise Affiliations	Provides access to reports on extended enterprise affiliations.
Reports: Extended Enterprise Affiliation Learners	Provides affiliation managers access to reports on learners in their affiliation.
Reports: Extended Enterprise Usage Metrics	Provides access to reports that enable you to track the number of active extended enterprise learners in your tenant. You can use this information to measure your product usage over time.
Reports: Learning Campaign Records	Provides access to the Learning Campaign Record report data source, enabling you to report on learning campaigns.
Reports: Learning Record	Provides access to reports that display learning record data, including: • Assignments. • Enrollments. • Equivalencies. • Historical tracking. • Media tracking.
Self-Service: Certifications	Provides users with access to their certification information.
Self-Service: Extended Enterprise Learning	Provides extended enterprise learners with the ability to view their own information.
Self Service: Learning	Provides access to the learner to view their course calendar and learning transcript.
Self-Service: Learning Assessor	Enables external learning assessors to view their profiles.
Self-Service: Learning Instructor	Provides access to roster management tasks and reports such as: • Instructor schedules. • Grading and attendance for course offerings. • Waitlists. You can grant unrestricted access or restrict access so instructors can view enrollment and grading information only on courses for which they are the primary or secondary instructor. Grant permissions to the: • All Internal Learning Instructors and All External Learning Instructors security groups for unrestricted access.

Domain	Description
	• Internal Learning Instructor as Self and External Learning Instructor as Self security groups for restricted access.
Set Up: Learning Catalog	Provides access to a large number of tasks and reports that enable administrators to manage learning content.
Set Up: Learning External Content Integrations	Provides access to the Configure External Content task and the external content integrations for Learning.
Set Up: Sale Item	Provides access to tasks and reports that enable you to manage sales items for learning program and course costs.
View External Learning User	Provides access to view external learning users.
View: Sale Item	Provides access to view a specific sales item.

You can configure these domains in the System functional area.

Domain	Description
Calendar Download Access	Provides access to download iCalendar (.ics) files.
Drive	Provides access to the Drive user interface to create and manage Workday files associated with media files.
Set Up: Learning Security Segments	Provides access to administrators to manage security segments for learning content.
Questionnaire Creation and Distribution	Provides access to questionnaires in learning survey lessons.
Questionnaire Results	Provides access to tasks and reports related to results in learning survey lessons.
Self-Service: Take Surveys	Enables learners to participate in learning survey lessons.

You can configure these domains in the Backpack Hub Service functional area.

Domain	Description
Manage: Media Advanced	Provides access to manage media and set passing scores on video interactions.
Manage: Media Settings	Provides access to manage settings for media content.
Media Reporting	Provides access to media tracking data for reporting.

Learning Pricing

Setup Considerations: Pricing

You can use this topic to help make decisions when planning your configuration and use of Pricing Enablement for Learning. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday enables you to configure pricing and price display options, including direct e-commerce capabilities, for learning courses and course offerings. You can configure prices in different currencies and use condition rules to set prices for groups of learners and extended enterprise learners. Workday creates pricing records for each enrollment. You can report on prices or use web services to send them to applications that support billing or payment processing.

Business Benefits

Pricing your learning content and allowing learners to purchase it through a third-party payment processor enables you to:

- Communicate the value of your training by displaying prices to users.
- Report on prices associated with each course or course offering enrollment.
- Monetize your training and create new revenue streams.

Use Cases

This table describes use cases for pricing learning content:

Audience	Use Case
External (Extended Enterprise)	Strategically price learning content according to contracts with customers, partners, and other extended enterprise affiliates.
Internal (Learning)	Track and measure the value of interdepartmental training programs.

Questions to Consider

Questions	Considerations
Who do you want to configure pricing for?	Workday supports pricing enablement for workers and extended enterprise learners. You can enable functionality for workers only, extended enterprise learners only, or both.
Which time zone is most appropriate for enabling new training credit mappings?	New mappings that go into effect can impact currency values and prices for all users. Consider which time zone will minimally impact your users and select it from the Time Zone Credit Mapping prompt in tenant setup. If you don't select a time

Questions	Considerations
	zone, training credit mappings become effective on pacific time.
Which currencies should I plan to include in my training credit mappings?	You can configure whichever currencies you want to display prices in. The currencies you include in your training credit mappings have no relationship to currency used elsewhere in Workday, nor do they respect the preferred currencies of individual users. Consider the audiences who will consume your learning content and the currencies you need to communicate value to them. Each supervisory organization and extended enterprise affiliation can only have 1 currency.
How many training credit mappings can I create?	You can create as many training credit mappings as you want, but only 1 can be in effect at a time. You can prepare new training credit mappings for the future and set an effective date so they automatically apply when ready. You can't edit or delete training credit mappings that are currently in effect. To change an existing training credit mapping, you must copy it, edit it, then set a new effective date.
Who should be in charge of pricing administration functionality?	Workday secures pricing functionality to different domains than learning administration functionality. Administrators who manage your learning catalog might not understand your pricing strategy or contractual obligations with your affiliates. Similarly, pricing administrators might not understand the details of individual courses. Consider this as you decide: • Who gets access to pricing and pricing rule security domains. • How you might configure business process definitions to ensure appropriate approvals.
What are the differences between course costs and pricing?	The Costs section on the Create Course task is intended to itemize and display the cost of course-related expenses and materials on the course. The Pricing section is for configuring the enrollment price for a course. You might need to explain these differences to users who can edit courses.
Can I use decimals in pricing configurations?	You can enter up to: • 10 digits before the decimal point and 5 digits after the decimal point in training credit mappings and course prices. • 12 digits before the decimal point and 4 digits after the decimal point in pricing rules. The final calculated price for a course can have up to 20 digits before the decimal point and 10 digits after.

Questions	Considerations
	Workday rounds prices for learners who view pricing enabled learning content to the decimal place appropriate for each currency. Example: Prices in USD round to the hundredths decimal place while prices in JPY round to the nearest whole number. In custom reporting, you can use either rounded report fields or unrounded report fields on the Learning Enrollment Pricing Record data source.
How do learners browse and access e-commerce enabled courses?	The Manage Learning Content report allows you to identify purchasable learning content and configure custom sliders that will present this information to learners.

Recommendations

Create pricing rules to change the price of a course for a set of users who meet the conditions you define.

Requirements

To use pricing and e-commerce, you must subscribe to Workday Learning. You can also use pricing and e-commerce with Extended Enterprise Learning.

Workday requires these components to calculate the price for an enrollment:

- A training credit mapping with a current effective date.
- A payment configuration for the organization the learner belongs to.
- A default price, or training credit value, on the course or course offering with pricing enabled.

Limitations

- You can't price learning programs or stand-alone lessons.
- You can’t use mass enrollment or Enroll My Team methods for e-commerce enabled courses.
- Learners can’t purchase multiple courses with a single payment.
- You can’t drop enrollments that are in *pending payment* state. To do it, you must cancel the associated event.

Tenant Setup

The Enable Pricing Configuration for Person Types prompt enables the configuration of prices for workers or extended enterprise learners. If you disable pricing configuration, you can still:

- Report on enrollment prices.
- Use web services to get pricing data out of Workday.
- Use web services to specify training credits and pricing rules for courses.

Security

These domains in the Learning Core functional area:

Domain	Considerations
Manage: E-Commerce for Learning	Secures the tasks related to the learning content payment processor configuration.

Domain	Considerations
Manage: Learning Pricing	Secures most pricing configuration functionality for pricing administrators.
Manage: Learning Pricing Rules	Secures the Create Worker Pricing Rule and Create Extended Enterprise Learner Pricing Rule tasks. You don't need access to this domain to add pricing rules to a course.
Reporting: Learning Pricing	Secures report data sources needed to create custom reports for pricing and pricing records. This domain is for users who need to report on prices, but not configure them. Note: Contextual security applies to learning enrollment pricing records so that managers and affiliation managers can only view records for learners who are in their organization at the time of enrollment. Administrators can view all records.

Business Processes

Business Process	Considerations
Enroll in Content	You must edit the business process definition to allow active workers and Extended Enterprise learners to purchase content. You can configure a step so managers or affiliation managers can approve enrollment prices.
Manage Course	You can configure a step so pricing administrators can approve course prices.
Manage Course Offering	You can configure a step so pricing administrators can approve course offering prices.
Mass Enroll	You can configure a step so managers, affiliation managers, or pricing administrators can approve enrollment prices for each learner.

Reporting

You can create custom reports with the:

- Learning Contents report data source to view pricing by course.
- Learning Enrollments report data source to view pricing records by enrollment.

Integrations

You can use these web services to configure pricing:

- *Get Training Credit Mappings*
- *Get Learning Organization Payment Configuration*
- *Get Learner Pricing Rules*
- *Put Training Credit Mapping*
- *Put Learning Organization Payment Configuration*
- *Put Learner Pricing Rule*

- *Manage Course Offering*
- *Manage Learning Course*

You can use these web services to enable e-commerce in courses and course offerings:

- *Get Learning Blended Courses*
- *Get Learning Courses*
- *Get Learning Course Offerings*
- *Get Learning Digital Courses*
- *Manage Course Offering*
- *Manage Learning Course*
- *Put Learning Blended Courses*
- *Put Learning Course Offering*
- *Put Learning Digital Course*

You can also use the *Get Learning Pricing Records* web service to send enrollment pricing records to other third-party applications. The only way to change the Document Payment Status field from *Unpaid* is with the *Put Learning Pricing Record Document Payment Status*.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Pricing for Learning

Prerequisites

Set up Learning or Extended Enterprise Learning.

Context

You can configure pricing and price display options for internal and external learners.

Steps

1. Edit Domain Security Policies.

   Configure security policies for these domains:

   - *Manage: Learning Pricing*
   - *Manage: Learning Pricing Rules*
   - *Reporting: Learning Pricing*
2. Access the Edit Tenant Setup - HCM task.

   Use these prompts on the Learning section to select who you can configure pricing for, and when new training credit to currency mappings become effective:

   - Enable Pricing Configuration for Person Types.
   - (Optional) Time Zone for Training Credit Mappings.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.
3. Access the Maintain Training Credit Mappings task.

   Specify the value of 1 training credit in each currency you want to configure pricing for.

   Security: *Manage: Learning Pricing* domain in the Learning Core functional area.
4. Create Learning Organization Payment Configurations on page 1934.

5. (Optional) Create condition rules for pricing.

   You can access these tasks to create condition rules that change the default price of courses for groups of learners:

   - Create Extended Enterprise Learner Pricing Rule.
   - Create Worker Pricing Rule.

   Security: *Manage: Learning Pricing Rules* in the Learning Core functional area.
6. Create Learning Courses on page 1986.

   Enter the default price for the course in the Price (Training Credits) field, and select the Enable Pricing check box. You can optionally use the Advanced Pricing Rules grid to apply any pricing rules you've created.
7. (Optional) Edit Business Processes.

   Update these business process definitions to include approval steps for pricing:

   - *Enroll in Content*
   - *Manage Course*
   - *Manage Course Offering*
   - *Mass Enroll*

   Examples: Managers or affiliation managers can approve enrollments. Pricing administrators can approve pricing changes to courses.

Result

Workday applies pricing settings to courses. After a learner enrolls in a course, Workday:

- Creates an enrollment pricing record.
- No longer displays the pricing details on the course.

Next Steps

Create a custom report using:

- The Learning Contents report data source to view pricing configurations for courses.
- The Learning Enrollments report data source to view pricing records for enrollments.

Set up and configure E-Commerce for Learning.

Related Information

Concepts

Setup Considerations: Pricing on page 1927

Tasks

Steps: Set Up E-Commerce for Learning on page 1932

Reference

Reference: Edit Tenant Setup - HCM

Steps: Set Up E-Commerce for Learning

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *MSA*, you must enable this feature through Innovation Services.
- *UMSA*, you can skip the Opt in to E-Commerce for Learning through the Innovation Services Opt-In prerequisite step.

For more information, see this Community article.

- Set up Learning or Extended Enterprise Learning.
- Review Setup Considerations: Pricing on page 1927.
- Opt in to E-Commerce for Learning through the Innovation Services Opt-In task. Select E-Commerce for Learning service in the Learning category on the Available Services tab.
- Set up pricing. See: Steps: Set Up Pricing for Learning on page 1931.

Context

You can configure e-commerce capabilities in Workday Learning to allow active workers and Extended Enterprise learners to purchase learning content through Stripe, a third-party payment processor.

Steps

1. Edit Domain Security Policies.

   Configure the security policy for *Manage: E-Commerce for Learning* domain in the Learning Core functional area.
2. Access the Maintain E-Commerce for Learning task.

   Select Stripe as the Learning Content Payment Processor and use the Set up Stripe option to create an account ID and link it to your existing Stripe account, or create a new account.
3. Use the Onboard Stripe for Learning E-Commerce task to complete the onboarding process in Stripe.
4. (Optional) Access the Test Learning Content Payment Processor Connection task to verify the connection after setting up Stripe.
5. Create Learning Courses on page 1986.

   Enter a price for the course in the Price (Training Credits) field and select the Enable Pricing and Enable E-Commerce check boxes. Note: On digital courses also select the Requires Enrollment check box.
6. Edit Business Processes.

   Update the *Enroll in Content* business process definition to add the Require Learning E-Commerce Purchase service step and the Learning E-Commerce Purchase allowed action immediately after. This ensures Workday prompts learners to make a purchase before accessing the content. Note: Configure the security policy for *Employee as Self*, *Extended Enterprise Learner as Self*, and *Contingent Worker as Self*.

Result

Workday applies pricing settings to courses and course offerings. After enrolling, learners can purchase content by clicking the Purchase button, which redirects them to the payment processor website. Upon successful payment, learners can access the learning content.

Note: For inquiries about refunds, discounts, or receipts, please contact Stripe or refer to their documentation.

Create Learning Organization Payment Configurations

Prerequisites

- Security: *Manage: Learning Pricing* domain in the Learning Core functional area.
- Enable pricing configuration for the *Worker* or *Extended Enterprise Learner* person type on the Edit Tenant Setup - HCM task.

Context

Configure the currency and price display options for supervisory organizations and extended enterprise affiliations. You can create a configuration for each organization or apply a configuration to subordinate learning organizations in a hierarchy for more simple setup.

Steps

Access the Create Learning Organization Payment Configuration task.

As you complete the task, consider:

Option	Description
Supervisory Organization	Select organizations to include in the payment configuration. This prompt only displays when you enable pricing for the *Worker* person type.
Extended Enterprise Affiliation	Select organizations to include in the payment configuration. This prompt only displays when you enable pricing for the *Extended Enterprise Learner* person type.
Include Subordinate Learning Organizations	Applies configuration options to subordinates of selected supervisory organizations and extended enterprise affiliations. Subordinate organizations that already have their own payment configuration retain their existing settings. If you remove an organization from a payment configuration that includes subordinates, its subordinates no longer inherit pricing settings.
Display Pricing In	Select a display option for prices.
Currency	Select a currency to use for organizations in this payment configuration. Workday doesn't consider the preferred currency settings of individual users when displaying prices.

Next Steps

- Create a custom report with the Learning Organization Payment Configurations data source to review which learning organizations belong to or inherit which learning organization payment configurations.
- Use the Move Learning Organization Payment Configuration task to move organizations from 1 learning organization payment configuration to another. To move an organization, the old and new learning organization payment configuration must have the same setting on the Include Subordinate Learning Organizations check box.

Tasks

Create Custom Reports

Reference: Pricing Terminology for Learning

This table defines pricing concepts and terminology for Workday Learning and Extended Enterprise Learning:

Term	Description
Advanced Pricing Rule	A condition rule used to change the default Price (in Training Credits) on a course for a group of learners.
Document Payment Status	A report field on the Learning Enrollment Pricing Record business object that tracks the payment status of an enrollment. Workday automatically sets the status to *Unpaid*. You can update the status with the *Put Enrollment Pricing Record Document Payment Status* web service to reflect payments processed in third-party systems.
Learning Enrollment Pricing Record	Pricing data that Workday records with each course enrollment. Pricing records enable you to report on prices as Workday calculates them at the time of enrollment. The only element of this record you can edit is the Document Payment Status.
Learning Organization Payment Configuration	Specifies the currency and price display option for members of an extended enterprise affiliation or supervisory organization.
Training Credit	The standard currency used in exchange for consuming learning content. You can define: • How much a credit is worth in each currency. • How many credits each course or course offering is worth.
Training Credit Mappings	Specify the value of a single training credit in different currencies. Training credit mappings become effective on pacific time unless otherwise specified on the Edit Tenant Setup - HCM task.

Learner Experience

Setup Considerations: Learner Experience

You can use this topic to help make decisions when planning your configuration of the learner experience. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.

- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

You can provide tailored experiences for different learners based on their characteristics in Workday.

Business Benefits

- Configure different interfaces for different audiences in your organization, providing flexibility.
- Provide consistency for your audience by applying your brand to the Learning Home page.
- Make it easy for learners to identify required or relevant content.
- Create an engaging, more streamlined experience for learners to browse your catalog or complete their content.
- Improve learner interaction with learning paths sharing functionality.

Use Cases

- Configure separate banner images and header texts for specific audiences.
- Promote a task, report, or external content to your learners using spotlight cards.
- Add links to relevant content that learners can access on the panel menus.
- Highlight important updates by displaying announcements on the Home page.
- Target content for specific groups of users.
- Enable learners to share their learning paths with others.

Questions to Consider

Questions	Considerations
How do you want to display information to your learners?	Workday provides a default configuration including: • A side panel from which learners can return to their learning homepage, view links, the My Learning, and Discover pages. • Customizable banner image and welcome message. • Cards, called Spotlight Cards, that enable learners to see their current status in, and type of learning content. • The ability for learners to swipe to view required or recommended content. You can configure pages to display content that: • Is in progress, required, or of interest to a learner. • Develops learner skills or competencies, or is of interest to the learner. • Required. You can also: • Add menu items for tasks, reports, or external content in the links section of the side panel.

Questions	Considerations
	• Create spotlight cards that display that you can use to highlight tasks, reports, or both to a Learner. • Display required content dynamically. Three or more items of content display from left to right this view. Fewer than 3 items of content display vertically.
Which content do you want to call attention to?	To make content more visible and easier to access, you can add links to content, custom reports, or tasks on: • The links section of the main navigation menu. • Spotlight cards that display on the learning homepage. • Highlights that you add to your page, which learners can use to swipe through the content.
How do you want to configure the experience for different learners?	You can use segmented security to configure different learner experiences for different types of workers. Examples: • All employees. • Contingent workers. • External learners. • Managers. • Pre-hires. You can structure your required content to display sequentially on the page when you want your learners to complete courses in a certain order. Spotlight cards and links only display to learners who have access to the tasks or reports that you add.
How do you want your learners to browse your learning catalog?	You can configure a spotlight card that you link to your learning content report. Learners can then browse your catalog to find content that is relevant to their interests. Learners can also use the Discover page to help them develop their skills or competencies or just find content of interest. You can also enable language preferences so learners receive learning recommendations in their preferred languages.

Recommendations

Add these to your My Learning page to provide your learners with the best experience:

- Continue Learning.
- Required Learning.

Provide more relevant content recommendations for learners by enabling machine learning on:

- Based on Your Skills to Develop.

- Recommended for You.
- Suggestions for You.

To maximize performance, reduce the number of security groups.

Requirements

You must opt in to access the tasks to configure the learner experience interface. You can opt out at any stage.

Limitations

Workday provides a default configuration to ensure a consistent experience for your learners. You can't configure:

- The interface on which learners consume content.
- The top 3 menu items on the side panel.
- More than 3 spotlight cards per page.
- More than 3 custom sliders per page.
- More than 5 announcements on the Home page.
- More than 120 characters in spotlight card subtitles.

To provide a streamlined experience, you can only add 3 or fewer of these Workday-delivered spotlight cards to your Learning Home and My Learning pages:

- Create Lesson.
- Drop Enrollment.
- Edit Lesson.
- Edit Preferences.
- View Learning Transcript.

You can only add:

- Continue Learning to the Home and My Learning pages.
- Highlights to the Home page.
- Most Popular, Popular in Your Role, or Recently Added to the Home and Discover pages.
- Required for You to the Home and My Learning pages.
- Saved for Later and Learning Paths to the My Learning page.

You can only translate your spotlight cards into French, Italian, Portuguese, and Spanish.

Tenant Setup

Use the Edit Tenant Setup - HCM task to configure tenant-wide options for:

- Course and lesson rating. Workday suggests content with high ratings to learners.
- Packaged content. Example: SCORM digital courses.
- Learning paths.
- Language preferences for learning recommendations.

Security

Configure these domains in the Learning Core functional area:

Domains	Considerations
Learning Access	Enables users to: • View content information.

Domains	Considerations
	• View content progress.
Manage: Share Learning Paths	Enable users to share their learning paths with others.
Set Up: Tenant Setup - Worklets *Set Up: Learner Experience*	Users with access to these domains can configure the learner interface.

Business Processes

No impacts.

Reporting

Reports or Dashboards	Considerations
Browse Learning Content report	Add this report, or your custom version, to spotlight cards that enable learners to browse your learning catalog. Learners can use the *External Content Type* facet on this report to filter external content if they've configured Skillsoft Percipio in their tenant.
My Library dashboard	Enables learners to manage their learning paths and create a personalized curriculum from the learning catalog.

Integrations

Web Services	Considerations
Get Learning Navigation Items *Put Learning Navigation Item*	Use to view or add links to relevant content.
Get Learning Page Items *Put Learning Page Item*	Use to view or add content items to your pages.
Get Spotlight Cards *Put Spotlight Cards*	Use to view your current configuration, or load spotlight cards into Workday.

Connections and Touchpoints

Touchpoints	Considerations
Learning Content	Learners can view courses and lessons you create on their Learning interface.
Opportunity Graph	Learners can identify courses ranked most highly by workers in positions on their Opportunity Graph.
Talent	You can use the survey functionality from Talent as a lesson type to get feedback on the usability of your learner interface.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Setup Considerations: Learning Content on page 1947

Tasks

Steps: Maintain Access to Learning Content on page 1914

Reference

2021R2 What's New Post: Learning Paths and Sharing

Steps: Set Up Learner Experience

Prerequisites

- Review Setup Considerations for Learner Experience.
- Save Searches for any reports you would like to use for custom sliders.

Context

You can use the Workday-delivered configuration or configure a customized learner experience so learners can access, complete, or view content using:

- Custom links that learners can use to access tasks, custom reports, or external content.
- Spotlight cards that highlight specific content for groups of learners.
- Custom sliders that enable learners to access personalized learning content.

Steps

1. (Optional) Configure Branding for Learning on page 1941.

   Configure your own banner image and header text for the Learning Home page.
2. (Optional) Configure Learning Spotlight Cards on page 1942.

   Create spotlight cards that direct learners to specific content. Example: A custom report from which they can browse your learning catalog to find content that helps them develop new skills.
3. (Optional) Steps: Set Up Learning Paths on page 1943.

   Enable learners to create and share personalized learning paths.
4. (Optional) Access the Create Learning Custom Slider task.

   Select the saved search that you want to use to display personalized content to learners on Workday Learning homepages.

   You can use these data sources when creating search reports for custom sliders:

   - Learning Assignment
   - Learning Content
   - Learning Enrollment
   - Learning Record

   Security:

   - *Set Up: Learner Experience* domain in the Learning Core functional area.
   - *Set Up: Tenant Setup – Worklets* domain in the System functional area.
5. (Optional) Add Home and Dashboard Announcements

   Use the Configure Announcements task to display up to 5 announcements on the Learning Home page.

6. Access the Maintain Learner Experience task.

   Select Customized Configuration on the tab for the page that you want to configure.

   As you add rows, consider:

Option	Description
Page Content	Select a card that Workday displays to your learners. You can select the order in which your content items display. You can add up to 3 custom sliders to these pages: • Learning Home • My Learning • Discover To add a slider, select Custom Sliders and then select the slider you want to display on the page.
Condition Rule	Add condition rules to specify who can view external links. Example: Add a condition rule display an external link to managers.
Task/ Report or External Link	Add a link that displays on the side panel on the Learning Home page.
Required for Groups	Select the groups that you want to display the custom slider to.

7. (Optional) Set Up Language Preferences for Learning Recommendations on page 1945.

   Enable learners to set their language preferences for the content that appears in learning recommendations.
8. (Optional) You can select Default Configuration to return to the Workday-delivered configuration.

   Security: *Set Up: Learner Experience* domain in the Learning Core functional area.

Next Steps

To view or change custom sliders, access the:

- Edit Learning Custom Slider task.
- View Learning Custom Slider report.

2021R2 What's New Post: Learning Paths and Sharing

2022R1 What's New Post: Custom Learning Sliders

Examples

Example: Create a Custom Report to Save Searches for Custom Learning Sliders on page 1946

Configure Branding for Learning

Prerequisites

- Select file types to upload to Workday on the Edit Tenant Setup - System task in the System Setup section.

- Create condition rules to configure branding for different users on the Create Branding Rule task.
- Security: *Set Up: Tenant Setup - System* domain in the System functional area.

Context

You can personalize Workday Learning by adding your own banner image and header text to the Learning Home page.

Steps

1. Access the Configure Tenant Branding task.
2. Click Other tab to add the banner image and the header text to the Learning Home page.
3. As you complete the task, consider:

Option	Description
Branding Rule	Add condition rules and apply 1 to each banner. For example, you can define 1 banner image for managers and other for external learners. When you don't create condition rules, Workday displays the same banner image and header text for all users.
Branding Image	The recommended banner size is 1440 x 193. To comply with Web Content Accessibility Guidelines AA (WCAGAA) standards, avoid placing text over the banner image. When you don't add a branding image, Workday displays the header text without a banner.
Branding Text	When you don't specify branding text, Workday displays this default text: *What will I learn today?*

Configure Learning Spotlight Cards

Prerequisites

Security: These domains in the Learning Core functional area:

- *Set Up: Tenant Setup - Worklets*
- *Set Up: Learner Experience*

Context

You can configure spotlight cards to highlight specific tasks, reports, or external content to your learners. You can configure different spotlight cards to deliver information to specific groups of learners. You can't currently make spotlight cards inactive once you've configured them.

Steps

1. Access the Manage Learning Spotlight Cards report.
2. Edit or view your spotlight cards in the Custom Cards area.

3. Configure the Workday delivered cards in the Delivered Cards area. Example: Configure the Browse Learning Catalog spotlight card to link to your custom report to enable your learners to find content of interest.
4. As you complete the task, consider:

Option	Description
Save As	Enter an identifier for the name with the *Put Spotlight Cards* web service to load the card into Workday
Title	Enter the text to display the spotlight card name to your learners.
Subtitle	Enter a description of fewer than 120 characters that describes the spotlight card.
Button Label	Displays to the learners on the spotlight card, enter an intuitive label. Example: Add 'Open Video' when you link to an external video.

5. (Optional) From the related action menu of your spotlight card, select Translation > Translate Instance.

   Select the language into which you want to translate the name, title, and subtitle of your spotlight cards. Currently you can select from French, Spanish, Italian, and Portugese.

Next Steps

- Add spotlight cards to your learner experience.
- Use the Edit Learning Spotlight Card task to edit your spotlight cards.

See: Setup Considerations: Learner Experience on page 1935.

Reference: Learning Content Organization on page 1902
Reference: Workday-Delivered Reports for Learning on page 2102

Steps: Set Up Learning Paths

Prerequisites

Review setup considerations for Learner Experience.

Context

You can set up learning paths and path sharing functionality to enable learners to:

- Create their own personalized curriculum from the learning catalog.
- View and save paths that others have shared with them.
- Manage privacy settings to enable others to view and share their paths.

Steps

1. Access the Edit Tenant Setup - HCM task.

   Select the Enable Learning Paths option to enable learners to add content to learning paths.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

2. (Optional) Access the Maintain Learner Experience task.

   Add these sliders to your My Learning page:

   - Saved for Later
   - Learning Paths

   Security:

   - *Set Up: Tenant Setup - Worklets* domain in the System functional area.
   - *Set Up: Learner Experience* domain in the Learning Core Functional area.
3. (Optional) Edit Domain Security Policies.

   Provide users with view and modify access to the *Manage: Share Learning Paths* domain in the Learning Core functional area to enable them to use the paths sharing functionality.
4. (Optional) Access the Maintain Dashboards task.

   To enable learning paths on mobile, add these sliders to the My Library dashboard:

   - Saved for Later
   - Learning Paths Created by You
   - Learning Paths Saved by You

   Security: *Set Up: Tenant Setup - Worklets* domain in the System functional area.

Result

Learners can create, edit, and share their personalized learning paths. They can also use My Library report to see the learning paths they created or saved.

To add content to a learning path, learners can navigate to the stand-alone lesson or course of interest and click the Save option.

Available Innovation Services – Service Descriptions and Exhibits

Set Up Learning for Career Hub Plan

Prerequisites

- Set up Career Hub.
- Set up learning paths.

Security:

- *Learning Access* domain in the Learning Core functional area.
- *Self-Service: Career Hub* domain in the Career Hub functional area.
- *Set Up: Learner Experience* domain in the Learning Core Functional area.
- *Set Up: Tenant Setup - Worklets* domain in the System functional area.

Context

Workers can save learning suggestions to their Career Hub Plan. You can configure Workday to display sliders on the Learning Home page that contain learning items in a worker's Career Hub Plan and learning suggestions to help grow their career.

Steps

1. Access the Maintain Learner Experience task.
2. On the Learning Home tab, select the Customized Configuration option.

3. Add a new row and select the Grow Your Career slider from the Page Content options.
4. On the My Learning tab, select the Customized Configuration option.
5. Add a new row and select the Learning Items in Your Career Hub Plan slider from the Page Content options.

   Note: You must configure both the Grow Your Career slider and the Learning Items in Your Career Hub Plan slider. If you only configure 1 of the sliders, it won't display. The Learning Items In Your Career Hub Plan slider only displays once learning content is added to the worker's career plan.

Next Steps

Users can browse courses in Learning and add learning content using the Add to Career Hub Plan related action. If the user hasn't completed their Career Hub profile, a message will prompt them to complete the process.

Set Up Language Preferences for Learning Recommendations

Prerequisites

- Review Setup Considerations for Learner Experience.
- Ensure all learning content has at least 1 language assigned in the language field. You can use the *Manage Learning Course* web service for bulk updates.
- Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

Context

You can configure Workday Learning to allow learners to set their language preferences for the content displayed in learning recommendations.

Steps

1. (Optional) Access the Configure Optional Fields task to make the Language field required in learning content. See: Hide or Require Optional Fields.
2. Access the Edit Tenant Setup - HCM task.

   In the Learning section, select the Enable Language Preferences check box.

Result

After learners specify their preferred languages in the Learning Preferences task, Workday displays learning recommendations in those languages within:

- Career Hub
- Manager Insights Hub
- Opportunity Graph

- These Learning sliders:
    - Based on Your Interests
    - Based on Your Skills to Develop
    - Grow Your Career
    - Most Popular
    - Popular in Your Role
    - Recently Added
    - Recommended for You
    - You Might Also Be Interested in

Note: When no content is available in a learner's preferred language, Workday doesn't display the corresponding slider. Example: If a learner selects German as their preferred language but no learning content is tagged with German, no recommendations will appear.

These worklets don't take into consideration the learner's preferred language:

- Continue Learning
- Required for You
- Highlights
- Learning paths
- Custom sliders

Example: Create a Custom Report to Save Searches for Custom Learning Sliders

This example illustrates how to create a custom report to save searches for custom learning sliders. You can also use a saved search to create custom learning sliders.

Context

You can create custom sliders to display personalized learning content based on saved searches. You want to create a custom report using the Learning Content data source to save searches.

Steps

1. Access the Create Custom Report task.
2. Enter Custom Slider Learning Content in the Report Name field.
3. Select Advanced from the Report Type prompt.
4. Select Learning Content from the Report Data Source prompt.
5. Click OK.
6. Under the Additional Info section, access the Columns tab.
7. Select the Learning Content field on the Field column.
8. Access the Share tab.
9. Select Share with all authorized users for the Report Definition Sharing Options field.
10. Access the Advanced tab.

11. Under the Facet Options section, add, at least, 1 of your preferred facet filters.

    Example:

    - Access Type
    - Certification
    - Content Provider
    - Course Offering Instructors
    - Created by Worker
    - Learning Unit Type
    - Skill Level
12. Click OK.
13. Click Run.
14. Select the check boxes of the filters that you want to save.
15. Click the Save button.
16. Enter a Name for your saved search.
17. Click OK.

Next Steps

Access the Create Learning Custom Slider task.

Learning Content

Setup Considerations: Learning Content

You can use this topic to help make decisions when planning your configuration and use of learning content. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

With Workday Learning, you can create content, such as courses, lessons, and programs, to add to a learning catalog for your organization.

Business Benefits

- Associate content with certifications so that you can reward learners for successfully completing learning content.
- Associate learning content with competencies when you create or edit a course or program so that users can search for content by competencies.
- Ensure that learning content meets requirements before publication by adding approval steps to the business processes.

- Gain insights on content in your learning catalog by creating a discovery board.
- Increase efficiency of catalog maintenance by enabling subject matter experts to create their own content.
- Increase flexibility and improve the user experience by blending internal and external learning content.
- Make it easier to educate and ensure compliance in your organization.
- Provide an interactive learning environment by enabling employees to personalize their content, such as content on performance goals.
- Simplify searches by grouping topics in your catalog according to specific skills, such as HR and Product Management.

Use Cases

- Create and issue certifications to learners based on their completion of associated learning content.
- Create courses that instructors deliver in person, have digital content, or a combination of both.
- Curate project management content to build project design skills and expertise.
- Enable your learners to provide feedback through questionnaires or ratings.
- Deliver a mandatory Health and Safety course to a group of first responders.
- Include third-party external content, such as Skillsoft or YouTube videos, in your courses, lessons, and programs.
- Set a deadline for an online Security Training course that all employees must complete.
- Tag media as sensitive so that users outside your organization can't view it.
- Notify managers and HR Business Partners when learning content is assigned to full-time workers in your organization. This functionality doesn't support extended enterprise learners.
- Create version schemas and add them to blended courses in your learning catalog, so that you can version your content consistently.

Questions to Consider

Question	Consideration
What type of content do you need to create for your organization?	You can create and mix these content types: • Blended courses: A combination of digital content and 1 or more scheduled, instructor-led lessons. • Digital courses: A combination of digital content items that don't include a scheduled, instructor-led lesson. • Stand-alone lessons: A single piece of content such as a recorded lecture or a job aid. • Programs: A combination of courses and lessons.
What content items do you need to include in your learning courses?	Both blended and digital courses can include any combination of these items, depending on the needs of your organization: • Documents, such as course guides, activity guides, and job aids. • External materials and links. • Images and diagrams. • Learning activities.

Question	Consideration
	• Presentations, videos, simulations, and recorded webinars. • Quizzes, knowledge checks, surveys, and exams.
Do you have existing media content that you need to load from external systems?	Workday handles any element that isn't an external link or survey as media content. Example: Documents, recorded webinars, software simulations, tests, quizzes, and videos. Cloud Connect for Learning and Public Learning Content enable you to import third-party media content. Workers can also access external content by search or through links as a recommended course. You can import media into Workday using: • The Workday Learning interface to load documents or graphics to an existing course or lesson. • Media importer or web services to bulk load external learning content. • Skillsoft to add new content and update existing course materials.
Do you want to monitor content creation?	All users can create content but you can monitor its creation by adding approval steps to ensure that content meets specified requirements before publication.
How do you want to manage your learning content?	You can create assessors and instructors to plan schedules and assess learners. You can assign them to content depending on the lesson type: • Assessors: You can create and assign multiple assessors for each enrollment in course offerings with training activity lessons. • Instructors: You can create internal instructors from workers already in your tenant and external, third-party instructors for courses and lessons. You can also assign subject matter experts as instructors for specific lessons.
Who do you want to access your learning content?	You can use segmented security to provide access to learning content and control the ability to edit it. Examples of segmented security groups are: • All employees. • Contingent workers. • External learners. • Managers. • Pre-hires.

Question	Consideration
	You can also suggest equivalent courses for workers when they can't access their desired course.
Do you want to receive learner feedback on the quality of your learning content?	You can configure your tenant to enable learners to rate their learning content. When you enable ratings, learners can rate their completed courses and programs, including SCORM. They can also rate standalone lessons in the learning catalog at any stage of their enrollment.

Recommendations

- Configure segmented security so that topics inherit or override their catalog's default security if you've created multiple learning catalogs for your organization.
- We recommend that you’ve fewer than 250,000 courses in your learning catalog. This number doesn't include imported records or content.
- Workday associates each topic in your learning catalog with an image. You can use any image that meets your company requirements.
- Use a total pixel size of 1,427 x 803 for your images. You might have to crop your image if it exceeds the recommended parameters.
- Use an image aspect ratio of 16:9 (in case of 1,366 x 768), and 4:3 (in case of 1,024 x 768).

Requirements

Create a topic before you can build learning content. Topics group your content so that learners can find it in the learning catalog.

Limitations

- Inactive external content is only removed from the *Browse Learning Content* report after the weekly maintenance window on Saturday is complete.
- Workday can't track external materials. You can't set lessons with external materials as required learning because you can't know their completion status.
- You can apply a single security segment to either learning catalogs or learning topics, but not both.
- You can only add 1 piece of learning content per learning certification rule.
- You can only display courses as a comma-separated list in your email notifications.
- You can't include surveys in a course until you activate them. You can activate a survey by creating a link for it, enabling it to function as a lesson within a course.
- You can't select media items from Drive when using Mobile.

Tenant Setup

Use the Edit Tenant Setup - HCM task to configure these tenant-wide options for your learning content:

Option	Description
Enable Express Interest	Enables users to express interest in courses when no suitable offerings are available to them in a specified location and date range.
Enable Learning Paths	Enables learners to add content to learning paths.
Enable Pricing Configuration for Person Types	Enables pricing configuration for workers and Extended Enterprise learners. Once you enable it for at least 1 person type, you can configure:

Option	Description
	• Learning organization payment configurations. • Prices for individual courses and course offerings. • Pricing rules. • Training credit mappings.
Enable Security Categories	Enables you to restrict access by security category segment.
Enable Packaged Content	Enables you to upload packaged media content in course lessons.
Enable Packaged Content Interaction Reporting	Enables you to report on learner responses in courses that contain media lessons with packaged content. This setting applies to interaction response data for new completions of future packaged content.
Enable Packaged Content on Mobile	Enables users to view packaged content for learning lessons on: • Android. • iOS.
Enable Rating on Courses and Learning Content	Enables users to rate content that they're enrolled in and any stand-alone lessons in the learning catalog.

Security

Domain	Consideration
Learning Access domain in the Learning Core functional area	Enables users to: • Complete learning content. • Set preferences. • View content information. • View content progress.
Manage: Learning Content in the Learning Core functional area	Enables you to access learning content management tasks and reports.
Set Up: Learning Catalog in the Learning Core functional area	Enables you to access the learning catalog for administrative reports and tasks.
Manage: Media Import in the Backpack Hub Service functional area	Enables you to import large volumes of video and packaged content media files. This domain is only available when you enable Media Cloud in your tenant.
Manage: Media Settings in the Backpack Hub Service functional area	Enables you to access and manage settings for media content.
Create and Manage Surveys in the System functional area	Enables you to create, edit, copy, view, launch, close, and cancel surveys.

Domain	Consideration
Manage Surveys in the System functional area	Enables you to create, edit, copy, view, launch, close, and cancel surveys.
Self-Service: Learning Assessor in the these functional areas: • Extended Enterprise for Learning • Learning Core	Enables external learning assessors to view their profiles.
Self-Service: Take Surveys in the System functional area	Enables users to access Workday survey lessons.

Business Processes

Business Process	Consideration
Cancel Course Offering	Enables you to create condition rules and custom notifications.
Edit Course Additional Data *Edit Program Additional Data*	Enables you to select security groups to approve the addition of custom fields to learning content.
Enroll in Content	Enables you to create condition rules and custom notifications using report fields for learning content on the Learning Enrollment Event business object. Example: Learners can drop on-demand courses without manager approval, unless they're required learning (either campaigned or manager-enrolled courses).
Manage Course *Manage Lesson* *Manage Program*	Enables you to add approval steps to ensure that content meet requirements before publication when workers: • Create learning content. • Edit learning content. • Manage learning content versions.
Manage Course Offering	Enables you to configure the business process security policy to enable learning administrators or instructors to move instructor-led classroom training online in course offerings.
Manage External Learning Assessor *Manage Internal Learning Assessor*	Enables you to create and edit internal and external learning assessors.
Manage External Learning Instructor *Manage Internal Learning Instructor*	Enables you to create and edit internal and external instructors.
Mass Enroll	Enables managers to enroll their teams in a course.
Waitlist in Course	Enables learners to join a waitlist until a seat is available.

Reporting

Report or Dashboard	Description
Translate Business Object	Create translated titles and descriptions for learning content.
Courses and Lessons Created (Last 12 Months)	Monitor the amount of content that users create per month.
Learning Admin dashboard	Provide an administrative view of learning content with access to: • Learner self-service tasks. • Manage reports that enable you to maintain the learning catalog and provide insight into the value and effectiveness of training.
Learning Content by Rating	Use this report to identify the: • Highest-performing content. • Performance for learning courses and stand-alone lessons.
Learner Engagement	Evaluate enrollments and completions, so you can examine why some learners engage more than others. The report only displays data for the last complete month.
Learning Trainer dashboard	Enable trainers to: • Find workers to enroll in courses. • Manage grading and attendance. • Manage training activities. • Manage waitlists. • View schedules for lessons that they're teaching.
My Library dashboard	Enable learners to manage their learning paths and create a personalized curriculum from the learning catalog.

You can use the Learning Contentreport data source in custom reports to track learning content data for your organization.

Integrations

Web Service	Consideration
Edit Learning Course Additional Data *Edit Learning Course Offering Additional Data* *Edit Learning Program Additional Data*	Enables you to update effective-dated custom fields for learning content.
Enroll in Learning Content	Enables you to enroll learners into learning content. Respects due dates that you set when you mass enroll learners using this web service.

Web Service	Consideration
Manage External Learning Instructor *Manage Internal Learning Instructor*	Enables you to create internal instructors from workers inside your tenant and external instructors.
Manage Equivalency Rule	Enables you to create or update equivalency rules.
Manage Learning Course *Manage Lesson* *Manage Learning Program*	Enables you to create or update learning content types. Use the Legacy check box on the *Manage Learning Course* web service to enable a course to display as a legacy course on reports and identify when it uploads as a legacy course. This check box is noneffective dated. If you uncheck it in the future, all versions of the course will be unchecked.
Manage Learning Prerequisite Rule	Enables you to create or update prerequisite rules.
Manage External Learning Assessor *Manage Internal Learning Assessor*	Enables you to create or update external and internal learning assessors.
Put Learning Content Subscription	Enables you to create or update subscriptions for learning content.
Put Learning Imported Content *Put Learning Imported Record*	Enables you to bulk load existing content or enrollments into Workday.
Put Learning Other Unit Types	Enables you to create or update other unit types for digital and blended courses.
Put Learning Topic	Enables you to create or update learning topics.
Put Media Settings	Enables you to update the Restrict Access check box setting for a specific media item.

Workday also supports integrations with third-party media content providers, including:

- Coursera
- Go1
- Harvard ManageMentor®
- LinkedIn Learning™
- OpenSesame
- Pluralsight
- Skillsoft Percipio
- Udemy Business
- YouTube

Connections and Touchpoints

Touchpoint	Consideration
Career and Development Planning	Workday Learning helps learners identify courses ranked highest by workers in their positions on their Opportunity Graph.

Touchpoint	Consideration
Onboarding	You can create required learning campaigns to display learning content on the Required for You worklet on the Onboarding dashboard.
Talent	You can: • Use the survey functionality from Talent as a lesson type within a course. Surveys enable you to get feedback on the course, that you can use to improve your learning content. • Use Talent Marketplace to suggest learning content to help close skills gaps. • View the learning content you completed to achieve a competency, and suggestions for other content. • View recommended learning content that's relevant to skills that you want to develop or improve. • Import exact and synonymous skills from Skillsoft Percipio and Udemy Business. When external skills match a Skills Cloud skill in your tenant, Workday attaches them to the imported content and displays them in areas such as recommendations, search facets, course details, and worker profiles. Note: Workday Learning doesn't support importing of external content with more than 25 skills.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Setup Considerations: Learning Lessons

You can use this topic to help make decisions when planning your configuration and use of lessons. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What Are They

Lessons are an item of learning content that users can access as a single unit or as part of a course. Examples:

- Course guide.
- Job aid.
- Movie.
- Recorded lecture.
- Software simulation.

Business Benefits

- Continuously improve your content by creating surveys to gather learner feedback.
- Encourage social learning by enabling users to personalize content and share expertise by easily uploading videos or other lesson content.
- Optimize distribution of educational and compliance content throughout your organization.
- Streamline catalog management by enabling subject matter experts to create and manage their own content.
- Target areas of your organization with audience-specific content.
- Facilitate compliance and record-keeping by providing a verifiable record of learner understanding for important content.

Use Cases

- Build lessons from scratch or using previously loaded media.
- Create lessons using content from Workday Learning or imported material, or a combination of both.
- Create media or instructor-led segments.

- Create single lessons for business tasks or combine multiple lessons to create a course.
- Define an approval process for new content to maintain a high standard of lesson content.
- Display featured or recommended content to learners.
- Host individual lessons in different locations over a specified time period.
- Include materials related to job-training activities. Example: A forklift driving demonstration and follow-up assessment.
- Require learners to take lessons for legal compliance training.
- Require learners to confirm that they have read and understood a policy, safety procedure, or other important content.

Questions to Consider

Question	Consideration
What content do you want to create for lessons?	You can create: • External content. Examples: Websites or video links. • Media. Examples: Documents or movies. • Surveys. • Acknowledgments.
Which lesson types do you want to add to blended and digital courses?	You can add these lesson types to blended courses: • Acknowledgment • External Content • In Person Classroom (Instructor Led) • Media • Survey • Training Activity • Virtual Classroom (Instructor Led) You can add these lesson types to digital courses: • Acknowledgment • External Content • Media • Survey
How do you want to manage locations for instructor-led lessons?	You can select different locations for each instructor-led lesson. Lesson locations can be anywhere your business has tagged as a training business site.
How do you want to manage expiration dates for lessons?	You can ensure the continuity of lessons by setting an end date on the current lesson that's the same as the start date of the new version.

Recommendations

- Enforce lesson order to ensure that mandatory lessons are taken in the correct sequence.
- To ensure that instructors can track attendance and enter grades at lesson level, assign them as both primary and lesson-level instructors.
- Upload an image to represent the subject matter of instructor-led lessons.

Requirements

You must create topics before you create lessons. Topics enable you to categorize learning content for ease of access.

Limitations

- Workday can't track external materials. You can't set lessons with external materials as required learning because you can't know their completion status.
- Workday doesn't support SCORM or AICC packaged content files for stand-alone lessons.
- Workday doesn't track lessons. To track progress for a single lesson, build a single-lesson course.
- You can't include Acknowledgment, External Content, Training Activity, or Surveys lesson types in stand-alone lessons.
- You can't assign a correct answer to a survey response. Workday Learning only uses surveys to gather feedback.
- You must launch a survey before you can add it as a lesson to a course.
- You need to access Workday on desktop to mark lessons complete.
- Content ratings can only be enabled or disabled for all content types in your tenant rather than individual lessons. Comment functionality is independent of content ratings.
- The enrollment status of every lesson needs to be complete to rate a course or a program, including SCORM.

Tenant Setup

Access the Edit Tenant Setup - HCM task to configure these tenant-wide options for lessons:

Option	Description
Enable Packaged Content	Enables you to upload packaged media content as lessons in a course.
Enable Packaged Content on Mobile	Enables users to view packaged content for learning lessons on: • Android. • iOS.
Enable Rating on Courses and Lessons	Enables users to rate lessons that they're enrolled in and stand-alone lessons in the learning catalog.

Security

Domain	Considerations
Learning Access domain in the Learning Core functional area.	Enables users to: • Complete lessons. • Set learning preferences. • View lesson information. • View lesson progress.
Create and Manage Surveys in the System functional area.	Enables users to create, edit, copy, view, launch, close, and cancel survey lessons.
Manage Surveys in the System functional area.	Enables users to create, edit, copy, view, launch, close, and cancel survey lessons.
Self-Service: Take Surveys in the System functional area.	Enables users to access Workday survey lessons.

Business Processes

Business Process	Description
Manage External Learning Assessor *Manage Internal Learning Assessor*	Enables you to create and edit internal and external learning assessors.
Manage External Learning Instructor *Manage Internal Learning Instructor*	Enables you to set up and manage internal instructors from workers already in your tenant and external, third-party instructors.
Manage Lesson	Enables you to create and edit of all types of lessons, including creating new versions of an existing lesson. You can add approval steps to ensure that lessons meet requirements before publication.

Reporting

Report or Dashboard	Description
Courses and Lessons Created (Last 12 Months)	Monitor the rate at which users create learning content. Example: Use this information to plan for which departments require more lessons.
Learning Content by Rating	Monitor the quality of your learning catalog through ratings-based groupings of lessons.
Learning Trainer	Enable trainers to: • Manage grading and attendance. • Manage training activity lessons. • Manage waitlists. • View schedules for lessons that they're teaching.

Integrations

Web Service	Consideration
Manage External Learning Instructor *Manage Internal Learning Instructor*	Enables you to designate external third-party users as external instructors and workers as internal instructors.
Manage Lesson	Enables you to create or update stand-alone lessons.
Manage External Learning Assessor *Manage Internal Learning Assessor*	Enables you to create or update internal or external learning assessors.

Connections and Touchpoints

Touchpoint	Consideration
Onboarding	You can create required learning campaigns to display lessons on the Required for You worklet on the Onboarding dashboard.

Touchpoint	Consideration
Talent	You can use survey functionality from Talent as a lesson type within a course to get feedback so that you can improve your content.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Reference

2025R2 Feature Release Note: Acknowledgment Lesson Type

Setup Considerations: Learning Campaigns

Note: We plan to migrate Campaign functionality to Engagement Builder in a future release. Workday recommends that you start using Engagement Builder for greater efficiency and visibility into your engagements. See: ../../../manage-workday/collaboration/engagement-builder/setup-considerations-engagement-builder.dita.

You can use this topic to help make decisions when planning your configuration and use of Learning Campaigns functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Leaning campaigns enable you to engage target audiences by promoting learning content and automatically sending notifications to learners.

Business Benefits

You can use learning campaigns to:

- Assign required content to help meet your organization's compliance needs.
- Improve efficiency by dynamically identifying specific groups of learners based on learner data.
- Ensure consistency in the delivery of learning content by defining schedules.
- Prominently display required learning content on the Learning dashboard.

Use Cases

- Assign a course about workplace safety to your entire department.
- Assign content to new hires.
- Assign a required leadership program to all the managers in your organization.
- Promote annual security policy training to your entire organization.

Questions to Consider

Question	Consideration
What content do you want to promote?	You can include 1 or more of these learning content items in your campaigns: • Courses • Lessons • Notifications • Programs • Surveys
How do you want to notify learners of content?	You can promote content to learners using: • Notifications. • The Required for You worklet. • Custom sliders on the Learning Dashboard. You can configure up to 3 reminders per campaign item. Workday removes campaign content from the Required For You slider after the campaign's end date, even if the learner hasn't completed the content. Workday doesn't send campaign content to learners that have previously completed the content, even if they completed the content outside of the campaign. Workday sends campaign reminders based on the recipient's timezone.
Which learners do you want to send your learning campaigns to?	You can create campaign audiences to assign and track learning content for specific audiences. You can configure dynamic updates to enable Workday to automatically: • Remove learners when they no longer meet the audience criteria. • Send the campaign to learners again if they dropped out of the audience prior to completion and rejoin. You can run campaigns based on your audience. When you have a set audience, you can select Run Now to run your campaign. When you have a dynamic audience that changes daily or weekly, you can select a daily or weekly recurrence. Example: New learners join or existing learners are removed regularly and you want to avoid selecting Run Now every time a new learner joins or leaves. Workday updates the audience size count the next time the campaign is launched.
How do you want to manage large volumes of campaigns?	You can save time by creating message templates to automatically populate information into new campaigns that you create.

Question	Consideration
When setting an end date on a campaign and the end date is the same as the due date by default, will reminders go out if you confgiure them for the due date?	If your due date is the same as your end date, the campaign will end at 12am based on your tenant timezone. Reminders configured on the due date won't trigger as the campaign has already ended. Part of the reminder requirements is that the campaign needs to be valid. In this case, we recommend configuring the reminder 1 day before the due date instead.

Recommendations

To avoid delayed notifications and other system processes, Workday recommends that you contact the Workday Production Readiness team to help you test and prepare for running large volume campaigns in Production. Examples of large volume campaigns include those with:

- Audience sizes of over 100,000 workers.
- Frequent dynamic audience additions of over 100,000 workers.
- Over 100 daily scheduled campaigns.

For an audience size of 100,000, Workday recommends a minimum campaign duration of 30 days.

If you have a campaign audience that exceeds 50,000 learners, use a saved search instead of a custom report to create your campaign audience. Results for custom reports are limited to 50,000.

If your campaign audience exceeds 100,000, break the audience into multiple campaigns.

Test your campaign configuration in your sandbox tenant. We recommend that you:

- Test different users to ensure that they receive the campaign.
- Run reports to ensure results are accurate.
- Ensure results are correct when identifying your target audience. Example: If there are 50 managers included in your custom report for the campaign audience, the campaign should be sent to 50 managers.

Requirements

- You must use the Worker data source when creating custom reports for learning campaigns.
- To use the Campaign Email Analytics by Item report, you must set up email analytics. See: Steps: Set Up Email Analytics.

Limitations

- You can’t rescind a campaign from individual learners; you have to rescind the entire campaign.
- If a learner completes a campaign and the campaign is relaunched, the learner will not receive the campaign again.
- You can't use copied custom versions of the Find Workers report to create saved searches for campaign audiences.
- You can't configure campaigns to automatically enroll a learner. Learners must manually enroll or begin the content when they receive a campaign item.

Tenant Setup

You can access the Notification Delivery Settings section of the Edit Tenant Setup - Notifications task to configure settings for learning notifications.

If you disable reminders on Edit Tenant Setup-Notifications, Workday queues the reminders and then sends queued reminders when they're enabled.

Security

Security	Description
Administer Campaigns in the System functional area.	Enables you to create, edit, and view campaigns.
Security segments: • *Extended Enterprise Campaigns* • *Learning Campaign*	Enables you to configure delivery settings for the Extended Enterpirse Campaigns or Learning Campaigns notification types for your security groups.

Business Processes

Configure the *Campaign Event* business process to perform these actions on campaigns:

- Approve
- Copy
- Create
- Edit
- Rescind
- Submit
- View

Reporting

Reports or Dashboards	Description
Business Process and Integration Notifications report	View the status of all notifications that are sent to learners.
Campaign Email Analytics by Item report	Identifies the campaign: • Click rate • Content type • Item delivered • Marked as spam rate • Name • Open rate • Received rate • Unsubscribe rate See: Steps: Set Up Email Analytics.
Campaign Status by Category report	Identifies the campaign category and status of the campaign. You can drill down to view learners and their status.Example: You can see that a learner's campaign category is Required and the status is In Progress.
Learning Campaign report	View learning campaigns from the previous 12 months on the Learning Admin dashboard.
Learning dashboard	Display learning campaign content prominently to learners.
View Campaign report	View a list of campaigns in the tenants.

Integrations

You can use these web services with campaigns:

- *Get Campaign Categories*
- *Get Connect Campaigns*
- *Put Campaign Category*
- *Submit Connect Campaign*

Connections and Touchpoints

Features	Considerations
Learning Assignments	Enables you to track campaigns and email analytics.
Recruiting Campaigns	You can create campaigns that enable recruiters to send branded marketing communications to pools of prospects or candidates.
Student Recruiting Campaigns	You can create a campaign for a student recruiting cycle.
Surveys	You can create campaigns that deliver surveys to target audiences.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Configure Google Calendar for Learning

Context

You can create calendar invites that automatically sync with course offering updates and enrollment events. The integration ensures that learners have the most current information in their calendars as they receive updated invites when the course offering changes. If the offering is cancelled; or the attendee drops or is dropped from the offering, they receive a cancellation email.

Workday doesn't retroactively add the calendar integration for existing course offerings. Additionally, Workday prevents you from downloading the iCalendar (.ics) file type for offerings scheduled after activating the feature.

The calendar integration only processes calendar events created in the same tenant type. Example: Events created for old course offerings in an Implementation tenant won't be picked up in your Production tenant. Workday recommends that you cancel any such course offerings in Production and create new offerings or copy the old offerings before enrolling learners.

Workday recommends caution when testing this feature in non-Production environments as learners will receive real emails.

Steps

1. Register the Learning Integration with Google.

   See Configure Google Cloud Platform for Learning Calendar Integration.
2. (Optional) Access the Create Integration System User task.

   Create an integration system user (ISU). We recommend using *Learning_Integrations_User* for the user name.

   Security: *Integration Security* domain in the Integration functional area.

3. Access the Edit Tenant Setup - HCM task.
    a) In the Learning section, select the Enable Calendar Integration check box.
    b) As you complete the Learning Calendar Integration section, consider:

Option	Description
Calendar Provider	Select *Google Calendar*.
Integration System User	Select the ISU you created.

    Security: *Set Up: Tenant Setup - HCM* in the System functional area.
4. Create Integration System Security Groups.

    As you complete the landing page, consider:

Option	Description
Type of Tenanted Security Group	Select *Integration Security Group (Constrained)* or *Integration Security Group (Unconstrained)*.
Name	We recommend using *Learning_Integrations_Group*.

    Assign your ISU to the integration system security group you create.
5. Maintain Security Group Permissions.

    Add the *Set Up: Learning External Content Integrations* domain to the Report/Task Permissions section with *View* and *Modify* access, and Integration Permissions section with *Put* access.
6. Activate Pending Security Policy Changes.
7. Access the Edit Tenant Set Up – HCM task.

    As you complete the Learning Calendar Integration section on the Parameters grid, consider:

Option	Description
Service Owners Key	Workday uses this text after you set up the project on Google Cloud Platform. Contact your IT department or Cloud administrator to set this up.
Mailbox	Enter the email address from which you want to generate the calendar invites. Ensure that this email address matches the address entered in Google Cloud Platform. We limit the number of emails you can generate in 24 hours to 10,000 internal emails and 3,000 external emails.
Restricted to Environment	When you select an environment, Workday prevents your Preview settings from overriding your Production settings when your Production tenant data is used to refresh your Preview tenant data.

8. Access the Manage Learning Calendar Message Templates task.

   Create and manage content for your classroom, virtual classroom, and cancellation message templates.

   - Workday enables you to configure message templates at tenant level and applies them to all email invites generated as a result of this integration.
   - The integration doesn't run until you configure message templates so that empty calendar invites don't go out to learners.
   - The integration doesn't utilize domain-wide delegation, ensuring that Workday doesn't have read and write access to all mailboxes in your tenant.

   Security: *Set Up: Learning Catalog* in the Learning Core functional area.

Result

- Instructors and enrolled attendees receive the same version of the invite. Attendees can't view other attendees on invites.
- Workday uses the learner's time zone to send invites and displays them correctly in their calendar.
- Workday sends email invites to learners with any email client.
- Workday limits attendees on a single invite to 500, and automatically creates another invite when you reach this limit. You can generate a maximum of 9,900 emails in 24 hours.

Next Steps

Access the Learning Calendar Integration Status report to view:

- Whether the integration is running at that moment. The integration is set to run every 15 minutes.
- The number of invites sent in the past 24 hours.
- The number of invites that ran in the past 24 hours.
- Related course offerings and lessons for any pending invites

You can only view this report when you enable Google Calendar integration for your tenant.

Reference

2021R1 What's New Post: Outlook Calendar Integration for Learning

Steps: Configure Microsoft Outlook Calendar for Learning

Context

You can create calendar invites that automatically sync with course offering updates and enrollment events. The integration ensures that learners have the most current information in their calendars as they receive updated invites when the course offering changes. If the offering is cancelled, or the attendee drops or is dropped from the offering, they receive a cancellation email.

Workday doesn't retroactively add the calendar integration for existing course offerings. Additionally, Workday prevents you from downloading the iCalendar (.ics) file type for offerings scheduled after activating the feature.

The calendar integration only processes calendar events created in the same tenant type. Example: Events created for old course offerings in an Implementation tenant won't be picked up in your Production tenant. Workday recommends that you cancel any such course offerings in Production and create new offerings or copy the old offerings before enrolling learners.

Workday recommends caution when testing this feature in non-Production environments as learners will receive real email invites.

Note: To create calendar events, the integration needs ReadWrite access to a single mailbox defined in the tenant setup. Workday uses this to send calendar events to learners and instructors.

See Configure Application Access Policy and Limit Application Permissions to Specific Exchange Online Mailboxes to configure policy rules using Microsoft Powershell to restrict ReadWrite access to one mailbox.

Steps

1. Register the Learning integration with Microsoft Outlook.

   See Register Your Client-Side Application for Learning Calendar Integration with Microsoft Outlook.
2. (Optional) Access the Create Integration System User task.

   Create an integration system user (ISU). We recommend using *Learning_Integrations_User* for the user name.

   Security: *Integration Security* domain in the Integration functional area.
3. Access the Edit Tenant Setup - HCM task.
   a) In the Learning section, select the Enable Calendar Integration check box.
   b) As you complete the Learning Calendar Integration section, consider:

Option	Description
Calendar Provider	Select *Microsoft Outlook Calendar*.
Integration System User	Select the ISU you created.

   Security: *Set Up: Tenant Setup - HCM* in the System functional area.
4. Create Integration System Security Groups.

   As you complete the landing page, consider:

Option	Description
Type of Tenanted Security Group	Select *Integration Security Group (Constrained)* or *Integration Security Group (Unconstrained)*.
Name	We recommend using *Learning_Integrations_Group*.

   Assign your ISU to the integration system security group you create.
5. Activate Pending Security Policy Changes.
6. Access the Edit Tenant Set Up – HCM task.

   In the Learning section, enter values for these fields on the Parameter grid to customize your message templates. Consult with your IT department for these values:

   - *Client ID*
   - *Client Secret*
   - *Mailbox*
   - *Tenant ID*

   Workday masks the values that you enter for *Client ID* and *Client Secret* when you set up this integration for the first time. After set up, we don't display the full values to provide additional security for this sensitive information. We recommend that you set up a new mailbox to manage your invites as the mailbox might get busy.

7. Access the Manage Learning Calendar Message Templates task.

   Create and manage content for your classroom, virtual classroom, and cancellation message templates.

   - Workday enables you to configure message templates at tenant level and applies them to all email invites generated as a result of this integration.
   - The integration doesn't run until you configure message templates so that empty calendar invites don't go out to learners.

   Security: *Set Up: Learning Catalog* in the Learning Core functional area.

Result

- Instructors and enrolled attendees receive the same version of the invite. Attendees can't view other attendees on invites.
- Workday uses the learner's time zone to send invites and display them correctly in their calendar.
- Workday sends email invites to learners with any email client.
- Workday limits attendees on a single invite to 500, and automatically creates another invite when you reach this limit. You can generate a maximum of 9,900 emails in 24 hours.

Next Steps

Access the Learning Calendar Integration Status report to view:

- Whether the integration is running at that moment. The integration is set to run every 15 minutes.
- The number of invites sent in the past 24 hours.
- The number of invites that ran in the past 24 hours.
- Related course offerings and lessons for any pending invites

You can view this report only when you enable Microsoft Outlook Calendar integration for your tenant.

Concept: Calendar Message Templates on page 2018

Reference

The Next Level: Outlook Calendar Integration for Workday Learning Webinar

Reference: Microsoft Environments for Workday Learning on page 2026

Steps: Configure Translation Templates for Calendar Email Invites

Prerequisites

Configure Google or Microsoft Outlook calendar for your tenant.

See: Steps: Configure Google Calendar for Learning on page 1964 or Steps: Configure Microsoft Outlook Calendar for Learning on page 1966.

Context

You can create and send email translation templates in the specified language of a course offering, improving the user experience for employees around the world. To ensure that the integration implements the translation templates correctly, set only one language on your course offering.

Steps

1. Access the Edit Tenant Setup - HCM task.

   In the Learning section, select the Enable Message Translation Template check box.

2. Access the Manage Learning Calendar Message Templates task.

   On the Translations tab, click Translate Message Templates and select a user language.

   Workday enables you to set up these templates at tenant level and applies them to all email invites generated from this integration. We provide default messages for the Classroom, Virtual Classroom, and Cancellation templates. You can customize the templates to display specific information in the email subject and body.
3. Use the Instructor Led Offering business object to add dynamic fields.

   Select the Activated check box to ensure that translation templates send correctly.

Next Steps

- When you create a course offering, ensure that the Language field for the course offering matches the language for the translation template.
- Use the Translate Learning Calendar Template task to create additional translation templates.

2021R1 What's New Post: Outlook Calendar Integration for Learning

Steps: Manage Learning Content

Context

The learning catalog comprises programs, blended and digital courses, course offerings for blended courses, and stand-alone lessons. You can create and maintain courses and course offerings to enable learner enrollment. Workday supports peer learning by enabling you and your employees to create stand-alone lessons, as an employee self-service task.

Steps

1. Access the Maintain Sales Item Groups task.

   Create a sales item group for items that relate to learning programs and course costs.

   Security: These domains in the Learning Core functional area:

   - *Set Up: Sale Item*
   - *View: Sale Item*
2. Access the Create Sales Item task.

   Create sales items that relate to program and course costs. Sales items include:

   - Catering.
   - Course materials.
   - Fees for instructors.
   - Room rental.

   You can add these sales items when you create or edit programs and courses. The total of all sales items on a program or course provides the overall cost. If there are no sales items, the learning content has no cost. Workday displays the Cost value on these reports so that learners can view the cost before they enroll:

   - View Learning Program
   - View Course

   Security: The Create Revenue Category task is secured to the *Set Up: Basic Revenue Category Worktag* domain.

   Provide both *View* and *Modify* access to the *Set Up: Basic Revenue Category Worktag* domain.

3. (Optional) Create skills to tag to your learning content.

   See Enable Skills Cloud on page 1854.
4. (Optional) Create competencies to add to your learning content.

   See Steps: Set Up Competencies on page 122.
5. Create Learning Courses on page 1986.
6. Create Learning Course Offerings on page 1995.
7. (Optional) Access the Create Lesson task.

   Create stand-alone lessons to add content such as videos and documents to your learning catalog as a single lesson. Ensure that you select a media type that Workday supports.

   Note: You can't add SCORM or AICC packaged media files to stand-alone lessons.

   See FAQ: Uploading and Viewing Videos.

   Security: These domains in the Learning Core functional area:

   - *Learning Access*
   - *Manage: Learning Content*
8. (Optional) Move Instructor-Led Classroom Training Online on page 2000.
9. (Optional) Create Learning Programs on page 2001.
10. View and Edit Learning Content on page 2005.
11. (Optional) Create Learning Equivalency Rules on page 2009.
12. (Optional) Create Learning Prerequisite Rules on page 2011.
13. (Optional) Configure External Content on page 2051.

    Enable learners to access content from third-party providers.
14. (Optional) Set up Learner Name for Packaged Content.

    Enable Workday to send a learner's name, ID, or both, to third-party packaged content providers.

    - Access the Edit Tenant Setup - HCM task.
    - In the Packaged Content section, select the Send Learner Name to Third-Content Provider check box.
15. (Optional) Share media items that you've uploaded to Workday with other learning administrators so they can also add the media to courses.

    a. Access Drive from the Workday main menu.
    b. Select the media file or folder that you want to share and click Share to configure permissions.

    Security: *Drive* domain in the System functional area.

    Only users with access to the *Drive* domain can access media that you share.
16. (Optional) Configure Learning Content Highlights Rules on page 2013.
17. (Optional) Translate Business Data.

    Configure translations for field values on these business objects in the *Learning: Learning – Course Management* category to support global learning:

    - *Course* (for course offerings)
    - *Instructor Led Lesson*
    - *Learning Course*
    - *Learning External Content Item*
    - *Learning Media Content Item*
    - *Learning Survey Content Item*
18. (Optional) Create learning campaigns to recommend content to users.

    See Steps: Set Up and Launch Learning Campaigns on page 1973.

19. (Optional) Copy managers and HR business partners (HRBP) on reminders generated from learning content. You can use role assignments to define the HRBP. This functionality doesn't support extended enterprise learners.

The Next Level: Peer Learning

The Next Level: Prepare for a Workday Learning Deployment

Steps: Set Up Learning Content Description Generation and Revision

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Security: *Manage Learning Content* or *Set Up: Learning Catalog* in the Learning Core functional area.

Context

Learning content description generation and revision enables you to revise learning course descriptions using generative artificial intelligence and reducing manual effort. You can condense, expand, and professionalize the tone of existing text descriptions of digital and blended courses.

Workday uses these data points to revise learning course descriptions:

- Learning course title.
- Learning course description.

Note: We recommend that you establish best practices for reviewing, editing, and verifying the accuracy of the AI-generated content before use.

Steps

1. Access the Innovation Services and Data Selection Opt-In task.

   You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.
2. On the Innovation Services Opt In tab, select HCM on the Available Services tab.
3. On the Maintain Innovation Services Data Selection Opt In tab, select HCM: HCM ML Features and Third Party Connectors GA.
4. Select the Opt In check box to enable the Learning Data category.
5. Access the Edit Tenant Set Up - HCM task.
6. In the Learning section, select Enable AI Generated Learning Content Description.

   You might need to wait up to 24 hours after you opt in for the AI-assisted options to display on your tasks.

Result

You can use the Condense, Expand, and Professionalize AI-assisted options on the Description field on these tasks, to revise learning course descriptions:

- Create Course
- Edit Course

Workday Community: Generate and Revise Learning Content Descriptions

Steps: Set Up Advanced Catalog Management

Prerequisites

Security: These domains in the Learning Core functional area:

- *Learning Access*
- *Manage: Learning Content*
- *Manage: Learning Course Enrollments*
- *Set Up: Learning*
- *Set Up: Learning Catalog*

Context

You want to create multiple learning catalogs and configure segmented security so that topics inherit or override their catalog security.

Steps

1. Access the Create Learning Catalog task to create 1 or more catalogs for your learning content.
2. Access the Maintain Learning Catalogs task to set up content hierarchy for your learning catalogs.

   You can set catalogs to inactive to prevent Workday from using them for security evaluation.
3. Access the Create Learning Security Segment task to set up segmented security for your learning catalogs.

   Add a note to the Learners with Access field to act as a reminder of which learners can access the security segment. Example: All Employees.

Result

You've created a hierarchy for your learning catalogs to simplify how Workday applies security to your learning content.

Next Steps

Access the Manage Learning Security Segments task to view security configuration and which content learners can access.

Related Information

Tasks

Create Segment-Based Security Groups

Reference

2021 R2 What's New Post: Advanced Catalog Management

Steps: Set Up and Launch Learning Campaigns

Prerequisites

Note: We plan to migrate Campaign functionality to Engagement Builder in a future release. Workday recommends that you start using Engagement Builder for greater efficiency and visibility into your engagements. See: ../../../manage-workday/collaboration/engagement-builder/setup-considerations-engagement-builder.dita.

Create learning content to include as campaign items.

Context

You can create learning campaigns that engage target audiences in learning activities by:

- Promoting content on their Learning dashboards. When you create required learning campaigns, Workday displays the content in the Required for You worklet. You can create a custom slider to display all other campaigns.
- Sending notifications about the learning content.

The learning content might be:

- Legally required compliance courses, such as workplace violence prevention.
- Courses that the company or a manager wants their department to take, such as how to complete their expense reports.

To avoid delayed notifications and other system processes, Workday recommends that you contact the Workday Production Readiness team to help you test and prepare for running large volume campaigns in Production. Examples of large volume campaigns include those with:

- Audience sizes of over 100,000 workers.
- Frequent dynamic audience additions of over 100,000 workers.
- Over 100 daily scheduled campaigns.

For an audience size of 100,000, Workday recommends a minimum campaign duration of 30 days.

Steps

1. (Optional) Determine if your event is large enough that you need to work with the Workday Production Readiness Team. See Workday Community: Customer Events: Best Practices and Production Readiness for guidelines about opening up a Production Readiness case.
2. Create Segment-Based Security Groups.

   Grant your security group access to the *Extended Enterprise Campaigns* or *Learning Campaigns* segments.

3. Access the Domain Security Policies for Functional Area report.

   Select Domain Security Policy > Enable from the related actions menu of the *Administer Campaigns* domain security policy.

   Security: These domains in the System functional area:

   - *Security Activation*
   - *Security Configuration*
4. Edit Domain Security Policies.

   Grant permissions to your security group to the *Administer Campaigns* domain.
5. Edit Business Process Security Policies.

   Configure the security policy for the *Campaign Event* business process to add your security group.

   The security group must have access to the *Extended Enterprise Campaigns* or *Learning Campaigns* segments.
6. (Optional) Edit Business Processes.

   Configure the *Campaign Event* business process definition to include an approval step.
7. Enable and configure delivery settings for the Extended Enterprise Campaigns or Learning Campaigns notification types.

   See Reference: Edit Tenant Setup - Notifications.
8. (Optional) Create Email Templates.

   Email templates enable you to define the layout for email notifications. Create a custom template for emails associated with learning campaigns using the *Learning Campaign Emails* email template behavior.
9. Create learning audiences and campaigns.

   To assign and track required learning for specific audiences, select the *Required Learning* category on the Create Campaign task.

   You can enable dynamic updates to campaign audiences to:

   - Remove learners from audiences when they no longer meet the audience criteria. Workday removes any campaigned learning content from their Learning dashboards, including:
     - Learning content in the announcements area at the top.
     - Incomplete required learning content on the Required for You worklet and Progress > Required section.
   - Resend learning campaigns, when learners rejoin the audience.

   To enable dynamic updates, select the *Enable dynamic removal and resend* option on the Exclusion Rule prompt on these tasks:

   - Copy Campaign
   - Create Campaign
   - Edit Campaign

   Note: For pre-hire audiences, if you want campaigned content to remain as required learning when they transition to employees, remove the *Enable dynamic removal and resend* option.

   See Steps: Set Up Campaigns.

10. (Optional) Rescind a learning campaign.

    To rescind a learning campaign, you must:

    a. Edit the course in the campaign to *Inactive* to remove the requirement for all audience members.
    b. Delete the course from the campaign.
    c. Remove the incorrect workers from the campaign audience.
    d. Edit the course items in the campaign back to active.
    e. Add the course back into the campaign.
    f. Launch the campaign. It automatically picks up the course the next time it runs if you've scheduled a daily campaign run.

Next Steps

Access the Edit Campaign Categories task to update a course in your campaign. Examples: Due date or whether the content is required or not required learning. This update takes effect immediately and updates all open assignments in the campaign. Workday displays the update to all learners who have assigned, enrolled, and in progress enrollments.

Concept: Email Templates

Setup Considerations: Learning Campaigns on page 1960

Reference

Reference: Event-Specific Best Practices

Steps: Set Up Learning Certifications

Prerequisites

Create learning content.

See: Setup Considerations: Learning Content on page 1947.

Context

You can issue and renew certifications to learners based on their successful completion of associated learning content. Certifications improve learner engagement by encouraging skill development and help to ensure compliance in your organization.

You can use the Leaning Enrollments report data source in custom reports to print a completion certificate using a business form layout. See Steps: Create a Business Form Layout.

Steps

1. Access the *Create Business Process Definition* task to create a default definition for the *Manage Learning Certification Rule* business process.
2. Access the Create Certification task.

    - Create an issuer for the certification. Example: Workday Learning.
    - Create a name for the certification. Example: Health and Safety.

    Security: *Manage: Learning Certifications* domain in the Learning Core functional area.
3. Configure the *Manage Learning Certification Rule* business process definition.

4. Access the Create Learning Certification Rule task.

    - Select the learning content for the certification. Example: Health and Safety.
    - Select effective dates for the certification rule.
    - Select the Display on Content check box to display the related certification information to learners on the content overview and completion pages.

    Note:

    - If you rescind a certification rule, Workday removes the achievement, but doesn't delete the certification as this information remains useful for reporting purposes.
    - Learners must successfully complete the learning content within the effective dates in order to receive the certification.
    - Workday bases the expiry date of a learning certification on the expiry of the associated learning content.
    - We only display relevant certifications for the associated learning content.
    - You can only add 1 piece of content per certification rule.

Result

- Workday Learning issues a Health and Safety certification to all employees who successfully complete the Health and Safety course.
- Learners can view details for their awarded certifications using the View Certifications report of the content completion page or the Certifications tab on their Career Profile.

Next Steps

Configure the *Manage Learning Certification Rules* report to display on the Learning Admin dashboard so that you can manage content and effective dates for learning certifications.

2021R2 What's New Post: Learning Certifications

Steps: Set Up Integration System User Security for Calendar Integrations

Prerequisites

- Configure Google Cloud Platform.
- Register a new application in the Microsoft Azure portal.
- Security: These domains in the Integration and System functional areas:
    - *Integration Security*
    - *Security Configuration*

Context

All calendar integrations for Learning require an integration system user (ISU) and integration system security group (ISSG). It's Workday policy to use an ISU with only the appropriate access for integration purposes. Administrators shouldn’t configure any integration security.

Steps

1. Access the Create Integration System User task.

   Create an ISU. We recommend using *Learning_Integrations_User* for the user name.

   - Each integration system must have a unique ISU.
   - Keep the session timeout value of zero to prevent session expiration.
   - Select the Do Not Allow UI Sessions check box to prevent the ISU from signing into Workday through the user interface.
2. Access the Create Security Group task.

   Create an ISSG and assign your ISU to it. We recommend using *Learning_Integrations_Group* for the user name.

   See: ../../../authentication-and-security/configurable-security/security-groups/integration-security-groups/wvu1571267715376.dita.
3. Access the Maintain Permissions for Security Group task to update domain security policies.
4. Add the *Set Up: Learning Catalog* domain to the Report/Task Permissions section with *View* and *Modify* access, and the Integrations section with *Put* access.
5. Run the Activate Pending Security Policy Changes task.

   Activate pending security policy changes for the integration.
6. Access the Edit Tenant Setup - HCM task.
7. Select the Enable Calendar Integration check box.

   Select a calendar provider and enter ISU details in the Learning Calendar Integration section.

Result

Workday assigns the ISU to the *Learning_Integrations_Group* security group so that they can run the integration for your organization.

Next Steps

Create and manage calendar invites that automatically synchronize with course offering updates and enrollment events.

Steps: Set Up Integration System User Security for Virtual Classroom Integration with Microsoft Teams

Prerequisites

- Create and configure your virtual classroom integration with Microsoft Teams.

  See: Steps: Set Up Virtual Classroom Integration with Microsoft Teams on page 1978.
- Security: These domains in the Integration and System functional areas:
  - *Integration Security*
  - *Security Configuration*

Context

All virtual classroom integrations with Microsoft Teams require an integration system user (ISU) and integration system security group (ISSG). Each integration system must have a unique ISU. It's Workday policy to use an ISU with only the appropriate access for integration purposes. Administrators shouldn’t configure any integration security.

Steps

1. Access the Create Integration System User task.

   Create an ISU. We recommend using *Learning_Integrations_User* for the user name.

   - Each integration system must have a unique ISU.
   - Keep the session timeout value of zero to prevent session expiration.
   - Select the Do Not Allow UI Sessions check box to prevent the ISU from signing into Workday through the user interface.

   Security: The *Integration Security* domain in the Integration functional area.
2. Access the Create Security Group task.

   Create an ISSG and assign your ISU to it. We recommend using *Learning_Integrations_Group* for the user name.

   Security: The *Security Configuration* domain in the System functional area.
3. Access the Maintain Permissions for Security Group task to update domain security policies.
4. Access the *Manage: Learning Virtual Classroom Integration* domain.

   Add the ISSG to the Report/Task Permissions section with *Modify* access and Integration Permissions section with *Put* access so that the integration can run.

   Security: The *Manage: Learning Virtual Classroom Integration* domain in the Learning Core functional area.
5. Run the Activate Pending Security Policy Changes task.

   Activate pending security policy changes for the integration.

Result

Workday assigns the ISU as part of the virtual classroom integrations with Microsoft Teams security group.

Next Steps

Create course offerings that include virtual classroom lessons for instructor-led training.

Steps: Set Up Virtual Classroom Integration with Microsoft Teams

Prerequisites

- Register a new application in the Microsoft Azure portal:
  - Take note of its Application (Client) ID value.
  - Give the application these API permissions:
  - *OnlineMeetings.ReadWrite.All*
  - *User.Read.All*
  - Add a Client Secret to this application.

  Note: To create calendar events, the integration needs ReadWrite access to a single mailbox defined in the tenant setup. Workday uses this to send calendar events to learners and instructors. See Configure Application Access Policy and Limit Application Permissions to Specific Exchange Online Mailboxes to configure policy rules using Microsoft Powershell to restrict ReadWrite access to one mailbox.
- Workday adds the Client ID that you generate from Microsoft Azure to your tenant.
- Configure policy rules using Microsoft PowerShell.
- Create and configure a new integration system.

Context

You want to integrate Workday Learning with Microsoft Teams so that you can create course offerings that include virtual classroom lessons for instructor-led training. This lesson type enables large, geographically diverse populations to join virtual classes for instructor-led training.

Steps

1. Create an Integration System User (ISU) for virtual classroom integration with Microsoft Teams.

   See Steps: Set Up Integration System User Security for Virtual Classroom Integration with Microsoft Teams.
2. Access the Create Integration System task.

   Add values for system name and template. We recommend you use the *Workday-delivered Learning Virtual Classroom for MS Teams Template* template.

   Security: The *Integration Build* domain in the Integration functional area.
3. From the related actions menu of the View Integration System report, select Workday Account.

   Select Edit Account for Integration System and add your ISU on the Workday account.
4. From the related actions menu of the View Integration System report, select Configure Integration Attributes for Integration System.

   Populate values for these fields:

   - Client ID: From your Microsoft Azure setup.
   - Client Secret: From your Microsoft Azure setup.
   - Tenant: Your Microsoft tenant ID.
   - Mailbox: To generate the Microsoft Teams link.

   Security: The *Integration Build* domain in the Integration functional area.
5. Access the Manage Course Offering business process and navigate to the Edit Business Process Definition task from the related actions.

   Add a new step and select *Integration* for the Type. This action prompts you to configure the integration system. If you've followed these steps, you don't need to select *Run as User*, as the integration automatically selects your ISU. Select your integration, and click *OK*.

   Use the Integration System - Proposed report field to create a condition rule so that this step only runs when the associated lesson has selected the integration. We recommend using different condition rules when you enable more than 1 integration, or instance of the integration, so that the correct condition rule runs for the correct integration.

   These domains in the System functional area:

   - *Business Process Administration*
   - *Manage: Business Process Definitions*
6. (Optional) Configure attendance synchronization.

   Give *OnlineMeetingArtifact.Read.All* API permission to the application in the Microsoft Azure portal.

   Access the Learning section of the Edit Tenant Setup – HCM task. From the Select Virtual Classroom Integrations prompt, select the Microsoft Teams integration you want to use.

   Enter values on the Minimum Percentage for Full Attendance and Minimum Percentage for Partial Attendance fields. Select the Track Non-Attendance for Virtual Classroom check box.
7. (Optional) Set an instructor as a co-organizer of virtual classroom meetings so that they can create and manage breakout rooms.

Result

You can now create course offerings that include virtual classroom lessons for instructor-led training.

Note: Workday doesn't support unlimited capacity for course offerings that include virtual classroom lessons with Microsoft Teams integration.

Next Steps

See FAQ: Attendance Synchronization for Virtual Classroom Integration with Microsoft Teams and Zoom.

Related Information
Reference
2022R2 What's New Post: Virtual Classroom Integration with Microsoft Teams
2023R1 What's New Post: Virtual Classroom Integration with Microsoft Teams - Attendance Synchronization
Reference: Microsoft Environments for Workday Learning on page 2026

Steps: Set Up Virtual Classroom Integration with Zoom

Prerequisites

- Create and activate a server-to-server OAuth application in Zoom.
  - Add a name to your application. Workday recommends that you use *Learning Virtual Classroom Integration* for the application name.
  - Take note of its *Account ID*, *Client Secret*, and *Client ID*.
  - Add a short description, contact name, and developer contact information. You can populate the contact information fields at your own discretion.
  - Add these scopes:
    - *user:read:user:admin* - To ensure all instructors are users in the zoom tenant.
    - *meeting:write:meeting:admin* - To create meetings on behalf of default mailbox and organizer mailboxes
    - *meeting:delete:meeting:admin* - To delete old meetings, when editing lessons to update the organizer field.
    - *meeting:read:list_past_participants:admin* - To get attendance records for meetings created by Workday integration. This scope is optional. This is required if you’re planning to use Virtual Classroom Integration with Zoom - Attendance Synchronization that will be delivered in the future release.
- Create a default Zoom account associated with a mailbox for this integration.
- Security: *Manage: Learning Virtual Classroom Integration* domain in the Learning Core functional area.

Context

You want to integrate Workday Learning with Zoom to enable you to automatically create Zoom meeting links when scheduling virtual classroom lessons in course offerings. This will improve the learning admin experience for scheduling virtual classroom lessons and enhance the virtual classroom lessons for your global workforce.

You can add an organizer for a Zoom virtual classroom lesson. The organizer's mailbox associated with the Zoom account will be used to schedule a Zoom meeting, and the organizer will be the host for the virtual classroom lesson. If you enable calendar integration, Workday sends a meeting invite with a Zoom meeting link to learner's Outlook or Google calendar.

If you don't add an organizer on the course offering with a Zoom virtual classroom lesson, then the Zoom account associated with the default mailbox will be used to generate the Zoom link. Workday strongly recommends that you update the course offering and add the lesson level instructor and organizer after you identify an instructor to avoid limitations from Zoom related to concurrent meetings.

Note: Your integration will fail if you schedule or update an offering with an organizer who isn't in your Zoom tenant.

Note: Workday recommends caution when testing this feature in non-production environments as real email invites will be sent to learners' mailboxes.

Steps

1. Access the Create Integration System User task.

   Create an Integration System User (ISU). We recommend using *Learning_Integrations_User* for the user name.

   - Each integration system must have a unique ISU.
   - Keep the session timeout value of zero to prevent session expiration.
   - Select the Do Not Allow UI Sessions check box to prevent the ISU from signing into Workday through the user interface.

   Security: The *Integration Security* domain in the Integration functional area.
2. Access the Create Security Group task.

   - Your Type of Tenanted Security Group is *Integration System Security Group (Unconstrained)*.
   - We recommend you use *Learning Integration Group* for the user name.
   - Assign the ISU that you created to this security group.

   Security: *Security Configuration* domain in the System functional area.
3. Access the Maintain Permissions for Security Group task to update domain security policies.
4. Access the *Manage: Learning Virtual Classroom Integration* domain.

   Add the ISSG to the Report/Task Permissions section with *View* and *Modify* access, and the Integration Permissions section with *Get* and *Put* access so that the integration can run.

   Security: The *Manage: Learning Virtual Classroom Integration* domain in the Learning Core functional area.
5. Run the Activate Pending Security Policy Changes task.

   Activate pending security policy changes for the integration.
6. Access the Create Integration System task to add values for the System Name and Template fields.

   We recommend you use the Workday-delivered *Learning Virtual Classroom for Zoom* template.

   Security: The *Integration Build* domain in the Integration functional area.
7. Run the View Integration System report.

   From the related actions menu:

   - Select Workday Account > Edit and add your ISU on the Workday account.
   - Select Configure Integration Attributes for Integration System and populate values for these fields:
     - Account ID: From the Zoom app you created on your Zoom setup.
     - Client ID: From the Zoom app you created on your Zoom setup.
     - Client Secret: From the Zoom app you created on your Zoom setup.
     - Mailbox: The mailbox associated to the default Zoom account that you created on Zoom Admin console.
     - Participant Limit: Populate this field based on the lowest limit that your Zoom licenses support. Example: If instructor A has a business license with a maximum participant limit of 300 and instructor B has an enterprise license with a maximum participant limit of 500, enter the participant limit as 300 in Workday.

   Security: The *Integration Build* domain in the Integration functional area.

8. Access the *Manage Course Offering* business process and navigate to the Edit Business Process Definition task from the related actions.
    a) Add a new step.
    b) Select *Integration* for Type.

       This action prompts you to configure the integration system. If you've followed these steps, you don't need to select *Run as User* as the integration automatically selects your ISU.
    c) Select your Zoom integration and click OK.

   Security: These domains in the System functional area:

    - *Business Process Administration*
    - *Manage: Business Process Definitions*
9. From the related actions menu of the new step, select Business Process > Maintain Step Conditions.
    a) In the Maintain Step Conditions task, select *Create Condition Rule* from the Rule prompt.
    b) In the Create Condition Rule task, enter Description.
    c) Create these 2 rule conditions:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Integration Systems - Proposed*	*any in the selection list*	*Value specified in this filter*	Zoom Integration System
Or	*Integration Systems - Current*	*any in the selection list*	*Value specified in this filter*	Zoom Integration System

10. Access the Edit Tenant Setup – HCM task.
11. Select a Zoom integration from the Select Virtual Classroom Integrations prompt.
12. (Optional) Configure attendance synchronization.

    Add *meeting:read:list_past_participants:admin* and *meeting:read:list_past_instances:admin* scopes to your server-to-sever OAuth application.

    Access the Learning section of the Edit Tenant Setup – HCM task. From the Select Virtual Classroom Integrations prompt, select the Zoom integration you want to use.

    Enter values on the Minimum Percentage for Full Attendance and Minimum Percentage for Partial Attendance fields. Select the Track Non-Attendance for Virtual Classroom check box.

Result

You can automatically add Zoom meeting links to courses or send meeting invites with Zoom meeting links to learner's Outlook or Google mailbox.

Next Steps

See FAQ: Attendance Synchronization for Virtual Classroom Integration with Microsoft Teams and Zoom.

Virtual Classroom Integration with Zoom

Configure Google Cloud Platform for Learning Calendar Integration

Prerequisites

Set up a Google Cloud account.

Context

Before you can enable Google Calendar integration for your Workday tenant, you must configure the Google Cloud Platform.

Steps

1. Sign into the Google Cloud Platform.
2. Configure the Google Cloud Platform.

   See the *GCP Configuration Steps* in Google Calendar Integration and Language Support.
3. Note the Service Owner Key in JSON format and organizer mailbox values from your Google Cloud Platform configuration.

   You'll need to enter these values in the Edit Tenant Setup - HCM task in Workday when you enable Google Calendar integration for your tenant.

Next Steps

Enable Google Calendar integration for your Workday tenant.

See Configure Google Calendar for Learning.

Register Your Client-Side Application for Learning Calendar Integration with Microsoft Outlook

Prerequisites

Set up administrator access to an Azure Active Directory (AD) tenant.

Context

When you register your client application for the Learning calendar integration with Microsoft Outlook, the Microsoft identity platform can provide authentication and authorization services for the application and its users.

You can configure permissions to enable the Learning calendar integration web API to:

- Access Microsoft Graph.
- Read and write calendars in all mailboxes.

Note: To create calendar events, the integration needs ReadWrite access to a single mailbox defined in the tenant setup. Workday uses this to send calendar events to learners and instructors.

Steps

1. Register the application in the Azure portal and add credentials:

   - Enter a display name that you can easily recognize as the client for the application. Example: *Learning Calendar*.
   - For Supported account types, select a suitable option for your organization.
   - Take note of your Application (client) ID and Tenant ID values, and add a client secret. You'll need these values for setting up your Microsoft Outlook integration in Workday.

   See Quickstart: Register an application with the Microsoft identity platform.

2. Add API permissions for the application.

   Enable the Learning calendar integration web API to access Microsoft Graph:

   - Add Calendars.ReadWrite as the application permission.
   - Grant admin consent for your client application.

   See Quickstart: Configure a client application to access a web API.
3. Configure policy rules using Microsoft Powershell to restrict ReadWrite access to one mailbox.

   See Configure Application Access Policy and Limit Application Permissions to Specific Exchange Online Mailboxes.

FAQ: Microsoft Outlook Integration with Workday Learning on page 2033

Create Stand-Alone Learning Lessons

Prerequisites

- Access the Manage Topics task to create learning topics that categorize your learning content.
- Configure Drive to manage access to, and security for, many file types. See Steps: Set Up Drive .
- Sign up for Workday Media to enable learners to consume media content.
- Create any videos or documents that you want to include as media lessons.
- Configure the *Manage Lessons* business process and the security policy in the Learning Core functional area.
- Security:

  These domains in the Learning Core functional area:

  - *Learning Access*
  - *Manage: Learning Content*

Context

You can create items of learning content that users can access as single stand-alone units or as part of a course.

Stand-alone lessons don’t require enrollment and are a good way to support peer-to-peer learning. They typically have a narrow focus on a single subject. Examples include:

- Course guides.
- Job aids.
- Recorded lectures.
- Software demonstrations.
- Videos.
- Any other item that learners can access on their own as a single unit.

Steps

1. Access the Create Lesson task.
2. As you complete the task, consider:

Option	Description
Title	Enter a unique title for the lesson. Note: While stand-alone lessons can't reuse other stand-alone lessons titles, you can reuse the stand-

Option	Description
	alone lesson title when building a lesson within a course.
Media	Select or drop a unique media file for each stand-alone lesson. Workday doesn't support SCORM or AICC packaged media files for stand-alone lessons.
Exclude From Recommendations	Workday populates these content container worklets on the Learning dashboard with recommendations for relevant learning content: • Based on Your Interests • Based on Your Skills to Develop • Most Popular • Popular in Your Role • Recently Added • Recommended for You • You Might Also Be Interested In Workday also includes learning recommendations on these reports: • Opportunity Graph (in the Popular for This Role section). • View Competency. Select this option to exclude the lesson from the results.
Exclude From Search and Browse	Select this option to exclude lessons from appearing in the Browse Learning Content report and global search results. Administrators, assessors, and instructors for excluded lessons can still view them using global search. If you've customized the Browse Learning Content report for your company, Workday recommends that you manually update the *Exclude from Search and Browse* filter on pre-existing reports.

3. (Optional) To enable learners to create and edit stand-alone lessons, add the *Employee as Self* security group to the Create Lesson initiating action on the *Manage Lesson* business process security policy.
4. (Optional) Add an approval or review step to the *Manage Lesson* business process.

Related Information

Concepts

Setup Considerations: Learning Content on page 1947

Tasks

Create Learning Courses on page 1986

Create Learning Courses

Prerequisites

- Create learning instructors.

  See: Steps: Set Up Learning Instructors on page 1888.
- Create any videos or documents that you want to include as media lessons.
- To add additional data that is specific to your organization, you can create custom fields for learning courses. You can only use these custom fields in calculated fields for your learning content.
- To get feedback on a course, course offering, or lesson, or to evaluate learner knowledge, you can add a survey. Before adding a survey as a lesson, access the Create Survey task. Create and launch the survey and select the Send via link option. Workday generates a link that Learning uses to enable you to add the survey as a lesson. You don't need to copy the link.

Security: These domains in the Learning Core functional area:

- *Learning Access*
- *Manage: Learning Content*
- *Set Up: Learning Catalog*

Context

Create a course and add lessons.

Steps

1. Access the Create Course task.
2. As you complete the task, consider:

Option	Description

Course Type	Select either:
	• *Create Blended Course*: Enables you to include these lesson types:
	  ◦ External Content.
	  ◦ In Person Classroom (Instructor Led) or Virtual Classroom (Instructor Led).
	  ◦ Media (video, packaged content, and documents).
	  ◦ Survey.
	  ◦ Acknowledgment lessons, which allow learners to acknowledge their understanding of learning content.
	  ◦ Training Activity lessons enable you to upload documents such as assessments, observations, or demonstrations for when a learner must demonstrate a manual training skill that a live trainer must sign off. Example: Warehouse forklift driving. A trainer teaches a learner how to drive a forklift and then the learner demonstrates their forklift driving

Option	Description
	ability. The training materials for this training activity lesson could include PDF documents such as a Warehouse Demonstration Manual that the learner must study, and a Forklift Assessment Checklist that the trainer uses to assess the learner's forklift driving. The trainer uses this live assessment to give the learner a *Pass/Fail* for the training activity lesson in Workday. A blended course is a template from which you can create unique course offerings. You can schedule offerings in different locations for instructor-led classroom training, and at different times, for both classroom training and webinars. Learners can then select the offering they want to enroll in. You can also use a blended course to create a digital course with different versions that contain only digital content. The blended course can contain any lesson combination of external content, media, and surveys. All course offerings relate to a blended course, so you can report on the course as a whole. Workday applies effective dating to blended courses, so you can: • Report on their changes over time. • Schedule course offerings based on the course version that you're viewing. A course version is effective until you add a new version. If you add a new version for a course, Workday replaces the current version. The current version expires unless its Effective Date is in the future. In that case, it remains available for editing so that you can plan future enhancements to the course. • *Create Digital Course*: Enables you to include any lesson type except Instructor Led and Training Activity lessons. You don't need to schedule digital courses, so course offerings don't apply.
Skills	(Optional) You can tag skills to your course using 1 of these prompt options:

Option	Description
	• By Category: To access pre-existing tenanted skills. • Recommended Skills: Machine learning produces a set of recommended skills based on the title and description of your content. • Create Maintained Skills: Enables you to create a new tenant-specific skill. Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
Language	(Optional) You can tag 1 or more languages to your course, enabling learners to find it when they browse the learning catalog by a specific language.
Security Category	To restrict access to the course by security category segment, either: • Select a security category. • Click Create Learning Security Category to create a new category and restrict the category and course by security segment. Note: Workday doesn't apply effective dating to this prompt, so changes to blended courses affect all course offerings.
Exclude from Recommendations	Workday populates these content container worklets on the Learning dashboard with recommendations for relevant learning content: • Based on Your Interests • Most Popular • Popular in Your Role • Recently Added • Recommended for You Workday also includes learning recommendations on these reports: • Opportunity Graph (in the Popular for This Role section). • View Competency. Select this option to exclude the course from the results.
Exclude from Search and Browse	Select this option to exclude courses from appearing in the Browse Learning Content report and global search results. Administrators, assessors, and instructors for excluded courses can still view it using global search.

Option	Description
	If you've customized the Browse Learning Content report for your company, Workday recommends that you manually update the *Exclude from Search and Browse* filter on pre-existing reports.
Disable Express Interest	(Optional) For offerings on blended courses, select this check box to disable the Express Interest button for learners.
Version Schema	(Optional) For blended courses, select a version schema. See: Create Version Schemas for Blended Courses on page 1998
Custom Version Label	You can specify a unique name for your versioned content so that learners can more easily identify which version to consume.
Version Notes	(Optional) For blended course types, enter rich text notes about the Version.
Effective Date	You can specify a date in the future to postpone availability for scheduling course offerings.
Time Value	(Optional) Helps learners gauge the amount of time they need to complete all of the lessons in the course, including any instructor-led lessons and digital content. Depending on how long you think the class lasts, overestimate and round appropriately. Example: if you select *Minutes*, round to the nearest 5 or 15 minutes when entering Total Course Duration.
Retrain Window Value	(Optional) Enter a number of either weeks or months to specify the time period of the retrain window. The retrain window triggers retraining content to display on the Required For You slider within the defined window. The Retrain Window recognizes a successful completion for initial assignments and retraining assignments if a learner completes the content when the Retrain Window is open.
Weeks/Months Before Expiration	Select either weeks or months in relation to the Retrain Window Value.
Enable Auto-Enrollment from the Waitlist	For blended course types, select this check box to enroll learners from a waitlist automatically when space in a course offering becomes available. Ensure that you also set the Waitlist Capacity field.
Minimum Enrollment Capacity	The minimum number of enrollments that make the course offering viable. The default is zero. If the number of enrollments doesn't meet this

Option	Description
	value, the course offering can still go ahead as scheduled. The value is for reporting purposes only.
Maximum Enrollment Capacity	For blended course types, specify the maximum number of learners who can enroll in a course offering. Enter a value greater than zero to enable learners to enroll.
Course Number	(Optional) Your company can use your own numbering scheme for courses. Enter the number that your company uses to identify the course.
Status	Indicates whether the digital course is: • Open: Open for enrollment. • Closed: No longer available for enrollment. On the Learning dashboard, learners who enrolled in a course, then started or completed it, can continue to access the course from the Progress menu.
Requires Enrollment	For digital courses, this setting indicates whether the course: • Requires enrollment (the default). The *Enroll in Content* business process applies to learner enrollments. • Is available on demand. If you clear the check box, when learners begin the on-demand course, Workday creates an enrollment record in the background to support robust reporting.
Waitlist Capacity	For blended course types, this value specifies the number of spaces on the waitlist. Enter a number greater than zero to configure a waitlist for the course.
Expiry Period	(Optional) Specify an expiry period that applies to enrollments for this course. You can create expiration rules that define learner group rule conditions and expiry periods for each group, on these grids: • Advanced Learning Expiration Rules • Advanced Learning Expiration Rules for Extended Enterprise Learners Access the Create Learner Group Rule task from the Learner Group Rule prompt to define condition rules, or select an existing rule. For extended enterprise learners, use the Create Extended Enterprise Learner Group Rule task.

Option	Description
	Workday automatically adjusts the expiry period of the course for learners who meet the rule conditions of a learner group rule. The expiration date, duration, or recurrence frequency setting is the default expiry period of the course for learners who don't meet the learner group rule conditions for any expiration rule.
Unlimited Capacity	(Optional) Indicates that there's no limit to the number of learners that can enroll in a course offering. Selecting this check box overrides the Maximum Enrollment Capacity value.
Units	Add the available unit types, or add additional unit types to the Units grid. Use the Manage Other Unit Types task (secured to the *Set Up: Learning Catalog* domain) to add additional unit types. When you add units to a course or course offering, Workday displays them on the View Course report so that learners understand the units associated with the content and their value.
Cost	Add the sales item to the Cost grid when creating or editing a course. Use the Create Sales Item task (secured to the *Set Up: Sale Item* domain) to create sales item to add it to the Cost grid. Course costs enable you to itemize and track the internal costs associated with offering a course. The total cost of the sales items that you add to a course is visible to learners who browse learning content. If you add multiple sales items to a course, you will only be able to report on the total of the sales items as you can't itemize sales items in custom reports.
Pricing	Enter the number of training credits that the course is worth in the Price (Training Credits) field. You can use these grids to set prices for groups of learners that are different from the default course price: • Advanced Pricing Rules for Workers • Advanced Pricing Rules for Extended Enterprise Learners

Option	Description
	Use the Create Worker Pricing Rule and Create Extended Enterprise Learner Pricing Rule tasks (secured to the *Manage: Learning Pricing Rules* domain) to configure condition rules for use in advanced pricing rules. This Pricing section only displays when you enable pricing configuration for at least 1 person type on the Edit Tenant Setup - HCM task. Select Enable E-Commerce check box to add a mandatory prerequisite step of completing a successful payment through a payment processor before the learner can consume the content. Enable E-Commerce check box only displays when you configure E-Commerce for Learning on the Maintain E-Commerce for Learning task.
Lesson Details	You can add multiple instructor-led and training activity lessons to blended courses. Before you add these lesson types, specify: • Allowed Instructors: Who can teach the classroom training and webinar lessons in the course. • Allowed Assessors: Who can assess the training activity lessons in the course. • Location: Active business sites where you can schedule classroom training for offerings.
Enforce Lesson Order	Select this check box to apply the order number sequence defined in the lesson order. When selected, learners can't access self-directed mandatory lessons (including media, surveys, and external link lessons) until they complete the previous required content. • When the course contains any virtual or in-person instructor-led training lessons, subsequent lessons are available after the end date of the instructor-led lesson. • When the course contains any required training activity lessons, subsequent lessons are available after grading and attendance is completed. To enforce the lesson order you need to have, at least, 2 mandatory lessons, with one of them being self-directed.

3. (Optional) In the Competencies grid, add competencies that relate to the course. Workday tags the course and course offering with the competencies that you add.
4. Click Add Lesson to add 1 or more lessons.

5. As you complete the lesson details, consider:

Option	Description
External Content	Enables you to link to external content or existing lessons by adding their URL to the Content URL field.
Lesson Order	Sequences the lessons within the course. The lessons display in sequence from 1-*n* by default. You can reorder the sequence, if necessary by changing the number in this field. To ensure learners complete the required lessons in the designated sequence, select the Enforce Lesson Order check box.
Make Lesson Mandatory	Indicates whether the lesson counts towards the course completion. Clear the check box if you want to make the lesson optional. You can add both mandatory and optional lessons.
Media	If you select a media file from Drive, to avoid access errors, ensure that you or the media owner shares the file in Drive with other learning administrators who might need to review and approve the course as part of the *Manage Course* business process. Restrict access to media content using: • The Edit Settings button on the View Media report. • The View Media button on the administrator view of the learning content. Setting the *Restrict Access* flag to *Yes* ensures that Workday restricts content based on the authentication policy.
Provide Course Grade	For media lessons, you can select the Provide Course Grade check box to nominate the lesson as the one that provides the overall course grade if it is: • A video that contains multiple choice questions as video interactions and has a Passing Score value set. • Packaged content.
Track Attendance	Indicates whether to record attendance for the instructor-led lesson for learners who enroll in the course.
Track Grades	Indicates whether to record grading details for the instructor-led lesson for learners who enroll in the course. If you select the check box, the primary instructor or a learning administrator must provide the overall course grade.

Option	Description
	The Grading Scheme that you can use to evaluate learner proficiency for the lesson is currently limited to *Pass/Fail*.

Result

Workday routes the course for review or approval, depending on your *Manage Course* business process configuration.

Next Steps

- Access the Edit Tenant Setup - HCM task to enable packaged content for your tenant.

  See: Setup Considerations: Packaged Content for Learning on page 2064.
- Access the Schedule Offering report and select a blended course. Create course offerings from this blended course if the *Manage Course* business process is complete.
- Use the Translate Business Object report to translate field values on the *Learning Course* business object in the *Learning: Learning – Course Management* category to support global learning.

  You can also edit translations from the related actions menu of the learning course or topic. Example:

  1. Access the View Digital Course report.
  2. Select the Administrative tab.
  3. Select Translation > Translate Instance as a related action on the Digital Course title or Topics name.

     See Translate Business Data.

Create Learning Course Offerings

Prerequisites

- Security: These domains in the Learning Core functional area:
  - *Manage: Learning Content*
  - *Set Up: Learning Catalog*
- Create a blended course.

  See: Create Learning Courses on page 1986.
- To add additional data that is specific to your organization, you can create custom fields for learning course offerings. You can only use these custom fields in calculated fields for your learning content.
- If you want to schedule an instructor-led classroom training lesson in a specific room at an existing business site location, ensure that you create a location with a Location Usages value of *Training Room* and a Superior Location that's a business site.
- To set unlimited enrollment capacity for a course offering, access the Edit Course Offering task or Schedule Offering report and select the Unlimited Capacity check box. You can only select or deselect this check box when there are no enrollments on the course offering, including cancelled, rescinded, or dropped enrollments. Once you set enrollments for a course offering to unlimited capacity and the offering has any enrollments, you can't switch back to limited capacity, and vice versa.

Context

Learning course offerings are specific instances of a course that are made available to learners for enrollment. The course offerings can be scheduled based on the version of a blended course.

A blended course serves as a template from which you can create unique course offerings, allowing for a combination of different lesson types, including external content, media, and surveys. Each offering is associated with specific dates and locations, providing learners with options that suit their needs.

Steps

1. Access the Schedule Offering report.
2. Search for the blended course that you want to schedule as a course offering.
3. The View Course report displays the current version. You can schedule the offering based on the current version, or click View beside a different version on the Versions tab. Click Scheduling to open the Schedule Course Offering task.
4. (Optional) Access the Configure Optional Fields task.

   You can mark these fields as required for the relevant lesson types on course offerings:

   - Instructor Led Lesson - Instructor
   - Instructor Led Lesson - Location
   - Language
   - Training Activity Assessor
   - Virtual Instructor Led Lesson - Instructor

   When you mark these fields as *Required for All*, they display as required on all tasks and web services where a course offering can be created or edited. If you don't mark them as required on the tasks or web services, they display as optional by default. You can also mark them as required for specific security groups only. Examples: Managers, Team Leads.

   Primary Assessors, Primary Instructors, and Primary Locations aren't supported fields on the Configure Optional Fields task. To make 1 or more of these fields required, you must configure a custom validation on the *Manage Course Offering* business process.

5. As you complete the task, consider:

Option	Description
Maximum Enrollment Capacity	Specify the maximum number of learners that can enroll in the course, if different for this offering. Enter a value greater than zero in this field to enable learners to enroll in the offering.
Update Status from Offering Dates	For courses with instructor-led lessons that aren't required learning, Workday automatically updates the Status field. Based on the start and end dates of the course offering, Workday moves the offering from *Open* to *In Progress*, to *Closed*. If you want to set the availability status manually, clear the check box. The status for closed course offerings that have passed their end date remains *In Progress* after you update grading and attendance if the instructor-led lessons are required learning.
Status	Indicates the availability status for the course offering: • Open: Open for enrollment. • In Progress: Course offering not available for enrollment. • Closed: No longer available for enrollment. Learners who have enrolled in, started, or completed the course can continue to access it from the Progress menu on the Learning dashboard.
Language	If the course is available in multiple languages, select 1 or more languages to enable learners to filter their search by a specific language when they browse the learning catalog.
Instructor Led Details	If the course offering contains instructor-led or training activity lessons, you can set: • Primary Instructors: Can enter grading and attendance results for the overall course and for all lessons in the course. Primary instructors can also override results that instructors enter for individual instructor-led training lessons. Required for in person classroom and virtual classroom lessons. • Primary Assessors: Can enter assessment results for training activity lessons. Primary assessors can also override results that assessors enter for individual training activity lessons. Required for training activity lessons. • Primary Location: The primary business site for the offering. You can schedule multiple lessons in different locations. Required for classroom lessons.

6. Add or edit lesson details that apply to the course offering. As you complete the details for instructor-led lessons, consider:

Option	Description
Location	For classroom training, you must either: • Select an existing location. • Configure ad hoc location details.
Time Zone	For classroom training, if you configure an ad hoc location, you must specify the time zone that corresponds to the location where the instructor will deliver the lesson. For virtual classroom training, you must specify the time zone that corresponds to the location where the instructor will host the virtual classroom lesson. When displaying virtual classroom start and end dates and times, Workday automatically localizes these details, based on your preferred time zone. Course offering start and end dates and times also reflect localized virtual classroom times. Classroom training lessons display in the time zone of the location on the lesson.
Organizer	Workday displays this field in the lesson level, only when you select Integration System for the Virtual Classroom Setup field and then select a Zoom integration for the Integration System field. If you select an instructor on a lesson for a zoom integration, the Organizer field becomes mandatory. Workday populates the Organizer field with the list of instructors selected in the Instructors field. Instructors and organizers must have a valid work email address associated with a Zoom account which is used to generate the Zoom meeting link.

Result

Learners can find courses and enroll in course offerings on the Learning dashboard. When they select the Select Offering task, the offerings table displays:

- A *Save* filter filter which learners can use to search and save results under a personalized name for future use. Example: Paris Location
- Course offerings by their start date.
- Cost and Version details only if you add values to them.
- Offerings that have capacity at the top of the list. It displays full offerings with waitlists at the bottom of the list.
- The lesson location on the primary table:
    - If no lesson location is configured, we display the primary location by default.
    - This can display multiple locations if lessons exist in multiple locations within a course.

Workday checks for an exact match between the learner location and the course location, and displays them first on the list but we don't apply a proximity check.

Instructors can view start and end dates and times for the offering lessons that they deliver on the Instructor Schedule Calendar.

Next Steps

- If you edit the time or date for a course offering that has a virtual classroom lesson, an update sends to all registered attendees with the new time or date for the Google or Microsoft Outlook calendar event that was created for the lesson.
- If the Track Attendance and Track Grades check boxes are selected on an offering, you can access the Manage Grading and Attendance task to record details for learners who are enrolled in the offering.
- Use the Translate Business Object report to translate field values on the *Course* business object in the *Learning: Learning – Course Management* category to support global learning.

  See Translate Business Data.
- Use the *Cancel Course Offering* business process to cancel a course offering and notify the enrolled learners and their managers. Workday hides canceled course offerings from the Browse Learning Content report so that learners can no longer view them.

Create Version Schemas for Blended Courses

Prerequisites

- Security: These domains in the Learning Core functional area:
  - *Manage: Learning Content*
  - *Set Up: Learning Catalog*
- Create a blended course.

  See: Create Learning Courses on page 1986.

Context

You can create version schemas for blended courses in your learning catalog, so that you can version your content consistently. This provides the ability to automatically label blended courses in your organization, and enables you to track and report details, such as content and learner consumption.

Steps

1. Access the Create Version Schema task.
2. As you complete the task, consider:

Option	Description
Schema Name	You can specify a unique name for your schema. Example: GMS Version Schema
Prefix	(Optional) You can specify prefix text to affix to the schema label. Example: Version
Major Version	Enter an numeric version label to identify the schema version. Example: 1

Option	Description
Increment	Enter the value by which you want to increment the version each time you make an update.
Postfix	(Optional) You can specify postfix text to affix to your schema label. Example: (INTERNAL)
Allow Minor Version	(Optional) Selecting this option enables you to make minor version updates. A minor update means that the version number adds an increment after the decimal point. Example: Version 1.1
Inactive	Select this option if you want to make your version schema inactive.
Schema Preview	You can preview the version schema label that displays to learners. Example: Version 1 (INTERNAL)

3. Click Submit on the Create Schema task to save your changes.
4. Navigate to your chosen blended course.
5. Open the Admin view and select Edit on the related actions menu.
6. To create a new effective version, select the Add New Version Effective Date option and select a date.

   The new active version of the course commences on this chosen date.
7. Navigate to the Versioning section of the Edit Course task.
8. Select a Version Schema from the drop-down list:
   - Select *Minor* (if the schema permits) or *Major* from the Version Update Type options.
   - Ensure that you've selected the Display Schema Label to Learners option.
   - Check the Schema Preview field to ensure that the version added by the schema is set to display for learners.
   - (Optional) Enter a Custom Version Label value.
   - (Optional) Add an explanation note to the Version Notes field that displays on the blended course. Example: 2024 Version for All Learners.
9. Click Submit on the Edit Course task to save your changes.

Result

- You've created version schemas and added them to your blended courses.
- Version details can be viewed when learners select the Enroll button. Learners can view which versions of learning content they've enrolled in and completed on the Learning tab of their Workday profile.

Example

If you want to rescind an earlier version of a blended course, we strongly recommend that you rescind in the correct order. This is a best practice and helps to avoid performance issues with your versions.

Example: You create multiple versions of a course and name them Version 1, Version 2, Version 3, and Version 4. You decide to rescind Version 2 of the course. To maintain order within your catalog, you should first rescind Version 4, then rescind Version 3 before you rescind Version 2, when Version 2 was created before Version 3 and Version 4.

Next Steps

You can create another new effective version by selecting Edit on the Edit Course task:

- Select the Add New Version Effective option.
- Select a future date.
- Select a Version Update Type.

You can update an existing version by selecting Edit on the Edit Course task:

- Select the Existing Version Effective option.
- Select a date between the current date and the new effective version.
- Select the version you want to update. The version label doesn't increment or change.

If you edit a schema that's used on a course, we update labels on the existing versions of the course to adhere to the new schema, including on the learner transcript.

Select View as Learner and navigate to Additional Course Details to view which version is used for the offering.

Navigate to the Versions tab of the Admin view for the learning content to:

- Add a new version.
- View a previously created version of a course. Versions effective in the past that were created before the version schema was added to a piece of learning content aren't given a number by the schema. Versioning starts at the current effective version, or if this doesn't exist, the first future effective version.
- View all versions.

Navigate to the Scheduling tab to:

- View all scheduled offerings.
- View a version of a specific offering.

Move Instructor-Led Classroom Training Online

Prerequisites

- Configure the *Manage Course Offering* business process security policy in the Learning Core functional area. Grant access to security groups for the *Update Offering to Online Only* initiating action.
- Schedule webinar sessions to host online training. You'll need the webinar URL and login details before you convert the training.
- Run the Manage Learning Content report to select the blended course containing the instructor-led classroom training lessons that you want to move online.

Context

You can move an existing course offering online by changing its instructor-led classroom training lessons to webinars.

Steps

1. On the View Course report for the blended course, select the Scheduling tab.
2. Select Course > Update Offering to Online Only from the related actions menu of the course offering.
3. Select lessons to convert from classroom training to webinars.
4. Enter the webinar details for each lesson. For Time Zone, specify the time zone of the location where the instructor will host the webinar.

Next Steps

- On the course offering, verify that Workday has converted the instructor-led classroom lessons to instructor-led webinars.
- Notify all instructors and learners of your changes.

Create Learning Programs

Prerequisites

- Create any courses and stand-alone lessons that you want to include as content items.
- Create any skills that you want to tag to a program.

  See: Enable Skills Cloud on page 1854.
- To add additional data that is specific to your organization, you can create custom fields for learning programs. You can only use these custom fields in calculated fields for your learning content.
- Configure any external content that you want to include as content items.
- Security: These domains in the Learning Core functional area:
  - *Manage: Learning Content*
  - *Set Up: Learning Catalog*

Context

Workday Learning programs enable you to:

- Group courses and lessons.
- Create learning campaigns using a single program content item that includes multiple courses and lessons.

Programs make it easier for:

- You to create required learning campaigns that cover an entire curriculum.
- Users to enroll in required learning.

When learners click Begin on the View Learning Program report, Workday effectively enrolls them on the program as part of a background process.

Workday enrolls learners in programs, but doesn't initiate a business process, so learners don't need approval to enroll. Workday initiates the *Enroll in Content* business process for each course that the learner enrolls in within a program.

Steps

1. Access the Create Program task.
2. As you complete the task, consider:

Option	Description
Skills	(Optional) You can tag skills to your program using 1 of these prompt options: • By Category: To access pre-existing tenanted skills.

Option	Description
	• Recommended Skills: To access recommended skills, if you've opted into Skills Cloud and signed the Innovation Services Agreement. Machine learning produces a set of recommended skills based on the title and description of your content. • Create Maintained Skills: Enables you to create a new tenant-specific skill. Security: *Set Up: Skills and Experience* domain in the Worker Profile and Skills functional area.
Language	(Optional) You can tag 1 or more languages to your program, enabling learners to find it when they browse the learning catalog by a specific language.
Requires Enrollment	• If selected learners view an Enroll button on the program, which ensures that their manager approves their enrollment before they can start consuming the content. • If not selected learners view a Start Program button. They can start consuming the content immediately and Workday creates an automatic enrollment for them in the background.
Security Categories	Select or create a security category to restrict access to the program by security segment.
Exclude from Recommendations	Workday populates these content container worklets on the Learning dashboard with recommendations for relevant learning content: • Based on Your Interests • Most Popular • Popular in Your Role • Recently Added • Recommended for You Workday also includes learning recommendations on these reports: • Opportunity Graph (in the Popular for This Role section). • View Competency. Select this check box to exclude the program from the results.
Exclude from Search and Browse	Select this option to exclude programs from appearing in the Browse Learning Content report and global search results.

Option	Description
	Administrators, assessors, and instructors for excluded programs can still view it using global search. If you've customized the Browse Learning Content report for your company, Workday recommends that you manually update the *Exclude from Search and Browse* filter on pre-existing reports.
Version	(Optional) Enter an alphanumeric version label.
Version Notes	(Optional) Enter rich text notes about the Version.

3. (Optional) In the Cost grid, add sales items that relate to the program.
4. (Optional) In the Competencies grid, add competencies that relate to the program. Workday tags the program with the competencies that you add.
5. (Optional) Configure program expiration rules.

   In the Expiration Rules section, configure expiry periods for:

   - Default Expiration Rule.
   - Advanced Learning Expiration Rules for Workers.
   - Advanced Learning Expiration Rules for Extended Enterprise Learners.

   See: Concept: Expiry Periods for Learning Content on page 2014
6. Click Add Content to add learning content from the learning catalog in your tenant.

   You can add:

   - Blended courses.
   - Digital courses (both internal and external third-party content).
   - Lessons (both internal stand-alone lessons and external content).

   As you add content items, consider:

Option	Description
Enforce Content Order	Select this check box to apply the order number sequence defined in the content order. When selected, learners can't complete mandatory content items until they successfully complete the previous required content items. • When a course or course offering requires enrollment, learners can enroll but won’t be able to start the course until they complete the previous required content items. • When the program contains any blended courses with offerings with virtual or in-person instructor-led training, subsequent required content is not available until grading and attendance is completed. To enforce the lesson order you need to have, at least, 2 mandatory content items in the program.

Option	Description
	Order sequencing doesn’t apply when: • Learners access the course outside of the program. Example: using the global search, using reports, or sliders. • Learners have successfully completed the content outside of the program prior to enrollment and Recognize Previous Completion is enabled.
Skip Enrollment Approval	Indicates whether you want to enable learners to skip enrollment approval for content within a program.
Requires Successful Completion	Indicates whether the course or lesson is mandatory. You need to complete mandatory content items to complete the program successfully.
Recognize Course Expiration Dates	Indicates whether Workday recognizes expiration periods on learning content for courses in the context of the program. If you select this check box and the Recognize Previous Completion check box, we recognize previous completions up until the point of expiry. If a learning content is in an expired state, the program won't move to completed until the expired content is completed. If you don't select this check box, but select Recognize Previous Completion, we ignore the expiry and the program moves to completed.
Recognize Previous Completions	Indicates whether the program recognizes previous completions for the content item in the learning transcript of the learner. When you select this check box, you must select one of these options to specify whether to recognize: • All Previous Completions. • Completions that occur on or after the As-of Date. • Completions that occur Within Date Range. When learners complete the content item on the same day that they enroll in a program, the program recognizes the completion even if you: • Don't select Recognize Previous Completions. • Set a Within Date Range value and the completion date is outside the date range. When you select this check box but not Recognize Course Expiration Dates, learning

Option	Description
	content for the course won't expire in the context of the program.

Result

Workday routes the program for review or approval, depending on your *Manage Program* business process and generates a unique reference ID for the program. You can also overwrite the reference IDs with legacy reference IDs using the *Manage Learning Program* web service.

Next Steps

To search for the program, run the Manage Learning Content report.

Workday 2021R2 What's New Post: Program Expiration Rules

View and Edit Learning Content

Prerequisites

Security: These domains in the Learning Core functional area:

- *Learning Access*
- *Manage: Learning Content*
- *Manage: Learning Course Enrollments*
- *Set Up: Learning Catalog*

Context

You can use the Manage Learning Content report to search for learning content, which can include:

- Blended Courses.
- Digital Courses (with Access Type of Requires Enrollment or On Demand).
- Lessons (stand-alone).
- Programs.

You can use the Edit Course task to edit a specific blended or digital course. You can search for a course by either:

- *Topic*
- *Delivery Mode*:
    - *Hybrid* (contains both instructor-led and media lessons).
    - *In-Person* (contains instructor-led lessons only).
    - *Self-Directed* (contains media lessons only).

For courses with hybrid or in-person delivery modes, you can:

- Update a specific version, based on its effective date, or select the current version.
- Add a new version with a different effective date.

You can select the View as Admin button to view content as an administrator and to enable Workday to remember this setting preference. To consume learning content, learning administrators and trainers must select the View as Learner button on the learning reports or access the content through the Learning dashboard.

Steps

1. Run the Manage Learning Content report.
2. View and edit details for learning content. Workday displays 1 of these reports, based on the content type that you select:

<table>
<tr><th>Report</th><th>Enables you to:</th></tr>
<tr><td>View Course</td><td>View and edit a particular version or add a new version of a blended course on the Administrative tab. The Versions section lists all versions where the Manage Course business process has completed.

If you edit non-effective-dated fields, Workday updates the fields on all course versions. Non-effective-dated fields include:
Course Title
Skill
Description
Topics
Inactive
Cover Image
Workday applies effective dating to all other fields on courses. If you edit effective-dated fields in a course version, your changes apply only to that version.
Schedule course offerings from the version that you're viewing. Select More > Schedule.
Update course offerings to the version that you're viewing and apply version labels and notes, if available on that version. Example: When you edit these values on a course version, you can</td></tr>
</table>

Report	Enables you to:

	also update these values on 1 or more offerings:
	• Contacts
	• Cost
	• Expiry Period
	• Units
	Select More > Update Offering to Version to select 1 or more offerings to update.
	Workday updates the selected offerings and adds, removes, or replaces these lesson types:
	• External Content
	• Media
	You can't update these lesson types in the selected course offerings, but you can update the offering version:
	• Instructor-led classroom or webinar lessons.
	• Surveys.
	• Course offerings with lesson-order conflicts.
	• Drill into course offerings on the Offerings grid on the Administrative tab to:
	  • View and edit a course offering.
	  • Enroll your team in a course offering.
	  • Manage the grading and attendance roster.
	  • Drop enrollments.
	  • Manage or view waitlists.
	  • Add a course offering to your calendar.
	• Create course reminders.
	• Run the View Content Equivalency Rules report when there are 1 or more equivalency rules associated with the course.

View Digital Course	• View and edit a digital course. • Enroll your team in a digital course. • Drop enrollments. • Run the View Content Equivalency Rules report. Workday doesn't apply effective dating to digital courses.
View External Lesson	• View a third-party external lesson.

Report	Enables you to:
	• Inactivate or activate an external lesson.
View External Digital Course	• Launch a third-party external digital course. • Enroll your team in an external digital course. • Drop enrollments for your team in an external digital course. • Inactivate or activate an external digital course. You can't play inactive courses. • Mark an external digital course as complete. • Run the View Content Equivalency Rules report.
View Learning Lesson	View and edit internal stand-alone lesson details. You can't edit videos or documents after you submit lessons.
View Learning Program	• View and edit a particular version or add a new version of a program on the Administrative tab. The Versions section lists all versions where the *Manage Program* business process has completed. • View program content items.

From the administrator view, you can also access the AI Summarize Feedback tab to use Generative AI (GenAI) to summarize user feedback comments on courses, lessons, and programs. Note: Feedback summary is not available for external content.

Result

If you update a media file in a digital course, these are the impacts on your learners:

- For learners who have completed the course prior to replacing the media file, the course will remain complete, but the lesson with a new media file within the course will be incomplete. If learners click the View Course Again button, the new media file will be available.
- Learners who have not started the course or are in progress need to complete the lesson with the new media file.

Next Steps

- Manage reminders for your learning content.

  See: Create and Manage Reminders for Learning Content on page 2090.
- Add third-party material to your learning content.

  Concept: Packaged Content on page 2069

Related Information

Tasks

Steps: Set Up Learning Content Description Generation and Revision on page 1971

2025R1 Feature Release Note: AI Summarization of Content Feedback

Create Learning Equivalency Rules

Prerequisites

- Configure the *Manage Equivalency Rule* business process definition.
- Security: These domains in the Learning Core functional area:
  - *Manage: Learning Content*
  - *Set Up: Learning Catalog*

Context

You can create equivalency rules so you can define learning content as equivalent to 1 or more other content, improving compliance management in your organization. Equivalencies support your curriculum planning and simplify how learners find equivalent content to satisfy learning requirements.

When a learner retakes learning content that satisfies equivalency rules, Workday creates a new equivalent learning record.

When a learner completes an equivalent course, Workday creates:

- An equivalent record for the assigned course using the expiration from the assigned course.
- A retraining record for the assigned course.

Example: You assign a Digital Course A to a learner and, instead, the learner completes a Blended Course B, which is an equivalent course. The learner gets an equivalent record for the Digital Course A, which closes the assignment, creating a retraining record based on the equivalent record rather than the enrollment. Digital Course A will appear in the Required For You slider based on the expiration date of the assigned course (Digital Course A). On viewing Digital Course A, the learner can also view the equivalent Blended Course B.

When learners complete 1 or more content that is equivalent to a particular content, Workday displays an *Equivalency* status on the thumbnail image for that content. We display this status to indicate that learners don't need to complete the content because they've already earned an equivalency from another content. We only display this status when learners haven't interacted with the content. If they enroll in, start, or complete the content, we override the equivalency and update the thumbnail to display 1 of these statuses:

- *Not Started*
- *In Progress*
- *Completed*

Note: If a learner has been mass enrolled into content by a learning administrator, they have a *Not Started* enrollment. If they complete an equivalent content, they satisfy the assignment and Workday removes it from the Required for You worklet. Their enrollment in the original content remains marked as *Not Started* until they complete it or drop it.

When required learning content is due or overdue, or content is due to expire, we display the due date or expiration date and 1 of these statuses:

- *Due*
- *Overdue*
- *Expired*

When an equivalent record is made inactive, it's ignored by Workday and isn't counted.

Steps

1. Access the Create Learning Equivalency Rule task.

2. As you complete the task, consider:

Option	Description
Singular Equivalency Rule	Enables you to add multiple contents into the Source and Target fields.
Group Equivalency Rule	Enables you to make multiple contents equivalent to each other quickly, so learners can gain equivalency in multiple contents.
Source	The learning content that learners must complete to achieve an equivalency in the Target content. Enter a single content item in the row to specify that learners must complete 1 source item in order to generate the equivalency record. Create separate rules of single content items if you want to provide learners with a choice of equivalency options. Enter multiple content items in the same row to specify that learners must complete all source items in order to generate the equivalency record.
Target	The learning content that the learners achieve the equivalency in by completing the Source content.
Two-Way	Indicates that learners can take learning content in the Source or Target fields and achieve an equivalency in either. This option applies only to singular equivalency rules.
Display Equivalency Records on Learning History	Select to display the achieved equivalency in the Learning History section of the Learning tab on the Career profile group. Workday displays a row for each equivalency with a Record Type of *Equivalent Record*.
Display Equivalency Options on Course	Select to display an Equivalent Options section on these reports: • View Course • View Digital Course • View External Digital Course This section indicates whether learners can complete equivalent content instead of the selected content. Learners must complete all content listed under a particular option to earn the equivalency. To make it easier for learners to earn equivalencies, we display the equivalency group option with the least amount of content left to complete first.

Result

Workday routes the learning equivalency rule for review or approval, depending on your *Manage Equivalency Rule* business process configuration.

Next Steps

- Run the Manage Learning Equivalency Rules report to view and edit singular and group equivalency rules in your tenant.
- Run the Manage Learning Content report to search for a particular course that has an associated equivalency rule. Select View Content Equivalency Rules on these reports:
  - View Course
  - View Digital Course
  - View External Digital Course
- Create custom reports using the Learning Equivalency Record report data source to report on:
  - Equivalency records.
  - Related learner and learning content that granted the equivalency.
- Create a report using the Learning Record report data source to report on equivalency records alongside Learning Enrollments.
- Users can run the My Transcript report to view equivalency records in chronological order.

Reference

2023R2 What's New Post: Learning Equivalency Retraining

Create Learning Prerequisite Rules

Prerequisites

Security: These domains in the Learning Core functional area:

- *Manage: Learning Content*
- *Set Up: Learning Catalog*

Use your learning catalog to identify the prerequisite rules you want to create.

Context

You can create prerequisite rules that define completion of 1 or more courses or programs as a prerequisite to the enrollment or consumption of other learning content. Prerequisites enable you to manage completion of content in your learning catalog.

Workday replaces the enrollment option with a View Prerequisites button when a learning course or program has related prerequisites that learners must complete before they can enroll in the target content. Workday continues to indicate these prerequisites by displaying a Pending Items button on the target content until learners successfully complete the prerequisite content.

Steps

1. Access the Create Learning Prerequisite Rule task.
2. As you complete the task, consider:

Option	Description
Target	The learning course or program that learners can consume once they complete the required prerequisite items.

Option	Description
Qualifier	Indicates whether learners must either complete or enroll in the prerequisite items.

3. Create rules for the prerequisite content that specify the learning course or program that learners must complete or enroll in before they can consume the target content:

Option	Description
AND	Enter multiple prerequisite items in the same row. Example: Enter *Project Design* and *Project Metrics* in the same row to specify that learners must complete both items before consuming *Project Management*.
OR	Enter each prerequisite item in a separate row. Example: Enter *Project Design* in 1 row and *Project Metrics* in a separate row to specify that learners complete either item before they can consume *Project Management*.

Result

Workday displays details of the rules you've created for the content on the View Learning Prerequisite Rule report.

Next Steps

Run the Manage Learning Prerequisite Rules report to view and edit all prerequisite rules in your tenant.

Create Observational Checklists

Prerequisites

- Configure the *Manage Observational Checklist* business process and security policy in the Staffing functional area.
- Security: *Manage: Observational Checklist* in the Learning Core functional area.

Context

Observational Checklists help you provide a structured framework for assessing your learners. You can create detailed observational checklists and manage them through Get Observational Checklists and Manage Observational Checklist web services and Manage Observational Checklist business process.

You can design comprehensive observational checklists with a clear hierarchy of sections, tasks, and specific evaluation criteria, ensuring consistent and thorough assessments.

Note: Workday doesn’t support adding Observational Checklists as course lessons in learning content. We're targeting to support this in a future release.

Steps

1. Access the Create Observational Checklist task.
2. Enter these values:

Field	Value
Title	A title for the observational checklist.

Field	Value
Description	A description to the observational checklist.
Language	Select a language for the observational checklist. This contributes to an easy and efficient search experience by prioritizing and indexing observational checklists based on language preferences.
Allow Feedback	Select this check box to receive feedback on this checklist.

3. Click Add Section to add sections to the checklist.
4. Enter these values:

Field	Value
Order	Workday displays the unique order for the section. You can edit this field to change the order of the sections.
Title	A unique title for the section.
Description	A description for the section.

5. Click + Add to add a task to the section.
6. Enter these values:

Field	Value
Task Title	A unique title for the task.
Task Description	A description for the task.
Evaluation Criteria	Click + to add title and description for the evaluation criteria.

7. Click + Add to add another task above the existing task.

   You can add a task below the existing task by clicking the 3 dots on a task.
8. Click Save for Later to save the changes if you want to exit the observational checklist without submitting it.
9. Click Submit.

Result

Workday creates the observational checklist, which you can edit to create the revisions for the same checklist.

Configure Learning Content Highlights Rules

Prerequisites

Security: *Set Up: Learning Catalog* domain in the Learning Core functional area.

Context

You can use condition rules for specific learner groups to determine which learning content items display in the Highlights worklet on the Learning dashboard.

Steps

1. Access the Configure Learning Content Highlights task.
2. As you complete the task, consider:

Option	Description
Order	Indicates the order in which the rules apply. When learners are eligible for the same content under different rules, Workday only displays the first instance in the Highlights worklet.
Rule	Select or create a learner group rule for learners within the company or extended enterprise learners.
Display Until	Select a date to indicate when Workday should no longer display the content in the worklet.
Content	Select 1 or more content items to display for each rule, adding a row for each.
Order	In the subsection, select the display order for the content items in the worklet.

Next Steps

Configure the Highlights worklet on the Learning dashboard.

Configure Dashboard Content

Concept: Expiry Periods for Learning Content

Workday enables you to set an expiry period for courses and programs. For compliance or local regulations, you might need learners to re-enroll in content after a certain amount of time, which you can determine with an expiry period. Expiry periods enable you to manage retraining needs across your organization, based on required learning that originates from:

- Learning campaigns.
- Learning administrator mass enrollment.
- Manager enrollment.

We display an *Overdue* status label on learning content that learners don't complete prior to the expiration date set on the content. You can also remind learners to complete required content or require workers to retake content for multiple reasons, ensuring they receive regular and updated training.

Expiration Date and Expiration Duration

When specifying an expiry period for a course or program, you can select either a:

- Date: The expiration date automatically displays on the learner history after the learner completes their learning content .
- Duration: The expiration duration automatically calculates an expiration date relative to the date that the learner completes their learning content .
- Recurrence Frequency: The expiration recurrence frequency calculates the next expiration date based on the current expiration date and your preferred recurrence frequency. Example: The current expiration date is January 15. You configure the expiry period to recur every 6 months. The next expiration date is July 15.

The expiration date, duration, or recurrence frequency displays on the Administrative tab when you're viewing the content and on the Learning report on the Career profile group.

You can mass reset expiration dates on learning records that have a future expiration date using the Reset Expiration Date on Learning Records task.

To reset expiry periods on completed enrollments to zero, select the check box for 1 or more learning records and clear the Expiry Period value. Workday removes the expiry periods from the selected learning records.

Workday automatically runs a daily background job to recalculate expiration dates on learning records based on your Expiry Period settings. This update doesn't apply to expiration dates you reset manually using the:

- Reset Expiration Date on Learning Records task.
- *Put Learning Enrollment* web service operation.

When loading enrollments using the *Put Learning Enrollment* web service operation, the *Manual Expiration Override* flag indicates whether to:

- Allow the job to override the expiration date. Set the flag to N (false).
- Prevent overrides. Set the flag to Y (true).

When the expiration date is in the past, the background job sets the expiration date to today's date.

Retrain Window

You can configure a retrain window to specify a time period to display retraining content on the Required For You slider, ensuring that learners complete retraining within the defined window.

Workday displays content on the Required For You slider and opens the retrain window on the earliest of these dates:

- Start of retrain window (if configured on the content).
- Course reminder date (if configured).
- Content expiry date.

For content with a Recurrence Frequency expiry period, learners must complete their retraining assignment within the retrain window to view the next expiration date. Once the current expiration date on the course has passed, the current and next expiration dates update in line with the recurrence frequency set on the content.

The Retrain Window recognizes a successful completion for initial assignments and retraining assignments if a learner completes the content when the Retrain Window is open:

- Learners who complete content for the first time inside the Retrain Window receive the next expiration date for their retraining assignment if they successfully complete the content.
- Learners who complete content for the first time outside the Retrain Window receive the current expiration date on their retraining assignment if they successfully complete the content.

Expiration Date Reminders and Statuses

When you view a course or program that has an expiry period, you can configure reminders that automatically notify learners about the expiration date of their completed enrollment. You can configure Workday to send reminders on the expiration date or on a date relative to the expiration period. Workday doesn't send a reminder if the course or program has already expired.

For courses and programs with configured reminders, we display the required learning content on the Required for You worklet when the first reminder triggers, with a status of *Due* and their due date on their content thumbnail images. If learners don't complete the content by the due date, we display an *Overdue* status, to indicate that that the learning content is still available but they need to update their completion.

If there are no reminders, we display the *Overdue* status directly.

Advanced Learning Expiration Rules

When you're creating or editing a learning course or program, you can create learner groups and define expiry period rules that apply to different learner groups. Example: In an organization, office staff is required to take a manual handling course every 2 years but engineers are required to take the course annually. You can set up a learner group for office staff and a learner group for engineers to specify different learning expiration rules.

If a learner doesn't meet the rule conditions of the learner group, the default expiry period of the content applies to their enrollment. If a learner meets multiple rule conditions, the first advanced learning expiration rule in the table will apply to their enrollment.

Concept: Completion Status for Learning Content

Learning Transcripts

Workday displays a learning transcript for each learner on the Learning report on their Career profile. The Learning History section on this report indicates the completion status for all learning content associated with the learner. Workday only considers a video lesson complete when a learner watches 100% of the content.

Completion Status for Digital Courses

Workday changes the status of digital course enrollments with lessons that aren't required learning to *Completed* once learners complete all mandatory lessons in the course. Update grading and attendance for digital course enrollments with lessons that are required learning to change the status to *Completed*.

Workday doesn't provide completion tracking on all external digital courses. To complete an external digital course for Harvard ManageMentor®, learners must click Mark Complete on the View External Digital Course report.

Workday provides completion tracking on Coursera, LinkedIn Learning™, Pluralsight, Skillsoft, Skillsoft Percipio, Udemy Business, and YouTube courses.

Completion Status for Blended Courses

Workday tracks completion for all media lessons in blended courses, regardless of whether you set Track Attendance or Track Grades on the course offering. When entering time, replace the numerical value instead of deleting it to ensure Workday updates the information.

Workday displays a completion status of *Not Started* before the start date and time of the first instructor-led lesson.

Workday determines the *In Progress* status based on whether you select Track Attendance or Track Grades on the course offering. If:

- Not selected, we display *In Progress* from the start date and time of the first instructor-led lesson until the end date and time of the last instructor-led lesson.
- Selected, we display *In Progress*:
    - From the start date and time of the first instructor-led lesson until the end date and time of the last instructor-led lesson.
    - When an instructor or learning administrator hasn't entered attendance and grading results for individual required lessons and the overall course.

Workday determines the *Completed* status based on whether you select Track Attendance or Track Grades on the course offering. If:

- Not selected, we display *Completed* after the end date and time of the last instructor-led lesson.
- Selected, we display *Completed* when an instructor or learning administrator has entered attendance and grading results for individual required lessons and the overall course, and the end date and time of the last instructor-led lesson are in the past.

Blended Course Outcomes on the Learning History

When learners access the Learning History worklet in the Progress section on the Learning dashboard, Workday displays 1 of these outcomes on the image thumbnails of their completed course enrollments:

Outcome	Description
Completed	Displays when any of these conditions are true: • The primary instructor or a learning administrator has entered an overall *Pass* grade for the learner on the blended course. • A learning administrator selected Provide Course Grade on a media lesson that contains video interactions with the Passing Score percentage value set, and the learner achieves the passing score. • Track Attendance and Track Grades aren't selected on the course offering and the end date and time of the last instructor-led lesson has passed.
Unsuccessful	Displays when any of these conditions are true: • The primary instructor or a learning administrator enters an overall *Fail* grade for the learner. • A learning administrator selected Provide Course Grade on a media lesson that contains video interactions with the Passing Score percentage value set, and the learner doesn't achieve the passing score. • You use an EIB to load course completions.

Completion Status for Internal Stand-Alone Lessons and External Lessons

Workday displays these completion statuses for stand-alone lessons and external lessons:

- *In Progress* when learners start playing the video and pause it.
- *Completed* when learners play the video to the end.

Because you can't enroll in these lessons, we don't display a *Not Started* status.

Completion Status for Programs

Workday determines the overall completion status of program enrollments for individual content items based on these check boxes on the Create Program and Edit Program tasks:

- Recognize Course Expiration Dates
- Recognize Previous Completions
- Requires Successful Completion

Workday tracks the completion status of program enrollments against the mandatory content items within a program. Workday sets the completion status for the enrollment to *Not Started* when:

- A learner doesn't have any previous completions for the mandatory content.
- Recognize Previous Completions isn't selected on the program.

Workday updates the status to *In Progress*:

- When the learner accesses any of the media content.
- From the start date and time of the first instructor-led lesson until the end date and time of the last instructor-led lesson within the last mandatory course.

When a learner successfully completes all mandatory items, Workday:

- Updates the completion status for the enrollment from *In Progress* to *Completed*.
- Sets the completion date to the date on which the learner completed the last mandatory item, based on whether the Recognize Previous Completions check box is selected.

When you select the Recognize Course Expiration Dates check box, Workday recognizes expiration periods on enrollments for courses in the context of the program.

When you also select the Recognize Previous Completion check box, we recognize previous completions up until the point of expiry.

Learners can re-enroll in a program when they complete their previous enrollment for the program.

When a learner successfully completes all mandatory items before enrolling in a program on the same day, Workday updates the completion status to *Completed*.

When a learner unsuccessfully completes a mandatory item due to a failing grade, the program remains *In Progress*. When the learner re-enrolls in the mandatory item and successfully completes it, Workday:

- Updates the completion status of the program to *Completed*.
- Records each course enrollment in the Learning History section on the Learning report on the Career profile.

When you rescind an enrollment for a mandatory course, as part of the *Enroll in Content* business process, Workday changes the program status from *Completed* to *In Progress*.

If you use an EIB to load program completion, the EIB won’t update the completion of the individual content items. It'll load only the program record. To update the completion status of content items within a program, you need to load the course completions separately in a sequence. Example: If Recognize Previous Completions is selected on a program, you load the course completions and then create an enrollment for the program. This would automatically complete the program, based on the last course completion.

Concept: Calendar Message Templates

Calendar message templates in Workday enable you to customize the notifications that learners and instructors receive for learning events. They provide a way to communicate important information consistently and efficiently, enhancing the learning experience. They also save administrators time by automating the notification process. By providing clear and informative messages, templates contribute to a more positive and effective learning experience.

Workday enables the configuration of message templates at the tenant level, applying them to all email invites generated from the Microsoft Outlook and Google Calendar integration. Workday also provides default messages for the templates. You can customize the templates to display specific information in the email subject and body. Workday uses the same templates for both instructors and learners.

Workday lets you create email templates in different languages. To send a calendar invite to learners in the specified language of a course offering, you need to:

- Specify only 1 language on the course offering.
- Enable message template translation for the calendar integration in your tenant.

- Create a message template in the language of the course offering.

Note: Workday doesn't translate report fields to the language on the course offering. Workday recommends that you create separate courses for each of your supported languages and select the translated course when creating the translate learning calendar message template.

Workday doesn't run the Microsoft Outlook and Google Calendar integrations until you configure message templates, preventing you from sending empty calendar invites to learners.

Workday won't require you to reconfigure the calendar message template if you change your integration from Microsoft Outlook to Google or vice versa.

Types of Calendar Message Templates

When a learning event is scheduled or changed, Workday uses the appropriate template to generate and send a calendar invitation to the relevant participants. Workday provides different types of calendar message templates to address various learning scenarios.

- Classroom: Workday triggers this template when a learner successfully enrolls or drops an enrollment with in-person classroom lessons, and when learning administrators cancel enrollments with in-person classroom lessons. Workday also triggers this template when you edit a course offering with in-person classroom lessons.
- Virtual Classroom: Workday triggers this template when a learner successfully enrolls or drops an enrollment containing virtual classroom lessons, and when learning administrators cancel enrollments with virtual classroom lessons. Workday also triggers this template when you edit a course offering with virtual classroom lessons.
- Cancellation: Workday triggers this template only when a course offering is cancelled.

You can customize each template to include relevant details, such as event time, location, and instructor information.

Declining the calendar invite doesn't unenroll a student from the course offering. Students must manually unenroll themselves from course offerings in Workday.

Workday will trigger Classroom or Virtual Classroom message templates if you update these fields in the Edit Course Offering task:

- Additional Information
- Ad Hoc Location Name
- Ad Hoc Location Address
- Ad Hoc Location Room
- Description
- End Date
- Instructor
- Lesson Order
- Login Details
- Make Lesson Mandatory
- Password
- Time Zone
- Title
- Start Date
- Virtual classroom URL

Example: When a learner drops a virtual classroom lesson enrollment, Workday sends a calendar invite with Canceled added to the Subject, and the Body of the email displays the information set for the virtual classroom lesson.

If you're using calculated fields for the message templates, ensure that your Integration System User (ISU) for learning calendar integration has access to the calculated fields. If your ISU doesn't have access to any fields, they won't appear in the email sent to the learners and instructors. If you want to use custom calculated fields for the calendar message template, you need to create calculated fields on the Instructor Led Offering Lesson business object with learning admin access.

New and Updated Calendar Message Templates

Workday applies a new template only to new course offerings. Workday applies a new template to existing course offerings only when you update the course offerings.

Workday applies the updated templates to course offerings when you edit course offerings. Also, Workday sends an updated template in emails to existing enrolled learners and instructors when you update a course offering, and not to learners who enroll or drop enrollments after you update a template.

Example: Create Training Activity Lessons

This example illustrates how to create mandatory training activity lessons for a blended course with a maximum of 10 enrollments and 2 assessors.

Context

You want to create a training activity lesson for warehouse forklift driving for a beginner driver. The training materials include existing PDF documents for the warehouse demonstration manual that the learner must study and a forklift assessment checklist that Assessors A and B use to evaluate the learner's forklift driving. The assessors will use this live assessment to give the learner a *Pass/Fail* for the training activity lesson in Workday.

Prerequisites

- Access the Create Learning Topic task to create the *Manufacturing* topic to categorize your learning content.
- Create learning assessors. See Steps: Set Up Learning Assessors.
- Create any documents that you want to include as training materials.
- Security: These domains in the Learning Core functional area:
  - *Learning Access*
  - *Manage: Learning Content*
  - *Set Up: Learning Catalog*

Steps

1. Access the Create Course task.
2. Select Create Blended Course.
3. Click OK.
4. Enter these values:

Field	Value
Course Title	*Forklift Driving Demonstration*
Skill Level	*Beginner*
Description	*A demonstration of forklift driving.*
Topics	*Manufacturing*
Effective Date	*11/01/2024*
Maximum Enrollment Capacity	*10*
Allowed Assessors	• *Assessor A*

Field	Value
	• *Assessor B*

5. From the Add Lesson menu, select *Training Activity*.
6. Enter these values:

Field	Value
Make Lesson Mandatory	Select this check box.
Lesson Title	*Forklift Driving Demonstration*
Track Attendance	Select this check box.
Training Activity Type	*Demonstration*

7. Click Select Files to upload the demonstration manual.
8. From the Add Lesson menu, select *Training Activity*.
9. Enter these values:

Field	Value
Make Lesson Mandatory	Select this check box.
Lesson Title	*Forklift Driving Assessment*
Track Attendance	Select this check box.
Track Grades	Select this check box.
Grading Scheme	*Pass/Fail*
Training Activity Type	*Assessment*

10. Click Select Files to upload the checklist.
11. Click Submit.

Next Steps

- Access the Schedule Offering report to create a course offering from the Forklift Driving Demonstration blended course with Assessor A and Assessor B as assessors.
- Enroll learners for the Forklift Driving Demonstration blended course and set as a required learning with a due date.
- Assessors can access the Manage Grading and Attendance task to record details for learners who are enrolled in this course offering.

Create Learning Courses on page 1986

Create Learning Course Offerings on page 1995

Manage Schedules and Grading and Attendance on page 2087

Example: Create a Message Template for Learning Campaigns

Note: We plan to migrate Campaign functionality to Engagement Builder in a future release. Workday recommends that you start using Engagement Builder for greater efficiency and visibility into your engagements. See: ../../../manage-workday/collaboration/engagement-builder/setup-considerations-engagement-builder.dita.

This example illustrates how you can create and use a message template for a learning campaign item.

Context

Andy Fraiser needs to set up multiple learning campaigns targeting Global Modern Services employees. He decides to create a message template to save time.

Steps

1. Access the Create Message Template task.
2. In the Setup section, enter these settings:

Option	Description
Name	*Andy's Enrollment Notification Content*
Notification Type	*Learning Campaigns*

3. Click Next.
4. In the Message section, enter these values:

Option	Description
From Display Name	*Andy Fraiser*
Reply To	*A.Fraiser@GMS.com*
Subject	*Please Enroll for this Online Training*
Body	*Please enroll and complete this required training. You have 14 days to complete this training.* *If you have any questions, please contact Andy Fraiser at A.Fraiser@GMS.com.*

5. Click Next, then Save.
6. Access the Create Campaign task.
7. Enter these settings:

Option	Description
Title	*Health & Safety Update 2019*
Type	*Learning Campaign*
Audience	*San Francisco Employees*
Start Date	*01/02/2019*
End Date	*04/30/2019*

8. Click OK.
9. Click Add Item.
10. In the Item Details section, enter these settings:

Option	Description
Title	*Online Training Alert*
Content Type	*Notification*

11. Click Next.
12. In the Setup section, select *Andy's Enrollment Notification Content* from the Message Template prompt.
13. Click Next.

Result

The message template content automatically populates the text boxes in the Message section for campaign items. Andy can continue to edit content in the text boxes; further edits don't save to the message template.

Example: Set Up Attendance Synchronization to Track Full Attendance

This example illustrates how to set up attendance synchronization to track full attendance only for a virtual classroom lesson.

Context

You've already configured integration with Microsoft Teams or Zoom and you want to track full learner attendance for a virtual classroom lesson on Project Design.

Prerequisites

Set up virtual classroom integration with Microsoft Teams or Zoom.

Steps

1. Access the Edit Tenant Setup - HCM task.
2. Navigate to the Learning section.
3. From the Select Virtual Classroom Integrations prompt, select your Microsoft Teams or Zoom integration.
4. Enter *60* as the value for the Minimum Percentage for Full Attendance field.
5. Enter *0* as the value for the Minimum Percentage for Partial Attendance field.
6. Ensure that the Track Non-Attendance for Virtual Classroom check box remains unselected.
7. Click OK.

Result

- Setting a *0* value for the Minimum Percentage for Partial Attendance means that this field isn't active and Workday won't use it.
- Not selecting the Track Non-Attendance for Virtual Classroom check box means it's inactive and Workday won't use it.
- When there's a record match and:
  - Learner attendance is 60% or more, the Overall Attendance field displays as *Attended*.
  - Learner attendance is less than 60%, the Overall Attendance field displays as *Not Entered*.

Next Steps

Access the Manage Grading and Attendance task to view attendance details for your learners.

Example: Set Up Attendance Synchronization to Track Full and Partial Attendance

This example illustrates how to set up attendance synchronization to track full and partial attendance for a virtual classroom lesson.

Context

You've already configured integration with Microsoft Teams or Zoom and you want to track full and partial learner attendance for a virtual classroom lesson on Project Design.

Prerequisites

Set up virtual classroom integration with Microsoft Teams or Zoom.

Steps

1. Access the Edit Tenant Setup - HCM task.
2. Navigate to the Learning section.
3. From the Select Virtual Classroom Integrations prompt, select your Microsoft Teams or Zoom integration.
4. Enter *60* as the value for the Minimum Percentage for Full Attendance field.
5. Enter *40* as the value for the Minimum Percentage for Partial Attendance field.
6. Ensure that the Track Non-Attendance for Virtual Classroom check box remains unselected.
7. Click OK.

Result

- Not selecting the Track Non-Attendance for Virtual Classroom check box means it's inactive and Workday won't use it.
- When there's a record match and:
    - Learner attendance is 60% or more, the Overall Attendance field displays as *Attended*.
    - Learner attendance is 40% or more, but less than 60%, the Overall Attendance field displays as *Partially Attended*.
    - Learner attendance is less than 40%, the Overall Attendance field displays as *Not Entered*.

Next Steps

Access the Manage Grading and Attendance task to view attendance details for your learners.

Example: Set Up Attendance Synchronization to Track Full, Partial, and Non-Attendance

This example illustrates how to set up attendance synchronization to track full, partial, and non-attendance for a virtual classroom lesson.

Context

You've already configured integration with Microsoft Teams or Zoom and you want to track full, partial, and non-attendance for a virtual classroom lesson on Project Design.

Prerequisites

Set up virtual classroom integration with Microsoft Teams or Zoom.

Steps

1. Access the Edit Tenant Setup - HCM task.
2. Navigate to the Learning section.
3. From the Select Virtual Classroom Integrations prompt, select your Microsoft Teams or Zoom integration.
4. Enter *60* as the value for the Minimum Percentage for Full Attendance field.
5. Enter *40* as the value for the Minimum Percentage for Partial Attendance field.
6. Select the Track Non-Attendance for Virtual Classroom check box.
7. Click OK.

Result

- Selecting the Track Non-Attendance for Virtual Classroom check box means it's active and Workday will use it.
- When there's a record match and:
    - Learner attendance is 60% or more, the Overall Attendance field displays as *Attended*.
    - Learner attendance is 40% or more, but less than 60%, the Overall Attendance field displays as *Partially Attended*.
    - Learner attendance is less than 40%, the Overall Attendance field is displays as *Not Attended*.

Next Steps

Access the Manage Grading and Attendance task to view attendance details for your learners.

Reference: Zoom Limitations for Virtual Classroom Integration

Limitations

Limitation	Description	Recommendation
Licensed users on business, education, enterprise accounts can host only a maximum of 2 concurrent meetings.	If you schedule a third session that overlaps with the first 2 sessions with the same host: • Learners will be unable to join the third session on the scheduled date and time. • The host will be unable to start the third session until one of the earlier sessions concludes. • A cohost will be able to abruptly end the ongoing 2 sessions and start a third session. This limitation can cause significant disruptions for both learners and hosts. To mitigate these issues, Workday adds these to help you manage and optimize the scheduling of virtual classroom sessions, ensuring a seamless experience for all participants: • A new Organizer field on the Schedule Course Offering task. This allows you to select an instructor whose Zoom account will be used to generate a Zoom link. • A critical validation on the Schedule Course Offering task to prevent scheduling conflicts. If you attempt to schedule a virtual classroom session with an organizer with a start date and time that overlaps with another existing session with the same	Workday strongly recommends that you update the course offering and add the lesson level instructor and organizer after you identify an instructor to avoid limitations from Zoom related to concurrent meetings.

Limitation	Description	Recommendation
	organizer as the host, Workday triggers an error prompting you to select an alternate time.	
Only up to 100 requests per Zoom account per day.	If you exceed the limit, Workday fails the integration event.	Workday recommends that you don't use 1 Zoom account to schedule more than 100 virtual classroom lessons per day.

Additional Considerations

Settings	Description
Meeting co-host	To designate someone as a host during the meeting, you need to enable the Co-host option in your Zoom tenant.
Zoom email settings	Zoom automatically sends emails to alternative hosts, whether you enable calendar integration or not. Workday recommends that you disable email settings in Zoom if you enable calendar integration.
Integration system update	If you edit a course offering to update the integration system from Zoom to Microsoft Teams for a virtual classroom lesson, the virtual classroom lesson will still reflect on the Zoom application for the organizer and instructors.
Zoom and Microsoft Teams integration systems	If you use both Zoom and Microsoft Teams integration systems and you add the Organizer class report field to the calendar message template, Workday populates the Organizer field only in Zoom calendar invites and the field remains blank in Microsoft Teams calendar invites. For a course offering with a virtual classroom lesson, if you use Microsoft Teams integration without an instructor and update the integration system from Microsoft Teams to Zoom, the integration event will run and complete but with errors. Workday will create a Zoom meeting link but won't delete the Microsoft Teams meeting ID.

Reference: Microsoft Environments for Workday Learning

Workday Learning supports these Microsoft environments:

Environment	Graph URL
Microsoft 365 Commercial	https://graph.microsoft.com
Microsoft 365 GCC	https://graph.microsoft.com

You can avail Microsoft 365 GCC using Workday's federal moderate environments.

Workday Learning doesn't support these Microsoft environments:

Environment	Graph URL
Microsoft 365 GCC High	https://graph.microsoft.us
Microsoft 365 DoD	https://dod-graph.microsoft.us

FAQ: Attendance Synchronization for Virtual Classroom Integration with Microsoft Teams and Zoom

What do I need to do to use attendance synchronization if I'm already using the Microsoft Teams integration?

1. Give *OnlineMeetingArtifact.Read.All* API permission to the new application in the Microsoft Azure portal.
2. Access the Learning section of the Edit Tenant Setup – HCM task. From the Select Virtual Classroom Integrations prompt, select the Microsoft Teams integration you want to use.
3. Enter values for these fields:
    - Minimum Percentage for Full Attendance
    - Minimum Percentage for Partial Attendance
4. Select the Track Non-Attendance for Virtual Classroom check box.

What do I need to do to use attendance synchronization if I'm already using the Zoom integration?

1. Add these scopes to your server-to-sever OAuth application:
    - *meeting:read:list_past_participants:admin*
    - *meeting:read:list_past_instances:admin*
2. Access the Learning section of the Edit Tenant Setup – HCM task. From the Select Virtual Classroom Integrations prompt, select the Zoom integration you want to use.
3. Enter values for these fields:
    - Minimum Percentage for Full Attendance
    - Minimum Percentage for Partial Attendance
4. Select the Track Non-Attendance for Virtual Classroom check box.

I've configured the attendance synchronization functionality but I don't want to track attendance. What do I do?

1. Populate zero as the value for these fields on the Edit Tenant Setup – HCM task:
    - Minimum Percentage for Full Attendance
    - Minimum Percentage for Partial Attendance

	2. Ensure that you haven't selected the Track Non-Attendance for Virtual Classroom check box.
How is attendance marked for learners who don't use the specific Microsoft Teams or Zoom link to join the meeting?	Enrolled learners who don't join the Microsoft Teams or Zoom meeting themselves must have their attendance record manually added by the administrator using the Manage Grading and Attendance task.
Does Workday always update attendance details for learners?	If an Administrator manually enters values in the Attendance Duration or Overall Attendance fields, Workday doesn't automatically update them. Also, when the email for an attendance record doesn’t match with the primary work email of an enrolled learner, Workday doesn’t update the attendance details.
Who controls the information displayed in the Attendance Records from Integration section of the Manage Grading and Attendance task?	This section displays all records for learners who attended the virtual classroom lesson using the Microsoft Teams or Zoom link. When attendance displays as Not Entered in the Enrolledsection, the instructor must verify and enter attendance manually using information from the Attendance Records from Integration section. • Microsoft Teams and Zoom send Attendee Display Name and Attendee Duration (Minutes) details to Workday. • Workday controls Attendee Percentage and Automatically Matched details. • Workday also receives email address details for learners from Microsoft Teams and Zoom, but keeps this personal information privately in the background. If an external learner hasn't enrolled in the virtual classroom lesson, but they attended it using a forwarded Microsoft Teams or Zoom link, their name, attendance percentage, and attendance duration display in the Attendance Records from Integration section, but not in the Enrolled section. Workday receives attendance details only for a completed virtual classroom lesson from Microsoft Teams and Zoom once the batch job runs. Even though the job runs hourly, it only records attendance data from Microsoft Teams and Zoom meetings that have concluded for 4 hours to the integration run. Workday displays the *Attendance records for your virtual classroom aren't available yet* error message if the hourly job hasn’t run yet.
How does Workday manage email addresses for virtual classroom lessons?	If a learner registers for a course offering and attends using a Microsoft Teams or Zoom link, Workday retrieves their email addresses and attendance data from Microsoft and Zoom. Workday

	checks that the primary work email on the Workday account matches this email. • If it matches, Workday marks it as *Matched* by selecting the check box under the Automatically Matched column. • If it's different, Workday marks it as *Unmatched* by not selecting the check box under the Automatically Matched column.
How does Workday round attendance percentages for virtual classroom integration with Microsoft Teams and Zoom?	• If a learner joins for less than 1% of the time on a meeting, they'll automatically receive an attendance percentage of 1%. • If a learner joins for more than 1% of the time on a meeting, the percentage remains its true value, and Workday won't round it up or down.
How do I fix a failed integration process event?	The integration launches when you perform the *Manage Course Offering* rescind event. If an integration process event fails within a rescind event, the Microsoft Teams meeting desynchronizes between the Workday and Microsoft Teams, as the integration couldn't update the meeting details in the Microsoft Teams' tenant. Access the Edit Course Offering task to edit the lesson in order to fix this issue, and the business process will execute the integration. The solution is the same for a failed Zoom integration process event.
How does Workday match a learner who joins a meeting by phone rather than an email link?	We don't match attendees using their phone number. If an attendee joins a meeting using a phone number and no email address, we can't match them to an enrolled learner in the virtual classroom lesson.
Can I assign any instructor to the Microsoft or Zoom integration?	Only use instructors who are users within Microsoft Entra for Microsoft integration. Only use instructors who are in your Zoom tenant for Zoom integration. This is a Microsoft and Zoom restriction and not something that Workday can control.
How can I purge attendance data for a learner?	You can filter the Virtual Classroom Attendance Record report data source to display specific names and attendance records. Use it in the Purge Person Data task to purge: • Display names and email addresses for your virtual classroom lessons. • Data for unmatched learners by using the new Virtual Classroom Attendance Record business object to create a custom report.
How does Workday track attendance details for a learner whose primary work email in Workday doesn't match with the email they used to join the	If a learner displays in the Enrolled section but their Attendance is marked as *Not Entered*, there's no attendance duration recorded, and the Automatically Matched column remains unchecked. This means that their email doesn't match with the

virtual classroom meeting in Microsoft Teams or Zoom?	work email they've listed on their Workday account. The Attendance Records from Integration section displays a record for this learner with Attendance Duration and Attendee Percentage calculated because they attended using a personal email ID. When Workday extracts all learner records for the virtual classroom lesson, this learner's records are included. The Automatically Matched column is blank because they used personal email ID, so the instructor or administrator must manually verify and enter their attendance.
How does Workday manage learners that attend using a display name instead of an email ID?	If a learner displays in the Enrolled section, but their Attendance Default is marked as *Not Entered*, there's no recorded attendance duration for them and the Automatically Matched column remains unchecked, indicating there's no match with their registered work email on Workday. The Attendance Records from Integration section displays no record for that learner. They might have attended the virtual classroom lesson using a Microsoft Teams or Zoom link on their mobile or the Teams or Zoom Mobile application using a different display name. The instructor or administrator must verify what display name the learner used and manually enter their attendance. This covers learners who attend virtual classroom lessons as guest users who don't sign in to Microsoft Teams or Zoom.
What's the time limit for rescheduling a virtual classroom lesson?	There's no time limit, but as good practice, and in order to avoid issues with attendance tracking, Workday recommends that you reschedule a virtual classroom lesson at least 24 hours before it's due to start.
Can I reuse a previously generated Zoom or Microsoft Teams meeting URL?	As best practice, and in order to avoid issues with attendance tracking, Workday recommends that you don't reuse a previously generated Zoom or Microsoft Teams meeting URL.
Can I set an instructor as a co-organizer of a virtual classroom instructor-led lesson for an existing course offering for the Microsoft Teams integration?	For existing course offerings with a virtual classroom instructor-led lesson where you've already added an instructor at lesson level, you must make a minor change to the lesson title or description so that the Microsoft Teams integration is triggered and the new changes are picked up in order to grant co-organizer privileges to the instructor. Example: Add a special character such as a quotation mark to the title.
How can I access breakout rooms through my browser when I use Microsoft Teams integration?	The breakout rooms button is only available through the Microsoft Teams app. It's not available when accessing Microsoft Teams through a browser.
Can I set any instructor as co-organizer for the Microsoft Teams integration?	When creating or editing course offerings, you can set any instructor as co-organizer for the Microsoft Teams integration as long as they're registered in Microsoft Entra. Assigning the presenter or co-organizer role to users who aren't registered

	in Microsoft Entra isn't currently supported by Microsoft.
Can I set any instructor as co-host for the Zoom integration?	An organizer is always the host for a virtual classroom lesson with the Zoom integration. When creating or editing course offerings, you can set any instructor as a co-host or alternative host for the Zoom integration if they're users within Zoom. To designate someone as a host during the meeting, you need to turn on the Co-host option in your Zoom application.
Can I connect multiple Zoom accounts to a single Workday tenant?	Yes. You need to create a unique integration system for every Zoom account. The Account ID field in the integration systems will reference the individual Zoom accounts.
Does the Zoom integration authenticate the meeting participants and webinar attendees by default?	No. You need to enable the Only authenticated meeting participants and webinar attendees can join meetings and webinars option in the Zoom console to authenticate the participants. Also, ensure that all users for the integration are in a group. Example: Default mailbox on integration system and all instructors.
How can I best manage attendance data so that it accurately reflects time spent by a learner in breakout rooms?	Microsoft currently doesn't support attendance data from breakout rooms as part of its graph API, which this integration consumes. This limitation means that Workday doesn’t receive details from Microsoft on the amount of time that learners spend in breakout rooms. Example: • A virtual classroom offering is scheduled from 8-9 am. • A learner joins the main meeting at 8 am. • They join the breakout room at 8:15 am and stay for 30 minutes. • They leave the breakout room and rejoin the main meeting at 8:45 am. • They stay in the main meeting for the remaining 15 minutes of the lesson and then leave the virtual lesson. The attendance data that Workday receives from Microsoft Teams includes an attendance duration of 30 minutes, made up of 15 minutes on the main meeting at the beginning and 15 minutes again at the end. It doesn’t factor in the 30 minutes spent in the breakout room so the learner only receives a 50% attendance, which is incorrect. We recommend that you log into Microsoft Teams and manually download the attendance report. The attendance report provided on Microsoft Teams user interface contains the learner’s attendance data from the breakout room. Use the Manage Grading and Attendance task in Workday to manually update the learner’s attendance.

	Zoom supports attendance data from breakout rooms and the data will be used to calculate attendance.
Does attendance synchronization for a lesson occur immediately after a meeting ends?	Workday receives attendance details only for a completed virtual classroom lesson from Microsoft Teams and Zoom once the batch job runs. Even though the job runs hourly, it only records attendance data from Microsoft Teams and Zoom meetings that have concluded for 4 hours to the integration run.
How does Workday calculate the Attendance Duration Percentage of a learner?	Workday calculates the Attendance Duration Percentage of a learner using this formula: Attendance Duration Percentage of a Learner = (Attendance Duration of the Learner)/(Actual Duration of VILT Lesson) x 100. • The actual duration of the VILT lesson is from the Workday Lesson Start Time to the Last Instructor Leave Time. • The attendance duration of a learner is the duration between Attendee End Time and Attendee Start Time. • Logic to calculate the Attendee Start Time: If the attendee joins the VILT lesson at or before the scheduled Workday Lesson Start time, the Attendee Start Time is equal to the Workday Lesson Start Time. If the attendee joins the VILT lesson after the scheduled Workday Lesson Start time, the Attendee Start Time is the actual time the attendee joined the VILT lesson. • Logic to calculate the Attendee End Time: If the attendee leaves the VILT lesson at or after the Last Instructor Leave Time, the Attendee End Time is equal to the Last Instructor Leave Time. If the attendee leaves the VILT lesson before the Last Instructor Leave Time, the Attendee End Time is the actual time the attendee left the VILT lesson. If no instructor joins the VILT lesson, Workday replaces the Last Instructor Leave Time with Workday End time for the lesson.

FAQ: Microsoft Outlook Integration with Workday Learning

What can I expect from integrating Workday Learning with Microsoft Outlook?	You must create just 1 set of login credentials for the new application and enter these credentials in the Workday tenant. Workday securely stores these credentials, and only users who have access to the Workday tenant setup can view the login credentials. Microsoft Outlook creates calendar invites in a single mailbox. Attendees on the calendar invites receive invitations by email.

Will the application send emails using information from my Microsoft tenant?	This application will only be given *Calendars.ReadWrite* permission and will only read and write calendar events to a single mailbox that you can configure. Workday will not retrieve any other information from your Microsoft tenant. The only information from your Microsoft tenant that Workday will store are the UUIDs for the calendar events that are created. See Configure Application Access Policy and Limit Application Permissions to Specific Exchange Online Mailboxes to configure policy rules using Microsoft Powershell to restrict ReadWrite access to one mailbox.
Who manages the application?	Workday builds the application in partnership with Microsoft. The application runs on the same platform that the rest of your Workday tenant runs on. Workday owns and manages the platform.
Can the application retrieve or read information from our 0365 tenant?	The application won't retrieve information from your 0365 tenant. Workday is the source of all the information about the events and the attendees. The application is simply syncing this information to your 0365 tenant and will only ever read back or update information that originates in Workday.
Who will have access to the application?	Workday has a strict data privacy system and restricts access to customer data based on purpose. For information on privacy and compliance, see Workday Community.
For how long does Workday store information from my 0365 tenant?	The information originates in your Workday tenant. The only information that Workday stores from your 0365 tenant is the access credentials and a unique identifier for the calendar events the application creates. You own the data, and Workday will store it until you stop using the service or you ask Workday to delete it.
What is a Client Secret?	A Client Secret is a secret known only to the application and the authorization server. In this case, it's between Workday and your 0365 tenant. It is part of the OAuth authentication standard that is being used by Microsoft to secure access to your 0365 data.

Troubleshooting: Learning Content Access

Learners can't access new topics.

Cause: You didn't add the learners to the relevant security group.

Solution:

Steps

Security: *User-Based Security Group Administration* domain in the System functional area.

1. Access the Assign User to User-Based Security task.
   a) Add the learners to the security group when you create new topics. See: ../../../authentication-and-security/configurable-security/security-groups/user-based-security-groups/dan1370796695367.dita.
   b) Add the security group to the *Learning Access* domain.
2. ../../../authentication-and-security/configurable-security/security-change-control/dan1370796405018.dita.

Learners access content that's not appropriate to them.

Cause: Your segmented security configuration for the *Learning Access* domain is incorrect.

Solution:

Steps

Security: *User-Based Security Group Administration* domain in the System functional area.

1. Access the Domain Security Policies for Functional Area report.
2. Select the Learning Core functional area.
3. Remove the learner from all unconstrained security groups on the *Learning Access* domain.

Learning administrators can't view learning content.

Cause: Learning administrators only have access to the *Set Up: Learning Catalog* domain.

Solution:

Steps

1. Access the Domain Security Policies for Functional Area report.
2. Edit Domain Security Policies.
3. Add learning administrators to the *Learning Access* domain.

Steps: Manage Learning Content on page 1969

Troubleshooting: Microsoft Outlook Calendar for Learning

Outlook Calendar integration isn't running or displays authentication error messages.

When you configure the Outlook Calendar integration, the integration runs every 15 minutes so the invites should send 20-30 minutes after the event, but Workday isn't sending invites or displays authentication error messages such as:

- *Graph API refuses to authenticate to provide Authorization Token. Please check credentials passed to Learning Calendar integration are valid.*
- *Unable to retrieve token to authenticate to Microsoft. Not processing Calendar Events, Audit skipped.*

Cause: The credentials for Microsoft Azure are incorrect.

Solution:

Steps

1. When registering a new application in the Microsoft Azure portal, ensure you enter the Secret Key Value rather than the Secret ID.
2. Ensure the tenant name that you enter for the Tenant ID field ends with *onmicrosoft.com*. This is the tenant name used in the Edit Tenant Setup - HCM configuration. Example: If your company is called ABCinc, then your tenant name should be *abcinc@onmicrosoft.com* or similar.

Outlook calendar integration displays an invalid user error message.

The Outlook calendar integration displays this error message: *The requested user 'example@myworkday.com' is invalid*.

Solution: Update the email address for the mailbox in your Microsoft tenant. Example: If your company is called ABCinc, then your email address should be *mailbox@abcinc.com* or similar.

Steps

Security: These domains in the Learning Core functional area:

- *Public Reporting Items*
- *Set Up: Learning Catalog*

1. Access the Edit Tenant Set Up – HCM task.
2. Under the Learning Calendar Integration section, remove the invalid Mailbox parameter value.
3. Add a new mailbox and select a Restricted Environment.
4. Click OK.

Troubleshooting: Microsoft Outlook and Google Calendar for Learning

The Learning Calendar Integration Status report in the Production tenant doesn't display the number of invites ran and sent in the past 24 hours.

Solution: In the Production tenant, don't populate multiple environments for Restricted to Environment in the Edit Tenant Setup – HCM task. To restrict learning integration parameters to multiple environments, create separate rows for each environment.

Steps

Security: These domains in the Learning Core functional area:

- *Public Reporting Items*
- *Set Up: Learning Catalog*

1. Access the Edit Tenant Set Up – HCM task.
2. Under the Learning Calendar Integration section, for all parameters, retain only *Production* and remove other environments.

Cloud Connect for Learning

Steps: Set Up Integration System User Security for Cloud Connect for Learning

Prerequisites

Security: These domains in the Cloud Connect for Learning functional area:

- *Cloud Connect for Learning Service*
- *Manage: External Tracking Data*

- *Set Up: External Content*
- *Integration Security* domain in the Integration functional area.
- *Security Configuration* domain in the System functional area.

Context

All Cloud Connect for Learning integrations require an Integration System User (ISU) and Integration System Security Group (ISSG). ISUs must be unique across all integrations. It's Workday policy to use an ISU with only the appropriate access for integration purposes. Administrators shouldn't configure any integration security.

Steps

1. If the required domains aren't enabled, enable all the domains.

   Example: Follow these steps to enable the *Cloud Connect for Learning Service* domain:

   a) Access the View Domain report.
   b) Select the *Cloud Connect for Learning Service* domain from the Domain prompt.
   c) Click the magnifying glass icon next to Domain Security Policy. If the domain is not enabled, the status will be Suspended - Policy not enabled.
   d) On the View Domain Security Policy report, from the related actions menu of the Cloud Connect for Learning Service, select Domain Security Policy > Enable.
2. Access the Create Integration System User task to create an ISU.
   - Workday recommends using *<Content Provider>_Learning_ISU* for the user name.
   - Select the Do Not Allow UI Sessions check box to prevent the ISU from signing into Workday through the user interface
3. Access the Create Security Group task to create an ISSG.
   - Select *Integration System Security Group (Unconstrained)* for Type of Tenanted Security Group.
   - Workday recommends using *ISSG_Cloud_Connect_For_Learning* for the user name.
   - Select the newly created *<Content Provider>_Learning_ISU* for Integration System Users.
4. From the Related Actions menu of the newly created ISSG, select Security Group > Maintain Domain Permissions for Security Group.
5. Add these domains to the Report/Task Permissions section with *View* and *Modify* access, and Integration Permissions section with *Put* and *Get* access:
   - *Cloud Connect for Learning Service*
   - *Set Up: External Content*
   - *Set Up: Learning External Content Integrations*
6. Run the Activate Pending Security Policy Changes task.

Result

Workday assigns the integration system user as part of the Cloud Connect for Learning security group.

Next Steps

Configure external content for third-party providers.

Steps: Set Up Cloud Connect for Learning Using Cloud Connect for Learning Platform

Prerequisites

Note: See Concept: Cloud Connect for Learning Integration Methods to learn about the various integration methods and their benefits.

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

- Set up Workday Learning. See: Steps: Set Up Learning.
- To enable this feature, you might need to take additional steps to set up Media Cloud based on your organization's subscription service agreement. For more information, see Getting Started with Workday Media Cloud.
- Ensure that you have an active account with the external provider.
- Check if your content provider is in the CCL platform. Workday recommends you to set up CCL for your content provider in the CCL platform if your provider is already available in the CCL platform. See Reference: Content Providers Using the CCL Platform to Integrate With Workday Learning for the list of content providers who are using the CCL platform.
- Create an Integration System User (ISU). ISUs must be unique across all integrations.
    - If you're new to CCL or configuring a new content provider, create a new ISU. See Steps: Set Up Integration System User Security for Cloud Connect for Learning.
    - If you have set up a CCL integration with a content provider previously, Workday will display the ISU you configured for the existing CCL integration in the Configure Cloud Connect for Learning task. If you've used the previously created ISU in a different integration, create a new ISU. See Steps: Set Up Integration System User Security for Cloud Connect for Learning.

- Enable these security domains and grant *View* and *Modify* permissions for reports and tasks and *Get* and *Put* permissions for integrations:
  - The *Set Up: External Content* domain in the Cloud Connect for Learning functional area.
  - The *Cloud Connect for Learning Service* domain in the Cloud Connect for Learning functional area.
  - The *Set Up: Learning External Content Integrations* domain in the Learning Core functional area.

Context

When you set up Cloud Connect for Learning, you can import content from the third-party providers into your tenant, enabling you to deliver rich and engaging playback experiences.

The content catalog provides you with the ability to search for external content and related materials from these providers. Catalog listings include titles, descriptions, and other metadata to help you select which content to make available for customer consumption in Workday.

For users that don't set up Cloud Connect for Learning, including customers, administrators, and other implementers who configure the Workday tenant for their organizations:

- No third-party content will be imported into Workday Learning.
- Administrators can't access configuration tasks.
- Learners can’t view or access third-party content in learning catalogs.

Workday doesn't control and isn't liable for information presented in external content. The views and statements made in external content represent the views of the author or content creator, and not the views of Workday. If you find any of this content offensive or inappropriate, contact the content creator or content service provider, or stop viewing the content.

For a use case related to this topic, see ../../../use-case-library/use-case--set-up-cloud-connect-for-learning.dita in the Use Case Library.

Note: Don't configure Cloud Connect for Learning on a Gold tenant.

Steps

1. Enable the Cloud Connect for Learning functional area.

   See: Steps: Enable Functional Areas and Security Policies.
2. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   On the Innovation Services Opt-In task, select the Cloud Connect for Learning service in the Learning category and click OK.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.
3. Access the Configure Cloud Connect for Learning task.
4. From the Content Provider prompt, select the content provider you want to set up.
5. Access the *Set Up Content and Content Provider* step.

   Enter these values:

Option	Description
Inactivate Content Provider	This is optional. Select this check box only if you want to deactivate the integration with the content provider.
Integration System User (ISU)	Select your newly created ISU. Note: You can use an ISU only for one integration. If you need to set up integrations with multiple content providers, set up separate ISUs for them.

Option	Description
	If you have any issues with the ISUs, see Troubleshooting: Configure Cloud Connect for Learning.
Requires Enrollment	Select this check box if content from this content provider requires enrollment.
Exclude from Recommendations	Workday populates these content container worklets on the Learning dashboard with recommendations for relevant learning content: • Based on Your Interests • Based on Your Skills to Develop • Most Popular • Popular in Your Role • Recently Added • Recommended for You • You Might Also Be Interested In Workday also includes learning recommendations on these reports: • Opportunity Graph (in the Popular for This Role section) • View Competency Select this check box to exclude the content from this content provider from the results.
Exclude from Search and Browse	Select this check box to exclude content from this content provider from appearing in the Browse Learning Content report and global search results. If you've customized the Browse Learning Content report for your company, Workday recommends that you manually update the *Exclude from Search and Browse filter* on pre-existing reports.
Import External Vendor Skills	Select this check box to import external content skills when you have an active account with a content provider who supports skills.
Opt-Out of Synonymous Skills	Select this check box to disable synonymous skills matching.
I agree to migrate this content provider to the CCL platform	This check box is displayed only if you are migrating from a legacy content provider integration and are accessing the Configure Cloud Connect for Learning task for the first time. Select this checkbox to successfully configure settings for your content provider in the CCL platform.

Option	Description
	Workday will display the *Manage Content Catalog* and *Manage Credentials* steps for you only if you select this check box.

6. Click Next.
7. Access the *Manage Content Catalog* step.

   Select a default learning topic.

   If you've set up a CCL integration with the content provider previously, Workday will display the topics and tags that were mapped previously. If you're configuring CCL for a content provider for the first time, you'll be able to configure the topic-tag mapping after you complete the Configure Cloud Connect for Learning task and the content provider imports content into your tenant. See Next Steps.
8. Access the *Manage Credentials* step.

   Enable Generate Credentials.

   Workday will display these:

   - Auth URL
   - Client ID
   - Client Secret
   - Content URL
   - Tracking URL

   Take note of Client Secret. You'll need this value for configuring tracking and importing content in the external content provider's platform. If you lose it, you'll need to generate new credentials using Regenerate Credentials.

   If you've set up a CCL integration with the content provider previously, you don't need to generate credentials. Workday will display your current credentials in this page.
9. Access the *Conclusion* step.

   Verify the settings and click OK.

Next Steps

- Contact your content provider to complete the content import.

  Your content provider has to import the content to your tenant to complete the content import.

  Note: After the content provider imports the content to Workday, Workday has to index the content. For production environments, indexing can take up to 12 hours, and for non-production environments, indexing can take up to 24 hours.
- (Optional) Configure topic and tag mappings.
  1. After the content provider imports content to your tenant, access the Configure Cloud Connect for Learning task.
  2. Access the *Manage Content Catalog* step.
  3. In the Topic Mapping grid, add rules to enable Workday to map tagged third-party content to learning topics in your tenant. As you complete the grid, consider:

Option	Description
Order	Workday resolves the mapping rules in the order that you specify. If it can't resolve any of the rules, it maps the content to the Default Learning Topic.

Option	Description
Topics	Select 1 or more learning topics to associate with the content.
Tags	Select 1 or more tags that are already associated with the third-party content. To configure a new topic and tag mapping, ensure that you've listed at least 1 tag in the mapping rule row. When you list multiple tags in the same row, Workday applies *And* logic when evaluating the rule. Example: You create a rule that maps Learning Topic A to Tags 1 and 2 in the same row. A piece of content must have at least Tags 1 and 2 to map to Learning Topic A. Content 1 has Tags 1, 2, 3, so it maps to Learning Topic A. You can create an *Or* relationship by creating multiple mapping rules for the same topic and specifying different tags in each row. Example: You create a rule mapping Learning Topic B to Tag 1 and a separate rule mapping Learning Topic B to Tag 2. Content 1 must have either Tag 1 or Tag 2 to map to Learning Topic B. Order matters when using the *Manage Content Catalog* step in the Configure Cloud Connect for Learning task, as Workday resolves topic mapping in the order that you specify. Example: Content 1 has Tags 1,2,3,4, which are mapped in order: Example 1: • Learning Topic A to Tag 4. • Learning Topic B to Tags 1,2,3. • Content 1 maps to Learning Topic A. Example 2: • Learning Topic B to Tags 1,2,3. • Learning Topic A to Tag 4. • Content 1 maps to Learning Topic B.

4. Access the *Conclusion* step.

   Revise the topic and tag mapping.
5. Click OK.

- You can use a single topic across multiple content providers.
- When you associate learning topics with external content, Workday applies the topics to the content immediately. Any topic-based segmented security that restricts access to the content also applies with immediate effect. Updates to the Topic facet in Learning search results can take up to 6 hours. Ensure that you allow the appropriate amount of time to pass before verifying that Workday maps the external content to the topics in your tenant.

Troubleshooting: Configure Cloud Connect for Learning on page 2062

Steps: Set Up Cloud Connect for Learning Using Legacy Tasks

Prerequisites

Note: See Concept: Cloud Connect for Learning Integration Methods to learn about the various integration methods and their benefits.

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

- Set up Workday Learning. See: Steps: Set Up Learning.
- To enable this feature, you might need to take additional steps to set up Media Cloud based on your organization's subscription service agreement. For more information, see Getting Started with Workday Media Cloud.
- Ensure that you have an active account with the external provider.

- Enable these security domains and grant *View* and *Modify* permissions for reports and tasks and *Get* and *Put* permissions for integrations:
  - The *Set Up: External Content* domain in the Cloud Connect for Learning functional area.
  - The *Cloud Connect for Learning Service* domain in the Cloud Connect for Learning functional area.
  - The *Set Up: Learning External Content Integrations* domain in the Learning Core functional area.

Context

When you set up Cloud Connect for Learning, you can import content from the third-party providers into your tenant, enabling you to deliver rich and engaging playback experiences.

To enable content provided by these third-party content providers in your tenant, you must maintain a separate subscription with them directly. The content catalog provides you with the ability to search for external content and related materials from these providers. Catalog listings include titles, descriptions, and other metadata to help you select which content to make available for customer consumption in Workday.

For users that don't set up Cloud Connect for Learning, including customers, administrators, and other implementers who configure the Workday tenant for their organizations:

- No third-party content will be imported into Workday Learning.
- Administrators can't access configuration tasks.
- Learners can’t view or access third-party content in learning catalogs.

Workday doesn't control and isn't liable for information presented in external content. The views and statements made in external content represent the views of the author or content creator, and not the views of Workday. If you find any of this content offensive or inappropriate, contact the content creator or content service provider, or stop viewing the content.

For a use case related to this topic, see Use Case: Set Up Cloud Connect for Learning Using Legacy Tasks in the Use Case Library.

Steps

1. Enable the Cloud Connect for Learning functional area.

   See: Steps: Enable Functional Areas and Security Policies.
2. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA customers.

   On the Innovation Services Opt-In task, select the Cloud Connect for Learning service in the Learning category and click OK.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.
3. Create an Integration System User (ISU).

   See: Steps: Set Up Integration System User Security for Cloud Connect for Learning.
4. Access the Configure External Content Provider task.
   - Ensure that the integration system security group from this task includes the user configuring your integration system and your integration system user and that it has *View* and *Modify* access to Report/task permissions and *Get* and *Put* access to integration permissions on these domains:
     - The *Set Up: External Content* domain in the Cloud Connect for Learning functional area.
     - The *Set Up: Learning External Content Integrations* domain in the Learning Core functional area.
   - If your content provider supports channels, activate the channels you want to make available in your tenant for a content provider. See Reference: External Content Provider Configurations.

5. Configure External Content.
   Enable Workday Learning to include the third-party content you configured.
6. Set up external tracking.
   See: Steps: Set Up External Tracking.

Result

You can now import content from these third-party providers into your tenant and add them to your learning catalog.

Go1 Content Import and Tracking

Steps: Set Up Public Learning Content

Prerequisites

Note: Workday plans to retire Content Cloud YouTube integration in a future release.

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

- Set up Workday Learning. See Steps: Set Up Learning.
- To enable this feature, you might need to take additional steps to set up Media Cloud based on your organization's subscription service agreement. For more information, see Getting Started with Workday Media Cloud.

Context

Public Learning Content provides you with a catalog to search for external content, and related materials from Workday and third-party content providers. Catalog listings include titles, descriptions, and other metadata to help you select which content to make available for customer consumption in Workday. When you set up Public Learning Content, you can import content from YouTube into your tenant, enabling you to deliver rich and engaging playback experiences.

Steps

1. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA customers.

   On the Innovation Services Opt-In task, select the Public Learning Content (Do Not Use) service in the Learning category.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.
2. Access the Configure External Content Provider task.

   Activate the channels you want to make available in your tenant for a content provider. See Reference: External Content Provider Configurations on page 2056.

   - Security:
     - The *Set Up: External Content* domain in the Cloud Connect for Learning functional area.
     - The *Set Up: Learning External Content Integrations* domain in the Learning Core functional area.
3. Configure External Content on page 2051.

   Enable Workday Learning to include the third-party content you configured.

Steps: Set Up External Tracking

Prerequisites

Note: This information is to help you set up external tracking if you are using legacy tasks to integrate with Workday Learning. See Concept: Cloud Connect for Learning Integration Methods to learn about the various integration methods and their benefits.

- Set up Cloud Connect for Learning. See Steps: Set Up Cloud Connect for Learning.
- Administrator access and an active account for the external provider.
- Content Import integration must be complete.

- Test tracking in a Sandbox tenant before enabling it in Production.

Context

You can enable near real-time completion and in progress tracking to track when learners consume external content from these providers on the Learning dashboard:

- Coursera
- Go1
- Harvard ManageMentor®
- LinkedIn Learning™
- OpenSesame
- Pluralsight
- Skillsoft Percipio
- Udemy Business

In progress tracking for these providers works by default for all customers who enable completion tracking. To protect overall customer tenant performance, Workday limits tracking requests per tenant, per external content provider, to 1000 requests per minute. In the unusual event of high system load and an increase in the number of requests, it can take anywhere from 12 to 24 hours for the tracking record to be updated, depending on each external content provider's retry mechanism.

To successfully track a learner's progress send the learner’s Workday Username from an Identity provider (IdP) to the external content provider on the Account Name of the tracking statement. Using Workday Username guarantees a unique ID. Only use an Employee ID or an email if it matches the learner's Workday Username.

These providers communicate with Workday in near-real time regardless of whether a learner launches their content from:

- A desktop device.
- An external platform.
- Mobile.
- Workday Learning.

If you enable completion tracking, the Mark Complete button automatically disappears.

Note: Don't configure Cloud Connect for Learning on a Gold tenant.

Steps

1. (Optional) Activate Single Sign-On (SSO) tracking integration.

   Note: Contact your content provider to confirm the SSO support.

   As the process varies for each provider, we recommend that you contact them directly and use their documentation to configure it correctly. They'll work with your IT staff to configure SSO with your corporate identity provider, and to use the Workday Username as the Account name on the tracking statement.

   If you don’t have an IdP, you can use a learner’s email address as the user identifier value for tracking. However, you must create a custom report using the External Tracking Requests report data source on a regular basis to view failed tracking instances.

   Workday recommends tracking a learner's progress using their Workday Username.

2. Run the Configure External Content Tracking Credentials report to generate values for these Parameter fields:

    - *Auth URL*
    - *Client ID*
    - *Client Secret*
    - *Tracking URL*

    Security: The *Set Up: External Content* domain in the Backpack Hub Service and Cloud Connect for Learning domains.
3. Select an external content provider and the Generate Credentials button.

    Take note of your Client Secret information. If you lose it, you'll need to generate new credentials.
4. Confirm that you've recorded your credentials.
5. (Optional) Select the Regenerate Credentials button on the trusted credentials summary if you've lost your Client Secret information.
6. Access the Create Client Credentials Mapping task.

    Only Security Administrators can run this task.

    Security: The *Security Administration* domain in the System functional area.
7. Enter these values:

Field	Value
Client ID	The *Client ID* you generated using the Configure External Content Tracking Credentials report.
Integration System User	The Integration System User (ISU) must be part of an Integration System Security Group (ISSG) on the *Cloud Connect for Learning Service* domain security policy. Grant the ISSG *View* and *Modify* permissions for reports and tasks and *Get* and *Put* permissions for integrations. To save time, we recommend that you reuse the ISU for Content Import integration.

8. Access the Administrator page for your external content provider to add completion integration details.

    Consult configuration guides for your external content provider for details on how to configure their tracking functionality.

9. Enter the generated credentials to activate the integration:

   Depending on the external content provider, you can:

   - Configure tracking using their user interface.
   - Contact their support team to configure tracking on your behalf.

   We recommend that you test tracking in Sandbox before enabling it in Production. Tracking won't be recorded in Sandbox once it's enabled in Production.

   If you aren't using Workday Account Username to configure tracking, and you would like to use Workday Account Username, work with your content provider to ensure they support the sending of Workday Username in their integration.

   If you are using a learner's email address as the user identifier value for tracking, you must create a custom report using the External Tracking Requests report data source on a regular basis to view failed tracking instances.

   If you're using a learner's email address as the user identifier value, then tracking won't record if:

   - The learner completed a course on an external content provider's website that's not imported into your Workday tenant.
   - The learner's email on the external content provider's website isn't the same learner email used to log into Workday.

   The tracking mechanism disregards statements for learners who have 2 or more persons with the same email address. We expect that each person in Workday has a unique email address according to the external content provider's setup. A common exception to this includes customers with 2 persons or more with the same email address such as:

   - Contingent workers who become full-time employees.
   - Pre-hires who become full-time employees.

   So for multiple learners with the same email address, we:

   - Check all people with duplicate addresses.
   - Check whether there's at least 1 learning record associated to exactly 1 person.
   - Associate the tracking to that person.

10. Edit Domain Security Policies.

    To report on failed tracking instances for your organization, configure the *Manage: External Tracking Data* domain in the Cloud Connect for Learning functional area. Grant security groups Modify permissions.

11. (Optional) Create Custom Reports.

    Create an advanced custom report to view these failed tracking instances for your organization:

    - Course not found: When the learner consumed a course on an external content provider's website that's not imported into your Workday tenant.
    - Duplicate email found: When there are multiple learners with the same email address.
    - Learner not found: When the learner's email on the external content provider's website isn't the same learner email used to log into Workday, or the email isn't associated to a learner in Workday.

    a) From the Data Source prompt, select the External Tracking Requests report data source (RDS).

       Note: Every week, Workday automatically deletes failed tracking instances older than 180 days on the External Tracking Requests RDS.

    b) On the Columns tab, add rows with these selections in Fields column:

       - *Content Provider*
       - *Created Moment*
       - *External Tracking Processing Errors*
       - *External Tracking Request*
       - *Learner Actor ID*
       - *Learner Email*
       - *Learning Content Reference ID*

Result

Workday provides you and your learners with more accurate information on their external content consumption.

Next Steps

Use these custom report fields in your custom reports to surface tracking data for your organization:

- External Content Attendance Duration in Minutes: To track the amount of time a learner has spent on an activity associated with an enrollment. Workday can only track this information if the external content providers submit it.
- Last Updated Lesson Tracking Moment: To view a timestamp for a lesson's in progress and completion tracking.
- Record Progress: Contains a default value of 0.5 to record in progress tracking for external content.

2022R1 What's New Post: Cloud Connect for Learning: Completion Tracking for LinkedIn Learning and Udemy Business

2023R1 What's New Post: OpenSesame Content Import and Tracking

https://community.workday.com/node/1171474

Configure External Content

Prerequisites

Note: Workday plans to retire Content Cloud YouTube integration in a future release.

Note: This information is to help you configure external content if you are using legacy tasks to integrate with Workday Learning. See Concept: Cloud Connect for Learning Integration Methods to learn about the various integration methods and their benefits.

- Ensure that you have an active account with the external provider.
- Set up Cloud Connect for Learning for Coursera, Go1, Harvard ManageMentor®, LinkedIn Learning™, OpenSesame, Pluralsight, Skillsoft Percipio, or Udemy Business using the Configure External Content Provider task. See Steps: Set Up Cloud Connect for Learning.
- Enable these security domains and grant *View* and *Modify* permissions for reports and tasks and *Get* and *Put* permissions for integrations:
    - The *Set Up: External Content* domain in the Cloud Connect for Learning functional area.
    - The *Set Up: Learning External Content Integrations* domain in the Learning Core functional area.

Context

You can enable learners to access third-party content from these providers in search, discovery, and recommendations alongside internal content on the Learning dashboard:

- Coursera
- Go1
- Harvard ManageMentor®
- LinkedIn Learning™
- OpenSesame
- Pluralsight
- Skillsoft Percipio
- Udemy Business

Workday:

- Doesn't control and isn't liable for information presented in external content. The views and statements made in external content represent the views of the author or content creator, and not the views of Workday. If you find any of this content offensive or inappropriate, contact the content creator or content service provider, or stop viewing the content.
- Doesn't record your activity if you view linked external content in a separate web browser or tab.
- Only supports Skillsoft Percipio courses on mobile devices that Skillsoft Percipio has designed for mobile.

Steps

1. Access the Configure External Content task.
2. As you complete this task, consider:

Option	Description
Content Provider	Select *External Course*: for Coursera, Go1, Harvard ManageMentor®, LinkedIn Learning™, OpenSesame, Pluralsight, Skillsoft Percipio, or Udemy Business content.
Default Learning Topic	Select a default learning topic from your tenant to map to third-party content.

Option	Description
Import Exact and Synonymous Skills	When you have Skills Cloud enabled and you select Skillsoft Percipio or Udemy as the Content Provider, select this option to import up to 25 exact and synonymous skills per piece of content.
Opt-Out of Synonymous Skills	Select this option when you want to exclude synonymous skills from your import. Note: Workday recommends including synonymous skills for the best matching of vendor skills to Workday Skills Cloud or maintained skills.
Requires Enrollment	Select this check box if content from this content provider requires enrollment.
Exclude from Recommendations	Workday populates these content container worklets on the Learning dashboard with recommendations for relevant learning content: • Based on Your Interests • Based on Your Skills to Develop • Most Popular • Popular in Your Role • Recently Added • Recommended for You • You Might Also Be Interested In Workday also includes learning recommendations on these reports: • Opportunity Graph (in the Popular for This Role section) • View Competency Select this check box to exclude the content from this content provider from the results.
Exclude from Search and Browse	Select this check box to exclude content from this content provider from appearing in the Browse Learning Content report and global search results. If you've customized the Browse Learning Content report for your company, Workday recommends that you manually update the *Exclude from Search and Browse filter* on pre-existing reports.

3. In the Topic Mapping grid, add rules to enable Workday to map tagged third-party content to learning topics in your tenant. As you complete the grid, consider:

Option	Description
Order	Workday resolves the mapping rules in the order that you specify. If it can't resolve any of the rules, it maps the content to the Default Learning Topic.

Option	Description
Topics	Select 1 or more learning topics to associate with the content.
Tags	Select 1 or more tags that are already associated with the third-party content. For Coursera, Go1, Harvard ManageMentor®, OpenSesame, Pluralsight, and Skillsoft Percipio content, Workday only displays tags after you run the integration for the first time. To map content to a topic that you configured using the Configure External Content task, ensure that you've listed at least one tag in the mapping rule row. When you list multiple tags in the same row, Workday applies *And* logic when evaluating the rule. Example: You create a rule that maps Learning Topic A to Tags 1 and 2 in the same row. A piece of content must have at least Tags 1 and 2 to map to Learning Topic A. Content 1 has Tags 1, 2, 3, so it maps to Learning Topic A. You can create an *Or* relationship by creating multiple mapping rules for the same topic and specifying different tags in each row. Example: You create a rule mapping Learning Topic B to Tag 1 and a separate rule mapping Learning Topic B to Tag 2. Content 1 must have either Tag 1 or Tag 2 to map to Learning Topic B. Order matters when using the Configure External Content task, as Workday resolves topic mapping in the order that you specify. Example: Content 1 has Tags 1,2,3,4, which are mapped in order: Example 1: • Learning Topic A to Tag 4. • Learning Topic B to Tags 1,2,3. • Content 1 maps to Learning Topic A. Example 2: • Learning Topic B to Tags 1,2,3. • Learning Topic A to Tag 4. • Content 1 maps to Learning Topic B.

When you associate learning topics with external content, Workday applies the topics to the content immediately. Any topic-based segmented security that restricts access to the content also applies with immediate effect. Updates to the Topic facet in Learning search results can take up to 6 hours. Ensure that you allow the appropriate amount of time to pass before verifying that Workday maps the external content to the topics in your tenant.

Result

When you select a lesson or course, Workday displays the content in these reports:

- View External Lesson: Enables learners to consent to third-party terms and play videos. Learning administrators can activate and inactivate the lesson.
- View External Digital Course: Enables learners to view external digital course content. You can enable near real-time tracking for Coursera, LinkedIn Learning, Skillsoft Percipio, and Udemy Business. Tracking is recorded whether learners consume the content in Workday Learning or the external content provider's website. Workday removes the Mark Complete button once you've configured completion tracking for the content.

You can view imported third-party skills and their corresponding mappings on the View External Skill report.

https://community.workday.com/node/1171474

Concept: Cloud Connect for Learning Integration Methods

Third-party learning content providers integrate with Workday Learning using 1 of these 2 methods:

- The Cloud Connect for Learning (CCL) platform.
- These legacy tasks:
    - Configure External Content
    - Configure External Content Provider
    - Configure External Content Tracking Credentials
    - Create Client Credential Mapping

Understanding the differences helps you choose the right path for your organization.

Cloud Connect for Learning (CCL) Platform Integration

The CCL platform is the streamlined solution for integrating content providers with Workday Learning. It enables third-party providers to build and manage their own integrations with Workday, independent of Workday's release schedule. This approach simplifies the setup process for you.

Key features:

- Simplified Setup: You use a single task, Configure Cloud Connect for Learning, to set up or migrate a content provider.
- Future-Proof: All future enhancements and new features for learning content integrations will be delivered exclusively through the CCL platform. This includes new content types, like collections, and expanded skills import functionality.
- Provider Independence: Content providers can release updates to their integrations at any time, giving you quicker access to new features and a wider choice of providers.

If you're setting up an integration with an existing content provider where channels were used, Workday no longer supports channel selection in the CCL platform as content curation will be done on the content provider side.

Benefits of Migrating to the Cloud Connect for Learning Platform

- Access to Innovation: You'll receive all future enhancements, ensuring your learning ecosystem remains current.
- Simplified Configuration: A single task simplifies the setup and management of each content provider integration.
- Greater Content Choice: As more providers build on the CCL platform, you will have a larger and more diverse catalog of content to choose from.

If you’re using the legacy integrations, you can continue to use the current setup. However, as the CCL platform is the strategic path forward for all learning content integrations in Workday, we recommend:

- Migrating existing legacy integrations to the CCL platform when your content provider becomes available on the platform. After you migrate a provider, Workday automatically removes it from the legacy configuration tasks.
- Using the CCL platform if you are setting up CCL for a content provider for the first time if your provider is already available in the CCL platform.

For information on the list of content providers who are using the CCL platform, see Reference: Content Providers Using the CCL Platform to Integrate With Workday Learning.

Legacy Integration

The legacy integration method is the original way of connecting content providers to Workday Learning. This approach involves a point-to-point integration that requires you to configure multiple tasks to establish the connection for each content provider. Use this integration method if your content provider is not yet in the CCL platform.

Key features:

- Task-Based Setup: Configuration typically involves using a combination of these tasks:
  - Configure External Content
  - Configure External Content Provider
  - Configure External Content Tracking Credentials
  - Create Client Credential Mapping
- No Future Enhancements: Workday won't update individual legacy integrations with new features. Example: New content types won’t be available for any content providers, and skills import functionality will be available only for 2 content providers through this method.

Content providers available in the legacy integration task:

- Coursera
- Go1
- Harvard ManageMentor®
- LinkedIn Learning™
- OpenSesame
- Pluralsight
- Skillsoft Percipio
- Udemy Business

To take advantage of new features like skills support and ensure long-term support, you should plan to migrate your providers to the CCL platform if your provider is already available in the CCL platform.

	Process Monitor to see when the import was previously run. Content Import: • We import Go1 courses only. • We don't import courses with languages that aren't supported in Workday Learning.
Harvard ManageMentor®	Parameters: Enter the subdomain that your organization uses for Single Sign-On (SSO). Channels: The channels correspond with Harvard ManageMentor courses that can contain content such as text, video, and quizzes. Workday displays the courses in Learning, but you must manually launch the course in Harvard ManageMentor to view the associated lessons and assessments. Content Import: We don't import courses with languages that aren't supported in Workday Learning.
LinkedIn Learning™	Parameters: Contact LinkedIn Learning™ for your client credentials. Channels: The channels correspond with LinkedIn Learning™ subjects that contain courses. Workday displays the courses in Learning but you must manually launch the course in LinkedIn Learning™ to view the associated lessons and assessments. The Unclassified channel corresponds to LinkedIn Learning™ courses that don't belong to any specific subject. You must have an All Language License from LinkedIn Learning™ to activate non-English channels. Process Monitor: You can check the status of the import integration by accessing the Process Monitor information. The Process Type is Integration and the Process is LinkedIn Learning Import. Scheduled processes run nightly but the only way to view them is to check your Process Monitor to see when the import was previously run. Content Import:

Provider	Settings
	We don't import courses with languages that aren't supported in Workday Learning.
OpenSesame	Parameters: Contact your OpenSesame Implementation Specialist for your Customer Integration ID (CIID). Process Monitor: You can check the status of the import integration by accessing the Process Monitor information. The Process Type is Integration and the Process is OpenSesame Import. Scheduled processes run nightly but the only way to view them is to check your Process Monitor to see when the import was previously run. Content Import: • We import OpenSesame courses only. • We don't import courses with languages that aren't supported in Workday Learning.
Pluralsight	Parameters: Contact Pluralsight for your client credentials. Process Monitor: You can check the status of the import integration by accessing the Process Monitor information. The Process Type is Integration and the Process is Pluralsight Content Import. Scheduled processes run nightly but the only way to view them is to check your Process Monitor to see when the import was previously run. Content Import: • We import Pluralsight courses only. • We don't import courses with languages that aren't supported in Workday Learning.
Skillsoft Percipio	Parameters: Contact Skillsoft Percipio for your client credentials. Channels: Channel selection isn’t available for Skillsoft Percipio. Contact Skillsoft Percipio for assistance on the content selection process before importing into Workday assessments, audio, books, courses, labs, and videos. Process Monitor: You can check the status of the import integration by accessing the Process Monitor information. The Process Type is Integration and the Process is Percipio Import. Scheduled processes run

Provider	Settings
	nightly but the only way to view them is to check your Process Monitor to see when the import was previously run. Content Import: • We import external content types such as assessments, audio, books, courses, labs, and videos. No configuration is required to import content types but we recommend that you contact Skillsoft Percipio for assistance on the content selection process. • Learners can use the *External Content Type* facet on the Browse Learning Content report to filter external content if they've configured Skillsoft Percipio in their tenant. • We don't import courses with languages that aren't supported in Workday Learning. • We enable you to import up to 25 exact and synonymous skills per piece of content, and up to 12,000 skills total for Skillsoft Percipio.
Udemy Business	Parameters: Contact Udemy Business for your client credentials. Channels: The channels correspond with Udemy Business subtopics that contain courses. Workday displays the courses in Learning but you must manually launch the course in Udemy Business to view the associated lessons and assessments. Process Monitor: You can check the status of the import integration by accessing the Process Monitor information. The Process Type is Integration and the Process is Content Provider Course Import. Scheduled processes run nightly but the only way to view them is to check your Process Monitor to see when the import was previously run. Content Import: • We don't import courses with languages that aren't supported in Workday Learning. • We enable you to import up to 25 exact and synonymous skills per piece of content.
YouTube™	Channels: The channels correspond with YouTube channels that contain videos. Workday displays the videos in Learning as standalone lessons.

<table>
<tr><th>Provider</th><th>Settings</th></tr>
<tr><td></td><td>Note: Some content creators might require additional licenses. Customers are responsible for ensuring that they have the proper rights to use content for these channels.

You can only activate these channels from the Workday-delivered list:

• 99u
• Berkeley Haas
• Collision Conference
• Columbia Business School
• Content Marketing Institute
• DataCamp
• DevTips
• ESADE
• Forbes
• GOTO Conferences
• Harvard Business School
• HSGUniStGallen
• INSEAD
• Jack Welch Management Institute
• Kellogg School of Management
• KnowledgeAtWharton
• Lean In
• LearnCode.academy
• LevelUpTuts
• London Business School
• Microsoft Office 365
• Mind The Product
• Presidents Institute
• Rotman School of Management
• Said Business School, University of Oxford
• SimonSinek
• South x Southwest (SXSW)
• Stanford Graduate School of Business
• Startup Grind
• The Economist
• The Ross School of Business - University of Michigan
• Workday</td></tr>
</table>

To remove external content from the Browse Learning Content report, access the Configure External Content task, select the external content you want to remove, and select the Exclude from Search and Browse check box.

To deactivate an external content provider, access the Configure External Content Provider task and deselect their channels. If an external content provider has no channels, you can deactivate the content by deselecting the Active check box that displays on the task instead.

Steps: Set Up Cloud Connect for Learning Using Cloud Connect for Learning Platform on page 2038

Troubleshooting: Configure Cloud Connect for Learning

Users can't find the new Integration System User in the drop-down.

Cause: Users have not enabled the *Cloud Connect for Learning Service* domain.

Solution:

Steps

1. Access the View Domain report.
2. Select the *Cloud Connect for Learning Service* domain from the Domain prompt.
3. Click the magnifying glass icon next to Domain Security Policy. If the domain is not enabled, the status will be Suspended - Policy not enabled.
4. On the View Domain Security Policy report, from the related actions menu of the Cloud Connect for Learning Service, select Domain Security Policy > Enable.

Users can't find the Configure Cloud Connect for Learning task.

Cause: The user is not configured for the correct domains.

Solution: Create a Learning Administrator with these domains with the *View* and *Modify* access and assign a user or users to the Learning Administrator:

- *Cloud Connect for Learning Service :* This domain requires *GET*, *PUT*, *View*, and *Modify* permissions.
- *Manage: Learning Additional Data*
- *Manage: Learning Content*
- *Manage: Learning Course Enrollments*
- *Person Data: Learning*
- *Person Data: Learning Record*
- *Set Up: Learning Catalog*
- *Set Up: External Content*
- *Set Up: Learning External Content Integrations*: This domain requires *GET*, *PUT*, *View*, and *Modify* permissions.

For information on user-based security groups, see Create User-Based Security Groups.

Users can't find the Configure Cloud Connect for Learning task after configuring the correct domains.

Cause: The tenant has not been configured correctly.

Solution: Contact Workday Partner Support and share the Tenant Name.

Users see Error Your request failed. Contact support when generating or regenerating credentials on the Manage Credentials page.

Cause: The tenant has not been configured correctly.

Solution: Contact Workday Partner Support and share the Client ID and Tenant Name.

FAQ: Cloud Connect for Learning

What are the methods content providers use to integrate with Workday Learning?	Third-party content providers integrate with Workday Learning using 1 of these 2 methods:
	• The Cloud Connect for Learning (CCL) platform.
	• These legacy tasks:
	    • Configure External Content
	    • Configure External Content Provider
	    • Configure External Content Tracking Credentials
	    • Create Client Credential Mapping
	See Concept: Cloud Connect for Learning Integration Methods to learn about the various integration methods and their benefits.

My content provider is listed both under providers using the legacy tasks and under the CCL platform. Which task should I use to set up CCL for the first time?	Workday recommends you to set up CCL for your content provider in the Cloud Connect for Learning platform if your provider is already available in the Cloud Connect for Learning platform. See Concept: Cloud Connect for Learning Integration Methods to learn about the various integration methods and their benefits.
I have set up CCL for my content provider using the legacy tasks. If my content provider is available in the CCL platform, what should I do?	Workday recommends migrating existing legacy integrations to the Cloud Connect for Learning platform when your content provider becomes available on the platform, as the Cloud Connect for Learning platform is the strategic path forward for all learning content integrations in Workday. See Concept: Cloud Connect for Learning Integration Methods to learn about the various integration methods and their benefits.

Which ISU should I select from the Integration System User (ISU) prompt if multiple ISUs display?	Each integration will require a unique Integration System User (ISU). As you are configuring a new Content Provider in the Cloud Connect for Learning platform, you need to select the ISU created for that Content Provider.
What happens if I select or clear the Import External Vendor Skills check box in the Configure Cloud Connect for Learning task?	If you select the check box, you import exact and synonymous skills from content providers to Workday Learning, provided you have opted in to receive skills on the content provider platform. If you clear the check box, workday will not import content that contains skills. If you make this change, you must contact the content provider. We don’t recommend clearing the Import External Vendor Skills check box after you enable skills.
What happens if I select or clear the Opt-Out of Synonymous Skills check box in the Configure Cloud Connect for Learning task?	If you select the check box, you disable synonymous skills matching from the imported skills from content providers to Workday Learning. If you clear the check box, you allow synonymous skills matching from the imported skills from content providers to Workday Learning.
Which default learning topic should I select when I set up CCL for my content provider?	Choose a topic based on your organization's learning content strategy.
How long should I wait for the content sync after I set up CCL for my content provider in the CCL platform?	After the content provider imports the content to Workday, Workday has to index the content. For production environments, indexing can take up to 12 hours, and for non-production environments, indexing can take up to 24 hours.
My content provider supports skill mapping. Where does Workday display the newly mapped skills?	Skills are displayed on the Learning content.
What does the Data Added field on the content indicate?	This is the date when the content was published. This information comes from the content provider.
How can learners find various external content partner content types in Workday?	Learners can filter content using the External Content Type filter in the Browse Learning Content report to find content imported by external content providers to Workday Learning.
How does engagement with external content providers show up in Workday?	A Learning admin can view the Learning Admin dashboard, and select the Content Provider tab to view engagement.

Steps: Set Up Cloud Connect for Learning Using Legacy Tasks on page 2043

Packaged Content

Setup Considerations: Packaged Content for Learning

You can use this topic to help make decisions when planning your configuration and use of packaged content. It explains:

- Why to set it up.

- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Packaged content in Workday refers to learning content that's compliant with SCORM (Sharable Content Object Reference Model) or AICC (Aviation Industry Computer-Based Training Committee) file-type specifications. Packaged content also includes courses licensed from e-learning content vendors. You can use packaged content in Workday Learning courses for desktop and mobile.

Business Benefits

- Create a familiar and intuitive experience for learners by enabling them to consume packaged learning content formats in Workday.
- Customize packaged learning content to create a personalized learning experience.
- Improve efficiency by selecting a packaged content lesson to provide the primary score and grade for the course.
- Simplify reporting using the tracking information for packaged content in learning reports.

Use Cases

- Automatically recover missing data to update records with the best completion, score, and success rates or the latest interactions.
- Import packaged content into Workday as lessons in a course.
- Track packages in Workday according to completion status

Questions to Consider

Questions	Considerations
What e-learning content standards does Learning support?	Workday supports these versions of AICC and SCORM for packaged content: • AICC 2.x • SCORM 1.2 • SCORM 2004 (2nd-4th Edition)
How do you want users to access packaged content?	You can create Workday Learning courses using packaged content for desktop and mobile. We support packaged content for iPad, iPhone, and Android using devices running: • Android 5.0 or later. • iOS11 or later.
How do you import existing media content into Workday?	You can import packaged content into Workday using: • Drive to load packaged content files. • Media importer or web services to bulk load external learning content. • The Workday Learning interface to add packaged content to an existing course.

Recommendations

- Learners should disable pop-up blockers, which can impact on interactions between SCORM packaged content and Workday.
- To manage large volumes of packaged content efficiently, use the Create Media Import Job task to upload files before you create lessons or courses.
- You can't use SCORM or AICC packaged content files for stand-alone lessons. As these files require detailed authoring and can be assigned to learners, we recommend putting them into lessons within a course instead, as this enables you to use more functionality for them.

Requirements

To enable Workday to receive question-level data from SCORM or AICC quizzes, you must:

- Enable packaged content interaction reporting on the Edit Tenant Setup - HCM task.
- Test your files in an independent tool to ensure that the files publish interaction results. Example: SCORM Cloud.

Limitations

- 4 GB is the maximum video file size for packaged content.
- Workday only scans for viruses on uploads of 2GB or under.
- Workday defaults limit uploads to 2GB for new customers only. You can select the Increase Maximum Upload Size check box on the Edit Tenant Setup - HCM task to enable larger uploads, but Workday won't scan them for viruses.
- You can only amend enrollment results for courses that contain packaged content when they have a status of not started or in progress.
- Your packaged content files must meet these requirements:
  - Maximum extracted file size of 20 GB.
  - Maximum of 100,000 extracted files.
  - Maximum zip file upload size, using Drive or Learning file picker, of 4 GB.
  - Maximum zip file upload size, using Media Import service, of 20 GB.

Tenant Setup

Enable tenant-wide settings for packaged content on the Edit Tenant Setup - HCM task.

Security

Domains	Considerations
Set Up: Learning External Content Integrations in the Learning Core functional area	Enables you to access management tasks related to external content integrations for Learning.
Set Up: Tenant Setup - HCM in the System functional area	Enables you to set up packaged content for your tenant.

Business Processes

You can use these business processes to add approval steps to courses containing packaged content when you create or edit learning content or manage learning content versions:

- *Manage Course*
- *Manage Lesson*
- *Manage Program*

Reporting

Reports or Dashboards	Considerations
Translate Business Object	Create translated titles and descriptions for packaged content.
Learner Engagement	View enrollments and completions to evaluate learner engagement.
My Team's Learning	Display a summary of course completion status for learners.
View External Lesson	Activate and inactivate external lessons. Enable learners to consent to third-party terms and play videos.

Integrations

Integrations or Web Services	Considerations
Manage Course Offering *Manage Learning Course* *Manage Lesson* *Manage Learning Program*	Enables you to create or update learning content types.
Put Learning Content Subscription	Enables you to create or update subscriptions for learning content that contains packaged content.
Put Learning Imported Content *Put Learning Imported Record*	Enables you to bulk load existing content or enrollments into Workday.
Put Media Settings	Enables you to update restricted access settings for media items.

Connections and Touchpoints

Features	Considerations
Career and Development Planning	You can create packaged content that learners can consume for their personal or professional development.
Talent	You can use survey functionality from Talent as a lesson type in a course to gather feedback to improve your packaged content materials.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Packaged Content for Learning

Prerequisites

Review setup considerations for packaged content.

Note: The steps for enabling this feature depend on your organization's subscription service agreement. To determine your subscription service agreement, a Community user can:

1. Access your profile avatar on Community.
2. Select the Profile button.
3. On your profile page, select your organization's name underneath your name and to the right of your title.
4. View the Subscription Service Agreement value.
    - If the value is *UMSA*, the Media Cloud functionality is provided under the relevant terms within the Platform and Product Extensions Product Terms.
    - If the value is *MSA*, the Media Cloud functionality is provided under the terms of the Media Cloud Addendum.

Context

You can import third-party material to your learning courses.

Steps

1. Access the Edit Tenant Setup - HCM task.

   In the Packaged Content section, select the Enable Packaged Content check box.

   (Optional) Configure other tenant-wide options for your packaged content.

   See Reference: Edit Tenant Setup - HCM.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

2. (Optional) Set up Learner Name for Packaged Content.

   Enable Workday to send a learner's name, ID, or both, to third-party packaged content providers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   If your Subscription Service Agreement value is *MSA*, Enable Innovation Services Feature and Machine Learning Data Contributions for MSA customers.

   a. On the Innovation Services Opt-In task, select the Learner Name service on the Available Services tab in the Learning category.
   b. On the Maintain Innovation Services and Data Selection Opt In task, select Learner Name and Learner ID in the Learning: Learner Name category.

   If your Subscription Service Agreement value is *UMSA*:

   a. Access the Edit Tenant Setup - HCM task.
   b. In the Packaged Content section, select the Send Learner Name to Third-Content Provider check box.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

Next Steps

Import third-party material and add it to your learning courses.

Getting Started with Media Cloud

Concept: Packaged Content

Workday uses the term packaged content to describe learning content that's compliant with SCORM or AICC file type specifications. Packaged content also includes courses licensed from content vendors, such as Skillsoft. You can create Learning lessons and courses for both desktop and mobile using packaged content.

Since e-learning content can contain many media files, packaged content contains a manifest file or a set of descriptor files that defines the basic functions of the package.

Creating and Uploading

You can:

- Create packaged content using external applications, such as Adobe Captivate and Articulate Storyline.
- Import the files directly into Workday Learning lessons (except stand-alone lessons).

When you have a large volume of packaged content, Workday recommends that you use the Create Media Import Job task to upload the files before you create Learning lessons or courses. The maximum file size limit for packaged content is 4 GB.

Tracking

Workday tracks the status (Not Started, In Progress, Completed) for each package you launch.

Some packaged content opens in a separate browser window. If your Workday session times out before you complete the packaged content, Workday still saves your progress. When you log back into Workday, Workday directs you back to the Learning page that launched the content.

When you launch packaged content that contains a scoring element or assessment, Workday also tracks summary data (pass/fail, score). You can use Learning reports to view tracking data.

Concept: Best Practices for Uploading Packaged Content on Mobile

Workday supports packaged content for:

- iPad and iPhone devices running iOS 11 or later.
- Devices running Android 5.0 or later.

Packaged content might not display optimally on older devices and operating systems.

Workday doesn't optimize packaged content videos for playback. To minimize the risk of packaged content playback issues on mobile, we recommend that you follow these guidelines.

Container Format

Package your content in HTML5 and avoid using advanced features that might not be compatible with mobile devices, such as battery status and vibration.

Content and Device Considerations

Avoid using Flash or Flash Video, because iOS and Android operating systems don't support them.

If you use Multi-SCO or Multi-AU packaged content that uses layered navigation modules or tables, the lack of available screen space might cause playback rendering errors.

Cross-domain content, such as Skillsoft, might not work predictably on all devices due to differences in network firewalls and browser compatibility.

External Document Links

On Android devices, Workday opens PDF external document link types in the same browser tab that you're on. When you add any other supported external document link type to your content, you might have to install third-party applications to view the content. iOS devices open external document link types in their own web view. We support these external document link types in mobile packaged content:

Operating System	External Document Link Type

Android	• Excel (.xls, .xlsx)
	• Images
	    • .bmp
	    • .gif
	    • .jpeg
	    • .jpg
	    • .png
	    • .svg
	    • .tif
	    • .tiff
	• PDF (.pdf)
	• PowerPoint (.ppt, .pptx)
	• Rich Text Format (.rtf)

Operating System	External Document Link Type

	• Videos
	  ◦ .mkv
	  ◦ .mov
	  ◦ .mp4
	• Word (.doc, .docx)

iOS	• Excel (.xls, .xlsx)
	• Images
	  ◦ .bmp
	  ◦ .gif
	  ◦ .jpeg
	  ◦ .jpg
	  ◦ .png
	  ◦ .svg
	  ◦ .tif
	  ◦ .tiff
	• Keynote (.key)
	• Numbers (.numbers)
	• Pages (.pages)
	• PDF (.pdf)
	• PowerPoint (.ppt, .pptx)
	• Rich Text Format (.rtf)
	• Videos
	  ◦ .mov
	  ◦ .mp4
	• Word (.doc, .docx)

FAQ: Packaged Content

Which package formats do Workday support?

Version	Release Date	Widely Used	Works Cross-Domain
AICC HACP	Feb. 1998	Yes	Yes
SCORM 1.2	Oct. 2001	Yes	No
SCORM 2004 (V2-V4)	Jul. 2004 - Mar. 2009	Yes	No

What is the maximum file size limit for packaged content?

4 GB.

Why am I receiving the error message: Processing failed for this media item?

If the item is a Lynda.com AICC package, the packaged content could be nested outside of the root folder. Manually unzip the package and nest the actual SCORM or AICC file in the zipped folder.

How reliable are packaged content completions and updates in Workday?	See: Packaged Content Reliability in Workday Learning.
How can I troubleshoot SCORM-related errors?	See: Packaged Content.
How can I report on SCORM content scores?	You can select theProvide Course Gradecheck box on a SCORM lesson and create a custom report against learning enrollments for score and grade. If replay is allowed on a SCORM lesson, learners can replay the lesson to improve their score. If replaying of a SCORM lesson isn't allowed, learners must create a new enrollment, and you can report on the latest enrollments to check the most recent score.
Why am I receiving the error message when I resume my SCORM 2004 (2nd and 3rd Editions): You failed this packaged content lesson?	This is expected behavior of SCORM 2004 (2nd and 3rd Editions). Rules have been corrected for SCORM 2004 (4th Edition). You have 2 options to fix this issue: • Republish your package as SCORM 2004 (4th Edition) if you've access to the authoring tool. • Alter the manifest file to override the default rollup rules. See: Packaged Content Tracking Troubleshooting.
How are completion statuses for Packaged Content, Lessons, and Courses determined?	Packaged Content: Completion status for packaged content is dependent on the logic built into the package by its author. Workday is reliant on receiving completion status information from the package. Lessons: Completion status for lessons is dependent on the packaged content completion status. Lesson status is set to *Not Started* before content is launched. When packaged content is launched, and before it's complete, status sets to *In Progress* in most cases. We mark both package and corresponding lesson as *Completed* when the package sends completion status to Workday. Courses: Completion status for learning courses is based on the logic for the course set by a learning administrator in Workday. Courses in Workday require all lessons that are required learning content to be complete.
What impact does the Enable Completion Without Exit functionality have on completion status?	Completion status for packaged content is determined by the logic built into the package by its author. You can configure the package to send completion status at any point during user consumption or upon user exit. Regardless of when the package sends the completion status to Workday, lesson completion status updates when the learner exits the course as a current default with interaction reporting enabled. Enable Completion Without Exit functionality updates this process

	so that lesson completion status is immediately marked in Workday as soon as completion status for packaged content is received. For highest reliability, Workday recommends that the tracking logic in your packaged content send completion status as early as makes logical sense. See: Completion Without Exit Tracking Logic.
How does the Enhanced Tracking Completion logic work?	Enhanced Tracking Completion (ETC) is designed to recover the tracking details of learners that might have completed a course, but aren't marked as *Completed* or *Passed* because the information was lost due to network issues or flaws in the SCORM standard. ETC is enabled for all Workday tenants by default. See: Enhanced Tracking Completion Recovery Logic.
How does the Align Workday and Packaged Content functionality work?	When a learner launches a piece of packaged content, that course opens in a separate pop-up window. Workday generates a separate session for the packaged content in order to track the learner's progress and course completion, which is independent from the underlying Workday session. The packaged content session refreshes by specific activity within the packaged content, such as progress, tracking, or bookmarking updates. In the case of SCORM content, this includes any updates in a RecordResults.jsp request, or in the case of AICC, a ProcessAiccRequest.jsp request. When you enable this functionality, the length of the packaged content session aligns to the length of the Workday session. Both remain active until: • Learners exit the course and the pop-up window closes. • Or, an inactivity threshold of 4 hours is reached. If no activity requests are received within a 4 hour period, the packaged content session expires and no further updates will be processed between the packaged content and Workday. • Or, a maximum extension time of 18 hours is reached for SCORM or AICC courses hosted inside Workday. For AICC courses hosted outside of Workday, the maximum extension time is 4 hours. If the package continues to send activity requests, the packaged content session is extended for up to 18 hours or 4 hours, respectively. After 18 hours or 4 hours, respectively, the packaged content session expires and no further updates are processed between the packaged content and Workday. If 1 of these criteria is met, the packaged content session expires and users see the message,

“A fatal error has occurred, communication with the server has been lost.” From that moment the Workday session resumes to the default session timeout you've configured.

It’s important to note that session inactivity isn't solely determined by user interactions within the packaged content. In Workday, session expiration is also influenced by automated system actions wherein the package content itself can autonomously send requests and therefore reflate the session to a maximum of 18 hours. This means that the session may not expire even if the user isn't actively engaging with the packaged content. Such non-user interactions are dependent on how the package itself is created. Examples include checks to see if the state has changed, or if the scores have changed. This feature is supported by web browsers and mobile web browsers only. User settings (e.g. extensions, storage/cookie settings) can modify the behavior of the mobile web browser to a certain extent. Also, by default, when the Mobile web browser is in the background (receiving a phone call, locking the phone, switching to a different application etc), the operating system suspends most of the Workday application activity and only specifically allowed applications are given extended time to perform additional functions, resulting in the Workday session to timeout.

Troubleshooting: Incorrect Learner Tracking in Packaged Content

Learners pass course at incorrect grade.

Cause: Pass / Fail threshold is incorrect. When you don't configure a passing score, the score records as *Unknown*, which results in unsuccessful tracking.

Solution:

Steps

1. Access your authoring tool.
2. Modify the grade parameter to record a pass or fail for each individual packaged course.

Failing learners don't receive a failing grade.

Cause: The grade parameter isn't set to record the fail grade. Example: A failing score records an *Incomplete* rather than *Fail* grade.

Solution:

Steps

1. Access your authoring tool.
2. To report a failing grade for a failing score, modify the grade parameter.

Learning Enrollments

Setup Considerations: Learning Enrollments

You can use this topic to help make decisions when planning your configuration and use of learning enrollments. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

Workday enables you to manage learning enrollments for course offerings and digital courses including:

- Due dates.
- Grading.
- Mass actions.
- Waitlists.

Business Benefits

- Gain insights on enrollments in your organization by creating a discovery board.
- Help learners to find recommended content related to their active enrollments and visualize their required learning.
- Increase efficiency by managing mass enrollments for a large organization.
- Manage compliance for required learning in your organization by enrolling team members or entire teams in content.
- Reduce administrative overhead as learners select content and enroll themselves.
- Simplify assessment processes by enabling specific users to manage the grading and attendance roster.
- Streamline enrollment processes by assigning access levels to specific security groups so that they can manage enrollments.
- Manage enrollments efficiently by receiving warning messages when content a learner is being enrolled in conflicts with a scheduled absence or leave.

Use Cases

- Assign multiple assessors for each enrollment in course offerings with training activity lessons.
- Cancel or rescind enrollments.
- Define custom email notifications or approvals for learning enrollments.
- Enable learners to skip enrollment approval for content within a program.
- Enable administrators and managers to track and monitor learner engagement.
- Enable users to enroll themselves in content to improve skills related to their career interests.
- Inform learners when courses are available if enable express interest functionality, and configure reminders when they enroll.

- Enable notifications in Slack or Microsoft Teams for enrollment approvals.
- Manage waitlists for course offerings.
- Hide enrollment records from transcripts or reports.
- Self-assign as an additional assessor for an enrollment.
- Send questionnaires to learners to collect information such as dietary requirements or whether they need a sign language interpreter.

Questions to Consider

Question	Consideration
Who manages enrollments for your organization?	Workday enables you to configure specific access levels for different security groups so that they can mass enroll or drop learners. Example: You can grant limited access to trainers and unlimited access to administrators.
How do you want to manage course offerings that reach full capacity?	You can create an automatic or manual waitlist on a course to enable learners to join the waitlist of the course offering: • Automatic waitlists enroll learners into an offering if a space becomes available. • Manual waitlists require an administrator or an instructor to enroll the learner from the waitlist into the offering.
Who manages attendance and grading for enrollments in your organization?	You can enable administrators, instructors, and assessors to enter grading and attendance results for enrolled learners if you enable tracking options for 1 or more lessons.
Does your company need to remind learners of retraining requirements?	You can configure reminders for courses and programs with expiry periods that automatically notify learners when an enrollment has an upcoming expiration date and is due for retraining. You can also add multiple reminders to courses and programs that notify learners and their managers about their enrollments.
Does your organization assign required learning content to learners?	Workday supports the assignment of required learning through mass enrollment actions. Administrators and manager can set fixed or relative due dates on required learning enrollments.
Do you want to enable learners to enroll in content without manager approval?	You can add an entry condition rule for an approval step on the enrollment business process to determine when learners need manager approval. Example: Learners can enroll in a course offering without approval from their managers when the location of the offering is the Dublin office. You can also select the Skip Enrollment Approval option on the Create Program and Edit Program tasks if you want to enable learners to skip enrollment approval for content within a program.

Question	Consideration
What's the difference between dropping and cancelling an enrollment?	Learners can drop an enrollment once the content isn't required learning content. Administrators have the option of creating mandatory drop reasons from which learners must select when dropping enrollments so that they can understand their reasons for not completing the content. Learning administrators can cancel a single enrollment for a learner or they can perform a mass cancel action for a larger group of enrollments.
How do you want to communicate with enrolled learners?	You can create custom notifications on enrollment business processes or alerts from custom reports. You can configure notifications to inform learners when their enrollment has been approved or denied using: • Workday for Slack. • Workday for Microsoft Teams. Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.
How do you want to collect learner information when a learner enrolls in content or drops enrollment?	Add questionnaires for learners to complete when they enroll in content or drop enrollments. You can add the *Complete Questionnaire* action step to the Enroll in Content and Drop Learning Enrollment business processes. When a business process definition contains a *Complete Questionnaire* step that hasn't been configured, Workday displays an error message prompting you to run Configure Questionnaire. Questionnaire Administrators determine which questionnaires can be associated with a business process while they are creating or editing a questionnaire. Selecting the appropriate Questionnaire Type and Allowed on Business Process options makes a questionnaire available in the corresponding business processes.

Recommendations

- Remove the Assessor Dashboard worklet and Instructor Dashboard menu from the Learning dashboard so that trainers access their enrollment tasks and reports through the Learning Trainer dashboard.
- The limit for a mass enroll action is 100,000 but Workday recommends enrollments of less than or equal to 1,000.
- Use the *Manage Internal Learning Assessor* or *Manage External Learning Assessor* web service if you need to create large numbers of assessors.

- Use the *Save* filter on the offerings table that displays to learners on the Select Offering task and to administrators on enrollment tasks to search the offerings table and save results under a personalized name for future use. Example: Berlin Location.
- Workday recommends that users with access to the *Manage: Facilitated Enrollments* domain don't have access to the *Manage: Learning Course Enrollments* domain. This setup ensures they can only enroll learners that they have access to.

Requirements

Create user-based security groups to enable specific users to manage enrollments for your organization.

Limitations

- You can't cancel completed enrollments that have an associated equivalency record, learning assignment, expiration date, or pricing period.
- You can only amend enrollment results for digital lessons that haven't started or are in progress.

Tenant Setup

Use the Edit Tenant Setup - HCM task to:

- Express enrollment interest in courses when no suitable offerings are available to them in a specified location and date range.
- Rate courses that they're enrolled in and any stand-alone lessons in the learning catalog.

Security

Domain	Considerations
Manage: Facilitated Enrollments	Enables selected users to access to the Find Workers to Enroll report to manage enrollments for blended and digital courses.
Manage: Learning Course Enrollments	Enables selected users to access administrative based enrollment tasks. Users with access to this domain can manage multiple tasks that support enrollment processes. You can configure unconstrained access for users or restrict access using learning security category or topic segments.
Manage: Mass Enrollments	Enables selected users to access these tasks: • Mass Drop by Role • Mass Enroll by Role
Manage: Unrestricted Mass Enrollments	Enables users to access the Find Workers to Enroll report and these tasks: • Learning Mass Enroll • Mass Drop
Reports: Learning Record	Enables users to access reports that display enrollment data on learning records.

Business Processes

Business Process	Description
Cancel Learning Enrollment	Enables you to cancel an enrollment for a course offering.
Drop Learning Enrollment	Enables you to manage when a learner can drop an enrollment for a program, a course offering, or a digital course (both internal and external).
Enroll in Content	Enables you to manage how a learner can enroll in a course offering or a digital course (both internal and external).
Mass Cancel Learning Enrollments	Enables you to cancel multiple enrollments for 1 or more course offerings.
Mass Enroll	Enables managers to enroll their teams in a course or program.

Reporting

Report or Dashboard	Description
Find Workers to Enroll	Find and enroll specific workers in learning content.
Learner Engagement	Evaluate enrollments and completions so you can examine why some learners engage more than others. The report only displays data for the last complete month.
Learning Trainer dashboard	Provide assessors and instructors with access to tasks and reports so they can manage enrollments for course offerings.
My Team's Learning	Track progress in enrolled content for all direct reports and pre-hires.

Integrations

Web Service	Consideration
Admin Drop Learning Enrollment	Enables you to drop learners from learning content as an action on the Drop Learning Enrollment business process. You can drop enrollments with these registration statuses: • Enrolled • Enrolled – Pending Prerequisites • Waitlisted
Bulk Import Admin Drop Learning Enrollment	Enables you to drop learners from the learning content in high volumes as an action on the Drop Learning Enrollment business process.

Web Service	Consideration
Cancel Learning Enrollment	Enables you to cancel enrollments in upcoming course offerings and add reasons for the cancellation. You can also cancel incomplete enrollments that are linked to open learning assignments.
Enroll in Learning Content	Enables you to enroll learners into learning content. Respects due dates that you set when you mass enroll learners using this web service.
Put Learning Enrollment	Enables you to update or create legacy enrollments. You can also prevent enrollments from displaying in learning transcripts or reports by not selecting the Display Equivalency Records on Learning History check box when creating an equivalency rule.
Put Learning Enrollment Pricing Record Document Payment Status	Enables you to update payments listed on pricing records or enrollments to reflect payments processed in third-party systems.

Connections and Touchpoints

Touchpoint	Consideration
Absence	Workday displays warning messages when an enrollment conflicts with a scheduled absence.
Career and Development Planning	Workday Learning helps learners identify courses ranked highest by workers in their positions on their Opportunity Graph so they can enroll in this content.
Talent	Use Talent Marketplace to suggest content in which learners can enroll to improve their skills.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Mass Enroll Learners

Prerequisites

Create a course offering or digital course.

Context

Workday enables you to manage learner enrollments in a number of different ways depending on your access level. You can use different methods to mass enroll learners into a course offering or digital course.

Steps

1. (Optional) Create Learning Prerequisite Rules on page 2011.
2. (Optional) Create Role-Based Security Groups.

   You can create constrained and unconstrained role-based security groups to provide access to users to mass enroll learners. Example: You can provide constrained access by role to users who belong to 1 of these security group types:

   - Extended Enterprise Affiliation
   - Location Hierarchy
   - Supervisory Organization
3. Access 1 of these tasks or buttons depending on your access level:

Access Level	Method	Description	Security
Learning Administrator	*Learning Mass Enroll*	You can use a custom search report for administrator enrollment that includes this mass action. This method enables you to: • Enroll learners in course offerings that have reached their Maximum Enrollment Capacity or that have a status of *Closed* or *In-Progress*. • Override custom validations.	These domains in the Learning Core functional area: • *Learning Access* • *Set Up: Learning Catalog* • *Manage: Learning Course Enrollments* • *Manage: Unrestricted Mass Enrollments*

Access Level	Method	Description	Security
		• Override prerequisite rules. • Specify whether content is required learning.	
Constrained access by role	Mass Enroll by Role	This method enables you to: • Enroll learners in course offerings that have reached their Maximum Enrollment Capacity or that have a status of *Closed* or *In-Progress*. • Override custom validations. • Override prerequisite rules. • Specify whether content is required learning.	*Manage: Mass Enrollments* domain in the Learning Core functional area
Manager	Enroll my Team	You can use this button on these reports if you configured the *Mass Enroll* business process: • View Course • View Digital Course This method: • Enables you to specify whether the content is required learning. • Adheres to enrollment limits and	*Learning Access* domain in the Learning Core functional area

Access Level	Method	Description	Security
		custom validations. • Adheres to prerequisite rules. If required, Workday displays the course on these worklets on the Learning dashboard for each team member: • Required for You • Progress > Required	
Other users with constrained or unconstrained access	Learning Facilitated Enroll	Run the Find Workers to Enroll report and access this task if you configured the *Mass Enroll* business process. This method: • Enables you to specify whether the content is required learning. • Adheres to enrollment limits and custom validations. • Adheres to prerequisite rules. • Uses the *Mass Enroll* business process to route enrollment requests for review and approval.	These domains in the Learning Core functional area: • *Manage: Facilitated Enrollments* (Provides constrained access to enroll learners) • *Manage: Learning Course Enrollments* (Provides unconstrained access to enroll learners) • *Manage: Unrestricted Mass Enrollments*

4. (Optional) Use the *Save* filter to search through columns in the table and save your results under a personalized name for future use. Use the trash bin icon beside the Saved Filters field when you want to delete a saved filter.
5. (Optional) Create custom reports using the Learning Enrollments report data source.
6. (Optional) Add a due date or duration when you enroll learners.

Result

Workday mass enrolls the selected learners in a course offering or digital course.

Next Steps

- Managers can run the My Team's Learning report if configured on the My Team Management dashboard.
- Managers can select the Skip Enrollment Approval option on the Create Program and Edit Program tasks to enable learners to skip enrollment approval for content within a program.
- Use the Cancel Learning Enrollment and Mass Cancel Learning Enrollments business processes to control and manage enrollments for 1 or more course offerings. Access the Create Business Process Definition (Default Definition) task to set them up before using them.
- Access the Maintain Cancel Enrollment Reason Categories task and View Cancel Enrollment Reason Categories report to create and view reasons for canceled enrollments in your organization.

Mass Drop Learners

Prerequisites

- Create a course offering, program, or a digital course.
- Enroll learners.

Context

Workday enables you to manage learner enrollments in a number of ways depending on your access level. You can use different methods to mass drop learners from a course offering or digital course.

Learning administrators can cancel a single enrollment for a learner or they can perform a mass cancel action for a larger group of enrollments. You can also create user-based security groups to enable specific users to manage enrollments for your organization.

See: ../../../authentication-and-security/configurable-security/security-groups/role-based-security-groups/fyv1570811031746.dita.

Steps

1. (Optional) Create Role-Based Security Groups.

   You can create constrained and unconstrained role-based security groups to provide access to users to mass drop learners. Example: You can provide constrained access by role to users who belong to 1 of these security group types:

   - Extended Enterprise Affiliation
   - Location Hierarchy
   - Supervisory Organization
2. Access 1 of these tasks, buttons, or web services depending on your access level:

Access Level	Method	Description	Security
Learning Administrator	Admin Drop Learning Enrollment Bulk Import Admin Drop Learning Enrollment	These web services are initiating actions on the Drop Learning Enrollment business process, enabling you to drop learners from learning content. For high volumes, we recommend	Secured to the Learning Core functional area

Access Level	Method	Description	Security
		using the Bulk Import Admin Drop Learning Enrollment web service. You can drop these types of enrollments: • Enrolled • Enrolled – Pending Prerequisites • Waitlisted With these web services: • You can only drop enrollments in an incomplete status. • You can't drop enrollments that have in-progress business process events. • You can only use an active drop reason that's in an active reason category. • The Drop Reason field is optional by default. To make the Drop Reason a required field, access the Configure Optional Fields task and select the Enforce Required in Web Service check box. These web services are meant for administrator use and don't support custom errors and warnings	

Access Level	Method	Description	Security
		configured using the Maintain Learning Validations task.	
Learning Administrator	Drop Learners	This button on these reports initiates the *Learning Mass Drop* job: • View Course • View Digital Course The Mass Drop task then displays: • All enrolled learners. • Any learners who are pending enrollment approval. • Details of all related prerequisites for the content.	*Manage: Learning Course Enrollments* domain in the Learning Core functional area
Learning Administrator	Related Actions Menu	You can mass drop learner enrollments using the related actions menu on the Admin view of a program or on the Learner view of a course.	*Manage: Learning Course Enrollments* domain in the Learning Core functional area
Constrained access by role	Mass Drop by Role	This task enables you to drop learners if you belong to a security group with constrained access by role. Example: HR Partner	*Manage: Mass Enrollments* domain in the Learning Core functional area

Result

Workday mass drops the selected learners from a course offering or digital course.

Manage Waitlists for Learning Course Offerings

Prerequisites

- Create a blended course and course offering.
- Specify a Waitlist Capacity value to set up a waitlist and enable learners to join it when enrollment reaches full capacity.

- Security: These domains in the Learning Core functional area:
    - *Set Up: Learning Catalog* and *Manage: Learning Course Enrollments* for learning administrators.
    - *Self-Service: Learning Instructor* for primary instructors.

Context

If you don't configure auto-enrollment, you can manually enroll learners from the waitlist.

Steps

1. Access the Manage Waitlists report.
2. To enroll learners manually on a course offering from the waitlist, click Manage beside the offering.
    a) In the Waitlisted section, select the check boxes beside the learners you want to enroll.
    b) Click Enroll.
3. (Optional) To view the waitlist for an offering that has no enrollment capacity, click View.

Result

If enrollments for the course offering reach full capacity after you enroll learners from the waitlist, Workday no longer displays the offering in the Waitlists Requiring Action section.

Manage Schedules and Grading and Attendance

Prerequisites

Security: These domains in the Learning Core functional area:

- *Manage: Learning Course Enrollments*
- *Manage: Create and Edit Learning Roles*
- *Self Service: On the Job Training*
- *Self Service: Learning Assessor*
- *Self-Service: Learning Instructor*
- *Set Up: Learning Catalog*

Context

As a learning instructor, you deliver instructor-led in person or virtual classroom lessons for course offerings. As a learning assessor, you assess training activity lesson content for course offerings. You can also designate multiple experts to assess each enrollment in a course offering with training activity lesson content for course offerings, including grading work and recording attendance. Workday enables you to manage your schedule and the grading and attendance roster for lessons that you deliver or assess from the Learning Trainer dashboard. You can enter grading and attendance results for learners enrolled in a course offering, if you select Track Attendance and Track Grades on 1 or more lessons.

Steps

1. (Optional) Set up learning assessors.

    See Steps: Set Up Learning Assessors.
2. Access the Instructor Schedule Calendar report.

    This report display calendar entries for lessons in course offerings in your course-delivery schedule. Note that Workday automatically localizes the start and end dates and times for the classroominar lessons that you deliver, based on your preferred time zone. Classroom training lessons display in the time zone of the location on the lesson.
3. Select a calendar entry to view more details about the lesson, including the location for classroom training.

4. (Optional) Click View Course to view the course details and add the schedule to your calendar.
5. Click Manage Roster to access the Manage Grading and Attendance task.
6. Enter grading and attendance results.

   The Overall Grade tab enables the primary instructor, assessors for the course offering, or a learning administrator to enter the overall attendance, score, and grade for the course for each enrolled learner. You can also enter results for each lesson on the Lessons tab.

   Before submitting the overall results, click View Results to review individual lesson results for each enrolled learner.

   If you're an instructor but not the primary instructor, or a learning administrator, the Lessons tab enables you to enter results for the lessons that you deliver. If you're an assessor, you can enter results for training activity lessons using the Lessons tab. Primary instructors and learning administrators can override the results for each lesson. An assessor can override the results for training activity lessons.

   Note that Workday doesn’t support editing existing attendance statuses or adding additional statuses.

Result

When you set Track Attendance and Track Grades on instructor-led lessons in a course offering, Workday considers the enrollment complete when:

- All required lessons within the course are complete.
- The primary instructor, assessor, or learning administrator has entered the overall attendance and grade for the course.

When at least 1 instructor-led lesson in a course offering tracks grades or attendance, the grading and attendance details display on the Grading and Attendance tab of the view course information report.

We also display Lesson Results for individual lessons on the View Lesson report after the lesson completes.

Next Steps

In custom reports, you can report on lessons a learner has completed within a course. Use report fields on the Lesson Tracking business object (secured to the *Public Reporting Items* domain).

On the Learning Enrollment business object, these report fields display results for the overall course:

- Course Attendance Status
- Course Grade
- Course Score

Related Information
Tasks
Steps: Set Up Learning Assessors on page 1889

Manage Enrollment Completion

Prerequisites

Security: These domains in the Learning Core functional area:

- *Manage: Learning Course Enrollments*
- *Set Up: Learning Catalog*

Context

When learners complete a blended or digital course that contains a lesson with packaged content, a video with interactions, or a survey, sometimes the completion results don't pass back to Workday. Example: If learners experience a network connectivity issue while playing SCORM content, their device might cache the lesson locally and they can complete it, but Workday doesn't record the results. You can manually complete the enrollment on their behalf, so learners don't have to retake the course, giving you an additional level of control when needed. You can also manually enter the score and grade if Provide Course Grade is set on the media lesson in the course.

You can change enrollment results only for courses that have *Not Started* or *In Progress* completion status. You can't change the enrollment results after you enter the results manually and mark a course as *Complete*. You can change enrollment results as completed only if you change the tracking status of all lessons in an enrollment as completed.

To complete or enter results for instructor-led lessons, use the Manage Grading and Attendance task. See: Manage Schedules and Grading and Attendance.

Note that Workday doesn’t support manually marking standalone lessons as complete.

Steps

1. Run the Manage Learning Content report and search for the course.
2. Select the course for which you want to complete enrollment.
3. In the view course report, click the Enrollments tab.
4. Select the enrollment that you want to complete on behalf of a learner.

   You can change enrollment results only for courses that have *Not Started* or *In Progress* completion status and *Enrolled* enrollment status.
5. On the View Learning Enrollment report, click Manage Completion.
6. Enter these values:

Tracking Status	Completion Date and Time
Select *Completed*.	Enter a completion date and time.

   Enter a score and grade, if applicable.

   You can change enrollment result as completed only if you change the tracking status of all lessons in an enrollment as completed.
7. Select the Confirm check box to save your changes.
8. Click OK.

Next Steps

Create an advanced custom report to view which courses contain lessons that you've manually assessed. Use these reporting items:

- Learning Enrollments data source.
- Enrollment Manually Assessed report field on the Learning Enrollment business object.
- Lesson Manually Assessed report field on the Lesson Tracking business object.

See: Create Custom Reports.

Run the custom report and filter the enrollments by worker. Verify that Workday marked the enrollment and lessons as manually assessed.

Create and Manage Reminders for Learning Content

Prerequisites

- Enable reminders.

  See: Reference: Edit Tenant Setup - Notifications.
- Specify an expiry period when creating or editing content or, add a due date or duration when you enroll learners into a course offering or digital course.
- Security: *Administer Campaigns* domain in the System functional area.
  - These domains in the Learning Core functional area:
    - *Manage: Learning Content*
    - *Manage: Learning Course Enrollments*
    - *Set Up: Learning Catalog*

Context

You can notify learners of upcoming due dates by configuring reminders for courses and programs. You can also copy managers and HR business partners (HRBP) on reminders generated from learning content. Use role assignments in a supervisory organization to define the HRBP.

When you configure reminders for content with expiry periods, learners automatically receive a notification when an enrollment they've completed has an upcoming expiration date. The reminder notifies learners that they should re-enroll in the content before the expiration date, enabling you to comply with local regulatory requirements. The reminders are based on the expiration date on the enrollment, including self-enrollments.

Steps

1. Access the Manage Learning Content report.
2. Select the content that you want to create a reminder for.
3. On the administrator view for the course or program, select Create Reminder from the More menu.

   You can create reminders before or after assigning learning content to learners. Workday sends updated reminders on the correct due date if you make a change to a non-recurring reminder or reset a due date.
4. Configure the reminder details on the Create Reminder task.

   As you complete the Send Date section, consider:

Option	Description
Send Reminder	Select if you want to send the reminder on, before, or after the expiration or due date of the content.
Set as a Recurring Reminder	Select this check box if you want to resend the reminder daily or weekly.
Send Until the Number of Reminders Reaches	Enter the number of days or weeks that you want the reminder to recur.

Result

Learners receive automatic reminders when content they've enrolled in has an upcoming expiry or due date.

Example

You configure a reminder send on the due date, and then want to send regular reminders after the due date has passed. To send 1 reminder 1 week after the due date:

- Select *Weekly* on the Reminder Frequency prompt.
- Enter *1* on the Send Until the Number of Reminders Reaches prompt.

To send reminders every day for 3 days after the due date:

- Select *Daily*on the Reminder Frequency prompt.
- Enter *3* on the Send Until the Number of Reminders Reaches prompt.

Next Steps

- You can change the reminder settings by accessing the content and selecting Manage Reminders from the More menu. The Manage Reminders option displays after you've created at least 1 reminder.
- You can mass reset expiry periods for completed learning records by accessing the Reset Expiration Date on Learning Records task. Select at least 1 completed learning record on a course or program with a future expiration date. When you use this task to reset existing expiry periods to zero, Workday:
    - Updates the Latest Successfully Completed Enrollment report field on the Learning Enrollment business object to indicate that it's not the latest successfully completed enrollment with an expiration date for a learner.
    - Removes any associated reminders for the learner.

Related Information

Reference

Reference: Edit Tenant Setup - Notifications

Reset Learning Due Dates

Prerequisites

Security: *Manage: Learning Assignments* domain in the Learning Core functional area.

Context

When you campaign required learning, you can set due dates for learners to indicate when they need to complete the content. When due dates apply to content, Workday displays the date on the content thumbnail image on the Learning dashboard and on these reports:

- View Course
- View Digital Course
- View External Lesson
- View Learning Path
- View Learning Lesson
- View Learning Program

When learners don't complete required content by the due date, we display a status of *Overdue* on their content thumbnail images. The Required for You worklet sorts content by due date to help learners prioritize their required learning.

You can reset due dates on required learning content for specific learners, overriding due dates on the learning campaigns. When you reset due dates, we automatically reset expiration dates. We always keep due dates and expiration dates in sync. When the content has been assigned by a campaign, you can't extend the due date beyond the end date of a campaign.

Example: When learners take extended leave, they might need more time to complete their required learning.

Steps

1. Access the Reset Learning Due Dates task.

   This task enables you to view learning campaign assignment or mass enroll details by learning content, learner, or both.
2. Select 1 of these Reset Method options:

Option	Description
Select New Date	Enter a new due date.
Extend Current Due Date by Duration	Select a duration type, and enter the number of days, weeks, or months.

3. Select the check box for the learner assignment that you want to reset.
4. Review the Proposed Due Date before you confirm your changes.

Result

Workday updates the *Item Due Date* for the learner to the reset date. We record the due date that applied to the campaign item for the learner before you reset it as *Item Due Date without Reset*. When you reset the due date, Workday sets the *Manual Expiration Override* flag to Y (true) so that the background job will no longer recalculate the due date you reset manually.

Concepts

Concept: Expiry Periods for Learning Content on page 2014

Tasks

Steps: Set Up and Launch Learning Campaigns on page 1973

Steps: Waive Learning Assignments

Context

You can manually waive a single assignment or mass waive multiple assignments for learners in your organization when they:

- Receive an assignment in error.
- No longer need to complete the content.

You can only waive learning assignments with a status of *Open*.

When you waive an assignment, the enrollment remains *Open* and active until either:

- The learner drops the enrollment.
- You drop the learner from the enrollment using mass drop.

If a learner drops an enrollment, or is dropped by a mass drop action, and the learning assignment is still *Open*, you can manually waive the assignment for the learner, if applicable.

Note: Workday automatically waives open learning assignments when an administrator removes the associated content from a Learning campaign or Engagement. In this scenario, manual waiving isn’t required.

Steps

1. Access the Maintain Learning Assignment Waive Reasons task.

   Create or edit reasons that users who manage learning assignments can select when waving assignments. Example:

   - *On extended leave*
   - *Sent in error*

   Security:

   - *Manage: Learning Assignments* in the Learning Core functional area.
   - *Set Up Learning Catalog* domain in the Learning Core functional area.
2. Access the related actions menu from the learning assignment you want to waive to manually waive a single assignment.

   Access the Waive Learning Assignment task to mass waive multiple assignments.

   You can search for learning assignments to waive by either Learning Content, or Learners, or both. You can select multiple values for each one. Workday also displays a table listing eligible and ineligible assignments for waiving.

   For Learning Content, if you select a program, Workday waives the entire program and not individual content items within the program.

   Security: *Mass Waive Learning Assignments* business process in the Learning Core functional area.
3. (Optional) Select a Waive Reason.

   Select 1 or more learners to waive.
4. (Optional) Access the Manage Learning Assignment Waive to undo a waive for a specific learning or group or learners.

   You can also undo a waive by rescinding the *Waive Learning Assignments* business process event.

   Security: *Manage: Learning Assignments* domain in the Learning Core functional area.

Result

When you waive a learning assignment, Workday creates a business process event. The Assignment Status on the learning assignment record for the learner changes to *Manually Waived*. For required learning, Workday removes the content from the learner's Required for You worklet on their Learning dashboard. When you waive a retraining assignment, the assignment remains waived until further action is taken such as undoing the waive or creating a new initial assignment, even if the enrollment has an expiration date.

Next Steps

You can access the Assignments tab on a learning content item to view, filter, and manage learning assignments related to a piece of content.

Aditionally, you can create a custom report that indicates the assignment status of learners for a learning content item, using either of these data sources:

- Learning Assignments by Learning Organization
- Learning Assignment Records

Include these report fields for each worker or extended enterprise learner to verify the waive results:

- Assignment Status
- Assignment Cancellation Date
- Learning Assignment
- Learning Assignment Waive Activity
- Learning Assignment Waive Events
- Learning Content

- Permanent Waive
- Proposed Waive Assignment Reason
- Waive Cancelled By
- Waive Cancellation Moment
- Waive Reason
- Waived By
- Waived By Worker

You can use the View Learning Assignment Waive Reasons report to view waive reasons for waived learning assignments.

If you waive a required assignment, you can then reassign the content as required or nonrequired.

Related Information
Reference
2023R2 What's New Post: Waive Learning Assignments
2025R2 Feature Release Note: Automatically Waive Assignments Upon Content Removal from Campaigns

Concept: Learning Assignments

Learning Assignments supports compliance management in your organization, by enabling you to report on all assigned content for learners using constrained data sources.

Learning Assignment Mechanisms

Workday creates learning assignment records for learners as a result of these assignment mechanisms, both required and nonrequired:

Assignment Mechanism	Description
Campaign	Indicates that a learning campaign assigned the content to the learner.
Learning Mass Enroll	Indicates that the assignment is as a result of: • Learning administrator enrollment using a Learning Mass Enroll mass action on a custom search report. • Constrained access by role. • Learning facilitated enroll.
Manager Enroll	Indicates that a manager enrolled the learner as part of a team.
Retraining	Indicates that Workday created the assignment automatically. When a learner completes learning content, Workday creates a new assignment record that enables you to manage retraining requirements effectively. You can: • Track learners during the retraining cycle. • Identify when Workday waives learner assignments automatically or as a result of a manual waive. • Plan retraining. Example: When a large number of learners have enrollments that expire around the same time, and the retraining includes instructor-led training,

Assignment Mechanism	Description
	you can identify and plan for additional course offerings in advance. Workday uses the Expiration Dateon the learning record to populate the Due Date on the next assignment record. A daily background job recalculates due dates on retraining assignment records based on your Expiry Period settings. Workday creates an assignment record for retraining requirements when you add Expiry Period settings to learning content using these tasks: • Edit Course • Edit Program • Reset Expiration Date on Learning Records If learners have enrollments for a course, Workday associates the assignment records with the enrollments. Workday updates the Due Date on retraining assignment records when: • You change the expiration date for the learning record using theReset Expiration Date on Learning Records task. • The *Put Learning Enrollment* web service operation updates the expiration date for the enrollment. Workday returns the learning content to the Required for You worklet on the Learning dashboard when the learner needs to retake the content.

Learning Assignment Statuses

An assignment record can have 1 of these statuses:

Status	Description
Open	The learner needs to take action on this assignment.
Completed	The learner has successfully completed the associated content to satisfy the assignment record. When a learner completes an assignment, Workday updates the Assignment Record Completion Moment field on the record. When you assign content to a learner that has equivalent content, if the learner completes the equivalent course or courses and gains an equivalency, this satisfies the requirements of the assignment. We then update the status of the

Status	Description
	assignment record and any equivalent assignment record to *Completed*.
Automatically Waived	• The learner no longer meets the campaign audience criteria: The *Enable dynamic removal and resend* option is set on the Exclusion Rule prompt for a learning campaign, and the learner no longer meets the audience criteria. Workday removes the learner from the audience dynamically. • The learning administrator removes content from a campaign or engagement. In both scenarios there's no need for the learner to complete the assignment, so Workday: • Waives the assignment automatically and updates the Assignment Cancellation Date field on the record. • Removes required learning content from the Required for You worklet on the Learning dashboard.
Manually waived	A learning administrator manually waived the learner from the assignment using the Waive Learning Assignment task because there's no need for the learner to complete the assignment, so Workday: • Updates the Assignment Cancellation Date field on the record. • Removes required learning content from the Required for You worklet on the Learning dashboard.

Concept: Waitlists for Learning Course Offerings

If you enter a Waitlist Capacity value and select the Enable Auto-Enrollment from the Waitlist check box on these tasks for a blended course, Workday automatically enrolls learners from the waitlist when space in a course offering becomes available:

- Create Course
- Edit Course
- Edit Course Offering
- Schedule Course Offering

Workday also secures waitlists to the context of primary instructors so that they can view and manage waitlists for the course offerings that they deliver.

Workday provides these reports and tasks to enable you to view and manage waitlists:

Reports and Tasks	Description
Manage Waitlists	You can access this report in global search or select the Manage Waitlisting menu on the Learning Admin dashboard. Learning instructors can access this report on the Instructor Dashboard. This report displays 2 sections:

Reports and Tasks	Description
	• Waitlists Requiring Action: Lists course offerings that aren't configured with the Enable Auto-Enrollment from the Waitlist option, but have learners on a waitlist and enrollment capacity. • All Other Waitlists: Lists course offerings with an active waitlist, but no enrollment capacity. You can drill into an offering to view and manage its waitlist.
Manage Waitlist	Enables you to enroll learners manually on a course offering from its waitlist. To access this task, click Manage beside the offering on the Manage Waitlists report. You can also access this task from the View Course report. Select either: • More > Manage Waitlist. • On the Administrative tab, as a related action on the *Course Offering*, select Course > Manage Waitlist.
View Waitlist	Displays all learners on the waitlist for a course offering. You can access this report from the View Course report by either: • Selecting More > View Waitlist. • On the Administrative tab, as a related action on the *Course Offering*, selecting Course > View Waitlist.

Enrollment Types That Relate to Waitlists

The Enrollment Type report field on the Learning Enrollment Event business object provides status values for learning course enrollments from the Registration Record Status business object. We display these status values when you access these reports:

- Course: On the Enrollments tab in the Enrollment Status column of the Enrollments grid when viewing enrollments for course offerings.
- View Blended Course: On the Schedule tab in the Enrollment Status column of the History grid.

We also display these values to learners on the Schedule tab of the View Course report. The Enrollment Status column of the History grid displays the enrollment type after learners try to waitlist on a course.

Enrollment Type	Description
Waitlisted	Displays when a learner tries to enroll in a course offering that's full and joins a waitlist.
Waitlist - Closed	Displays when a course offering closes while the learner is on a waitlist for the offering. Learners can't enroll even if there are seats available. Workday records a drop date for the offering for each learner on the waitlist so that they can enroll in another offering.

Enrollment Type	Description
Waitlisted - Pending Approval	Displays when a learner tries to join a waitlist for a course offering that's full and requires approval. Workday displays this status until the approval step completes. The status then moves to *Waitlisted* if the offering is still open. If a seat becomes available, once approved and Enable Auto-Enrollment from the Waitlist is set for the course or course offering, Workday automatically enrolls the next learner from the waitlist. If the approval remains pending and another learner joins the waitlist, Workday enrolls that learner on the course before the learner with the pending approval. When the approval step completes, and Enable Auto-Enrollment from the Waitlist is set for the course or course offering, Workday automatically enrolls the learner and the status moves to *Enrolled* if: • The Maximum Enrollment Capacity for the course offering increases. • Seats become available due to learners dropping their enrollments, or mass drop enrollments by learning administrators or users with constrained access.

Reference: Learning Records and Report Data Sources

Record Types

Workday provides several types of learning records to enable you to track and report on learning:

Learning Record Type	Description
Enrollment	Workday creates this record type for learners when: • They enroll themselves in learning content. • Their manager enrolls them. • You enroll them using administrator mass-enroll or constrained mass-enroll by role. See: Manage Enrollment Completion on page 2088.
Equivalent	Workday creates this record type for learners for each equivalent course when they complete a course that's equivalent to 1 or more courses. See: Create Learning Equivalency Rules on page 2009.
Historical Tracking	For historical tracking purposes, you can create a shell of a course for noncatalog content using

Learning Record Type	Description
	the *Put Learning Imported Content* web service. You can't search for or edit this content, but Workday displays associated records on the learner's transcript. Workday creates this record type for learners when you use the *Put Learning Imported Record* web service to import large volumes of historical records for noncatalog content. You can only view historical records on the Learning tab of a worker's Career page or on the Learning Transcript tab of Extended Enterprise profiles.
Learning Assignment	Workday creates assignment records when learners are assigned content, both required and non-required learning. The record provides detailed information about the learning assignment, indicating whether it was created: • Automatically for retraining purposes based on the expiration date on an enrollment. • By manager or mass-enroll. • By a learning campaign. See: Concept: Learning Assignments on page 2094.
Learning Engagement	Workday creates learning engagement records for learners when you create learning campaigns to promote content or assign required learning. See: Steps: Set Up and Launch Learning Campaigns on page 1973.
Learning	The learning record details for a learner. Workday records: • Media tracking for learning course content items and stand-alone lessons. • Enrollments for course content items in learning programs and tracking for stand-alone lessons.
Learning Enrollment Pricing Record	Workday creates this record type when learners enroll into a pricing enabled course.
Tracking for Lesson	Workday creates this record type when learners start or complete a stand-alone lesson.

Learning Report Data Sources

Learning includes these report data sources (RDS):

RDS	Description
Learning Assignments by Learning Organization	A combined and indexed RDS that enables you to manage your learning compliance from a single place. It provides constrained access to learning

RDS	Description
Security: These domains in the Learning Core functional area: • *Person Data: Learning* • *Reports: Learning Record* • *Self Service: Learning*	assignments for workers and extended enterprise learners in a specific: • Affiliation • Location hierarchy • Supervisory organization You can use this RDS in custom reports to find out who has completed learning across the organization, and the learning assignment mechanism. You can only report on learners who you have permission to access. Because this data source combines assignments with worker data, you can also add worker information to the report. Workday doesn't create an assignment record in the case where a learner chooses to take content and self-enrolls. A learner must have a successfully completed enrollment to complete the assignment.
Learning Assignment Records Security: These domains in the Learning Core functional area: • *Person Data: Learning* • *Reports: Learning Record* • *Self Service: Learning*	Provides constrained access to learning assignments for workers and extended enterprise learners in a specific: • Affiliation. • Location hierarchy. • Supervisory organization. Learning administrators have unconstrained access to the data, unlike learners and managers who have contextual access, based on their role in a supervisory organization. You can use this RDS in custom reports to find out who has been assigned learning content across the organization, including the assignment mechanism, assignment status, and assignment completion data. You can only report on learners whom you have permission to access.
Learning Content Security: These domains in the Learning Core functional area: • *Learning Access* • *Manage: Learning Content* • *Manage: Learning Course Enrollments* • *Set Up: Learning Catalog*	Provides access to internal learning content data, including: • Blended courses. • Course offerings. • Digital courses. • Programs. • Stand-alone lessons.
Learning Enrollments Security: These domains in the Learning Core functional area: • *Person Data: Learning* • *Reports: Learning Record* • *Self Service: Learning*	A subset of learning records. Provides access to learning enrollment data for enrollments associated with an assignment or standalone enrollments. Example: A learner chooses to take learning content and enrolls, creating a self-enrollment record. Workday uses contextual security to determine if a user has permission to access the instances in an RDS. There are 3

RDS	Description
	groups of users within your organization who need contextual access to enrollment data: • Learners need to view their own enrollments. • Managers need to view their own enrollments and the enrollments of their direct reports. • Learning administrators need to view all enrollments. Also provides constrained access to learning enrollments for workers and extended enterprise learners in a specific: • Affiliation. • Location hierarchy. • Supervisory organization. Workday uses these domains in the Learning Core functional area to secure the RDS and ensure that users have contextual access to the data: • *Self Service: Learning* for learners. • *Person Data: Learning* for managers. • *Reports: Learning Record* and *Manage: Learning Course Enrollments* for learning administrators. Learning administrators have unconstrained access to the data, unlike learners and managers who have contextual access, based on their role in a supervisory organization. Workday-delivered reports that use this RDS include: • Learner Engagement • Learning by Length of Service • My Team's Learning You can use this RDS in custom reports to print a completion certificate using a business form layout. See Steps: Create a Business Form Layout.
Learning Equivalency Record Security: These domains in the Learning Core functional area: • *Learning Access* • *Manage: Learning Content* • *Set Up: Learning Catalog*	Enables you to track who has achieved equivalencies and which courses they completed to achieve the equivalency.
Learning Interests Security: These domains in the Learning Core functional area:	Enables you to track expressions of interest in blended courses for learners. Example: To help learners identify when you've scheduled courses they're interested in, you can create a

RDS	Description
• *Person Data: Learning* • *Reports: Learning Record* • *Self Service: Learning*	custom report that includes the Matching Offerings Scheduled report field.
Learning Record Security: These domains in the Learning Core functional area: • *Person Data: Learning* • *Reports: Learning Record* • *Self Service: Learning*	Provides a detailed overview of the learner's activity as it enables you to track combined data on: • Equivalencies. • Historical tracking imported content. • Learning enrollments, including self-enrollments. • Media tracking. Workday displays this data on the learner's transcript.
Learning Trainer Security: These domains in the Learning Core functional area: • *Manage: Create and Edit Learning Roles* • *Reports: Archives External Learning Users*	Enables you to track all the assessors and instructors.
Indexed Learning Campaign Records Security: *Reports: Learning Campaign Records* in the Learning Core functional area.	Provides access to campaign items sent to workers, enabling you to track who has been assigned campaign items and their due dates.

Reference: Workday-Delivered Reports for Learning

These Workday-delivered reports provide insight into the value and effectiveness of learning.

Report	Description
Courses and Lessons Created (Last 12 Months) Security: *Set Up: Learning Catalog* domain in the Learning Core functional area.	Monitors the rate at which users who have access to Learning in your organization create learning content. The report displays the creation rate for 3 data sets: • Blended course offerings by learning administrators. • Digital courses by learning administrators. • Stand-alone lessons by all learners.
Find Learning Assignments Security: These domains in the Learning Core functional area: • *Person Data: Learning* • *Reports: Learning Record*	Allows you to search for learning assignments based on learning content.
Learning by Length of Service Security: *Reports: Learning Enrollment* domain in the Learning Core functional area.	Analyzes learning engagement across the organization by worker length of service. Use this report to identify whether there are sections of the worker population who aren't engaging with learning and investigate why.

Report	Description
Learning Campaign Security: *Administer Campaigns* domain in the Learning Core and System functional area.	Displays a summary of learning campaigns for the last 12 months. We don't automatically enroll from campaigns so a corresponding enrollment is only created when a learner enrolls or is enrolled into content. A campaigned record only moves to *Complete* when the learner successfully completes an associated enrollment.
Learning Content by Rating Security: *Set Up: Learning Catalog* domain in the Learning Core functional area.	Helps you identify the learning courses and stand-alone lessons that are performing poorly as well as the highest performing content in your tenant.
Learner Engagement Security: *Reports: Learning Record* domain in the Learning Core functional area.	Evaluate learner engagement in terms of learning enrollments and completions, so you can start to examine why some learners are engaging more than others. The report displays learner engagement data for the last complete month only.
Manage Learning Prerequisite Rules Security: These domains in the Learning Core functional area: • *Manage: Learning Content* • *Set Up: Learning Catalog*	Helps you to identify and manage all prerequisite rules for learning content in your tenant.
My Course Offerings Security: These domains in the Learning Core functional area: • *Self-Service: On the Job Training* • *Self-Service: Learning Instructor*	Displays information for all course offerings that relate to a user's role as an assessor or instructor, including: • Course Name • Dates • Enrolled Learners • Location • Trainers
My Express Interest on Courses Security: These domains in the Learning Core functional area: • *Manage: Learning Content* • *Set Up: Learning Catalog*	Helps you identify learner demand in courses.
My Team's Learning Security: *Person Data: Learning* domain in the Learning Core functional area.	Displays a summary of learning progress for all direct reports and pre-hires, including: • Attendance Status • Completion Status • Enrolled Content You can configure the report to display on the My Team Management dashboard.

Report	Description
My Team's Learning Assignments Security: *Person Data: Learning* domain in the Learning Core functional area.	Displays a summary of learning progress for managers. It returns Learning Assignment and Learning Enrollment data, including: • Assignment Status • Attendance Status • Completion Status • Due Date • Enrolled Content
View Cancel Enrollment Reason Categories Security: *Set Up: Learning Catalog* domain in the Learning Core functional area.	Displays reasons for canceled enrollments in learning course offerings. Use the Maintain Cancel Enrollment Reason Categories task to create and maintain the reason categories that display in this report.

Example: Create a Custom Report for Learning Assignment Completions

This example illustrates how to create a custom report for learning assignment completions, enabling you to manage learning compliance from a single place.

Context

You want to report on all learning assignments for a specific organization within the company.

Steps

1. Access the Create Custom Report task.

   As you complete the task, consider:

Option	Description
Report Name	Enter *All Assignment Records*.
Report Type	Select *Advanced*.
Data Source	Select *Learning Assignments by Learning Organization*.

2. On the Edit Custom Report task, as you complete the Columns tab, add these rows:

Business Object	Field
Learning Assignments by Learning Organization	Worker
Learning Assignments by Learning Organization	Learning Content
Learning Assignments by Learning Organization	Assignment Mechanism

Business Object	Field
Learning Assignments by Learning Organization	Assigned Date
Learning Assignments by Learning Organization	Assigned By
Learning Assignments by Learning Organization	Assignment Status
Learning Assignments by Learning Organization	Required
Learning Assignments by Learning Organization	Due Date
Learning Assignments by Learning Organization	Assignment Record Completion Moment
Learning Assignments by Learning Organization	Assignment Cancellation Date
Learning Record	Record Expiration Date
Learning Assignments by Learning Organization	Job Profile
Learning Assignments by Learning Organization	Job Title
Learning Assignments by Learning Organization	Worker's Manager(s)

3. On the Sort tab, add these rows:

Field	Sort Direction
Worker	*Alphabetical - Ascending*
Learning Content	*Alphabetical - Ascending*

4. To save the report, click OK.

Next Steps

Run the custom report to check on the assignment status of learners in a specific supervisory organization.

Example: Create a Custom Report for Learner Attendance

This example illustrates 1 way to create a custom report to manage learner attendance for course offerings.

Context

As a learning administrator, you want to identify which course offerings require recording learner attendance. You create a custom report to record enrolled content and learners, their in-progress lessons, and attendance statuses.

Prerequisites

Security: *Custom Report Creation* domain in the System functional area.

Steps

1. Access the Create Calculated Field task.

   Create a calculated field for lesson tracking to use in your custom report.

   a. Enter *Lesson Tracking Calculated Field* for the Field Name.
   b. Select *Learning Enrollment* for the Business Object.
   c. Select *Extract Multi-Instance* for the Function.
   d. Click OK.
   e. Select *Subset* for the Operation Type.
   f. Select *Lesson Tracking* for the Source Field.
   g. Select *Any is True* for the Condition.
   h. Click OK.
   i. Click Done.
2. Access the Create Custom Report task.
3. Enter these values:

Option	Description
Report Type	Select *Advanced*.
Data Source	Select *Learning Enrollments*.
Data Source Filter	Select *All Enrolled Enrollments*

4. On the Columns tab, add these fields:

Business Object	Field
Learning Enrollment	Enrolled Content
Learning Enrollment	Worker
Lesson Tracking	Lesson Title
Lesson Tracking	Lesson Type
Lesson Tracking	Attendance Status
Lesson Tracking	Lesson Grade

5. On the Filter on Instances grid on the Filter tab, add these rows:

And/Or	Field	Operator	Comparison Type	Comparison Value
And	*Learning Content Type*	*in the selection list*	*Value specified in this filter*	*Course Offering*
And	*Lesson Tracking Calculated Field*	*is not empty*		
And	*Completion Status*	*in the selection list*	*Value specified in this filter*	*In Progress* *Not Started*
And	*Learning Content Title*	*contains*	*Prompt the user for the value and ignore the filter condition if the value is blank*	*Default Prompt*

6. On the Subfilter tab, select Add.
7. Select *Lesson Tracking Calculated Field* for the Business Object.

8. Add these rows and values:

And/Or	Field	Operator	Comparison Type	Comparison Value
And	*Lesson Type*	*in the selection list*	*Value specified in this filter*	*In Person Classroom (Instructor Led)* *Virtual Classroom (Instructor Led)* *Training Activity*
And	*Lesson Attendance Status*	*in the selection list*	*Value specified in this filter*	*Not Entered*

9. Click OK.
10. Click Run.

Related Information
Tasks
Create Calculated Fields
Create Custom Reports

Example: Define Custom Email Notifications for Learning Enrollments

Context

This example illustrates how to define an email notification to the initiator of a learning enrollment. The notification uses report field values on the *Learning Enrollment Event* business object. Your company wants Workday to send an email to the initiator of a learning enrollment once the enrollment is complete.

Steps

1. Select Business Process > Add Notification from the related actions menu of the Enroll in Content (Default Definition) business process.
2. Click OK.
3. Configure these values:

Field	Value
Trigger on Status	*Completed*
Recipient(s)	*Initiator of Enrollment*
Email Option	*Default*

4. In the Message Content section, compose the Subject. Workday automatically adds spacing after each Text and External field value.

   Add rows for these items in this order:

Field	Value
Text	*Your request to attend*
External Field	*Course Name*
Text	*has been approved!*

5. Compose the Body.

   Add rows for these items in this order:

Field	Value
Text	*Hi*
Field	*Initiator of Enrollment*
Text	*,* *Your request to attend*
Field	*Course Name*
Text	*in*
Field	*Locations*
Text	*with*
Field	*Instructors*
Text	*has been approved! The cost of the course is:*
Field	*Course Cost*
Text	*Looking forward to seeing you at training.* *Warm regards* *The GMS Learning team*

6. Click OK.
7. Click Done.

Result

To check the format of the email notification before Workday sends it, click Preview.

Example: Define an Approval Condition Rule for Learning Enrollments

Context

This example illustrates how to define an entry condition rule for an approval step on the *Enroll in Content* business process. The rule uses report field values on the *Learning Enrollment Event* business object. Your company wants to enable learners to enroll in a course offering without approval from their managers when the location of the offering is the Dublin office.

Steps

1. Select Business Process > Edit Definition from the related actions menu of the Enroll in Content (Default Definition) business process.
2. Click OK.
3. In the Business Process Steps grid, add a step with these values and click OK:

Order	Type	Group
b	*Approval*	*Manager*

4. In the Step column of the Approval step row, select Business Process > Create Condition Rule from the related actions menu.
5. Enter a Description for the condition rule.

6. In the Rule Conditions grid, add 2 rules with these values and click OK:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Locations*	*none in the selection list*	*Value specified in this filter*	*Dublin*
And	*Course Type*	*any in the selection list*	*Value specified in this filter*	*Course Offering*

7. Click Rule Usage.
8. Click Enroll in Content (Default Definition) step b - Approval.
9. Click Enroll in Content (Default Definition).
10. In the Step column of the Approval step, select Business Process > Maintain Step Conditions from the related actions menu.
11. Click OK.
12. In the Entry Conditions grid, add a new row.
13. From the Rule prompt, select Condition Rules for Business Process Condition and select the condition rule that you just defined.
14. Click OK.
15. Click Done.

Troubleshooting: Learning Notifications Sending Incorrectly

Workday sends emails to learners who enroll in a program, not when they enroll in individual courses.

Cause: Your configuration sends notifications for enrollment in a program, even when a learner enrolls in an individual course of that program.

Solution: Create a condition rule to include notifications when a learner enrolls in all course types.

Steps

Security: *Set Up: Learning Catalog* domain in the Learning Core functional area.

1. Select Business Process > Create Condition Rule from the related actions menu of the Enroll in Content (Default Definition) business process.
2. In the Rule Conditions grid, name your condition rule and add these values:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Course Type*	*any in the selection list*	*Value specified in this filter*	*Blended Course, Course Offering, Digital Course, Imported Content, Lesson*

3. Select Business Process > Add Notification from the related actions menu of the Enroll in Content (Default Definition) business process.
4. Configure these values:

Field	Value
Trigger on Status	*Completed*

Field	Value
Recipient(s)	*Learner*
Email Option	*Default*

5. In the Message Content section, compose the Subject. Workday automatically adds spacing after each Text and External field value.
6. Compose the Body.
7. Add the condition rule to the notification.

Setup Considerations: Learning Enrollments on page 2075

Extended Enterprise Learning

Setup Considerations: Extended Enterprise Learning

You can use this topic to help make decisions when planning your configuration and use of Extended Enterprise Learning. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

With Extended Enterprise Learning, you can provide learning content to users outside of your company, such as vendors, contractors, and partners, without modifying your security configurations. Extended enterprise learners can access your learning catalog and take courses.

Business Benefits

With Extended Enterprise Learning, you can:

- Save time and resources by using the same reporting, content, and learning management system for internal and external users.
- Provide knowledge sharing, compliance training, and certifications to nonemployees who do business with you, while maintaining your security configurations and data privacy.
- Strategically price learning content according to contracts with your third-party affiliates. Review the setup considerations for pricing enablement for details.

Use Cases

- Training vendors who need to review human resources policies before teaching courses to your employees.
- Manufacturing subcontractors who need to complete safety and compliance training.
- Seasonal workers in retail who need to learn about store systems and processes.
- Traveling nurses in healthcare who need to learn hospital-specific policies.

Questions to Consider

Questions	Considerations
How are extended enterprise learners different from contract contingent workers?	Contract contingent workers can access Workday and are part of your internal workforce. They typically receive some kind of benefit from you, such as onboarding, benefits, payroll, performance reviews, or time tracking. Extended enterprise learners are external to your company and can only access Workday Learning.
Who uses Extended Enterprise Learning?	Extended Enterprise Learning enables you to provide learning content to users outside of your company. Each member of your extended workforce has an external learning user account, which is their unified system account. The external learning user can have multiple active personas at the same time: • Extended enterprise learners can consume learning content. • External learning assessors can assess training activity lesson content for course offerings. • External learning instructors can teach courses or lessons. You can grant workers or members of your extended workforce additional responsibilities to help you manage your extended workforce: • Affiliation managers can manage an organization of extended enterprise learners. Affiliation managers are a role-based constrained group with access to their organization only. • Extended enterprise administrators are responsible for creating and maintaining extended enterprise learner accounts. Administrators have unconstrained access to administer learning to your extended workforce.
Do you need an Extended Enterprise Learning subscription to create external learning instructors and external learning assessors?	No, you don't need an Extended Enterprise Learning (EEL) subscription to create external learning instructors or external learning assessors. Creating profiles for external instructors and assessors is a core feature of Workday Learning and is available to all Workday Learning customers, regardless of whether you have an EEL subscription. The EEL subscription is specifically required for external learners to consume learning content in Workday Learning. The scope of the EEL subscription is focused on external end-users, not

Questions	Considerations
	on other external personas such as instructors or assessors.
How can you restrict the learning content that extended enterprise learners can view?	You can create learning topics and topic security segments to restrict content. You can use these report fields on the Learning Content Subscription business object to report on the dates through which extended enterprise learners should have access to learning content: • Inactive • Learning Content Subscriber • Learning Content Subscription Record • Learning Topic • Subscription Expiration Date
How can you track additional information about extended enterprise learners for compliance or reporting reasons when there's no Workday-delivered field?	You can create custom fields to track information such as partial training completion or the time it took to complete training. You can create custom fields on the Extended Enterprise Learner and Extended Enterprise Affiliation business objects. You can't use the *Manage Extended Enterprise Learner* business process to edit custom objects. You can edit custom fields: • By accessing the related actions menu on an extended enterprise learner or an affiliation. • Through web services using the Workday REST API. You can also create EIBs for non-effective dated custom objects.
How do you want to configure sign-in for external learning users?	External learning users can sign in to Workday on mobile or desktop. When your workers use Single Sign-On (SSO), but you don't intend to set up SSO for external learning users, you can configure an authentication selector. This enables external learning users to sign into Workday using a username and password. You can configure multifactor authentication for external learning users for more secure access.
Can extended enterprise learners receive campaigns?	You can create campaigns for extended enterprise learners using the Extended Enterprise Campaign. This is different from the Learning Campaign used for employees. Extended Enterprise Campaigns enable separate security and campaign configuration for extended enterprise learners. Workday doesn't enable you to send surveys to extended enterprise learners with campaigns.

Questions	Considerations
How can extended enterprise learners modify certifications on other extended enterprise learners' profiles?	To enable an extended enterprise learner to modify certifications for other extended enterprise learners, make them the affiliation manager for the intended extended enterprise learners' affiliation. To enable an extended enterprise learner to modify certifications for all extended enterprise learners, make them the affiliation manager for all of your existing affiliations, instead of granting them administrator permissions. Assign the extended enterprise learner constrained access to the *Person Data: Certifications* domain and the *Manage Certifications* business process in the Worker Profile and Skills functional area. When you grant an extended enterprise learner unconstrained access to the *Manage Certifications* business process, they can view and modify certifications on worker profiles.
How can your extended enterprise learners become workers in your organization?	Extended enterprise learners can view and apply for jobs for nonworkers within your organization through their Workday account. When you hire an extended enterprise learner, their learning transcripts and talent certifications transition with them to their new role. Workday archives their external learning user account and personas and clears their extended enterprise learner activation date. Set up Workday Recruiting to use this feature.
How do you determine the time zone for extended enterprise learner activation dates?	Workday uses these time zone rules: The activation date time zone is based on the preferred time zone on the external learning user account. Otherwise, Workday uses the first available of these time zones in this order: • The override extended enterprise affiliation location for the extended enterprise learner when the location is configured with a time zone. • The extended enterprise affiliation location for the extended enterprise learner when the location is configured with a time zone. • Your tenant time zone. • Pacific Standard Time. Workday determines the expiration date time zone based on the processing user's time zone, so you may notice different expiration and activation date time zones for extended enterprise learners. When you want Workday to determine time zones for activation dates based on your affiliation locations, ensure that:

Questions	Considerations
	• You configure time zones for your locations. Example: Add Business Site as a Location Usage on an Extended Enterprise Affiliation location. • External learning user accounts don't have preferred time zones.
How can extended enterprise learners create their own accounts?	Set up the Managed Self-Registration feature to enable prospective extended enterprise learners to register for their own accounts. Account approvals are based on your configuration of the *Request Extended Enterprise Learner* business process.
How can you deactivate multiple extended enterprise learner accounts at once?	Workday enables you to use a mass operation to deactivate up to 50,000 extended enterprise learners accounts at once. The mass operation deactivates accounts based on criteria specified in a custom report.

Recommendations

No impact.

Requirements

Set up Workday Learning.

To create external learning users, configure the *View External Learning User* domain and the *Manage External Learning User* business process and security policy.

Limitations

- External learning instructors and external learning assessors can’t create their own accounts as a self-service option.
- You can't merge person records for external learning users who become workers using the duplicate management framework.
- You can't configure and send different email templates for new accounts for external learning users and workers. Workday sends the same email to both person types. The email content is customizable.
- Workday doesn't support constrained access to the *Manage Certifications* business process for external learning instructors who are also administrators.
- Extended enterprise learners with future-hire dates are sometime unable to access their Worker profile.
- Tasks on the the *Request Extended Enterprise Learner* business process don't include the Activation Date field, so you can't schedule a future activation date. When you create a new or activate an existing extended enterprise learner using this business process, Workday automatically sets the activation date to the date that the request was initiated. To determine the time zone, Workday uses the activation date time zone rules. When you edit an extended enterprise learner, Workday retains their existing activation date.

Tenant Setup

Use the Edit Tenant Setup - HCM task to configure these tenant-wide options for your external workforce:

Option	Description
Enable Self-Service Time Zone Management for Extended Enterprise check box	Select to enable learners to set their own time zone for course enrollment expiration rules.
Enable Pricing Configuration for Person Types prompt	Select person types that you want to configure pricing for, including extended enterprise learners.

Security

In the Extended Enterprise for Learning or Learning Core functional areas:

Domains	Considerations
Learning Access	Enables extended enterprise learners access to search the learning catalog and view course information.
Maintain Archived External Learning User	Enables users to unarchive external learning users who aren't active workers.
Manage: Extended Enterprise	Enables extended enterprise learning administrators to manage affiliations, job profiles, and dashboard access.
Manage: Extended Enterprise Affiliation Learners	Enables affiliation managers to view extended enterprise learners in their affiliation.
Manage: Extended Enterprise Learner Type	Enables users to create and manage extended enterprise learner types. Users with View access on the *Manage: Extended Enterprise* domain can view the learner type you assign to an extended enterprise learner.
Manage: Learning Content	Enables users to access administrative tasks and reports to manage learning content, including creating course expiration rules.
Self-Service: On the Job Training	Enables external learning assessors to access the Learning Trainer worklet and manage grading and attendance for course offerings.
Manage: Self-Registration	Enables administrators to create and manage self-registration URLs.
Person Data: Learning	Enables administrators to view learning transcripts for extended enterprise learners, including on user profiles.
Reports: Archived External Learning Users	Enables users to report on archived external learning users.
Reports: Extended Enterprise Affiliations	Enables constrained and unconstrained security groups to access reports related to extended enterprise affiliations.
Reports: Extended Enterprise Affiliation Learners	Enables affiliation managers to access reports on learners in their affiliation.
Reports: Extended Enterprise Usage Metrics	Enables users to track the number of active extended enterprise learners in your tenant. You

Domains	Considerations
	can use this information to measure your product usage over time.
Self-Service: Extended Enterprise Learning	Enables extended enterprise learners to view their own profile and information.
Self Service: Learning	Grants users self-service capabilities, such as viewing transcript details on their profile.
Self-Service: Learning Assessor	Enables external learning assessors to view their own profile.
View External Learning User	Enables administrators to view external learning user information, including external learning user profiles.

In other functional areas:

Domains	Considerations
Internal Careers in the Recruiting functional area.	Enables extended enterprise learners to view and apply for jobs for nonworkers within your organization through their existing Workday account.
Mass Operation Management in the System functional area.	Enables users to manage mass operations, including setting up and running the *Deactivate Extended Enterprise Learner Accounts* mass operation type.
Person Data: Certifications in the Worker Profile and Skills functional area.	Enables administrators to view certifications for extended enterprise learners and external learning instructors, including on user profiles.
Person Data: Personal Photo in the Personal Data functional area.	Enables users to view and edit photos for users that they have access to.
Self-Service: Certifications in the Worker Profile and Skills functional area.	Enables users to view their own certifications on their profile.
Self-Service: My Applications in the Recruiting functional area.	Enables extended enterprise learners to review or withdraw their applications.
Self-Service: Personal Photo in the Personal Data functional area.	Enables users to view and edit their own photo.

Business Processes

Business Processes	Considerations
Request Extended Enterprise Learner	Enables affiliation managers to request learning access for new or existing users for their affiliations. Workday recommends first configuring these business processes, which are subprocesses on the *Request Extended Enterprise Learner* business process: • *Manage External Learning User*

Business Processes	Considerations
	• *Manage Extended Enterprise Learner* Managed Self-Registration uses the *Request Extended Enterprise Learner* business process to create new or editing existing users. Ensure that you have allowed actions, security groups, and approvals properly configured before distributing self-registration URLs.
Mass Enroll	To enable affiliation managers to enroll extended enterprise learners that belong in their assigned affiliations in learning courses, grant them permission on the initiating action.
Manage External Learning Assessor	Enables you to create and edit external learning assessors.
Manage External Learning User	Enables you to create external learning user accounts. To enable external learning users to edit their own personal information, grant them permissions on the Edit My Personal Information initiating action.
Manage Extended Enterprise Learner	Enables you to create and edit extended enterprise learners.
Manage External Learning Instructor	Enables you to create and edit external learning instructors.
Enroll in Content, *Drop Learning Enrollment*, and *Mass Enroll*	You can enable extended enterprise learners to enroll, and external learning instructors and affiliation managers to enroll and approve enrollments.
Manage Certifications	To enable extended enterprise learners, external learning instructors, and administrators to open certification attachments, you must grant them View Completed Events permissions on this business process.
Job Application	To enable extended enterprise learners to view and apply for jobs for nonworkers within your organization, grant them permission on the Apply to Job for Non-Workers initiating action.

Reporting

Reports or Dashboards	Considerations
Extended Enterprise Admin dashboard	Enables extended enterprise administrators to manage extended enterprise learners and affiliations.
Find Extended Enterprise Learners report	Enables affiliation managers and administrators to search for active extended enterprise learners.

Reports or Dashboards	Considerations
Learning dashboard	Modify this dashboard so extended enterprise learners can easily access announcements and learning content.
Daily Maximum Count of Active Extended Enterprise Learners Monthly Maximum Count of Active Extended Enterprise Learners Yearly Maximum Count of Active Extended Enterprise Learners	View and monitor the number of extended enterprise learners in your tenant. When you retroactively enter an expiration date for an extended enterprise learner using the Edit Extended Enterprise Learner task, the reports reflect the account as inactive as of the day you enter the expiration date. These reports only display current data in Production environments: • Monthly Maximum Count of Active Extended Enterprise Learners • Yearly Maximum Count of Active Extended Enterprise Learners
View Extended Enterprise Affiliation report	View details on an extended enterprise affiliation.
View Extended Enterprise Learner report	View an extended enterprise learner's profile.
View External Learning User report	View an external learning user's profile.

You can create custom reports with these report data sources:

- Indexed Learning Campaign Records
- Extended Enterprise Affiliations
- Extended Enterprise Job Profiles
- Extended Enterprise Learners
- External Learning Users
- Learning Assignments by Learning Organization
- Learning Assignment Records
- Learning Enrollments
- Learning Instructors

To display first and last names in separate columns on custom reports, use report fields on the Global Person Names business object instead of the Extended Enterprise Learner business object.

Integrations

Web Services	Consideration
Maintain Archived External Learning User	Use to manage external learning user archiving in your organization. For EIBs based on the *Maintain Archived External Learning User* web service, Workday recommends that you create these condition rules: • Is Archived on the External Learning User business object is true. • Is Active Worker on the External Learning User business object is false.

Web Services	Consideration
Manage Extended Enterprise Learner	Use to create extended enterprise learners from existing external learning users. You can optionally disable the username and password notifications Workday sends to learners upon account creation. When you want to update existing inactive extended enterprise learners, Workday recommends that you disable username and password emails. For EIBs based on the *Manage Extended Enterprise Learner* web service, Workday recommends that you: • Select Extended Enterprise Learner ID for Reference ID Type for Condition Rule. • Use this rule condition, Is Archived on the Extended Enterprise Persona business object is false. You can use this web service to set extended enterprise learner activation dates that are in the past. When you specify all the same values as an existing extended enterprise learner in your request, the web service doesn't create any new business process events. It also doesn't send username and temporary password emails, even when you specify sending these emails.
Manage External Learning Assessor	Use to create external learning assessors. You can optionally disable the username and password notifications Workday sends to assessors upon account creation.

Manage External Learning Instructor	Use to create external learning instructors.
	
	You can optionally disable the username and password notifications Workday sends to external instructors upon account creation.
	
	For EIBs based on the *Manage External Learning Instructor* web service, Workday recommends that you:
	
	• Select External Learning Instructor ID for Reference ID Type for Condition Rule, and
	• Use 1 of these rule conditions:
	  ◦ Is Archived on the Extended Enterprise Persona business object is false.
	  ◦ Is Archived on the External Learning Instructor business object is false.

Manage External Learning User	Use to create external learning user accounts.

Web Services	Consideration
	For EIBs based on the *Manage External Learning User* web service, Workday recommends that you create this condition rule: Is Archived on the External Learning User business object is false.

Connections and Touchpoints

Extended Enterprise Learning interacts with Workday Recruiting. You can enable extended enterprise learners to view and apply for jobs for nonworkers within your organization. When you hire an extended enterprise learner, their learning transcripts and talent certifications transition with them into their new role and Workday archives their external learning user account and personas.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Reference

Custom Objects (Non-Effective Dated) EIB - Inbound

Steps: Set Up Extended Enterprise Learning

Prerequisites

- Review setup considerations for Extended Enterprise Learning.
- Set up Workday Learning. See Steps: Set Up Learning.

Context

You can set up Extended Enterprise Learning to enable users outside of your organization to access learning content in your tenant.

Steps

1. Configure security for external learning users and administrators.

   See Steps: Set Up Access for Extended Enterprise Learning on page 2122.
2. Create affiliations to assign to extended enterprise learners.

   See Steps: Set Up Extended Enterprise Affiliations on page 2123.

3. (Optional) Create Email Templates.

   Edit the contents of these email templates:

   - *Workday New Account Password*
   - *Workday New User Name Notification*

   Workday sends the same emails for new accounts for external learning users and workers.
4. Access the Maintain Extended Enterprise Learner Type task.

   Create learner types for users outside of your organization. Example: Customer or Partner.

   Security: *Manage: Extended Enterprise Learner Type* domain in the Extended Enterprise for Learning functional area.
5. Create External Learning Users on page 2127.
6. (Optional) Create Extended Enterprise Learners on page 2128.

   Add the extended enterprise learner persona to external learning user accounts.
7. (Optional) Add the external learning instructor persona to external learning user accounts.

   See Steps: Set Up Learning Instructors on page 1888.
8. (Optional) Add the external learning assessor persona to external learning user accounts.

   See Steps: Set Up Learning Assessors on page 1889.
9. Configure the Extended Enterprise Admin dashboard.

   You can also add the All Extended Enterprise Learners security group to the worklets on the Learning dashboard.

   To ensure that the Learning worklet displays by default for extended enterprise learners when they access Workday Learning, add the All Extended Enterprise Learners security group to the Learning worklet on the Home dashboard.

   See Steps: Set Up Dashboards and Landing Pages.
10. (Optional) Copy Reports.

    Create a custom report by copying the Find Extended Enterprise Learners report and adding a mass enroll action.

    On the Advanced tab, add a row to the Mass Actions grid and select *Learning Mass Enroll (Extended Enterprise)* from the Workday Supplied Mass Actions prompt.
11. (Optional) Set up Managed Self-Registration to enable prospective extended enterprise learners to register for their own accounts.

    See Steps: Set Up Managed Self-Registration for Extended Enterprise.

Next Steps

Create learning campaigns to recommend content to extended enterprise learners.

Configure the Extended Enterprise Profile using these tasks:

- Configure Profile
- Configure Profile Group
- Configure Profile Header Card
- Configure Profile Summary

Related Information

2023R2 What's New Post: Activation Date for Extended Enterprise Learners
2024R1 What's New Post: Self-Service Profile Management for Extended Enterprise

Steps: Set Up Access for Extended Enterprise Learning

Context

You can create security groups within your organization to determine who can:

- Access learning content.
- Create and manage extended enterprise learners.

Steps

1. Access the Domain Security Policies for Functional Area report.
    a) On the Functional Area prompt, select *Extended Enterprise for Learning*.
    b) Select Domain Security Policy > Enable from the related actions menu on the security policy for these domains:
        - *Manage: Extended Enterprise*
        - *Self-Service: Extended Enterprise Learning*
2. Create User-Based Security Groups.

    Create user-based security groups for managing external learning users.
3. Edit Domain Security Policies.

    Configure access for the:

    - All Extended Enterprise Learners security group on the *Learning Access* domain in the Learning Core functional area.
    - User-based security groups that you created on the *Manage: Extended Enterprise* domain in the Extended Enterprise for Learning functional area.

    Configure access for the Extended Enterprise Learner as Self security group on these domains:

    - *Person Data: Personal Photo* and *Self-Service: Personal Photo* in the Personal Data functional area.
    - *Self-Service: Certifications* in the Worker Profile and Skills functional area.
    - *Self-Service: Extended Enterprise Learning* in the Extended Enterprise for Learning functional area.
    - *Self Service: Learning* in the Learning Core functional area.
4. Edit Business Process Security Policies.

    Assign extended enterprise security groups to perform actions on these business processes in the Learning Core functional area:

    - *Drop Learning Enrollment*
    - *Enroll in Content*
    - *Manage Lesson*

    (Optional) Add the External Learning User as Self security group to the Edit My Personal Information initiating action on the *Manage External Learning User* business process.
5. Activate Pending Security Policy Changes.
6. (Optional) Configure segmented security for extended enterprise learners.

    See ../learning-setup-and-maintenance/learning-security/czj1470841147315.dita.

7. Access the Edit Tenant Setup - Security task.

   Select the Email Temporary Password to New Accounts check box to ensure that new users receive security emails.

   Note: This is a tenant-wide setting that all applies to all new users, including new workers. In some cases, you can configure individual business processes to avoid sending temporary password emails to all new users. Example: Configure the *Hire* business process so that new workers don't get these emails.

   See Reference: Edit Tenant Setup - Security.

   Security: *Set Up: Tenant Setup - Security* domain in the System functional area.
8. (Optional) Set Up Authentication Selectors.

   When your workers use Single Sign-On (SSO), you can configure an authentication selector that enables external learning users to bypass SSO and sign in with a username and password.
9. (Optional) Set up multifactor authentication.

   As you configure the authentication policy, select:

   - *All External Learning Users* from the Security Group prompt on the Authentication Ruleset grid.
   - *One Time Passcode - Email* from the Multi-factor Authentication prompt on the same row.

   See Steps: Set Up Multifactor Authentication Using Emailed One-Time Passcode.

Next Steps

Configure security for extended enterprise affiliation roles.

Steps: Set Up Extended Enterprise Affiliations

Context

Extended enterprise affiliations are groups of extended enterprise learners. You can establish hierarchies by creating superior and subordinate affiliations. Workday enables you to assign users to roles that manage and report on specific affiliations.

When you create extended enterprise learners, add each one to the appropriate affiliation.

Steps

1. Create Locations.

   Select the Extended Enterprise Affiliation option from the Location Usages prompt to create locations for extended enterprise affiliations. Alternatively, you can edit an existing location. Access the Edit Location Usages task and select the Extended Enterprise Affiliation option from the Location Usages prompt.
2. Access the Create Extended Enterprise Affiliation task.

   As you create affiliations, you can specify their locations. You can also create hierarchical relationships by selecting superior affiliations.

   Security: *Manage: Extended Enterprise* domain in the Extended Enterprise for Learning functional area.
3. Set Up Assignable Roles.

   Create and enable a role for extended enterprise affiliations. Example: The Affiliation Manager role enabled for Extended Enterprise Affiliation.
4. Create Role-Based Security Groups.

   Create a constrained role-based security group for the role that you created.

5. Edit Domain Security Policies.

   Configure these domains and grant the role-based security group View or Modify permissions:

   - *Manage: Extended Enterprise Affiliation Learners* in the Extended Enterprise for Learning functional area. Enables users to create, edit, and view extended enterprise learners within their assigned affiliations.
   - (Optional) *Person Data: Certifications* in the Worker Profile and Skills functional area. Enables access to certification information.
   - (Optional) *Person Data: Learning* in the Learning Core functional area. Enables access to learner transcripts.
   - *Reports: Extended Enterprise Affiliation Learners* in the Extended Enterprise for Learning functional area. Enables users to view extended enterprise learners that belong to their assigned affiliations.
   - (Optional) *Reports: Extended Enterprise Affiliations* in the Extended Enterprise for Learning functional area. Enables constrained and unconstrained groups to access reports related to affiliations.
   - (Optional) *Workday Accounts* in the System functional area. Enables users with Modify permission to reset passwords for extended enterprise learners in their affiliations.
6. (Optional) Edit Business Processes.

   Configure the *Mass Enroll* business process in the Learning Core functional area to enable users to enroll extended enterprise learners that belong in their assigned affiliations in learning courses.
7. (Optional) Edit Business Process Security Policies.

   Grant the role-based security group permissions on the initiating action of the *Mass Enroll* business process.
8. (Optional) Configure the *Request Extended Enterprise Learner* business process in the Extended Enterprise for Learning functional area.

   Enables affiliation managers to request learning access for new or existing users for their affiliations. You can configure the business process to initiate automatically or manually, or use a combination of automatic and manual initiation based on custom condition rules.

   See:

   - Steps: Configure Automatic Initiation of Request Extended Enterprise Learner on page 2134
   - Steps: Configure Manual Initiation of Request Extended Enterprise Learner on page 2135
   - Steps: Configure Conditional Initiation of Request Extended Enterprise Learner on page 2137
9. From the related actions menu of an extended enterprise affiliation, select Roles > Assign Roles.

   Assign roles to affiliations.

Next Steps

Create external learning users.

Related Information

Concepts

Concept: Extended Enterprise Affiliations on page 2130

Steps: Set Up Internal Hiring and Transcript Transition for Extended Enterprise Learners

Prerequisites

Set up internal recruiting. See Steps: Set Up Internal Recruiting.

Context

You can enable extended enterprise learners to use their existing Workday account to view and apply for jobs for nonworkers within your organization.

When you hire an extended enterprise learner for a job in your organization:

- Their learning transcripts and talent certifications transition with them to their new role.
- Workday automatically archives their external learning user account and personas on the hire date.

This makes it easier to transition between external and internal workforces while maintaining records under 1 account.

Steps

1. Configure the *Job Application* business process in the Recruiting functional area.

   See Steps: Configure the Job Application Business Process on page 197.
2. Edit Business Process Security Policies.

   On the *Job Application* business process, add the Extended Enterprise Learner as Self security group to the Apply to Job for Non-Workers initiating action.
3. Edit Domain Security Policies.

   Grant the:

   - All Extended Enterprise Learners security group Modify permissions on the *Internal Careers* domain in the Recruiting functional area.
   - (Optional) Extended Enterprise Learner as Self security group Modify permissions on the *Self-Service: My Applications* domain under the *Internal Careers* parent domain in the Recruiting functional area. Enables extended enterprise learners to review or withdraw their applications.
   - (Optional) Recruiter (Unconstrained) security group View permissions on the *View External Learning User* domain in the Extended Enterprise for Learning functional area. Enables recruiters to view contact information for extended enterprise learners.

Result

Extended enterprise learners can view available jobs on the Find Jobs (Non-Workers) report.

Related Information

2022R1 What's New Post: Transcript Transition for Extended Enterprise Learners

Steps: Set Up Mass Extended Enterprise Learner Account Deactivation

Prerequisites

Security: *Mass Operation Management* domain in the System functional area.

Context

You can use a mass operation to deactivate up to 50,000 extended enterprise learners accounts at once based on criteria specified in a custom report.

Workday excludes extended enterprise learner accounts from this operation when they're archived, already inactive, or have in progress events on these business processes:

- *Manage Extended Enterprise Learner*
- *Request Extended Enterprise Learner*

Steps

1. Create a Segment-Based Security Group for Mass Operations.

   You can create a new security group or edit an existing security group and enable members to set up mass extended enterprise learner account deactivation.

   As you complete the task, consider:

Option	Description
Security Groups	Select the security groups that you want to enable to run the *Deactivate Extended Enterprise Learner Accounts* mass operation type.
Access to Segments	Select the *Deactivate Extended Enterprise Learner Accounts* segment.

2. Edit Domain Security Policies.

   Grant the new segment-based security group Modify permissions on the *Mass Operation Management* domain.
3. Activate Pending Security Policy Changes.
4. Create Custom Reports.

   Create a custom report based on the Extended Enterprise Learners report data source that defines the criteria for deactivating extended enterprise learner accounts. Example: Your organization no longer does business with GMS, so you want to deactivate extended enterprise learners in the GMS affiliation. You create a custom report that displays extended enterprise learners in the GMS affiliation.

   Alternatively, you can copy the View Last Sign-In For Extended Enterprise Learners report, which displays extended enterprise learners that haven't signed in a specified number of days.

   As you complete the task, consider:

Option	Description
Report Type	Select *Simple* or *Advanced*.
Temporary Report	The report can't be temporary. Don't select this check box.
Data Source	Select the Extended Enterprise Learners report data source. You can only use a custom report based on this report data source in the *Deactivate Extended Enterprise Learner Accounts* mass operation type.
Report Definition Sharing Options	Share the report with appropriate authorized groups or users.

5. Access the Mass Operation Management task.

   As you complete the task, consider:

Option	Description
Mass Operation Type	Select the *Deactivate Extended Enterprise Learner Accounts* mass operation type. Workday only displays this option when the user is a member of the segmented security

Option	Description
	group with access the *Deactivate Extended Enterprise Learner Accounts* segment.
Input Report	Select the custom report that you created. This mass operation type only accepts custom reports.
Run Frequency	Configure the operation to run now, in the future, or on a regular schedule.
Enable Review	Workday only enables you to add user-based security groups.
Value Type and Value	When your custom report is based on the View Last Sign-In For Extended Enterprise Learners report, Workday displays the Number of Days Since Last Sign-In field in the Report Definition section. Use the Value Type and Value prompts to specify the number of days since last sign-in as criteria for mass deactivating extended enterprise learner accounts.

Result

When the mass operation runs, Workday deactivates extended enterprise learner accounts based on the criteria that you defined in your custom report.

For every extended enterprise learner account deactivation through the mass operation, Workday creates a new event on the Manage Extended Enterprise Learner Events report field. Workday automatically approves the event creation.

2024R1 What's New Post: Criteria-Based Automated Account Deactivation for Extended Enterprise

Create External Learning Users

Prerequisites

Security: Configure the *Manage External Learning User* business process and security policy in the Extended Enterprise for Learning functional area.

Context

You can create external learning user accounts for learners and instructors outside of your organization. The external learning user account is the unified system account that holds the user's basic information.

Steps

1. Access the Create External Learning User task.

2. As you complete the task, consider:

Option	Description
Email Address	Workday sends sign-in credentials to this email address when you activate a persona on the external learning user account. You can't reuse email addresses that already exist in your tenant, including proposed email addresses for in-progress *Manage External Learning User* business process events and email addresses for terminated workers.
Preferred Time Zone	Select the time zone for Workday to use for course enrollment expiration rules and activation date for the external learning user. Workday uses Pacific Standard Time when you don't specify a time zone. To enable time zone preferences for users, select the Enable Self-Service Time Zone Management for Extended Enterprise check box on the Edit Tenant Setup - HCM task.
Preferred Locale and Preferred Display Language	Workday uses the default tenant locale and language when you don't specify these settings.

Result

Workday assigns external learning users to the External Learning User as Self and All External Learning Users security groups. External learning user accounts are disabled until you activate personas on them.

Next Steps

Add Extended Enterprise personas to external learning user accounts.

Create Extended Enterprise Learners

Prerequisites

- Create external learning user accounts.
- Configure the *Manage Extended Enterprise Learner* business process and security policy in the Extended Enterprise for Learning functional area.
- Security: Configure these domains in the Extended Enterprise for Learning functional area:
    - *Manage: Extended Enterprise*
    - *Manage: Extended Enterprise Affiliation Learners*

Context

You can create extended enterprise learners by activating the extended enterprise learner persona for any external learning user. Extended enterprise learners can access your learning catalog and take courses through their Workday account. They can consume learning content based on training, compliance, and knowledge sharing needs.

Steps

1. Access the Create Extended Enterprise Learner task.
2. As you complete the task, consider:

Option	Description
Persona Status	You can select Inactive to create an inactive extended enterprise learner or you can select Schedule to enter activation and expiration dates. Workday automatically sets the activation date to the current date. You can change it to a date in the future. Workday sends the extended enterprise learner their welcome emails on the activation date. The activation date time zone is based on the preferred time zone on the external learning user account. Otherwise, Workday uses the first available of these time zones in this order: • The override extended enterprise affiliation location for the extended enterprise learner when the location is configured with a time zone. • The extended enterprise affiliation location for the extended enterprise learner when the location is configured with a time zone. • Your tenant time zone. • Pacific Standard Time. You can set an expiration time and date to terminate all active Workday sessions for this account on all devices. Workday determines the expiration date time zone based on the processing user's time zone, so you may notice different expiration and activation date time zones for extended enterprise learners.
Extended Enterprise Affiliation	The extended enterprise learner inherits their account location from their affiliation.
Override Extended Enterprise Affiliation Location	Select this check box to assign a location for the extended enterprise learner that is different from the location of their affiliation. You must have View permissions on the *Locations: View* domain to use this check box.

Result

Workday sends the extended enterprise learner emails with their username and temporary password on their activation date, which they can use to access Workday Learning. Workday assigns the extended enterprise learner to the All Extended Enterprise Learners and Extended Enterprise Learner as Self security groups and appends *E* to the end of their name.

You can search for active extended enterprise learners by name using the eel prefix in global search.

Next Steps

Add certifications to extended enterprise learners' profiles.

Create campaign audiences.

Related Information

Tasks

Steps: Set Up Certifications on page 131

Reference

2021R2 What's New Post: Certifications for External Learning Users

2023R2 What's New Post: Activation Date for Extended Enterprise Learners

Concept: Extended Enterprise Affiliations

Extended enterprise affiliations enable you to group extended enterprise learners. You can group them based on categories such as vendor, department, or geographic location. Extended enterprise affiliations are similar to supervisory organizations. Workday requires you to set up extended enterprise affiliations and assign each extended enterprise learner to an affiliation. You can create hierarchies using superior and subordinate affiliations. Workday enables you to report on affiliations.

You're a learning administrator at Global Modern Services (GMS), a company that manufactures power tools. AMS Hardware and Tool Supply sell GMS' power tools at their hardware stores across Canada and the US. The workers at the hardware stores have extended enterprise learning accounts, enabling them to access product-knowledge and safety courses.

To organize the extended enterprise learners, you create an affiliation for each retailer in each country:

- AMS Hardware - Canada
- AMS Hardware - USA
- Tool Supply - Canada
- Tool Supply - USA

You then create subordinate affiliations that group extended enterprise learners by store location within each country. You add extended enterprise learners to the affiliation for the store where they work.

Affiliation Locations

You can optionally specify locations for affiliations. When an affiliation has a location, all extended enterprise learners within the affiliation inherit the location. You can select the Override Extended Enterprise Affiliation Location check box on an extended enterprise learner's profile to stop them from inheriting the location. When you select this option, Workday requires that you enter a location for the extended enterprise learner.

When you want Workday to determine time zones for activation dates based on your affiliation locations, ensure that:

- You configure time zones for your locations. Example: Add Business Site as a Location Usage on an Extended Enterprise Affiliation location.
- External learning user accounts don't have preferred time zones.

Affiliation Managers

You can assign workers or members of your extended workforce to be affiliation managers. They manage and report on specific organizations of extended enterprise learners and can manage details like their certifications and learning enrollments. Workday recommends that you set up affiliation managers as a role-based constrained group, ensuring that they can only access their own affiliations.

To enable affiliation managers to reset passwords for extended enterprise learners in their affiliations, provide the Affiliation Manager – Constrained role-based security group Modify access on the *Workday Accounts* domain. They can select Security Profile > Manage Workday Account Credentials from the related actions menu of an extended enterprise learner to reset their password.

Affiliation managers can request new or edit existing extended enterprise learners for their affiliations using the *Request Extended Enterprise Learner* business process.

Affiliations Management

You can manage affiliations by:

- Inactivating affiliations you're not currently using.
- Deleting affiliations you've never used.

From the related actions menu of an affiliation, select Inactivate or Delete. When you inactivate affiliations, begin with subordinate affiliations at the bottom of the hierarchy, working towards the top. When you reactivate affiliations, begin at the top of the hierarchy, working towards the bottom.

Tasks
Steps: Set Up Extended Enterprise Affiliations on page 2123

Reference: Extended Enterprise Learning Feature Availability

Extended Enterprise Learning enables you to create Workday accounts for users outside of your company so they can access your learning catalog and take courses.

This table lists different features and their availability or limitations for extended enterprise learning. Extended enterprise learners:

Feature	Availability	Limitation
Activity Stream	Can comment on courses and view comments from workers or other extended enterprise learners.	Can't be tagged in comments and can't tag others in comments.
Certifications	Can access on their profile.	
Competencies	Can filter search results by competency when browsing for learning content.	Can't earn competencies.
Course Calendar	Can view the Learner Schedule Calendar when they have access to the *Self Service: Learning* domain.	
Course Contacts	Can view contact information when they click a contact person or instructor on a course or course offering.	Can't view worker profiles.

Feature	Availability	Limitation
Custom Organizations		Can't be in custom organizations.
Learning Transcripts	Can access on their profile or from the My Transcript report on the Learning dashboard.	
My Team's Peer Learning Content		Aren't included in the report.
Opportunity Graph		Can't view.
Photo	Can change their own photo.	
Unique ID		Don't have Employee IDs.
Mobile	Can access Extended Enterprise on mobile.

Example: Assign Multiple Personas to External Learning Users

This example illustrates how to activate multiple personas on a single external learning user account. A person can have multiple personas in your organization at the same time, while maintaining 1 Workday account and 1 set of sign-in credentials.

Context

You're a learning administrator at Global Modern Services (GMS), a company that manufactures electric vehicles. You want to give subcontractor Erin Park access to compliance training. Erin is also a subject matter expert on the batteries that GMS uses in their new line of electric vehicles. You want her to teach an 8-month-long course on battery installation.

When Erin completes the compliance training, she no longer requires access to learning content. Erin needs to remain an external learning instructor for the duration of the battery installation course.

You need to:

- Create an external learning user account for Erin.
- Activate the extended enterprise learner persona on the account.
- Activate the external learning instructor persona on the account and set an expiration date of 8 months from now.
- Inactivate the extended enterprise learner persona on the account when Erin completes the compliance training.

Prerequisites

- Set up Extended Enterprise Learning.

Steps

1. Access the Create External Learning User task.

2. Enter these values in the Account Information section:

Field	Values
User Name	*erinpark*
Email Address	*erin.park@atp.ca*

3. Enter these values in the Personal Information section:

Field	Values
Country	*Canada*
First Name	*Erin*
Last Name	*Park*
Preferred Time Zone	*GMT-06:00 Central Standard Time (Regina)*
Preferred Locale	*English (Canada) - en_CA*
Preferred Display Language	*English*

4. Click Submit.
5. Access the Create Extended Enterprise Learner task.
6. Select *Erin Park* from the External Learning User prompt.
7. Click OK.
8. Set the Persona Status to *Active*.
9. Select an affiliation from the Extended Enterprise Affiliation prompt.
10. Click Submit.

    Workday sends Erin notification emails with a username and temporary password.
11. Access the Create External Learning Instructor task.
12. Select *Erin Park* from the External Learning User prompt.
13. Click OK.
14. In the Persona Status section, set an expiration date for 8 months from now.
15. Click Submit.

    Erin can use her existing credentials to sign in as the external learning instructor until the persona status expires.
16. When Erin completes the compliance training, access the Edit Extended Enterprise Learner task.
17. Select *Erin Park* from the Extended Enterprise Learner prompt.
18. Click OK.
19. Change the Persona Status to *Inactive*.
20. Click Submit.

Result

When the external learning instructor persona expires, Workday disables Erin's external learning user account. The disabled account continues to exist in Workday and you can enable it again by activating a persona on the account.

2021R2 What’s New Post: Unified System Account for External Learning Personas

Request Extended Enterprise Learner Business Process

Steps: Configure Automatic Initiation of Request Extended Enterprise Learner

Prerequisites

Configure these business processes and security policies in the Extended Enterprise for Learning functional area:

- *Manage Extended Enterprise Learner*
- *Manage External Learning User*

Context

You can enable affiliation managers to request learning access for new or existing users by configuring the *Request Extended Enterprise Learner* business process. The business process uses these business processes as subprocesses for creating new or editing existing users:

- *Manage External Learning User*
- *Manage Extended Enterprise Learner*

You can configure the *Request Extended Enterprise Learner* business process so that when the initiator requests an existing user, Workday automatically initiates the request and overrides the existing user information with the requested information.

You can apply different configuration options to the different steps on the *Request Extended Enterprise Learner* business process.

Note: When you create the default definition for the *Request Extended Enterprise Learner* business process, the definition that Workday populates isn't usable. Reconfigure it to avoid inconsistent data results.

Steps

1. Access the Create Business Process Definition (Default Definition) task.

   Create the default definition for the *Request Extended Enterprise Learner* business process in the Extended Enterprise for Learning functional area.

   a) Delete the *Create External Learning User from Request* and *Edit Extended Enterprise Learner from Request* steps.

   b) Reorder the steps in the definition.

      Ensure that:

      - The *Create External Learning User from Request (Auto-Initiate)* step comes before the *Edit External Learning User from Request* step.
      - All steps involving external learning users come before any steps involving extended enterprise learners.
      - The *Create Extended Enterprise Learner from Request* step comes before the *Edit Extended Enterprise Learner from Request (Auto-Initiate)* step.

      Example:

      - *Create External Learning User from Request (Auto-Initiate)*
      - *Edit External Learning User from Request*
      - *Create Extended Enterprise Learner from Request*
      - *Edit Extended Enterprise Learner from Request (Auto-Initiate)*

   Security: These domains in the System functional area:

   - *Business Process Administration*
   - *Manage: Business Process Definitions*

2. Edit Business Process Security Policies.

   Configure the security policy for the *Request Extended Enterprise Learner* business process.

Result

Affiliation managers with permissions on the *Request Extended Enterprise Learner* business process can access these tasks to request learning access for new or existing users:

- Request Edit Extended Enterprise Learner
- Request Extended Enterprise Learner

Related Information

2022R2 What's New Post: Request Extended Enterprise Learner for Existing Accounts

Steps: Configure Manual Initiation of Request Extended Enterprise Learner

Prerequisites

Configure these business processes and security policies in the Extended Enterprise for Learning functional area:

- *Manage Extended Enterprise Learner*
- *Manage External Learning User*

Context

You can enable affiliation managers to request learning access for new or existing users by configuring the *Request Extended Enterprise Learner* business process. The business process uses these business processes as subprocesses for creating new or editing existing users:

- *Manage External Learning User*
- *Manage Extended Enterprise Learner*

You can configure the *Request Extended Enterprise Learner* business process so that when the initiator requests an existing user, Workday sends security group members on the subprocesses a task enabling them to compare the requested and existing user information and either deny or submit the request. When they submit the request, Workday overrides the existing user information with the requested information. Only 1 person from the security group needs to complete the task.

You can apply different configuration options to the different steps on the *Request Extended Enterprise Learner* business process.

Note: When you create the default definition for the *Request Extended Enterprise Learner* business process, the definition that Workday populates isn't usable. Reconfigure it to avoid inconsistent data results.

Steps

1. Edit Business Process Security Policies.

   Add appropriate security groups to the:

   - *Create External Learning User from Request* initiating action on the *Manage External Learning User* business process.
   - *Edit Extended Enterprise Learner from Request* initiating action on the *Manage Extended Enterprise Learner* business process.

   Workday recommends that you add unconstrained security groups. This ensures that when Workday sends security group members the task to deny or submit a request, they can view all requested and existing user information. Example: Extended Enterprise Admin or External Learning User Admin.

   Add these security groups when you create the default definition for the *Request Extended Enterprise Learner* business process.
2. Activate Pending Security Policy Changes.
3. Access the Create Business Process Definition (Default Definition) task.

   Create the default definition for the *Request Extended Enterprise Learner* business process in the Extended Enterprise for Learning functional area.

   a) On the *Create External Learning User from Request* step, select the same security group as on the *Create External Learning User from Request* action on the *Manage External Learning User* business process.
   b) On the *Edit Extended Enterprise Learner from Request* step, select the same security group as on the *Edit Extended Enterprise Learner from Request* action on the *Manage Extended Enterprise Learner* business process.
   c) Delete the *Create External Learning User from Request (Auto-Initiate)* and *Edit Extended Enterprise Learner from Request (Auto-Initiate)* steps.
   d) Reorder the steps in the definition.

      Ensure that:

      - The *Create External Learning User from Request* step comes before the *Edit External Learning User from Request* step.
      - All steps involving external learning users come before any steps involving extended enterprise learners.
      - The *Create Extended Enterprise Learner from Request* step comes before the *Edit Extended Enterprise Learner from Request* step.

      Example:

      - *Create External Learning User from Request*
      - *Edit External Learning User from Request*
      - *Create Extended Enterprise Learner from Request*
      - *Edit Extended Enterprise Learner from Request*

   Security: These domains in the System functional area:

   - *Business Process Administration*
   - *Manage: Business Process Definitions*
4. Edit Business Process Security Policies.

   Configure the security policy for the *Request Extended Enterprise Learner* business process.

Result

Affiliation managers with permissions on the *Request Extended Enterprise Learner* business process can access these tasks to request learning access for new or existing users:

- Request Edit Extended Enterprise Learner

- Request Extended Enterprise Learner

Related Information
Reference
2022R2 What's New Post: Request Extended Enterprise Learner for Existing Accounts

Steps: Configure Conditional Initiation of Request Extended Enterprise Learner

Prerequisites

Configure these business processes and security policies in the Extended Enterprise for Learning functional area:

- *Manage Extended Enterprise Learner*
- *Manage External Learning User*

Context

You can enable affiliation managers to request learning access for new or existing users by configuring the *Request Extended Enterprise Learner* business process. The business process uses these business processes as subprocesses for creating new or editing existing users:

- *Manage External Learning User*
- *Manage Extended Enterprise Learner*

You can configure the *Request Extended Enterprise Learner* business process so that when the initiator requests an existing user, Workday follows 1 of these workflows, depending on your custom condition rules:

- Sends security group members on the subprocesses a task enabling them to compare the requested and existing user information and either deny or submit the request. When they submit the request, Workday overrides the existing user information with the requested information. Only 1 person from the security group needs to complete the task.
- Automatically initiates the request and overrides the existing user information with the requested information.

You can apply different configuration options to the different steps on the *Request Extended Enterprise Learner* business process.

Note: When you create the default definition for the *Request Extended Enterprise Learner* business process, the definition that Workday populates isn't usable. Reconfigure it to avoid inconsistent data results.

Steps

1. Edit Business Process Security Policies.

   Add appropriate security groups to the:

   - *Create External Learning User from Request* initiating action on the *Manage External Learning User* business process.
   - *Edit Extended Enterprise Learner From Request* initiating action on the *Manage Extended Enterprise Learner* business process.

   Workday recommends that you add unconstrained security groups. This ensures that when Workday sends security group members the task to deny or submit a request, they can view all requested and existing user information. Example: Extended Enterprise Admin or External Learning User Admin.

   Add these security groups when you create the default definition for the *Request Extended Enterprise Learner* business process.
2. Activate Pending Security Policy Changes.

3. Access the Create Business Process Definition (Default Definition) task.

   Create the default definition for the *Request Extended Enterprise Learner* business process in the Extended Enterprise for Learning functional area.

   a) On the *Create External Learning User from Request* step, select the same security group as on the *Create External Learning User from Request* action on the *Manage External Learning User* business process.
   b) On the *Edit Extended Enterprise Learner from Request* step, select the same security group that you selected for the *Edit Extended Enterprise Learner from Request* action on the *Manage Extended Enterprise Learner* business process.
   c) Reorder the steps in the definition.

      Ensure that:

      - The steps to create external learning users come before the step to edit external learning users.
      - All steps involving external learning users come before any steps involving extended enterprise learners.
      - The step to create extended enterprise learners comes before the steps to edit extended enterprise learners.

      Example:

      - *Create External Learning User from Request (Auto-Initiate)*
      - *Create External Learning User from Request*
      - *Edit External Learning User from Request*
      - *Create Extended Enterprise Learner from Request*
      - *Edit Extended Enterprise Learner from Request (Auto-Initiate)*
      - *Edit Extended Enterprise Learner from Request*

   Security: These domains in the System functional area:

   - *Business Process Administration*
   - *Manage: Business Process Definitions*
4. Access the *Request Extended Enterprise Learner* business process definition.

   From the related actions menu of the appropriate step, select Business Process > Create Condition Rule.

   a) Create mutually exclusive condition rules that determine if Workday executes the *Create External Learning User from Request (Auto-Initiate)* step or the *Create External Learning User from Request* step.
   b) Create mutually exclusive condition rules that determine if Workday executes the *Edit Extended Enterprise Learner from Request (Auto-Initiate)* step or the *Edit Extended Enterprise Learner from Request* step.

Result

Affiliation managers with permissions on the *Request Extended Enterprise Learner* business process can access these tasks to request learning access for new or existing users:

- Request Edit Extended Enterprise Learner
- Request Extended Enterprise Learner

Example

This example illustrates how to add condition rules to the *Request Extended Enterprise Learner* business process definition that ensure that when the initiating affiliation manager is:

- A worker, Workday automatically initiates requests for existing users.

- External to your organization, Workday sends the security groups on the *Manage External Learning User* and *Manage Extended Enterprise Learner* subprocesses a task for requests for existing users, prompting them to submit or deny the request.

1. Access the *Request Extended Enterprise Learner* business process definition.
2. From the related actions menu of the *Create External Learning User from Request (Auto-Initiate)* step, select Business Process > Create Condition Rule. Create a condition rule with these values:

Field	Value
Description	*Initiating Worker is Not Empty*
And/Or	*And*
Source External Field or Condition Rule	*Initiating Worker*
Relational Operator	*is not empty*
Comparison Type	*Value specified in this filter*

3. Add the *Initiating Worker is Not Empty* condition rule to these steps:
   - *Create External Learning User from Request (Auto-Initiate)*
   - *Edit Extended Enterprise Learner from Request (Auto-Initiate)*
4. From the related actions menu of the *Create External Learning User from Request* step, select Business Process > Create Condition Rule. Create a condition rule with these values:

Field	Value
Description	*Initiating Worker is Empty*
And/Or	*And*
Source External Field or Condition Rule	*Initiating Worker*
Relational Operator	*is empty*
Comparison Type	*Value specified in this filter*

5. Add the *Initiating Worker is Empty* condition rule to these steps:
   - *Create External Learning User from Request*
   - *Edit Extended Enterprise Learner from Request*

Managed Self-Registration

Setup Considerations: Managed Self-Registration for Extended Enterprise

You can use this topic to help make decisions when planning your configuration and use of Managed Self-Registration for Extended Enterprise. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Managed Self-Registration for Extended Enterprise enables people outside of your organization to register for their own extended enterprise learning account.

You can create affiliation-specific self-registration URLs and distribute them to prospective extended enterprise learners so that they register for an account. After account approval, they can sign in to Workday Learning as extended enterprise learners. Workday automatically adds them to the affiliation associated with the URL.

Business Benefits

With Managed Self-Registration, organizations can:

- Save time and resources by enabling prospective extended enterprise learners to register for their own accounts.
- Streamline a portion of the onboarding process for extended enterprise learners.

Use Cases

Onboarding large volumes of extended enterprise learners from third party contractors or vendors.

Questions to Consider

Questions	Considerations
How do you restrict who can register for an account?	Anyone who accesses your self-registration URL can register for an account. To restrict registrations, configure the *Request Extended Enterprise Learner* business process with an administrator approval step so that administrators can approve or deny new account registrations. To avoid charges for added extended enterprise learning accounts, Workday recommends that you restrict registration.
Can you restrict the number of users who can self-register?	Workday automatically limits the number of self-registrations per hour based on the number of extended enterprise learners in your tenant. Workday enables up to 500 self-registrations per hour when you have 5999 or fewer active or inactive extended enterprise learners. The hourly limit increases by 100 self-registrations per hour for every additional 1000 extended enterprise learners. The maximum hourly limit is 1000 self-registrations. Example: • 0-5999 extended enterprise learners = 500 self-registrations per hour • 6000-6999 extended enterprise learners = 600 self-registrations per hour • 7000-7999 extended enterprise learners = 700 self-registrations per hour

Questions	Considerations
	You can enter a custom hourly limit in the Edit Tenant Setup - HCM task. Note: For security, Workday recommends using the default value or entering a custom limit that's less than the default value.
How can you manage self-registration URLs?	You can create 1 self-registration URL per extended enterprise affiliation. You can inactivate URLs or schedule activation and expiration dates. You can view and report on inactive self-registration URLs in Workday.
Can external learning instructors register for their own accounts?	Only extended enterprise learners can self-register. However, you can activate the external learning instructor persona on external learning users created through self-registration.
What will the activation date be for extended enterprise learners created through self-registration?	Workday sets the activation date to the date that the extended enterprise learner submitted their account registration. Workday uses your tenant time zone for the activation date time zone. When you don't have a tenant time zone, Workday uses Pacific Standard Time.
What happens when there are duplicate self-registrations?	If a prospective extended enterprise learner has a pending self-registration and they attempt to submit another self-registration, Workday displays an error that tells the them to contact their administrator. If an existing extended enterprise learner submits a self-registration and you have the *Request Extended Enterprise Learner* business process configured to enable administrators to review duplicate requests, administrators receive a task enabling them to compare the requested and existing user information and either deny or submit the request. When they submit the request, Workday overrides the existing user information with the requested information.
How do you configure the language and name format for the self-registration page that extended enterprise learners see when they access a self-registration URL?	Workday translates the self-registration page into a Workday-supported language based on the user's browser language. Upon account approval, the extended enterprise learner receives their username and temporary password emails in the same language. They also select a country when they register, which determines the formatting for their name.

Recommendations

To avoid unknown users creating accounts, Workday recommends adding administrator approval steps to the *Request Extended Enterprise Learner* business process. Workday also recommends using the default value or less for the hourly limit on self-registrations.

Requirements

Configure the *Manage: Self-Registration* domain and set up the *Request Extended Enterprise Learner* business process. See:

- Steps: Configure Automatic Initiation of Request Extended Enterprise Learner
- Steps: Configure Conditional Initiation of Request Extended Enterprise Learner
- Steps: Configure Manual Initiation of Request Extended Enterprise Learner

Limitations

- When an existing user registers for an account, Workday doesn't notify them that the email that they registered with is already in use. To avoid this, Workday recommends only distributing the self-registration URL to new users.
- Managed Self-Registration only supports First Name and Primary name components. It doesn't support additional required name components that you configure.

Tenant Setup

You can optionally use the Edit Tenant Setup - HCM task to:

- Configure the privacy policy for prospect extended enterprise learners who are registering for an account. The privacy policy is set to None by default.
- View or customize your hourly limit on self-registrations.

Security

In the Extended Enterprise for Learning functional area:

Domains	Considerations
Manage: Self-Registration	Enables users to create, edit, view, and report on self-registration URLs.

Business Processes

Business Processes	Considerations
Request Extended Enterprise Learner	Managed Self-Registration uses the *Request Extended Enterprise Learner* business process to create new or edit existing extended enterprise learners. Configure this business process before distributing self-registration URLs.

Reporting

You can create custom reports using these report data sources:

- Extended Enterprise Learners
- External Learning Users
- Self-Registration URLs

Integrations

Web Services	Considerations
Get Self Registration URLs	Use this web service to retrieve self-registration URLs.
Put Self Registration URL	Use this web service to create or update self-registration URLs.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

2022R2 What's New Post: Request Extended Enterprise Learner for Existing Accounts

The Next Level: Managed Self-Registration for Extended Enterprise

Steps: Set Up Managed Self-Registration for Extended Enterprise

Context

Managed Self-Registration for Extended Enterprise enables people outside of your organization to register for their own extended enterprise learning account. You can create self-registration URLs to distribute to prospective extended enterprise learners. Each URL is unique to an extended enterprise affiliation. You can create 1 URL per affiliation. When prospect extended enterprise learners access the URL, they enter their information to register for an account.

After account approval, the new extended enterprise learner receives 2 emails with their username and temporary password, enabling them to sign in to Workday Learning. Their username is the same as their email address. Workday automatically adds the extended enterprise learner to the affiliation associated with the self-registration URL that they used to register.

Steps

1. Configure the *Request Extended Enterprise Learner* business process in the Extended Enterprise for Learning functional area.

   Note: Managed Self-Registration uses the *Request Extended Enterprise Learner* business process to create new or editing existing users. Ensure that you have allowed actions, security groups, and approvals properly configured before distributing self-registration URLs.

   You can configure the business process to initiate automatically or manually, or use a combination of automatic and manual initiation based on custom condition rules.

   To avoid unknown users creating accounts and accessing your learning content, Workday recommends adding administrator approval steps to the *Request Extended Enterprise Learner* business process.

   These topics describe 3 different approaches for configuring the *Request Extended Enterprise Learner* business process. See:

   - Steps: Configure Automatic Initiation of Request Extended Enterprise Learner.
   - Steps: Configure Conditional Initiation of Request Extended Enterprise Learner.
   - Steps: Configure Manual Initiation of Request Extended Enterprise Learner.

2. Access the Domain Security Policies for Functional Area report.

   Select Domain Security Policy > Enable from the related actions menu of the *Manage: Self-Registration* domain in the Extended Enterprise for Learning functional area.

   Security: These domains in the System functional area:

   - *Security Activation*
   - *Security Configuration*
3. Edit Domain Security Policies.

   Set up the security policy for the *Manage: Self-Registration* domain.

   When you want to enable affiliation managers to create and manage self-registration URLs, Workday recommends that you add the Affiliation Manager – Constrained security group to the domain security policy. This ensures that affiliation managers can only view the self-registration URL associated with their own affiliation.
4. (Optional) Access the Learning: Extended Enterprise section of the Edit Tenant Setup - HCM task.
   a) Select a self-registration privacy policy option. The default is None.
   b) Select the Override Default Self-Registration Hourly Limit With Custom Value check box to enter a custom limit on the number of self-registrations per hour.

      Workday determines your default hourly limit on the number of self-registrations based on the number of extended enterprise learners in your tenant. Workday enables up to 500 self-registrations per hour when you have 5999 or fewer active or inactive extended enterprise learners. The hourly limit increases by 100 self-registrations per hour for every additional 1000 extended enterprise learners. The maximum hourly limit is 1000 self-registrations.

      Example:

      - 0-5999 extended enterprise learners = 500 self-registrations per hour
      - 6000-6999 extended enterprise learners = 600 self-registrations per hour
      - 7000-7999 extended enterprise learners = 700 self-registrations per hour

      Note: For security, Workday recommends using the default value or entering a custom limit that's less than the default value.

      When registrations exceed the hourly limit, anyone additional who registers for an account within that hour receives an error informing them that their request couldn't be submitted.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

Result

Users with permission can create self-registration URLs for affiliations.

Next Steps

Create a self-registration URL using the Create Self-Registration URL task and distribute it to prospect extended enterprise learners.

Example: Create a Self-Registration URL

This example illustrates how to create a self-registration URL. It describes how to configure it so that only a specific group can successfully register for extended enterprise accounts.

Context

You're a learning administrator at Global Modern Services (GMS), a company that manufactures electric vehicles. You hire 16 subcontractors from ATP. They need to register for extended enterprise learning accounts so that they can take required compliance training. Your training materials contain proprietary information, so you want to ensure that only the 16 subcontractors successfully register and access the materials.

You work with an administrator at ATP as your primary contact while you onboard the new subcontractors.

Prerequisites

Set Up Managed Self-Registration for Extended Enterprise.

Steps

1. Access the *Request Extended Enterprise Learner* business process definition.

   Add an approval step to the business process definition with a security group that includes administrators. This routes all requests for new extended enterprise learners to an administrator who can approve or deny each request and ensure that only the 16 subcontractors successfully register for accounts.

   a) From the related actions menu of the *Request Extended Enterprise Learner* business process definition, select Business Process > Edit Definition.
   b) Click OK.
   c) Add a row.
   d) Enter or select these values:

Field/Prompt	Value
Order	A value that ensures that this step is last in the definition. Example: *z*
Type	*Approval*
Group	An unconstrained group that includes administrators. Example: *Extended Enterprise Admin*

   e) Click OK and Done.

   Security: These domains in the System functional area:

   - *Business Process Administration*
   - *Manage: Business Process Definitions*

2. Access the *Request Extended Enterprise Learner* business process definition.

   Add a condition rule to the approval step so that it only triggers when a request for a new extended enterprise learner comes from a self-registration URL. The condition rule enables you to maintain your regular business process configuration while ensuring that administrators have full control over who can create an account through a self-registration URL.

   a) From the related actions menu of the approval step, select Business Process > Create Condition Rule.
   b) Create a condition rule with these values:

Field	Value
Description	*Request from Self-Registration*
And/Or	*And*
Source External Field or Condition Rule	*Created from Self-Registration*
Relational Operator	*equal to*
Comparison Type	*Value specified in this filter*

Field	Value
Comparison Value	Select the Comparison Value checkbox.

c) Click OK.
d) From the related actions menu of the approval step, select Business Process > Maintain Step Conditions.
e) Click OK.
f) From the Rule prompt, select the *Request from Self-Registration* condition rule.
g) Click OK and Done.

3. Access the Create Extended Enterprise Affiliation task.

   Create a new affiliation for ATP.

   a) In the Name field, enter *ATP*.
   b) Click OK and Done.
4. Access the Create Self-Registration URL task.

   Create an active self-registration URL for the ATP affiliation.

   a) Enter or select these values:

Field	Value
Extended Enterprise Affiliation	*ATP*
Activation Date	Current date and time. Example: *02/21/2023, 09:00 AM*

   b) Click OK and Done.
5. Distribute the self-registration URL.

   Email the self-registration URL to the ATP administrator so that they can forward it to the 16 prospective extended enterprise learners from ATP.

Result

The subcontractors can access the self-registration URL and register their own account details. The approval step and condition rule ensure that the extended enterprise administrator approves or denies each request. Upon approval, the new extended enterprise learners each receive 2 emails with their username and temporary password, enabling them to access Workday Learning. Workday automatically adds them to the ATP affiliation.

Workday Scheduling

Centralized Scheduling

Mass Generate Schedules for Organizations

Prerequisites

Security: *Set Up: Centralized Scheduling* domain in the Workday Scheduling functional area.

Context

You can use the Mass Generate Schedules for Organizations task to launch a background job that mass generates schedules.

Steps

1. Access the Mass Generate Schedules for Organizations task.
2. Select a run frequency.
3. Click OK.
4. Complete the schedule generation details:

Option	Description
Scheduling Organizations	Workday generates schedules for all scheduling organizations that: • You select. • Are subordinate to the high-level scheduling organizations that you select.
Number of Weeks	Determines how many weeks to generate schedules for. Enter a value from 1 to 8.
Start Date	Workday uses the Start Date in the Schedule Generation Details section or tab to determine the first schedule week for these frequencies: • *Run Now* • *Run Once in the Future*
Days in the Future	Workday uses the value you enter in the Days in the Future field and the day you configure on the Schedule tab to determine the first schedule week for these frequencies: • *Weekly Recurrence* • *Monthly Recurrence*

5. (Optional) Complete the Schedule tab:

Option	Description
Priority	Setting a higher priority can reduce potential queuing. See Concept: Workday Scheduled Processes.
Recurs Every x Week(s)	Available when you select *Weekly Recurrence* for Run Frequency. Enter a number from 1 to 52.
Days(s) of the Week	Available when you select *Weekly Recurrence* for Run Frequency. You can select more than 1 day. Example: You want to generate schedules for 2 scheduling organizations, North and South, on the day of the week their schedules start. If the North schedule starts on Monday and South starts on Tuesday, select both *Monday* and *Tuesday*.
Recurrence Type	Available when you select *Monthly Recurrence* for Run Frequency. Specify which Days(s) of the Month or Day of the Week to run the job based on a calendar date.

Option	Description
Catch Up Behavior	Workday uses this field to determine whether to run the job again after an error.
Start Date	Select the date when you want the job to begin.
End Date	For weekly or monthly recurrence, select the date when you want the job to end.

6. Click OK and Done.

Result

Workday creates a schedule in *Draft* status.

Example

You want to generate schedules every Sunday beginning on a week 28 days in the future. Configure these options:

Option	Value
Run Frequency	*Weekly Recurrence*
Days in the Future	*28*
Days(s) of the Week	*Sunday*

Next Steps

You can access the Process Monitor report to view a summary of the schedules that were completed and any errors.

Mass Publish Schedules for Organizations

Prerequisites

Security: *Set Up: Centralized Scheduling* domain in the Workday Scheduling functional area.

Context

You can use the Mass Publish Schedules for Organizations task to launch a background job that mass publishes schedules that are in *Draft* status.

Steps

1. Access the Mass Publish Schedules for Organizations task.
2. Select a run frequency.
3. Click OK.
4. Complete the organization schedule settings:

Option	Description
Scheduling Organizations	Workday publishes schedules for all scheduling organizations that: • You select.

Option	Description
	• Are subordinate to the high-level scheduling organizations that you select.
Number of Weeks	Determines how many weeks to publish a schedule for. Enter a value from 1 to 8.
Start Date	For the Run Now or Run Once in the Future frequencies, Workday uses the Start Date to determine the week to publish a schedule.
Days in the Future	For the weekly or monthly frequencies, Workday uses the value you enter in the Days in the Future field and the day you configure on the Schedule tab to calculate when to publish the first schedule.

5. (Optional) Complete the Schedule tab:

Option	Description
Priority	Setting a higher priority can reduce potential queuing. See Concept: Workday Scheduled Processes.
Recurs Every x Week(s)	Available when you select *Weekly Recurrence* for Run Frequency. Enter a number from 1 to 52.
Days(s) of the Week	Available when you select *Weekly Recurrence* for Run Frequency. You can select more than 1 day. Example: You want to publish schedules for 2 scheduling organizations, East and West, on the day of the week their schedules start. If the East schedule starts on Sunday and West starts on Monday, select both *Sunday* and *Monday*.
Recurrence Type	Available when you select *Monthly Recurrence* for Run Frequency. Specify which Days(s) of the Month or Day of the Week to run the job based on a calendar date.
Catch Up Behavior	Workday uses this field to determine whether to run the job again after an error.
Start Date	Select the date when you want the job to begin.
End Date	For weekly or monthly recurrence, select the date when you want the job to end.

6. Click OK and Done.

Example

You want to publish schedules the first Monday of the scheduling month beginning on a month 60 days in the future. Configure these options:

Option	Value
Run Frequency	*Monthly Recurrence*
Days in the Future	*60*
Day of the Week	*First Monday*

Next Steps

You can access the Process Monitor report to view a summary of the schedules that were published and any errors.

Mass Clear Schedules for Organizations

Prerequisites

Security: *Set Up: Centralized Scheduling* domain in the Workday Scheduling functional area.

Context

You can use the Mass Clear Schedules for Organizations task to launch a background job that mass clears schedules.

Steps

1. Access the Mass Clear Schedules for Organizations task.
2. Click OK.
3. Complete the task:

Option	Description
Scheduling Organizations	Workday clears schedules for all scheduling organizations that: • You select. • Are subordinate to the high-level scheduling organizations that you select.
Number of Weeks	Determines how many weeks to generate schedules for. Enter a value from 1 to 8.
Start Date	Determines the first schedule week to clear.

Next Steps

You can access the Process Monitor report to view a summary of the schedules that were cleared and any errors.

Concept: Mass Generate Schedules for Organizations

You can launch a background job to mass generate schedules. This enables you to generate many schedules at once while continuing to use your Workday tenant. Workday manages all centralized scheduling jobs to efficiently use computing power. This improves performance and supports scalability for larger or more complex organizations.

When you launch the job, Workday generates schedules in the background for all scheduling organizations that:

- You select.

- Are subordinate to the high-level scheduling organizations that you select.

Jobs can process for up to 12 hours. Workday generates schedules for all organizations successfully processed within this time. We don't generate schedules for any organizations or weeks that haven't been processed within the 12-hour limit.

Provisioning tenanted resources requires lead time, which varies with the complexity of your configuration and the necessary updates. Workday can help you adjust job configurations to meet processing constraints, eliminating the need for additional infrastructure. We recommend that you test your configuration in a Sandbox tenant to help us monitor behavior and address issues effectively.

For scheduling organizations that use manual scheduling, Workday generates blank schedules. Once the job is running, you can’t generate or modify schedules using the Schedule Workers report.

You can generate schedules for up to 8 weeks at a time. To generate schedules for more than 8 weeks, you can configure multiple future job runs. When you configure multiple weeks, Workday creates schedules independently and in sequential order for each scheduling organization you select.

Workday skips scheduling organizations that already have a schedule created.

Concept: Mass Publish Schedules for Organizations

You can launch a background job to mass publish schedules. This enables you to publish many schedules at once while continuing to use your Workday tenant. This makes it easier for centralized teams to publish schedules for many scheduling organizations at once. You can run the job across multiple high-level scheduling organizations and their subordinate scheduling organizations.

Workday publishes schedules in the background for all scheduling organizations that:

- You select.
- Are subordinate to the high-level scheduling organizations that you select.

This job initiates the *Publish Schedule* business process using the account that configured the job. When step conditions are configured on the *Publish Schedule* business process, Workday respects the conditions. Workday recommends that you do not use an Integration System User account to run the job because the ISU account permissions will skip step conditions on the business process.

When the job includes multiple weeks, Workday publishes the weeks in sequential order.

Concept: Mass Clear Schedules for Organizations

You can launch a background job to mass clear schedules while still using your Workday tenant. This makes it easier for centralized teams to clear schedules for many scheduling organizations at once.

Workday clears schedules in the background for all scheduling organizations that:

- You select.
- Are subordinate to the high-level scheduling organizations that you select.

When you configure multiple weeks, Workday clears schedules independently for each scheduling organization that you select. Workday skips schedules that are not in *Draft* status.

Scheduling Basics and Tenant Setup

Steps: Set Up Workday Scheduling and Labor Optimization

Context

The Workday Scheduling SKU enables you to create schedules that Workday validates against business rules, regulatory requirements, worker availability, preferences, and qualifications. With Workday Scheduling, workers are able to:

- Manage their own availability and schedule preferences to help balance work/life priorities..
- Receive notifications about their schedules.
- View schedules for themselves and their teams.
- Offer and request to cover shifts on the Open Shift Board.
- Swap shifts with coworkers to trade for shifts that better suit their personal needs.
- Sign up for additional shifts from their mobile devices.

With Workday Scheduling, managers can:

- Assign workers to customer-defined shifts based on business and worker needs.
- Measure productivity and labor costs and track scheduled vs. actuals.
- Ensure compliance with regulatory rules and business policies.

The Labor Optimization SKU is an add-on product to Workday Scheduling that uses artificial intelligence to optimize shifts and shift assignments. Labor Optimization matches labor demand with worker qualifications, availability, and preferences while respecting business and regulatory requirements. This SKU can meet the needs of businesses in industries with fluctuating labor demands like retail, hospitality, and food services.

With Labor Optimization, Workday generates the entire structure of the schedule, determining exactly how many shifts are required and exactly when those shifts should begin and end based on customer-provided labor demand while at the same time balancing shift assignments with worker availability, preferences, and skills to generate optimized schedules. Workday will also recommend replacement workers when shifts or schedules change. Labor Optimization enables managers to:

- Manage labor demand data by organization, suborganization, and work attributes or qualifications.
- Gain visibility into coverage gaps so that you can avoid overscheduling and overtime.
- Understand the quality of your schedule using a schedule score that rates how well the schedule meets worker and business needs.

Steps

1. Access the Maintain Functional Areas task.
    - Enable the Scheduling functional area.
    - (Optional) Enable the Labor Optimization functional area.
2. Configure domain security policies for Scheduling domains.

    Workday recommends providing both View and Modify access for the Scheduling Administrator and the Scheduling Partner.
3. (Optional) Configure domain security policies for Labor Optimization domains.
4. Configure business process security policies for Scheduling business processes.

    See: Reference: Scheduling Business Processes on page 2199.

    All business processes are secured to the Workday Scheduling . You don’t need Labor Optimization to use business processes.
5. Set up the organizations that you'll use to schedule workers.

    See: Steps: Set Up Scheduling Organizations on page 2153.
6. Define settings for high-level scheduling organizations such as the appearance of the schedule for managers and workers, and the options that are available for managers when they create schedules.

    See: Steps: Set Up High-Level Scheduling Organizations on page 2154.
7. Create validations to warn managers when they create or attempt to publish shifts that violate business or regulatory requirements.

    See: Steps: Create Schedule Validations on page 2168.
8. Create Schedule Tags on page 2205.

9. Assign schedule tags to workers based on their qualifications.

   See: Steps: Assign Schedule Tags on page 2203.
10. Create Scheduling Eligibility Rules on page 2171.
11. Define Working Hours on page 2163.
12. (Optional) Set up pattern-based schedules for workers whose work schedules don't change significantly from week-to-week.

    See: Steps: Set Up Static Scheduling on page 2166.

    Skip this step if you're using the Labor Optimization SKU.
13. (Optional) Set Up the Optimization Engine on page 2173.

    Skip this step if you're not using the Labor Optimization SKU.
14. (Optional) Add Labor Demand on page 2173.

    Skip this step if you're not using the Labor Optimization SKU.
15. Set up the Time and Scheduling Hub so managers have a centralized place to manage Workday Scheduling, Time Tracking, and Absence Management information.

    See: Steps: Set Up the Time and Scheduling Hub on page 2183.
16. (Optional) Configure and View Alerts.

    Alert workers of upcoming shifts using the Upcoming Shift notification type.
17. Set up notifications to send to workers when their shifts change.

    See: Steps: Set Up Shift Change Notifications on page 2187.

Result

Managers and schedulers can also access these tasks to define worker-level settings:

- Change Work Availability for Worker
- Change Schedule Preferences for Worker
- Override Scheduling Settings for Worker

Workers can access these tasks from the Scheduling worklet:

- My Schedule
- Change My Work Availability
- Change My Schedule Preferences
- Open Shift Board

Steps: Set Up Scheduling Organizations

Prerequisites

Security: *Set Up: Scheduling: Maintain Scheduling Organizations* domain in the Scheduling functional area.

Context

There are 3 types of organizations that you can use in Workday Scheduling: high-level scheduling organizations (HLSOs), scheduling organizations, and subgroup organizations. High-level scheduling organizations define settings for themselves and the scheduling organizations below them in the organization hierarchy. Scheduling organizations are the organizations that schedules are created for. An HLSO can also be a scheduling organization. Subgroup organizations are a smaller group of workers within a scheduling organization.

Steps

1. Access the Maintain Scheduling Organizations task.

   Define whether an organization is a high-level scheduling organization, a scheduling organization, or both.

   Example: You make the *Property Management - NA* supervisory organization an HLSO, but not a scheduling organization. You make 2 of its subordinate organizations, *Property Management - CAN* and *Property Management - USA* scheduling organizations. You define the schedule settings at the *Property Management - NA* level. The *Property Management - CAN* and *Property Management - USA* scheduling organizations inherit the settings from *Property Management - NA*. When Workday creates schedules, it will create schedules for *Property Management - CAN* and *Property Management - USA*.
2. (Optional) Set up subgroup organizations to create smaller groups of workers within a scheduling organization.

   See Step 2: Steps: Set Up High-Level Scheduling Organizations on page 2154.

Tasks

Maintain Organization Types

Steps: Set Up High-Level Scheduling Organizations

Prerequisites

Security: *Set Up: Scheduling: Maintain Scheduling Organizations* domain in the Scheduling functional area.

Context

You can configure settings for high-level scheduling organizations (HLSOs) that determine many aspects of schedules including:

- The appearance of the schedule for managers and workers.
- The options that are available for managers when they create schedules.
- Schedule tags that can be assigned to workers and defined for labor demand.

Steps

1. Access the Edit Scheduling Settings task.

   Select an existing effective-dated configuration snapshot or create a new one. Workday prevents you from making changes that could potentially break an existing schedule or labor demand by locking certain fields on the configuration snapshot.

   The effective date for the configuration snapshot takes effect on the first day of the week. Example: You have your latest schedule generated from the week starting on Sunday, January 1, but then add a new snapshot starting Monday, January 2. The new snapshot won't have any fields locked as it doesn't take effect until the first day of the week (Sunday, January 8).
2. As you complete the Settings tab, consider:

Option	Description
Start Day of Week	Select the day on which each work week begins. If you use Workday Payroll or Time Tracking, Workday recommends that you use the same

Option	Description
	start day of week that you've configured in those product areas. Workday only applies schedule settings overrides if they're effective as of the first day of the scheduling week. Example: If your week starts on a Monday and you change someone's minimum and maximum weekly hours overrides as of Tuesday, those changes won't be effective until the next Monday.
Location	Select a location. The location you select must have a time zone configured. Workday applies the time zone of the location that you selected to the schedule. This time zone is the anchor time zone for the HLSO and all SOs beneath it. You can use locations as subgroup organizations to support different time zones within the same HLSO.
Demand Period Length	Select the interval of time for which you can define labor demand for schedules. Example: Your restaurant needs 3 servers from 6:30PM-7:00PM but 5 servers from 7:00PM-7:30PM. You select *30 minutes* for the Demand Period Length. For best performance, select an interval of 60 minutes.
Meal Break Rule Set	Select a meal break rule set that determines the number, length, order, and placement of meals and/or breaks in a shift. The Optimization Engine follows the rule set when generating schedules. It staggers breaks to minimize any overlapping. Example: You create a rule for an 8-hour shift. The rule requires 1 meal break for 45 minutes that must be at least 3 hours after the beginning of the shift, and at least 3 hours before the end of the shift.
Predictive Scheduling Rule Set	Select a predictive scheduling rule set to apply to the HLSO. You can configure a predictive scheduling rule set to calculate the penalty for changing a worker's schedule without advance notice, as required by some local and state laws.
Borrow Workers Rule Set	Select or create a new rule set to define the HLSOs that this HLSO can borrow workers from.

Option	Description
Include Leader as Part of the Schedule	Select to include the manager or scheduler in schedules when they sit outside of the organization.

Include Members Based On Organization	Specify the pool of workers that can be scheduled when generating a schedule.
	• With Scheduling Organizations
	    • Workday includes workers from subordinate organizations and every organization under them.
	• Without Scheduling Organizations
	    • Workday includes workers from subordinate organizations, and all of the organizational hierarchy under them, until a SO is encountered. If Workday encounters an SO, it ignores any workers within it, as well as those in the organizations under it.
	• Only Current Scheduling Organization
	    • Workday includes only workers from the current selected SO.
	Note: Borrowed workers are impacted. Organizations that are borrowed from a different HLSO use the HLSO configuration to determine the workers for which they can manually search. Adjacent organizations are not impacted. Example: HLSO 1 contains SO 1. HLSO 2 contains SO 2 and another organization under SO 2 called Org 1. Under Org 1 is SO 3. If the Without Scheduling Organizations setting is selected on HLSO 2, and if HLSO 1 is borrowing from HLSO 2, the manager is unable to manually search for workers from SO 3 because of the HLSO 2 configuration.

Enable Subgroup Organizations	Select to further divide this organization into subgroup organizations. This enables you to divide labor demand and labor cost in a more granular way.
Subgroup Organization Type	Select a location or custom organization that is enabled as a financial worktag (1-10). Access the Custom tab of the Maintain Organization Types task to edit or create organizations for use as a financial worktag.
Subgroup Organizations	Select subgroup organizations. Workday displays organizations that belong to the organization type you've selected.

Option	Description
	When you select organizations, Workday display them as additional subtabs on the Labor Demand tab of a schedule and in filtering options on the schedule.
Use Subgroup Organization Time Zone	When you select the Location subgroup organization type, you can select this check box to have Workday apply the time zone of the location to schedules for workers in that location. This enables you to support multiple subgroup time zones for a single HLSO. If you don't select the check box, Workday uses the HLSO time zone.
Apply Daily Overtime Apply Weekly Overtime	Select to enable Workday to account for the cost of daily overtime, weekly overtime, or both when creating schedules. Also enables validations when a worker is scheduled for hours that exceed the daily or weekly overtime configuration. This value is also used in the Labor Budget calculation but doesn't necessarily reflect what the worker will actually be paid. Workday applies the configured overtime rate for hours above the overtime thresholds for the projected scheduled and projected actual costs. The options you configure here don't impact Workday Time Tracking.
Overtime Threshold	Enter the number of daily hours, weekly hours, or both, beyond which a person is scheduled for overtime. The options you configure here don't impact Workday Time Tracking.
Overtime Rate	Enter the overtime rate used to estimate the cost of schedules. The options you configure here don't impact Workday Time Tracking.

3. Create schedule validations.

   See Steps: Create Schedule Validations on page 2168.
4. Create Schedule Tags on page 2205.
5. Set Up the Optimization Engine on page 2173.
6. Configure the schedule options that are available for managers.

   See Steps: Set Up Schedule View for Managers on page 2160.
7. Configure additional options for workers. As you complete the Worker Experience tab, consider:

Option	Description
Enable Shift Bidding	Select to enable workers to bid on open shifts. After the worker submits a bid, the manager is notified and selects a worker to take the shift.

Option	Description
	You can't modify this setting if there are in-progress Cover Shift events. You must also configure the *Cover Shift Bidding Event* business process with the*Select Worker to Cover Shift*action step to use this feature.
Allow Workers to Cover or Swap Overlapping Shifts	Select to allow workers to cover shifts that overlap with shifts in their schedule. Workday warns the worker but allows them to take the shift. If you don't select this option, Workday prevents the worker from covering overlapping shifts.
Enable View My Team's Schedule	Select to enable workers to view the published schedules of other workers in their scheduling organization by accessing the View My Team's Schedule task. Workers can see other workers': • Shift start times and end times. • Schedule tags. • Meals and breaks.
Number of Previous Days Workers Can View	Enter a value to control the number of days in the past for which a worker can view their team's schedule. Example: A worker can't view their team's schedules that are more than 7 days in the past.
Days Before Shift to Lock Worker Actions	Enter the number of days before a shift's start date during which workers can't take action on the shift. If you enter 1, workers can't take shift actions starting 1 day before the shift. If you enter 0, workers can take shift actions even on the day of the shift.
Allow ~Workers~ to be On Call	Enable workers to indicate whether they'd like to be on call. Workday displays an Available on Call check box for workers to select on the Change My Schedule Preferences task. The indicator is used on the Good Faith Estimate report, which shows workers that have chosen to be on call.
Enable Voluntary Standby List	Enable workers to indicate whether they'd like to be on a voluntary standby list. Workday displays a Voluntary Standby List check box for workers to select on the Change My Schedule Preferences task. The indicator is used on the Good Faith Estimate report, which shows workers who have volunteered to be on standby.

Maintain Organization Types

Examples

Troubleshooting: Scheduling After Organization Changes on page 2213

Concept: Scheduling Organizations

There are 3 different types of organizations that you can use in Workday Scheduling: high-level scheduling organizations, scheduling organizations, and subgroup organizations.

Organization Type	Description
High-level scheduling organization (HLSO)	The organization that determines the scheduling settings for organizations below itself in the organizational hierarchy.
Scheduling organization (SO)	The organization in which workers can be scheduled to work. A scheduling organization can also be a high-level scheduling organization.
Subgroup organization	A subset of a scheduling organization that enables you to take action on a smaller group of workers.

High-Level Scheduling Organizations

You can define supervisory organizations or custom organizations as HLSOs. Workday recommends that you use a supervisory organization as your HLSO. You must configure at least one HLSO. Settings you can define at the HLSO level include:

- The start day of week for the schedule.
- Location and time zone.
- Validations.
- Schedule tag types and values.
- Labor demand period length.
- Schedule appearance and options for managers and workers.

To configure these settings, use the Edit Scheduling Settings task. The configuration choices you make for the HLSO will flow down to the scheduling organizations below it in the hierarchy. If you need to schedule members of an HLSO, then it can also be a scheduling organization.

Scheduling Organizations

You can define supervisory organizations, custom organizations, or groups of supervisory or custom organizations as scheduling organizations. Scheduling organizations determine the workers who are included in a schedule. Example: A group of workers share a manager, and that manager is in a supervisory organization enabled as a scheduling organization. Those workers are scheduled together.

The settings you configure for HLSOs will flow down to the scheduling organizations below them in the organization hierarchy. If more than 1 HLSO exists on a hierarchy, the scheduling organization will inherit the settings from the HLSO nearest to it in the hierarchy.

Managers, scheduling partners, and scheduling administrators can assign a shift to a worker in a different scheduling organization if both scheduling organizations roll up to the same HLSO. Workers can also pick up shifts or swap shifts from outside of their scheduling organization as long as:

- The worker is qualified to work the shift they're attempting to pick up or swap.
- The worker's scheduling organization and the shift's scheduling organization both roll up to the same HLSO.

Subgroup Organizations

You can define subgroup organizations on an HLSO. Subgroup organizations can be locations or custom organizations enabled as financial worktags. Using subgroup organizations enables you to divide the population of your scheduling organization into smaller groups of workers. You can then define labor demand and view and report on schedules and schedule data for subgroups.

Example: At your fitness center, you make each of these departments a separate subgroup organization by enabling them as a custom worktag:

- Day Care
- Cafe
- Swimming Pool

Some of the schedule attributes you can define at a subgroup level include:

- Labor budget.
- Labor demand.
- Productivity targets.
- Sales forecast.

You can view the results of these attributes using the Sales and Productivity modal on the schedule.

Schedule Generation Settings

Steps: Set Up Schedule View for Managers

Prerequisites

Steps: Set Up High-Level Scheduling Organizations on page 2154

Security: *Set Up: Scheduling: Maintain Scheduling Organizations* domain in the Scheduling functional area.

Context

You can control how Workday displays the Schedule Workers report to managers when they create or edit schedules.

Steps

1. Access the Edit Scheduling Settings task.
2. As you complete the Manager Experience tab, consider:

Option	Description
Schedule Generation Strategy	Select a strategy: • Static Scheduling: Enable Workday to create schedules based on schedule patterns. • Labor Optimization: Enable the Optimization Engine to create schedules. • Manual Scheduling: Enable managers to create schedules using the Generate

Option	Description
	Schedule or Create Schedule Manually buttons, or to use the Copy from a Prior Week option.
Allow Create Schedule Manually	Select to enable managers to manually create schedules from scratch when no labor demand exists. If you don't select this option, managers will only be able to do one of these actions: • Copy a schedule from a prior week. • Edit schedules that the Optimization Engine generates.
Allow Copy Schedule from a Prior Week	Select to add a Copy from Prior Week option to the manager view of schedules. When a manager copies a schedule from a prior week, Workday prompts them to select a week in the past or future. Workday then copies all shifts, shift assignments, and shift details from the week they selected into the current week and places the schedule in Draft status. Workday creates an unassigned shift for each shift conflict that arises due to terminated workers in the target week, and/or if there are approved worker time off or leave of absence events.Prior week shifts are copied, even if the schedule is in Draft status. Workday also copies the most recently published version of each shift if there are any: • Pending draft or swap shifts on a published schedule. • Cover pending, take back pending, or open pending events. • Shifts in Changes Pending, New Shift Pending, or Delete Pending status. • Shifts at Changes Needed status. • Shift Bidding events in progress.

3. (Optional) When you select Static Scheduling as the Schedule Generation Strategy, you can configure how Workday behaves when you generate static shifts on a schedule where absences already exist.

Option	Description
Absence Event Status Must Be	Select an absence event status. Only absence events of this status will trigger the shift conflict behavior you select in the Absence and Shift Conflict Behavior field.
Absence and Shift Conflict Behavior	Define how Workday behaves when you generate static shifts on a schedule where absences already exist.

Option	Description
	Example: You select Unassign Shifts from Worker. When a worker has an absence event, Workday will unassign static shifts that occur at the same time.

4. As you complete the Calendar Options section, consider:

Option	Description
Scheduling Productivity Template	Select a productivity template to apply to the High-Level Scheduling Organization (HLSO), or create a new one. Productivity templates give you the ability to show, hide, or rename metrics on the Sales and Productivity modal.
Show Sales and Productivity Modal	Select to enable managers to view the Sales Productivity Modal. Managers can view the modal by clicking on the bar chart icon on a schedule.
Show Sales Forecast	Select to enable managers to set the dollar amount allocated for the week's sales goal. Managers enter this value on the Labor Demand tab on schedules. You can load the sales forecast into Workday, but Workday only displays it when you select this option.
Show Labor Budget	Select to enable managers to set the monetary amount allocated for the week's budget. Managers enter this value on the Labor Demand tab on schedules. You can load the labor budget into Workday, but Workday only displays it when you select this option.
Forecast and Budget by Day	Select to enable managers to: • Enter sales target and labor budget values for each day of the week in the Schedule Productivity Plan section of the Details tab on the Labor Demand tab. • View daily, rather than weekly, values on the Schedule Productivity modal.
Labor Budget Type	Select either Cost or Hours to control whether the organization’s budget is in cost (a currency value) or hours. By budgeting in hours instead of currency, you can compare the total number of hours scheduled to the total number of hours in the budget to see how well you’re scheduling your workers.

5. Display Absence Details on Schedules on page 2191.

6. Configure Default Weekly View and Default Daily View options.

   You can define which attributes Workday displays on the weekly and daily schedule views when managers initially view the schedule. Managers can then use the Change View button on the schedule to choose whether or not to view these attributes:

   - Schedule versus Demand
   - Gaps in Coverage
   - Shift Notes
   - Meal
   - Break
   - Shift Duration
   - Time Off Duration
   - Holiday Duration
   - Meal/Break Duration
   - Unscheduled Workers
   - Unassigned Shifts
   - Display Absences
   - Worker Total Hours
   - Worker Availability
   - Total Daily Hours
   - Color Coding

   When you select the Show Hours Variance option, Workday displays a Schedule versus Demand row on the schedule that displays the variance between the labor demand values you entered and the hours that Workday added to the generated schedule. Viewing the variance can help you to identify times when you might be overstaffed or understaffed. This option is only available on the weekly view.

   The Default Start Time controls the start time of day displayed when a manager selects the day view. Example: A store begins operating at 8AM. If you don't define a start time, Workday populates the start time to 12AM. Managers can't override the default start time.
7. Select a Group by Default option that controls how Workday groups shifts when managers initially view a schedule. You can set a different Group by Default for the Day and Week views of the schedule. You can choose to group shifts on the schedule by schedule tag type, subgroup organization, or workers.

Define Working Hours

Prerequisites

Security: *Set Up: Scheduling: High Level Scheduling Settings* domain in the Scheduling functional area.

Context

You can create configurations that define whether Workday counts time off or holiday time towards working hours for the week. You can then apply that configuration to these validations so that they take time off and holiday time into account:

- Minimum Weekly Hours
- Maximum Weekly Hours
- Maximum Working Days
- Weekly Overtime Threshold

Your configuration also determines whether or not holidays display on the Schedule Workers report.

Steps

1. Access the Scheduling Validation Working Hours Configuration task.
2. As you complete the Time Off section, consider:

Option	Description
Include All Time Offs	Select to include all time offs as working time.
Time Offs	Select the time offs that you'd like to include as working time.
None of the above	Select to exclude all time offs from working time.
Time Off in Days Converted to Hours	Workday converts 1 day of time off into the number of hours that you define. Example: You enter 8 in this field. Workday converts 1 day of time off into 8 working hours.

3. As you complete the Holiday section, consider:

Option	Description
Holiday Calendar	Select the holiday calendar that contains the holidays you want to include as working time. When you use the scheduling validation working hours configuration in any validation, Workday automatically displays the holidays from the associated holiday calendar on the daily and weekly view of schedules for all workers in the HLSO. You can use worker overrides to limit the holidays that workers can see on the schedule. Create a scheduling validation working hours configuration with the appropriate holiday calendar. Then, use that scheduling validation working hours configuration in validations on the worker override. The worker override takes precedence over the configuration on the HLSO. Note: The length of the holiday that displays on the schedule is derived from the hours configured on the scheduling validation working hours configuration, rather than the start and end time of the holiday on the holiday calendar.
Hours	Workday converts 1 holiday into the number of hours you define.

Result

You can select the configuration in the Additional Hours Configuration column when configuring scheduling validations.

Example

A worker has a minimum weekly hours validation of 20 hours, a maximum weekly hours validation of 40 hours. You create a scheduling validation working hours configuration that includes all time offs. The worker submits a time off request for 8 hours in a week. Workday Scheduling won't schedule the worker for more than 32 hours or for less than 12 hours that week to account for the paid time off.

Reference: Scheduling Settings Details Web Service

Parameter Name	Type/Value	Description
Start_Day_of_Week_Reference	Day_of_the_WeekObject	Start day of week for the settings. If labor demand and/or a schedule exists after the HLSO snapshot effective date, you can't update this value. To update the value add a new HLSO snapshot effective date after your latest labor demand entry or scheduled week.
Location_Reference	LocationObject	Location for the scheduling organization. This determines the default time zone for each scheduling organization. If labor demand and/or a schedule exists after the HLSO snapshot effective date, you can't update this value. To update the value add a new HLSO snapshot effective date after your latest labor demand entry or scheduled week.
Demand_Period_Length_Reference	Scheduling_Organization_Configuration_Demand_Length_Object	Demand period length for labor demand. If labor demand and/or a schedule exists after the HLSO snapshot effective date, you can't update this value. To update the value add a new HLSO snapshot effective date after your latest labor demand entry or scheduled week. See: Add Labor Demand on page 2173.
Meal_and_Break_Rule_Set_Details	Scheduling_Break_Configuration_Details_WS	Meal and break rule set for the scheduling organization. See: Create Rules for Meals and Breaks on page 2810.
Include_Leader_as_part_of_the_Schedule	boolean	Include leader in the schedule.

Include_Members_of_Subordinate_Organization	Boolean	Include members of subordinate organizations in the schedule.
Scheduling_Subgroup_Org_Configuration_Reference	Scheduling_Subgroup_Org_Configuration_Reference	Subgroup organization configuration for the scheduling organization. You can enable subgroup organizations, set a type, and select subgroup organization values. If labor demand and/or a schedule exists after the HLSO snapshot effective date, you can't update this value. To update the value add a new HLSO snapshot effective date after your latest labor demand entry or scheduled week. See: Steps: Set Up Scheduling Organizations on page 2153 and Steps: Set Up High-Level Scheduling Organizations on page 2154.
Scheduling_Overtime_Configuration_Overview	Scheduling_Overtime_Configuration_Overview_Reference	Set the daily and weekly overtime thresholds and the overtime multiplier.

Static Scheduling Configuration

Steps: Set Up Static Scheduling

Prerequisites

Context

Static scheduling enables you to utilize work schedule calendar patterns for workers that Workday will use to automatically populate schedules in Workday Scheduling. This makes it easier for you to create schedules for workers who have few changes to their schedule from week to week.

You can configure individual high-level scheduling organizations to use static scheduling. You can also configure these business processes so that a manager will flow through the necessary steps when setting up a worker for static scheduling:

- Assign Work Schedule
- Assign Shift Profiles to Worker
- Change Worker Schedule Tags

Example: Alec's manager, Sue, creates a work schedule calendar with shifts from 10:00AM to 6:00PM from Monday to Friday. This work schedule calendar has 2 shift profiles. After Sue assigns the work schedule calendar to Alec, Workday directs Sue to the Assign Shift Profiles task from the *Assign Work Schedule Calendar* business process. On the Assign Shift Profiles task Sue can review and add or update Alec’s shift profiles. From here, a business process step takes Sue to the Change Worker Schedule Tags task where Sue can validate that the schedule tags on the shift profile match what is assigned.

Steps

1. Access the Edit Scheduling Settings task.

   On the Manager Experience tab, select Static Scheduling from the Schedule Generation Strategy field.

   Security: *Set Up: Scheduling: Maintain Scheduling Organizations* domain in the Scheduling functional area.
2. Access the Create Work Schedule Calendar task or the Edit Work Schedule Calendar task.

   In the Scheduling section, select the Enable for Static Scheduling check box.

   Security: *Set Up: Calendar* domain in the System functional area.
3. Access the Pattern tab.

   Workday doesn't support the ability to use calendar events with static scheduling. You must use week patterns to define shifts.
4. Enter a Pattern Start Date.

   Workday strongly recommends that you select a pattern start date that matches the start day of week you've configured for the high-level scheduling organization. You can view the Start Day of Week on the Settings tab on the Edit Scheduling Settings task.
5. Add a row for each distinct week in the schedule.
6. Click Pattern Details. As you select the Schedule Pattern Type, consider:

Option	Description
Single Shift and Meal	You can create a single shift with a single meal for each day. You can associate the shift with 1 shift profile.
Multiple Shifts and Meals	You can create multiple shifts and meals for each day. You can also associate different shifts in a day with different shift profiles. Example: You associate the 9:00AM - 12:00PM shift with Shift Profile 1. You associate the 1:00PM - 5:00PM shift with Shift Profile 2.

   Note: Workday Scheduling only supports meals, not breaks. Ensure that the pattern you create only includes meals.
7. Enter shift details for each day of the week. Select a Shift Profile to associate with each shift or day in the schedule pattern.

   Workday uses the shift profile to determine the subgroup organization and schedule tags of the worker so that Workday can create the worker's shifts in Workday Scheduling.
8. Access one of these tasks to assign the work schedule calendar to the appropriate workers:

   - Assign Work Schedule
   - Assign Custom Work Schedule

   You can only use static scheduling when you directly assign work schedule calendars to workers (rather than assigning work schedule calendars through eligibility rules).

   Security: Configure the *Assign Work Schedule* business process and security policy in the Workday Scheduling functional area.

9. Access the Assign Shift Profiles to Worker task to update and assign shift profiles to each static scheduling worker.

   Enter the relevant position, subgroup organization, and schedule tags for each shift profile. Workday automatically populates these details on shifts. If a worker's shift profile contains schedule tags that aren't yet assigned to the worker, you must also update the worker's schedule tag assignments.

   Workers must have the same number of shift profiles assigned to them as exists on their assigned work schedule calendar pattern. A worker may have more than one shift profile if they work one job on some days, and a different job on other days. This situation is different from a worker with multiple positions, as you can have 1 position but still perform multiple roles using different schedule tags.

   Security: Configure the *Assign Shift Profiles to Worker* business process and security policy in the Workday Scheduling functional area.

Result

When you create a schedule using the Schedule Workers report, Workday will automatically create shifts for workers you've set up for static scheduling. If workers have time off or a leave of absence, Workday won't populate a shift on those days. Workday runs your configured validations on static shifts.

When a shift crosses from one week into the next, Workday doesn't display the cross-week shift in the subsequent week's schedule. For weekly validations and cost values, Workday groups all of the hours and costs from cross-week shifts with the week where the shift starts. Example: Laura has a shift from 10PM Saturday to 4AM Sunday with Sunday being the first day of a new weekly schedule. When assessing the total weekly hours, Workday counts Laura's entire 6-hour shift (including her hours from 12AM-4AM on Sunday) in the previous week's total hours.

Next Steps

Shift profiles might become outdated. Example: A worker moves from 1 HLSO to a different HLSO that uses different subgroup organizations and schedule tags. Update the worker's shift profiles to use the new HLSO values. Similarly, if you disable subgroup organizations or a schedule tag type on the HLSO, you'll need to update the shift profiles that used that subgroup organization or schedule tag type.

You can access these web services to assign shift profiles and work schedule calendars:

- *Assign Shift Profiles*
- *Assign Work Schedule Calendars*

You can use the Scheduling Workers with Work Schedule Calendar Assignments report to quickly check workers' work schedule calendar assignments.

Examples

2023R1 What's New Post: Static Scheduling

Validations

Steps: Create Schedule Validations

Prerequisites

Security: *Set Up: Scheduling: Maintain Scheduling Organizations* domain in the Scheduling functional area.

Context

You can create validations to warn managers when they create schedules or shifts that violate business or regulatory requirements. When you create validations, you can select a severity level of either Critical or Warning for each validation type. Workday displays critical validations in red and warning validations in yellow. Managers can publish a schedule with either critical or warning validations present, neither validation prevents Workday from publishing a schedule.

You can prevent managers from publishing or changing a published schedule when validations are present by setting up condition rules on these business processes:

- *Publish Schedule*
- *Change Published Schedule Event*
- *Bulk Change Published Schedule Event*
- *Mass Change Shifts Event*

Workday executes validations when managers generate a schedule or when they create, edit, or delete a shift. Workday doesn't automatically execute validations on existing schedules when you make a configuration change or when a worker requests time off. Managers must manually refresh the schedule by clicking the Refresh Schedule option from the Actions drop-down for Workday to account for those changes.

Note: When you make configuration changes, you must manually refresh each schedule that the change impacts.

Steps

1. Access the Edit Scheduling Settings task.
2. On the Validations tab, select the Enabled check box to enable Workday-delivered validations. Enter relevant values for each validation type.

   See: Reference: Scheduling Validations on page 2169
3. In the Additional Hours Configuration column, select an existing Scheduling Validation Working Hours Configuration or create a new one.

   Configuring a scheduling validation working hours configuration gives you the ability to control whether Workday includes time off or holiday hours in the hours evaluated by a validation.

   This setting automatically applies to all workers under the High-Level Scheduling Organization (HLSO) and its subordinate organizations. Managers can override this setting at the worker level.

   See: Define Working Hours on page 2163
4. Add custom validation text in the Error Message column.
5. In the Validation Usage Type column, select UI and Solver.

Reference: Scheduling Validations

Scheduling validations determine the length and placement of shifts that the Optimization Engine creates. You can enable, disable, and modify these validation types for high-level scheduling organizations.

You can also define whether Workday includes time off and holiday time as working time in validations. To include time off and holiday time, select a Scheduling Validation Working Hours Configuration for each validation type.

For weekly validations, Workday groups all of the hours from cross-week shifts with the week where the shift starts. Example: Laura has a shift from 10PM Saturday to 4AM Sunday with Sunday being the first day of a new weekly schedule. When assessing the total weekly hours, Workday counts Laura's entire 6-hour shift (including her hours from 12AM-4AM on Sunday) in the previous week's total hours.

Validation Type	Description
Minimum Shift Length (Hours) Maximum Shift Length (Hours)	The minimum and maximum shift lengths in hours. Enter the longest possible and shortest possible shift lengths for the organization. You can use overrides to limit the shift lengths for particular groups of workers in the organization.
Minimum Rest Between Shifts (Hours)	The minimum rest time that a worker must receive between scheduled shifts.
Minimum Weekly Hours Maximum Weekly Hours	The maximum and minimum number of hours that a worker can be scheduled to work in a week.
Maximum Working Days	The maximum number of days that a worker can be scheduled to work in a week.
Weekly Overtime Threshold Daily Overtime Threshold	The threshold over which hours will be counted as overtime. Example: You enter 40 as the Weekly Overtime Threshold. If a worker is scheduled for 42 hours in a week, 2 of those hours will be considered overtime.
Split Shifts Threshold	Split shifts occur when a worker is scheduled for two or more shifts in a single day with a gap between the end of one shift and the beginning of the next that could qualify the worker for premium pay. You can configure the length of the threshold and the severity of the validation. Example: At your organization, any gap greater than 2 hours between shifts that start on the same day qualifies workers for premium pay. You enter 2 as the Split Shifts Threshold.
Maximum Daily Hours	The maximum number of hours that a worker can be scheduled to work in a day. This validation makes it easier for you to schedule populations of workers who work multiple roles or at multiple locations, or who work multiple shifts on the same day. Example: Greg works as a Cashier from 9AM-1PM and a Store Associate from 4PM-7PM. The validation includes the total hours for all shifts that start on the same day, but excludes meal and break time. Note: The Optimization Engine currently doesn't respect the Maximum Daily Hours validation, so Workday may create a shift that violates the maximum daily hours. However, if you've configured the validation, Workday will display an error to let the manager know so that they can correct the shift.
Predictive Scheduling	The predictive scheduling penalty is triggered when a manager or scheduler changes a worker's schedule without advance notice.

Validation Type	Description
	See: Steps: Set Up Predictive Scheduling on page 2184.

Rules

Steps: Borrow Workers Across Organizations

Prerequisites

Security: *Set Up: Scheduling: High Level Scheduling Settings* domain in the Workday Scheduling functional area.

Context

You can borrow workers to work in high-level scheduling organizations (HLSOs) outside of their original high-level scheduling organization, so that you can share workers between districts or regions, making it easier for you to give workers the flexibility to work from different locations.

When you enable this feature, managers or schedulers can search for and select workers from outside their HLSO using the worker search functionality on the schedule, and then assign them to a shift in their organization.

The borrowed worker inherits the HLSO settings of the borrowing organization. Example: If the worker is part of Org 15 but is borrowed into Org 35, then the worker will now inherit the configuration of Org 35. If Org 35 has predictive scheduling and shift bidding configured, the worker could now receive predictive scheduling penalties and be able to bid on shifts.

The worker’s costs will only be visible to the manager of the organization that the worker has shifts in. Example: The manager of the worker’s home organization won’t see worker cost if the worker doesn’t have any more shifts in the home organization.

Steps

1. Access the Create Borrow Worker Rule Set task.

   Create rule sets to define the HLSOs and/or scheduling organizations (SOs) that you want to borrow workers from. If you select an HLSO, then all of the SOs under the HLSO in the organization hierarchy will also be automatically selected.
2. Access the Edit Scheduling Settings task and select the relevant HLSO.

   On the Settings tab, in the Borrow Workers Rule Set field, select the rule set you just created.

   If the HLSO has either of these fields selected, then those workers will also be included when borrowing from another HLSO:

   - Include Leader as Part of the Schedule
   - Include Members of Subordinate Organizations

Result

When a worker is borrowed into an organization, their shifts will display as external shifts on the Schedule Workers report. If a worker is borrowed and has a shift in the org, then the worker will be a suggested worker in Replace Worker. If the worker's shift is removed, they will not be suggested anymore.

Create Scheduling Eligibility Rules

Prerequisites

Security: *Set Up: Scheduling: High Level Scheduling Settings* domain in the Scheduling functional area.

Context

You can configure rules that determine eligibility for Workday Scheduling components. Workday can then use eligibility rules to automatically populate values in some processes. Example: Workday can automatically assign schedule tags to workers as part of the *Auto-Assign Schedule Tags* service step on the *Change Job* business process based on the eligibility rules you create.

Workday provides many fields on the Worker and Position business objects that you can reference in eligibility rules. For position-specific data, delivered fields on the Worker object usually reference a worker's primary position. To handle workers with multiple jobs, you can either:

- Define conditions on the Worker object that reference all of a worker's positions.
- Define position-specific eligibility on the Worker object using a calculated field to extract a field from the Position object.

You can also create your own calculated fields to use in eligibility rules.

Steps

1. Access the Create Scheduling Eligibility Rule task.
2. In the Description field, enter a meaningful description for identifying the rule.

   This description displays in prompts when you select from available rules.
3. As you complete the Rule Conditions grid, consider:

Column	Description
And/Or	When you enter 2 or more logical statements, this option controls how Workday uses the statement with the preceding line. All conditions in an And expression must be true for the expression to be true. At least one of the conditions in an Or expression must be true for the expression to be true.
( )	Use the parentheses columns when there are 3 or more logical statements and a combination of Ands and Ors. Example: To say (a and b) or c: • Use the opening parenthesis at the beginning of statement a. • Use And before statement b and a closing parenthesis at the end of statement b. • Use Or at the beginning of statement c.
Source External Field or Condition Rule	The source data for which you're defining a rule condition. You can select a report field or a calculated field. Example: *Job Profile*.
Relational Operator	Select how you want to compare the source data to the next value in your condition. The options depend on the data type of the source. Example: any in the selection list.
Comparison Type	Specify whether Workday will compare the source to another field or to a value you enter in the Comparison Value column.

Column	Description
Comparison Value	Select a comparison field or enter the value to compare to the source.
Order	When you have multiple statements, use the arrows to control the processing order of the statements.

Result

You can view the rule using the View Scheduling Eligibility Rule report.

Labor Optimization Configuration

Set Up the Optimization Engine

Prerequisites

Security: *Set Up: Scheduling: High Level Scheduling Settings* domain in the Scheduling functional area.

Context

Administrators can configure Optimization Engine values that determine the default positions of the sliders on the schedule. Managers can then modify these values on the schedule. If all of the slider values are equal, the Optimization Engine applies internal weightings to some factors. If you enter a value for Consistency, it will take precedence over all other values.

Steps

1. Access the Edit Scheduling Settings task.
2. Select the Scheduling Engine Settings tab.

Concept: Scheduling Optimization Engine on page 2176

Add Labor Demand

Prerequisites

Security: These domains in the Labor Optimization functional area:

- *Scheduling: Labor Demand*
- *Cost Data*

Context

You can define labor demand so that the Optimization Engine generates a schedule with the right number of workers at the right times of day. To use the Optimization Engine to generate schedules, you must define labor demand. If you don't define labor demand, you can still manually add shifts to the schedule or copy the schedule from a prior week.

You can also import labor demand, sales forecasts, and labor budgets into Workday using these web services:

- Import Labor Demand
- Import Scheduling Period Productivity Data

Steps

1. Configure these security domains in the Workday Scheduling functional area:
   - *Scheduling: Maintain Labor Demand and Tag Sets*to enable managers to view or modify labor demand on theLabor Demandtab.
   - *Scheduling: Budget and Sales Data*to enable managers to view or modify theSchedule Productivity Planon the Labor Demandtab.
2. Access the Schedule Workers task. Select an organization from the organization drop-down.
3. Click the Labor Demand tab. Click the Overview tab for a summary of the labor demand for the week.
4. Click the Details tab. Navigate to each day of the week to identify the headcount for each required schedule tag value or combination of schedule tag values.

   If your scheduling organization has one or more subgroup organizations, each subgroup organization displays in its own tab. You can define different labor demand values for each subgroup organization.

   As you complete the labor demand, consider:

Option	Description
Sales Forecast	Enter a dollar amount for this week's sales goal.
Labor Budget	Enter a dollar amount for this week's budget.
Ratio %	Set the target percentage that you spend on payroll divided by your sales goal.
Add	Add a new schedule tag set to the labor demand.
Clear All	Clears all labor demand data for the day or week.
Copy from a Prior Week	When you copy labor demand for a week from the past, Workday clears all existing labor demand in the week. Workday then copies the labor demand from the week that you select.

Result

When you generate a schedule, the Optimization Engine schedules workers according to the labor demand you entered. When you click the bar chart icon, you can view the Productivity modal on the schedule.

Create Scheduling Productivity Templates

Prerequisites

Security: Set Up: Scheduling: High Level Scheduling Settings

Context

You can use productivity templates to customize the Sales and Productivity modal. You can customize these aspects of the modal:

- Labels for fields on the modal.
- Calculations that override the default shift rate and unassigned shift rate.

When you create custom calculations to override the default shift rate and unassigned shift rate, Workday doesn't convert the values to different currencies, so you must create separate templates for different currencies.

Steps

1. Access the Create Scheduling Productivity Template task.
2. In the Scheduling Productivity Metrics grid, enter your organization's preferred labels in the Override Titles column.
3. (Optional) Select Override Worker Pay Rate to override the default pay rate defined for workers and to instead use a calculated field to define the pay rate.

   When you create a calculated field for this field, you must use a calculated field on the *Position* business object that returns a currency value. You can't save the template if you select a field from a different business object or that returns a non-currency value.

   If the pay rate is a negative value, Workday treats it as zero.
4. (Optional) Select Override Unassigned Shift Rate to override the default shift rate defined for workers and to instead use either:

   - A static numeric value.
   - A calculated field.

   When you create a calculated field for this field, you must use a calculated field on the Schedule Shift business object that returns a currency value. You can't save the template if you select a field from a different business object or that returns a non-currency value.

Result

When managers view the Sales and Productivity modal, they'll see values based on the calculations you've configured.

Example

Creating a Calculated Field to Override Worker Pay Rate	You need to override the default worker pay rate so that:
	• Hourly workers are paid the appropriate hourly rate.
	• Contingent workers are paid the appropriate rate based on their contract.
	1. Select Override Worker Pay Rate.
	2. In the field, select Create Calculated Field.
	3. Enter these values:
	  • Field Name: *Worker hourly rate*
	  • Business Object: *Position*
	  • Function: *Evaluate Expression*
	4. Click OK.
	5. On the Create Calculated Field - Evaluate Expression page, enter these values:
	  • Field Type: *Numeric*
	  • Default Value:*0*

6. In the first row of the grid, enter:
    - Condition:*is hourly worker*
    - Return Value If Condition is true:*Hourly Rate - Amount*
7. Add a new row. Enter these values:
    - Condition:*Contingent Worker*
    - Return Value If Condition is True: *Contingent Worker Pay Rate Annualized in USD*
8. Save the calculated field.

Creating a Calculated Field to Calculate Unassigned Shift Rates

You want to calculate the cost of unassigned shifts.

1. Select Override Unassigned Shift Rate.
2. In the field, select Create Calculated Field.
3. Enter these values:
    - Field Name: *Total Unassigned Shift Cost*
    - Business Object: Schedule Shift
    - Function: *Sum Related Instances*
4. Click OK.
5. On the Create Calculated Field - Sum Related Instances page, enter these values:
    - Related Field: *Workers with Availability and Schedule Tags for Shift*
    - Related Business Object: *Worker*
    - Sum: *All instances*
    - Field to Sum: *Hourly Rate - Amount*
6. Save the calculated field.

Concept: Productivity Modal on page 2179

Concept: Scheduling Optimization Engine

What Is the Optimization Engine?

The Optimization Engine uses artificial intelligence to compare many possible scheduling scenarios to generate the schedule that most effectively meets your needs. The Optimization Engine creates schedules by taking these factors into account:

- Labor demand needs.
- Worker attributes (such as qualifications, availability, and preferences).
- Your configuration and business objectives.

To create schedules, the Optimization Engine designs shifts by determining their length, start time, and end time. As the Optimization Engine designs shifts, it simultaneously assigns those shifts to qualified workers to meet labor demand needs. The Optimization Engine also optimizes the schedule to meet business objectives as much as possible while not violating any hard constraints.

Labor Demand

The Optimization Engine relies on labor demand data defined at the scheduling organization (SO) level to generate schedules. You define labor demand for an organization by specifying:

- The type of work that needs to be done.
- The number of workers required to do the work.
- The specific period of time in which the work needs to be done.

Shift Design and Assignment

Shift length is determined by a combination of High Level Scheduling Organization (HLSO) settings and labor demand. The Optimization Engine doesn't create shifts that occur outside of the time period called for by the labor demand. The Optimization Engine also won't create shifts that violate minimum shift length validations, maximum shift length validations, or meal rules you've defined for the HLSO. The Optimization Engine instead creates meal periods as defined on the HLSO and attempts to stagger meal periods to best meet coverage requirements. If the Consistency setting is greater than zero, the Optimization Engine might also create shifts based on the start and end times of a worker's shift in the lookback period.

Workday never generates a schedule with unassigned shifts. If a worker isn't available to be assigned to a shift, that shift isn't included in the schedule. Workday automatically indicates where there are gaps in coverage between the labor demand and the generated and assigned shifts. Workday also indicates where there might be overcoverage or undercoverage.

Hard Constraints: Fixed or Relaxable

The Optimization Engine only creates schedules that don't violate any of these fixed hard constraints:

- Availability: If a worker has time off or a leave of absence without a scheduling effect that overlaps the shift, the worker is considered not available.
- Maximum Shift Length: A shift can't be greater than the maximum shift length as defined by the HLSO.
- Minimum Rest Periods between shifts.
- Minimum Shift Length: a shift must be at least the minimum shift length as defined by the HLSO.
- Meal Rules: a shift must comply with the meal rule defined by the HLSO.
- 1 shift per day: Workday will only automatically assign a worker to 1 shift per day, even if a worker has more than 1 position or more than 1 schedule tag assignment.
- No overlapping shifts: a worker can't be assigned to more than 1 shift at a time.
- Schedule tag qualification: a worker must be qualified for a shift through their schedule tag assignment to be assigned to the shift.

The only time a hard constraint could be violated is when consistency is enabled for the schedule week being generated. In this case, if a shift has been manually updated to violate a minimum or maximum hour or meal rule in the lookback period, it could be possible for that violation to be carried forward to the week being scheduled.

There are also relaxable hard constraints that are sometimes hard constraints and sometimes not. When they aren't hard constraints, they're referred to as objectives. You can configure whether these constraints are relaxable (and treated as objectives) or hard constraints through schedule settings:

- Maximum weekly hours.
- Maximum working days.

If the Optimization Engine is unable to find a schedule solution that doesn't violate a hard constraint, the Optimization Engine might relax the Labor Demand hard constraint and the Minimum Weekly Hours hard constraint. The Optimization Engine treats these constraints as soft constraints so a solution can be found that doesn't violate any of the other hard constraints.

Soft Constraints/Objectives

As Workday Labor Optimization solves for hard constraints, it also attempts to meet the business objectives that are defined at the point of schedule generation. Adjustable soft constraints are objectives that the Optimization Engine attempts to respect as much as possible. When the Optimization Engine meets these constraints, it improves the schedule quality and score, but if the soft constraints aren't met, the Optimization Engine still generates a schedule. Soft constraints include:

- Consistency
- Demand Coverage
- Labor Cost
- Maximum Weekly Hours
- Minimum Weekly Hours
- Maximum Working Days
- Preferred Days/Times
- Preferred Schedule Tags
- Preferred Weekly Hours

Soft constraints are configured by HLSO and weighted on a scale from 0-100. To configure the Optimization Engine to ignore a soft constraint, you can set the weight to zero. You can override these settings at the worker level. Worker level overrides take precedence over slider settings at the point of schedule generation.

Workday maintains intrinsic weightings that determine the relative importance of each of the soft constraints. These are Workday's intrinsic weightings from greatest weight to least weight:

1. Consistency.
2. Maximum Weekly Hours.
3. Minimum Weekly Hours.
4. Maximum Working Days.
5. Demand Coverage.
6. Labor Cost.
7. Preferred Weekly Hours.
8. Preferred Schedule Tags.
9. Preferred Days/Times.

These settings are automatically populated by the setting configuration on the HLSO.

Sliders

When managers generate a schedule they can use sliders to control the weightings of different soft constraints. When a schedule is initially generated, Workday automatically places the sliders based on the settings defined for the HLSO. Once managers adjust the slider settings and generate a schedule, Workday carries forward the schedule settings to the next week.

Consistency

The consistency value allows you to create schedules that are copies, or close to copies, from week to week. Consistency copies shift start and end times and meals, but not schedule tags. If the schedule setting is greater than zero, consistency will be weighted more heavily than all other soft constraints.

Workday looks back either 1 or 2 weeks (depending on HLSO or override configuration) to find a reference schedule to compare against. If the reference schedule includes time off, Workday looks back another single lookback cycle of 1 or 2 more weeks to find a week without time off. If Workday can't find a reference schedule for a worker the Optimization Engine ignores consistency for that worker.

If the consistency setting is greater than zero, and a shift exists in the reference week where you've manually overridden one or more of these rules, Workday might respect the manual override and bring it into the current week:

- Meal.
- Maximum Shift Length.
- Minimum Shift Length.

If a shift in the reference week isn't required to meet the current week's labor demand, Workday might still generate the shift within the current week.

Schedule Score

After the Optimization Engine generates a schedule, it gives the schedule an overall score based on these dimensions:

- Consistency.
- Coverage.
- Labor cost minimization.
- Workers' preferred schedule tags.
- Workers' preferred weekly hours.

Workday also provides a score for each dimension and a description of how the schedule met each dimension. The soft constraint weightings you defined don't affect the schedule score or the scores of each dimension. Example: You set the Consistency weighting to *Low*. The Optimization Engine generates a schedule that includes shifts that aren't consistent with shifts in the prior lookback cycle. Therefore, the Consistency score will likely display as Poor.

Worker Replacement Score

When workers can take a shift without violating hard constraints (such as availability and schedule tag qualifications), Workday recommends them as replacement workers for existing shifts. Workday ranks recommended workers in order based on their replacement score. Workday displays a replacement score as a Match %. Workday calculates the Match % by taking these factors into account:

- Workday considers workers with a higher pay rate or who will incur overtime as a lower match.
- The further away the shift would take a worker from their preferred working hours, the lower their match score.
- Workday considers the worker a match if any of their preferred schedule tags exist on the shift.

Related Information
Concepts
Concept: Scheduling Organizations on page 2159

Concept: Productivity Modal

The Productivity modal enables you to compare target, scheduled, actual, and projected hours and costs for a week. When you compare these values you can gain insight into key performance indicators for the schedule.You can access the modal by selecting the bar chart icon on the schedule. Workday immediately refreshes the modal data when you:

- Add or remove shifts from the schedule.
- Filter by a different subgroup organization.

Workday includes workers' actual values in the modal when you view their scheduling organization. Workday only displays actual values in the subgroup organization view when workers either:

- Have the subgroup organization assigned to them as a default organizational assignment.
- Apply the subgroup organization worktag to their time blocks in Time Tracking.

Target Values	Calculation Details
Sales	The U.S. dollar amount allocated for the sales goal that week. Reflects the value entered on the Labor Demand tab. If you don't enter target sales forecast values on the Labor Demand tab, Workday displays zero.

Target Values	Calculation Details
Labor Cost	The U.S. dollar amount allocated for the budget that week. Reflects the value entered on the Labor Demand tab. If you don't enter target labor cost on the Labor Demand tab, Workday displays zero.
Ratio %	Target Labor Cost / Target Sales.
Hours	The total labor demand for the week.

Scheduled Values	Calculation Details
Labor Cost	Scheduled Hours x Worker's Hourly Pay Rate. The rate is based on the worker's pay rate type. If workers are salaried, we deannualize their total base pay rate by the hourly rate defined using the Maintain Frequencies task to get their hourly rate. If a worker's hours exceeds the threshold set on the HLSO, Workday calculates their overtime by multiplying the overtime rate defined for the HLSO by the worker’s overtime hours. Reflects compensation effective as of the start of the week. Doesn't include cost for unassigned shifts.
Ratio %	Scheduled Labor Cost / Target Sales. If you didn't enter target sales, displays as zero.
Hours	Total hours in the schedule. Workday includes hours associated with unassigned shifts.
Sales per hour	Target Sales / Scheduled Hours.

Actual Values	Calculation Details
Actual Labor Cost	Worker's Hourly Pay Rate x Worked Hours. If a worker's hours exceed the threshold set on the HLSO, Workday calculates their overtime by multiplying the overtime rate defined for the HLSO by the worker’s overtime hours.
Actual Ratio %	Actual Labor Cost / Target Sales.
Actual Hours	Reported hours from Time Tracking. If a worker’s pay rate type is salary, Workday uses their scheduled hours as actual hours. If the worker isn’t salaried but they report time, Workday treats their reported hours as actuals. However, Workday only uses hours from the past in actuals. Workday doesn't include reported hours from the current day when calculating actuals.

Actual Values	Calculation Details
Actual sales per hour	Target Sales / Actual Hours.

Projected Values	Calculation Details
Ratio %	Scheduled Ratio % - [(Actual Labor Cost + remaining Scheduled Labor Cost) / Target Sales].
Hours	Scheduled Hours - (Actual Hours + Remaining Hours). The Remaining Hours are scheduled hours for the week that are either on the current day or future days and not yet counted as Actuals. Example: The total scheduled hours for Monday - Thursday is 200. The scheduled hours for Friday is 50. As of Thursday night, the actual worked hours from Monday - Thursday is 190. For the sake of the projection, the 50 scheduled hours on Friday are considered remaining hours. To calculate the projection, Workday calculates 250 - (190 + 50) = 240.
Sales per hour	Scheduled Sales per hour - [Target Sales / (Actual Hours + Remaining Hours)]. The Remaining Hours are scheduled hours for the week that are either on the current day or future days and not yet counted as Actuals.
Labor Cost	Scheduled Labor Cost - Actual Labor Cost + remaining Scheduled Labor Cost.

java.net.SocketTimeoutException: timeout	The tenant UI has timed out. A stale page has the connection severed for security purposes.	Refresh the page to initiate the action again.

Schedule Management, Communications, and Productivity

Steps: Set Up the Time and Scheduling Hub

Context

You can configure the Time and Scheduling Hub to enable frontline managers to quickly access frequently used Time Tracking, Absence Management, and Workday Scheduling tasks and reports. The Hub includes these tabs:

- A home page that you can configure with additional cards.
- The Schedule Workers task.
- The Review Time report.
- The Edit and Approve Time report.
- A Direct Reports section that displays Time and Scheduling data for individual workers.
- An Operational Analytics section that includes a Team Insights dashboard (Time and Absence Dashboard) and the Scheduled vs. Actuals report.
- The Team Absence calendar.

Workers only have access to the reports and tasks on the hub if they have access to the domains that secure them.

Workers can add the Time and Scheduling Hub as a link in the Menu on the left panel of their Workday Home page. When they search for the Time and Scheduling Hub in order to add it as a link, Workday returns two options both called Time and Scheduling Hub. The two options will link to different tabs on the

Hub. The option that has an icon of a sheet of paper links directly to the Scheduling tab of the Hub. The option that has an icon of a tree diagram links to the Overview tab of the Hub.

Steps

1. Edit Domain Security Policies.

   Configure the *Manager: Time and Scheduling Manager Hub* domain security policy in the Time Tracking functional area.
2. Set Up Hubs.

   Add relevant cards or reorganize existing cards. Configuring cards controls what users see when they access the Overview tab.
3. (Optional) Configure worklets and task links to display on the Team Insights tab.

   Access the Maintain Dashboards task. Edit the Time and Absence dashboard. The Team Insights tab reflects the changes that you make.

   Security: *Set Up: Tenant Setup - Worklets* in the System functional area.

Result

Managers can customize their Workday home page and add the Time and Scheduling Hub as a worklet. Managers can also customize what they see on the Team Insights dashboard by editing the settings for each worklet you've configured.

Next Steps

To hide the Direct Reports section, access the Hide Workday Delivered Report task and select Time and Scheduling Hub Direct Reports View.

The Next Level: Time and Scheduling Hub Next Level Presentation

Steps: Set Up Predictive Scheduling

Prerequisites

Configure these Workday products:

- Time Tracking
- Workday Scheduling

Context

Predictive Scheduling enables you to calculate the penalty for changing a worker's schedule without advance notice as required by some local and state laws.

Steps

1. Create and publish a schedule. You must have a published schedule to trigger the penalties that you configure in a predictive scheduling rule set.

   See: Steps: Set Up Workday Scheduling and Labor Optimization.
2. (Optional) Configure predictive scheduling reason types.

   Access the Maintain Predictive Scheduling Reason Types task to define reason types, configure whether they incur a penalty, and view the total number of rule sets that currently use the reason type.

3. Access the Create Predictive Scheduling Rule Set task.
    - Enter the rule set name.
    - Select the effective date for the rule set. You can create multiple snapshots to help you plan for future changes in legislation or company policies.
    - Configure the Notice Period Comparison Value to specify if the time of the shift change should be compared to Start of Shift or Start of Week.
    - (Optional) Associate the rule set with 1 or more reason types using the Predictive Scheduling Reason Types prompt.

    You can configure as many rules as you need. As you do, consider their order. Workday evaluates the rules in order and creates the penalty block for the first rule that is true, which prevents multiple penalties being created for the same change to the schedule.
4. Add a row for each rule that you need for the high-level scheduling organization.
    - Use the range operator and units to specify the penalty range when the penalty should be triggered. The range can be hours or days.
    - Configure standard or advanced penalty criteria. You can use a standard condition or an advanced condition for each rule, not both. As you complete the penalty criteria configuration, consider:

Option	Description
Standard Condition	Use standard conditions to determine if a change type is true. Select from these change types: • Shift Added • Shift Deleted • Shift Hours Increased • Shift Hours Reduced • Start Time Changed When you select multiple change types, Workday uses OR logic and triggers a penalty whenever 1 change type is true.
Advanced Condition	Use advanced conditions when you use multiple criteria to determine if a penalty is due. Set up a predictive scheduling penalty condition with the criteria that must be met to trigger a penalty. You can use predictive scheduling penalty conditions across multiple rule sets.
Calculated Results	Selected time calculation tags apply to the penalty time block. Use Quantity or Calculated Quantity to specify the quantity for the time block. You can use one or the other per rule. • Quantity is a fixed value. • Calculated Quantity returns the value of the calculated fields. You can use fields on the Schedule Shift Business

Option	Description
	Object, such as Shift Duration, in the calculated quantity.

5. Access the Edit Scheduling Settings task to attach the predictive scheduling rule set to a high-level scheduling organization. You can add only 1 predictive scheduling rule set to each high-level scheduling organization.

   See: Steps: Set Up High-Level Scheduling Organizations.
6. Create a predictive scheduling calculation using calculation group and priority as the calculation criteria. You need only 1 predictive scheduling calculation per tenant.

   See: Create Predictive Scheduling Calculations on page 2745.
7. Configure the *Change Published Schedule* business process and the *Bulk Change Published Schedule* business process to enable predictive scheduling:

   - Add the *Evaluate Predictive Scheduling Penalty* service step to ensure that validations trigger in scheduling.
   - Add the Run Time Calculations for *Predictive Scheduling Evaluation Date* service step as the next step to ensure that predictive penalties are triggered in time tracking.
   - (Optional) Configure the *Acknowledge Change Published Schedule* action to enable workers to accept or deny the changes to their schedule.
8. Configure the *Cover Shift* business process.

   Add these service steps so that Workday creates a predictive scheduling penalty when a worker picks up a shift from the Open Shift Board that falls within the penalty window:

   - *Evaluate Predictive Scheduling Penalty for Cover Shift Event*
   - *Run Time Calculations for Predictive Scheduling Evaluation Date for Cover Shift*

   When configured, if a worker picks up a shift, Workday sends an approval notification to the approver. If the original worker posts the shift to the Open Shift Board and then takes it back, the original worker will not receive the penalty. If a new worker picks up the shift, then the new worker will receive the predictive scheduling penalty.
9. Access the Manage Predictive Scheduling Penalties task.

   Managers can view and update the status of penalties. After the status update, run time calculations again for changes to take effect.

Result

Managers can view a list of penalties on the Manage Predictive Scheduling Penalties task and see details such as the schedule, worker, when the penalty was created, rule set, rule, change types, time blocks, penalty status, and penalty comment.

When a manager navigates to Schedule Workers > Edit Shift Details to edit a shift, and a predictive scheduling penalty occurs:

- They must enter a reason type for each worker in the Schedule Penalty popup if at least 1 reason type is configured for the rule set attached to the HLSO. Based on the selected reason type, Workday displays a message that indicates whether it incurs a penalty.
- If no reason type is configured for the rule set attached to the HLSO, managers can manually override penalties.

Examples

2023R2 What's New Post: Predictive Scheduling

Steps: Set Up Shift Change Notifications

Prerequisites

Security: *Set Up: Scheduling: Notifications* domain in the Workday Scheduling functional area.

Context

You can configure notifications that Workday sends to workers as soon as someone changes one of the worker's published shifts. You can also control which types of changes trigger notifications. Example: You want to notify workers when their shift start or end time changes, but not when their position changes.

When a worker receives a shift change notification, the notification includes:

- A list of the details that changed.
- The details for their original shift.
- The details for their updated shift.

When a worker receives a new shift or has a shift removed, they'll only see the details for the current shift in the notification. Workers should always look at the latest notifications in My Tasks to see the current state of their schedule.

Steps

1. Add the Notify Workers of Change to Published Schedule Event service step to the *Change Published Schedule* business process after the completion step.
2. Access the Maintain Change Published Schedule Notifications task.
3. Create a new snapshot with an effective date.

   The effective date is based on the updated shift date. Example: You move a shift from Monday to Friday. Your snapshot effective date is Wednesday. Workday uses the Wednesday snapshot details to create the notification for My Tasks.
4. (Optional) Enter a custom Notification Message.

   Workday displays the message at the top of each notification.
5. Select the check box in the Enabled column for any change that should trigger a notification.

Steps: Automatically Assign Scheduling Settings to Workers

Prerequisites

Steps: Set Up Scheduling Organizations on page 2153

Context

You can automatically assign Scheduling settings for workers when they experience job transitions by adding the *Auto-Assign Scheduling Setting Overrides* service step to these business processes:

- *Change Job*
- *Hire*
- *Request Return from Leave of Absence*

When a scheduling worker goes through one of these business processes Workday applies the first eligible Override Scheduling Settings Template to the worker. You can define template priority on the Maintain Override Scheduling Settings Template task. Workday applies the template as of the effective date of the business process event.

Steps

1. Access the Create Override Scheduling Settings Template task and enter values for the validations and scheduling engine settings.

   Security: *Set Up: Scheduling: High Level Scheduling Settings* in the Workday Scheduling functional area.
2. Create Scheduling Eligibility Rules on page 2171.

   Create an eligibility rule that captures the group of workers to whom you'd like to assign new Scheduling settings.
3. Access the Maintain Override Scheduling Settings Templates task.

   Assign a priority to the template that you created and select an eligibility rule.

   Security: *Set Up: Scheduling: High Level Scheduling Settings* in the Workday Scheduling functional area.
4. Access one of these business processes and edit the business process definition:

   - Change Job
   - Hire
   - Request Return from Leave of Absence

   Security: *Business Process Administration* or *Manage: Business Process Definitions* domain in the System functional area.
5. Add the *Auto-Assign Scheduling Setting Overrides* service step after the *Completion* step.

Next Steps

Access the All Override Scheduling Settings Templates report to review your template configuration.

Related Information
Examples
Example Steps: Automatically Assign Scheduling Settings When Workers Change Jobs on page 2193

Steps: Mass Assign Scheduling Settings Overrides

Prerequisites

Security: *Set Up:Scheduling:High Level Scheduling Settings* domain.

Context

You can use the Mass Assign Scheduling Override Settings task to set up an automatic process that checks your high-level scheduling organizations and scheduling organizations for eligibility changes that will impact scheduling override settings. The process will then assign the appropriate settings based on your configuration. This reduces the need for you to manually update overrides when worker eligibility changes due to an expected event. Example: A worker transitions from being minor to an adult on their eighteenth birthday.

Steps

1. Access the Create Override Scheduling Settings Templates task.

   Create a new template with the validations, engine settings, and rules that you'd like to mass assign.

   Example: You create a template for workers under 18 years old that ensures they aren't scheduled for more than 20 hours for each week.

2. Access the Maintain Override Scheduling Settings Templates task. As you complete the task, consider:

Option	Description
Priority	Select the priority for which rule Workday evaluates first. If a worker is eligible for multiple templates, Workday assigns the highest priority template first.
Override Scheduling Settings Template	Select the template that you created.
Worker Eligibility	Select a condition rule or create a new scheduling eligibility rule. Example: You create an eligibility rule that captures workers whose age is less than 18 years.

3. Access the Mass Assign Scheduling Override Settings task.
4. From the Run Frequency prompt, select whether to initiate the settings override for workers now or at a later date.

   Example: You select Weekly to run the job on a weekly basis. If you have 3 eligibility rules for 3 settings templates, when the job runs, workers in the organizations are checked against those 3 rules. If a worker doesn't qualify for any, there will be no overrides. If a worker qualifies for rule 1, they'll be assigned template 1. When the job runs again next week, if the worker still qualifies for rule 1, no new overrides will be assigned and the current override template remains in place. If the job runs again in 10 weeks, and the worker is now over 18, and now qualifies for template 2, a new setting will be assigned with the effective date of the job run date, and a new override will be in place. The worker now has 2 snapshots total.
5. Select the Scheduling Organizations for which you want to override settings.

   When you select an organization, Workday checks eligibility for every scheduling worker in the organization.

   If you've selected Include Members of Subordinate Organizations on the Edit Scheduling Settings task for the HLSO, Workday also checks eligibility for workers in subordinate organizations. Likewise, Workday will only check the eligibility of the leader of the organization if you've enabled Include Leader as Part of Schedule.

   Workday then applies the highest priority override template that workers are eligible for based on the Maintain Override Scheduling Settings Templates task.
6. Enter the number of Days in the Future after which Workday runs the job.

   Each time the job runs, Workday checks worker eligibility for this number of days in the future. Example: You've set the job to run on May 1. You enter 30 for Days in the Future. Workday checks worker eligibility as of May 31.

Change a Worker's Availability

Context

You can modify the details of a worker's availability using the Change Worker Availability for Worker task. The Optimization Engine takes any changes submitted on this task into account when generating schedules.

Validations on this task alert schedulers when the availability time slots they enter cause a conflict with overlapping time slots. This means that Workday prevents you from submitting availability when you enter time slots that overlap within the same day.

Note:

The Change Worker Availability for Worker task enables you to configure availability for each day of the week. However, Workday Scheduling also takes into account shifts that:

- Cross over midnight into the next day.
- Cross schedule weeks.

Workday combines a worker's availability from consecutive days (Example: Monday 10PM to Tuesday 6AM) into a single time slot for scheduling purposes. This means that if a worker needs to be available for an overnight shift, it is recommended that you configure their availability across the two affected days. Example: 10PM to 00:00 AM on Monday and 12:00AM to 6:00AM on Tuesday.

Steps

1. Access the Change Worker Availability for Worker task and select a Worker.
2. Verify that the Effective As Of Date reflects the date that you want the changes to take effect.

   The default value is the current date.
3. Use the Start Time and End Time fields for each day to specify the worker's availability.

   You can enter multiple time slots for a single day.

   Note: The Available check box is selected by default to indicate that the worker is available all day. The values entered in the Start Time and End Time fields take precedence over the Available check box, even when the Available check box is selected.
4. Click Submit.

Example

This example illustrates a use case involving setting up a worker's availability when crossing midnight. In this example, the worker needs to be available from 10:00 PM on Monday until 4:00 AM on Tuesday.

The scheduler enters these values for Monday on the Change Worker Availability for Worker task:

Field	Value
Start Time	10:00 PM
End Time	12:00 AM

The scheduler also enters these values for Tuesday:

Field	Value
Start Time	12:00 AM
End Time	4:00 AM

This following example illustrates a use case involving split shifts for a worker who has a commitment every Wednesday between 12:00 PM and 6:00 PM. The worker is available on Wednesdays from 6:00 AM to 12:00 PM, and is available again later that day from 6:00 PM to 10:00 PM.

The scheduler enters these values in a row for Wednesday on the Change Worker Availability for Worker task:

Field	Value
Start Time	6:00 AM
End Time	12:00 PM

The scheduler adds another row for Wednesday with these values:

Field	Value
Start Time	6:00 PM
End Time	10:00 PM

Next Steps

Display Absence Details on Schedules

Prerequisites
Security:*Set Up: Scheduling: High Level Scheduling Settings*domain in the Scheduling functional area.

Context
Workday automatically displays absences with a general label of Time Off. If managers prefer not to see absences, they can use the Display Absences option on the Change View menu on schedules to completely hide all absences from the schedule.

You can control whether managers, or anyone else who has the ability to see schedules, can see these absence details on schedules:

- Name.
- Event status.
- Reasons.
- Time off comments.

Workday can display absence details for any of these configured absence types:

- Absence tables.
- Time offs.
- Leave types.

For leave types, Workday displays the name of the leave type rather than the leave family. You can see the leave family in a separate pop-up which appears when you click on the white absence card on the schedule.

Steps

1. Access the Edit Scheduling Settings task and select an effective-dated snapshot.
2. As you complete the Absence section on the Calendar tab, consider:

Option	Description
Display Details for All Absence Types	Workday displays the details of the absence type for all configured absence types in your tenant.
Display Details for Absence Types	Select specific absence types that you want to display on schedules. When you select this option workers who have access to view schedules will be able to see absence details on schedules, even if they're not secured to Absence Management tasks.
Don't Display Any Absence Type Details	Workday displays a time off block on the schedule, but doesn't display the details of the absence type.

Option	Description
	When you select this option workers who have access to view schedules will be able to see absence details on schedules, even if they're not secured to Absence Management tasks.

Example: You select Display Details for Absence Types and enter *Paid Time Off*.

Audrey has Paid Time Off on Monday and Sick Time on Tuesday. Workday displays absences for Audrey on both Monday and Tuesday. However, Workday only displays the Paid Time Off label and other details for Audrey's Monday time off. The manager can see that Audrey has an absence on Tuesday, but can't see what type of absence it is, or any additional details.

3. Save your changes.

Result

The configuration fields are effective-dated so you can add or remove absence types from your HLSO snapshots when needed. When you select specific Leave of Absence types to display in the Display Details for Absence Types field, Workday assesses whether to display the absence type based on these criteria:

- If the Actual Last Day of Leave is set, Workday checks the HLSO settings snapshot as of the First Day of Leave and the HLSO settings snapshot as of the Actual Last Day of Leave.
- If the Actual Last Day of Leave isn't set, Workday checks the HLSO settings snapshot as of the First Day of Leave and the HLSO settings snapshot as of the Estimated Last Day of Leave.

Example

On the 01/01/2023 HLSO snapshot, you've selected Display Details for All Absence Types. Audrey's Compassionate Leave begins on 11/20/2023 with an Estimated Last Day of Leave of 12/31/2023. Workday displays her leave as Compassionate Leave on the schedule.

Later, you decide you only want a few absence types to be displayed on the schedule. You create a new 11/27/2023 HLSO snapshot and in the Display Details for Absence Types field, you enter specific leave types that you want to display on the schedule. You do not add the Compassionate Leave leave type.

From 11/27/2023-12/31/2023, the schedule will no longer display Audrey's Compassionate Leave leave type because as of the estimated last day of her leave, the HLSO snapshot was configured to display only certain absence type details on the schedule.

Any Compassionate Leave leave type entered on or after 11/27/2023 will not be displayed as Compassionate Leave, but will display as a generic time off block on the schedule.

Next Steps

When you print a schedule, Workday hides the name and event status of the absence type and only displays the Time Off label on the schedule.

Related Information

Tasks

Steps: Set Up High-Level Scheduling Organizations on page 2154

Set Up Daily Notes

Prerequisites

Security: *Set Up: Scheduling: Daily Notes* domain in the Workday Scheduling functional area.

Context

You can create notes that Workday displays to managers on the weekly schedule view, to help make it easier to communicate updates directly within the schedule. Workday displays notes on the schedule beneath the date for each day of the week. Example: You create a note to remind managers of that week's sales target.

Steps

Access the Maintain Daily Notes for Scheduling Organizations task. As you complete the task, consider:

Option	Description
Scheduling Organizations	Select one or more scheduling organizations where the note will be displayed.
Start Date	Enter the date when Workday begins to display the note for managers.
End Date	Enter the date when Workday stops displaying the note for managers.
Title	The header of the note.
Description	The body of the note.

Next Steps

You can access the View Daily Notes for Scheduling Organizations report to view all daily notes by scheduling organization.

Example Steps: Automatically Assign Scheduling Settings When Workers Change Jobs

This example illustrates how to set up Workday Scheduling and HCM business processes to automatically assign Scheduling setting overrides to workers when they change jobs or return from a leave of absence.

Context

You want Workday to automatically update these Scheduling settings for workers when they transition from full time to part-time work in California:

- Workers should have at least 8 hours of rest time between scheduled shifts.
- Workers should work no more than 20 hours in a week.
- The Optimization Engine should heavily weight workers' preferred weekly hours when it generates schedules.

Steps

1. Access the Create Override Scheduling Settings Template task. Enter *CA < 20 hours/week* in the Description field.
2. On the Validations tab, enter these values:

Enabled	Validation Type	Validation Value	Additional Hours Configuration	Severity Level	Error Message	Validation Usage Type
True	Minimum Rest Between	8	N/A	Critical	Provide a break of at least 8 hours	UI and Solver

Enabled	Validation Type	Validation Value	Additional Hours Configuration	Severity Level	Error Message	Validation Usage Type
	Shifts (Hours)				between shifts.	
False	Minimum Weekly Hours	Leave blank.	N/A	N/A	N/A	N/A
True	Maximum Weekly Hours	20	Leave blank.	Critical	Schedule the worker for no more than 20 hours in a week.	UI and Solver

3. On the Scheduling Engine Settings tab, select the Enable check box for Preferred Weekly Hours and enter *100* in the field.
4. Click OK and Done.
5. Create a *CA < 20 hours/week* scheduling eligibility rule that includes workers in California with 20 or fewer scheduled weekly hours.

   See:Create Scheduling Eligibility Rules on page 2171.
6. Access the Maintain Override Scheduling Settings Templates task. Enter these values:

Field	Value
Priority	*1*
Override Scheduling Settings Template	*CA < 20 hours/week*
Eligibility	*CA < 20 hours/week*

7. Edit the Change Job business process definition and add a new row with these values:

Order	Type	Specify
Place this step after the completion step.	Service	Auto-Assign Scheduling Setting Overrides

8. Access the All Override Scheduling Settings Templates report to review your template configuration.

Related Information

Concepts

Concept: Override Scheduling Settings on page 2196

Tasks

Steps: Automatically Assign Scheduling Settings to Workers on page 2187

Concept: Mass Edit Shifts

Mass Edits

You can configure the *Mass Change Shifts Event* business process (secured to the Workday Scheduling functional area) so that managers can mass edit, copy, or delete shifts in a series directly from a single shift in the schedule.

Note: This functionality is separate to the bulk shift editing described in Concept: Bulk Edit Shifts, which handles editing of multiple shifts for several workers on 1 schedule at once. The *Mass Change Shifts Event* business process only applies to editing 1 shift that is assigned to 1 worker over several future schedules at once.

When a manager edits a shift that shares the same shift details as future shifts, you can view and edit those future shifts (up to 6 months from the current shift) at once. In order to edit the future shifts, the shifts must have these details in common:

- Day of the week.
- Start time.
- End time.
- Subgroup organization.
- Schedule tags.

You can choose whether to apply edits to all future shifts, or you can select individual shifts where you'd like to apply changes.

Limitations

If there's a schedule that is in In Review status, shifts on that schedule can't be mass edited or mass copied. Those shifts on the In Review schedule will also not be returned as shifts that a mass edit from a different week can be applied to.

If there is a shift in Pending status, it can't be mass edited or mass copied, and also won't be returned as a shift that a mass edit from a different week can be applied to.

The mass edit and mass copy functionality currently doesn't respect predictive scheduling rules that you configure.

Business Process Approvals

If you configure business process approvals on the *Change Published Schedule* business process, each mass edit triggers a single approval event, even when you edit multiple shifts. The *Change Published Schedule* business process only applies to changes you make to the original shift (the shift in the current week). To trigger business process approvals for edits to shifts in future weeks, configure an approval step on the *Mass Change Shifts Event* business process. If you configure both, there will be 2 separate approval events in the Inbox–-one to approve the current shift (*Change Published Schedule* business process) and another to approve the future shifts (*Mass Change Shifts Event* business process).

Note: There will only be an approval required if you're editing a published shift. If the shift isn't published, it won't go through a business process.

You can configure these allowed actions so that workers are required to either approve or deny shift changes:

- *Acknowledge Mass Change Shifts* on the *Mass Change Shifts Event* business process.
- *Acknowledge Change Published Schedule* on the *Change After Publish* business process.

When you configure these steps, workers can accept the shift change when they can work the shift, or deny the shift change if they can't work the shift. If you configure both allowed actions, workers will receive 2 separate notifications.

Business Process Step Conditions

If the original shift is in Draft status, Workday automatically updates it without processing it through a business process.

If the original shift is in Published status, it will go through the *Change Published Schedule* business process. If a step condition exists on the *Change Published Schedule* business process and the current shift you're editing violates the step condition, Workday will not allow you to update the current shift or future shifts that are part of the mass edit.

Workday puts the current shift that you attempted to edit or copy into a Changes Needed status to indicate that you need to fix the shifts so that the shifts meet the step condition requirements before edits can be applied.

If you were attempting a mass delete, Workday puts the current shift into a Pending Delete status. Future shifts that you attempted to delete will not have a status change, though. Managers won't be able to edit a shift in the Pending Delete status.

Note: If you make a mass edit where the current shift you're editing is a Draft shift, Workday does not check the Change Published Schedule business process for a step condition. Workday allows the changes to be made for the current shift and future shifts, even if the future shifts are in a published status. This means that future published shifts could potentially be updated in error.

Workday then processes future shifts (those you edited or copied) through the *Mass Change Shifts Event* business process.

Concept: Override Scheduling Settings

You can override schedule settings, validations, and rules so that workers have custom settings based on your override rather than inheriting settings from their high-level scheduling organization (HLSO). The validations you configure for HLSOs determine the length and placement of shifts that the Optimization Engine creates. Overrides determine which workers are assigned to those shifts.

Example: You want to ensure that full-time workers are assigned 8-hour shifts and part-time workers are assigned 4-hour shifts. You configure the HLSO so that the maximum shift length is 8 hours and the minimum shift length is 4 hours. You create an override for part-time workers that defines the maximum shift length as 4 hours and the minimum shift length as 4 hours. You also create an override for full-time workers that defines the maximum shift length as 8 hours and the minimum shift length as 8 hours.

You can override these validations:

- Maximum Shift Length (Hours)
- Maximum Weekly Hours
- Maximum Working Days
- Minimum Rest Between Shifts (Hours)
- Minimum Shift Length (Hours)
- Minimum Weekly Hours

You can also override these Optimization Engine settings:

- Consistency
- Consistency Lookback Cycle
- Labor Cost Minimization
- Preferred Weekly Hours
- Preferred Schedule Tags
- Preferred Work Times

You can also override meal and break rules so that schedules for individual workers comply with school calendar regulations.

You can use the Override Scheduling Settings for Worker task to override settings for an individual worker. For overrides to take effect in a scheduling week, they must be effective dated as of the start of that week, or earlier. If an effective-dated override snapshot is dated after the start day of the schedule week, the override will take effect the next week.

Note: To use this feature, you must create a blank template so that Workday can insert an empty row when a worker isn't eligible for any rules. The worker's settings use the HLSO configuration when the new override snapshot is created.

You can override settings automatically when workers transition jobs or have other events. Create override templates using the Create Override Scheduling Settings Template task. Then add the Auto-Assign Scheduling Setting Overrides service step after the *Completion* step on these business processes:

- *Change Job*
- *Hire*
- *Request Return from Leave of Absence*

Concept: Mass Add Shifts

The Mass Add Shifts feature enables scheduling managers to mass add up to 300 shifts at once.

Mass added shifts are always created in draft status. If you mass add shifts on a published schedule, you need to save the shifts in the Mass Add Shifts modal before publishing them. You can assign the shifts to multiple workers, with the option to also create a specific number of unassigned shifts.

Note: Workday validates data when you add 1 worker in the Workers field. For performance reasons, Workday doesn't validate data when you add more than 1 worker.

You can access the Mass Add Shifts feature from the Actions menu in Day or Week view, or by clicking any day of the week on an unassigned row or blank space on a worker row.

Option	Description
Time	Enter shift start and end times that do not exceed the maximum shift length defined for the HLSO.
Post to Open Shift Board	Select if you want to post these shifts in Open status to the Open Shift Board so that workers can bid on them. This applies for both assigned and unassigned shifts.
Add Worker	Click to access the Worker Search modal where you can: • Search for a specific worker. • Select Suggested Workers from the Workers prompt to view a list of workers based on their availability, schedule tags, and cost. • Select All Workers from the Workers prompt to view all available workers and filter by schedule tags.
Quantity of Unassigned Shifts	Enter the quantity of unassigned shifts that you want to create. Note: The combination of this value and the quantity of assigned shifts can’t exceed 300 shifts in total. Example: If there are 200 assigned shifts, then the maximum allowed quantity of unassigned shifts is 100.
Shift Notes	Enter a note to append to the shift details.
Add Meal or Break	Create meals and/or breaks for the shifts that don’t break the meal break rule set defined for the HLSO.

Concept: Bulk Edit Shifts

The Edit Shifts functionality enables scheduling managers to edit and/or delete up to 350 shifts on a draft or published schedule at once.

Note: This functionality is separate to the *Mass Change Shifts Event* business process described in Concept: Mass Edit Shifts, which allows you to edit 1 shift that is assigned to 1 worker over several future schedules at once. This bulk editing shifts functionality enables you to edit multiple shifts for several workers on 1 schedule at once.

You can access the Edit Shifts feature from the Actions menu on a schedule. You can use the filters to narrow the list of shifts, before selecting the shifts on your schedule that you want to mass edit or delete.

Scheduling managers can edit several aspects of the selected shifts in one action:

- Date
- Time
- Post to Open Shift Board
- Subgroup Organization
- Schedule Tags
- Assigned Worker or Unassign Shifts
- Shift Notes

When you want to edit shifts that cross over midnight into the following day, enter the shift start date in the Shift Date filter, or filter by shift start and end times. If you want to edit shifts that cross over midnight into the following week, (Example: A shift begins on Saturday and ends on Sunday, with Sunday being the first day of a new weekly schedule), filter by shift start and end times.

Note: When you select the Shift Notes check box in the Edit Shifts window without changing the field values, Workday deletes any existing shift notes when you save your shift edits when you save your shift edits.

Navigating the Schedule

Windows

Keyboard Shortcut	Description
• Ctrl + Down arrow • End key	Moves the cursor to the bottom of the schedule.
• Ctrl + Up arrow • Home key	Moves the cursor to the top of the schedule.
Ctrl + F key	Opens the Schedule Search and Quick Navigation modal.
Ctrl + R key	Refreshes the web browser page.

Mac

Keyboard Shortcut	Description
• Command + Down arrow • Function (fn) + Right arrow	Moves the cursor to the bottom of the schedule.
• Command + Up arrow • Function (fn) + Left arrow	Moves the cursor to the top of the schedule.

Keyboard Shortcut	Description
Command + F key	Opens the Schedule Search and Quick Navigation modal.
Command + R key	Refreshes the web browser page.

Adding and Editing Shifts

Windows and Mac

Keyboard Shortcut	Description
In the Time field. Time + Tab key Examples: • 7a + Tab: 7AM • 7p + Tab: 7PM • 7 to 11 + Tab: 7AM to 11AM • 12 to 6 + Tab: 12PM to 6PM • 14 + Tab: 14:00	Inserts time in the Time field.
Escape (esc)	Closes the selected field or shift modal.

Reference: Scheduling Business Processes

Worker Data Business Processes

Schedule Maintenance Business Processes

Workday delivers these business processes in the Scheduling functional area.

Business Process	Description
Change Worker Schedule Tags	Initiates when you use the Assign Schedule Tags to Worker task. You can also initiate this business process through the Auto-Assign Schedule Tags service step. Add this step to these business processes to automatically assign schedule tags to workers when they have a job or competency change: • *Add Additional Job* • *Change Job* • *Change Organization Assignments for Worker* • *Contract Contingent Worker* • *Hire* • *Manage Certifications*
Override Scheduling Settings for Worker	Enables managers to override scheduling engine settings, some validations, and rules for a worker, if they need personalized settings that differ from their high-level scheduling organization.

Business Process	Description
Change Schedule Preferences	Enables workers to update their schedule preferences using the Change My Schedule Preferences task to update preferences including: • Preferred weekly hours. • Preferred days. • Preferred time slots on specific days. This business process enables managers to know what schedules work best for employee's personal lives. You can configure whether a worker must receive approval to change their preferences. Enables managers to access the Change Schedule Preferences for Worker task.
Change Work Availability	Enables workers to change their work availability when they need to request a change to their working hours due to personal circumstances. They can use the Change My Work Availability task. You can configure whether a worker must receive approval to change their availability. Enables managers to access the Change Work Availability for Worker task.

Business Process	Description
Change Published Schedule	Enables managers to shift schedules if workers have urgent requests, or to meet different business needs. Managers can make edits to a published schedule and publish those shift changes individually using the Publish button on the Edit Shift Details modal. Also enables managers to publish a new or updated shift (assigned or unassigned) to the Open Shift Board in an Open status.
Bulk Change Published Schedule for Worker Event	Enables managers to make multiple draft changes to a published schedule, and then to publish the schedule with all of the changes at once using the Publish button on the schedule. You can add the Notify Workers of a Change to Bulk Publish Schedule Event service step to notify workers of any changes to their schedule. Note: Workers will only receive a notification when you've configured the Maintain Change Published Schedule Notifications task and selected fields that trigger notification
Mass Change Shifts Event	Enables managers to mass edit or mass copy shifts in a series directly from a single shift. To edit the future shifts, the shifts must have these details in common:

Business Process	Description
	• Day of the week. • Start time. • End time. • Subgroup organization. • Schedule tags. Note: If you configure approvals on the *Change Published Schedule* business process, each mass edit initiates only 1 approval event even when you edit multiple shifts. You can't mass edit shifts that have in-progress changes or are in Draft status.
Cover Shift	Enables workers to: • Request to cover an open shift. • Withdraw a pending request to cover an open shift. Enables managers to view validations and information about the updated shift in an approval action in My Tasks.
Cover Shift Bidding Event	Enable workers to bid on shifts from theOpen Shift Boardand enable managers to decide which worker to select to cover the shift. Configure the*Bid to Cover Shift*initiating action and the*Select Worker to Cover Shift*allowed action to use this feature.
Open Shift	Enables workers to offer assigned shifts to other workers by placing them on the Open Shift Board. Enables managers to place unassigned shifts directly on the board. You can configure whether a worker must receive approval to post their shift on the board.
Publish Schedule	Enables managers to publish a schedule once they've finalized hours for the week. Then workers can view and take action on the schedule. Also enables managers to publish assigned or unassigned shifts to the Open Shift Board in an Open status.
Request Shift Swap *Accept Shift Swap*	Enables workers to: • Swap shifts with other workers within their scheduling organization. • Accept or deny a proposed shift swap.
Take Back Shift	Enables workers to withdraw in-progress *Open Shift* and *Cover Shift* events.

Reference: Shift Statuses

Shift Statuses

Shift Status	Description	Where to View
Action Required	A worker's published shift has been updated and is waiting for approval from the worker.	• Shift view (ESS). • My Schedule report (ESS).
Changes Needed	A shift change has failed to meet a step condition on the Change Published Schedule or the Bulk Change Published Schedule Event business process. Example: The business process initiation step has a condition rule that requires a comment when a manager makes changes to a published schedule. The manager didn't provide a comment with their change, so the shift status is Changes Needed.	Weekly schedule view (MSS).
Changes Pending	An existing published shift has been updated and is pending approval.	Weekly schedule view (MSS).
Cover Pending	A worker has requested to cover a published shift and the request is pending approval.	• Weekly schedule view (MSS). • Shift view (ESS). • My Schedule report (ESS). • Open Shift Board (MSS and ESS).
Delete Pending	An existing published shift has been deleted and is pending approval.	Weekly schedule view (MSS).
Draft	A shift that hasn't yet been published or has been published but is undergoing additional edits.	Weekly schedule view (MSS).
New Shift Pending	A new shift has been added to a published schedule and is pending approval.	Weekly schedule view (MSS).
Open Pending	A worker has requested to open a published shift and the request is pending approval.	• Weekly schedule view (MSS). • Shift view (ESS). • My Schedule report (ESS).
Open Shift	A published shift (assigned or unassigned) that is available for	• Weekly schedule view (MSS). • Shift view (ESS).

Shift Status	Description	Where to View
	a worker to request to cover on the open shift board.	• My Schedule report (ESS). • Open Shift Board (MSS and ESS)
Pending Delete	An attempt to delete a shift has failed to meet a step condition on the Change Published Schedule or Bulk Change Published Schedule Events business process. Example: The business process requires a comment when a manager deletes a published shift. The manager didn't provide a comment, so the shift status is Pending Delete.	Weekly schedule view (MSS).
Published	A shift that is assigned to a worker and published to the schedule.	• Weekly schedule view (MSS). • Shift view (ESS). • My Schedule report (ESS). • Open Shift Board (MSS and ESS)
Swap Pending	A worker has requested to swap a shift with another worker, and the request is pending approval.	• Weekly schedule view (MSS). • Shift view (ESS). • My Schedule report (ESS).
Take Back Pending	A worker has requested to take back a published shift, and the request is pending approval.	• Weekly schedule view (MSS). • Shift view (ESS). • My Schedule report (ESS). • Open Shift Board (MSS and ESS).

Schedule Tags

Steps: Assign Schedule Tags

Prerequisites

Security: *Set Up: Scheduling: High Level Scheduling Settings* domain in the Scheduling functional area.

Context

In order for workers to be included in a schedule, they must be assigned at least 1 schedule tag. A worker's schedule tag assignment determines:

- The shifts workers are qualified to work.
- The shifts workers are eligible to swap or open from the My Schedule task.

- The shifts workers can cover on the Open Shift Board.
- The area where Workday displays workers in the schedule.

You can assign schedule tags to workers by:

- Manually assigning them using the Assign Schedule Tags to Worker task.
- Automatically assigning them as part of the Auto-Assign Schedule Tags service step.

You can also add the Auto-Assign Schedule Tags service step to these business processes:

- *Add Additional Job*
- *Change Job*
- *Change Organization Assignments for Worker*
- *Contract Contingent Worker*
- *Hire*
- *Manage Certifications*

When a worker has a job change, Workday suggests new schedule tags to assign to the worker through a notification to their manager.

The service step evaluates scheduling eligibility rules on the worker's high-level scheduling organization. Workday determines whether to add new tag assignments to the worker based on the worker data that Workday updates during the staffing transaction.

Steps

1. Create Scheduling Eligibility Rules on page 2171.
2. Access the Edit Scheduling Settings task to associate eligibility rules with schedule tags.
3. On the Tags tab, in the Schedule Tags grid, click the Values button for a schedule tag.
4. In the Worker Eligibility column, select a scheduling eligibility rule.
5. Configure Scheduling business processes to automatically assign schedule tags to workers.

   See: Reference: Scheduling Business Processes on page 2199
6. Access the Assign Schedule Tags to Worker task to assign schedule tags to workers individually.

Example

To identify workers who belong to the Clerk job profile, you create an eligibility rule. Then you apply the eligibility rule to the Clerk schedule tag.

You enter these values on the Create Scheduling Eligibility Rule task:

Field	Value
Description	*Job Profile = Clerk*
And/Or	*And*
Source External Field or Condition Rule	*Job Profile*
Relational Operator	*any in the selection list*
Comparison Type	*Value specified in this filter*
Comparison Value	*Clerk*

You access the Edit Scheduling Settings task. On the Tags tab, enter these values:

Field	Value
Enabled	*Select the check box.*

Field	Value
Name	*Job*
Required	*Select the check box.*

Select the Values button. Enter these values:

Field	Value
Active	*Select the check box.*
Name	*Clerk*
Worker Eligibility	*Job Profile = Clerk*

Create Schedule Tags

Prerequisites

Security: *Set Up: Scheduling: Maintain Scheduling Organizations* domain in the Scheduling functional area.

Context

You can define schedule tag types that apply to workers and schedule blocks. Schedule tag types can represent worker qualifications, roles, locations, or other relevant categories of information. Once you create schedule tag types, you can also create the schedule tag values that belong to each type. Example: You create a *Role* schedule tag type. You then create these schedule tag values: *Cashier*, *Stock Associate*, *Security*. Or you create a *Location* schedule tag type. You then create these schedule tag values: *Mumbai*, *London*, *San Francisco*.

Schedule tags determine:

- How Workday groups and displays shifts on the schedule.
- The roles that are available when you define labor demand for a schedule.
- Whether workers are qualified to work shifts.

You can assign workers to 1 or more schedule tag types and associated values. You can't schedule workers until they've been assigned a schedule tag value.

You can configure schedule tags for 1 high-level scheduling organization (HLSO) and configure lower HLSOs to inherit the schedule tags and values from the HLSO above them in the organization hierarchy.

You can create up to 3 schedule tag types in your tenant, and an unlimited number of schedule tag values. Schedule tag settings aren’t effective-dated. Changes you make will update all schedules in the past and the future.

Steps

1. Access the Edit Scheduling Settings task.
2. Click the Tags tab. As you complete the Schedule Tags grid, consider:

Option	Description
Enabled	Enables the schedule tag for the HLSO and all subordinate scheduling organizations.
Inherit	Select to inherit the tag settings from a higher-level HLSO rather than configuring them for the current one. This enables you to share schedule tag values across multiple HLSOs.

Option	Description
	When you select the Inherit check box, Workday automatically populates the row with the inherited schedule tag from the higher-level HLSO and prevents you from editing it. You can't remove inherited tag values from a lower HLSO, but you can add new tag values.
Name	The name of the schedule tag that displays on labor demand and shift details. Examples: *Role*.

3. Click the Values button to add values for a schedule tag. Example: *Cashier, Stock Associate, Security*.

   As you complete the modal, consider:

Option	Description
Active	Makes the value available for workers to select.
Name	Enter a name. This name is visible to workers.
Worker Eligibility	Select an existing scheduling eligibility rule or create a new one. See: • Steps: Assign Schedule Tags on page 2203 • Create Scheduling Eligibility Rules on page 2171

4. In the Tag Values from Superior Organizations grid, view the values that the organization inherits from a superior HLSO.

   To edit these values, you must make changes to the superior HLSO.

Next Steps

Before scheduling workers, you can check that they have the appropriate schedule tag value assigned by running the View Schedule Tags by Organization report. Running the report will help you ensure that new hires or workers who changed jobs are assigned the correct tags.

Shift Swapping and Bidding

Steps: Set Up Open Shift Bidding

Prerequisites

Context

You can enable workers to bid on shifts on the Open Shift Board, then managers can select which worker receives the shift based on criteria that meets your business requirements, such as distributing shifts by seniority. This gives workers more control over their schedules, and helps managers distribute shifts in a more fair way.

When workers bid on shifts, Workday:

- Sends a notification to the manager's My Tasks with details about the shift bids. The manager can then select an active bid to give the shift to the requesting worker.

- Includes details about worker seniority in the manager notification so that the manager can make an informed decision when selecting a worker for the shift.

Steps

1. Access the Create Business Process Definition task.

   Select the Cover Shift Bidding Event business process to create the default definition.

   Security: These domains in the System functional area:

   - *Business Process Administration*
   - *Manage: Business Process Definitions*
2. Configure the *Cover Shift Bidding Event*business process.
   a) Add Bid to Cover Shift as the initiating action.
   b) Add Select Worker to Cover Shift as an allowed action.

   See: ../../../authentication-and-security/configurable-security/security-policies/dan1370796362110.dita.
3. Access the Edit Scheduling Settings task for the high-level scheduling organization for which you'd like to enable shift bidding.

   On the Worker Experience tab, select Enable Shift Bidding.

   Security: *Set Up: Scheduling: High Level Scheduling Settings*domain.

Result

Workday displays a Bid to Cover Shift option on shifts on the Open Shift Board when shifts are in *Open* or *Bidding Pending*status. Workday only displays the option if the worker is eligible to work the shift.

Managers can’t edit shifts once bidding has started.

Concept: Open Shift Board

You can enable workers to offer their assigned shifts to other workers by placing them on the Open Shift Board. Managers can also place unassigned or assigned shifts directly on the board. Once a shift is on the board, other qualified workers can view the open shifts and request to cover them. Workers can request to cover shifts across different organizations and locations. The board only displays open shifts to a worker when:

- The worker is assigned the schedule tags on the open shift.
- The open shifts are in a scheduling organization that rolls up to the worker's nearest high-level scheduling organization.
- The open shift isn't in the past.

You can configure whether a worker must receive approval to post their shift on the board, to cover a shift from the board, or both. When managers review a request to cover a shift through My Tasks, Workday displays validations indicating whether the worker opening or covering a shift will violate configured business rules. Example: A worker will exceed the maximum weekly hours threshold.

Note: If a worker posts a shift to the open shift board but no one covers the shift, the worker is still responsible to work the shift.

You can create a custom report to report on shifts with an Open Shift status to find unassigned shifts that you might need to manually assign.

Business Processes

Configure these business processes to use the Open Shift Board:

Business Process	Description
Open Shift	Enables workers to open their own shift and place it on the open shift board.
Take Back Shift	Enables workers to take back a shift they previously posted on the open shift board when it hasn't been covered by another worker.
Cover Shift	Enables workers to: • Request to cover an open shift. • Withdraw a pending request to cover an open shift. Enables managers to view validations and information about the updated shift in an approval action in My Tasks.
Publish Schedule	Enables managers and admins to publish an assigned or unassigned shift to the open shift board in an *Open* status.
Change Published Schedule	Enables managers and admins to publish a new or updated shift (assigned or unassigned) to the open shift board in an *Open* status.

Concept: Swap Shifts

You can enable workers to swap shifts with other workers within their scheduling organization, helping them to have more control over their schedules and balance their work/life priorities.

When workers swap shifts, they can:

- Search for other workers in their scheduling organization who meet the qualifications for a shift swap based on their schedule tag assignment, availability, and scheduling organization membership.
- View other workers' upcoming published shifts that the initiating worker is qualified to work.
- Search and filter for shifts by date, time, and schedule tag.

Unlike the Open Shift Board where workers can look for available shifts to cover, the Swap Shift functionality requires workers to initiate a direct shift swap between themselves and one of their coworkers.

After a worker selects a shift to swap and submits their request, the shift is in a *Swap Pending* status. After a worker accepts a shift swap request, their manager receives a notification that displays the details for both swapped shifts.

When workers access the My Schedule task and view Shift Details for a shift, then click the Manage Shift button, they see a Swap Shift option.

Business Processes

You can configure these business processes to use the Swap Shift functionality:

Business Process	Description
Accept Shift Swap	Enables workers to accept or reject a shift swap request. When a worker accepts a shift swap request, Workday automatically reassigns the shift to the worker.
Request Shift Swap	Enables workers to select another worker with whom they'd like to swap shifts.

Business Process	Description
	You can add the Notify All Impacted Workers of Shift Swap service step to the business process after the completion step. The service step notifies both workers that the shift swap was successful.

Example: Request Shift Swap Business Process Configuration

Order	Type	Specify	Optional	Group	Complete
a	Initiation		No		
b	Action	Accept Shift Swap	No	Employee as Self	
c	Approval		No	Manager	Yes
d	Service	Notify All Impacted Workers of Shift Swap	No		

How Workers Can Swap and Accept Shifts

To request a shift swap, a worker can:

1. Access the My Schedule report.
2. Select they shift they wish to swap.
3. Select Swap Shift.
4. Select a worker from the prompt to swap with. Only workers assigned the corresponding schedule tag will display in the prompt.
5. Select Submit.

To accept a shift swap, a worker can:

1. Access My Tasks.
2. Select the Swap Shift Request item.
3. Select Approve.

The shift appears on the new worker's schedule and is removed from the original worker's schedule.

To cancel a request, select Business Process > Cancel from the related actions menu of the in-progress business process.

Reporting

Concept: Audit Schedules and Shifts

You can use the Schedule and Shift Audit report (secured to the *Scheduling: Schedule and Shift Audit* security domain) to view schedule changes and shift changes by scheduling organizations over a period of time. The report displays:

- Individual shift and schedule changes.
- When the shift or schedule change occurred.
- The worker who made the changes.
- An Additional Details prompt, which optionally displays more info about the worker that each shift belongs to.

When you use the report, if you delete a draft shift or clear a draft schedule, Workday completely deletes the shift or schedule, so there is no audit trail. If you delete a published shift or rescind a published schedule, you can audit those changes using the report.

Note: Workday updates the Created By field when the event is approved. When a shift change event needs to be submitted or approved, Workday won't update the field to Manual until the event is complete.

Concept: Good Faith Estimate Reporting

You can use the Good Faith Estimate report (secured to the Reports: Scheduling Worker Configuration domain) to view workers and their schedule preferences, availability, and whether they're on-call or on the voluntary standby list. You can then provide this report to workers to give them an estimate of their work schedule to help them predict their pay and to comply with local ordinances and regulations.

Managers and workers can update their on-call availability and opt-in to the voluntary standby list using these tasks:

- Change My Schedule Preferences
- Change Schedule Preferences for Worker

To set up your tenant for this type of reporting, you can enable one or both of these options on the Worker tab of the Edit Scheduling Settings task:

- Allow Workers to Be On Call
- Enable Voluntary Standby List

You can share the report with workers by updating these business processes with a report step that generates a PDF and sends it to the worker:

- *Change Job*
- *Hire*

To ensure that the report contains data, the *Change My Schedule Preferences* or *Change Schedule Preferences for Worker* steps must be an earlier step in the business process than the document generation step.

Reference: Scheduling Reports

Workday delivers a number of standard reports to give you greater insight into your Workday Scheduling data and configuration. For a complete, descriptive list of Workday delivered standard reports for Workday Scheduling, access the Workday Standard Reports report and select the *Scheduling* report category.

Report	Description	Security
Good Faith Estimate	View workers and their schedule preferences, availability, and whether they've indicated they're available on-call or have opted in to the voluntary standby list.	*Reports: Scheduling Worker Configuration*
View Schedule Shift Details by Organization	Displays shift details with a date range for one or more scheduling organizations.	*Reports: Schedule Shift Details*
View Scheduling Organizations	Displays all organizations in your tenant. You can sort based on the supervisory or custom organizations that you've enabled as high-level scheduling organizations	*Set Up: Scheduling: Maintain Scheduling Organizations*

Report	Description	Security
	(HLSOs) or scheduling organizations (SOs).	
View Scheduling Settings	Displays configuration settings for each HLSO. You can select the effective-dated snapshot you'd like to view.	*Set Up: Scheduling: Maintain Scheduling Organizations*
View Worker Schedule Tag by Organization	Displays workers, their positions, scheduling organization assignment, and schedule tag assignments.	*Reports: Scheduling Worker Configuration*
View Worker Scheduling Availability	Displays the days and times when workers are available to work.	*Reports: Scheduling Worker Configuration*
View Worker Scheduling Engine Settings	Displays workers' Scheduling Engine settings. When the worker has an override, the report displays the effective date of the override and the details of the override.	*Reports: Scheduling Worker Configuration*
View Worker Scheduling Preferences	Displays workers' preferred weekly hours and top 2 preferred schedule tag values.	*Reports: Scheduling Worker Configuration*
View Worker Scheduling Settings	Displays workers' scheduling validations. When the worker has an override, the report displays the effective date of the override and the details of the override.	*Reports: Scheduling Worker Configuration*

Troubleshooting

Troubleshooting: Workday Scheduling

Labor demand coverage is too low or Workday didn't create any shifts to fill labor demand.

Solution:

- Confirm that there are available workers with the right qualifications to cover all schedule tags and hours you've specified in labor demand.
- Ensure that labor demand can be met without violating maximum shift lengths.
- Decrease the cost minimization slider (if the cost isn’t too high).
- Make Maximum Weekly Hours relaxable and set the corresponding slider to a low position.
- Make Minimum Weekly Rest Days relaxable and set the corresponding slider to a low position.
- Decrease Consistency slider so the Optimization Engine can better accommodate the labor demand.
- Decrease one or more of the worker preferences sliders.

Worker preferences aren't being adequately met.

Solution:

- Increase Worker Preferences slider.
- Decrease cost minimization slider.

I can see that there's a worker available to cover a gap in the schedule. Why isn't the Optimization Engine generating a shift?

Solution:

- Double check that the worker is available.
- Verify that the worker has no time off or leave of absence overlapping with the shift.
- Verify that the worker doesn't have any overlapping shifts in another subgroup organization or tag set.
- Verify that the worker has the required schedule tags.
- Verify that the worker isn't at or near their maximum weekly hours constraint.
- Verify that giving the worker a shift won't violate maximum working days constraint.
- If preferences are set high, and giving the worker another shift violates those preferences, adjust down the preferences sliders.

Workers don't have minimum weekly hours.

Solution:

- Check that the workers have availability to meet minimum weekly hours without violating minimum shift lengths.
- Check if there are enough labor demand hours to cover the minimum hours of all workers in the scheduling organization.
- Decrease cost minimization slider.

Workday displays this Optimization Engine error: Unable to generate schedule.

Solution:

- When the Optimization Engine can't generate a schedule, it's usually because of a timeout. Try adjusting some of the slider weightings and regenerating the schedule.

Workday doesn't display a scheduling organization on the Scheduling Organizations list on the Schedule Workers report.

Solution:

- Ensure that the scheduling organization either:
    - Rolls up to an active high-level scheduling organization (HLSO).
    - Is itself an active HLSO.
- Ensure that the scheduling organization has at least 1 schedule tag type configured.

Schedules have disappeared for scheduling organizations.

Cause: When you make changes to a supervisory organization's hierarchy, location, or time zone, it's possible that those changes could impact schedules that Workday has already created.

Solution: When you make changes to supervisory organizations that are enabled for Scheduling, make sure that you use an effective date for those changes that doesn't already have schedules created.

Managers can't see their own shifts on the schedule.

Solution: Ensure that the mangers' security group is added to the *Self-Service: View Schedule* security domain.

Troubleshooting: Scheduling After Organization Changes

These are common issues that occur in Workday Scheduling when a team is restructured or an organization is reorganized.

Schedules disappear during reorganization.

Cause:

When you begin a reorganization, the scheduling department may transition to operate under a different high-level scheduling organization (HLSO). When the new HLSO has different configuration settings, schedules may disappear.

Solution: Access the Edit Scheduling Settings task. Ensure these 4 settings from the previous HLSO match the settings on the new HLSO:

- Start day of week.
- Location and time zone.
- Labor demand period length
- Subgroup organization (SGO) settings, including SGO usage, SGO list, and SGO time zone.

If you need to change these settings for the new HLSO, you can either:

- Access the Edit Scheduling Settings task for the new HLSO and create a new snapshot effective dated after the last existing schedule. You can then update the settings on the snapshot.
- Clear the schedules associated with the previous HLSO settings and recreate them using the new HLSO settings. This applies whether the scheduling organization becomes its own HLSO, a new HLSO is introduced between the old and current HLSO, or if the scheduling organization now reports to a new HLSO.

When enabling a new high-level scheduling organization (HLSO) at the existing scheduling organization (SO) level or above the SO, configuration options are locked on the Edit Scheduling Settings task.

Cause:

Some HLSO configuration settings are crucial for Workday to generate and display schedules. Workday prevents you from editing these settings in order to maintain data integrity when there are existing schedules for the HLSO.

Solution: During the initial snapshot setup for new HLSOs, Workday temporarily unlocks these four configuration options. It is essential to ensure that these settings align with those used in previous schedules:

- Start day of week.
- Location and time zone.
- Labor demand period length.
- Subgroup organization (SGO) settings, including SGO usage, SGO list, and SGO time zone.

Following the initial snapshot, if you identify errors in your configuration, you can use the Settings tab on the Cleanup Invalid Scheduling Data task to update these settings.

Note:

Removing subgroup organizations or changing the Start Day of Week using this task could make schedules disappear due to the reasons we've listed in the first troubleshooting issue. Workday recommends exercising extra caution and double-checking your configuration when using this task.

The schedule won't load after inactivating an HLSO.

Cause:

When turning off an HLSO, existing scheduling organizations will continue to traverse up the organization chain to find an enabled HLSO with valid configuration to use for rendering the schedule.

Solution: These four configurations must be the same as the configuration used when the schedule was created.

- Start day of week.
- Location and time zone.
- Labor demand period length.
- Subgroup organization (SGO) settings, including SGO usage, SGO list, and SGO time zone.

Re-enable the HLSO, clear the schedule, then disable the HLSO and recreate the schedule under the new HLSO.

Absence

Setup Considerations: Absence Management

You can use this topic to help make decisions when planning your configuration and use of Workday Absence Management. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday Absence Management enables you to track your workforce’s time away from work. Workers can request short-term time off or long-term leave of absence.

Business Benefits

- Works seamlessly with the main Workday product areas, including Workday Payroll, Workday Time Tracking, and Workday Assistant.
- Provides flexibility by enabling you to create multiple time off and leave types.
- Makes it easy for workers to request time off and leave of absence when needed.
- Helps your organization to comply with regulatory time off and leave requirements.
- Enables workers to view their time off balances and leave requests in a single absence calendar or team absence calendar.
- Helps you to respond to General Data Protection Rules by purging absence data for terminated workers.
- Integrates with third-party calendar applications to send approved time off events from Workday to your corporate calendars.
- Supports benchmarking, enabling you to compare your worker absence rates and policies with peers in your industry.

Use Cases

Workers can:

- Enter time off requests.
- Correct their time off.
- View time off balances.
- Record leaves of absence with estimated and flexible end dates.
- View approved time off and leave for their teams and organizations.

Managers can view absences for their teams.

Managers and absence administrators can:

- Approve or deny time off or leave requests.
- Enter time off or leave on behalf of a worker.
- Adjust a worker's time off or leave.
- Return a worker from leave.
- Track and manage time off.
- Monitor the number of times and consecutive days workers are absent during a period and the types of absences they take.
- Assist workers who are on long-term leave of absence or time off, by creating absence cases to track their progress as they reach milestones to rejoining the workforce.

Administrators can:

- Define the parameters of your time off, using:
    - Time off calculations, business logic, and rules that govern the time off as a period of time.
    - Accruals, eligibility rules, carryover amounts, upper and lower limits, and other time off values.
- Configure Absence business processes so that editable documents are dynamically generated when workers access tasks that initiate the configured business processes, such as Request Time Off or Request Leave of Absence.

You can use report fields or create calculated fields to build leave of absence rules.

Questions to Consider

Question	Considerations
How does your organization differentiate between short-term and long-term time off?	For configuration purposes, Workday classifies short-term time away from work as time off and long-term as leave of absence. The Absence Calendar Experience simplifies absence requests by merging the tasks for requesting time off and leave of absence. The Team Absence Calendar report enables managers and workers to see absence requests for their teams and extended organization to: • Coordinate time off and leave requests. • Manage team resources.
How do you encourage your workers to take time off?	Encouraging workers to take time off: • Ensures that workers make the most of their benefit. • Prevents time off carryover expiring. • Reduces time off liability for accounting purposes.

Question	Considerations
	You can create scheduled distributions that send email and mobile push notifications to: • Workers who you want to remind to take time off based on specific criteria. • Managers and administrators who have time off requests requiring their approval. You can also run reports with completion analytics to find who has taken action on the notifications received within a specific time period.
Do you want to control access to specific time off and leave types?	You can create security segments for time off and leave types to control who can access each type.
How do you want to manage overlapping time off requests?	You can specify and track thresholds for the total number of workers who can take an absence, as well as the total number of hours available to workers. You can configure thresholds for a given day.
How do you want to track time off for your workers?	Workday enables you to set up time off plans that either: • Track balances. A balance period defines the start and end dates of the time off plan. You can identify accruals that add to the plan balance and time offs that subtract from the balance. • Don't track balances. You can specify the unit of time for recording and processing time off requests. The period schedule defines accrual frequencies (except for accruals with a custom frequency), and reporting periods for the plan. You can define eligibility and validation rules and rates of pay for different time off plans.
How do you allocate time off balance when workers are eligible for more than 1 time off plan?	You can create absence tables that include 2 or more tiers, each with a priority order and time off plan. When a worker requests time off, Workday processes time off entries against the highest-priority tier. When the worker exhausts the balance, Workday applies the remaining time against the next tier.
Which payroll application are you using?	If your organization is using Workday Payroll, you can use it to pay time off and leave. Absence Management automatically creates Absence Component Related Calculations (ACRCs) for time off that you can use as inputs in payroll calculations to configure time off earnings. You can also configure a payroll effect for leave of absence to:

Question	Considerations
	• Stop paying workers while on leave. • Configure a run category to pay workers on certain leave types when the payroll effect is enabled for the leave type. If your organization is using a third-party payroll application, you can use payroll interfaces to: • Connect with the payroll vendor. • Send and receive payroll data, including time off and leave information.
How do your absence policies differ between countries?	You can configure time off plans for specific countries, regions, or worker types. Workday also delivers country-specific leave families and their respective leave types. With Workday Payroll for France and Workday Payroll for UK, you can comply with local statutory time off and leave requirements by setting up: • Statutory leave payments. • Time offs for statutory sick pay. • Time offs for holiday pay. You can link a leave type to a statutory leave payment type so that Workday Payroll can process payments based on the leave type. You can configure absence occurrences to report on how many times workers are absent in a period, helping you comply with local regulatory requirements. Absence occurrences are based on absence types.
How do you want to manage worker holiday schedules?	You can set up holiday and work schedule calendars to prevent employees requesting: • Time off on a holiday. • More hours than they're scheduled to work. Workday excludes holidays when calculating the days to include in absence requests, based on time off plans and leave type settings.
How does your organization track hours worked?	You can use Absence Management with or without Time Tracking. You can configure a time off so that workers can: • Request it using the *Request Time Off* business process. • Enter it through Time Tracking. • Use both options.
How often do your time off policies change?	Workday enables you to make effective-dated time off configuration changes due to: • Evolving regulatory, company policy. • Union or collective bargaining agreements.

Question	Considerations
How does your organization manage time off for workers with multiple jobs?	Workday enables you to create position or worker-based time off plans and leaves. You can also add position-based time offs to worker-based time off plans. When you configure time off plans and leaves as position-based, you can't change this setting after time off and leave data exist for the plan or leave type.
How do you track and assist workers who are on long-term time offs and leaves of absence?	Workday enables you to define conditions that automatically initiate absence cases for workers. Workday bases absence case groups on a set number of days of absence in a defined period.
How do you refer to absence, time off, and leave of absence? Do you prefer to use different terminology?	You can create custom labels for these and other absence-related terms, making it easier for you to align absence management with your organization's terminology. Workday displays the custom labels for employee and manager self-service tasks and reports but continues to display the base values for administrator or specialist-related tasks and reports.

Recommendations

Note:

In September 2025, we plan to retire these legacy reports and tasks:

- Absence Calendar
- Place Worker on Leave
- Request Leave of Absence
- Time Off and Leave Calendar
- Time Off Calendar

To aid in your transition to Absence Calendar Experience on desktop and mobile, Workday recommends that you familiarize yourself and groups of users by configuring the initiating actions for the experience instead. See Steps: Set Up the Absence Calendar Experience on page 2243.

- Validate and test your absence time off and leave component configurations to ensure that you meet statutory requirements.
- To ensure consistency, use the Global Library report to search Absence Management rules and configurations when deploying Absence Management in different countries. You can configure time off plans and eligibility rules in multiple ways, which can lead to inconsistencies.
- Use the Tenant Analyzer report to get a quick inventory of your payroll, absence, and reporting setup to enable you to:
    - Verify your tenant configuration against Workday recommendations.
    - Troubleshoot performance issues.

Recommendations for Deployments in the UK

When deploying Absence in the UK, consider whether Workday Payroll is in scope, a future consideration, or not at all. When interacting with Payroll, your time off configurations can impact your end results. Refer to these sample configurations from the Workday foundry tenant, wdsetup when setting up your time off configuration:

Absence Type	Configuration in wdsetup	If Workday Payroll Is in Scope	If Third-Party Payroll Is in Scope	Additional Information
GBR Annual Leave / Holiday	Time off	Time off with absence occurrences.	Time off	If Workday Payroll is in scope and using UK Statutory Holiday Pay, you must configure absence occurrences to support the payroll functionality. Configure absence occurrences for holiday pay absence types separately. It's important to keep them distinct as changes can impact payroll.
GBR Compassionate Leave	Time off	Time off	Time off	
GBR Jury Duty	Time off	Time off	Time off	
GBR Sick Leave Unpaid/ SSP	Time off	Time off	Time off	Only for Statutory Sick Pay (SSP)
GBR Sick Leave	Absence Table with 100%, 50%, and 0% pay time off tiers.	Time off	Time off	Only for Company Sick Pay (CPS). To ensure that the absence tiers take effect, there's an initial accrual that continues to roll over year to year, from the date the time off request is taken from the balance. It's important that you enable revaluation on the absence table so that Workday considers any corrections or updates to the accrual or balance for the rolling accrual. Workday needs to account for the rolling accrual when loading history, payments against payroll and work schedule changes. Workday doesn't apply work schedule change adjustments (such

Absence Type	Configuration in wdsetup	If Workday Payroll Is in Scope	If Third-Party Payroll Is in Scope	Additional Information
				as FTE) to the rolling dates that apply a year from the date they are taken. Use the Absence Tier Time Off Entry Details report to review recorded dates. You can't use a custom report to review the absence table tier dates and details of the balance and time off taken.
GBR Unpaid	Time off	Time off	Time off	
GBR Adoption Leave	Leave	Leave	Leave	
GBR Maternity Leave	Leave	Leave	Leave	
GBR Paternity Leave	Leave	Leave	Leave	
GBR Shared Parental Leave	Leave	Leave	Leave	
GBR Unpaid Parental Leave	Leave	Leave	Leave	

Go-Live Data Conversion

When preparing for go-live, ensure that:

- Someone cleans the company's historical data as soon as possible.
- You evaluate any inconsistencies in the company's documentation.
- You practice data extraction from the current system.

Doing this enables you to follow these guidelines for loading historical information:

- Load your event history in batches and in chronological sequence to aid in rolling accrual calculations.
- Follow the *Import Time Off Request Event Batch* web service considerations to aid in this process. For details, see the Integrations section.
- Review the information to see if any recalculations need to occur for existing modifications to user time off transactions. Example: User data is loaded to align with an absence table tier time off entry against a time off request event, and overrides are entered, or corrections applied.
- Enter all historical information prior to entering any current time off or leave transactions in the tenant.
- Coordinate with Payroll for inclusion or exclusion of events.

Payroll Considerations for UK Deployments

Scope	Consideration
Absence and Workday Payroll for the UK in scope.	Sometimes it's better to configure sick time off for the UK in hours instead of days. The only caveat for this is that when a worker takes sick time off in

Scope	Consideration
	hours, you don't know if those hours represent an entire shift or a partial shift. Example: If Sam takes off 4 hours, you don't know if this is the entire shift, half a shift, a third of a shift, and so on. For SSP (Statutory Sick Pay), Workday assumes that any time off in hours is for the full shift. Workday Payroll for the UK doesn't support cascading leave types that are linked to statutory payments, with the exception of Statutory Sick Pay. You can't effectively manage proration for leave of absence across multiple levels in the same way that absence tables can. Example: 100%, 50%, and 0%.
Absence in scope and potentially Workday Payroll for the UK in the future.	To future proof any potential deployments, it's a good idea to set up sick leave as time off unless there's a compelling reason to configure a leave type.

Requirements

- Configure the business processes and domain security policies in the Time Off and Leave functional area.
- Create holiday and work schedule calendars.

Limitations

- If you also use Time Tracking, being on leave doesn't automatically prevent an employee from entering worked time. You can build validations within Time Tracking to prevent an employee from entering time when on certain leave types.
- You can only purge absence data for terminated workers and only for these data types:
    - Absence Case Events for Worker
    - Absence Occurrence
    - Worker's Absence Balance Components
    - Worker's Leave of Absence Events
    - Worker's Time Off Events
- Absence data purging validation ensures that you can only purge workers' absence data after several years have passed since their termination date. Example:
    - In the U.S., the amount of time is 3 years.
    - In France, it's 5 years.
    - In the UK, it's 6.
    - In Canada, it's 7.
- The Absence Third-Party Calendar integration with Microsoft Outlook only works with Microsoft Exchange Online. Workday doesn't support hybrid deployments of on-premise Microsoft Exchange Server and Microsoft Exchange Online when setting up the integration.

Tenant Setup

You can configure tenant-wide settings for leave of absence and time off in the Edit Tenant Setup - HCM task to:

- Control the display of absence thresholds on calendars.
- Control whether workers can edit the time off type when they correct an approved time off request.

- Edit absence setup components with an effective date older than 12 months such as accruals, time offs, and time off plans.
- Hide total balances on absence tasks.
- Overlap workers in the same position when the incumbent starts a leave of absence.

Security

To view the different security domains for Absence, access the Domain Security Policies for Functional Area report and select the Time Off and Leave functional area.

Security domains in the Time Off and Leave functional area enable users to:

- Set up and administer time off and leave plans.
- Manage who can request specific time off and leave types through eligibility, validations, segmented security, and absence thresholds.
- Set up and administer absence entitlements for both time off and leave plans, and define carryover limit and expiration rules for time off plans.
- View worker absence balances including projections and carryover balances.
- View worker time off and leave taken, including absence occurrences.
- Define time off and leave visibility for teams, managers, and administrators (including third-party calendar integrations).

You can restrict access to designated time offs and leave types, including time offs that are part of an absence table, to members of segment-based security groups.

Workday displays details of the time off and leaves type segments in your tenant and their associated time offs, leave types, and security groups on these reports:

- All Time Off Security Segments
- All Leave Type Security Segments

You can ensure that members of a security group have access to all time offs and leave types, including those restricted to segment-based security groups, by securing the group directly to these domains, respectively, in the Time Off and Leave functional area:

- *Access Time Off (Segmented)* domain.
- *Access Leave Type (Segmented)* domain.

Business Processes

Business Process	Considerations
Absence Calendar (Legacy)	Enables managers and workers to submit and correct absence requests from the legacy Absence Calendar report.
Absence Case Event	Enables you to enter absence cases for workers who are on long-term leave of absence or time off.
Assign Work Schedule	Workday uses calendar rules to assign work schedule calendars to workers automatically. This business process enables you to override calendar rules and manually assign work schedule calendars to individual workers.
Correct Time Off	Enables administrators, managers, or workers to make a correction to an employee's time off.
Request Leave of Absence	Enables you to enter a leave of absence request for a worker.

Business Process	Considerations
Request Return from Leave of Absence	Enables you to enter a return from leave of absence request for a worker.
Request Time Off	Enables you to enter time off for a worker.

Reporting

To view the available reports for Absence Management, access the Workday Standard Reports report, and select 1 of these report categories:

- *Set Up Time Off and Leave*
- *Time Off and Leave*

Reports or Dashboards	Considerations
Absence Tier Time Off Entry Details	View absence tier usage by worker time off requests. You can also use the report to confirm that tier priority is working correctly. The report indicates reevaluated events.
All Time Off Plans	Verify the configuration of time off plans as of the effective date, including: • Their balance periods, carryover limits, period schedules, and units of time. • Whether to process accruals as of the beginning or end of the period. • Which accruals add to the balance and time offs that reduce the balance.
All Time Offs	View all time offs and: • Their related time off plan, time off type, unit of time. • Their eligibility and scheduling rules. • Whether they allow adjustments or overrides, negative time off limits, and data entry validations for time off requests.
All Accruals	View accruals and: • Their related time off plan, unit of time, and limit amounts. • Their eligibility, scheduling, and calculation rules. • Whether they allow adjustments or overrides.
All Leave Families	View all the leave families that you can use to group leave types so that workers can easily find and select the types when requesting leave of absence.
Evaluate Absence Eligibility	Test whether a worker is eligible for time off plans, accruals, or time offs as of a selected date.
Evaluate Absence Calculation	Verify whether you configured accruals correctly and identify discrepancies in your configuration.

Reports or Dashboards	Considerations
Leave Results for Worker Leave Results for Organization	Use to predict trends and plan for costs of workers being on a leave of absence.
My Team’s Upcoming Time Off	Use to view all upcoming time off for workers in organizations that you manage or support, enabling you to allocate resources and plan for future time off.
Team Absence Calendar	Use to analyze absence requests so that you can better manage team resources.
Time Off Liability	View the liability of an organization for time off balances. For the time off plans and date you select, Workday reports the plan balance and total liability for each worker.
Time Off Liability for Position	View your liability for time off plan balances for employees' positions in the supervisory organizations that you select.
Time Off Results Detail	View detailed time off information for workers in a single processing period.
Time Off Results Summary	View high-level time off information for workers in the processing periods and organizations that you select.
My Time Off Results by Period Time Off Results by Period Time Off Results by Period for Workers	View accruals, paid, and unpaid time off for each period.
Time Off Approvers with Events Awaiting Action	Use to identify approvers who have unapproved time off events awaiting their action.
View Absence Occurrences Detail	View individual occurrences for workers.
View Absence Occurrences Summary	View the number of times workers are absent per absence type.
Workers on Leave	Use to predict trends and plan for costs of workers being on a leave of absence.
Workers Returning from Leave	Identify workers returning from leave and check that you've correctly configured payroll for them.

Integrations

Web Service	Considerations
Adjust Time Off	Adjust or correct existing time off entries.
Enter Time Off	Add new time off entries.
Get Absence Inputs	Get information for accrual and time off adjustments and overrides for specific employees or batch identifiers.
Get Carryover Override	Get carryover expiration or limit overrides for workers for time off plans.

Web Service	Considerations
Get Override Balances	Get time off plan override balances for employees.
Get Time Off Plan Balances	Get the time off plan balances by worker.
Import Request Leave of Absence Events *Import Request Return from Leave of Absence Events*	Load a batch of either: • Request Leave of Absence events. • Return from Leave of Absence events. Workday processes the batch in a background process to retain only valid events. When you load business process events using these web services, they complete automatically. When using Enterprise Interface Builder (EIB), you can upload data from a spreadsheet into Workday. The spreadsheets contain worksheets for either the *Request Leave of Absence* or *Request Return from Leave of Absence* business processes. Enter: • Header keys on the Import Request Leave of Absence or Import Request Return from Leave tab. • The same header key on each row on the corresponding Request Leave of Absence Event or Request Return from Leave Event tab, if you want to group all events in the same batch. The header key is a unique identifier for a batch. • A different line key for each event that's part of the same header key on the Request Leave of Absence Event or Request Return from Leave Event tab.
Import Time Off Request Event Batch	Bulk upload a high volume of new time off requests into Workday.
Put Absence Input	Add new accrual and time off adjustments and overrides for specific employees or batch identifiers, or update existing adjustments and overrides.
Put Carryover Override	Add or update new carryover expiration or limit override records for a specific worker and time off plan.
Put Override Balance	Add or update time off plan override balance records for a specific worker and time off plan.
Request Leave of Absence	Add new leave of absence requests. This web service uses the *Request Leave of Absence* business process event and its subprocesses.
Request Return from Leave of Absence	Add return from leave of absence requests. It uses the *Request Return from Leave of Absence* business process event and its subprocesses.

Workday also provides an Absence integration with Google Calendar and Microsoft Outlook. You can create an integration system using the *Absence Third-Party Calendar* template and configure it to send approved time off events from Workday to these online third-party calendars. When you run the integration, Workday automatically creates, updates, and removes approved time off entries, corrections, and cancellations in these third-party calendars.

Connections and Touchpoints

Touchpoint	Considerations
Time Tracking	You can enable employees to enter their time off through Time Tracking or Absence Management.
Workday Assistant	Set up the Workday Assistant chatbot to enable users to: • Request time off. • View their time off balances. • View holiday schedules. You can also enable Workday Assistant in Workday for Slack to access quick time off actions.
Workday Learning	Workday validates whether workers have approved time off or leave of absence requests that conflict with scheduled course offerings.
Workday HCM	Absence Management uses employee data such as work location, seniority, employee type, or position for eligibility rules. You can configure the *Change Job* business process to transfer balances for employees automatically when they become eligible for a different time off plan.
Workday Payroll	You can configure Workday to pay out absence balances to an employee automatically on termination.
Workday Scheduling	You can define whether Workday counts time off or holiday time towards working hours for the week. You can then apply that configuration to scheduling validations so that they take time off and holiday time into account.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Enable Absence for Mobile

Prerequisites

Security: *Set Up: Time Off (General)* domain in the Time Off and Leave functional area.

Context

You can enable workers to request, correct, and cancel time off requests from their mobile devices. Reviewers can approve, deny, revise, and send back time off on mobile through My Tasks. You can also enable workers to request leave of absence on their mobile devices. On mobile, the Absence Calendar Experience provides:

- A single calendar to request time off and leave of absence.
- Team absence information to help self-service users make informed requests.

When you enable Absence for mobile with Workday Scheduling, when users select Schedule > Schedule Settings > Request Unavailable Time, we display either the Request Absence task or the legacy Time Off Calendar report, depending on the business process security policy configuration.

Steps

1. Enable workers to request time off from mobile devices.
    a) Edit the security policy for the *Request Time Off* business process.
    b) Add self-service security groups to the *Request Time Off for Self* initiating action.
2. Enable workers to cancel time off from mobile devices.
    a) Access the business process security policy for the *Request Time Off* business process.
    b) In the Who Can Do Actions on Entire Business Process section, add the *Initiator* security group to the *Cancel* action.
    c) Access the *Self-Service: Time Off* domain security policy.
    d) Edit the domain security policy and grant self-service security groups Modify and View access.

3. Enable workers to correct time off from mobile devices.
    a) Access the business process security policy for the *Correct Time Off* business process.
    b) Add self-service security groups to the *Edit Time Off for Self* initiating action.
    c) In the Who Can Do Actions on Entire Business Process section, add the *Initiator* or *Employee-as-Self* security groups.
4. Enable workers to request leave of absence on mobile devices.
    a) Access the business process security policy for the *Request Leave of Absence* business process.
    b) Add self-service security groups to the *Request Leave for Self* initiating action.
5. Enable workers to view balances on mobile devices.

    Edit the domain security policy for the *Self-Service: Time Off Balances* domain and grant self-service users View and Modify access.
6. Verify segmented security for time off and leave types.

    If you've configured segmented security for time off and leave types in your tenant, verify the configurations for the security segments to ensure that they support your Absence Calendar Experience configuration on mobile. These segments define the time offs or leave types that users can select when requesting absence.

    Ensure that you configure the segment-based security groups in authentication policies if you encounter issues with users being unable to select absence types on mobile.

    See:

    - Steps: Set Up Segmented Security for Leave Types
    - Steps: Set Up Segmented Security for Time Off
    - Steps: Set Up Authentication Policies

Steps: Set Up Absence Thresholds

Prerequisites

Security: *Set Up: Absence Threshold Schedule* domain in Time Off and Leave functional area.

Context

Specify and track the threshold for the total number of workers who can take an absence, as well as the total number of hours available to workers. You can configure thresholds for a given day.

Steps

1. Access the Edit Tenant Setup - HCM task.
2. Select Display Absence Thresholds in the Time Off: Threshold area.

    You can configure when thresholds display to your workers. You can also display the thresholds as a percentage, number, or threshold name.
3. Access the Create Absence Threshold Schedule task.
4. As you complete the task, consider:

Field	Description
Display Name	Enter a name for the absence threshold that displays to your workers on their calendars and validation messages.

Field	Description
By Organization	You can only create and edit absence threshold schedules for the organizations to which you have security permissions.
Validation Severity	The *Warning* option displays a warning to a worker when the worker's time off request exceeds the threshold quantity. Select this option if you want workers to proceed even when the request exceeds the threshold quantity. The *Critical* option displays an error to a worker when the worker's time off request exceeds the threshold quantity. Select this option if you want to prevent workers from requesting time off when the request exceeds the threshold quantity.
Unit Type	Select Headcount to define the number of workers that are out of the office before you reach the absence threshold. Select Hours to configure the collective total hours of absence before you reach the threshold.
Absence Types with Threshold Validations	Time off and absence tables included in the absence threshold count towards the threshold. Threshold validations display if workers request a time off against any of the types in this field after they exceed or meet the threshold.
Absence Types without Threshold Validations	Time off, absence tables, and leave types included in the absence threshold count towards the threshold. Workday doesn't display threshold validation if workers request time off or leave against any of the types in this field even if they exceed or meet the threshold.
Set Daily Quantity	This field displays with a default value of zero when you select the Unit Type. If you don't edit the value in this field, Workday selects the No Threshold Limit check box for all days of the week.
Threshold Quantity	Enter your threshold quantity of workers, or hours, for the appropriate days of the week.

5. (Optional) Enter an override if necessary. Example: You set up a threshold of 4 headcounts for all days. On December 22 and 23, you want to ensure that there are more staff available so you set the threshold for those days to 2.

   Users with unconstrained security access can update all fields on absence threshold schedules with a start date, end date, or both in the past. Users with constrained security can rename, and add override dates to, absence threshold schedules with a start date in the past and end date in the future. However, if the end date is also in the past, users with constrained security can only update the *Name* and *Display Name*.

Next Steps

Run the All Absence Threshold Schedules report to view the configuration for each schedule.

Run the View Absence Threshold Results report to view details of absence threshold schedules by organization within a date range.

Access the Copy Absence Threshold Schedule task to clone your threshold schedule.

Access the Delete Absence Threshold Schedule task to delete threshold schedules.

The Next Level: Absence Thresholds

Steps: Set Up Document Generation for Absence Business Processes

Context

You can configure Absence business processes to dynamically generate documents when users access tasks that initiate the configured business processes.

Steps

1. Create a document template. You can use either the traditional text block method or Workday Docs:
   - When you use the traditional text block method, generate the dynamic document. See Steps: Generate Dynamic Documents.
   - When you use Workday Docs, set up Workday Docs for business processes. See Steps: Set Up Docs for Business Processes.
2. Configure document generation for the Absence business process. See Configure Generated Documents.

   We recommend that you add:

   - The *Generate Document* action step after the *Completion* step in the business process.
   - A *Review Documents* step. When you configure the review document step, select the *Generate Document* action step that you added.

Setup

Result

You create a parental leave document using Workday Docs. You add the *Generate Document* action step on the *Request Leave of Absence* business process, and select the parental leave document, configuring it specifically when workers request parental leave.

When a worker requests parental leave, the parental leave document is dynamically generated. Their manager can edit the document before it's routed to the worker for review and submission with the absence request.

2025R2 Feature Release Note: Document Generation Support for Absence Business Processes

Concept: Absence and Time Off Terminology on the Worker Profile

In some regions in which you operate, the term absence is more meaningful than time off and leave of absence. Example, when you translate absence into other languages.

The *Self-Service: Worklets: Absence* domain provides access to the Absence worklet. To provide a consistent user experience, Workday changes the terminology on absence-related tasks, reports, and worklets that you can access on the worker profile on desktop and mobile, based on whether you've access to the *Self-Service: Worklets: Absence* domain. This domain access controls the terminology that you see when viewing your own records and other worker's records. You can navigate other worker profiles in the context that's familiar to you as the logged-in user. Workday renames:

- The Time Off for Worker Profile group to Absence for Worker Profile.
- Time Off Balance on the Time Off worker profile group to Absence Balance.
- Time Off and Leave Requests on the Time Off worker profile group to Absence Requests.
- The Time Off worklet on the mobile Home page to Absence so that it's consistent with desktop.

When users don't have access to the *Self-Service: Worklets: Absence* domain worklet, Workday displays the Time Off worklet on their Home page and its related Time Off profile and report labels.

By default, when you enable Absence for mobile, users have access to the Time Off worklet on mobile devices.

Reference: Tenant Analyzer

The Tenant Analyzer (secured to the *Set Up: Tenant Setup - Tenant Analyzer* domain in the System functional area) is a preconfigured profile of reports for reviewing your payroll, absence, reporting, and financial management configurations to enable you to:

- Verify your tenant configuration against Workday recommendations.
- Troubleshoot performance issues.

As your tenant grows, you can also use Tenant Analyzer to get a quick inventory of your payroll, absence, reporting, and financial management setup.

Absence Profile Group

Report	Description	Example Use
Validations	Displays absence configurations that don't meet Workday recommendations. Security: *Set Up: Time Off (General)* domain in the Time Off and Leave functional area.	Identify and resolve accruals that are missing a time off plan.

Report	Description	Example Use
Calculation Exception Audit	Displays the number calculations with exceptions. You can drill down on the number to view and resolve exceptions. Security: • *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area. • *Set Up: Calculations - Generic* domain in the Core Payroll functional area.	Identify and resolve calculations that reference other calculations with a different category.

Payroll Profile Group

Report	Description	Example Use
Pay Groups	Displays all pay groups and related configuration, such as: • Number of employees. • Run category. • Gross and net pay accumulations.	Verify that all pay groups use the same gross and net pay accumulations.

Report	Description	Example Use
	• Period schedule. Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.	
Accounting	Displays all account posting rule sets and related configuration, such as: • Posting rules. • Posting rule conditions. • Condition dimensions. Security: *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.	Identify any companies and rule types associated with account posting rule sets.
Validations	Displays payroll configurations that don't meet Workday recommendations. Security: *Set Up: Payroll* domain in the Core Payroll functional area.	Identify any pay groups that have no calculated pay periods, and investigate whether you need them.
Calculation Exception Audit	Displays the number of payroll calculations	Identify and resolve deductions that are

Absence Calendar Experience

Setup Considerations: Absence Calendar Experience

You can use this topic to help make decisions when planning your configuration and use of the Absence Calendar Experience. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Absence Calendar Experience simplifies absence requests by merging the tasks for requesting and managing time off and leave of absence on desktop and mobile.

Business Benefits

Absence Calendar Experience provides a unified user experience where you have fewer tasks to become familiar with. You can request and view your absence and balances from wherever you are in Workday. On desktop, you can request absence on a micro calendar that keeps you in the context of the page you're working on. On mobile, you can use a single calendar to request time off and leave of absence.

You can:

- Roll out Absence Calendar Experience using a phased approach across your organization.

- Quickly create and view requests for time off and leave of absence in a unified task. When requesting and correcting absence on behalf of other workers, you have the same familiar experience as requesting or correcting absence for yourself.
- Easily view balances as of the current date or as of the end of the calendar year.
- View absence table tier time off balances.
- Use a date-range option to make long-duration requests easier.

Absence Calendar Experience supports:

- Absence type grouping, making it easy for you to identify the type of absence you want to request.
- Display of instructional information that you can configure as help text on:
    - Absence business processes. Example: You can include links to absence policies for your organization.
    - The Manage Absence calendar.

Absence Calendar Experience tasks display:

- The worker's available balance, which includes accrued and future requests, and the remaining balance after you submit the request.
- Team absence information, which helps self-service users make informed requests. Workers can access a list view of the upcoming time off or leave of absence of their team members. The calendar uses different colors to highlight the status of each request and team absence information.

Use Cases

Administrators and managers can:

- Rescind leave events from the calendar.
- Request time off and leave on behalf of a worker that they support.
- Correct or edit time off requests on behalf of a worker.

  Note: Workday doesn't support corrections or edits of leave of absence requests by managers or workers. However, administrators can correct leave of absence requests for workers as a related action on the request.

Managers can:

- Drill into approved absence request for members of their team.
- Edit time off events directly from a team absence calendar.

Workers can:

- Request time off and leave.
- Correct or edit time off.
- Cancel time off and leave.
- Edit the position, quantity, reason, and type for individual time off entries within a time off request.
- Add additional information and supporting data and attachments for absence requests.

Questions to Consider

Questions	Considerations
Who do you want to be able to enter time off or leaves of absence for workers?	With Absence Calendar Experience, managers and workers can submit and correct absence requests. You can enter absence requests for your workers when your policies require that an absence administrator or manager enter time off or leaves for workers. Consider whether other

Questions	Considerations
	organizations, such as Payroll, have sufficient access to enter time off or leave for workers.
Who do you want to be able to view time off and leave events within an organization?	With the Configure Team Absence task, you can enable other roles or teams to view absence requests on the Team Absence Calendar.
Do you want to roll out Absence Calendar Experience on a phased basis?	If you want a more tailored approach to roll out, you can control which users or populations have access to Absence Calendar Experience. You can restrict access by security group on initiating actions that use the: • Manage Absence report. • Request Absence task.
After you terminate workers, do you want to enable managers or Absence administrators to manage their absence history?	With Absence Calendar Experience, you can enable managers and Absence administrators to edit time off and enter time off and leave requests from the Worker profiles of the terminated workers as Time and Absence related actions. Manager and administrator access is based on membership of security groups on the business process security profile for these initiating actions: • *Edit Time Off for a Worker* (on the *Correct Time Off* business process). • *Request Leave for a Worker* (on the *Request Leave of Absence* business process). • *Request Time Off for a Worker* (on the *Request Time Off* business process).

Recommendations

In September 2025, we plan to retire these legacy reports and tasks:

- Absence Calendar
- Place Worker on Leave
- Request Leave of Absence
- Time Off and Leave Calendar
- Time Off Calendar

To aid in your transition to Absence Calendar Experience on desktop and mobile, Workday recommends that you familiarize yourself and groups of users by configuring the initiating actions for the experience instead. See Steps: Set Up the Absence Calendar Experience on page 2243.

Review the configuration in these sections of the *Correct Time Off*, *Request Leave of Absence*, and *Request Time Off* business process security policies:

- Policy Restrictions. Update the policy restrictions as needed.
- Attachment Settings in BP Toolbar. Update the attachment settings as needed. As part of the Absence Calendar Experience, when you request leave or request return from leave of absence, Attachments will fully replace the Supporting Documents section. See Steps: Enable Attachments on an Individual Business Process.

As we plan to retire the Time Off and Leave Calendar, we advise that you use the more flexible Team Absence Calendar report, which enables you to edit time off requests as part of the new experience. See Steps: Set Up the Team Absence Calendar on page 2246.

Requirements

To use Absence Calendar Experience, provide access to the initiating actions described in the Business Processes section. Add the security groups that have permission to start each of the initiating actions. As you're ready to uptake the experience, or roll out access in stages across your organization, remember to remove security from the other legacy initiating actions in the *Correct Time Off*, *Request Time Off*, and *Request Leave of Absence* business processes, and in the legacy *Absence Calendar* business process. See Reference: Absence Calendar Experience Comparison.

Review the Current Delegations report to ensure that you update active delegations, where necessary, to use the initiating actions for Absence Calendar Experience.

Limitations

On mobile, you can't request absence (either time off or leave of absence) on behalf of another worker. However, you can request absence for yourself.

If you’ve configured QuickTips using the Guidance Workspace for the Request Time Off task, you can’t configure them for the Request Absence task, as it isn’t currently supported. See FAQ: Guidance Workspace for the tasks that QuickTips currently supports.

Tenant Setup

Use the Edit Tenant Setup - HCM task to configure the tenant-wide Balances as of date in the New Absence Calendar Experience option.

Security

If you've configured segmented security for time off and leave types in your tenant, verify the configurations for the security segments to ensure that they support your Absence Calendar Experience configuration. These segments define the time offs or leave types that users can select when requesting or entering absence. See:

- Steps: Set Up Segmented Security for Time Off.
- Steps: Set Up Segmented Security for Leave Types

Grant access to security groups on the initiating actions that use the tasks for managing and requesting absence on the security policies for these business processes:

- *Correct Time Off*
- *Request Leave of Absence*
- *Request Time Off*

Review the policy restrictions, attachment settings, and related links to ensure that they're correct. Once your entire organization is using Absence Calendar Experience, you can remove all security groups from the legacy initiating actions.

Business Processes

Business Processes	Considerations
Correct Time Off	Enables you to edit your time off or edit time off on behalf of a worker you support. The initiating actions for Absence Calendar Experience include: • *Edit Time Off for a Worker* • *Edit Request Time Off for Self*
Request Leave of Absence	Enables you to enter leave of absence requests for yourself or on behalf of a worker you support. The initiating actions for Absence Calendar Experience include:

Business Processes	Considerations
	• *Request Leave for a Worker* • *Request Leave for Self*
Request Time Off	Enables you to request time off for yourself or on behalf of a worker you support. The initiating actions for Absence Calendar Experience include: • *Request Time Off for a Worker* • *Request Time Off for Self*

Reporting

Reports or Dashboards	Considerations
Manage Absence	Use to view another worker's absence calendar, review and edit their absence, or request absence on their behalf.
Team Absence Calendar	Use to analyze absence requests so that you can better manage team resources.

Connections and Touchpoints

Touchpoint	Consideration
People Experience	You can configure Absence-related cards on the Home page to include tasks based on security-group access to the initiating actions on the *Correct Time Off*, *Request Leave of Absence*, and *Request Time Off* business process security policies. Access to the initiating actions for Absence Calendar Experience takes precedence. When users have access to only those initiating actions, we display links to these tasks and reports: • Manage Absence (on the Upcoming Time Off card on desktop and mobile). • Manage Absence with the View Teams button (on the Upcoming Team Absences card). • Team Absence Calendar (on the View Upcoming Team Absences card for employee self-service). • Team Absence Calendar (on the View Upcoming Team Absences card for managers).
Platform and Product Extensions	• The mandatory Absence Calendar Experience includes a label change for events related to time off and leave of absence. Workday replaces the

Touchpoint	Consideration
	Time Off or Leave label of report fields on these business objects with Absence: • Leave Request Event • Leave Return Event • Time Off Event • Time Off Request Event • Worker Business Process To use the legacy Absence Calendar terminology, you can either: • Select the Enable Time Off and Leave Label for Absence Events check box in the Time Off section of the Edit Tenant Setup - HCM task to revert the automatic label change. • Review and manually replace the Absence label of report fields on the relevant business objects with Time Off or Leave. • When you use alerts to prompt users to specific tasks, consider revising your alert configuration to point to the Request Absence task and Manage Absence report.
Time Tracking	In Time Tracking, users can access Absence-related menus from the Actions button on the Enter My Time report and Enter Time for Worker task based on: • Security-group access to the initiating actions on the *Request Time Off* business process security policy. • Whether the time off configurations have the *Time Tracking and Time Off* entry option. You can configure the Absence card on the Time and Scheduling Hub to include tasks based on security-group access to the initiating actions on the *Correct Time Off*, *Request Leave of Absence*, and *Request Time Off* business process security policies. Access to the initiating actions for Absence Calendar Experience takes precedence. When users have access to only those initiating actions, or to both those and the legacy initiating actions, we display the: • Manage Absence report. • Request Absence task. The *Return Worker from Leave* initiating action is available for all configurations.
Workday Assistant	Workday displays a Manage Absence link that you can use to correct time off using Workday Assistant.
Workday HCM	The *Change Job business* process includes an *Update Time Off Request* subprocess that creates inbox tasks for assigned users to encourage them to take action on ineligible time offs. You can configure the subprocess as an Action step on the business process. Workday highlights ineligible time offs in red on the calendar. Workday displays a Manage Absence button on the inbox task to initiate the *Update Time Off Request* subprocess.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Other Impacts

If you're planning to roll out Absence Calendar Experience on a staged basis, be mindful of who has permission to do each action. This can impact other configurations such as who can use worktags on time off.

Examples

2024R1 What's New Post: New Absence Calendar Experience

2025R2 Enable Time Off and Leave Label for Absence Events

The Next Level: New Absence Calendar Experience Next Level Series

Steps: Set Up the Absence Calendar Experience

Prerequisites

Note:

In September 2025, we plan to retire these legacy reports and tasks:

- Absence Calendar
- Place Worker on Leave
- Request Leave of Absence
- Time Off Calendar

To aid in your transition to Absence Calendar Experience on desktop and mobile, Workday recommends that you familiarize yourself and groups of users by configuring the initiating actions for the experience instead.

As we plan to retire the Time Off and Leave Calendar, we advise that you use the more flexible Team Absence Calendar report, which enables you to edit time off requests as part of the new experience.

Review Setup Considerations: Absence Calendar Experience.

Context

You can set up the Absence Calendar Experience to enable:

- Workers to request time off and leave of absence on desktop and mobile.
- Managers and administrators to manage absence requests.

Steps

1. Edit Business Processes.

   Configure these Absence business processes in the Time Off and Leave functional area:

   - *Correct Time Off*
   - *Request Leave of Absence*
   - *Request Time Off*

   Note: We plan to retire the *Absence Calendar* business process. When you uptake the New Absence Calendar Experience, remove any security groups from the initiating actions on the legacy Absence Calendar business process security policy.

2. Edit Business Process Security Policies.
    a) Add security groups to the initiating actions on these business process security policies:
        - Correct Time Off
        - Request Leave of Absence
        - Request Time Off
    b) Remove security groups from the legacy initiating actions on these business process security policies:
        - Absence Calendar
        - Correct Time Off
        - Request Leave of Absence
        - Request Time Off

    Compare the legacy initiating actions that correspond to the initiating actions for the new Absence Calendar Experience:

Legacy Calendars	Absence Calendar Experience
Correct Absence	*Edit Time Off for a Worker*
Correct My Absence	*Edit Time Off for Self*
Correct My Time Off	*Edit Time Off for Self*
Correct Time Off	*Edit Time Off for a Worker*
Enter Absence	• *Request Leave for a Worker* • *Request Time Off for a Worker*
Enter Time Off	*Request Time Off for a Worker*
Place Worker on Leave	*Request Leave for a Worker*
Request Absence	• *Request Leave for Self* • *Request Time Off for Self*
Request Leave of Absence	*Request Leave for Self*
Request Time Off	*Request Time Off for Self*

3. (Optional) Specify how to display leave-entitlement balances when using the Absence Calendar Experience. For each leave type:
    a) Access the Edit Leave Type task.
    b) On the Balance / Leave Taken tab, select a display option from the Calendar Display prompt.
4. (Optional) Configure Absence Type Groups on page 2251.

    You can group together similar types of time offs, leave types, or absence tables, when submitting an absence request.
5. (Optional) Set up segmented security for time off and leave types on these domains:
    - *Access Leave Type (Segmented)*
    - *Access Time Off (Segmented)*

    See:
    - Steps: Set Up Segmented Security for Leave Types on page 2564.
    - Steps: Set Up Segmented Security for Time Off on page 2279.

6. (Optional) On the Home page, add these tasks to any existing worklets or dashboards you're using in place of legacy absence or time off tasks:

    - Manage Absence
    - Request Absence

    You can also add them as apps or worklets to the View All Apps section of the Home page to provide faster access from the Global Navigation Menu. See:

    - Steps: Set Up Dashboards and Landing Pages.
    - Reference: Home Page Sections.
7. (Optional) Access the Edit Tenant Setup – HCM task.

    In the Time Off section, select either of these default values for Balances as of date in the New Absence Calendar Experience:

    - *As of end of calendar year*
    - *As of today*
8. (Optional) Access the Current Delegations report to review delegations in specific organizations.

    Ensure that you inform users that they need to update active delegations for legacy initiating actions, where necessary. Replace the legacy initiating actions with the corresponding initiating actions for the Absence Calendar Experience. See:

    - The table in Step 2.
    - Delegate My Tasks.
9. (Optional) Review any *To Do* steps on these business process definitions:

    - Correct Time Off
    - Request Leave of Absence
    - Request Time Off

    Replace any legacy tasks with the corresponding tasks in the Absence Calendar Experience. See Reference: Absence Calendar Experience Comparison on page 2252.
10. (Optional) Review and update any custom reports or integrations that have fields, filters, or text strings that reference the legacy tasks. See Reference: Absence Calendar Experience Comparison on page 2252.
11. (Optional) Configure any help text as needed:
    a) Review any help text configured on these business processes:

        - *Absence Calendar*
        - *Correct Time Off*
        - *Request Leave of Absence*
        - *Request Time Off*

        You can set up help text for steps in the *Correct Time Off*, *Request Leave of Absence*, and *Request Time Off* business processes by selecting Business Process > Maintain Help Text from the related actions menu of the business process definition. Workday displays the help text in the Request Absence micro calendar based on the type of absence and the respective business process. Example: When you correct a time off request, we display help text from the *Correct Time Off* business process. See Steps: Configure Business Process Definitions.

b) To set up help text on the Manage Absence calendar:

   1. Access the Maintain Manage Absence Calendar Help Text task (secured to the *Set Up: Leave of Absence* and *Set Up: Time Off* domains).
   2. Select a condition rule and enter the help text.

   Note: The list of condition rules are the help text condition rules created on the business process. You can:

   - Create help text condition rules from the related actions menu of the business process. Select Business Process > Maintain Help Text. From the Condition prompt, select *Create Help Text Condition Rule*.
   - You can optionally translate the help text into any target language enabled in your tenant by accessing the Translate Business Object report (secured to the *Data Translation* domain), and from the Translatable Business Object prompt, selecting *Manage Absence Help Text*.

12. (Optional) Create custom labels to replace any of these terms that your organization doesn't use:

    - Absence
    - Leave
    - Time Off

    You can use custom labels to replace them with an alternative that's appropriate for your organization. See:

    - Create Custom Labels.
    - Steps: Set Up Non-English Custom Labels.
    - Steps: Set Up Non-English Custom Labels for Absence.

Result

Managers can:

- Request time off and leave for a worker using the Manage Absence report or the Request Absence task.
- Correct worker absence requests using the Manage Absence report.

Workers can:

- Request time off and leave using the Manage Absence report or the Request Absence task.
- Correct time off using the Manage Absence report.

Steps: Set Up the Team Absence Calendar

Prerequisites

- Security: *Set Up: Time Off (General)* domain in the Time Off and Leave functional area.

Context

Note:

In September 2025, we plan to retire the legacy Time Off and Leave Calendar. Workday recommends that you use the more flexible Team Absence Calendar report, which enables you to edit time off requests as part of the new experience.

Team Absence enables managers and workers to see absence requests for their teams and extended organization from the calendar to:

- Coordinate time off and leave requests.
- Manage team resources.

You create access groups to:

- Define the pool of workers an employee can view on the calendar.
- Select the time off and leave types that an access group can view.

Workday provides 2 views for employees:

- Manager Self Service: Managers have access to the Team Absence Calendar report, which lists both in-progress and approved absence requests for their teams.
- Employee Self Service: Workers can click View Teams when requesting absence to view absence requests for their team and other organizations that they have access to. They can only view approved current or future-dated absence requests (not past).

Steps

1. Access the Configure Team Absence task.
2. On the Manager Self Service tab, create access groups by selecting assignable roles and organization type pairs.

   You can grant access to members of subordinate organizations and workers with Is Leader roles. As you complete this task, consider:

Option	Description
Assignable Role	The assigned roles that have access to the selected organization types. Examples: • Select the *Manager* role and the *Supervisory* organization type so that managers can view requests for their supervisory organizations. • Select the *Absence Partner* role and the *Cost Center* organization type. Workers have access to the members of cost centers in which they have the Absence Partner role assigned.
Organization Types	The organization types that the managers can access, based on their assigned roles.
Subordinate Organizations	The number of lower levels that managers can access, based on the organization in which they have an assigned role.
Leader Roles	Grants access to workers with an Is Leader role for the organization type.

3. On the Employee Self Service tab, create access groups by selecting the group criteria and organization types.

   Workers have access to the members of the selected organization types in which they have any of the selected job profiles. You can grant access to members of subordinate organizations and workers with Is Leader roles. As you complete this task, consider:

Option	Description
Group Criteria	Specify whether all workers, or workers with certain job profiles, have access to view approved absence requests for members of the selected organization types.

Option	Description
Organization Types	The organization types that the group can access, both supervisory and nonsupervisory. You can select custom organization types specific to your industry or tenant such as districts and stores. Example: *Store District* and *Store*.
Subordinate Organizations	The number of lower levels that workers can access based on the organization in which they have an assigned role. Note: For optimal performance, Workday recommends that you don't provide Employee Self Service (ESS) access to subordinate organizations more than 2 levels below the worker's level.
Leader Roles	Grants access to members of the group (either all workers or workers with a specific job profile) to view absences of workers in the selected organization types who have an Is Leader role. Workers can view these absences when they either: • Select Actions > View Teams on the Manage Absence report. • Click View Teams on the Request Absence task. Workday automatically includes workers with Is Leader roles when selecting an organization on the Team Absence Calendar report.
Always Display Workers on Calendar	Automatically displays team mate absences on your calendar.

4. On the Time Off Visibility and Leave Type Visibility tabs, select the Visible for Team Absence check box for each absence type to display the selected types on the team calendars.

   Note: The security policies for these business processes take precedence over the values that you configure on the Configure Team Absence task:

   - *Correct Time Off*
   - *Request Leave of Absence*
   - *Request Time Off*

   In the Who Can Do Actions on Entire Business Process section of these business process security policies, users in the Security Groups field for the View All action can see events on the Team Absence Calendar.

   Managers and absence administrators can use Team Absence Calendar. For this calendar, the visibility settings on the Configure Team Absence task and the View All action on the security policies both apply, regardless of whether you configure the business processes.

5. Edit Domain Security Policies.

   Grant permissions on these domains:

Domain	Description
Worker Data: Team Absence Calendar	Permissions on the domain grant access only to the Team Absence Calendar report. The access groups that you configure on the Manager Self Service tab grant access to specific workers and their time off and leave requests.
Self-Service: Team Absence Calendar	Permissions on the domain grant access only to the View Team button. The access groups that you configure in the Employee Self Service tab grant access to specific workers and their time off and leave requests.

6. Activate Pending Security Policy Changes.

Example

This example displays how to set up access groups for:

- Managers and workers of supervisory organizations.
- Workers of nonsupervisory, custom organizations.

Mario Morales manages the US and Canadian Property Management organization at his company. To balance resources for his projects, Mario needs to track the absence requests for his employees. He's an assigned role of Manager in both the Property Management - US Group and the Property Management - CAN Group supervisory organizations.

Likewise, the workers in these organizations need to see the approved absences of their teammates to help manage projects and to know when to ask for time off. As the absence administrator, you set up 3 access groups for:

- The manager of a supervisory organization.
- Workers in a supervisory organization that report to the manager.
- Workers in a nonsupervisory, custom organization.

On the Manager Self Service tab, you create an access group called *Manager - Supervisory*. On the Employee Self Service tab, you create an access group called *Employees - Supervisory*.

Access Group	Members	Organization Types	Supervisory Organizations	Leader Roles
Manager - Supervisory	Assignable Roles: *Manager*	*Supervisory*	Include Subordinate Organizations to Level: 1	Selected
Employees - Supervisory	Group Criteria: *All Workers*	*Supervisory*	No Subordinate Organizations	Selected
Store Employees - Custom	Group Criteria:Job Profile: *Store Clerk*	• *Store District* • *Store*	No Subordinate Organizations	Selected

When Mario accesses the Team Absence Calendar report, he sees both supervisory organizations listed in the Organizations prompt because he's an assigned role in each. He can select 1 or both organizations. He can also select individual members from the Workers prompt.

When workers in the *Employees - Supervisory* group requests an absence, they can click View Teams on the calendar. The calendar displays the approved requests of their teammates in their supervisory organization.

When workers in the *Store Employees - Custom* group request absence, they can click:

- View Teams on the calendar, and select the custom organization types from the Organizations prompt. The calendar displays the approved requests of their teammates in the custom organization.
- Worker to view individual workers, after they clear the Organization prompt.

You can use the Configure Worklet task to:

- Add the Team Absence Calendar report to the My Team worklet.
- Remove the Time Off and Leave Calendar from the My Team worklet.
- Add the View Teams report to the Time Off and Absence worklets.

Related Information

Tasks

Set Up Assignable Roles

Set Up Nonsupervisory Organizations

Maintain Organization Types

Examples

Concept: Security Policies

Concept: Custom Organizations

Steps: Set Up Non-English Custom Labels for Absence

Prerequisites

Security: *Custom Label Management for Non-English* domain in the System functional area.

Context

You can configure overrides for terms in a non-English language. Example: In Workday, your organization uses the English term absence instead of time off. For German, you want to replace the German term *Urlaub* with a custom label override of *Abwesenheit*. After you configure overrides, when users sign into Workday with German as their preferred locale and display language settings, Workday displays the term *Abwesenheit* instead of *Urlaub* on the Workday Home page (within the Important Dates and Quick Links sections) and on other time off-related employee self-service reports and tasks.

Steps

1. Access the Maintain Non-English Custom Labels task.
2. Configure these values:

Option	Description
User Language	Example: Select *German (Germany)*.
Custom Label Context	Select *Absence Management*.

3. Review the custom labels. In the Override Value column, enter the corresponding override value for each Default Value that you want to replace. Example: For each instance of the German term *Urlaub*, enter an equivalent *Abwesenheit* term.
4. Clear the corresponding Disabled check box to activate your non-English custom labels in Workday. Custom labels are disabled by default.

5. Click OK. Workday starts a background process that prepares the custom labels for the Maintain Non-English Custom Label Overrides task and the *Get Non-English Custom Label Overrides* web service.

   You can let the process complete or click Notify Me Later. When you click Notify Me Later, the process must finish running before you can use the Maintain Non-English Custom Label Override task.

   Note: The *Put Non-English Custom Labels* web service also triggers the background process.
6. Click Configure Custom Label Overrides.
7. On the Maintain Non-English Custom Label Overrides task, configure these values:

Option	Description
User Language	Example: Select *German (Germany)*.
Custom Label	Select the custom label that you want to override. Example: Select *Urlaub*.
Functional Area	Example: Select *Time Off and Leave*.

8. Review the proposed values and select either Keep Original or Use Proposed Value. If you want to use all the proposed values, select Use All Proposed Values.
9. Click OK and Done.
10. (Optional) Access the Rebuild Search Index task.

    Rebuild the search index. Workday recommends that you don't rebuild search indexes manually but wait for the Friday server restart, when indexes rebuild automatically.

Configure Absence Type Groups

Prerequisites

- Set up Absence Calendar Experience.
- Security: *Set Up: Time Off* domain

Context

Workers often have to look through many types of absence types when submitting an absence request. You can create absence types to group together similar types of time offs, leave types, or absence tables. Example: You can create an absence type group called Vacation. You might include Floating Holiday and PTO in the same group.

Steps

1. Access the Configure Absence Type Groups task.
2. Add a row for each absence type group. As you complete this task, consider:

Option	Description
Group ID	Enter a unique name for the group. Workday displays this name if you don't provide a Display Name.
Absence Type	Select one or more absence types from the list. This list includes all absence tables, time offs, and leave types. Each absence type can belong to only 1 group.
Display Name	An intuitive name that helps workers select the correct group of absence types.

Result

When users request an absence, they have a much shorter list of absence types to select from, reducing the need to correct requests. Workers see the grouped interface only if they're eligible for at least 1 absence type that belongs to a group. Workday automatically creates a group called Other Absence Types for absence types that don't belong to a group.

Related Information

Tasks

Create Leave Types on page 2568

Create Time Off Types on page 2294

Concept: Absence Calendar Experience

The Absence Calendar Experience simplifies absence requests by merging the tasks for requesting time off and leave of absence on desktop and mobile. You can manage absence requests using these reports, tasks, or related actions on a worker:

- Manage Absence
- Request Absence

When they request absence, workers can select from a combined list of time off and leave types, collectively known as absence types. They don't have to distinguish between time off or leave types. If you want workers to be able to distinguish between time off or leave types, you can configure absence type groups to group related absence types together.

You can use this combined approach instead of the legacy Time Off and Leave calendar that distinguishes between time off and leave types. Unlike the legacy unified Absence Calendar, Absence Calendar Experience provides a consistent experience across desktop and mobile. You configure access to Absence Calendar Experience on the initiating actions of the respective business process security policies.

Business Process Security Policy	Initiating Action
Correct Time Off	• *Edit Time Off for a Worker* • *Edit Time Off for Self*
Request Leave of Absence	• *Request Leave for a Worker* • *Request Leave for Self*
Request Time Off	• *Request Time Off for a Worker* • *Request Time Off for Self*

Legacy Absence Calendar

Steps: Set Up the Absence Calendar

Prerequisites

Note:

In September 2025, we plan to retire these legacy reports and tasks:

- Absence Calendar
- Place Worker on Leave
- Request Leave of Absence
- Time Off Calendar

To aid in your transition to Absence Calendar Experience on desktop and mobile, Workday recommends that you familiarize yourself and groups of users by configuring the initiating actions for the experience instead. See Steps: Set Up the Absence Calendar Experience on page 2243.

Configure these business processes in the Time Off and Leave functional area:

- *Correct Time Off*
- *Request Leave of Absence*
- *Request Time Off*

Context

If your organization doesn't distinguish between time off and leave of absence, you can set up the *Absence Calendar* business process. With the *Absence Calendar* business process, managers and workers submit and correct absence requests from the Absence Calendar.

You can enter an absence request for your workers when your policies require that an absence administrator or manager enter time off or leaves for workers.

Steps

1. Create Custom Business Processes.

   Configure the *Absence Calendar* business process in the Time Off and Leave functional area.
2. (Optional) Select Business Process > Maintain Related Links by Definition from the related actions menu of the *Absence Calendar* business process.

   Configure related links, such as links to regulatory documents. Include *http://* or *https://* in the URL.

   Security: These domains in the System functional area:

   - *Business Process Administration*
   - *Manage: Business Process Definitions*
3. Edit Business Process Security Policies.
   a) Add security groups to the initiating actions on the *Absence Calendar* business process security policy.
   b) Clear the fields for Who Can Do Action Steps in the Business Process.
   c) Remove security groups from the initiating actions on these business processes:

      - *Correct Time Off*
      - *Request Leave of Absence*
      - *Request Time Off*

      Note: Don't remove the security groups from web service initiating actions.
   d) Configure the Policy Restrictions settings to coordinate with the policy restrictions of the other business processes.

      The policy restrictions on the new *Absence Calendar* business process control what happens before workers click Submit for an absence request or correction.

      The policy restrictions on the *Request Time Off*, *Request Leave of Absence*, and *Correct Time Off* business processes control what happens after workers click Submit.
4. (Optional) Specify how to display leave entitlement balances on the Absence Calendar.

   For each leave type:
   a) Access the Edit Leave Type task.
   b) On the Balance/Leave Taken tab, select a display option from the Calendar Display field.
5. Edit Domain Security Policies.

   Set up the security policy on the *Self-Service: Worklets: Absence* domain in the Time Off and Leave functional area.
6. Set up leave segment security, except if you:

   - Have already configured the *Access Leave Type (Segmented)* domain.
   - Don't want to restrict leave types for groups of workers.

   See Steps: Set Up Segmented Security for Leave Types on page 2564.
7. (Optional) On the Home page, add the Absence worklet and remove the Time Off worklet.

   See Steps: Set Up Dashboards and Landing Pages.

8. (Optional) Enter an absence on behalf of a worker.
    a) Access the Enter Absence report.
    b) Select the days for the absence. As you complete the task, consider:

Option	Description
Type	Displays the absence types and absence tables that the worker is eligible for on the request date. Or, on the first day of the request if you select multiple dates. Absence types include absence tables, time off plans, and leave types. In the same request, you can select multiple time off types or absence tables, but not multiple leave types.
Position	Displays only if the absence is associated with a position-based plan. When a worker has only 1 position that's eligible for the absence, Workday displays it automatically. A plus sign (+) after a position name identifies it as a secondary position.
Quantity per Day	Can apply to each date requested; the worker can also change the quantity for a date. Example: If Mary is taking 2 days off from a daily plan, enter *2*. If she's taking 8 hours off each day and the plan is hourly, you can enter *8*. If you defined a Daily Quantity Default, Workday displays *Variable Quantity*, or a default value based on the first day of the request.

Result

Managers can:

- Request time off and leave for a worker using the Enter Absence task.
- Correct worker absence requests using the Correct Absence task.
- View display balances by leave entitlement type on the All Leave Families report.
- Enter an absence request for another worker.

Workers can:

- Request time off and leave using the Request Absence task.
- Correct time off requests using the Correct My Absence task.

Next Steps

Set up time off plans and leave types.

Reference

2022R2 What's New Post: Absence User Interface

The Next Level: Day in the Life: Absence Administrator

Concept: Absence Calendar

Note:

In September 2025, we plan to retire these legacy reports and tasks:

- Absence Calendar
- Place Worker on Leave
- Request Leave of Absence
- Time Off Calendar

To aid in your transition to Absence Calendar Experience on desktop and mobile, Workday recommends that you familiarize yourself and groups of users by configuring the initiating actions for the experience instead. See Steps: Set Up the Absence Calendar Experience on page 2243.

As we plan to retire the Time Off and Leave Calendar, we advise that you use the more flexible Team Absence Calendar report, which enables you to edit time off requests as part of the new experience. See Steps: Set Up the Team Absence Calendar on page 2246.

The Absence Calendar and the related actions merge the tasks for requesting time off and leave of absence. You can manage absence requests from the calendar using these tasks or related actions (from the worker):

- Correct Absence
- Correct My Absence
- Enter Absence
- Request Absence

You configure the Absence Calendar with the *Absence Calendar* business process security policy. The business process security policy works with these business processes for time off and leaves, which manage the action steps for time off and leave requests:

- *Correct Time Off*
- *Request Leave of Absence*
- *Request Time Off*

The related actions access the Absence Calendar, and workers select from a combined list of time off and absence types, collectively known as absence types. Report field labels also use the term Absence.

Related Information

Tasks

Steps: Set Up the Absence Calendar on page 2253

Steps: Set Up the Team Absence Calendar on page 2246

Configure Absence Type Groups on page 2251

Concept: Team Absence

Note:

We plan to retire the legacy Time Off and Leave Calendar. Workday recommends that you use the more flexible Team Absence Calendar report, which enables you to edit time off requests as part of the new experience. See Steps: Set Up the Team Absence Calendar on page 2246.

Team absence enables managers and workers to view the time off and leave requests of their teams and extended organization. Managers can view the Team Absence Calendar report to analyze absence requests so that they can better manage team resources. Workers can click View Teams on these calendars to see the absence requests of their teammates that might impact their own request:

Calendar	Visible Absence Type
Request Time Off	Time Off
Correct My Time Off	Time Off
Request Absence	Time Off and Leave
Correct My Absence	Time Off and Leave

Workers can only view approved current or future-dated absence requests (not past). Managers can view all events and statuses.

You specify which time off and leave types employees can access by selecting Visible for Team Absence for each type on the Configure Team Absence task.

Access Groups

Workday uses access groups to provide visibility to team absence views. An access group consists of:

- Assignable roles or job profiles.
- Organization types.
- Subordinate organization access.
- Leader role access.

You create the access groups on these tabs of the Configure Team Absence task:

- Manager Self Service: Managers in these access groups can view members of the selected organization types if they have a selected *assigned role*.
- Employee Self Service: Workers in these access groups can view members of the selected organization types if they have a selected *job profile*.

For all access groups, you can select whether to include access to:

- Subordinate organization members.
- Workers with Is Leader roles.

Visibility

Workday lets you select the type of absence requests that you want to be visible to managers and workers. Example: For privacy purposes, your organization considers Family Medical Leave (FMLA) to be a sensitive leave type. On the Leave Type Visibility tab, you clear the Visible for Team Absence check box beside an FMLA leave type to hide requests for this type from the access groups on the Manager Self Service and Employee Self Service tabs.

Note: The security policies for these business processes take precedence over the values that you configure on the Configure Team Absence task:

- *Correct Request Time Off*
- *Request Time Off*
- *Request Leave of Absence*

In the Who Can Do Actions on Entire Business Process section of these business process security policies, users in the Security Groups field for the View All action can see events on the Team Absence Calendar calendar.

Managers and absence administrators can use Team Absence Calendar. For this calendar, the visibility settings on the Configure Team Absence task and the View All action on the security policies both apply, regardless of whether you configure the legacy *Absence Calendar* business process.

Tasks

Set Up Assignable Roles

Time Off

Set Up Time Off

Setup Considerations: Time Off Plans

You can use this topic to help make decisions when planning your configuration and use of time off plans. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

A time off plan defines rules for entering and tracking 1 or more related time offs. When you set up time off plans, workers and managers can enter time off requests, correct requests, and track the status of requests through self-service pages and reports. Administrators can track, adjust, and manage accrual, time off, and time off plan balances.

Business Benefits

- Provides flexibility in creating a variety of time offs that suit the specific requirements of your organization.
- Minimize risks as you define optional or required default validation rules for taking time off.
- Lower operational costs by tracking time off balances and accruals.
- Easily enter and view time off requests in Workday Time Tracking.
- Integrate with Payroll to process payments to workers.
- Integrate with Workday Scheduling to determine working days for workers.

Use Cases

- Workers can track the approval process of a week-long vacation request.
- Managers or absence partners can approve pending time off requests.
- Absence Administrators can adjust accruals when workers change or lose their accrual eligibility due to a change in employment status.
- Absence Administrators can view time off patterns using reports for workers' absence from work on certain days of the week.

Questions to Consider

Questions	Considerations
Do you want to coordinate time off with leave of absence?	You can configure Workday to calculate combined balances for multiple leave types and time offs. You can also report on combined balances. You can suspend a worker's time off accrual when they are on leave. Alternatively, you can prorate the accrual for the period in which the worker is on leave. When you link related leave types and time offs to a source leave type, these conditions apply: • Leave types and time offs must use the same unit of time. • The multiple-jobs functionality lets you link leave types and time offs, even if they have different position-based settings. • You can associate a time off type with one leave type only. • Time off requests are subject to the eligibility and validation rules for the leave type and time off.
Do you want to create position-based or worker-based time off plans?	You can create a position-based plan if you want to define and apply eligibility rules, time off validations, and accrual calculations to the worker's primary position or all positions. With position-based plans, Workday applies balances and limits to the position. You can't transfer time off balances from one plan to another when you use position-based plans. You can create worker-based plans if you want to define and apply eligibility rules, time off validations, and accrual calculations to the worker's primary position. You can create a worker-based time off plan, with a time off that requires a position. With worker-based plans, Workday applies balances and limits to the worker. Worker-based plans enable you to transfer time off balances from one plan to another.
How do you want to handle time off and accrual balances?	You can create time off plans that track balances to: • Define accruals, including frequencies and limits. • Set time off limits. • Adjust time offs. • Adjust or override accrual calculations. • Calculate and store balances. • Override time off plan balances. • Track paid time separately from unpaid time.

Questions	Considerations
	• Pass time off to Workday Payroll Interface for use in calculations. You can create plans that don't track balances to define eligibility rules and specify unit of time for taking time off. You can't pass time off to Workday Payroll Interface for use in calculations. You can create accrue-as-you-go plans if you want workers to accrue in response to time off requests rather than in weekly or monthly increments. You can connect time offs to payroll earnings.
How do you plan to handle your time off plan policy changes?	You can use effective dating to configure your existing and new time off plans, time offs, and accruals to take effect on a certain date. If the changes align with your period schedule, you can set the effective date to the period start date or period end date.
How would you like to handle a worker's time off plan balance when a worker's eligibility for the plan changes?	You can assign a default time off plan for balance transfer and payout adjustments. You can only transfer time off balances for worker-based (not position-based) time off plans, so if you want to transfer balances from one plan to another, use worker-based time off plans.
How do you want to align your time off plan policy with your payroll period frequency?	You can align time off plan period schedules with payroll period schedules of either: • Weekly. • Biweekly. • Semimonthly. • Monthly.
How do you want to handle time off requests when workers exhaust their time off balance?	You can create an absence table with a tier for each time off plan. The request automatically moves to the next tier with available balance when it exhausts the balance of the current tier.
How do you want to handle time off requests when workers are scheduled to work?	If you also use Workday Scheduling, you can configure time off plans to use scheduling shifts to determine working days for workers. This integrated experience between Absence and Scheduling: • Frees your frontline managers from double-checking workers' shifts against the dates of their time off requests before approval. • Helps workers avoid using their time off balance unnecessarily for days they're not scheduled to work. • Reduces sent back or denied requests by giving workers information up front to correct their requests and align with published shifts.

Questions	Considerations
	Workday enables you to guide workers to only request time off on working days from a published schedule. When they don't have a published schedule, or aren't part of a scheduling organization, Absence validates their requests using the days-to-include settings on the time off plan. You can configure time off plans so that Workday: • Restricts requests for time off to days that workers are scheduled to work. • Prevents requests for planned time off when workers are scheduled to work. When working days and time off entries change, this can impact absence occurrences and absence table tier splitting. When Workday Scheduling publishes shifts for workers, Workday automatically flags absence occurrences for recalculation if there are changes to working days for workers.

Recommendations

Note:

In September 2025, we plan to retire these legacy reports and tasks:

- Absence Calendar
- Place Worker on Leave
- Request Leave of Absence
- Time Off and Leave Calendar
- Time Off Calendar

To aid in your transition to Absence Calendar Experience on desktop and mobile, Workday recommends that you familiarize yourself and groups of users by configuring the initiating actions for the experience instead. See Steps: Set Up the Absence Calendar Experience on page 2243.

To avoid confusion, hide balances on:

- Accrue-as-you-go time off plans, when the balance is zero.
- Time off plans that don’t have accruals.

To improve tenant performance:

- Configure the country or region in all your time off plans. This also simplifies your eligibility logic.
- Configure the holiday calendar before the current year begins.
- Configure period schedules for about 2 years before and beyond going live on Workday.
- Don't add surplus work schedule calendars. It reduces the time Workday takes to identify workers' calendars based on eligibility rules.
- Don't set Accrual - Adjustments / Overrides Allowed for accrue-as-you-go plans.
- For time offs and accruals in a plan that share the same eligibility rules, accrual limits, and limits for paid time off, define the rules for the time off plan only. Time offs and accruals inherit the rules from the plan.
- For workers with unconventional work schedules, create and manually assign individual work schedules.

- Override carryover balances for periods that fall before the go-live date, to avoid accruals in Workday before that date.
- Prevent workers from entering time off requests before going live in Workday or before a specific date. You can either define an eligibility rule on the time off, or a conditional rule on *Request Time Off* and *Correct Time Off* business processes.
- Schedule processes to store time off balances on a regular basis.
- Set the lowest frequency for a period schedule to *Weekly*. Don't use *Daily* period schedules on time off plans.

To increase efficiency:

- And to avoid accrual issues if you rehire a worker, for time off plans that track balances, create a separate termination time off to pay worker's balance upon termination. Assign an eligibility rule to the termination time off such that it's visible only after the worker's termination takes effect.
- Configure priorities on your time offs and accruals in the order you want workers to take time off. This configuration removes the need to correct requests if workers enter a request before they accrue the amount requested.
- Configure your lower limit calculation to enable workers who accrue their time off at the end of the month to use their time off before accrual. Workers can request time off without accruing the requisite units.
- Create a balance period based on the period end date for the time off plan to be available in Absence and Payroll.
- If you plan to apply rollback logic to accruals, create an absence table with multiple plans in sequential order.
- Workday recommends that workers accrue sufficient time off before they submit their request.

Requirements

- All accruals, time offs, and other calculation values associated with a time off plan must use the same unit of time.
- When you assign priorities to time offs and accruals of a time off plan, enter unique values.
- Specify a balance period, period schedule, time offs, and accruals on a time off plan that tracks balances.

Limitations

After you save a time off plan, you can't edit these fields:

- Period Schedule
- Track Balance
- Unit of Time

Tenant Setup

You can persist absence data for payslips following pay complete on the Edit Tenant Setup - Payroll task. This option improves payslip generation performance.

Security

Configure these security domains in the Time Off and Leave functional area:

Domains	Considerations
Assistant	Users can request time off and view balances on Workday Assistant.
Self Service: Worklets: Time Off and Leave	Users can request time off and view balances on these worklets:

Domains	Considerations
	• Time Off • Time Off and Leave
Set Up: Time Off	Users can configure the *Request Time Off* and *Correct Time Off* business processes.
Set Up: Time Off (Calculations - Absence Specific)	Users can: • View, edit, and create time off plans, time offs, time off validations. • Create time off plans that don't track balances. • Evaluate absence eligibility. • Evaluate absence calculations. • View, edit, and create absence tables.
Set Up: Time Off (Calculations - Absence Specific) *Worker Data: Time Off (Time Off Balances)*	Users can create time off plans that track balances.
Set Up: Time Off (General)	Users can create time off types. They can also control access to the time off types by creating rules.

Business Processes

Business Processes	Considerations
Absence Calendar (Legacy)	Enables secured workers to enter and request time off and leave of absence using the legacy Absence Calendar.
Correct Time Off	Enables managers to correct an approved time off request on behalf of a worker.
Job Change	When a worker's eligibility for a time off plan changes, this business process enables you to: • Transfer balances from previous to new time off plans. • Update time off requests against previous plans. • Adjust accruals.
Request Time Off	Enables secured roles to advance pending time off requests when the approver isn't available. When workers use this business process, Workday displays their time off requests on the time entry calendar.
Termination	Enables users to adjust time off balances for terminated workers.

Reporting

Reports	Considerations
Absence Configuration Snapshots	You can use this report to compare configurations across snapshots for a setup object such as an accrual, time off, or time off plan.
Accrual and Time Off Adjustments/Overrides by Batch ID	You can use this report to view time off and accrual adjustments for time off events using batch IDs.
All Balance Periods View Balance Period	You can use these reports to view balance periods and their: • Start and end date calculation rules. • Period date indicator, which determines the plan year for processing time off entries and accruals, when an absence processing period crosses plan year boundaries.
All Accruals View Accrual View Accrual Snapshot	You can use these reports to view accruals and: • Their related time-off plan, unit of time, and limit amounts. • Their eligibility, scheduling, and calculation rules. • Whether they allow adjustments or overrides. • Whether the accrual is configured for Buy Time Off.
All Time Off Plans View Time Off Plan View Time Off Plan Snapshot	You can use these reports to verify the configuration of time off plans as of the effective date, including: • Their balance periods, carryover limits, period schedules, and units of time. • Whether to process accruals as of the beginning or end of the period. • Which accruals add to the balance and time offs that reduce the balance.
Evaluate Absence Calculation	You can use this report to verify configuration of accrual calculations.
Evaluate Absence Eligibility	You can use this report to verify the configuration of calculations and test whether a worker is eligible for a time off plan, time off, or accrual.
Tenant Analyzer	You can use this report to identify time off plans, time offs, and accruals that don't meet Workday recommendations.
Time Off Liability	You can use this report to calculate total time off liability for each worker and time off plans.
Time Off Plan Override Balances by Batch ID	You can use this report to view overrides to time off plan balances using batch IDs.

Reports	Considerations
My Time Off Results by Period Time Off Results by Period Time Off Results by Period for Workers	You can use this report to track accruals and time offs of a worker in a balance period.

Integrations

Web Service	Considerations
Get Absence Inputs	The EIB based on this web service enables you to extract multiple time off plan overrides from Workday.
Put Absence Input	Use this operation to override time off plan balances.

Connections and Touchpoints

Features	Considerations
Payroll	You can link time off plans and payroll earning codes to the same period schedule to align balance periods with payroll periods.
Time Tracking	You can share time off plan period schedules with Time Tracking.
Workday Assistant	Workers can view their existing balance and request time off.
Workday Scheduling	You can configure time off plans to use scheduling shifts to determine working days for workers.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Setup Considerations: Time Off

You can use this topic to help make decisions when planning your configuration and use of time off. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Time Off Segmented Setup
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday time off functionality enables:

- Workers to record when they're taking time away from work.
- Administrators to manage the impacts a time off can have on other areas of Workday and other third-party applications. Example: Workday Payroll.

Business Benefits

- Improve efficiency in your organization as managers can predict trends, and plan resources accordingly.
- Integrate with a Payroll solution to enable you to process payments for workers on time off.
- Provides flexibility in creating time offs that suit the specific requirements of your organization. This functionality improves the user experience as they can quickly find the correct time off for their request.
- Workday provides reports that enable you to track costs. You can easily view how much absenteeism is costing your organization and calculate your liability.

Use Cases

- Enable workers to view and request some time off types, but not others.
- Enable workers to request time off on behalf of another. Managers can also correct time off requests.
- Import large volumes of time off events into Workday.
- Enable workers to enter time off requests through different actions in calendars in Absence Management, Time Tracking, or both.

Questions to Consider

When deciding if you should create a time off or leave of absence, consider:

Question	Consideration
When do you expect your workers to return to work?	You can create:

Question	Consideration
	• A time off for absences that have a short duration with a known return to work date. Workday creates a time off request for each day a worker expects to be off work. Example: Use annual leave for a vacation with a planned return date. • A leave of absence for longer durations, or for time away from work with an estimated end date. Example: Use parental leave for new parents.
How do you want a worker's status to display?	You can create: • A time off if you want a worker's status to remain unchanged. • A leave of absence if you want a worker's status to display as *On Leave*. You can configure if this status displays on each leave type. Example: You can configure Workday to hide workers on leave from search.
How do you want to restrict a worker's absence balance?	You can create: • A time off if you want workers to accrue their balance over time. Example: Paid sick leave can accrue over a period to enable workers to take up to 10 days per year. • A leave of absence if no accrual is necessary. Leave Types have an entitlement that each eligible worker can use. Example: You grant parental leave based on a worker's eligibility and company requirements.
How do you want your workers to return to work?	You can create: • A time off if you want a worker to return to work without their manager approving it. • A leave of absence if managers must ensure that the leave of absence ends before workers can return to work. A worker's status displays as *On Leave* until their manager returns them to work.
What periods do you use when tracking absences?	You can create: • A time off if you want workers to accrue their balance within a specified period. The period schedule used for Time Off aligns with the schedule you use for Payroll. • A leave of absence if the balance period is rolling backwards or forwards from the effective date of the leave, or first date of the leave.

When setting up time offs, consider:

Question	Consideration
How do you want your workers to view their available time offs?	You can configure Workday to display available time offs and time off balances on the calendar, or when entering a request. The balance displays as of the date of the request, so your workers can view their accrual on that date. Workers can also change the date to include in future accruals and time off requests. Example: Workers can view their remaining balance as of the end of the calendar year. Workers can also see their balances as of today when first accessing absence worklets or calendars.
How do you want workers to enter their time off requests?	When deciding how you want workers to enter a particular time off, consider who must approve it and whether workers should request it ahead of time. You can specify whether workers can enter requests for time off through: • Time Tracking: If you want managers to approve time off and worked time in the same event, use Time Tracking. • Absence: Workers can enter planned sick and vacation time through absence. • Both: You can also enable time off requests through both Absence and Time Tracking. You can configure Workday Assistant to enable workers to enter time off requests, or view their existing balance using Workday Assistant.
How do you want to pay workers on time off?	You can configure payroll to create earnings based on paid, unpaid, or total time off.
Who do you want to enter time off?	You can configure security groups to enable groups of workers to enter time off requests for others. You can also enable individual workers. Example: You can enable an assistant to enter time off requests for a CEO, or managers to enter time off requests for contractors. You can also only display available time offs to your managers. You can create time off segments and use them in segment-based security groups to provide access to specific time offs for different groups of users.
How do you want to manage unused time offs for terminated workers?	You can configure the *Termination* business process to either forfeit or pay out unused time offs.
When do you want to process payment to your workers on time off?	You can pay workers for approved time offs: • Up to the start of the current period. • Up to and including the current period.
What information do you want workers to enter when requesting time off?	You can require workers to select additional reasons when they're requesting time off. You can

Question	Consideration
	then use reports to view how often your workers select this reason. You can also require workers to enter start and end times for their time off request.
How do you want to update time off requests?	You can configure these options to update a time off request before the manager approves it: • Send the request back to the initiator with a comment asking the worker to make the revision. • Deny the request and add a comment asking the worker to enter a new request with the correct information. • Approve, then correct the request. • Cancel the request and enter a new request on the worker's behalf. • Review projected time off balances for the worker and see pending requests awaiting approval. • View any adjustments made. You can also configure the Workday mobile app to enable workers to correct time off requests with or without start and end times.
How do you want to prevent your workers from entering an invalid time off request?	You can: • Define validation rules to prevent workers from entering invalid requests. You can also configure a validation message that displays to workers when they attempt to enter the request. Example: You can create a rule that prevents multiple entries for the same time off on the same day. • Configure the days for which workers can request time off. Example: Enable workers to enter time off for scheduled work days. • Display time off only on your managers self-service interface.
When do you want your workers to accrue time off?	You can set your accruals: • Period by period. Example: Workers accrue 2 days per month. • Front-loaded. Workers accrue their full balance at the start of the balance period. • Custom frequency. Assign accruals when a worker completes their probationary period or for a specific anniversary date.
How do you want your workers to carryover their time off balance?	You can define carryover rules to enable your workers to carryover time off balance from 1 balance period to the next. Carryover rules also enable you to configure: • How many units to carryover.

Question	Consideration
	• When the carryover expires.
For which days do you want your workers to enter time off requests?	You define specific days in which your workers can request time off. You can also specify if a time off is available on a public holiday. Example: One of your international offices doesn't have Monday to Friday as the standard working week. You can define Sunday to Thursday as the working week. Workers in that location can request time off on Saturdays.

Recommendations

Note:

In September 2025, we plan to retire these legacy reports and tasks:

- Absence Calendar
- Place Worker on Leave
- Request Leave of Absence
- Time Off and Leave Calendar
- Time Off Calendar

To aid in your transition to Absence Calendar Experience on desktop and mobile, Workday recommends that you familiarize yourself and groups of users by configuring the initiating actions for the experience instead. See Steps: Set Up the Absence Calendar Experience on page 2243.

When you opt in to Segmented Security for Time Off, we recommend that:

- You either secure all absence table tier time offs or none of the tier time offs to each time off segment. If you secure some but not all tier time offs to a segment, users have access to all of the tier time offs on that absence table.
- After you create new time offs, you must add them to the appropriate time off security segment to enable users to access them in a time off request or correction. We recommend performing this step after you add the new time offs to a time off plan.

To improve performance when workers are entering time off requests, or when you run reports:

- Store calculated time off balances on a regular basis.
- Hide balances on your calendars and worklets in your tenant.
- Populate the country or region in all your time off plans.
- Configure your period schedules 2 years into the future and don't use daily period schedules.

When you define validation rules to prevent users from entering invalid requests:

- To ensure accurate calculations, use the same time units in validation rules and time off plans.
- Avoid conflicting rules.
- Apply maximum and multiple request rules consistently.
- Prevent multiple entries for the same time off on the same day.
- Avoid overly complex calculations.
- Limit calculations that reference calculated fields.

For terminations:

- Create a separate time off to pay out or forfeit a worker's time off balance.
- Create an eligibility rule so that workers are eligible for the termination time off in the relevant period.

To increase efficiency, configure priorities on your time offs and accruals in the order you want workers to take time off. This configuration removes the need to correct requests if workers enter a request before they accrue the amount requested.

Ensure that the *Request Time Off* and *Correct Time Off* business processes have the same configuration.

Requirements

If you use the same time off type with more than one time off:

- Select only time offs that are associated with time off plans that use the same unit of time (hours or days).
- Ensure that workers are eligible for only 1 time off at a time. Otherwise, they're able to request more than one time off with the same name and potentially reduce the time off plan balance twice.

If you apply maximum or multiple request rules to a validation set, each time off must have the same limits and include the same time offs. Otherwise, the same combination of time off requests that is valid in 1 situation might not be valid in another.

Limitations

- The sequence in which time offs process, combined with a lower time off limit, can affect the number of units treated as paid or unpaid time off for a worker. Example: Jane accrues 14 total hours per month (10 vacation + 4 sick hours). She previously requested 8 hours of vacation time off, leaving her with 6 available hours. She enters a request for 8 hours sick time off, which Workday rejects.
- You can only use time off plans that track balances with Workday Payroll.
- Workday doesn’t support start and end times when entering time off using absence tables.

Tenant Setup

Select the Edit Time Off Type option to enable workers to change the time off type when they correct an approved time off request.

Security

Domain	Considerations
Process: Enter or Correct Time	Users with access to this domain can enter or correct time off for any worker.
Self-Service: Time Off	Users with access to this domain can access the Time Off and Leave worklet to enter time off requests.
Set Up: Time Off (General)	Users with access to this domain can create time off types. They can also control access to the time off types by creating rules.
Set Up: Time Off (Calculations - Absence Specific)	Users with access to this domain can: • Create a time off definition for each time off workers can request. • Specify the time off type, enable adjustments, and configure validation rules. • Define requirements if a time off has eligibility requirements or limits that differ from the time off plan. • Define rules to warn users of invalid time off requests or prevent workers from entering them.

Domain	Considerations
	• View absence eligibility details for active workers within selected organizations.
Access Time Off (Segmented)	Users who are members of segment-based security groups with access to this domain can request or correct time off for time off types in the time off segment secured to their security group. If users have access to time offs for their own self-service needs, and those same users hold a support role for their organization, they can see all of the time offs in both time off segments. Example: Absence partners support the organizations that they belong to.
Worker Data: Time Off (Adjustments and Overrides)	Users with access to this domain can adjust a worker's time off.
Worker Data: Time Off (Time Off Manager View)	Users with access to this domain can view all time off requests on their absence calendars.

Business Processes

Business Process	Considerations
Absence Calendar (Legacy)	You can add an initiating action to this business process to enable secured workers to use their absence calendar to enter time off requests for another worker.
Correct Time Off	You can add steps to this business process to enable users to correct a worker's approved time off, and to dynamically generate editable documents during the correction process. You can also define a conditional rule to prevent workers from entering time off requests on accrue-as-you-go plans before an effective date.
Change Job	Add the *Update Time Off Requests* action step to this business process after the completion step. This transfers time off events when a worker changes roles.
Request Time Off	You can also add steps to this business process to: • Configure who approves time off requests. • Enable users to bulk load time off events. • Dynamically generate editable documents when a worker requests time off.
Termination	Add automated leave processing after the completion step to enable you to terminate workers while they're on leave.

Reporting

Reports or Dashboards	Consideration
Absence Calendar (Legacy)	Managers can use this report to view submitted and approved requests for their direct reports 1 week at a time. If a worker has multiple positions, the manager sees requests for all positions. You can: • Add a link to the calendar from the Team Time Off worklet using the Configure worklet task. • Control whether the calendar displays time offs, leaves, or both.
All Time Blocks and Time Off Entries All Worker Time Off Approved Time Off My Team's Upcoming Time Off Time Off - All Statuses for Active and Terminated Employees (Indexed)	Use these reports, report data sources, and dashboards to display all time offs for workers in organizations that you manage or support. The information enables you to allocate resources and plan for future time offs.
All Time Offs	Use this report to view all time offs and: • Their related time off plan, time off type, and unit of time. • Their eligibility and scheduling rules. • Whether they allow adjustments or overrides, negative time off limits, and data entry validations for time off requests. • Whether they're configured for crossing over midnight.
All Time Off Security Segments	Use this report to view the time off security segments in your tenant and their associated time offs and security groups.
Correct My Time Off (Legacy) Correct Time Off (Legacy) Enter Time Off (Legacy) Request Time Off (Legacy)	These legacy reports are available from the Time Off worklet, or related actions (from the worker). However, with the Absence Calendar Experience, Workday enables you to easily request and manage time off using the: • Manage Absence report. • Request Absence task.
Manage Absence	Use this report to manage your own time off or view another worker's absence calendar, review and edit their absence, or request absence on their behalf.
Mass Operation Management - Correct Time Off Mass Operation Management - Request Time Off	Use these reports to enable members of segment-based security groups to perform mass operations on time off business processes.
Time Off Approvers with Events Awaiting Action	Use this report to identify approvers who have unapproved time off events awaiting their action.

Reports or Dashboards	Consideration
Time Off for Payroll Interface	Use this report to view approved time off requests for 1 or more organizations within a specified period of time to find out what time off you haven't yet paid.
Time Off Liability	Use this report to view the liability of an organization for time off balances. For the time off plans and date you select, Workday reports the plan balance and total liability for each worker. For workers paid in a different currency, Workday displays the liability in the currency paid.
Time Off Liability for Position	Use this report to view your liability for time off plan balances for employees' positions in the supervisory organizations you select.
My Time Off Results by Period Time Off Results by Period Time Off Results by Period for Workers Time Off Results Summary	Use these reports to view accruals, paid, and unpaid time off for each period. You can also view time offs to pay out when a worker is terminated.
Time Off Types	Use this report to view all the time off types that users can select in prompts when they enter or review time off requests. You can associate a time off type with multiple time offs.
View Time Off View Time Off Balance View Time Off Results by Period	You can access these reports from the related actions menu of a worker to view their time off details.
View Time Off Data Validation Custom Text	Use this report to view specific custom text messages for time off validations in your tenant and their usage.
View Worker Time Off Eligibility by Organization	Use this report to view time off eligibility details for active workers within the selected organizations as of the current day.

Integrations

Web Services	Consideration
Adjust Time Off	Use this web service to adjust or correct an existing time off entry.
Enter Time Off	Use this web service to add new time off entries.
Import Time Off Request Event Batch	Use this web service to bulk upload a high volume of new time off requests into Workday. Before loading the data from the spreadsheet: • Change the line key when the worker changes. • Complete required business process tasks and approvals to confirm the new data values for workers.

Web Services	Consideration
	• Don't include time off requests more than 99 weeks old. • Enter a line key for each worker. • Use the same header key for all requests for individual workers. You can use multiple header keys. Follow these tips to help ensure a smooth and efficient import process for time off requests: • To prevent bad data in absence tables, avoid disabling the *Maximum Unpaid Time Off Units Allowed* validation. • Avoid loading multiple files in parallel, as this can reduce performance and introduce risks. • Keep re-evaluation enabled to prevent invalid data that can affect workers' balances and payroll. • For extremely large volumes of data, split the data across multiple files, but be aware that this introduces risk. • Include all time off entries for a worker in the same file for easier management. • Order requests chronologically, from oldest to most recent, to maintain clarity and accuracy.

Connections and Touchpoints

Touchpoint	Consideration
Workday Assistant	Workers can request time off, view their time off balance, and view holiday schedules using Workday Assistant. Workday Assistant doesn't support these features and configurations: • Attachments. • Business process comments. • Time offs configured with Start Time and End Time. • Time offs that workers can only enter through Time Tracking.
Guided Tours	Provide help text that supports a business case for your organization for the selected field. Example: If your company limits the number of hours a worker can request off per day, the guided tour on the Request Time Off task might have this help text for the Daily Quantity field: Enter a value between 4 and 8 hours.

Touchpoint	Consideration
Payroll	You can configure Workday Payroll to create earnings based on a paid, unpaid, or total time off for a worker.
Third-Party Payroll	You can configure the Payroll Effective Change Interface (PECI) integration to include grouped time off entries in the Time Off Earnings and Deductions data section of the Data Changes Audit report. Groupings can span pay periods. Workday groups time off in date ranges and produces separate groupings for: • Full and partial-day absences. • Different time off types.
Time Tracking	Workers can enter and submit time through Workday Time Tracking while they're on leave. You can also create a time validation to prevent submission. You can also configure Time Tracking to display absence balances on time entry templates.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Absence Third-Party Calendar Integration

Examples

2024R1 Feature Release Note: Effective Dating on Service Dates in Absence

Steps: Set Up Time Off Plans

Prerequisites

- Enable multiple job functionalities on your Workday tenant.
- Security: *Set Up: Time Off* domain in Time Off and Leave functional area.

Context

Time off plans enable workers to request time off and their managers to approve the requests. You can also use time off plans to set up accruals, time off taken, and balances. Enter basic information for a time off plan first, and then associate the components as you create them.

Steps

1. Create Custom Business Processes.

   Configure the *Request Time Off* and *Correct Time Off* business processes to route time off requests and adjustments to the appropriate roles for review and approval.

   You can configure the *Request Time Off* business process security policy so that secured roles can advance pending time off requests when the approver isn't available.
2. Configure time offs.
   a. Create Time Off Types on page 2294.
   b. Create a time off.

      See Steps: Set Up Time Offs on page 2278.
   c. (Optional) Create Time Off Validations on page 2298.
3. Track accrual, time off, and time off plan balances:
   a) Create Period Schedules for Time Off on page 2338.
   b) Create Balance Periods on page 2339.
   c) Create Accruals on page 2340.

   Note: All time offs, accruals, and other calculation values associated with a time off plan must use the same unit of time.
4. Create time off plans that track or don't track balances.

   See:

   - Create Time Off Plans That Don't Track Balances on page 2313.
   - Create Time Off Plans That Track Balances on page 2302.
5. Create Absence Tables on page 2470.
6. Manually Schedule Storage of Time Off Balances on page 2522.
7. (Optional) Configure the Time and Absence Dashboard.

   See Concept: Dashboards for Time Tracking and Absence on page 2910.
8. (Optional) Access the Maintain Time Off Plan Balance Display Priority for Search task.

   Enter priorities for time off plan balances that you want to display in the Your Time Off Summary card. Workday delivers these personalized results as part of the Smart Summaries feature. This card provides eligible workers:

   - Their time off balance, if you enter a priority.
   - Their upcoming time off within the next 30 days, regardless of the priorities that you enter.
   - A link to request time off and view all time off balances, if you enter a priority.

   When workers search for time off or other related terms, Workday displays the balance for the highest priority time off plan. Plans with a lower number have a higher priority.

   When entering priority values for your organization, consider what the highest priority time off plan balances might be for all users. Your users might have different eligibility based on country or location. Allocate priority based on your own country-specific configuration and decide on a convention.

   Entering a priority of 1 for at least 1 time off plan ensures that Workday displays a balance in the Your Time Off Summary card when eligible workers search for time off or other related terms.

Priorities for Displaying Time Off Plan Balances in a Global Organization

Time Off Plan	Priority
FranceTimeOffPlan1 (Vacation)	*101*
FranceTimeOffPlan2 (Sick)	*102*

Time Off Plan	Priority
FranceTimeOffPlan3 (Jury Duty)	*103*
UKTimeOffPlan1 (Sickness)	*201*
UKTimeOffPlan2 (Vacation)	*202*
IrelandTimeOffPlan1 (Annual Leave)	*301*
IrelandTimeOffPlan2 (Sickness)	*302*
IrelandTimeOffPlan3 (Paternity Leave)	*303*

Next Steps

If you're using Workday Payroll to process worker payments, create pay components to calculate paid and unpaid time off.

Tasks

Steps: Set Up Workday Home

Reference

Reference: Feature Availability and Balance Tracking on page 2371

Examples

Concept: Business Process Management

The Next Level: The Calculation Engine Behind Absence Management

Example: Create an Earning for a Single Time Off

Steps: Set Up Time Offs

Prerequisites

- Create Time Off Types on page 2294.
- Review Setup Considerations: Time Off on page 2266.
- Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Context

When you create definitions for each time off that workers can request, you can:

- Specify the time off type and how workers can enter the request.
- Enable adjustments.
- Configure validation rules and options for workers to sell back a portion of their accrued time off.
- Associate worktags with the time off.
- Define requirements when a time off has eligibility criteria or limits that differ from the time off plan.

When a time off is part of a position-based time off plan, limits are based on position. You can define eligibility rules and validations that reference a worker's primary position or all positions.

Steps

1. Create a time off. See Create Time Offs on page 2294.

   Note: Only fields within the tabs on this task are effective-dated. When you make changes to any fields outside of the tabs, Workday retroactively updates those fields with the new values in all existing time off definitions.
2. (Optional) On the Validations tab, Create Time Off Validations on page 2298.
3. (Optional) On the Time Off Plan Overrides tab, Create Time Off Plan Overrides for Time Offs on page 2505.
4. (Optional) On the Reasons tab, configure reasons for workers to report when requesting this time off.

   The Reason ID is used in web service API and EIB uploads for time off requests. Workday updates the Count each time a time off entry includes the reason.
5. (Optional) On the Worktags tab, associate worktags with the time off, enabling eligible workers to select worktag values when they enter time offs. See Steps: Set Up Worktags for Time Offs on page 2292.
6. On the Forfeiture Options tab, choose the forfeited absence component to adjust. The options are available when you select the Enable Forfeiture for Time Off Adjustment check box. See Steps: Enable Forfeiture Adjustments for Time Off Plans on page 2463.
7. (Optional) On the Sell Options tab, set up the options for workers to sell back any portion they accrued from this time off. The options are available when you select the Allow to Sell Time Off check box. See Steps: Set Up Sell Time Off on page 2448.
8. (Optional) Set Up Mass Operations.

   When reviewers are unavailable, or if you want to approve multiple in-progress time off requests, use the Mass Operation Management task. This task advances business process requests for a selected group of workers using a custom report. Your custom report must generate a list of time off request events requiring approval. Configure relevant security groups in the Manual Advance action of the *Request Time Off* business process and security policy in the Time Off and Leave functional area.

Next Steps

Add time offs to:

- Time off plans.
- The appropriate time off security segment to enable users to access them in a time off request or correction. We recommend performing this step after you add the time offs to a time off plan.

Concept: Accrual and Time Off Limits on page 2355

Concept: Time Tracking and Absence Management on page 2834

Concept: Entering Time Off in Absence and Time Tracking on page 2317

Concept: Time Off Earnings

Tasks

Steps: Enable Forfeiture Adjustments for Time Off Plans on page 2463

Steps: Set Up Segmented Security for Time Off

Prerequisites

- Configure the *Correct Time Off* and *Request Time Off*, business processes and security policies in the Time Off and Leave functional area.
- Create time offs and absence tables that contain the time off types you want to secure.

- Before configuring new time off security segments or updating existing ones, check that there are no time off entries with an unsubmitted status. This status is only possible when workers enter time off in Time Tracking. If you change time off security, you might prevent those time off events from completing.

Context

You can create time off segments to provide access to specific time offs for different groups of users, including time offs that are part of an absence table. Example: You might create 3 individual segments to provide access for administrators, employees and contingent workers, and managers.

Segmented security for time off removes the need for warning and error validations that control access on time off business processes, streamlining your configurations.

Segmented security for time off is currently an opt-in feature. When you opt in to the feature, Workday:

- Disables and removes the functionality behind the Hide from Worker Self Service check box on all time offs in your tenant.
- Applies the segmented security configuration to determine what time offs to display to workers when they request or enter time off.

Workday displays details of the time off segments in your tenant and their associated time offs and security groups on the All Time Off Security Segments report.

Steps

1. Access the Domain Security Policies for Functional Area report.

   Review the segment-based security groups on the *Access Time Off (Segmented)* domain security policy. This domain enables you to configure access to security segments for time offs and absence tables, which control who can request or correct specific time offs.

   If not already enabled, select Domain Security Policy > Enable from the related actions menu of the security policy for the *Access Time Off (Segmented)* domain in the Time Off and Leave functional area.

   Security: The *Security Activation* and *Security Configuration* domains in the System functional area.
2. Access the Create Time Off Security Segment task.

   Select the time offs that you want to secure to the segment from the Time Offs prompt.

   For absence tables, we recommend that you either select all of the tier time offs or none of them when providing access for certain security groups. Workday reevaluates all tiers on an absence table after a manager or administrator approves a time off request, including tiers that workers can't access. When providing access to tier time offs, for:

   - Managers, select all tiers.
   - Employees, select all tiers or none.

   Security: *Set Up: Time Off* domain in the Time Off and Leave functional area.
3. Create Segment-Based Security Groups.

   Create segment-based security groups that grant specific security groups access to the new time off security segments.
4. Edit Domain Security Policies.

   Edit permissions for the *Access Time Off (Segmented)* domain in the Time Off and Leave functional area to grant the segment-based security groups access to the time offs.

   If you don't have any time offs with Hide from Worker Self Service check box selected, Workday adds the *All Users* security group to the *Access Time Off (Segmented)* security policy. Remove this security group, and replace it with the segment-based security groups you want to use.

   If the *Access Time Off (Segmented)* domain security policy includes security groups that aren't associated with a time off segment, Workday doesn't apply any security segment restrictions to users in the security group, even if they're also in a security group that's associated with another time off segment. Example: Your company has 3 time off types: *Annual*, *PTO*, and *Sick*. You configure these segment-based security groups and add them to the domain.

Segment-Based Security Group	Access Time Off (Segmented) Domain Access	Associated with a Segment	Time Off Type	Considerations
Group A - Administrators	Yes	No	N/A	Users can access all time off types when correcting or requesting time off. This overrides the *Group B - Employee as Self* security configuration.
Group B - Employee as Self	Yes	Yes	*Annual* and *PTO*	Users can access only the *Annual* and *PTO* time off types. They can't access the *Sick* time off type.

5. Before opting in to Segmented Security for Time off, access these reports:

Report	Consideration
All Time Offs	Check these report fields to assess the visibility and security for each time off: • Hide from Employee Self Service • Time Off Security Segment
All Time Off Security Segments	Crosscheck to ensure that all time offs are in the correct segments, secured to the correct segment-based security groups. Make sure that no time offs are missing.

6. Activate Pending Security Policy Changes.
7. If you use authentication policies to restrict access to certain domains, edit access restrictions and update your policies to include the segment-based security groups in an authentication rule.

   See Steps: Set Up Authentication Policies.
8. (Optional) When an absence partner supports their own supervisory organization, you can change the worker who has the *Absence Partner* role for that organization. This prevents absence partners seeing the time offs in time off segments secured by the *Absence Partner* role when requesting time off in an employee self-service context.

   See Change Absence Partner Role Assignments on page 2316.
9. Access the Maintain Feature Opt-Ins report.

   Opt in to Segmented Security for Time Off.

   Note: After you opt in, you can't opt out.

   Security: *Set Up: System* domain in the System functional area.

10. (Optional) Verify the security policy changes. For each new time off security segment:
    a) Sign in as a user who's a member of a segment-based security group associated with the new time off segment.
    b) Access 1 of these tasks:
        - Manage Absence
        - Request Absence
    c) Verify that the time offs that you secured to the relevant time off segment are available for selection for the user.
    d) Repeat steps a-c to verify access to the time off segments for each segment-based security group.

    Segmented security for time off also applies to certain options on these Time Tracking tasks:

    - Enter My Time
    - Enter Time for Worker

    When you secure a time off, only members of the segment-based security groups with access to the time off segment can edit related time off requests using these time-entry options:

    - Enter Time by Type
    - Enter Time by Week
    - Enter Time

    Note: When workers or managers try to use the Enter Time > Enter Time menu to add more time or time off to an existing time week that includes an absence table time off request, Workday prevents them completing the task. If your company has set up absence tables, we recommend that users request time off using another option on the Enter Time menu or micro-edit.

Example

Next Steps

As you create new time offs, add them to time off security segments so that users can access the time offs in time off requests or corrections.

To hide an absence table from certain users, remove all of the tier time offs from the time off segment.

Steps: Enable Termination Adjustments for Time Off Plans

Prerequisites

Configure the time off plan to track balances.

Context

Workday can create termination adjustments for selected time off plans to set employees' balances to zero. Workday creates these adjustments when you terminate employees using the *Termination* business process or *Terminate Employee* web service.

Workday uses time offs, accruals, and any adjustments for dates on or before the termination date to determine the amount of an adjustment. Workday doesn't process balance adjustments of greater than 1000 units.

Termination adjustments are visible to administrators but hidden from employees until the day after their termination date. Employees continue to see their unadjusted balances and can request time off as before.

Steps

1. Add the *Adjust Time Off Balances* service after the completion step of the *Termination* business process.

   See:

   -
   - Concept: Service Step
   - Concept: Termination Impact
2. Decide which time off to adjust for a plan when you terminate an employee.

   Consider if Payroll retrieves adjustment units for the time off. If it does, are there impacts of termination adjustments on Paid Time Off, Unpaid Time Off, and Time Off Totals? Also consider how you want to report payouts, if applicable, on payslips.
3. Select the time off to use to create termination adjustments for a plan.

   a. Access the Create Time Off Plan task.

      Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.

   b. On the Time Off tab, add the time off to the plan.

   c. Select the time off as the Time Off for Termination Adjustment.
4. Make sure that eligibility requirements for the time off plan, its accruals, and the adjusting time off cover employees who are terminated midperiod.

   To receive a termination adjustment, an employee must meet eligibility requirements on the effective date of the termination. When eligibility rules don't cover employees who are terminated midperiod, the adjustment amount and time off reports for these employees can be inaccurate.

Result

Workday generates a termination adjustment that's visible to administrators on the Termination Adjustments tab of the Maintain Accrual and Time Off Adjustments/Overrides task. The adjustment takes effect on the termination date.

Concepts

Concept: Termination Adjustments on page 2459

Steps: Remove Invalid Time Off Entries After Job Changes

Prerequisites

Security: These domains:

- *Business Process Administration* and *Manage: Business Process Definitions* in the System functional area.
- *Set Up: Time Off* in the Time Off and Leave functional area.

Context

You can configure Workday to automatically remove approved time off entries after the completion of *Change Job* business process events when either the:

- Workers are no longer eligible for the approved time off.
- Entries are no longer valid days to include due to changes in holiday calendars or work schedule calendars as part of the *Change Job* event.

Invalid time off entries that remain on a worker's calendar after a job change can negatively impact reporting, scheduling, balance calculation, and integrations.

You can use the *Remove Invalid Time Off Entries After Job Change* service step to initiate the *Correct Time Off* business process and remove invalid, approved time off entries on or after the effective date of the worker's job change. This step removes the need to find and manually remove these time off entries. Workday automatically creates a *Correct Time Off* event for the approved invalid time off entries and adjusts the units down to zero.

Steps

1. Edit Business Processes.

   On the *Change Job* business process, add the *Remove Invalid Time Off Entries After Job Change* service step after either of these steps, depending on which one you use:

   - *Auto-Manage Business Processes* service.
   - *Manage Business Processes for Worker* action.

   This allows you to manage any in-progress events for a worker including time off requests or corrections. The *Remove Invalid Time Off Entries After Job Change* service step only corrects approved time off entries. In-progress time off entries require the *Auto-Manage Business Processes* or *Manage Business Processes for Worker* steps to handle business process cancellation or approval.

   You must add the *Remove Invalid Time Off Entries After Job Change* service step after the completion step (where Complete equals *Yes*). Workday displays an error if you try to add this step before the completion step.
2. After you add the *Remove Invalid Time Off Entries After Job Change* service step for the first time, Workday displays a warning message. Access the Evaluate and Process Events Impacting Absence task to run a background job immediately that initiates evaluation and correction of ineligible future time off entries and accrual adjustments. From this point onwards, Workday initiates the background job automatically every 15 minutes.

   If you don't run the Evaluate and Process Events Impacting Absence task, Workday continues to flag invalid time off entries that occur on or after the effective date in the *Change Job* business process event until the next Weekly Service Update when we automatically initiate the background job to run every 15 minutes in your tenant.

   Note:

   If Workday doesn't display a warning message when you add the service step to the business process definition for the first time, this means that the background job is already running and there's no need to run the Evaluate and Process Events Impacting Absence task.

   If *Rescind* or *Correct* actions occur on the *Change Job* business process, you might need to manually remove or re-enter time off entries that start on or after the effective date of the job change. This is because a rescind or correction of the *Change Job* event won't impact any automatic time off corrections by the Evaluate and Process Events Impacting Absence task.

3. Create a separate rule-based business process definition for the *Correct Time Off* business process because the *Remove Invalid Time Off Entries After Job Change* service creates correction events that follow the business process definition.

   If you want the service step to automatically remove invalid time off entries without review and approval, create a business process with just a single initiation step (Step a), as follows:

   a) From the related actions menu of the *Correct Time Off* business process, select Business Process > Copy or Link Business Process Definition.
   b) Select *Rule Based Workflow Definition Name* and enter a name. Example: *Remove Invalid Time Off Service*. Click OK.
   c) From the related actions menu of the *Correct Time Off (Remove Invalid Time Off Service)* business process, select Business Process > Rule-Based Business Process Configuration and click OK.
   d) From the related actions menu of Step a, select Business Process > Set as Completion and click OK.
   e) As a related action on the business process, select Business Process > Edit Definition.
   f) Remove any additional steps and click OK.
4. Create Business Process Condition Rules .

   Create a condition rule that uses the Initiating Business Process of Remove Invalid Time Off Entries Service report field to identify when the initiating business process is *Change Job*:

   a) From the related actions menu of the initiation step, select Business Process > Create Condition Rule and click OK.
   b) Enter a description. Example: A name such as *Time Off Correction Initiated by Remove Invalid Time Off Service After Change Job?* helps identify the business process condition rule.
   c) Enter a comment to explain the condition. Example: *If time off correction is initiated by Remove Invalid Time Off After Job Change, then exit of a - Correct Time Off notifies Employee as Self* .
   d) Add a rule with these values:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Initiating Business Process of Remove Invalid Time Off Entries Service*	*in the selection list*	*Value specified in this filter*	*Change Job*

   Note: Other possible comparison values are:

   - *Assign Work Schedule*.
   - *Termination*.
   - Blank, if the correction was not initiated by the service step.
5. Create Custom Notifications .

   To notify employees that Workday is correcting their time off as a result of a *Change Job* event, create a custom notification on the rule-based business process definition:

   a) From the related actions menu of the business process, select Business Process > Add Notification and click OK.
   b) Complete the task:

Option	Description
Triggers	From the On Exit prompt, select *a - Correct Time Off*.

Option	Description
Conditions and Rules	Add a rule and select the business process condition rule that you created previously.
Groups	Select the *Employee as Self* security group.
Email Message Content	Enter the details: • Subject: Add a row to enter text for the subject line. Example: *Time off Correction Submitted on Your Behalf*. • Body: Add a row to enter body text. Example: *Workday submitted a time off correction on your behalf due to a Change Job event that resulted in invalid time off entries after eligibility changes or the dates changing to non-working days.*

6. Configure Rule-Based Business Processes.

   To ensure that Workday only sends notifications to employees for corrections initiated by the service step as part of the *Change Job* business process, create a rule that triggers the rule-based business process when True:

   a) From the related actions menu of the rule-based business process that you created previously, select Business Process > Rule Based Business Process Configuration and click OK .
   b) Add a rule. From the Rule prompt, select Create Condition Rule, and click OK.
   c) Enter a description. Example: A name such as *Time Off Correction Initiated by Remove Invalid Time Off Service* helps identify the business process condition rule.
   d) Enter a comment to explain the condition. Example: *True if the event is a time off correction that was initiated by a Remove Invalid Time Off Entries Service.*
   e) From the Copy Condition from Rule prompt, select the business process condition rule that you created previously. Example: *Time Off Correction Initiated by Remove Invalid Time Off Service After Change Job?*
   f) Create a rule with these values and click OK:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Initiated by Remove Invalid Time Off Entries Service*	*equal to*	*Value specified in this filter*	Select the check box.

Result

You can initiate the *Change Job* business process to verify that the *Remove Invalid Time Off Entries After Job Change* service step is working. See Reference: Change Job Initiation. On the Manage Absence report, if workers requested time off but have a job change that makes them ineligible for the time off, as of the effective date, Workday removes the time off entries from their calendar, or reallocates the time off to a different absence tier that they're now eligible for when sufficient balances exist.

Concepts

Concept: Completion Steps

Concept: Rule-Based Business Process Definitions

Tasks

Configure Rule-Based Business Processes

Examples

2025R1 Feature Release Note: Change Job Impacts on Time Off

Steps: Remove Invalid Time Off Entries After Termination

Prerequisites

Security: These domains:

- *Business Process Administration* and *Manage: Business Process Definitions* in the System functional area.
- *Set Up: Time Off* in the Time Off and Leave functional area.

Context

You can configure Workday to automatically remove invalid time off entries that result from the completion of a *Termination* business process event. Invalid time off entries that remain on a worker's calendar after termination can negatively impact reporting, balance calculation, and integrations.

The *Remove Invalid Time Off Entries After Termination* service step initiates the *Correct Time Off* business process to remove approved time off entries after the worker's Termination Date. Workday automatically creates a *Correct Time Off* event for the approved time off entries that occur after the Termination Date and adjusts the units down to zero.

Steps

1. Edit Business Processes.

   On the *Termination* business process, add the *Remove Invalid Time Off Entries After Termination* service step after the *Completion* step and after either of these steps, depending on which one you use:

   - *Auto-Manage Business Processes* service.
   - *Manage Business Processes for Worker* action.

   The *Remove Invalid Time Off Entries After Termination* service step only corrects approved time off entries. In- progress time off entries require the *Auto-Manage Business Processes* service or *Auto-Manage Business Processes* action to handle business process cancellation.

   Note: After the *Remove Invalid Time Off Entries After Termination* service step completes, the service step won't reflect any corrections or rescinds of the termination event because Workday doesn't support *Correct* or *Rescind* actions on time off business processes. We recommend that you include the *Remove Invalid Time Off Entries After Termination* service step later in your *Termination* business process definition to reduce the likelihood of it completing prior to any termination corrections or rescinds.
2. (Optional) Configure a condition rule on the *Remove Invalid Time Off Entries After Termination* service step. From the related actions of the service step on the Business Process Steps tab, select Business Process > Create Condition Rule.

   Example: To configure a rule that only removes time off entries after voluntary terminations, add a rule with these values:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Involuntary Termination*	*equal to*	*Value specified in this filter*	*No*

   See Create Business Process Condition Rules.

3. (Optional) Add a delay to a step on the *Termination* business process.

   Example: To add a delay to the *Automated Leave Processing* service step, configure a delay step with these values:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Completed Leave Request Events*	*equal to*	*Value specified in this filter*	*No*

   See Maintain Step Delay.
4. Review the *Correct Time Off* business process definition. Evaluate whether you need to add new condition rules to any workflow steps or notifications when the correction is initiated by the *Remove Invalid Time Off Entries After Termination* service step.

   Example: You might want to remove approval steps and notification rules. You can either:

   - Add a condition rule to the existing approvals and notifications to prevent them triggering.
   - Create a rule-based business process definition without any approvals or notifications. As a related action on the *Correct Time Off* business process, select Business Process > Copy or Link Business Process Definition. Select the *Rule Based Workflow Definition Name* option, and enter a name for the rule-based business process definition. As a related action on the rule-based business process, select Business Process > Rule-Based Business Process Configuration. Add a rule that uses the Initiated by Remove Invalid Time Off Entries Service report field to return True if the time off correction is initiated by the service step.

     Example: Create a rule with these values:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Initiated by Remove Invalid Time Off Entries Service*	*equal to*	*Value specified in this filter*	*Yes*

     In the Rule Based Workflow Definition column, select the rule-based business process definition that you just created.
5. Access the Evaluate and Process Events Impacting Absence task to run a background job immediately that initiates evaluation and correction of ineligible future time off entries and accrual adjustments. From this point onwards, Workday initiates the background job automatically every 15 minutes.

   Note: If you don't run the Evaluate and Process Events Impacting Absence task, Workday continues to flag time off entries that occur after the termination dates in *Termination* business process events until the next Weekly Service Update when we automatically initiate the background job to run every 15 minutes in your tenant.

   If a *Rescind* action occurs on the *Termination* business process, you need to reenter time off entries that start after the original Termination Date. If a correction to the Termination Date occurs, you might need to manually remove or re-enter time off entries.

Tasks

Configure Rule-Based Business Processes

Examples

Concept: Completion Steps

2024R1 What's New Post: Termination Impact on Time Off

Steps: Remove Invalid Time Off Entries After Work Schedule Assignment

Prerequisites

Security: These domains:

- *Business Process Administration* and *Manage: Business Process Definitions* in the System functional area.
- *Set Up: Time Off* in the Time Off and Leave functional area.

Context

You can configure Workday to automatically remove approved time off entries after the completion of *Assign Work Schedule* business process events when either the:

- Workers are no longer eligible for the approved time off.
- Entries are no longer valid days to include due to changes in holiday calendars or work schedule calendars.

Invalid time off entries that remain on a worker's calendar after a work schedule assignment can negatively impact reporting, scheduling, balance calculation, and integrations.

You can use the *Remove Invalid Time Off Entries After Work Schedule Assignment* service step to initiate the *Correct Time Off* business process and remove invalid, approved time off entries from the effective date of the worker's work schedule assignment. This step removes the need to find and manually remove these time off entries. Workday automatically creates a *Correct Time Off* event for the approved invalid time off entries and adjusts the units down to zero.

Steps

1. Edit Business Processes.

   On the *Assign Work Schedule* business process, add the *Remove Invalid Time Off Entries After Work Schedule Assignment* service step after the completion step (where Complete equals *Yes*). Workday displays an error if you try to add this step before the completion step.
2. After you add the *Remove Invalid Time Off Entries After Work Schedule Assignment* service step for the first time, Workday displays a warning message. Access the Evaluate and Process Events Impacting Absence task to run a background job immediately that initiates evaluation and correction of ineligible future time off entries and accrual adjustments. From this point onwards, Workday initiates the background job automatically every 15 minutes.

   If you don't run the Evaluate and Process Events Impacting Absence task, Workday continues to flag invalid time off entries that occur on or after the effective date in the Assign Work Schedule business process event until the next Weekly Service Update when we automatically initiate the background job to run every 15 minutes in your tenant.

   Note:

   If Workday doesn't display a warning message when you add the service step to the business process definition for the first time, this means that the background job is already running and there's no need to run the Evaluate and Process Events Impacting Absence task.

   If a *Rescind* action occurs on the *Assign Work Schedule* business process, you need to reenter time off entries that start on or after the original effective date. If a correction to the effective date occurs, you might need to manually remove or re-enter time off entries.

3. Create a separate rule-based business process definition for the *Correct Time Off* business process because the *Remove Invalid Time Off Entries After Work Schedule Assignment* service creates correction events that follow the business process definition.

   If you want the service step to automatically remove invalid time off entries without review and approval, create a business process with just a single initiation step (Step a), as follows:

   a) From the related actions menu of the *Correct Time Off* business process, select Business Process > Copy or Link Business Process Definition.
   b) Select *Rule Based Workflow Definition Name* and enter a name. Example: *Remove Invalid Time Off Service*. Click OK.
   c) From the related actions menu of the *Correct Time Off (Remove Invalid Time Off Service)* business process, select Business Process > Rule-Based Business Process Configuration and click OK.
   d) From the related actions menu of Step a, select Business Process > Set as Completion and click OK.
   e) As a related action on the business process, select Business Process > Edit Definition.
   f) Remove any additional steps and click OK.
4. Create Business Process Condition Rules.

   Create a condition rule that uses the Initiating Business Process of Remove Invalid Time Off Entries Service report field to identify when the initiating business process is *Assign Work Schedule* :

   a) From the related actions menu of the initiation step, select Business Process > Create Condition Rule and click OK.
   b) Enter a description. Example: A name such as *Time Off Correction Initiated by Remove Invalid Time Off Service After Work Schedule Change?* helps identify the business process condition rule.
   c) Enter a comment to explain the condition. Example: *If time off correction is initiated by Remove Invalid Time Off After Work Schedule Assignment, then exit of a - Correct Time Off notifies Employee as Self* .
   d) Add a rule with these values:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Initiating Business Process of Remove Invalid Time Off Entries Service*	*in the selection list*	*Value specified in this filter*	*Assign Work Schedule*

   Note: Other possible comparison values are:

   - *Change Job*.
   - *Termination*.
   - Blank, if the correction was not initiated by the service step.

5. Create Custom Notifications .

   To notify employees that Workday is correcting their time off as a result of a *Assign Work Schedule* event, create a custom notification on the rule-based business process definition:

   a) From the related actions menu of the business process, select Business Process > Add Notification and click OK.
   b) Complete the task:

Option	Description
Triggers	From the On Exit prompt, select *a - Correct Time Off*.
Conditions and Rules	Add a rule and select the business process condition rule that you created previously.
Groups	Select the *Employee as Self* security group.
Email Message Content	Enter the details: • Subject: Add a row to enter text for the subject line. Example: *Time off Correction Submitted on Your Behalf*. • Body: Add a row to enter body text. Example: *Workday submitted a time off correction on your behalf due to an Assign Work Schedule event that resulted in invalid time off entries after eligibility changes or the dates changing to non-working days.*

6. Configure Rule-Based Business Processes.

   To ensure that Workday sends notifications to employees for corrections initiated by the service step, create a rule that triggers the rule-based business process when True regardless of the business process that initiated it:

   a) From the related actions menu of the rule-based business process that you created previously, select Business Process > Rule Based Business Process Configuration and click OK .
   b) Add a rule. From the Rule prompt, select Create Condition Rule, and click OK.
   c) Enter a description. Example: A name such as *Time Off Correction Initiated by Remove Invalid Time Off Service* helps you identify the business process condition rule.
   d) Enter a comment to explain the condition. Example: *True if the event is a time off correction that was initiated by a Remove Invalid Time Off Entries Service.*
   e) From the Copy Condition from Rule prompt, select the business process condition rule that you created previously. Example: *Time Off Correction Initiated by Remove Invalid Time Off Service After Work Schedule Change?*
   f) Create a rule with these values and click OK:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Initiated by Remove Invalid Time Off Entries Service*	*equal to*	*Value specified in this filter*	Select the check box.

Result

You can initiate the *Assign Work Schedule* business process to verify that the *Remove Invalid Time Off Entries After Work Schedule Assignment* service step is working. See Automatically Assign Work Schedule Calendars.

If workers have approved time off but then have changes in their work schedule calendar that make those days non-working days, Workday removes the time off entries from their calendar on the Manage Absence report. Example: A worker's pattern changes from Monday - Friday inclusive to Monday, Wednesday, and Friday only, making the entries for the time off on Tuesday and Thursday invalid, effective February 1. Workday removes the time off entries from their calendar.

Concept: Completion Steps

Concept: Rule-Based Business Process Definitions

Tasks

Configure Rule-Based Business Processes

Examples

2025R1 Feature Release Note: Assign Work Schedule Impacts on Time Off

Steps: Set Up Worktags for Time Offs

Prerequisites

Enable the New Absence Calendar Experience. See New Absence Calendar Experience.

Context

You can configure worktags on time offs and allow eligible workers to include worktag values when reporting time off. This increases efficiency and enhances compliance by enabling you to report and allocate these units appropriately.

Example: A worker can select a specific worktag type to report time off against a cost center or project.

Steps

1. To enable worktag types for time offs, access the Maintain Worktag Usage report and select Absence as the Taggable Type.
2. Select Edit Worktag Usage to set up worktag types. Add or remove the worktag types that you want to make available for time offs.

   Note: We support custom worktag types. See Steps: Define Custom Worktags.
3. Access the Create Time Off task and use the Worktags tab to add the relevant worktag types. You can configure additional options for each enabled worktag type.
4. (Optional) You can specify:

Option	Description
Entry Option	You can select Hidden to hide the worktag type for all users when reporting time off or Required when you must define a worktag value.
Default Value	You can select a worktag value to populate automatically when entering time off.
Hide from Self Service	Hides worktag type from workers. Use this option if you've enabled a worktag type that

Option	Description
	should only be accessible when reporting time off on behalf of a worker.
Default from Organization Assignment	You can select the Default from Organizational Assignment option for these supported worktag types: • Cost Center • Custom Organization 1-10 • Region • Program • Grant • Gift • Business Unit • Location

Example

You can specify worktag values when reporting time off using supported time off and time tracking entry points including:

Time Off

- Absence Calendar Experience
- Maintain Accrual/Time Off Adjustments/Overrides

Time Tracking

- Micro Edit
- Quick Add
- Enter Time by Week
- High Volume Time Entry
- Enter Time by Type
- Mass Enter Time

Next Steps

If using Workday Payroll, access the Create Earning or Edit Earning task to add the new Pay Component Group (PCG), Absence Pay Component, to the Pay Component Related Calculation (PCRC) for Hours (unprorated) or Hours (prorated) on a worktag-enabled time off earning.

Workday will create payroll result lines for each pay component and worktag value combination.

Note: If you don't add this PCG, Workday will continue creating a single payroll result line for the pay component, regardless of reported worktag values.

Examples

2024R1 What's New Post: Worktags on Time Offs

Create Time Off Types

Prerequisites

Security: *Set Up: Time Off (General)* domain in Time Off and Leave functional area.

Context

Time off types name the time offs that users can select in prompts when they enter or review time off requests. You can associate a time off type with more than a single time off. Example: You might define a time off type called *Vacation* and associate it with 2 time offs: *Vacation Full-Time* and *Vacation Part-Time*. *Vacation* is the name that all workers see.

Note:

If you use the same time off type with more than a single time off:

- Select only time offs that are associated with time off plans that use the same unit of time (hours or days).
- Ensure that workers are eligible for only a single time off at a time. This practice prevents workers from making duplicate requests against a time off plan. Otherwise, they can accidentally double the request against the time off plan balance.

You can also create a single time off with different eligibility or accrual rules for each set of workers. Example: In a time off called Vacation, full-time workers accrue 10 days of vacation while part-time workers accrue 5 days of vacation.

Steps

1. Access the Maintain Time Off Types task.
2. (Optional) Enter a Time Off Type ID for web services.

   Web service API and EIB uploads use this ID. If you leave this field empty, Workday automatically assigns a value.
3. Enter a Name.

Next Steps

Create a time off that uses the time off type. See Steps: Set Up Time Offs on page 2278.

Note: If you use the same time off type with more than 1 time off, ensure that workers are eligible for only 1 time off at a time. This prevents workers from requesting more than 1 time off with the same name and reducing their time off plan balance twice.

Create Time Offs

Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Context

You can create definitions for time offs, enabling workers to record time away from work. When workers request time off, they can select from the time off definitions for which they're eligible.

Steps

1. Access the Create Time Off task.

   Note: Only fields within the tabs on this task are effective-dated. When you make changes to any fields outside of the tabs, Workday retroactively updates those fields with the new values in all existing time off definitions.

   Complete the task:

Option	Description
Code	Enter a time off code for web services and EIB uploads.
Require Position on Time Off Request	Select to: • Require workers on a worker-based plan to enter a position to request time off against. • Use the approval step on the *Request Time Off* business process to route the request to the specified security group for approval. Example: If Group is set to *Manager*, Workday routes the request to all managers. However, the position in the request helps managers identify who should take action. If you specify a Routing Modifier on the approval step, when workers have 2 positions, Workday can route the request to either the primary manager or non-primary managers. By adding a condition rule that evaluates whether the request includes time off entries for the primary position or additional positions, you can route requests to the relevant managers based on which positions are included in the request. If there are multiple non-primary managers, Workday routes the approval to all additional managers. See Set Up Multiple Position Routing. • Automatically pay the worker's pay rate on the payslip.
Time Off Type	When you use the same time off type with more than 1 time off, ensure that workers are eligible for only 1 time off at a time. This prevents workers from requesting more than 1 time off with the same name and reducing their time off plan balance twice.
Allow to Sell Time Off	Select to enable: • Eligible workers to sell back any portion they accrued from this time off. • Setting up the options for sell time off on the Sell Options tab.

Option	Description
Enable Forfeiture for Time Off Adjustment	Select to: • Define Forfeiture Options. • Use this time off to create Forfeiture Adjustments.
Hide From Time Tracking	When selected, workers can only enter time offs using the Absence Management Request Absence, Manage Absence, Enter Absence, or Enter Time Off tasks.
Picked up by Payroll Interface one Period in Arrears	Select to include time off: • From the prior processing period. • Taken before the prior period start date but approved after the last payroll interface run. Clear to include time off: • From the current period. • Taken in prior periods but approved after the last payroll interface run.
Visible for Team Absence	Select to make this time off available for selection on the team calendars.
Comments	Enter a high-level summary on the time off to explain what to use it for and any calculations you had to create.

2. As you complete the Details tab, consider:

Option	Description
Priority	Assign a priority for processing the time off when multiple time offs subtract from the same time off plan. Workday processes time offs in the order from highest priority to lowest when a worker takes more than 1 time off during the same processing period. Enter a unique value as the priority for each time off. Example: Multiple time offs subtract from the same time off plan balance, and a worker requests absence against each time off object during the same processing period. The priority, combined with a lower time off limit on the time off plan and limit override value on the time off, or both, can affect paid and unpaid time off.
Adjustments Allowed	Select to allow adjustments to be made on this time off.
Hide from Worker Self Service	Select to prevent workers from requesting time off through self-service pages. Alternatively, you can set up segmented security for time off to control access to specific time offs using time off security

Option	Description
	segments and segment-based security groups. When you opt in to this feature, Workday removes this check box. Selecting the check box doesn't prevent workers and managers from viewing workers' time off balance. Also, managers can select the time off when entering time off on behalf of workers.
Time Calculation Tag	Select time calculation tags to assign to time off units. Workday Time Tracking uses time calculation tags to identify time off units in time calculations and totals. Example: Display time off totals to workers when they enter time.
Entry Option	When editing time offs that are part of a time off plan, select an option to specify how workers can enter requests for the time off: • *Enter through Time Off Only* (using the Absence Management Request Absence, or Manage Absence tasks). • *Enter through Time Tracking Only*. • *Enter through Time Tracking or Time Off*.
Display Start and End Time	Select to enable workers to enter values for start and end times when entering time off.
Start and End Time Required	Select to require workers to enter values for start and end times when entering time off.
Calculate Quantity Based on Start and End Time	Select to prevent workers from overriding the number of hours for the daily quantity. Applies only to time offs in time off plans with a Unit of Time value of *Hours*. When selected: • The quantity of time that workers request per day equals the duration of time between the start time and end time. • Workday ignores the daily quantity default. • Workday automatically selects the Display Start and End Time and Start and End Time Required check boxes. • Workday populates the Daily Quantity value on the time off request, so workers can't override the value. When not selected, workers can override the number of hours for the daily quantity when entering time off.

Option	Description
	Example: You select the Display Start Time and End Time check box on the time off. A worker later requests time off and enters a start time of 8:00 AM and an end time of 5:00 PM. Workday automatically populates the Daily Quantity field with 9 hours if a daily default is configured on the time off plan, but the worker can override this value by entering 8 hours.
Default Start and End Time from Schedule	Select to automatically populate the Start Time and End Time fields for each day from the worker's schedule. Workday uses either the worker’s published schedule from Workday Scheduling, if one exists, or the worker’s assigned work schedule calendar. If neither exists, Workday leaves the start and end times empty.
Enable Crossing Midnight	Select to enable workers to submit a single time off request for a time off that's configured with start and end times when that time off crosses midnight. When selected, Workday automatically selects these check boxes: • Display Start and End Time • Start and End Time Required • Calculate Quantity Based on Start and End Time

Next Steps

(Optional) Configure the other tabs based on your business requirements. See Steps: Set Up Time Offs on page 2278.

Related Information

Examples

2025R1 Feature Release Note: Time Offs Crossing Midnight

Create Time Off Validations

Prerequisites

- Create a time off.
- Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.

Context

Define rules to warn users of invalid time off requests or prevent workers from entering them.

Workday sets requests displaying warnings that workers submit through the time off calendar to *In Progress*.

Requests for intermittent time off are subject to validation rules for both the time off and the related leave of absence. Time off validations apply when entering time off. Leave validations apply when submitting a time off request or saving it for later. Workday automatically saves requests that fail a leave validation.

Steps

1. Access the Edit Time Off task.
2. On the Validations tab, add a row in the Data Entry Validation table for each validation you need to add.

   Any values you enter must be compatible with the unit of time defined for the time off plan balance.

   Complete the fields appropriate for the validation rule. The table lists fields that apply to all rules last.

Field	Description

Consecutive Day Maximum and *Consecutive Day Minimum*	For the value, specify the:
	• Maximum number of consecutive days a worker can take time off.
	• Minimum number of consecutive days workers must enter in a single request.
	Specify a positive number or a calculation that evaluates to a positive number.
	To require an exact number of consecutive days off, combine the Consecutive Day Maximum validation with a Consecutive Day Minimum validation that has the same value.
	These validations:
	• Reference the Days to Include option on the time off plan when determining which days are consecutive. Example: When Days to Include is:
	    • *All Days* and a worker takes time off on Thursday, Friday, Monday, and Tuesday, Workday evaluates the time off as 2 sets of 2 consecutive days, not 4 consecutive days.
	    • *Weekdays (Mon - Fri)* and a worker takes the same days off, Workday evaluates the time off as 4 consecutive days.
	• Ignore the Include All Selected Days setting.
	Note: Workday uses these validations to evaluate short-term time offs. Defining a consecutive day maximum or minimum greater than 30 days can slow down time off performance.
	The Consecutive Day Minimum validation isn't available for time offs entered through Time Tracking.

Increments	Specify the increments for entering time off.

Field	Description
	Example: Select a constant value, such as 4 hours or 0.5, or a calculation that returns different values for full-time and part-time workers.
Maximum	Specify the maximum amount of time off workers can request. Example: Select a constant value, such as 8 hours or 1 day, or a calculation that returns different limits based on a worker's work schedule calendar, holiday schedule calendar, or both. You can set limits dynamically based on the number of hours the worker is scheduled to work on the time off date. Example: 8 hours Monday, Tuesday, Wednesday, and Thursday; 12 hours on Friday, and zero hours on holidays. Example: You can use the *Published Scheduled Hours for All Positions for Calendar Day (Workday Scheduling)* instance value calculation (IVC) in a *Maximum* validation on a time off such as vacation as part of a calculation to return 0 if the worker’s published hours are greater than 0. This prevents or warns the worker that they’re requesting a planned absence for a day that they’re scheduled to work. Specify whether the maximum applies to: • Each request (*Individual Time Off Entry*). • All time off entries for the same date. • Requests for the same date for the time offs you select in the Time Off Validation Set field. If the time off belongs to a position-based time off plan, you can apply the maximum to all or selected time off entries for the same position and date.
Maximum Unpaid Time Off Units Allowed	Enter the maximum amount of unpaid time off allowed for a worker at any point in time. Must be a positive number. Applies only to time off plans that track balances and have a lower limit, or a time off limit override. To prevent unpaid time off, enter *0* (zero).
Minimum	Specify the minimum amount of time off workers can request for each time off entry, not the sum of time off entries each day. Example: Select a constant value, such as 4 hours or 0.5, or a calculation that returns different values for full-time and part-time workers.

Field	Description
Multiple Time Off Requests Not Allowed for Same Date	Specify whether the rule applies to: • All time off entries for the same date. • Requests for the same date for the time offs you select in the Time Off Validation Set field. If the time off belongs to a position-based time off plan, you can apply the rule to all or selected time off entries for the same position and date.
Time Off Date before Maximum Override Balance Date Not Allowed	Prevents the entry of time off requests for dates before the most recent Override Balance Date on the Maintain Time Off Override Balances task. (Applies only to time off plans that track balances.) Example: If the most recent Override Balance Date is 2016-01-01, workers can't enter time off requests for dates before this.
Do Not Allow Request	Display an error message when a request fails the validation. Depending on the type of validation, you can clear the check box to generate a warning message instead. Example: Clear this check box for a *Maximum Unpaid Time Off Units Allowed* validation to enable workers to submit requests for unpaid time off. A manager or administrator can reject the request. Applies to all validation rules.
Allow Override for Entry on Behalf of Worker	Enable managers or administrators to override the validation rule when entering, revising, or correcting time off on behalf of workers. A warning message displays when managers, administrators, or partners enter invalid requests. Applies to all validation rules.
Custom Text	Select a message that displays after the standard error or warning message, unless you select Display Custom Text First. Custom text doesn't display on mobile devices. Use the Maintain Time Off Data Validation Custom Text task to define custom text. Applies to all validation rules.
Hide Default Validation Text	Select to hide the default validation text when a worker enters a time off request if custom text is defined on the validation. Note: Workday displays the validations from the effective dated snapshot of the time off plan when the worker entered their time off

Field	Description
	request. Updates in subsequent snapshots don't display.

Example

This example shows how to apply validation rules. Sondra enters a request for 4 hours of Floating Holiday and a second request for 5 hours of Vacation time for June 7.

- If you limit Vacation requests to a maximum of 8 hours and select *All Time Off Entries for Worker for Same Date* in the Time Off Entries to Include field, Workday rejects Sondra's second request because it exceeds the maximum time off for all time off entries for that date.
- If the *Multiple Time Off Requests Not Allowed for Same Date* rule is in effect instead, and the validation set includes Floating Holiday and Bonus, Workday accepts Sondra's second request because there are no restrictions on Vacation requests.

Next Steps

(Optional) Access the Maintain Time Off Data Validation Custom Text task to display a custom message.

Create Time Off Plans That Track Balances

Prerequisites

- Create period schedules and balance periods.
- Create time offs and accruals.
- Security: *Set Up: Time Off (Calculations - Absence Specific)* and *Worker Data: Time Off (Time Off Balances)* domains in Time Off and Leave functional area.

Context

Time off plans that track balances identify accruals that add to the plan balance and time offs that subtract from the balance. They specify the unit of time to use for time off requests and accruals. They also specify the default eligibility rules workers must meet to accrue and take time off. Time off plans that track balances identify a period schedule and the plan balance period, and they can specify a carryover limit. Plans that track balances can pass time off to Workday Payroll or Workday Payroll Interface for use in payroll calculations.

All time off, accruals, and other calculation values associated with a time off plan must use the same unit of time.

Steps

1. Access the Create Time Off Plan task.
2. Enter a Name and, optionally, a Display Name.

   Use these fields to identify the time off plan for administrators while displaying a more meaningful name for self-service users. If no display name exists, self-service users see the name of the time off plan.

3. Select Position Based to track time off for workers by position.

   You can't change this setting after time off requests, accruals, or other time off data exist for the plan.

   Workday displays the check box if you configure your tenant to support multiple jobs on the Edit Tenant Setup - HCM task (Position Setup Options field) for 1 or both of these worker types:

   - Contingent workers.
   - Employees.

   If you don't select Position Based, Workday treats the plan as worker-based. Workers on a worker-based plan can still enter their position on time off requests if you select the Require Position on Time Off Request option when creating or editing the time off. For worker-based plans, Workday refers to the worker's primary position when applying eligibility and validation rules, unless your rules reference calculations that Workday applies across all jobs.

   If you select Position Based, you can't use front-loaded or based-on-as-of-date accruals with this time off plan because these service steps don't support position-based plans:

   - *Automated Accrual Adjustment*
   - *Bulk Automated Accrual Adjustment*

   However, you can create a worker-based time off plan and select the Require Position on Time Off Request option on the time off configuration. Worker-based time off plans can use front-loaded or based-on-as-of-date accruals.
4. Select a Period Schedule.

   The period schedule defines accrual frequencies (except for accruals with a custom frequency), and reporting periods for the plan. Plan eligibility rules that refer to period start or end dates also use the period schedule.

   Example: Select *Monthly* to calculate accruals, and to process and track time off requests and adjustments on a monthly basis.

   Note: Don't use daily period schedules in time off plans. Workday recommends that you select a weekly schedule at a minimum.
5. Select Track Balance to enable balance tracking.
6. (Optional) In the Default Payslip Name field, enter the name to use for the time off plan on payslips, if different from the time off plan name.

   This field doesn’t apply to Payroll Interface.
7. Select a Unit of Time.

   A worker can have both hour-based plans and day-based plans, but each plan must use a single unit of time.

   All time off, accruals, limits, and other calculation values associated with a time off plan must use the same unit of time. Workday doesn't convert hourly values to daily values or daily values to hourly.
8. On the Balance tab, consider:

Option	Description
Balance Period	Specify the period of time over which to accumulate balances for accruals, time offs, and the time off plan balance (accruals minus time off). Workday provides most of the balance periods that you need for time off plans; however, you can create your own, if necessary. This field isn't effective dated. If you modify the balance period, Workday applies the new

Option	Description
	balance period starting on the date you created the time off plan.
Balance Visibility	Select a balance visibility option to control whether workers, managers, and administrators can view time off balances. It also specifies the period of visibility after a worker loses eligibility for the plan: • *Eligible in balance period (based on As of Date)*: Display balances if the worker is eligible for time off at any point during the balance period. The balance reflects the *As Of* date that the worker enters to view balances. Example: The balance period is January 1 to December 31. Sue is eligible for time off from January through March. She can view her balances using an *As Of* date in June, but not February 1 of the next year. • *Eligible in period (based on As of Date)*: Display balances if the worker is eligible at any point in the period that includes the *As Of* date. Example: John loses eligibility for time off midway through the January 1 - 31 period. He can see his balances if he selects an *As Of* date of January 31, but not if he selects February 1. • *Eligible in period or prior periods (based on As of Date)*: Display balances if the worker is or was eligible for time off on or before the *As of* date. Workers who are no longer eligible can view time off and accrual totals as of the last period they were eligible. • *Never show balance*. To decide whether to track and display balances for time off plans with intermittent time off, consider if you'll use the intermittent time off to reduce a: • Leave balance. • Leave balance, as well as a time off plan.
Calendar Display	Select to display the time off plan name, the time off type name, or both, with a worker's time off balances.
Hide from Worker Self Service	Select to hide the balance for the time off plan from workers. Useful for balances that

Option	Description
	workers don't need to see, such as Jury Duty or Bereavement.
Overrides Allowed	Enable the balance override for the start date of any period that the worker is eligible for. You can use the Maintain Time Off Plan Override Balances task to configure overrides.
Balance Transfer Default(s)	(Optional) Select which time off plans Workday transfers balances to when a worker loses eligibility for this plan because of a job change. See Steps: Transfer Time Off Balances.

9. In the Carryover section, consider:

Option	Description
Date	Specify when to reset year-to-date balances for time offs and accruals, and carry over remaining time off plan balances: • *Balance Period Start Date*: Carry over balances on the first day of the next time off plan balance period. Typically, this option is appropriate when the period schedule aligns with the start of the plan balance period. • Example: A monthly period schedule and a January to December balance period. Prerequisite: Select a period for Balance Period that has a Period Date Indicator set to *Based on Period End Date*. To verify, click the related actions of the selected balance period to preview the details. • *First Period of Balance Period Start Date*: Carry over balances on the first day of the first period in the next balance period of the plan. Example: Time offs or accruals can occur in a period that spans 2 plan years. This option enables Workday to update the balance for the new year. Example: The balance period (plan year) is January 1 to December 31, 2011. The period schedule is biweekly and the December 24, 2011 - January 4, 2012 period crosses 2 plan years. • If you select *Balance Period Start Date*, carryover occurs on January 1, 2012. • If you select *First Period of Balance Period Start Date*, carryover occurs on December 24, 2011.

Option	Description
	Carryover occurs before accruals when both happen the same day.
Limit	Specify the maximum number of units workers can carry over from 1 balance period to the next. Example: A constant value of 10 days or a calculation that returns 50% of the balance from last year. To ensure that carryover balances expire, enter a value. If workers can carry over their full balance, enter a value that they can't reach based on the plan accrual, such as 999999999 Days. Units that exceed the limit display as *Carryover Forfeited* throughout Workday.
Amount of Time before Expiration	The number of days or months after the carryover date that carryover units expire. Select a constant value, such as 15, or a conditional calculation. • Leave this field empty if carryover units never expire for any workers. • Use a conditional calculation that returns zero, if carryover units only expire under certain conditions. Examples: ◦ Carryover units for full-time workers expire after 30 days but never expire for part-time workers. Define a calculation that returns 30 for full-time workers and zero for part-time workers. ◦ Carryover units for the 2014 balance period never expire, but expire after 30 days beginning with the 2015 balance period. Create a calculation that returns zero for the 2014 balance period and 30 days for the balance periods that follow.
Unit of Time for Expiration	Select *Days* or *Months* as the unit of time for measuring the expiration date. Example: If carryover units expire 2 months after the carryover date, select: • *2* for Amount of Time Before Expiration. • *Months* for Unit of Time for Expiration.
Include Carryover in Time Off Plan Balance Upper Limit Calculation	Select the check box to include carryover units in the upper limit calculation.

Option	Description
	Example: You can configure a time off plan where carryover expires after 3 months and doesn't force the worker's balance to exceed the plan configuration.
Use Time Off Accrual Before Carryover Balance	Select the check box to have time off requests reduce a worker's accrued time off before their carryover balance. If the check box is unchecked, the time off requests reduce the carryover balance before the accrual.

Use the Maintain Time Off Plan Carryover Overrides task to override the time off plan defined carryover rule for an individual worker. See .

10. On the Calculation tab, select an Accrual Frequency Method for Time Off Plan option to specify when to add the accrual to a worker's plan balance:

    - *Start of Period*: Before subtracting time off. Valid for front-loaded and based-on-as-of-date accruals.

      Note: Workers often reach upper limits sooner and lower limits later than if you use *End of Period*.
    - *End of Period*: After subtracting time off. Invalid for front-loaded accruals. Valid for based-on-as-of-date accruals.
    - *Custom Frequency*: Add accrual on the dates that you define in the next 3 fields. Invalid for based-on-as-of-date accruals or front-loaded accruals.

11. If you selected *Custom Frequency* for Accrual Frequency Method for Time Off Plan, define the frequency.

    On the Calculation tab, consider:

Option	Description
First Accrual Date	Select the calculation that returns the first date of the accrual, such as *Worker: Hire Date* or *Worker: Time Off Service Date*, or create a date calculation to return this date. Example: Create a date increment/decrement calculation that returns a worker's hire date plus 30 days. The accrual occurs on the last day of the month, if both are true: • The hire date falls on the 31st day of the month. • The next month has fewer than 30 days. Workers must still meet scheduling criteria for the accrual to occur on this date.
Accrual Recurs Every	Enter the number of recurring units of time (days or months) after the first accrual date when the accrual is to occur. Example: Enter *1* if the accrual occurs every month on the anniversary of the first accrual date.
Accrual Recurs Unit of Time	Specify if the recurrence interval represents *Days* or *Months*.

12. On the Calculation tab, consider:

Option	Description
Time Off Plan Balance Lower Limit	Control how much time off to pay when workers exceed their available balance. Select a constant value, such as -40 hours or 5 days, or a calculation to define the amount. Workday considers the time off units that reduce the balance below the limit as unpaid. Example: The vacation plan has a lower limit of -16 hours. John uses all of his vacation time (balance = zero) and then takes 10 more hours. Workday pays all 10 hours because they all fall within the lower limit. However, if John requests an additional 10 hours, Workday pays only 6 of them and tracks the remaining hours as unpaid time. You can use time off validation rules to prevent workers from requesting unpaid time off. Enter zero to indicate that Workday shouldn’t pay time off when workers reduce their time off balance to zero. Enter a negative value to enable workers to receive paid time off when their balance falls below zero.
Time Off Plan Balance Upper Limit	Specify the maximum number of hours or days workers can accumulate in their time off plan balance. You can also select a calculation that returns the amount. The balance amount that exceeds the limit displays as *Forfeited* accrual hours on Workday pages and reports.
Daily Quantity Default	Select a default value to display when you enter time off for this plan. If you select a conditional calculation, the default quantity is based on the first day requested. Examples: • You can use calculations that return a worker's scheduled hours, or 8 for workers without a schedule. Jane enters a request for personal time off for Monday, Tuesday, and Friday. Because she's scheduled to work 4 hours on Monday, the default quantity for each day of the request is 4. • Arithmetic calculations such as*Scheduling Worker - Scheduled Shifts: Shift Hours (Based on As of Date) no rounding* enable you to configure dynamic values to guide workers to enter correct values.

Option	Description
	To define a default quantity for a time off that overrides the default quantity of the plan, use the Create Time Off or Edit Time Off tasks. Workday generates an error if the generated quantity either: • Exceeds the maximum validation value. • Causes a request to fail other validations that you defined.
Days to Include	Workday automatically checks your selected days against the time off validations and the options that you select for this field. Your selections, together with the Restrict Requests to Days to Include on Calendar check box, control the days for which workers can enter time off. The *Workdays (Non-Holiday)* and *Workdays (Work Hours exceed Holiday Hours)* options require you to set up holiday and work schedule calendars. When you select the *Configure Days To Include* option, you can: • Select specific days from the Included Days prompt. Workday counts these days when workers request time off. Example: The Global Modern Services international office doesn't have Monday to Friday as the standard working week. Using this option they define Sunday to Thursday as the working week. • Specify that time off is available on a public holiday. Select the Include Holidays from Holiday Calendar check box.
Use Scheduling Shifts	Select to determine working days from Workday Scheduling. When workers are part of a scheduling organization, and have a published schedule for the week of their time off request, Workday uses the published schedule, otherwise Workday considers the Days to Include configuration on the time off plan. Workday uses the work schedule calendar when Days to Include is *Workdays (Non-Holiday)*. Although Workday Scheduling supports multiple positions, you can't select this check box on position-based time off plans. However, when you select Use Scheduling Shifts on a worker-based time off plan, and a worker with multiple positions requests time off against the plan, if there's a published schedule for the

Option	Description
	week for the worker for any position, Workday prevents them requesting time off on days that they're scheduled to work.
Restrict Requests to Days to Include on Calendar	Applies when using the Request Absence and Enter Absence tasks: • Select to restrict time off requests to the days specified by Days to Include option. • Clear to enable workers to enter time off for any day. Select Include All Selected Days to include days outside of the Days to Include selection.

13. On the Accrual tab, select the accruals that add to the time off plan balance.

    The grid identifies whether the selected accruals have an accrual frequency, eligibility rule, or upper limit that overrides the plan rules.

14. On the Time Off tab, associate time offs with the plan in the Subtracts from Balance grid.

    The override check boxes identify time offs that have an eligibility rule, lower limit, or quantity default that differs from the plan rules. The time off rules override the plan rules.

15. (Optional) In the Payout Time Offs section, consider:

Option	Description
Time Off for Balance Transfer Adjustment	Workday uses the time off to create an adjustment that offsets the plan balance when a worker loses eligibility because of a job change.
Time Off for Termination Adjustment	Workday uses the time off to create an adjustment that offsets the plan balance at termination.
Time Off for Forfeiture Adjustment	Workday uses the time off to create adjustments that offset the defined Forfeited Type on the Forfeiture Options tab of the time off.

16. On the Eligibility tab, consider:

Option	Description
Enabled for Worker Type Plan Eligibility	Specify whether the time off plan is available for employees, contingent workers, or all workers.
Country/Country Region	Select the countries or country regions in which the time off plan applies. This setting limits the number of eligibility rules that Workday must evaluate for a worker. It filters time off plans by country or country region before evaluating other eligibility criteria: • Position-based time off plans evaluate the location associated with each of a worker's positions.

Option	Description
	• Worker-based time off plans evaluate the location associated with the worker's primary position. Time off plans evaluate the location as of the period start date or the period end date. If your country eligibility rules are more specific, you must define additional eligibility rules. Example: Workers must live in the specific country as of the period end date. You can set the Country/Country Region for some or all of your time off plans with the Maintain Time Off Plan Country/Country Region Eligibility task.
Country/Country Region Enabled for All Positions	(Optional) Available for worker-based time off plans only. Workday overrides this setting when you also select Require Position on Time Off Requests on time offs on the plan. Select to enable workers on international assignment to select the time off plans for their current assignment. You can select this option if you enable Country/Country Region values for the worker's country. Example: Marc works in Toronto, but goes on an international assignment to China. He becomes eligible for the *China Vacation* plan, but can't access the plan when requesting time off. The administrator has enabled the *China Vacation* plan in the Country/Country Region field. However, to make the *China Vacation* plan available for Marc, you need to select the Country/Country Region Enabled for All Positions check box. Workday automatically checks for country or country region plans that Mark is eligible for.
Worker Eligibility	Select additional eligibility criteria for the time off plan. These eligibility rules apply to all time offs that you associate with the plan, unless you define additional rules for a specific time off.

Example

Effects of Days to Include Option: Restrict Requests to Days to Include on Calendar	Cynthia wants to take *Vacation* time off on Friday and the next Monday. On the calendar, she selects the date range of Friday through Monday. The Days to Include option for the *Vacation* plan is *Weekdays (Mon - Fri)*.

	Workday processes time off requests differently depending on the Restrict Requests to Days to Include on Calendar check box setting. If you: • Select it, Workday considers that Cynthia is requesting time off for 2 days. • Clear it, Workday displays the Include All Selected Days check box when workers enter time off. If Cynthia selects it, Workday considers her requesting time off for 4 days.
Effects of Days to Include Option: Configure Days to Include	Workday processes time off requests differently depending on the Include Holidays from Holiday Calendar check box and Included Days settings. When you: • Select Include Holidays from Holiday Calendar, Workday only includes days that you select in the Included Days prompt that are a holiday. • Clear it, Workday doesn't include any days that you select in the Included Days prompt that are a holiday. As an HR Administrator for Global Modern Services, you select the Include Holidays from Holiday Calendar check box. A holiday occurs on a Friday. However, because you only selected *Saturday* and *Sunday* from the Included Days prompt, when processing a time off request for Friday, Saturday, and Sunday, Workday doesn't include Friday.

Next Steps

- Review the All Time Off Plans report to verify the configuration of the time off plan.
- Run the Evaluate Absence Calculation task to validate calculations for an eligible worker.

Create Time Off Plans That Don't Track Balances

Prerequisites

- Create time offs.
- Create period schedules if plan eligibility rules refer to period start or end dates.
- Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.

Context

Time off plans that don't track balances include 1 or more time offs. They specify the unit of time for recording and processing time off requests and the default eligibility rules for taking time off.

Steps

1. Access the Create Time Off Plan task.
2. Enter a Name and, optionally, a Display Name.

   Use these fields to identify the time off plan for administrators while displaying a more meaningful name for self-service users. If there’s no display name, self-service users see the time off plan name.
3. To enable entering time off requests by position, select the Position Based check box on the Balance tab.

   You can't change this setting after time off requests, accruals, or other time off data exists for the plan.

   Workday displays the check box if you configure your tenant to support multiple jobs on the Edit Tenant Setup - HCM task (Position Setup Options field) for 1 or both of these worker types:

   - Contingent workers.
   - Employees.

   Select the worker's position when the time off plan is position-based. Workday bases eligibility and validation rules on the position for the time off request. But, you can also define these rules to reference the worker's primary position or all positions.

   If you don't select Position Based, Workday treats the plan as worker based. Workers on a worker-based plan can still enter their position on time off requests when you select the Require Position on Time Off Request option. Workday refers to the worker's primary position when applying eligibility and validation rules, unless your rules reference calculations that Workday applies across all jobs.

   If you don't select Track Balances, Workday doesn't track balances for the time off plan. You can't change this setting after you save this new time off plan.
4. On the Calculation tab, consider:

Option	Description
Unit of Time	A worker can have both hour-based plans and day-based plans, but each plan can use only 1 unit of time.
Period Schedule	Select only if an eligibility rule refers to a period start date or end date. Example: If a worker must be full-time as of the current period start date to participate in a time off plan, you must select a period schedule.
Days to Include	Controls which days to include in time off requests, by default. It works with the Restrict Requests to Days to Include on Calendar

Option	Description
	check box to control the days on which workers can enter time off. The *Workdays (Non-Holiday)* and *Workdays (Work hours exceed Holiday hours)* options require the setup of holiday and work schedule calendars.
Restrict Requests to Days to Include on Calendar	Applies when using the calendar for the Request Time Off and Enter Time Off tasks: • Select to restrict time off requests to the days specified by Days to Include option. • Clear to enable workers to enter time off for any day. Select Include All Selected Days to include days outside of the Days to Include selection.
Daily Quantity Default	Select a default value to display when you enter time off for this plan. If you select a conditional calculation, the default quantity is based on the first day requested. Example: You select a calculation that returns a worker's scheduled hours, or 8 for workers without a schedule. Jane enters a request for personal time off for Monday, Tuesday, and Friday. Because she's scheduled to work 4 hours on Monday, the default quantity for each day of the request is 4. To define a default quantity for a time off that overrides the default quantity of the plan, use these tasks: • Create Time Off • Edit Time Off Workday displays an error if the automatically populated quantity either: • Exceeds the maximum validation value. • Fails other validations that you defined.

5. On the Time Off tab, associate time offs with the plan in the Subtracts from Balance grid.

   The override check boxes identify time offs that have an eligibility rule, lower limit, or quantity default that differs from the plan rules. The time off rules override the plan rules.
6. On the Eligibility tab, consider:

Option	Description
Enabled for Worker Type Plan Eligibility	Specify whether the time off plan is available for employees, contingent workers, or all workers.
Country/Country Region	Select the countries or country regions in which the time off plan applies. This setting limits the number of eligibility rules that Workday must evaluate for a worker. It filters time off plans

Option	Description
	by country or country region before evaluating other eligibility criteria. • Position-based time off plans evaluate the location associated with each of a worker's positions. • Worker-based time off plans evaluate the location associated with the worker's primary position. Time off plans evaluate the location as of the period start date or the period end date. If your country eligibility rules are more specific, you must define additional eligibility rules. Example: Workers must live in the specific country as of the period end date. You can set the Country/ Country Region for some or all of your time off plans with the Maintain Time Off Plan Country/ Country Region Eligibility task.
Worker Eligibility	Select additional eligibility criteria for the time off plan. These eligibility rules apply to all time offs that you associate with the plan, unless you define additional rules for a specific time off.

Example

Effect of Days to Include Option when Entering Time Off through the Calendar	Cynthia wants to take Vacation time off on Friday and the following Monday. On the calendar, she selects the date range of Friday through Monday. The Days to Include option for the Vacation plan is *Weekdays (Mon - Fri)*. If the Restrict Requests to Days to Include on Calendar check box is: • Selected, Workday considers that Cynthia is requesting time off for 2 days. • Cleared, Workday displays the Include All Selected Days check box. If Cynthia selects it, Workday considers that she's requesting time off for 4 days.

Tasks

Steps: Set Up Time Off Plans on page 2276

Examples

Steps: Create Calendars

The Next Level: PATT Touchpoints with Assignments

Change Absence Partner Role Assignments

Prerequisites

- Configure the *Assign Roles* business process and security policy in the Organizations and Roles functional area.
- Security: *Manage: Supervisory Organization* domain in the Organizations and Roles functional area.

Context

When an absence partner supports their own supervisory organization, you can change the worker who has the *Absence Partner* role for that organization. This prevents absence partners seeing the time offs in time off segments secured by the *Absence Partner* role when requesting time off in an employee self-service context.

Steps

1. Access the View Supervisory Organization report and select a supervisory organization. Example: Property Management.
2. Select the Roles tab of the supervisory organization.
3. In the Assigned To column, drill into the worker assigned to the *Absence Partner* role for that organization and select the Supervisory Organization that the worker belongs to.
4. On the Members tab, identify a different absence partner who you can assign as the *Absence Partner* for the absence partner's own supervisory organization.
5. Drill into the worker to access the worker's profile.
6. In the Job Details section, from the related actions menu of the Position, select Roles > Assign Roles - Add/Remove.
7. Add a row and specify values for these prompts:

Field	Value
Role Enabled For	Select a different supervisory organization. Example: A Benefits organization.
Role	*Absence Partner*

Setup Considerations: Roles

Setup Considerations: Role-Based Security Groups

Concept: Relationship of Time Off Plan Components

A time off plan defines rules for entering and tracking 1 or more related time offs. When you set up time off plans, workers and managers can enter time off requests, correct requests, and track the status of requests through self-service pages and reports. Administrators can track, adjust, and manage accrual, time off, and time off plan balances.

Components of Time Off Plans

To build a simple plan that supports basic time off entry and approval, create time offs and add them to a time off plan.

Time off plans that track accrual and time off balances include additional components:

- Time offs
    - Time off types
    - Validation text
- Accruals
- Balance Period
- Period Schedule

Time Off Priorities and Accruals

When a period includes an accrual with a custom frequency, Workday processes time offs by priority for the days taken before the accrual. Workday processes time offs taken after the accrual separately.

The accrual for Lisa's time off plan occurs on the 15th of each month. Lisa requests:

- March 4: Sick time (priority 3).
- March 5: Vacation (priority 1).
- March 20: Floating holiday (priority 2).
- March 21: Vacation (priority 1).

Before processing the accrual, Workday processes the time off in this order:

- March 5 vacation.
- March 4 sick time.

After processing the accrual, Workday processes the time off in this order:

- March 21 vacation.
- March 20 floating holiday.

Concept: Entering Time Off in Absence and Time Tracking

You can configure time offs so that workers can enter them through Absence, Time Tracking, or both. On the Create Time Off task, the entry options are represented as:

- *Enter through Time Off Only*
- *Enter through Time Tracking Only*
- *Enter through Time Tracking or Time Off*

Absence and Time Tracking handle time off entry in different ways. Time offs entered in Absence follow the *Request Time Off* business process and time offs entered in Time Tracking follow the *Enter Time* business process. Time offs that can be entered in both Absence and Time Tracking follow whichever business process was used to enter the time off.

These are some considerations to take when deciding which entry option to apply to a time off:

Consideration	Entered through Time Off	Entered through Time Tracking
Time off approvals	Reviewers approve time offs separately from time entries. When you approve time entries, time offs aren't included in task totals for submitted time inMy Tasks.	Reviewers approve time offs and time entries in the same event. All hours are included in the task totals for submitted time in My Tasks .
Viewing balances when approving	Approvers can see time off balances as of the current date.	Approvers can't see time off balances.
Submitting time off across weeks	You can request a time off that spans multiple weeks in one request.	If a time off request spans multiple weeks or time periods,

Consideration	Entered through Time Off	Entered through Time Tracking
		you must submit each week or time period separately.
Submitting different time off types	You must submit a separate request for each time off type.	You can enter and submit multiple time off types within a single week or time period.
Time Tracking calculations	If your tenant is configured for it, approving a time off request causes Time Tracking to recalculate time for any overlapping weeks. If this recalculation causes any approved time blocks to update, you must re-submit them for approval. If your tenant doesn't automatically run time calculations upon time off approval, you must recalculate each worker's time in Time Tracking.	Calculations automatically trigger when you enter the time off on the time entry calendar.
Entering In/Out times	You can't record In/Out times for time offs.	You can record In/Out times for time offs.
Mass Entry	You can load time offs into Absence using the *Enter Time Off* web service.	You can't load time offs into Time Tracking using a web service.
Attachments	You can configure the *Request Time Off* business process to allow or require workers to attach supporting documents to time off requests. You can control who has access to the documents using segment-based security groups.	You can attach documents to individual time blocks. The *Enter Time* business process doesn't support attachments.
Future-dated time off	Absence Management period schedules are typically built out at least a few years into the future to allow for balance forecasting. As long as a period schedule exists for a date in the future, you can request time off for that date. You can use business process validations to restrict the submission (but not entry) of future-dated time off requests.	Time Tracking period schedules can be configured to open a week or period for time entry as of a specific date. This is typically not very far into the future so as to promote accurate time entry. You can enter time offs when a Time Tracking period is open. If you enter and approve a future-dated time off and then you add or change time for that week or time period when it becomes current, you must resubmit and reapprove that week or time period.

Consideration	Entered through Time Off	Entered through Time Tracking
Retroactive time off	As long as a period schedule exists for a date in the past, you can request time off for that date. You can also use business process validations to restrict the submission (but not entry) of past-dated time off requests.	Time Tracking period schedules can be configured to lock for payroll processing and also permanently close a week or period for time entry as of a specific date. You can't enter a time off when a Time Tracking period is locked or closed for time entry.

Tasks

Steps: Set Up Time Offs on page 2278

Concept: Eligibility for Time Off Plans, Time Off, and Accruals

Workers are eligible for time off and accruals based on:

- The eligibility rules that you add to a time off plan.
- The eligibility fields on the time off plan.

Workday first evaluates worker eligibility for a time off plan before evaluating eligibility rules associated with the time off plan.

- Eligibility Rules
- Pointers for Defining Eligibility Rules
- And/Or Logic
- Time Off Plan Filters
- Where to Add Eligibility Criteria

Eligibility Rules

You can create calculations to use as eligibility rules on time off plans. The eligibility rules specify the conditions that workers must meet for a period to take time off and accrue it. Each rule identifies:

- The condition.
- When the worker must meet the condition such as the period start date or period end date.

Example: Employees must work full-time at Global Modern Services as of the period start date. Employees who meet this condition remain eligible for the time off plan for the entire period. Even if they switch to a part-time position or change companies later in the period.

By default, all accruals and time off associated with a time off plan have the same eligibility criteria as the plan. If eligibility criteria for a particular accrual, or time off, differ from the plan, you can configure the accrual or time off to override the eligibility criteria of the plan.

Additionally:

- The only eligibility criteria that you need to define for a time off plan is the worker type. All workers of the specified type are eligible for the plan, including accruals and time off, if:
    - The time off plan has no other eligibility criteria.
    - The time off and accruals have no eligibility override instructions.

- When an accrual has eligibility override instructions, workers must meet the accrual eligibility criteria (not the plan) to receive the accrual.

  Example: Workers must work full-time to be eligible for the time off plan. Full-time workers with 2 or more years of service are eligible for a bonus accrual within the plan. Override criteria for the bonus accrual must specify that the worker:

  - Is full-time.
  - Has completed 2 or more years of service.
- Workday checks a worker's eligibility for a time off during the entry of a time off request. The Type prompt displays only those time offs that the worker is eligible for, on either:

  - The request date.
  - The first day of the request, if using the calendar to select multiple dates for the same request.

  Workday also checks eligibility for each date requested through the calendar, displaying an error message when a worker isn't eligible for dates within the request.
- For intermittent time off, a worker must meet the eligibility criteria for both the time off and its related leave. Workday applies the time off eligibility rules first.

Pointers for Defining Eligibility Rules

You can use instance set comparison calculations, logic calculations, and value comparison calculations to define eligibility criteria. Workday delivers calculations and report fields that you can use within your own calculations, most of which are based on the period start date or period end date. The dates depend on the period schedule of the time off plan.

When defining eligibility criteria:

- Ensure they cover workers hired or terminated midperiod, if they're eligible for a plan.

  Example: Your eligibility criteria specify that workers must be full-time as of the period start date. Consequently, you add criteria for newly hired workers based on period end date. Conversely, you base criteria for most workers on period end date. You then include criteria for terminated workers based on period start date.
- Understand how to use And/Or logic.
- If using Workday-owned calculations and report fields, use the calculations and report fields in the *Absence* or *Common* category.

  Don't use calculations related to subperiods as they are for Payroll use only.
- If you use custom organizations in your time off rules, avoid using:

  - Report fields involving default organizations.
  - Custom organizations having dynamic membership rules that return more than 3,000 workers or that Include Subordinate Organizations in Rule.

    Workday recommends that you use static or semidynamic usages for membership rules that return more than 3,000 workers. Alternatively, use another organization report field that returns a subset of the workers eligible for a plan.
  - Calculations must use the period start date or include an additional calculation to check that the worker isn't terminated as of the period end date. This avoids terminated workers inadvertently becoming eligible for time off plans, time offs, accruals, or both.

And/Or Logic

When you define eligibility rules, you can select one or more calculations in the same row or in different rows. This distinction is important:

- AND logic applies to criteria in the same row.
- OR logic applies to criteria in separate rows.

When criteria are in a single row, workers must meet all criteria (AND logic). When you define multiple rows of criteria, a worker must meet all criteria in at least 1 row (OR logic).

Criteria with AND logic	Example: Employees must work for GMS Company AND have an employee type of *Regular* to qualify for time off. Worker Eligibility Company = GMS Employee Type is Regular
Criteria with OR logic	Example: Employees must work for GMS Company OR have an employee type of *Regular* to qualify for time off. Worker Eligibility Company = GMS Employee Type is Regular
Criteria with both AND/OR logic	Example: Employees must work for GMS Company AND have an employee type of *Regular* OR they must work for ABC Company. Worker Eligibility Company = GMS Employee Type is Regular Company = ABC

When eligibility criteria consist of more than 1 row, list more inclusive rules first to improve performance. Example: If employees must have a location of either the United States or Mexico and most employees are in the United States, list it first.

Time Off Plan Filters

You can enable a time off plan for different worker types as well as individual countries or country regions. Position-based time off plans evaluate the location associated with each of a worker's positions. Worker-based time off plans evaluate the location associated with the worker's primary position.

Time off plan filters don't consider period start dates or period end dates. You might need to define more specific eligibility rules to add to the plan.

When defining time off plan eligibility criteria, keep in mind:

- AND logic applies to criteria in the same row.
- OR logic applies to criteria in different rows.

A few examples of the effects of different combinations of time off plan filters and eligibility rules include:

Country/Country Region	Eligibility Rule	Eligible Workers
France	None	Workers located in France as of the period start date OR the period end date.

Country/Country Region	Eligibility Rule	Eligible Workers
France	*Country Location as of Period End Date = France*	Workers located in France as of the period end date.
France	*Pay Rate Type as of Period End Date = Hourly*	Workers located in France as of the period end date OR workers located in France as of the period end date AND whose pay rate type is hourly.

Where to Add Eligibility Criteria

Define eligibility for a time off plan on the Eligibility tab of the Create Time Off Plan page.

Override the criteria defined for a plan using the Time Off Plan Overrides tab of the Create Time Off task or the Create Accrual task.

You can use the:

- Evaluate Absence Eligibility report to test whether a worker is eligible for a time off plan, time off, or accrual as of a date.
- View Worker Time Off Eligibility by Organization report to view absence eligibility details for active workers within the selected organizations as of the current day.

Concept: Effective Dating for Absence

When creating a new time off plan, you must select an effective date to create a dated configuration snapshot. Additionally, when editing an existing accrual, time off, or time off plan, you’re prompted to edit an existing or create a new effective-dated snapshot. You can select from period start dates that derive from the period schedule of the Time Off plan.

Only fields in the tabbed sections of these tasks are effective-dated:

- Create Time Off Plan
- Edit Accrual
- Edit Time Off
- Edit Time Off Plan

The Absence Configuration Snapshots report enables you to compare configurations across snapshots for an absence setup object.

Example: Effective Dating a Time Off Plan

Your local government introduces eligibility for time off for the birth of a child or to care for a family member with serious illness. The update is effective January 1 of the next year. Enter 1/1/2019 as the effective date for your time off plan while using the Edit Time Off Plan task to make the necessary updates.

Example: Effective Dating a Time Off

Your company introduces a minimum time off validation per day, effective from the first day of March. Enter 1/3/2018 date as the effective date when using the Edit Time Off task to make the necessary updates.

Example: Effective Dating an Accrual

Your company increases the annual leave accrual amount, effective January 2019. Update the accrual calculation using the Edit Accrual task, effective 1/1/2019.

Example: Deleting an Effective-Dated Snapshot

In a Nonproduction environment, you create an absence set up object snapshot effective-dated August 1, 2020. You realize that the snapshot should be effective-dated June 30, 2020, but you can't change the date. You can delete individual snapshots, but only in Nonproduction environments.

Workday recommends that you thoroughly test your configuration in a Nonproduction environment before you move it to Production.

Access the Absence Configuration Snapshots report.

From the related actions menu of the snapshot you want to delete, select Calculation > Delete.

Use Object Transporter to migrate snapshots related to the absence configuration object you want to migrate. Object Transporter:

- Migrates all new snapshots.
- Migrates changes to existing snapshots.
- Overwrites the configuration for the existing snapshot in Production.

If you delete a snapshot in the Nonproduction environment before migrating the object, Object Transporter won't delete the corresponding snapshot in Production.

You can't use Object Transporter to change the effective date or delete an existing snapshot because it can cause unforeseen consequences and bad data.

Effective Dated Service Dates: Absence Implications

Effective Dated Service Dates: Absence Implications Part 2

Concept: Using Effective Dated Service Dates in Absence

Effective Dating in Service Dates enables you to define an effective date when making service date changes. To take advantage of this feature within time off calculations, we recommend that you review your calculations that reference service date fields and consider updating any that don't make reference to Recent *Service Date* as of Period Start Date or Recent *Service Date* as of Period End Date. You can use service date fields within accrual calculations and time off plan eligibility.

Using non-effective-dated service date fields can result in unexpected impacts for rehires or workers who had their service dates adjusted during their employment. When using service date fields in time off calculations within instance value calculations (IVCs) such as Worker: Continuous Service Date, the calculations return the latest top-of-stack service date change, regardless of the calculation being evaluated in a previous period that had an earlier service date value. The result of this behavior is that when modifying a service date value, the change takes effect across both future and historical periods. This is particularly problematic when a worker is rehired or acquired from another organization and their accrual history needs to reflect the service date history and not just the latest service date.

To address this behavior, Workday delivers alternative IVCs that accurately reflect the historical service date changes for a worker within time off and accruals. These IVCs evaluate the service dates as of the period start or period end date instead of returning the latest service date change. These IVCs have a naming convention of Recent *Service Date* as of Period Start Date or Recent *Service Date* as of Period End Date.

Review your current calculations that reference service date fields, paying particular attention to eligibility and accrual configuration. If you're unsure where you're referencing service dates in your configuration, you can use the View Instance Value Calculation (Workday Owned) report to view the IVCs and then check their usage to see where they're referenced.

Take note when you find references to service dates in your calculations and include them in your testing scenarios. Check whether the calculation uses the recommended IVC that evaluates the effective date of the service date field as of the period start date or period end date. Some commonly used service dates within Absence are:

Non-Effective Dated IVC	Recommended Effective Dated IVC
Worker Continuous Service Date	• Recent Continuous Service Date based on Period Start Date • Recent Continuous Service Date Based on Period End Date
Worker Hire Date	• Recent Hire Date as of Period Start Date • Recent Hire Date as of Period End Date
Worker Seniority Date	• Recent Seniority Date Based on Period Start Date • Recent Seniority Date Based on Period End Date
Worker Time Off Service Date	• Recent Time Off Service Date Based on Period Start Date • Recent Time Off Service Date Based on Period End Date
Worker Union Seniority Date	• Recent Union Seniority Date Based on Period Start Date • Recent Union Seniority Date Based on Period End Date

If you're using calculations within Absence components in your tenant that don't reference the most recent service dates, validations in the Tenant Analyzer enable you to identify them. On the Tenant Analyzer, you can navigate to the *Calculations* row under the Area column of the Absence > Validation tab to view components that need your attention. Review the components in the Instances Failing Validation column to find out where you can replace existing calculations with instance value calculations that reference the most recent service date.

When making changes to calculations, it's important to consider the impact to any worker's time off balances. Consider effective date changes as well as a review of any balances persisted by the processes for calculating and recalculating balances. See:

- Concept: Guidelines for Storing Time Off Balances
- Recalculate Balances for Workers

Ensure that you test calculations that make reference to service dates when adopting the Effective Dating in Service Dates feature. In particular, consider these test scenarios:

- Rehired workers.
- Terminations.

- Workers with changes to their service dates, both retrospectively and future-dated.
- Midperiod hires.

When using the Effective Dating for Service Dates feature, you must enter an effective date when initiating a service date change. If you populate the effective date with the initiation date, you won't see a change in the behavior of your calculations that reference service dates.

Concept: Time Off in Workday Assistant

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Workers can use Workday Assistant to request time off, view time off balances, correct time off, and view holiday schedules. You can disable time off capabilities on the Edit Tenant Setup - Assistant task.

Workers can:

- Enter time off for days in the past, present, and future.
- Add comments to time off requests by clicking Edit or add details.
- Correct and delete approved time off requests for future dates.
- Group time off requests in absence tables.

When workers:

- Request time off, Assistant recognizes date formats depending on users' preferred locales. Example: If an American worker enters 10/15/22 and a German worker enters 15.10.22, Workday Assistant interprets both time off requests correctly as October 15, 2022.
- View their time off balances, Assistant displays up to 20 balances and provides a link to the Absence Calendar when they've more than 20.

You can enable workers to request time off by adding the *Employee as Self* security group to these permissions in the Time Off and Leave functional area:

- Initiating action permissions on the *Request Time Off* business process.
- Request Time Off (REST Service) permissions on the *Request Time Off* business process. You must configure this to enable workers to request time off in Assistant.

You can enable workers to correct time off by adding the relevant security group to the initiating action for the Correct Time Off Entry (REST Service) on the *Correct Time Off* business process security policy.

Workday Assistant doesn't support:

- Business process comments.
- Consecutive-day time off requests that spans multiple time off types.
- Time offs configured with Start Time and End Time.
- Time offs that workers can only enter through Time Tracking.

Reference: Tips for Configuring Time Off Entry Validations

When you create time offs or absence tables, you can define validation rules to prevent users from entering invalid requests. This topic provides tips and guidelines for creating validations.

Use the same units in validation rules and time off plans.	Example: If the unit of time for a vacation plan is *day*, use 0.5 as the increment value for workers entering half-days.
Avoid conflicting rules.	Example: You can define a validation rule that requires workers to enter vacation time in increments of 4 hours. You can also define a separate set of rules defining the minimum *and* maximum vacation entry as 8 hours. The increment rule is unnecessary because the maximum and minimum rules prevent vacation requests that are less than 8 hours.
Ensure that rules of the same type apply to different sets of time off types.	If you define validation rules of the same type, make sure that the rules apply to different sets of time off entries. Example of conflicting rules: • Maximum vacation entry = 8 hours (Time Off Entries to Include = *Individual Time Off Entry)* • Maximum vacation entry = 12 hours (Time Off Entries to Include = *Individual Time Off Entry)* Rules that don't conflict: • Maximum vacation entry = 8 hours (Time Off Entries to Include = *Individual Time Off Entry)* • Maximum vacation entry = 12 hours (Time Off Entries to Include = *All Time Off Entries for Worker (for Time Off Validation Set) for Same Date)* where the validation set includes vacation and floating holiday.
Apply maximum and multiple request rules consistently.	If you apply maximum or multiple request rules to a validation set, each time off must have the same limits and include the same time offs. Otherwise, the same combination of time off requests that is valid in 1 situation might not be valid in another. Example: These rules exist for vacation and floating holidays:

Time Off	Maximum Request	Time Off Entries to Include	Time Off Validation Set
Vacation	8	All Time Off Entries for Worker (for Time Off Validation Set) for Same Date	• Vacation • Floating Holiday
Floating Holiday	8	All Time Off Entries for Worker (for Time Off Validation Set) for Same Date	• Floating Holiday

Workday applies a different maximum depending on the order of the time off entries:

- Bob enters 8 floating holiday hours and later requests 8 vacation hours for the same day. Workday denies the second request because the vacation rule limits the sum of vacation and floating holiday hours to 8.
- If Bob entered the vacation hours first, both requests would go through. Requests for floating holiday don't trigger the 8-hour maximum for combined vacation and floating holiday time.

To apply these rules consistently, make the floating holiday rule identical to the vacation rule. Change the validation set to include both floating holiday and vacation.

Set a maximum for the sum of entries for the same time off and same day.

To apply a maximum time off limit to the sum of all time off entries for a time off (Example: To all vacation entries for a day):

- Select *All Time Off Entries for Worker (for Time Off Validation Set) for Same Date* in the Time Off Entries to Include field.

  Don't select *Individual Time Off Entry*. If you do, the maximum applies to each time off request.

	• Include only vacation time off in the Time Off Validation Set.
Prevent multiple entries for the same time off and same day.	Select *All Time Off Entries for Worker (for Time Off Validation Set) for Same Date* in the Time Off Entries to Include field. Include only the selected time off in the Time Off Validation Set. The restriction applies even if you don't meet the maximum time off request. Example: If the maximum vacation request is 8 hours and workers enter 4 hours, they can't enter additional vacation requests for the same day.
Base maximum time off on work and holiday schedules using Workday-provided calculation rules.	This setting can be especially useful for workers with variable work schedules. Examples: • A worker is on the schedule to work 12 hours on a given day. The rule retrieves and enforces a time off maximum of 12 hours for that day. • A worker is on the schedule to work 8 hours and enters a request for 12. The rule enforces a limit of 8 hours. • A worker accidentally enters a request for 8 hours on a holiday. The rule enforces a limit of zero hours. This table lists delivered calculation rules and usage guidelines. To use a rule, select it in the Value field on the Validations tab of the Create Time Off page.

Calculation Rule Name	Time Off Plan Units	Required Calendars	Maximum Value Returned
Worker Holiday/ Work Schedule Calendars: Scheduled hours to work EXCLUDING holiday hours if positive, else 0 (no rounding)	Hours	Work Schedule Holiday	Greater of zero or the total number of scheduled work hours minus holiday hours.
Worker Work Schedule Calendar: Workday	Hours	Work Schedule	Number of scheduled work hours.

Calculation Rule Name	Time Off Plan Units	Required Calendars	Maximum Value Returned
hours for date (based on As of Date) no rounding			
Worker Holiday Calendar: 0 if date is a holiday, else 8 You can copy the rule and change the maximum to any hourly value.	Hours	Holiday	Zero if the time off date is a holiday and 8 if the time off date isn’t a holiday.
Worker Holiday Calendar: 0 if date is a holiday, else 24 You can copy the rule and change the maximum to any hourly value.	Hours	Holiday	Zero if the time off date is a holiday and 24 if the date isn’t a holiday.
Worker Work Schedule/ Holiday Calendars: 1 if workday hours MINUS holiday hours > 0, else 0	Days	Work Schedule Holiday	One if work hours > holiday hours and zero if work hours < holiday hours.

Calculation Rule Name	Time Off Plan Units	Required Calendars	Maximum Value Returned
Work Schedule Calendar: 1 if date is a work day, else 0	Days	Work Schedule	One if the time off date is a work day and zero if the time off date isn't a work day.
Worker Holiday Calendar: 0 if date is a holiday, else 1	Days	Holiday	Zero if the time off date is a holiday and 1 if the time off date isn't a holiday.

Reference: Default Time Off Validation Messages

You can add validation rules for time off entries on the Validation tab of these tasks:

- Create Absence Table
- Create Time Off
- Edit Absence Table
- Edit Time Off

Before you consider adding custom text for the validation messages, review the default messages. When you include these Data Entry Validation fields in validation rules, Workday displays these validation messages for time off entries, where:

- *Value* corresponds to the Value that you specify on the rule together with the field that you select from the Data Entry Validation prompt.
- *Units* corresponds to the daily quantity unit of days or hours on the time off plan.

Data Entry Validation	Time Off Entries to Include	Default Validation Message
Consecutive Day Maximum	*Individual Time Off Entry*	Please update your request so that the number of consecutive days off is less than or equal to *Value*.
Consecutive Day Minimum	*Individual Time Off Entry*	Please update your request so that the number of consecutive days off is greater than or equal to *Value*.

Data Entry Validation	Time Off Entries to Include	Default Validation Message
Increments	*Individual Time Off Entry*	The Daily Quantity must be in increments of *Value Units*.
Maximum (position-based time off)	*All Time Off Entries for Position for Same Date* *All Time Off Entries for Position (for Time Off Validation Set) for Same Date*	The total Daily Quantity for *Worker* - *Position* cannot be more than *Value Units*. Note: When a previous time off exists for the same date, Workday appends this sentence to the message: A previous Time Off exists for this date.
(worker-based time off)	*All Time Off Entries for Worker for Same Date* *All Time Off Entries for Worker (for Time Off Validation Set) for Same Date*	The total Daily Quantity for *Worker* cannot be more than *Value Units*. Note: When a previous time off exists for the same date, Workday appends this sentence to the message: A previous Time Off exists for this date.
(individual time off)	*Individual Time Off Entry*	As of *Date*, the Daily Quantity cannot be more than *Value Units*.
Maximum Unpaid Time Off Units Allowed (absence table)	*Individual Time Off Entry*	You don't have a sufficient balance or aren't eligible to satisfy the request for *Absence Table* as of *Date*.
(time off)	*Individual Time Off Entry*	Unpaid time off is not allowed for *Time Off* . The Time Off request for *Date* exceeds the maximum amount of *Maximum Unpaid Time Off Units Allowed* unpaid *Units*.
Minimum	*Individual Time Off Entry*	The Daily Quantity cannot be less than *Value Units*.
Multiple Time Off Requests Not Allowed for Same Date	*All Time Off Entries for Position for Same Date* *All Time Off Entries for Position (for Time Off Validation Set) for Same Date* *All Time Off Entries for Worker for Same Date* *All Time Off Entries for Worker (for Time Off Validation Set) for Same Date*	*Time Off* for *Date* is not allowed. Another time off request exists for these dates. Multiple time off requests for the same position and/or date are not allowed.

Data Entry Validation	Time Off Entries to Include	Default Validation Message
Time Off Date before Maximum Override Balance Date Not Allowed	*Individual Time Off Entry*	The Time Off date(s) is earlier than the override balance date of *Date* for *Time Off*.

Create Time Off Validations on page 2298

FAQ: Segmented Security for Time Off

Why can users view and request previously hidden time offs?	Unconstrained security groups aren't context-sensitive. When users are members of unconstrained security groups such as *Absence Administrator* or *Manager (Unconstrained)* in addition to *Employee as Self* and enter time off for themselves, they have both sets of permissions. They can view all of the time offs that they're eligible for. To resolve this situation, remove the unconstrained security groups from your time off segment-based security groups. Use constrained versions of the security groups instead so that users see the appropriate time offs for each context. Constrained groups are context-sensitive. When users are members of constrained security groups such as *Absence Partner* or *Manager* with access to specific time off security segments, they can only view the appropriate time offs when entering time off for another worker using these tasks: • Enter Time Off • Enter Absence When members of the *Absence Partner* group enter time off for themselves, they use the *Employee as Self* context and can only view the appropriate time offs for Employee Self Service (ESS). However, if you've a time off segment for workers and another for the *Absence Partner* role, when absence partners support their own organization, they can request time off using time offs in both segments. To prevent this, ensure that a different absence partner supports those absence partners' organizations.
Why do users sometimes have view-only access to a time off request?	When users try to correct a time off that's secured by a time off segment that they don't have access to, Workday provides view only access to the time off request and displays a message explaining why they can't correct it.

The Next Level: Preparing for Time Off Segmented Security (Guide)

FAQ: When do workers see the Maximum Unpaid Validation?

Workday triggers the Maximum Unpaid validation when a worker requests time off that both:

- Reduces their balance to below the Lower Limit value defined in the time off plan, or any time off overrides.
- Exceeds the number of unpaid units defined in the time off plan for Maximum Unpaid Time Off Units.

Examples: You set Lower Limit to zero and Maximum Unpaid Time Off Units:

- To zero. If a worker requests a time off that makes their balance go below zero, Workday triggers the validation.
- To 8. If a worker requests a time off that makes their balance go below -8, Workday triggers the validation.

Concept: Accrual and Time Off Limits on page 2355

FAQ: How do I delete or inactivate a time off plan?

You can't delete a time off plan. You can, however, prevent users from requesting time off and stop displaying plan balances. A simple way to do this is to add an eligibility rule that no one can meet. You can use a value comparison calculation to create a condition that is never true, such as *1=2*, and add it to the eligibility rules. On the Edit Time Off Plan task:

- Check the Accrual and Time Off tabs for overrides to eligibility rules. If any accrual or time off definitions override the plan eligibility rules, be sure to modify the Worker Eligibility rules on those definitions to include the *1=2* condition.
- If workers can satisfy eligibility rules by meeting either set (row) of criteria, add the *1=2* condition inside each row.

Example: The worker eligibility rules in your time off plan, or time off plan overrides in the accrual or time off, include these rows of value comparison calculations. Together, these rules require workers to be full-time or work over 30 hours.

- First row:

Field	Value
Name	*Full-time Employees*
Category	*Absence* and *Payroll*
1st Operand	*Worker: Scheduled Weekly Hours (across all jobs) as of Sub Period End Date*
Operator	*greater than or equal to*
2nd Operand	*40*

- Second row:

Field	Value
Name	*Part-time over 30 hours*
Category	*Absence* and *Payroll*
1st Operand	*Worker: Scheduled Weekly Hours (across all jobs) as of Sub Period End Date*
Operator	*greater than or equal to*
2nd Operand	*30*

To add the *1=2* condition inside each row:

1. Access the Edit Time Off Plan task and select the time off plan that you want to inactivate.
2. On each row of the Worker Eligibility grid, select Create > Create Value Comparison Calculation.
3. Enter or select these values:

Field	Value
Name	*1=2*
Category	*Absence* and *Payroll*

Concept: Eligibility for Time Off Plans, Time Off, and Accruals on page 2319

Set Up Accruals, Period Schedules, and Balances

Setup Considerations: Period Schedules

You can use this topic to help make decisions when planning your configuration and use of period schedules. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

A period schedule is a set of sequential periods of a standard length that Workday uses in:

- Workday Absence to determine accrual frequency for time off plans that track balances, and to define worker eligibility for a time off plan.
- Workday Payroll to determine how often you pay workers and the span of days that the payment is for. They also control forward accruals for accounting entries.
- Workday Time Tracking to control when users can enter and adjust work hours.

Business Benefits

You can set up multiple period schedules with different frequencies according to your business needs.

You can save time and improve efficiency by using:

- An EIB integration to create a period schedule, or to add periods to an existing schedule.
- The same period schedules for multiple Workday products.

Workday increases flexibility by enabling you to automatically adjust payment dates that normally fall on a weekend.

Use Cases

- Define the length and payment dates for different payroll cycles. Example: Set up a biweekly schedule for regular payroll, and an annual schedule for bonus payments.
- Set up matching time period and pay period dates to pay employees for time worked on the same dates covered by the pay period.
- Establish when workers can enter time worked, and when administrators can make adjustments to workers' hours, for each period.
- Define payroll cutoff dates to exclude one-time payments after a certain date each period.
- Integrate holiday calendars to automatically adjust pay dates and accommodate non-business days.

Questions to Consider

Questions	Considerations
How many different cycles for payroll, time tracking, and absence exist in your company?	You need to create at least 1 schedule for every pay and time tracking cycle. You can share schedules in Absence, Time Tracking, and Payroll when the time period and the pay period dates align. When they don't, create separate period schedules for each product and map each period to pay periods. In payroll, pay groups with the same pay cycle and pay dates can share a schedule. Example: Pay groups for hourly and contingent workers can share a biweekly period schedule.
Do you use Workday Payroll in more than 1 country?	You can use a period schedule for multiple countries. When needed, you can set a different payment date on a period for each country. Specify the date override before you make any payments for the period.
Do you track balances in your time off plans?	If your time off plan tracks balances, you can create a period schedule that matches the frequency that your workers accrue time off. Example: Workers accrue 2 time off days per month.
When do you want workers to enter their time for a period?	You can set dates for each period between which workers can enter time for the period.
How do you want your workers to accrue time off?	You can configure your period schedule so that your workers accrue their time off at: • The start or end of a period. • A customized frequency. You can also front-load accruals. Example: Workers accrue 5 sick days at the start of the year.
Does your company have a holiday calendar?	You can integrate your company's holiday calendar to automatically adjust pay dates and accommodate non-business days.

Recommendations

To save time and reduce duplication of effort, review the period schedules in your tenant before you create a new schedule. You might be able to reuse a schedule with the same frequency.

Altering the start and end dates for a payroll schedule can impact retro, proration, and FLSA pay calculations. Instead of changing the dates for a period, create a new pay group and move workers to the new pay group on the date the change occurs.

When you create period schedules for Time Tracking:

- Lock time entry when you need to calculate payroll.
- Close time entry no more than 3 months after the period end date.
- Define Absence and Time Tracking eligibility criteria that match the guidelines you use to assign employees to pay groups.

When building a schedule, add periods for the current and next year. Doing so enables workers to request time off for dates into the future. For optimal performance, Workday recommends you build period schedules no more than 2 years in the future from the current period. For customers using commitments, you can configure period schedules beyond 2 years.

Requirements

You need at least 1 period in each schedule with dates before the effective date of your first Workday Payroll or HCM transactions.

When you create a semimonthly period schedule, the first period of each month must end on the 15th to ensure accurate time tracking processing.

Limitations

Workday doesn't automatically adjust payment dates that fall on a statutory holiday.

You can't change the payment date or your accrual configuration for a period after you've calculated payroll for that period. Cancel the pay calculation, make the changes to the period schedule, then rerun the pay calculation.

Workday doesn't support using calculations that reference academic pay periods or disbursement plan periods in Absence calculation fields as they don't use Absence period schedules. See:

- Reference: Balance Calendars
- Set Up Academic Pay Period Calendar

When you generate period schedule periods to extend an existing schedule, you:

- Can only add periods for weekly, biweekly, semimonthly, monthly, and annual schedules.
- Can only add periods to period schedules that have less than 2 years of future periods already added.
- Need to edit the schedule to update the time tracking, payroll GL accruals, and payroll settlement date overrides information for generated periods.

Tenant Setup

No impact.

Security

Domains	Considerations
• *Set Up: Payroll (Pay Group Specific)* in the Core Payroll functional area.	Enable you to create and manage period schedules for payroll.

Domains	Considerations
• *Set Up: Payroll Interface* in the Payroll Interface functional area.	
Set Up: Period Schedule in the Project Tracking functional area.	Enables you to create and manage period schedules for projects.
Set Up: Time Off (Calculations - Absence Specific in the Time Off and Leave functional area.	Enables you to create and manage period schedules for time off plans.
Set Up: Time Tracking in the Time Tracking and Time Tracking Hub functional areas.	Enables you to create and manage period schedules for time tracking.

Business Processes

No impact.

Reporting

Reports	Considerations
Audit - Workers with Multiple Time Period Schedules	Enables you to identify workers who meet eligibility requirements for more than 1 Time Tracking period schedule.
Tenant Analyzer	Enables you to verify your period schedule setup against Workday recommendations.
View Period Schedule	After adding periods to a schedule, enables you to verify that dates are correct for all new periods.

Integrations

Integrations or Web Services	Considerations
Get Period Schedule	Retrieves period schedule information.
Put Period Schedule	Uploads a new period schedule or adds periods to an existing schedule.

Connections and Touchpoints

Features	Considerations
Continuous payroll calculation	You can set up a period schedule that enables you to automatically: • Run a full calculation to open each period. • Stop continuous calculations so you can complete final audits.
Pay groups	When you create a pay group, you select the period schedule that Workday uses for each run category.
Payroll accounting	Workday creates forward accruals when a pay period spans multiple accounting reporting periods.

Features	Considerations
Payroll calculation	Workday calculates payroll results for a specified pay period. For each pay group, complete payroll for a period before you calculate payroll for the next period.
Payslips	A payslip displays pay for the time period you define.
Time off plans	You can run Absence Management reports based on the period schedules. Workday uses the period schedule to: • Define worker eligibility for time off plans. • Determine the frequency of accruals for time off plans that track balances.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Related Information

Tasks

Set Up Period Schedules for Time Tracking on page 2822

Set Up Payroll and Time Tracking Period Schedules

Create Period Schedules for Time Off on page 2338

Create or Edit Period Schedule for Payroll Interface

Create Period Schedules for Time Off

Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Context

Time off plans that track balances use a period schedule to determine:

- The frequency of accruals.
- The start and end dates of the periods that retrieve and process time off.

Period schedules don't control custom accrual frequency for time off plans.

You can use period schedules when defining eligibility rules for a time off plan, whether or not the plan tracks balances. Example: You might define an eligibility rule requiring workers to be full-time *as of the current period start date*.

You can also import period schedules from a spreadsheet using Workday's Enterprise Interface Builder (EIB).

Note: Workers can't request time off for dates outside a time off plan period schedule. When building a schedule, consider adding periods for the current and next year. Ensure that you have at least one period in your period schedule with dates before the effective date of your first Workday Payroll or HR transactions.

Steps

1. Access the Create Period Schedule task.
2. Select the period Frequency.
3. Select a Usage of *Absence*.

4. Enter the Period Start Date and the Period End Date for each period.

Next Steps

- Assign the period schedule to one or more time off plans.
- Add periods to the schedule, as needed, so that workers can continue to request time off for future dates.

Related Information

Tasks

Steps: Set Up Time Off Plans on page 2276

Create Balance Periods

Prerequisites

- Review the All Balance Periods report to determine if Workday delivers the balance period you need. Review the *Payroll* and *Absence* categories.
- Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Context

A balance period defines the start and end dates of a time off plan that tracks balances. The balance period (typically a year) tells Workday over what period to accumulate accrual, time off, and time off plan balances. At the end of the balance period, Workday resets balances to zero and carries over the plan balance up to the set limit.

Workday provides most of the balance periods you need for time off plans.

Steps

1. Access the Create Balance Period task.
2. From the Category prompt, select *Absence*.

   To make the balance period available for Payroll use too, select *Payroll*.
3. In the Balance Period Detail grid, select a Start Date Calculation and End Date Calculation.

   You can select Workday-provided date calculations for the start and end dates or use the date creation tasks.
4. For the Period Date Indicator, specify the plan year to use for processing time off entries and accruals when an Absence processing period crosses plan years:

   - *Based on Period End Date:* Process in the plan year that includes the end date (the new plan year). Use this setting when the time off plan has a carryover date set to the balance period start date.
   - *Based on Period Start Date:* Process in the plan year that includes the period start date (the old plan year). Example: Use this setting when front loading accruals for your workers when the first date of your balance period isn't the first workday of the period.

Example

The Vacation time off plan is based on a fiscal year of July 1 to June 30 and uses a weekly period schedule. Time off taken during the last week of the year (June 26 to July 2) processes in the old plan year.

To define the balance period, create these 2 date calculations that return:

- July 1 of the current year.
- June 30 of the next year.

To define the balance period, configure these settings:

- Start Date Calculation: Select the date calculation that returns July 1 of the current year.
- End Date Calculation: Select the date calculation that returns June 30 of the next year.
- Period Date Indicator: Select *Based on Period Start Date*.

Steps: Set Up Time Off Plans on page 2276

Create Calculations

Reference

Reference: Date Calculations

Create Accruals

Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Context

Define accruals for use in time off plans that track balances. An accrual specifies the accrual amount, when workers receive accruals, and other rules. If an accrual has eligibility requirements, a frequency, or limits that differ from the time off plan, you can define requirements specific to the accrual.

When an accrual is associated with a position-based time off plan, limits are based on position. While it's typical to base the accrual calculation and eligibility rules on position, you can instead define rules that reference a worker's primary position or all positions.

Steps

1. Access the Create Accrual task.
2. Name the accrual and enter an identifying code for web services.
3. (Optional) Set up the accrual from which workers can buy time off:
    a) Select the Allow to Buy Time Off check box.

    Note: You can’t edit this check box after the accrual is created. You can either set up an accrual for buying or as a regular accrual.

    b) Enter a value in the Buy Time Off Display Name field.

    Workday displays the value in the Type of Time Off prompt on the Buy Time Off task. If the field is blank, Workday displays the Accrual Name. We recommend you enter the same value as the time off that users see when they request time off.
4. Define the accrual Calculation.

    As you complete the task, consider:

Option	Description
Calculation	Select the calculation that returns the number of hours or days workers receive with each accrual. You can select: • A constant value. Example: 12 hours or 0.5 days. • A calculation based on a service rate table. • Any other type of calculation.

Option	Description
	When you use the accrual in a day-based plan, specify a daily unit of time, such as 0.5 (days), not 4 (hours). When you use the accrual in an hourly plan, enter an hourly unit of time, such as 4 (hours), not 0.5 (days). Workday doesn't automatically convert hours to days or days to hours. When you use the accrual for buying, by selecting the Allow to Buy Time Off check box, the calculation is automatically set to *0*, and the field is not editable. An accrual configured for buying won't add to the time off plan balance unless the worker buys time off against it.
Priority	Set a priority for processing the accrual. Enter a unique value. Accrual priorities determine their processing order, which is particularly important if they occur on the same date and contribute to the same time off plan. Example: *Vacation* has a priority of 1 and *Sick Time* has a priority of 10. If both accruals occur on the period end date, Workday adds the *Vacation* accrual to the balance first.
Adjustments/Overrides Allowed	Enable adjustments and overrides for workers' absence accruals. If the accrual has a different Accrual Frequency Method value than the time off plan, then add an override on the Time Off Plan Overrides tab.
Options	Specify an accrual type: • *Front-Loaded*: Workers receive front-loaded accruals up front, at the beginning of the balance period, rather than in increments throughout the balance period. You can't use front-loaded accruals with position-based time off plans. To ensure that front-loaded accruals accrue in the first period of the balance period, use either of these scheduling options: • Add 1 of these scheduling rules to the accrual: • *Scheduling: Front-Loaded* • *Scheduling: Annual - 1st Period of year (based on*

Option	Description
	Period End Date) or Mid-Period Hire or Termination • Add the accrual to a time off plan with a year-to-date (YTD) period schedule and accrual frequency method of *Start of Period*. If you use this option, you don't need to add scheduling rules to the accrual. • *Based on As of Date*: Workers can receive accruals at the start of or end of the period schedule. The accrual value can change during the period if a worker gains or loses eligibility to the accrual itself or calculations within the accrual resolve differently. Workday prorates the accrual based on the As Of date of the change. You can't use Based on As of Date accruals with position-based time off plans. Scheduling is optional for this accrual type if you add an *Automated Accrual Adjustment* Service step after the *Completion* step to the *Change Job* business process. For Accrual Frequency Method, select *Start of Period* or *End of Period*. • *None*: The accrual doesn't have any special proration behavior and operates according to the start or end date of the period. You can't change the *Front-Loaded* or *Based on As Of Date* options after the accrual is in use. However, you can change from *None* to either of these options if there are no adjustments or overrides for the accrual on the Maintain Accrual and Time Off Adjustments/Overrides task. When you use the accrual for buying, by selecting the Allow to Buy Time Off check box, the Options field is automatically set to *None*, and the field is not editable.
Rounding	Select a rounding definition to apply to front-loaded or as-of-date accrual calculations. Workday applies the rounding as part of the *Automated Accrual Adjustment* service step on the *Change Job* business process. Example: *Round to nearest 0.1*. Selecting a rounding definition can eliminate the need to further adjust the accrual results.

5. If you use Workday Time Tracking, select Time Calculation Tags for the accrual calculation to reference. If you select:
    - More than 1 tag in a row, all time blocks must have the tags to be in this calculation.
    - Tags in separate rows, all time blocks must have tags in at least 1 row to be in this calculation.
6. Select the Scheduling rule that determines when workers receive the accrual.

    Example: You might select a rule that makes floating holiday hours accrue only in the first month of the year.

    You can combine multiple scheduling rules in the same row or insert a separate row for each rule. A worker must meet all criteria specified in the same row. If you define criteria in separate rows, a worker must satisfy the criteria in at least 1 row. Based-on-as-of-date accruals don't need a scheduling rule.
7. (Optional) On the Time Off Plan Overrides tab, complete the Accrual Frequency Override section if this accrual frequency differs from the accrual frequency of the time off plan. As you complete this task, consider:

Option	Description
Accrual Frequency Method	Specifies when to add the accrual to a worker's plan balance. Select 1 of these options: • *Start of Period*: before subtracting time off. Workers might reach upper limits sooner and lower limits later than if Workday processes the accruals after the time off. • *End of Period*: after subtracting time off. • *Custom Frequency*: based on the date calculation you define in the next 4 fields. When you use the accrual for buying, by selecting the Allow to Buy Time Off check box, you must select either *Start of Period* or *End of Period*.
First Accrual Date	Applies to accruals with a custom frequency. Select the calculation that returns the first date of the accrual, such as *Worker: Hire Date* or *Worker: Time Off Service Date*, or create your own date calculation to return this date. Examples: • Create a date increment/decrement calculation that returns a worker's hire date plus 30 days. (The hire date falls on the 31st day of the month and the next month has fewer than 30 days. The accrual occurs on the last day of the month.) • Pause an accrual if a worker has an approved time off either on their hire anniversary date or a number of days before or after the date. Use the Number of Days to Pause an Accrual to specify both the number of days either side of

Option	Description
	their anniversary and the days to pause the accrual. • Delay annual time off accruals to the next available working day for workers who are absent on the day of their annual accrual and the day before. Select the *Accrual Date Paused if Worker is Absent* instance value calculation (IVC). If you select this IVC, don't enter accrual recurs values in the next 2 fields. Workers must still meet scheduling criteria for the accrual to occur on this date.
Accrual Recurs Every	Applies to accruals with a custom frequency. Enter the number of recurring units of time (days or months) after the first accrual date when the accrual is to occur. Example: Enter *1* if the accrual is to occur every month on the anniversary of the first accrual date.
Accrual Recurs Unit of Time	Applies to accruals with a custom frequency. Specify if the recurrence interval represents *Days* or *Months*.
Number of Days to Pause an Accrual	Applies to accruals with a custom frequency. Only available when First Accrual Date is *Pause Accrual for Related Time Off Events*. Enter the number of days to pause the accrual if a worker is absent for a defined period before or after their seniority anniversary occurs.

8. Complete the Worker Eligibility Override section if the eligibility criteria for this accrual differs from the worker eligibility criteria defined for the time off plan.

   The eligibility rules on this tab override rules defined at the time off plan level. If you don't define rules here, the accrual automatically inherits the rules associated with the time off plan.

   When adding rules on this tab, consider that:

   - You need to add the same eligibility rules that are already configured on the time off plan (if any), and any additional rules that make the eligibility for the accrual unique.
   - All workers are eligible for the accrual if there are no eligibility criteria on the plan or the accrual.
   - Workers must satisfy all criteria specified in the same row.
   - If you define criteria in separate rows, workers must satisfy the criteria in at least 1 row.

9. Use the Limit Override fields to define an upper accrual limit if different from the upper limit defined for the plan.

   Workday automatically reduces the accrual for any calculation period by the balance amount that exceeds the limit and displays the forfeited accrual on Workday pages and reports.

   In addition to accrual limits, these parameters can impact worker accruals:

   - The accrual processing order (defined by the accrual priority).
   - The timing of accrual processing (defined by the time off plan).

Option	Description
Value	Select the calculation rule that returns the maximum number of days or hours workers can accumulate in the time off plan balance. When a worker buys time off, the value is the limit that the time off balance shouldn't exceed.
Based On	Select the time off plan that includes the accrual. Workday displays the plan balance period. Exception: If defining an accrual for an accrue-as-you-go plan, select the accrual itself.

10. Configure the Expiration Override section so that time off can expire relative to the date that it was accrued.

    You can also configure expiration on accruals for time off plans with carry over limits and expiration, however, expiring accruals will be exempt from these carry over rules.

    As you complete this task, consider:

Option	Description
Amount of Time Before Expiration	Select a constant value or a calculation for the number of days or months after the accrual date that accrual units expire. Note: Once saved, this field may be required and you can't remove it.
Unit of Time Before Expiration	Select *Days* or *Months* as the unit of time for measuring the expiration date. Note: Once saved, this field may be required and you can't remove it.
Include Prior Balance Period Accruals in Upper Limit Calculation	Select if expiring accrual should be included in time off plan balance upper limit calculations across balance periods.

    Note: You may not be able to remove expiration from an accrual once saved. Before saving, review Concept: Accrual Expiration on page 2358.

11. (Optional) On the Buy Options tab, define the options for workers to buy time off.

    As you complete this task, consider:

Option	Description
Available to Buy During	Select when workers can buy time off:

Option	Description

	• *Anytime*. Workers can buy time off any time during the balance period.
	From the Balance Updated in Period prompt, select when the balance is updated:
	  • *Current Period*. The balance is updated in the same period when the worker buys time off.
	  • *Next Period*. The balance is updated in the next period after worker buys time off.
	The start and end payroll adjustment dates are automatically calculated based on the buy event. Workday sets the start payroll adjustments date to the most recent of these 2 dates: the date when the buy event is submitted or the date when the time off balance is updated. The end date for payroll adjustments is set to 1 year after the start date for payroll adjustments.
	• *Fixed Period*. Workers can buy time off based on a buy schedule.
	You must select a schedule for buying time off from the Buy Schedule prompt. Buy schedules are only available for workers to select if they have the same period schedule as the time off plan that the accrual is linked to.

Maximum Limit to Buy	Select a calculation to define the limit of time offs that a worker can buy. From the Maximum Limit Applies to prompt, consider whether you want workers to buy time off at any time or multiple times throughout the year based on the buy schedule: • *Period in which balance is updated*. Workers can buy up to the maximum limit for each period that the balance is updated. • *Balance Period*. Workers can buy up to the maximum limit for the entire balance period.
Allowable Increments to Buy	Select a calculation to define the increments or multiples of time offs that workers can buy.
Pay Rate for Adjustments	Select the pay rate to be used for the payroll adjustments: • *At the start of first pay adjustment*. Workday uses the worker's pay rate

Option	Description
	at the start of the first pay adjustment period for all pay periods. This is fixed. • *Current rate during each pay period*. Workday uses the worker's pay rate for each pay period. This could vary if the worker's pay rate changes in a pay period. • *When time off was purchased*. Workday uses the worker's pay rate at the time when they purchased time off for all pay periods. This is fixed.

Example

Limiting Sick Time Accrual to 40 Hours	The Paid Time Off plan, which includes accruals for *Vacation* and *Sick Time*, has an upper accrual limit of 120 hours. You want to limit sick time accrual to 40. On the Time Off Plan Overrides tab, specify: • Value: *40 hours* • Based On: *Paid Time Off* When calculating a worker's accrual for *Sick Time*, Workday compares the worker's plan balance to the 40-hour limit. If the plan balance exceeds 40 hours, it reduces the accrual by the number of hours over the limit.
Overriding the Accrual Frequency Method	According to the time off policy of your organization, workers accrue 12 hours of paid time off on: • The hire date. • Each monthly anniversary of the hire date for the first calendar year of employment. After that, they receive their entire accrual at the start of the year. You are in the process of setting up the Paid Time Off plan. It has an Accrual Frequency Method of *Start of Period*. The plan has 2 accruals: • *Paid Time Off Accrual - After First Calendar Year of Employment* Because this accrual has the same frequency as the plan, no Accrual Frequency Override instructions are necessary.

- *Paid Time Off Accrual - First Calendar Year of Employment*

  This accrual occurs at a different frequency from the plan, so you enter these instructions for the Accrual Frequency Override:

  - Accrual Frequency Method: *Custom*
  - First Accrual Date: *Worker: Hire Date*
  - Accrual Recurs Every: *1*
  - Accrual Recurs Unit of Time: *Months*

Next Steps

- Add accruals to time off plans.
- Determine which time off plan an accrual is associated with by checking the Usage tab for the accrual.
- Access these reports to verify that you configured accruals correctly:
  - Calculation Exception Audit
  - Evaluate Absence Calculation

Create Front-Loaded Accruals

Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.

Context

Create front-loaded accruals to use in worker-based time off plans that track balances. Workers receive front-loaded accruals all at once at the beginning of a year rather than in increments over time.

Schedule front-loaded accruals to occur in the beginning of a year, by either:

- Adding the front-loaded accrual to a time off plan that accrues at the start of the first period of the year.
- Configuring scheduling criteria on the accrual itself.

Steps

1. Access the Create Accrual task.
2. Name the accrual and enter an identifying code for web services.
3. From the Calculation prompt, select the calculation that returns the number of hours or days workers receive at the beginning of the balance period.

   You can select a constant value, such as 12 hours or 0.5 days, or any other type of calculation.

   Note: If you're using the accrual in a day-based plan, specify a daily unit of time, such as 0.5 (days), not 4 (hours). If you're using the accrual in an hourly plan, enter an hourly unit of time, such as 4 (hours), not 0.5 (days). Workday doesn't automatically convert hours to days or days to hours.

   You can't apply front-loaded accruals to workers hired mid-balance period.
4. In the Priority field, assign a priority for processing the accrual when other accruals occur on the same date and contribute to the same time off plan.
   Example: *Vacation* has a priority of 1 and *Sick Time* has a priority of 10. Both accruals occur on the period end date. Workday adds the *Vacation* accrual to the balance first.
5. Select the Adjustments/Overrides Allowed check box.
6. Select the *Front-Loaded* option.
7. (Optional) Select a Rounding definition to apply to the accrual calculation.

   Workday applies rounding as part of the *Automated Accrual Adjustment* service step on the *Change Job* business process. Example: *Round to nearest 0.1*.
8. If you're using Workday Time Tracking, select Time Calculation Tags for the accrual calculation to reference. If you select:

   - More than 1 tag in a row, all time blocks must have all tags included in this calculation.
   - Tags in separate rows, all time blocks must have tags in at least 1 row in this calculation.

   Time calculation tags assist in calculating accruals for compensatory time off.
9. In the Scheduling grid, select *Scheduling: Front-Loaded*.

   Alternatively, you can select *Scheduling: Annual - 1st Period of Year (based on Period End Date) or Mid-Period Hire or Termination*, which takes into account midperiod hires and terminations.

   You might not need to add scheduling criteria if you add the front-loaded accrual to a time off plan with an annual period schedule.
10. In the Accrual Frequency Method field on the Time Off Plan Overrides tab, select *Start of Period*.

    You can avoid setting up a time off plan override for the accrual frequency method. Add the accrual to a time off plan with an accrual frequency method of *Start of Period*.
11. Complete the Worker Eligibility Override section if the eligibility criteria for this accrual differ from the worker eligibility criteria defined for the time off plan.

    You can't use front-loaded accruals with time-defined lower limits, calculations, or eligibility criteria. Example: Eligibility for a new accrual rate based on length of service.

12. Use the Limit Override fields to define an upper accrual limit if different from the upper limit defined for the plan.

    Workday automatically reduces the accrual for any calculation period by the balance amount that exceeds the limit and displays the forfeited accrual on Workday pages and reports.

    In addition to accrual limits, these parameters can impact worker accruals:

    - The accrual processing order (defined by the accrual priority).
    - The timing of accrual processing (defined by the time off plan).

    As you complete this task, consider:

Option	Description
Value	Select the calculation rule that returns the maximum number of days or hours workers can accumulate in the time off plan balance.
Based On	Select the time off plan that includes the accrual. Workday displays the plan balance period. Exception: If defining an accrual for an accrue-as-you-go plan, select the accrual itself.

Next Steps

Add the accrual to a time off plan that has a year-based balance period.

2023R1 What's New Post: Rounding on Automated Accrual Adjustments

Create Based-on-As-of-Date Accruals

Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.

Context

Create accruals that use an as-of date to automate accruals adjustments. Accrual values can change during the period if a worker gains or loses eligibility to the accrual itself or calculations within the accrual resolve differently. Workday prorates the accrual based on the As Of date of the change. When you initiate the *Change Job* business process, this accrual automatically calculates the accrual proration, to the day, based on the effective date of change. You can use the based-on-as-of-date type of accrual in time off plans that track balances.

You can configure accruals that are based on an as-of date by adding:

- The accrual to a time off plan that accrues at the *Start of Period* or *End of Period*.
- A time off plan override to the accrual with an Accrual Frequency Method of *Start of Period* or *End of Period*.

Steps

1. Access the Create Accrual task.
2. Name the accrual and enter an identifying code for web services.
3. From the Calculation prompt, select the calculation that returns the number of hours or days workers receive at the beginning or end of the period schedule.

   You can select either a constant value, a conditional calculation, or any other type of calculation. Example: Select a conditional calculation where the accrual equals 12 hours for a full-time worker or 6 hours for a part-time worker.

   Note: If you're using the accrual in a day-based plan, specify a daily unit of time, such as 0.5 (days), not 4 (hours). If you're using the accrual in an hourly plan, enter an hourly unit of time, such as 4 (hours), not 0.5 (days). Workday doesn't automatically convert hours to days or days to hours.
4. In the Priority field, assign a priority for processing the accrual when other accruals occur on the same date and contribute to the same time off plan.
   In Global Management Services, *Vacation* has a priority of 1 and *Sick Time* has a priority of 10. If both accruals occur on the period end date, Workday adds the *Vacation* accrual to the balance first.
5. Select the Adjustments/Overrides Allowed check box.
6. Select the *Based on As of Date* option.
7. (Optional) Select a Rounding definition to apply to the accrual calculation.

   Workday applies rounding as part of the *Automated Accrual Adjustment* service step on the *Change Job* business process. Example: *Round to nearest 0.1*.
8. In the Accrual Frequency Method field on the Time Off Plan Overrides tab, select either *Start of Period* or *End of Period*.

   You can avoid setting up a time off plan override for the accrual frequency method. Add the accrual to a time off plan with an accrual frequency method of *Start of Period* or *End of Period*.
9. Complete the Worker Eligibility Override section if the eligibility criteria for this accrual differ from the worker eligibility criteria defined for the time off plan.
10. Use the Limit Override fields to define an upper accrual limit if different from the upper limit defined for the plan.

    Workday automatically reduces the accrual for any calculation period by the balance amount that exceeds the limit and displays the forfeited accrual on Workday pages and reports.

    In addition to accrual limits, these parameters can impact worker accruals:

    - The accrual processing order (defined by the accrual priority).
    - The timing of accrual processing (defined by the time off plan).

    As you complete this task, consider:

Option	Description
Value	Select the calculation rule that returns the maximum number of days or hours workers can accumulate in the time off plan balance.
Based On	Select the time off plan that includes the accrual. Workday displays the plan balance period. Exception: If defining an accrual for an accrue-as-you-go plan, select the accrual itself.

2023R1 What's New Post: Rounding on Automated Accrual Adjustments

Create Rolling Period Accruals

Prerequisites

- Create a time off plan that:
  - Enables balance overrides.
  - Specifies a time off in the Time Off for Termination Adjustment field.

    Note: Linking a termination adjustment ensures that Workday zeros out an employee's balance and recoups or pays out used or unused time on the employee's termination. When you don't link a termination adjustment, if you rehire workers in the same balance period, they can have higher than expected balances. This is because their remaining balance from their prior employment combines with the entitlement for their most recent employment period. For this reason, the tenant analyzer and our deployment recommendation is always to include termination adjustments on any time off plan that tracks a balance, even if you don't need to map the remaining balance to payroll for payout.
- Security: *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

Context

You can apply rollback logic to accruals, with definable conditions, that accurately calculates absence balances that don't typically have a start or end date. The rolling period starts on the current day and looks back to the beginning of the defined rollback period. Historic time off requests taken by workers expire after they fall outside of the rollback period. Workday restores them to the time off plan balance. Example: You can configure sick plans with a rolling period of 12 months that begins with the first day of the absence.

For this task, you create 2 accruals:

- The initial accrual that defines the amount of the accrual. Example: Employees receive 10 days.
- The rolling period accrual that specifies how far back to look for expired absences.

Steps

1. Access the Edit Time Off Plan task.
2. On the Accrual tab, add a row to create the initial accrual.
3. As you complete the Create Accrual task, consider:

Option	Description
Calculation	The amount of the accrual. Example: 10.
Adjustments/Overrides Allowed	(Required) Selected.
Options	(Required) *None*.

4. On the Time Off Plan Overrides tab, consider:

Option	Description
Accrual Frequency Method	(Required) *Custom Frequency*.
First Accrual Date	(Required) Example: Select *Worker: Hire Date as of Period End Date*.

5. Click OK.

6. On the Accrual tab, add another row to create the accrual that specifies the rollback period. As you complete the Create Accrual task, consider:

Option	Description

Calculation	(Required) Select a rolling period calculation:
	• *Time Off Quantity During n Periods*: Accrues expired absences of the same type on a daily basis. Workday restores them to the time off plan balance as they expire.
	• *Time Off Quantity During n Periods (Accrual frozen while absent)*: Accrues expired absences of the same type if the worker is active. If the worker is currently taking the same type of absence, Workday pauses the accrual until they return to work. The calculation includes all days.
	• *Reaccrue Time Off Taken in Prior Periods (Accrual Frozen While Absent or Based on Days to Include)*: Accrues expired absences of the same type if the worker is active. If the worker is currently taking the same type of absence, Workday pauses the accrual until they return to work. To use this instance value calculation, you must assign holiday and work schedule calendars to workers when the Days to Include value on the time off plan is either:
	    • *Workdays (Non-Holiday)*
	    • *Workdays (Work Hours exceed Holiday Hours)*
	• *Time Off Quantity During n Periods - Including Historic Absence*: Accrues expired balances and checks the rollback period for additional used absences. If Workday finds historic absences in the rollback period, it extends the rollback to the start of the historic absence period. Workday adds the used absences to the balance.

Adjustments/Overrides Allowed	(Required) Unselected.
Options	(Required) *None*.
Amount of Time to Roll Back	(Required) Displays only if you select one of the rolling period calculations listed in the Calculations row.
Unit of Time to Roll Back	(Required) Displays only if you select one of the rolling period calculations listed in the Calculations row.

Example

This example demonstrates 2 types of calculations for a rolling sick plan.

Your UK company uses a sickness plan with a rolling period accrual. Each employee gets an accrual of 10 sick days for a 12-month period. As the absence administrator, you create 2 accruals:

- The initial accrual granting workers the 10 days.
- The rolling accrual that looks back 12 months for expired accruals and restores them to the employee's balance.

Bill, a UK worker, took 4 days of sickness from August 15 to 18, 2016. On August 17 and 18, 2017, he takes 2 additional days of sickness. We start checking his accrual balance on August 15, 2017, using the 12-month rollback and compare the balances of each based on 2 of the calculations.

Time Off Quantity During n Periods

Date	Balance (days)
August 15, 2017 - Tuesday	7 - Bill is in the office and accumulates 1 day from the expired absence of August 15, 2016.
August 16, 2017 - Wednesday	8 - Bill is in the office and accumulates 1 day from the expired absence of August 16, 2016.
August 17, 2017 - Thursday	8 - Bill takes a sick day. He accumulates 1 day, but uses 1 day.
August 18, 2017 - Friday	8 - Bill takes a sick day. He accumulates 1 day, but uses 1 day. All of the 2016 sick days have reaccrued.

Reaccrue Time Off Taken in Prior Periods (Accrual Frozen While Absent or Based on Days to Include)

Date	Balance (days)
August 15, 2017 - Tuesday	7 - Bill is in the office and accumulates 1 day from the expired absence of August 15, 2016.
August 16, 2017 - Wednesday	8 - Bill is in the office and accumulates 1 day.
August 17, 2017 - Thursday	7 - Bill takes a sick day, Balance freezes until he returns.
August 18, 2017 - Friday	6 - Bill takes a sick day, Balance freezes until he returns.
August 19, 2017 - Saturday	Nonworking day for Bill.
August 20, 2017 - Sunday	Nonworking day for Bill.
August 21, 2017 - Monday	8 - Bill is in the office. Accrual resumes and adds the frozen expired balance of 2 days. All of the 2016 sick days have reaccrued.

Override Accrual Expiration Dates for a Worker

Prerequisites

Security:*Worker Data: Time Off (Adjustments and Overrides)* domain in the Time Off and Leave functional area.

Context

The Maintain Accrual Expiration Overrides task allows you to override expiration rules defined on an accrual to handle exceptions or special employee circumstances i.e. an employee on leave..

Steps

1. Access the Maintain Accrual Expiration Overrides task.
2. As you complete the task, consider:

Option	Description
Accruals	Select an eligible accrual that has expiration defined.
Accrual Date	Select a valid accrual date. The dates available for selection will include those derived from the period schedule based on the accrual frequency method and accrual adjustments with unique reference dates. Note: For accruals using the Instance Value Calculation *Approved Calculated Time for Day for Accrual*, the dates available for selection will only contain dates associated with calculated time blocks and accrual adjustments.
Position	Select a valid position if accrual is part of a position-based time off plan.
Expiration Date	Set this field to the date you want the accrual to expire. The expiration date defaults based on the system calculated expiration date relative to the selected accrual date.

Result

Example

Next Steps

Concept: Accrual and Time Off Limits

You can define accrual and time off limits using 2 approaches. You can define limits for:

- A time off plan, causing the associated accruals and time offs to have the same limits.
- Individual accruals and time offs that override any limits set for the plan.

In addition to limits, other factors can impact a worker's accrual and whether time off is paid or unpaid:

- Accrual timing, as defined by the time off plan or accrual. See Timing of Accrual Processing and Limits on page 2356.
- The calculation order for accruals that occur the same day, as defined by the accrual priority. See Accrual Priorities on page 2357.
- The processing order for time offs, as defined by the time off priority. See Time Off Processing Order on page 2358.

Timing of Accrual Processing and Limits

The Accrual Frequency Method field on the time off plan definition or the accrual definition controls the timing of accrual processing. If accrual processing occurs:

- At the beginning of the period, Workday adds the accrual to the time off plan balance. This addition applies accrual limits before subtracting time off. It checks the lower time off limit after subtracting the time off.
- At the end of the period, Workday subtracts time off from the time off plan balance. Workday checks the lower time off limit, adds accruals, and then checks the accrual limit.
- Midperiod (a custom accrual that you create), Workday:

    1. Subtracts time off taken before the accrual date.
    2. Checks the lower time off limit.
    3. Adds the accrual.
    4. Checks the accrual limit.
    5. Subtracts time off taken after the accrual date.
    6. Checks the lower time off limit.

Processing accruals before time off typically results in workers reaching accrual limits sooner, but causes time off calculations to reach lower limits later.

Note: When a time off and an accrual fall on the same day, the accrual adds to the balance before deducting time off. Workday processes carryover that occurs on the same day first.

Example: Timing of Accrual Processing and Upper Accrual Limits

In this scenario, the Vacation Time Off Plan has an upper limit of 120 hours. Workers accrue 12 hours of time off each month. Tony has an initial Vacation balance of 110 hours and requests 8 hours of time off.

- When the Accrual Frequency Method is *Start of Period*, Workday:

    1. Adds the current period accrual of 12 hours to the initial balance of 110 for a total of 122 hours.
    2. Applies the limit rule and determines that the balance exceeds the limit by 2 hours.
    3. Reduces the accrual by 2.
    4. Reduces Tony's overall balance by the 8 hours of time off, resulting in a final balance of 112.
- When the Accrual Frequency Method is *End of Period*, Workday:

    1. Subtracts the 8 hours of time off from the initial balance of 110 for a total of 102 hours.
    2. Adds the current period accrual of 12 hours for a total of 114.
    3. Applies the limit rule and determines that the balance doesn't exceed the limit, making his final balance 114.

Example: Timing of Accrual Processing and Lower Time Off Limits

In this scenario, the lower limit for a vacation plan is -8 hours. Workers accrue 12 hours of time off each month. Julia has an initial vacation balance of -4 hours and requests 8 hours of time off. Workday processes the time off as follows:

- Accrual Frequency Method = *Start of Period*
  1. Adds the current period accrual of 12 hours to the initial balance of -4 for a total of 8 hours.
  2. Reduces her balance by the 8 hours of time off for a total of zero.
  3. Applies the limit rule and determines that the balance doesn't go below the lower limit. Consequently, her entire request processes as paid time off.
- Accrual Frequency Method = *End of Period*
  1. Subtracts the 8 hours of time off from the initial balance of -4 for a total of -12 hours.
  2. Applies the limit rule and determines that the balance goes below the lower limit by 4 hours. Consequently, only 4 hours process as paid time off.

  Note: Set the Maximum Unpaid Time Off Units Allowed validation rule to zero to prevent requests for unpaid time off.

Accrual Priorities

The order in which accruals process, combined with an upper accrual limit, can affect a worker's accrued time off.

Example: Accrual Priorities and Upper Accrual Limits

In this scenario, 2 accruals, both processed at the beginning of the period, contribute to the Paid Time Off plan:

- Vacation accrues at 10 hours each month. Priority = 1.
- Sick time accrues at 6 hours each month. Priority = 2.
- Upper limit, inherited from plan = 120.

Joan's current Paid Time Off plan balance is 106 hours. Because vacation accrual processes first, she reaches the upper accrual limit before sick time processes. As a result, Joan forfeits 2 hours of Sick time accrual.

Priority	Current Balance: Paid Time Off	Accrual Amount	Balance + Accrual	Upper Limit	Hours Forfeited
1 (Vacation)	106	10	116	120	Zero

Priority	Current Balance: Paid Time Off	Accrual Amount	Balance + Accrual	Upper Limit	Hours Forfeited
2 (Sick Time)	116	6	122	120	2

Time Off Processing Order

The sequence in which time offs process, combined with a lower time off limit, can affect the number of days or hours treated as paid or unpaid time off.

Example: Time Off Processing Order and Lower Time Off Limits

In this scenario, Vacation time off and Sick time off belong to the Paid Time Off plan. Vacation time off has a priority of 1 and a lower limit of -8. Sick time has a priority of 2 and a lower limit of zero.

Joan has an available balance of 8 hours in the Paid Time Off plan. He takes 16 hours of Vacation time plus an additional 8 hours of Sick time. Vacation hours process first, reducing Joan's available balance to -8. Because she doesn't exceed the lower limit, her Vacation days process as paid time off. However, no hours remain in the plan balance to cover Joan's sick time, so the 8 hours of sick time are unpaid.

Priority	Current Plan Balance	Time Off Taken	Balance - Time Off	Lower Limit	Hours Paid
1 (Vacation)	8	16	-8	-8	16
2 (Sick Time)	-8	8	-16	Zero	Zero

FAQ: When do workers see the Maximum Unpaid Validation? on page 2333

Concept: Accrual Expiration

Accrual Expiration allows individual absence accruals to expire relative to the date accrued. By offering the flexibility to define expiration on a more granular level, like an accrual, you can more accurately track expiration and can better adhere to statutory, union, federal, and company policies.

Prioritization	Expiring balances refer to expiring carryover and expiring accruals. The expiring balance with the earliest expiration is used first when requesting time off. If balances are expiring on the same day, Workday applies this prioritization to determine which expiring accrual balance to use first: • Scenario 1: If different accruals are expiring on the same day, Workday uses the accrual with the higher priority first. • Scenario 2: If the same accruals are expiring on the same day, Workday first uses the accrual that was granted first. • Scenario 3: If an expiring accrual and carryover balance expire the same day, Workday uses the carryover first. • Note: This rule doesn't apply to accruals in a time off plan, if you select the Use Time Off Accrual Before Carryover Balance check box in the Carryoversection of the Balance tab when creating or editing the plan.
Limitations	You can't remove expiration from an accrual, or an expiring accrual from a time off plan, if the plan has: • Absence input. • Accrual expiration overrides. • Time off plan balance overrides. • Limit overrides. • Stored time off balances . • Time off requests (regardless of status). Note: To avoid this, it is critical to ensure existing accruals have expiration added using an accrual snapshot date that's in the current or a future period. When creating new accruals with expiration defined for an existing time off plan, add the expiring accrual to the plan using a time off plan snapshot date in the current period or a future period to avoid this issue. Workday doesn't support these accrual settings when an accrual has an expiration configuration: • Buy Time Off. • Calculation set to a Time Off Absence Component Related Calculation (ACRC). • Options. • Scheduling. Workday doesn't support accrual expiration in these time off plan configurations: • Absence tables

- Transfer balance
- Balance period set to current period
    - You can't transfer balances from or to time off plans that have accruals with expiration defined.

Considerations

Touchpoint	Considerations
Upper limits	Expiring accruals respect time off plan upper limits, accrual limit overrides, and the option to ignore limits. In the case time off is being accrued on the same day that it expires, the expiration occurs before the upper limit is evaluated.
Accrual adjustments	You can modify reference dates when processing adjustments for expiring accruals in the UI. The reference date selected determines when that accrual adjustment is granted, regardless of the accrual frequency method defined. You can make accrual adjustments for expiring accruals outside of the accruing period, however, Workday doesn't support negative accrual adjustments.
Time off plan balance overrides	Overriding a worker's time off plan balance, doesn't impact expiring accruals.
Termination adjustments	Termination adjustments take expiring accruals into consideration when zeroing out a worker's balance.

Recommendations

When updating existing configurations:

- Don’t change the existing balance period.
- Create a new accrual snapshot when adding expiration to existing accruals and a new future time off plan snapshot when adding a new expiring accrual to a plan.

  Note: Using the initial snapshot or a snapshot that's more than 3 months in the past can impact system performance and cause complications with balance calculations. Failure to use the appropriate effective dating may prevent expiration settings from being removed from the accrual.
- Consider carryover dates if replacing expiring carryover with expiring accruals. Example: A Time in Lieu plan is configured with a Month to Date (MTD) balance period and has a carryover expiration rule of 2 months. Company ABC wants to adopt accrual expiration effective October 1st, 2024. These are the steps this company should take:
  - Accrual: Create new snapshot effective Oct 1, 2024 and add an accrual expiration rule of 3 months.
  - Time Off Plan: Create a new time off plan snapshot effective January 1, 2025, and in the Carryover section change Amount of Time Before Expiration to 0 months.

Steps: Enable Forfeiture Adjustments for Time Off Plans on page 2463

Reference

Reference: Absence Management Cards

FAQ: Forfeiture Adjustments on page 2464

Concept: Accrue-As-You-Go Plans

In an accrue-as-you-go plan, accruals are in response to a time off request rather than accumulating at a constant rate per period. Example: Workers generally accrue bereavement leave in an amount that matches their leave request rather than in weekly or monthly increments.

To create an accrue-as-you-go plan, use the *xxx - Time Off Total* calculation to define the accrual amount (where xxx = the name of the time off). This calculation returns the sum of a worker's time off hours or days in the current period. It can generate accruals that match the number of approved hours or days in the worker's time off request (subject to time off limits).

You can configure an unlimited accrue-as-you-go plan by leaving the limits blank on the accrual and the time off plan to which it contributes. If you want to limit your plan, set the limit on the accrual itself rather than the time off plan. Select Start of Period as the Accrual Frequency Method to process accruals before time off.

FAQ: Pause Annual Time Off Accruals for Absent Workers

- Can you pause annual time off accruals for absent workers?
- How can I configure accruals to pause annual time off for absent workers?
- How does the IVC determine the next accrual date?
- How does Workday determine the accrual date for multiple tiers in an absence table?
- What happens when workers are on long-term sick leave?
- Do pending time off events have an impact?
- What happens when the annual accrual date for a balance period coincides with the period schedule start date or end date?
- Can I use the Maximum Unpaid Time Off Units Allowed validation with this instance value calculation?

Can you pause annual time off accruals for absent workers?	Yes, you can delay annual time off accruals to the next available working day, for workers who are absent on the day of their annual accrual and the day before. Workday processes the accrual only when workers return to work and bases the accrual on the Days to Include settings of the related time off plans or absence table tiers. This helps reduce manual effort in entering and correcting accrual details.
How can I configure accruals to pause annual time off for absent workers?	You can use the *Accrual Date Paused if Worker is Absent* instance value calculation (IVC) as an accrual frequency override on an accrual that uses a balance period such as anniversary or year-to-date (YTD). When the accrual is on an absence table, we determine a worker's working days based on a combination of the Days to Include settings on the absence table tiers. 1. Access the Edit Accrual task. 2. Select the accrual. 3. On the Time Off Plan Overrides tab, for Accrual Frequency Method, select *Custom Frequency*. 4. From the First Accrual Date prompt, select *Accrual Date Paused if Worker is Absent*. 5. Don't enter a value for these options: • Accrual Recurs Every • Accrual Recurs Unit of Time
How does the IVC determine the next accrual date?	When workers are sick on the day before and the day of their anniversary, the IVC looks for the next available working day free of a time off event up to a maximum of 364 calendar days. The IVC determines the working days from the Days to Include settings across the absence table tiers to accrue automatically on the correct date, instead of accruing on the 364th calendar day.

When workers have a time off event on their anniversary date, the IVC looks back 100 calendar days to find a working day, and to check whether the workers also have a time off event on that day. If there's no working day with a time off event within the 100-day period, which can happen for seasonal workers, the workers accrue on their anniversary date, even if the last working day beyond the 100-day period has a time off event.

When the anniversary of a worker falls on a nonworking day, so there's no time off event, the worker accrues time off on the next working day.

How does Workday determine the accrual date for multiple tiers in an absence table?

When you select the *Accrual Date Paused if Worker is Absent* IVC as an accrual frequency override on 2 or more tiers in an absence table, each with different Days to Include settings, Workday determines the accrual based on the combined settings and processes the accrual on the first appropriate day.

Example: Alice has a continuous service date of 2018-05-01, so her expected accrual date each year is May 1. Alice's company uses the *Accrual Date Paused if Worker is Absent* IVC as an accrual frequency override on an absence table that contains 2 tiers. The tiers have time off plans with these settings:

Option	Tier 1 Time Off Plan	Tier 2 Time Off Plan
Balance Period	*Anniversary Balance Period (based on Continuous Service Date)*	*Anniversary Balance Period (based on Continuous Service Date)*
Days to Include	*Weekdays (Mon-Fri)*	*Configure Days to Include (Sunday-Wednesday)* and Include Holidays from Holiday Calendar

Alice takes 2 sicks days on the day before and the day of her anniversary from 2020-04-30 to 2020-05-01 (Thursday-Friday). Saturday isn't a working day for Alice. She takes another sick day on Sunday. As Monday is a bank holiday, Alice receives her annual accrual when she returns to work on 2020-05-05 (Tuesday).

What happens when workers are on long-term sick leave?

When workers have sick leave time off events on the day before their expected accrual date, and continuously until the next expected accrual date,

	Workday doesn't increment their accruals for a time off plan twice for the same period schedule. Examples: • Organization A has a time off plan with a monthly period schedule and a balance period based on employee anniversary dates. Rachel has a hire date of 2018-06-17, so her expected accrual date each year is June 17. Rachel has a time off entry on 2019-06-16 and 2019-06-17. Workday pauses the accrual because Rachel has a time off entry on the day before and the day of her anniversary. However, Rachel's time off entry continues up to 2020-06-14. Workday processes the accrual on 2020-06-17 for the 2020 period, but Rachel forfeits her 2019 accrual because Workday prevents the same accrual occurring twice in the same period. • Organization B has a time off plan with a weekly period schedule and a balance period based on employee anniversary dates. John has a hire date of 2018-07-12, so his expected accrual date each year is July 12. John takes sick time off from 2019-07-11 to 2020-07-07. He returns on 2020-07-06 but 2020-07-07 is a nonworking day as per the Days to Include settings. John forfeits his 2019 accrual because the next working day is 2020-07-08, and he returns to work with his next accrual occurring within the same period schedule. Setting up time off plans with a weekly schedule can limit the number of accruals workers forfeit, depending on Days to Include settings. However, this configuration can affect performance.
Do pending time off events have an impact?	No, Workday doesn't consider pending time off requests when determining whether to pause accruals. Similarly, after Workday pauses an accrual, subsequent pending time off events don't trigger absence table tier reevaluation or affect whether Workday processes the next accrual for the balance period. However, you can view balances that may be impacted by pending events on these reports: • My Time Off Results by Period • Time Off Results by Period • Time Off Results by Period for Workers

What happens when the annual accrual date for a balance period coincides with the period schedule start date or end date?	When the accrual date for a balance period occurs on the first day of a period schedule, workers receive their accrual on the day before the period schedule start date. When the accrual date for a balance period occurs on the last day of a period schedule, workers receive their accrual on the last day of the period schedule. To limit the number of accruals workers forfeit, you can: • Check that any carryover limits set for time off plans on the absence table tiers can accommodate the accruals. • Run the Carryover Balances for Organization (by Carryover Date) report to see who will have balances on the last day of the period. • Consider adjusting the amount of time before expiration on the time off plan.
Can I use the Maximum Unpaid Time Off Units Allowed validation with this instance value calculation?	To ensure that the *Accrual Date Paused if Worker Is Absent* IVC resolves correctly, you must: • Only use the *Maximum Unpaid Time Off Units Allowed* validation on time offs that are part of an absence table tier. • Always have at least 1 tier without a *Maximum Unpaid Time Off Units Allowed* validation.

FAQ: How do I pause a rolling accrual for a number of days?

You can use the *Pause Accrual for Related Time Off Events* instance value calculation (IVC) to pause accruals for a number of days when workers are absent for a defined period before or after their defined anniversary occurs, reducing manual effort. The accruals must use an anniversary-based balance period. The IVC determines the accrual date based on a Days to Include setting of *All Days* for each time off plan.

Example: You configure an accrual frequency override to pause a sick time off accrual for 5 days. Rachel has a hire date of 18-02-10. She's sick from 21-02-06 to 21-02-12. Her first day back to work is 21-02-13. Her sick time off balance increases on 21-02-17, after she's back at work for 5 days and eligible for the increment, based on her length of service.

If Rachel is sick before her anniversary, to accrue her increment, she needs to have 5 days without sick time off before her anniversary.

Related time off events correspond to the time off plans that use the accrual. Only time off events for time off types that are part of the same time off plan as the accrual trigger the IVC. Example: When John takes time off on his work anniversary, if that time off isn't against a time off type on the same time off plan as the accrual, he accrues on that day.

To configure the accrual frequency override:

1. Access the Edit Accrual task.

2. Select the accrual.
3. On the Time Off Plan Overrides tab, for Accrual Frequency Method, select *Custom Frequency*.
4. From the First Accrual Date prompt, select *Pause Accrual for Related Time Off Events*.
5. In the Number of Days to Pause an Accrual field, enter the number of days.

FAQ: Enabling Workers Retain Their Historical Absence Data

- How can I enable workers retain their historical absence data after we rehire them or they have service or termination date changes? on page 2366
- Should I change time off plans, accruals, and time offs to use the related IVC for hire date, service date, or termination date calculations? on page 2368
- When you change a service date, in which periods does Workday reflect the change? on page 2369

How can I enable workers retain their historical absence data after we rehire them or they have service or termination date changes?

You can use these instance value calculations (IVCs) when you configure:

- Accruals, including accrual frequency on time off plans and scheduling rules.
- Accrual and time off eligibility overrides.
- Balance periods.
- Carryover limits.
- Limit overrides on accruals and time offs.
- Lower and upper limits.
- Time off plan eligibility rules.

When you rehire workers, or they have service or termination date changes, Workday uses the IVCs to calculate the correct dates as of the period.

IVC	Description
• *Recent Hire Date as of Period End Date* • *Recent Hire Date as of Period Start Date*	The most recent hire date for the worker based on the period start date or end date.
• *Recent Continuous Service Date Based on Period End Date* • *Recent Continuous Service Date based on Period Start Date*	The most recent continuous service date for the worker based on the period start date or end date.
• *Recent Seniority Date Based on Period End Date*	The most recent seniority date for the worker based on the period start date or end date.

IVC	Description
• *Recent Seniority Date Based on Period Start Date*	Use to enable workers hired multiple times remain eligible for all periods in which they were previously eligible.
• *Recent Termination Date based on Period End Date* • *Recent Termination Date based on Period Start Date*	The most recent termination date for the worker based on the period start date or end date. Use to enable workers terminated multiple times retain historical eligibility.
• *Recent Time Off Service Date Based on Period End Date* • *Recent Time Off Service Date Based on Period Start Date*	The most recent time off service date for the worker date based on the period start or end date. Use to enable workers hired multiple times, or with job changes, and multiple time off service dates in their history remain eligible for all periods.
• *Recent Union Seniority Date Based on Period End Date* • *Recent Union Seniority Date Based on Period Start Date*	The most recent union seniority date for the worker based on the period start or end date. Use to enable workers to remain eligible for accruals on off plans, based on union-membership eligibility rules.

Other instance value calculations that you can use in Absence components to provide the most recent and accurate historical data for workers include:

- *Recent Benefits Service Date Based on Period End Date*
- *Recent Benefits Service Date Based on Period Start Date*
- *Recent Company Service Date Based on Period End Date*
- *Recent Company Service Date Based on Period Start Date*

- *Recent Date Entered Workforce Based on Period End Date*
- *Recent Date Entered Workforce Based on Period Start Date*
- *Recent Original Hire Date Based on Period End Date*
- *Recent Original Hire Date Based on Period Start Date*
- *Recent Retirement Eligibility Date Based on Period End Date*
- *Recent Retirement Eligibility Date Based on Period Start Date*
- *Recent Severance Date Based on Period End Date*
- *Recent Severance Date Based on Period Start Date*
- *Recent Union Seniority Date Based on Period End Date*

Note:

Workday populates theOriginal Hire Datefield automatically from the earliestHire Date. However, if you manually change theOriginal Hire Datefield using theEdit Service Datestask, Workday doesn't continue to populate theOriginal Hire Datefield. The existing*Worker: Original Hire Date*calculation returns the latestOriginal Hire Datevalue, regardless of the period that Workday needs to evaluate, which can result in incorrect values for historical accrual and time off balances.

As a calculations administrator with modify access to the *Set Up: Time Off (Calculations - Generic)* domain, you can use the *Recent Original Hire Date Based on Period Start Date* and *Recent Original Hire Date Based on Period End Date* IVCs in Absence components instead of the*Worker: Original Hire Date*field to reference the recent original hire date for a worker as of the period start or end dates. These IVCs consider the worker's original hire date as part of accruals or in time off plan eligibility to determine which workers are eligible for specific time off plans.

Should I change time off plans, accruals, and time offs to use the related IVC for hire date, service date, or termination date calculations?

If these absence components use hire date, service date, or termination date calculations, consider whether you need to change their configurations to use the corresponding IVC. Example: Instead of *Continuous Service Date*, you can use *Recent Continuous Service Date based on Period Start Date* or *Recent Continuous Service Date based on Period End Date*.

Consider whether the calculation usages are in:

- Multiple areas. Example: If the usage is in more than 1 accrual, determine whether the IVC is required in each case.
- Multiple effective-dated snapshots of time off plans, accruals, and time offs. To prevent Workday retroactively recalculating historical periods based on a hire date, service date, or termination date change, uptake the IVC on all effective-dated snapshots of the absence component.

  To correct historical periods, you might need to recalculate time off plan balances for workers.
- Workday-delivered calculations that reference hire date, service date, or termination date calculations. In this case, you need to create new calculations that use the IVC manually.

When you change a service date, in which periods does Workday reflect the change?

Workday doesn't support entering an effective date on these business processes but derives service date changes from business process events:

Business Process	Effective Date
Hire	Hire Date is the effective date for these service date changes: • Hire Date • Continuous Service Date Workday reflects service date changes initiated from a *Hire* event in the period that you hire the worker and in all future periods.
Service Dates Change	The initiated date is the effective date for these service date changes: • Continuous Service Date • Seniority Date • Time Off Service Date Workday reflects service date changes in the period in which you initiate the change, and in all future periods.

Business Process	Effective Date
	Workday also populates the Seniority Date from the Hire Date automatically during the *Hire* business process.
Termination	Termination Date is the effective date. Workday reflects termination date changes initiated from a *Terminate* event in the period in which the termination date falls and in all future periods.

Note: When you backdate a service date, Workday doesn't update prior periods.

FAQ: How do I prevent time off from accruing while workers are on leave?

Identify the leave types that prevent accruals and modify accrual eligibility rules to stop workers on these leave types from accruing.

Example:

1. Update the leave type:
    a. Access the Edit Leave Type task.
    b. In the Leave Impacts section of the Details tab, select the Absence Accrual Effect check box.
2. Create a value comparison calculation:
    a. Access the Create Value Comparison Calculation task.
    b. Name the calculation something like *Not on LOA with Accrual Effect* and enter:

1st Operand	Operator	2nd Operand
On Leave as of Period End Date with Absence Accrual	*equal to*	*False*

1st Operand	Operator	2nd Operand
Effect (a Workday-owned instance value calculation)		

3. Assign the calculation to each accrual you want to stop:

   a. Access the Edit Accrual task.
   b. On the Time Off Plan Overrides tab, add *Not on LOA with Accrual Effect* to each set (row) of eligibility criteria.

Reference: Feature Availability and Balance Tracking

Compare the features available for time off plans that track balances and plans that don't.

Configuration

Feature	Plans That Track Balances	Plans That Don't Track Balances
Time off data entry validations	All validation types available.	All validation types except: • Time Off Date Before Maximum Override Balance Date Not Allowed • Maximum Unpaid Time Off Units Allowed
Eligibility rules for time off	Yes	Yes
Accruals, including frequencies and limits	Yes	No
Time off limits	Yes	No

Time Off Entry and Maintenance

Feature	Plans That Track Balances	Plans That Don't Track Balances
Enter time off (requests)	Yes	Yes
Review time off (and approve)	Yes	Yes
Revise time off	Yes	Yes
Correct time off	Yes	Yes
Review time off corrections (and approve)	Yes	Yes
View balances and balance projections	Yes	No
Adjust time off	Yes	No
Adjust or override accrual calculations	Yes	No

Feature	Plans That Track Balances	Plans That Don't Track Balances
Calculate and store balances	Yes	No
Suspend accrual and time off limits	Yes	No
Override time off plan balances	Yes	No

Payment-Related Features

Feature	Plans That Track Balances	Plans That Don't Track Balances
Track paid time separately from unpaid time	Yes	No
Pass time off to Workday Payroll or Payroll Interface for use in payroll calculations	Yes	No

Examples: Time Off Setup

Example: Define Eligibility for a Time Off Plan

This example describes how to define eligibility for time off plans.

Context

As part of the HR department, you're configuring the time off plan for your full-time employees. As part of the process, you need to define eligibility criteria for the time off plan so that it's available to:

- Employees classified as regular and full-time as of the period end date.
- Employees terminated at midperiod that are regular and full-time on the period start date.

Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.

Steps

1. Create eligibility criteria for regular employees:
    a) Access the Create Instance Set Comparison Calculation task.

       Enter this information:

Field	Description
Name	*Employee Type is Regular (as of Period End Date)*
Source Field	*Employee Type as of Period End Date*
Relational Operator	*in the selection list*

Field	Description
Target Instance	*Regular*

b) Access the Create Instance Set Comparison Calculation task.

Enter this information:

Field	Description
Name	*Employee Type is Regular (as of Period Start Date)*
Source Field	*Employee Type as of Period Start Date*
Relational Operator	*in the selection list*
Target Instance	*Regular*

c) Access the Create Logic Calculation task.

Enter this information:

Field	Description
Name	*Employee Type is Regular (as of Period Start Date) AND Worker is Terminated Mid-Period*
Operator	*AND*
Calculation	*Employee Type is Regular (as of Period Start Date)*
Calculation	*Worker: Terminated Mid-Period*

d) Access the Create Logic Calculation task.

Enter this information:

Field	Description
Name	*Employee Type is Regular*
Operator	*OR*
Calculation	*Employee Type is Regular (as of Period End Date)*
Calculation	*Employee Type is Regular (as of Period Start Date) AND Worker is Terminated Mid-Period*

2. Create the eligibility criteria for full-time employees:

a) Access the Create Instance Set Comparison Calculation task.

Enter this information:

Field	Description
Name	*Time Type is Full Time (as of Period End Date)*
Source Field	*Time Type as of Period End Date*
Relational Operator	*in the selection list*

Field	Description
Target Instance	*Full Time*

b) Access the Create Instance Set Comparison Calculation task.

Enter this information:

Field	Description
Name	*Time Type is Full Time (as of Period Start Date)*
Source Field	*Time Type as of Period Start Date*
Relational Operator	*in the selection list*
Target Instance	*Full Time*

c) Access the Create Logic Calculation task.

Enter this information:

Field	Description
Name	*Time Type is Full Time (as of Period Start Date) AND Worker is Terminated Mid-Period*
Operator	*AND*
Calculation	*Time Type is Full Time (as of Period Start Date)*
Calculation	*Worker: Terminated Mid-Period*

d) Access the Create Logic Calculation task.

Enter this information:

Field	Description
Name	*Time Type is Full Time*
Operator	*OR*
Calculation	*Time Type is Full Time (as of Period End Date)*
Calculation	*Time Type is Full Time (as of Period Start Date) AND Worker is Terminated Mid-Period*

3. Combine the eligibility criteria for regular, full-time employees.

   Access the Create Logic Calculation task.

   Enter this information:

Field	Description
Name	*Employee is Regular and Full Time*
Operator	*AND*
Calculation	*Employee Type is Regular*
Calculation	*Time Type is Full Time*

4. Add the eligibility criteria to the time off plan.
   a) Access the Create Time Off Plan task.
   b) In the Enabled for Worker Type field on the Eligibility tab, select *Employee*.
   c) In the Worker Eligibility table, add a row and select *Employee is Regular and Full Time*.

Result

Use the Evaluate Absence Eligibility report to test whether a worker is eligible for the time off plan as of a date.

The Next Level: Common Absence Use Cases

The Next Level: The Calculation Engine Behind Absence Management

Example: Display Balances for Plans with Intermittent Time Off

These examples suggest how you might configure balance tracking and visibility for 2 common Absence policies. The examples are for Family Medical Leave Act (FMLA) scenarios, but apply to any type of intermittent time off.

Context

Employees at Cara's company can take PTO concurrently with FMLA. To support this policy, Cara sets up a single time off plan, with 2 time offs that subtract from the plan. Her time off plan must track and display balances because the intermittent PTO reduces its time off plan and FMLA leave balances.

Time Off Plan	Track Balance	Balance Visibility	Time Offs that Subtract from Plan
PTO Plan	Yes	Yes	• *Regular Time Off* • *Intermittent FMLA Time Off*

Employees at Rupert's company must deplete their PTO before taking intermittent FMLA. To support this policy, Rupert sets up 2 time off plans. He must display balances for the *PTO Plan*, and either hide or not track balances for the *Intermittent FMLA Plan*.

Time Off Plan	Track Balance	Balance Visibility	Time Offs that Subtract from Plan
PTO Plan	Yes	Yes	*Regular Time Off*
Intermittent FMLA Plan	No	Not applicable	*Intermittent FMLA Time Off*

Prerequisites

- Create the *FMLA* leave type.
- Create these time offs:
  - *Regular Time Off*
  - *Intermittent FMLA Time Off* (linked to the *FMLA* leave type)
- Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.

Steps

- Employees can take PTO concurrently with FMLA.
  a) Access the Create Time Off Plan task.
  b) Select the Track Balance check box.
  c) Select a Balance Visibility Type.
  d) On the Time Off tab, add 2 rows and select these values in the Subtracts from Balance field:
     - *Regular Time Off*
     - *Intermittent FMLA Time Off*
- Employees must deplete PTO before taking intermittent FMLA.
  a) Create the *PTO Plan* that tracks balances and subtracts *Regular Time Off* from the plan's balance.
  b) Create the *Intermittent FMLA Plan*:
     a. Access the Create Time Off Plan task.
     b. Leave the Track Balance check box blank.
     c. On the Time Off tab, add a row and select *Intermittent FMLA Time Off* in the Subtracts from Balance field.
  c) Create a leave of absence rule that requires the *PTO Plan* to be depleted before the employee can use FMLA.

Examples

Example: Require Workers to Use Time Off Before FMLA on page 2579

Example: Position-Based Accrual

This example demonstrates how to set up an accrual based on a single position.

Context

Maria holds 2 positions in your company. For every 16 hours she works in her primary position in a pay period, she accrues 1 hour of time off. You need to configure an accrual so that it calculates based on the number of hours reported to payroll in a pay period for Maria's primary position only.

Prerequisites

Security:

- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Steps

1. Create an instance set comparison calculation that identifies payroll result lines as regular or overtime pay.
    a) Access the Create Instance Set Comparison Calculation task.
    b) As you complete the task, consider:

Field	Value
Name	*Pay Component is Hourly or Overtime Pay*
Category	*Absence*
Source Field	*Pay Component for Workday Payroll Related Payroll Result Line*
Relational Operator	*in the selection list*
Target Instance	• *Hourly* • *Overtime*

2. Create a conditional calculation that returns line amounts for payroll results (number of hours worked) for hourly or overtime pay.
    a) Access the Create Conditional Calculation task.
    b) As you complete the task, consider:

Field	Value
Name	*Regular or Overtime Hours Worked in Period*
Category	*Absence*
Order	*a*
Condition	*Pay Component is Hourly or Overtime Pay* Note: The instance set comparison calculation you created earlier.
Result	*Workday Payroll Related Result Line Amount*
Default Response	*0*

3. Create an aggregate calculation that sums the number of hours worked in a period.
    a) Access the Create Aggregate Calculation task.
    b) As you complete the task, consider:

Field	Value
Name	*Actual Hours Worked in Period*
Category	*Absence*
Function	*Sum*
Operand	*Regular or Overtime Hours Worked in Period* Note: The conditional calculation you created earlier.
Instances for Operand Calculation	*Payroll Hours Related Result Lines for Period - Position*

4. Create an arithmetic calculation that divides the number of hours worked in a period to calculate the accrual.
    a) Access the Create Arithmetic Calculation task.
    b) As you complete the task, consider:

Field	Value
Name	*Accruals for Pay Period*
Category	*Absence*
1st Operand	*Actual Hours Worked in Period* Note: The aggregate calculation you created earlier.
Operator	*Divide*
2nd Operand	*16*

5. Create the accrual.
    a) Access the Create Accrual task.
    b) In the Calculation field, select *Accruals for Pay Period*.

Result

Maria accrues 1 hour of time off for every 16 hours she works in her primary position.

Reference
The Next Level: Common Absence Use Cases

Example: Create an Accrue-As-You-Go Bereavement Plan

This example explains how to set up an accrue-as-you-go plan for bereavement time off with a limit of 40 hours.

Context

GMS offers employees an accrue-as-you-go bereavement plan, meaning that they don't accrue bereavement time off with every pay period. Instead, they accrue and use the time off as they request it, with a limit of 40 hours. You have to configure a time off plan that meets these requirements.

Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.

Steps

1. Define the time off and time off type.
    a) Access the Create Time Off task and enter:

Field	Value
Name	*Bereavement Time Off*

Field	Value
Code	*Bereavement Time Off*

b) From the Time Off Type prompt, select Create.

Name the time off type *Bereavement Time Off*.

c) Under the Details tab, enter:

Field	Value
Priority	*1*
Entry Option	*Enter through Time Tracking or Time Off*

2. Create the time off plan.

a) Access the Create Time Off Plan task and enter:

Field	Value
Name	*Bereavement Time Off Plan*
Track Balance	Select the check box.
Balance Period	*Rolling 12 Month Period*
Period Schedule	*Annual*
Unit of Time	*Hours*
Effective Date	*01/01/2024*

b) On the Balance tab, enter:

Field	Value
Balance Visibility	*Eligible in period (based on As of Date)*
Calendar Display	*Plan and Type*
Date	*Balance Period Start Date*

c) On the Calculation tab, enter:

Field	Value
Accrual Frequency Method for Time Off Plan	Select *Start of Period* to process accruals before time off. If you don't select this option, Workday could treat an employee's bereavement request as unpaid time.
Days to Include	*All Days*

d) On the Time Off tab, from the Subtracts from Balance prompt, select *Bereavement Time Off* to associate it with the time off plan.

3. Define the accrual calculation.

a) Access the Create Accrual task and enter:

Field	Value
Name	*Bereavement Accrual*

Field	Value
Code	*Bereavement Accrual*

b) On the Calculation tab, enter:

Field	Value
Calculation	*Bereavement Time Off - Time Off Total* Workday generates this related calculation when you define and associate the bereavement time off with a time off plan. If the*Time Off Total* calculation doesn't display in the Calculation prompt, ensure you've defined bereavement time off and associated it with a plan.
Priority	*1*
Options	*None*

4. Associate the accrual with the time off plan.
   a) Access the Edit Time Off Plan task and enter:

Field	Value
Time Off Plan	*Bereavement Time Off Plan*
Update Existing Effective Date	Select this option and in the corresponding prompt, enter *01/01/2024*, which is the same Effective Date specified in Step 2.

   b) On the Accrual tab, from the Adds to Balance prompt, select *Bereavement Accrual* to add it to the time off plan balance.
5. Define the accrual limit.
   a) Access the Edit Accrual task and enter:

Field	Value
Accrual	*Bereavement Accrual*
Update Existing Effective Date	Select this option and in the corresponding prompt, select *Initial Snapshot*.

   b) On the Time Off Plan Overrides tab, define the accrual limit in the Limit Override section and enter:

Field	Value
Value	*40* (to limit the accrual to 40 hours)
Based On	*Bereavement Accrual* If the accrual you're defining doesn't display in the prompt, save the accrual definition without specifying a limit and then define the limit using the Edit Accrual task. Always base accrual limits for accrue-as-you-go plans on the accrual itself—not on the balance of the time off plan to which the accrual contributes.

Field	Value
Time Off Plan Balance Period	Displays *Rolling 12 Month Period*, which is the balance period for the time off plan that the accrual is associated with. This is the same Balance Period selected in Step 2.

Note: For accrue-as-you-go plans, use the Edit Accrual task to define accrual limits. Don't define accrual limits for the time off plan.

Example: Create a Floating Holiday Plan

This example describes 1 way to create a time off plan for floating holidays.

Context

GMS floating holiday plan gives 16 hours of floating holiday accrual to employees on January 1 of each year. Betty Liu's start date was between January 1 and July 1, so she receives 8 hours in July. Logan McNeil's start date is after July 1, so she doesn't receive any floating holiday until January 1 of the next year. Floating holiday accrual doesn't carryover to the next year.

Workday provides some of the calculations needed to build the plan. You'll create calculations that:

- Return 16 hours of accrual in January and 8 hours in July.
- Detect if a worker's hire date is before July.
- Detect whether a worker's hire date is on or before January 1.
- Detect whether a worker's hire date is after January 1.

Prerequisites

Security:

- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.
- *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Steps

1. Define the accrual calculation.
    a) Access the Create Conditional Calculation task and enter:

Field	Value
Name	*Floating Holiday Accrual: 16 Hours if January / 8 Hours if July*

Field	Value
Category	*Absence*

b) Add 2 rows with these values:

Order	Condition	Result
a	*Scheduling: Period Start Date Month = 01 (January)*	*16*
b	*Scheduling: Period Start Date Month = 07 (July)*	*8*

c) Enter a Default Response of *0*.

d) Click OK and Done.

2. Define the accrual.

    a) Access the Create Accrual task.

    b) For Name, enter *Floating Holiday Accrual*.

    c) Enter a Priority of *1*.

    d) From the Calculation prompt, select *Floating Holiday Accrual: 16 Hours if January / 8 Hours if July*.

    e) For Options, select *None*.

    f) Add a row to the Scheduling grid with these calculations:

Calculation	Description
Scheduling: Period Start Date Month = 01 (January)	Determines whether the period is the first of the year.
Worker: Hire Date <= Current Calendar Year Start Date (based on Period End Date)	Determines whether the hire date is on or before January 1; the period start date.

g) Add another row in the Scheduling grid with these calculations:

Calculation	Description
Scheduling: Period Start Date Month = 07 (July)	Determines whether the current period is July.
Worker: Hire Date >Current Calendar Year Start Date (based on Period End Date)	Determines whether the hire date is after January 1.

h) In the same row, create a calculation that determines whether the hire date is between January 1 and July 1 of the current year.

1. Select Create > Create Value Comparison Calculation and enter:

Field	Value
Name	*Worker Hire Date < July*

Field	Value
Category	*Absence*

2. In the Calculation grid, enter:

1st Operand	Operator
Worker: Hire Date	*less than*

3. In the 2nd Operand field, select Create > Create Build Date Calculation.
4. For Name, enter *1 July of Current Year (based on Period End Date)*.
5. Enter these values and click OK:

Year	Month	Day
Year: Period End Date - Year	*7*	*1*

i) Review the Scheduling Criteria:

Scheduling Criteria
Scheduling: Period Start Date Month = 01 (January) *Worker: Hire Date <= Current Calendar Year Start Date (based on Period End Date)*
Scheduling: Period Start Date Month = 07 (July) *Worker Hire Date After 1 January of Current Year* *Worker Hire Date < July*

j) Click OK and Done.

3. Define the time off.
   a) Access the Create Time Off task.
   b) For Name, enter *Floating Holiday Time Off*.
   c) From the Time Off Type prompt, select *Create Time Off Type*.
   d) Add a time off type named *Floating Holiday*.
   e) Enter a Priority of *1*.
   f) Click OK.
   g) For Entry Option, select *Enter through Time Off Only*.
   h) Click OK.
4. Create the time off plan.
   a) Access the Create Time Off Plan task and enter:

Field	Value
Name	*Floating Holiday Plan*
Track Balance	Select the check box.
Balance Period	*YTD – Current Calendar Year (based on Period End Date)*
Period Schedule	*Monthly*
Unit of Time	*Hours*

Field	Value
Effective Date	Select the year and month from which the time off plan is effective. Example: *01/01/2022*.

b) On the Balance tab, enter:

Field	Value
Balance Visibility Type	*Eligible in period (based on As of Date)*
Calendar Display	*Plan and Type*
Date	*Balance Period Start Date*

c) On the Calculation tab, enter:

Field	Value
Accrual Frequency Method for Time Off Plan	*Start of Period*
Days to Include	*Weekdays (Mon - Fri)*

d) On the Accrual tab, add a row for Adds to Balance and select *Floating Holiday Accrual*.
e) On the Time Off tab, add a row for Subtracts from Balance and select *Floating Holiday Accrual*.
f) On the Eligibility tab, add a row for Worker Eligibility and select *Worker Employee Type is Regular as of PS Date*.
g) Click OK.

Example: Create a 90-Day Waiting Period for Accruals

This example illustrates how to build a simple eligibility rule that incorporates a waiting period before accruals begin.

Context

An HR administrator at GMS builds an eligibility rule that requires new hires to complete a 90-day waiting period before they begin to accrue 2 days vacation. The rule uses 3 Workday-owned calculations:

- *Recent Continuous Service Date based on Period Start Date*: When the company rehires workers or they have service date changes, Workday evaluates the correct service date as of the period. Using this instance value calculation (IVC) enables workers to retain their historical absence data.
- *90*: A constant value calculation.
- *Date: Current Calendar Month Start Date (based on Period Start Date)*: A build date calculation.

Prerequisites

Security:

- *Set Up: Payroll (Calculations - Generic)* domain in Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in Time Off and Leave functional area.
- *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.

Steps

1. Create a calculation that retrieves the date that is 90 days after the employee's hire date.
    a) Access the Create Date Increment/Decrement Calculation task and enter:

Field	Value
Name	*Vacation accrual start date (after 90-day wait period)*
Category	*Absence*
Start Date	*Recent Continuous Service Date based on Period Start Date*
Day	*90*

    b) Click OK.
    c) Click Done.
2. Create a calculation that compares the date retrieved in the previous step to the current period start date.
    a) Access the Create Value Comparison Calculation task and enter:

Field	Value
Name	*Vacation accrual start date (after 90-day wait period) >= current calendar month start date)*
Category	*Absence*
1st Operand	*Period: Period End Date*
Operator	*greater than or equal to*
2nd Operand	*Vacation accrual start date (after 90-day wait period)*

    b) Click OK.
    c) Click Done.
3. Assign the calculation that you created in the previous step to an accrual as an eligibility rule.
    a) Access the Create Accrual task and enter:

Field	Value
Name	*Vacation Accrual with Waiting Period*
Code	*vacation-accrual*
Calculation	*2*
Priority	*1*
Options	*None*

    b) On the Time Off Plan Overrides tab, in the Worker Eligibility Override grid, add the *Vacation accrual start date (after 90-day wait period) >= current calendar month start date)* calculation.
    c) Click OK.

4. Assign the accrual to a time off plan.
    a) Access the Create Time Off Plan task and enter:

Field	Value
Name	*Vacation Plan with Waiting Period*
Balance Period	*YTD - Current Calendar Year (based on Period End Date)*
Period Schedule	*Monthly*
Unit of Time	*Days*
Effective Date	*01/01/2022*

    b) Select the Track Balance check box.
    c) On the Balance tab, enter:

Field	Value
Balance Visibility	*Eligible in period or prior periods (based on As of Date)*
Calendar Display	*Plan and Type*

    d) In the Carryover section, from the Date prompt, select *Balance Period Start Date*.
    e) On the Calculation tab, select:

Field	Value
Accrual Frequency Method for Time Off Plan	*Start of Period*
Days to Include	*Workdays (Non-Holiday)*

    f) On the Accrual tab, add the *Vacation Accrual with Waiting Period* accrual.
    g) Click OK.

Result

Wait until the 90-day period elapses, then view the plan on pages that display the time off balances.

Related Information
Tasks
Create Time Off Plans That Track Balances on page 2302
Create Accruals on page 2340

Example: Configure Accruals Relative to Hire Date and Years of Service

This example illustrates how to configure:

- A custom accrual frequency for a time off plan.
- An accrual that starts relative to the worker's hire date.
- A years-of-service based accrual.

Context

GMS employees are eligible for a time off plan with a monthly period schedule. The plan has 2 accruals:

- A standard 16 hours of time off each month, with the first accrual starting 30 days after their hire date.

- A years-of-service based accrual of 1 hour per period every year for the first 5 years. The accrual increases to 2 hours per period for every subsequent year.

Workday uses a worker's Continuous Service Date to calculate years of service.

Example: A worker has a Continuous Service Date of 09-15-2015 and accrues 2 hours per period, starting on the monthly period of September, 2020. You terminate the worker on 12-01-2021 and rehire them on 03-05-2022. Workday updates their Continuous Service Date to 03-05-2022 to reflect their rehire date. Based on their current Continuous Service Date, their years-of-service value is less than 5 years.

You can use either of these instance value calculations (IVCs) to enable workers to retain their historical absence data:

- *Recent Continuous Service Date based on Period Start Date*
- *Recent Continuous Service Date Based on Period End Date*

These IVCs evaluate historical service date changes. They return the respective Continuous Service Date for each period, based on either the period start or end date. Example: The 2 hours per period that the worker accrued from September, 2020 through December, 2021 (the period they terminated in) remains at 2 hours. They retain their accrual amount because their prior years-of-service value in those periods is greater than 5.

You need to configure the time off plan so that the accrual frequency and accruals meet your company's requirements.

Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.

Steps

1. Access the Create Time Off Plan task and enter:

Field	Value
Name	*Vacation Time Off Plan A*
Balance Period	*YTD - Current Calendar Year (based on Period End Date)*
Period Schedule	*Monthly*
Unit of Time	*Hours*
Effective Date	*01/01/2022*

2. Select the Track Balance check box.
3. On the Balance tab, enter:

Field	Value
Balance Visibility	*Eligible in period or prior periods (based on As of Date)*
Calendar Display	*Plan and Type*

4. In the Carryover section, from the Date prompt, select *Balance Period Start Date*.
5. On the Calculation tab, define the accrual frequency calculation.

Field	Value
Accrual Frequency Method for Time Off Plan	*Custom Frequency*

Field	Value
First Accrual Date	a. Select Create > Create Date Increment/ Decrement Calculation b. For Name, enter *Vacation accrual start date (after 30-day wait period)*. c. For Category, select *Absence*. d. For Start Date, select *Recent Hire Date as of Period End Date*. e. For Day, enter *30*. f. Click OK to return to the time off plan.
Accrual Recurs Every	*1*
Accrual Recurs Unit of Time	*Months*
Days to Include	*Weekdays (Mon-Fri)*

6. On the Accrual tab, add a row for the standard 16-hour accrual.
    a) From the Adds to Balance prompt, access the Create Accrual task and enter:

Field	Value
Name	*Standard 16-hour accrual*
Code	*standard-16-hour-accrual*
Calculation	*16*
Priority	*1*
Options	*None*

    b) Click OK.
7. On the Accrual tab, add a row for the years-of-service accrual.
    a) From the Adds to Balance prompt, access the Create Accrual task and enter:

Field	Value
Name	*Years-of-service accrual*
Code	*years-of-service-accrual*
Priority	*2*
Options	*None*

    b) For Calculation, select Create > Create Lookup Calculation and enter:

Field	Value
Name	*Years of Service Lookup*
Category	*Absence*

    c) For Lookup Table, select Create > Create Lookup Table, then select *Advanced Lookup Table - Numeric Calculation Search Criteria*.
    d) Click OK.
    e) On the Create Lookup Table task, enter:

Field	Value
Name	*Years of Service Vacation*

Field	Value
Category	*Absence*

f) For Numeric Search Criteria, select Create > Create Date Difference Calculation and enter:

Field	Value
Name	*Worker Years of Service*
Category	*Absence*
Interval	*Year*
Start Date	*Recent Continuous Service Date Based on Period End Date*
End Date	*Period: Period End Date*

g) Click OK.
h) In the Table Data section, select an Effective Date. Example: *01/01/2022*.
i) Add 3 table data rows to include these value pairs in the respective columns:

Search Value	a
1	*1*
5	*1*
6	*2*

j) Click OK.
k) On the Create Lookup Calculation task, click the See in New Tab icon for the *Years of Service Vacation* lookup table.
l) On the new tab, from the related actions of the *Years of Service Vacation* lookup table, select Lookup Table > Column Labels.
m) On the Maintain Column Labels task, in the Display Name column, replace *a* with *Accrual (Hours per Period)*.
n) Click OK and Done.
o) On the Create Lookup Calculation task, in the Calculation grid, select:

Field	Value
Column	*Accrual (Hours per Period)*
Period Date Indicator	*Based on Period End Date*

p) Click OK.

8. On the Time Off Plan Overrides tab, from the Accrual Frequency Method prompt, select *End of Period*.
9. Click OK.

Troubleshooting: Time Off on page 2548

Example: Limit the Length of Time Off Requests

This example shows you how to create a business process validation to limit the length of a time off request.

Context

At Global Modern Services, workers are entitled to 1 day off at a time to attend a wedding. There are no limits to the number of weddings workers can attend in a year, but they are limited to 1 day per time off request.

Prerequisites

- Configure the *Request Time Off* business process.
- Create a *Wedding* time off type.
- Security:
    - *Business Process Administration* in System functional area.
    - *Manage: Business Process Definitions* in System functional area.

Steps

1. Access the Create Condition Rule task.
2. In the Description field, enter: *Time off requests for weddings are limited to one day each*.
3. Define the Rule Conditions.

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
AND	*Time Off Types for Time Off Event*	*any in the selection list*	*Value specified in this filter*	*Wedding*
AND	*Time Off Total Units - Days*	*greater than*	*Value specified in this filter*	*1*

4. Access the *Request Time Off business process definition*.
5. From the related actions menu of the initiation step, select Business Process > Maintain Step Conditions.
6. Add the *Time off requests for weddings are limited to one day each* Rule.

Result

When a worker tries to request more than 1 day off for the *Wedding* time off type, Workday displays an error message.

Next Steps

(Optional) Add a custom error message for this validation.

Create Business Process Condition Rules

Create Time Off Types on page 2294

Example: Set Up State Sick Leave

Context

In your state, employees accrue 1 hour of sick leave for every 30 hours worked, up to 48 hours per year. Accrued balance isn't available until 90th day of employment.

Unused balance can carry over in full to the next time period. Employers can set a limit of up to 24 hours of paid sick time per year.

Prerequisites

These domains in the Time Off and Leave functional area:

- *Set Up: Time Off (Calculations - Absence Specific)*
- *Worker Data: Time Off (Time Off Balances)*

Steps

1. Create calculations.
    a) Access the Create Arithmetic Calculation task.
    b) Enter this information:

Option	Value
Name	Scheduled Weekly Hours as of PE Date/ 30
Category	*Absence*
1st Operand	*Job Weekly Scheduled Hours (as of Period End Date)*
Operator	*Divide*
2nd Operand	*30*

    c) Click OK, then click Done.
    d) Access the Create Date Increment/ Decrement Calculation task.
    e) Enter this information:

Option	Value
Name	Continuous Service Date + 90 days
Category	*Absence*
Start Date	*Worker Continuous Service Date*
Day	*90*

    f) Click OK, then click Done.
    g) Access the Create Value Comparison Calculation task.
    h) Enter this information:

Option	Value
Name	Period Start Date >= Continuous Service Date + 90 days
Category	*Absence*
1st Operand	*Period: Period Start Date*

Option	Value
Operator	*greater than or equal to*
2nd Operand	*Continuous Service Date + 90 days*

i) Click OK, then click Done.

2. Create a time off.
    a) Access the Create Time Off task.
    b) Enter this information:

Option	Value
Name	State Sick Leave Time Off
Code	Enter an identification code for your time off.
Time Off Type	*Sick (Hours)*
Adjustments Allowed	Enable adjustments.
Entry Option	Specify whether workers can enter requests for this time off through Time Tracking, Absence Management, or both.

    c) Click OK.

3. Create an accrual.
    a) Access the Create Accrual task.
    b) Enter this information:

Option	Value
Name	State Sick Leave Accrual
Code	Enter an identification code for your accrual.
Calculation	*Scheduled Weekly Hours as of PE Date/ 30*

    c) Select the Time Off Plan Overrides tab.
    Enter this information:

Option	Value
~Worker~ Eligibility Override	Period Start Date >= Continuous Service Date + 90 days
Value	48

    d) Click OK.

4. Create a time off plan.
    a) Access the Create Time Off Plan task.
    b) Enter this information:

Option	Value
Name	State Sick Leave Time Off Plan
Track Balance	Enable balance tracking.
Balance Period	*YTD- Current Calendar Year (based on Period End Date)*

Option	Value
Period Schedule	*Weekly (Mon-Sun)*
Unit of Time	*Hours*
Effective Date	Enter a date for this plan to be available for your workers.

c) On the Balance tab, enter:

Option	Value
Balance Visibility	*Never show balance*
Calendar Display	*Plan*
Overrides Allowed	Enable overrides.
Date	*Balance Period Start Date*

d) On the Calculation tab, enter:

Option	Value
Accrual Frequency Method for Time Off Plan	*End of Period*
Time Off Plan Balance Lower Limit	*0*
Daily Quantity Default	*Worker Work Schedule Calendar: Workday hours for date (based on As of Date) no rounding*
Days to Include	*All Days*

e) On the Accrual tab, select *State Sick Leave Accrual* on the Adds to Balance field.
f) On the Eligibility tab, specify that the time off plan is available for all workers in your state using the Country / Country Region field.
g) On the Time Off tab, add a row to the grid and select *State Sick Leave Time Off* on the Subtracts from Balance prompt.
h) Click OK.
i) On the Accrual tab, select *State Sick Leave Accrual* on the Adds to Balance field.
j) On the Eligibility tab, specify that the time off plan is available for all workers in your state using the Country / Country Region field.
k) On the Time Off tab, add a row to the grid and select *State Sick Leave Time Off* on the Subtracts from Balance prompt.
l) Click OK.

5. Edit the accrual.
   a) Access the Edit Accrual task and enter *State Sick Leave Accrual*.
   b) Select the Time Off Plan Overrides tab.
   c) Enter *State Sick Leave Time Off Plan* in the Based On field.
   d) Click OK.

6. Create a calculated field that counts the number of sick time hours.
    a) Access the Create Calculated Field task.
    b) Enter a Field Name. Example: *24 Hour Count*.
    c) For Business Object, select *Time Off Event*.
    d) For Function, select *Count Related Instances*.
    e) Click OK.
    f) On the Calculation tab:
        - For Related Field, select *Time Off Entry*.
        - For Count, select *Instances where condition is true*, and select Create Calculated Field.
    g) Enter a Field Name. Example: *24 Hour True/False*.
    h) For Business Object, select *Time Off Entry*.
    i) Click OK.
    j) On the Calculation tab, create this condition rule in the True/False Condition grid.

Field	Operator	Comparison Type	Comparison Value
Time Off Amount in Balance Period	*greater than*	*Value specified in this filter*	*24*

    k) Click OK.
    l) Click OK and Done.
7. Edit the *Request Time Off* business process to add a validation that limits paid sick time to 24 hours per year.
    a) Access the Edit Business Process task and select your default or custom *Request Time Off* business process definition.
    b) From the related actions menu of the initiation step, select Business Process > Maintain Step Conditions.
    c) Click OK.
    d) Add a row in the Validation Conditions grid and in the Rule field, select Create Condition Rule.
    e) Click OK.
    f) In the Description field, enter *If 24-Hour Sick Time Off then Validate Request Time Off for Global Modern Services step a - initiation*
    g) Add these condition rules:

Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
Time Off Types for Time Off Event	*any in the selection list*	*Value specified in this filter*	*Sick (Hours)*
24 Hour Count	*greater than or equal to*	*Value specified in this filter*	*1*

    h) Click OK.

Result

Eligible employees can enter sick leave time off requests.

The Next Level: Common Absence Use Cases

Example: Bulk Load Time Off Requests into Workday

When uploading a high volume of time off requests through an EIB spreadsheet or existing web services, you must follow certain criteria. This example illustrates how to configure the EIB spreadsheet for the *Import Time Off Request Event Batch* web service.

Context

You want to bulk upload a high volume of new time off requests into Workday. For performant data loads, we recommend you use this EIB when the batch of requests exceeds either:

- 100 requests against an absence table.
- 1,000 requests directly against a time off type or plan.

Steps

1. Set Up Inbound EIB.

   Generate an EIB spreadsheet based on the *Import Time Off Request Event Batch* web service.
2. Prepare the EIB spreadsheet using these criteria:
   - Don't enter a time off request before the latest persisted balance date.
   - Don’t include time off requests more than 99 weeks old.
   - Don't split workers across files. All entries for a worker should be in the same file.
   - Each row has a unique ID in the tenant.
   - Each time off request in the same time off type has only 1 unit for the same date per row. Example: A worker requests 3 hours time off and 2 hours time off of the same type and on the same date. Include these requests as 5 hours on the same row. If you're loading requests with start and end times, you can use multiple rows.
   - Each worker has only 1 line key.
   - Order requests chronologically, from oldest to most recent.
   - You can enter an optional Time Off Entry ID value for each entry that you're loading. If you specify a value, it must be unique. When you leave it blank, Workday generates an ID automatically.
   - You can use multiple header keys. All time off requests from an individual worker must use the same header key.
3. Launch EIB Spreadsheet Upload.

Result

You can view your time off requests in Workday.

Related Information
Concepts
Concept: Importing Time Off Request Events on page 2434

Example: Correct Time Off Entries Using the Adjust Time Off EIB

This example illustrates how to generate an EIB spreadsheet template with data for the *Adjust Time Off* web service operation to correct time off entries. Workday removes time off entries corrected to zero from third-party calendars.

Context

You want to adjust existing time off entries by passing in the adjusted units and not the corrected amounts. You'll create a custom report for your time off entries and run the report to help you populate the EIB input file with the report results.

Steps

1. Access the Create EIB task.
2. Enter a Name value. Example: *Adjust Time Off Example* .
3. Select *Inbound*.
4. Click Next.
5. From the Web Service Operation prompt, select *Adjust Time Off*.
6. Click Next.
7. From the Template Model from Web Service Operation prompt, select *Adjust Time Off*.
8. Click Next and OK.
9. From the related actions menu of the integration system, select Template Model > Generate Spreadsheet Template.
10. Select the Confirm check box and click Submit.
11. Access the Create Custom Report task.
12. Enter these values:

Field	Value
Report Name	*Workday Time Off Entries*
Report Type	*Advanced*
Optimized for Performance	Clear the check box.
Data Source	*Time Off - All Statuses*

13. On the Columns tab, add these rows:

Business Object	Field
Worker	*Worker*
Worker	*Employee ID*
Time Off Entry	*Reference ID*
Time Off Entry	*Time Off Date*
Time Off Entry	*Time Off Type for Time Off Entry*
Time Off Entry	*Units*
Time Off Entry	*Entered On*
Time Off Entry	*Request or Correction*

14. Click OK.
15. From the related actions menu of the custom report, select Custom Report > Run.
16. In the *Adjust Time Off* EIB spreadsheet, enter values for these fields:

Field	Consideration
Spreadsheet Key	Specify a unique value for each worker.
Run Time Off Validation	Set to *Y* if you want to validate time off entries for the time off request. If any time off entries fail validation for a time off request, Workday rejects the entire time off request.
Worker	This is a required value. You might need to change the reference ID value in cell D4 of

Field	Consideration
	the spreadsheet from *Contingent Worker ID* to *Employee ID*. The default value is *Contingent Worker ID*. Columns that include *ID Type* values enable you to select a reference ID type for each row of data. Example: If you're loading employees and contingent workers in a single EIB, select the reference ID type for each person or row.
Row ID	This is typically a value of *1* for each entry, unless you have multiple row entries for the same worker.
Time Off Entry ID	If you want to assign a reference ID to the newly created correction event, enter a value here. If you leave the field blank, the web service automatically assigns a value.
Time Off Entry	Reference ID of the time off entry that you're adjusting. Use the value from the custom report.
Adjustment to Requested	Enter the number of units to add or remove from the time off entry. Example: If you want to adjust the time off from 8 hours to 6 hours, enter -2. This isn't the correction value.

17. Access the Launch / Schedule Integration task.
18. From the Integration prompt, select the *Adjust Time Off Example* integration.
19. In the Value column of the Integration Attachment row, select Create Integration Attachment.
20. Select the *Adjust Time Off* EIB spreadsheet file and click OK.
21. Click OK.

Example: Calculate the Carryover Limit for a Time Off Plan

This example illustrates 1 way to calculate carryover-limit amounts and includes these calculations:

- Conditional
- Instance Set Comparison

Context

Global Modern Services (GMS) wants to change their US vacation time off plan to enable workers to carryover different amounts, depending on their location. Example: When their primary work state is California, GMS wants to change the carryover limit from 80 units to 120 units. For all other states, the carryover limit will remain at 80 units.

Ben is a California employee whose carryover balance will change from 80 units to 120 units over the carryover period, based on a new effective date of 12-31-2018 for the time off plan. Jeremy works in Atlanta so his carryover limit of 80 won't change.

Prerequisites

Create a time off plan for US vacation that tracks balances.

Security: These domains in the Time Off and Leave functional area:

- *Set Up: Time Off (Calculations - Absence Specific)*

- *Worker Data: Time Off (Time Off Balances)*

Steps

1. Create calculations.
   a) Access the Create Instance Set Comparison Calculation task.
   b) Enter or select these values:

Field	Value
Name	*Primary Work State = California*
Category	*Absence* and *Payroll*
Source Field	*Primary Work State as of Period End Date*
Relational Operator	*in the selection list*
Target Instance	*California*

   c) Click OK and Done.
   d) Access the Create Conditional Calculation task.
   e) Enter or select these values:

Field	Value
Name	*Hourly Vacation Carryover*
Category	*Absence*

   f) In the Conditional Calculations grid, add a row with these values:

Field	Value
Order	*a*
Condition	*Primary Work State = California*
Result	*120*

   g) From the Default Response prompt, select *80*.
   h) Click OK and Done
2. Access the Edit Time Off Plan task.
3. Select the time off plan. Example: *USA Vacation Plan (Hourly)*.
4. On the Balance tab, in the Carryover section, enter these values:

Field	Value
Date	*First Period of Balance Period Start Date*
Limit	*Hourly Vacation Carryover*

5. Click Ok.

Result

The conditional calculation returns true for workers with a primary work location of California as of the period end date, and Workday enables eligible workers to carryover 120 units of time. Otherwise, workers have a carryover limit of 80. To verify the calculations and that the changes take effect:

- Access the Find Workers report to identify workers by location.
- Select Time and Absence > View Time Off Results by Period as a related action on the worker profile for workers based in California and another state such as Georgia.

- Select different balance periods on either side of the effective date to identify how many units the worker carried over each year. Select the last period of the previous year, the first and last periods of the next year, and so on. Example:
  - *2017> 12/18/2017-12/31/2017 (Bi-weekly (Mon-Sun))*
  - *2018>01/01/2018-01/14/2018 (Bi-weekly (Mon-Sun))*
  - *2018>12/31/2018-01/13/2019 (Bi-weekly (Mon-Sun))*
  - *2019>01/14/2019-01/27/2019 (Bi-weekly (Mon-Sun))*

Reference: Numeric Calculations

The Next Level: The Calculation Engine Behind Absence Management

Example: Identify Primary Position for Time Off Approval

Illustrates how to add a condition rule with calculated fields on the *Request Time Off* business process to identify the worker's primary position and route the time off approval to the appropriate manager.

Context

Your company allows worker's to have multiple positions. When they request time off, they need to specify the position that the time off relates to. When workers have 2 positions, Workday can route the request to either the primary manager or non-primary manager. You plan to configure the *Request Time Off* business process so that Workday routes the approval step to the primary manager.

If you specify a Routing Modifier on the approval step, when workers have 2 positions, you can add a condition rule with calculated fields to identify the primary manager for routing.

Steps

1. Create a calculated field that looks up all positions for the worker on the time off event:
   a) Access the Create Calculated Field task.
   b) Enter these values and click OK:

Field	Value
Field Name	*LRV Worker All Positions*
Business Object	*Time Off Event*
Function	*Lookup Related Value*

   c) Select these calculation values and click OK :

Field	Value
Lookup Field	*Worker*
Return Value	*All Positions*

2. Create a calculated field that extracts the primary position from all of the worker's positions:
   a) Click Create Another Calculation .
   b) Enter these values and click OK:

Field	Value
Field Name	*EMI Primary Position from All Positions*
Business Object	*Time Off Event*

Field	Value
Function	*Extract Multi-Instance*

c) Select these calculation values and click OK:

Field	Value
Source Field	*LRV Worker All Positions*
Condition	*Primary Job*

3. Create a calculated field that extracts the result from the *EMI Primary Position from All Positions* field.
   a) Click Create Another Calculation .
   b) Enter these values and click OK:

Field	Value
Field Name	*ESI Primary Position from All Positions*
Business Object	*Time Off Event*
Function	*Extract Single-Instance*

   c) Enter these calculation values and click OK:

Field	Value
Source Field	*EMI Primary Position from All Positions*
Condition	*Any is True*
Sort Field	*Position*

4. Create a calculated field that looks up the result from the *ESI Primary Position from All Positions* field.
   a) Click Create Another Calculation.
   b) Enter these values and click OK:

Field	Value
Field Name	*LRV Primary Position from All Positions*
Business Object	*Time Off Event*
Function	*Lookup Related Value*

   c) Select these calculation values and click OK :

Field	Value
Lookup Field	*ESI Primary Position from All Positions*
Return Value	*Position*

5. Create a calculated field that checks whether the time off event contains a position value.
   a) Click Create Another Calculation .
   b) Enter these values and click OK:

Field	Value
Field Name	*Time Off Entry Position is not Empty*
Business Object	*Time Off Event*

Field	Value
Function	*True/False Condition*

c) Enter these calculation values and click OK:

Field	Value
And/Or	*And*
Field	*Position*
Operator	*is not empty*

6. Create a calculated field that extracts the result from the *Time Off Entry Position is not Empty* condition.
   a) Click Create Another Calculation .
   b) Enter these values and click OK:

Field	Value
Field Name	*ESI Position from Time Off Event from Time Off Entry*
Business Object	*Time Off Event*
Function	*Extract Single-Instance*

   c) Enter these values and click OK:

Field	Value
Source Field	*Time Off Entry*
Condition	*Time Off Entry Position is not Empty*
Sort Field	*Position*

7. Create a calculated field that looks up the result of the *ESI Position from Time Off Event from Time Off Entry* field.
   a) Click Create Another Calculation .
   b) Enter these values and click OK:

Field	Value
Field Name	*LRV Position from Time Off Event from Time Off Entry*
Business Object	*Time Off Event*
Function	*Lookup Related Value*

   c) Select these calculation values and click OK :

Field	Value
Lookup Field	*ESI Primary Position from All Positions*
Return Value	*Position*

8. Edit the *Request Time Off* business process definition.
    a) From the related actions menu of the workflow step for the Approval step, select Business Process > Create Condition Rule.
    b) In the Description text box, enter *Routes the time off approval to the manager for the primary position* .
    c) Enter these rule conditions and click OK.

Field	Value
And/Or	*And*
Source External Field or Condition Rule	*ESI Primary Position from All Positions*
Relational Operator	*in the selection list*
Comparison Type	*Value from another field*
Comparison Value	*EMI Primary Position from All Positions*

Tasks

Create Time Offs on page 2294

Example: Set Up Segmented Security for Time Off

This example illustrates how to configure access to specific time offs for specific groups of users.

Context

You're the security administrator at Global Modern Services (GMS). You want to configure access to a set of time offs for managers so that they can request and correct time off on behalf of other workers.

Prerequisites

Create the time offs that you want to secure. Example: Time offs for sick days, vacation, and holidays.

Opt in to Segment Security for Time Off.

Security:

- *Security Configuration* domain in the System functional area.
- *Set Up: Time Off* domain in the Time Off and Leave functional area.

Steps

1. Access the All Time Off Security Segments report.
2. View the time off security segments in your tenant. If your tenant contains an existing *Segment-Based Security Group for All Time Off Segment* segment that's mainly for administrators, you can remove several security groups from the segment-based group. Otherwise, skip steps a-d.
    a) From the related actions menu of the *Segment-Based Security Group for All Time Off Segment* security group, select Segment-Based Security Group > Edit.
    b) From the Security Groups prompt, remove these groups:
        - *Manager*
        - *Management Chain*
    c) Click OK.
    d) Click Done.

3. Create a time off security segment for managers.
    a) Access the Create Time Off Security Segment task.
    b) Specify these values:

Field	Value
Name	*Manager Time Offs Segment*
Time Offs	Select all of the time offs that managers should be able to enter for their direct reports. Example: Vacation time off and holiday time off.

    c) Click OK.
    d) Click Done.
4. Create a time off security segment for all employees.
    a) Access the Create Time Off Security Segment task.
    b) Specify these values:

Field	Value
Name	*Employee Self Service Time Offs Segment*
Time Offs	Select a smaller set of time offs that workers should be able to request and correct. Example: Vacation time off and holiday time off.

    c) Click OK.
    d) Click Done.
5. Create a segment-based security group for managers.
    a) Access the Create Security Group task.
    b) Specify these values:

Field	Value
Type of Tenanted Security Group	*Segment-Based Security Group*
Name	*Manager Time Offs*

    c) Click OK.
    d) Specify these values:

Field	Value
Security Groups	• *Manager* • *Management Chain*
Access to Segments	*Manager Time Offs Segment*

    e) Click OK.
    f) Click Done.
6. Create a segment-based security group for all employees.
    a) Access the Create Security Group task.
    b) Specify these values:

Field	Value
Type of Tenanted Security Group	*Segment-Based Security Group*

Field	Value
Name	*Time Offs - Employee Self Service*

c) Click OK.
d) Specify these values:

Field	Value
Security Groups	*Employee as Self*
Access to Segments	*Employee Self Service Time Offs Segment*

e) Click OK.
f) Click Done.

7. Edit the domain security policy.
   a) Access the View Domain report.
   b) Select *Time Off Segmented Setu* from the Domain report.
   c) From the related actions menu, select Domain > Edit Security Policy Permissions.
   d) In the Report/Task Permissions section, add these groups with View access:
      - *Manager Time Offs*
      - *Time Offs - Employee Self Service*
   e) If the *Access Time Off (Segmented)* domain security policy contains the *All Users* security group, remove it.
   f) Click OK.
   g) Click Done.
8. Activate the security policy changes.
   a) Access the Activate Pending Security Policy Changes task.
   b) In the Comment field, enter:

      Created time off security segments to enable manager and employee self-service access to sets of time offs.
   c) Click OK.
   d) Select the Confirm check box.
   e) Click OK.
   f) Click Done.

Result

Managers can view all time offs in the *Manager Time Offs* security segment when they enter or correct time off on behalf of workers using these tasks:

- Enter Absence
- Enter Time Off
- Correct Absence
- Correct Time Off

Employees can request or correct time off for the time offs in the *Employee Self Service Time Offs Segment* segment.

Next Steps

Compare access for different groups of users. Example: Sign in to Workday as a worker such as Ben Adams and access 1 of these tasks to view the set of time offs that you can access:

- Request Absence
- Request Time Off

Create additional time off security segments and segment-based security groups to create a more fine-grained segment-based time off security model, depending on your requirements.

FAQ: Segmented Security for Time Off on page 2332

Example: Validate Time Off Requests Against Working Days in Workday Scheduling

This example illustrates how to configure a time off plan in Absence Management to validate time off requests against working days in Workday Scheduling.

Context

You're an Absence Administrator at Global Modern Services and want to configure a time off plan that checks whether the requested days in a time off request are working days in Workday Scheduling for a worker. If the worker doesn't have a published schedule or isn't part of a scheduling organization, Absence uses the configured Days to Include setting *Workdays (Non-Holiday)*. This setting uses a Work Schedule Calendar (WSC) to determine the working days for workers. For hourly workers who don't have a consistent work pattern stored in their WSC, a static fall-back option such as *Workdays (All Days)* might be more appropriate.

Enrique Valdez is a manager who generates and publishes a schedule for his team in the Time and Scheduling Hub. See Steps: Set Up Schedule View for Managers.

Prerequisites

- Create a time off plan with an accrual and time off. Example: A vacation plan with these values:

Field	Value
Name	*USA Vacation Plan (Hourly)*
Balance Period	*YTD - Current Calendar Year (based on Period End Date)*
Period Schedule	*Bi-weekly (Mon-Sun)*
Unit of Time	*Hours*
Effective Date	*09/21/2020*
Balance Visibility	*Eligible in period (based on As of Date)*
Calendar Display	*Plan and Type*
Overrides Allowed	*Yes*
Date	*First Period of Balance Period Start Date*
Accrual Frequency Method for Time Off Plan	*End of Period*
Time Off Plan Balance Lower Limit	*0*
Time Off Plan Balance Upper Limit	*200*
Daily Default Quantity	*8*
Days to Include	*Workdays (Non-Holiday)*
Accrual	*USA Vacation Plan Accrual*

Field	Value
Time Off	*USA Vacation Plan Time Off*

See Create Time Off Plans That Track Balances.

- Assign a WSC to a worker. Example: A WSC with a 30-hour Monday-Friday, 8:00 AM - 3:00 PM pattern.

Field	Value
Name	*Hourly PT 6 Hours (08:00-15:00) (Scheduling)*
Description	*For Hourly Part Time scheduling workers. FTE=0.75. 8AM to 3PM with lunch break.*
Pattern Start Date	*04/01/2024*
Pattern Start Day	*Monday*

See:

  - Create Work Schedule Calendars.
  - Create Rules for Assigning Calendars
  - Manually Assign Work Schedule Calendars
- Security: *Set Up: Time Off (Calculations - Absence Specific)* and *Worker Data: Time Off (Time Off Balances)* domains in Time Off and Leave functional area.

Steps

1. Access the *Edit Time Off Plan* task and select the time off plan. Example: *USA Vacation Plan (Hourly)*.
2. On the Calculation tab, in the Time Off Taken section, select Use Scheduling Shifts.
3. Select Restrict Requests to Days to Include on Calendar to restrict the worker from requesting non-working days and click OK.
4. To verify the configuration, log into Workday as a manager and search for a worker on your team. Example: *Enrique Valdez* searches for *Audrey Novak*.
5. From Audrey's Worker profile, select Calendar > View Worker Calendars and click OK. Example: This team member is assigned a WSC with a pattern from 8AM-3PM Mon-Fri.
6. Access the Scheduling report in the Time and Scheduling Hub. Audrey has a published schedule for the week of Jan 27-Feb 2, 2025. Enrique, Audrey's manager, has assigned her an extra shift on Saturday, February 1 but she needs to request time off on that day.
7. Log into Workday as Audrey and access the Manage Absence task.
8. Request 2 days off: Thursday, Jan 30 and Saturday, Feb 1. Workday allows you to submit the request for Saturday even though it's not a working day in Audrey's WSC. This is because she has a published shift on this date in Workday Scheduling, which takes priority and is considered a working day. Workday considers it a working day if the worker has a working shift for any of their positions.
9. Request vacation for Friday, January 31, when Audrey has no shifts. Workday doesn't allow the request even though it's a working day in her WSC and displays an error message. This is because Audrey's published schedule in Workday Scheduling doesn't schedule her to work on Friday and this takes priority. Click Discard.
10. Audrey wants to book vacation time in July but her schedule isn't published this far into the future. Request a week off from Sunday July 13-Saturday July 19, 2025 using the vacation time off plan. Workday detects that there's no published schedule and falls back to the Days to Include setting of *Workdays (Non-Holiday)* using Audrey's WSC. Because the selected days include non-working days, Workday doesn't submit those days for approval or display them on the absence calendar and automatically removes non-working days from the request.

11. Log into Workday as an Absence Administrator or manager and access the View Absence Occurrences Detail report.
12. Note that Workday reevaluates absence occurrences in line with absence requests and Workday Scheduling published shifts. For Audrey's first request, Workday displays 2 Workdays and 3 Calendar Days. Friday is a non-working day as she has no scheduled shifts that day but there's a published schedule for the week.
13. Log into Workday as Audrey's manager Enrique and publish another shift for Audrey on Friday and move the shifts that conflict with her approved time off to Unassigned Shifts. Making Friday a working day triggers Workday to split the absence occurrences for Audrey's time off on Thursday, Jan 30 and Feb 1 into 2 individual occurrences.

Parental Leave Time Off Plan Example

Example Steps: Configure Parental Leave as Time Off

You can configure parental leave in Workday as time off instead of leave of absence when you have specific functional requirements and desired tracking outcomes such as:

- Worker status display. When a worker is on time off, their status in Workday remains unchanged. In contrast, a leave of absence explicitly changes the worker's status to *On Leave*. For parental leave, if your company prefers the worker's status to appear as active for short, intermittent parental leave periods, or to avoid certain system implications of an *On Leave* status, time off might be your preferred configuration.
- Tracking multiple leave requests. When a worker who's currently *Active* requests a leave of absence, and a manager or administrator approves that request, their status changes to *On Leave*. This change in status triggers a staffing event on a leave of absence event, which can impact payroll, benefits, and other downstream processes. If a worker is already on a leave of absence and they move to another leave type, this results in a data change event, not a new staffing event. If your company requires each instance of parental leave (especially when taken intermittently or in conjunction with other leaves) to be tracked as a distinct event, or to trigger specific staffing-related processes, using time off enables you to achieve this.
- Duration and return to work. Companies typically use time off for absences with a short duration and a known return-to-work date, where you don't explicitly require manager approval for return. While parental leave can be long, some company policies or country regulations might involve shorter, fixed-duration parental leave periods that align more closely with time off characteristics. For longer, more open-ended leaves with estimated end dates and requiring manager approval for return, leave of absence is generally more suitable.
- Balance tracking and accrual. Time off plans often involve workers accruing balances over time. Leave of absence types, however, typically don't involve accrual but rather grant an entitlement based on eligibility. If a parental leave policy involves an accrual model, or a fixed entitlement that you want to manage similarly to other time off accruals, configuring it as time off might be more straightforward.
- Flexible payroll configuration. Configuring leave types as time off can offer more flexibility in managing different pay rates for various leave periods. Example: Statutory Sick Pay (SSP) or parental leave where varying pay rates might apply across different segments of the leave, making time off a practical choice for payroll processing.

Context

This example illustrates how to set up a time off plan for parental leave that workers are eligible for each period if they have at least 1 dependent under the age of 4 in that period. Workers receive 5 days in the period in which 1 of their dependents has a birthday, starting with the child's date of birth, and repeating on their first, second, and third birthdays. Example: Adam has a child born in April 2019. Each April, he receives 5 days up until April 2023 when he loses eligibility as his child is 4 years old.

Ideally, you would configure a leave type for this use case, which enables you to use calculations that isolate individual dependents. With leave of absence, you can require eligible employees to specify exactly which dependent they're taking each leave request event for, and then drive both the leave balance calendar start and end date, and the entitlement, based on the age of that dependent. If you set up the leave type to use entitlement per event, you can then also draw down from the same balance for each request related to the same dependent.

Within time off and Workday's calculations for Payroll and Absence, you can't use calculated fields in this manner, and can't require additional fields such as dependents in the same way as leave of absence. However, the advantage of using time off for this use case is that you can support:

- Partial day requests.
- Accruing entitlements in a more user-friendly way, without the need to return workers from leave.

Steps

1. Example: Configure a Parental Leave Upper Limit.
2. Example: Create a Worker Eligibility Rule for Parental Leave.
3. Example: Configure an Accrual for Parental Leave.
4. Example: Create a Time Off Plan for Parental Leave.
5. Example: Create an Absence Balance
6. Example: Configure an Accrual Adjustment for Parental Leave.
7. Example: Add an Accrual Adjustment to the Plan

Result

The time off plan is available for eligible workers to:

- Accrue 5 days for each child born or under 4 years of age within a specific period.
- Request absence for parental leave.

Next Steps

You can access the Time Off Results by Period report on the Worker Time and Absence profile to view accruals for the time off plan for eligible workers.

Example: Configure a Parental Leave Upper Limit

Context

This example illustrates how to configure a series of nested calculations to calculate the Time Off Plan Balance Upper Limit value for a time off plan. This top-level arithmetic calculation (*Parental Leave Upper Limit*) enables Workday to check how many children under the age of 4 a worker has, as of the period end date, and prevent the plan balance going above the annual limit of 5 days per child. You'll create 9 separate calculations that together feed into the final result for the top-level calculation, which you'll use later when configuring the time off plan:

- Dependent Age at Period End Date
- Dependent Age < 4 as of Period End
- Next Period Start Date
- Dependent Date of Birth Exists
- Dependent Date of Birth Exists in Period or Prior Period
- Dependent Age GTE 0 and < 4 as of Period End Date
- CC Dependent Age < 4 as of Period End Date
- Number of Dependents Under Age 4 as of Period End Date
- Parental Leave Upper Limit

Prerequisites

Read Example Steps: Configure Parental Leave as Time Off.

Security:

- *Set Up: Calculations - Generic* domain in the Core Payroll functional area.
- *Set Up: Time Off* and *Set Up: Time Off (Calculations - Generic)* domains in the Time Off and Leave functional area.

Steps

1. Dependent Age at Period End Date

   Create a calculation to determine the dependent's age at the period end date, using Workday-owned instance value calculations (IVCs) for the period start and end dates.

   a) Access the Create Date Difference Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Age at Period End Date*
Category	*Absence*
Interval	*Year*
Start Date	*Dependent: Date of Birth*
End Date	*Period: Period End Date*

2. Dependent Age < 4 as of Period End

   Create a calculation to determine whether the dependent's age is less than 4 as of the period end date, using the result of the previous calculation.

   a) Access the Create Value Comparison Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Age < 4 as of Period End*
Category	*Absence*
1st Operand	*Dependent Age at Period End Date*
Operator	*less than*
2nd Operand	*4*

3. Next Period Start Date

   Create a calculation to determine the start of the next period using a Workday-owned IVC.

   a) Access the Create Date Increment/Decrement Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Next Period Start Date*
Category	*Absence*
Start Date	*Period: Period End Date*
Day	1

4. Dependent Date of Birth Exists

   Create a calculation to return the dependent's date of birth for the period, using the result of the previous calculation.

   a) Access the Create Date Difference Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth Exists*
Category	*Absence*
Interval	*Day*
Start Date	*Dependent: Date of Birth*
End Date	*Next Period Start Date*

5. Dependent Date of Birth Exists in Period or Prior Period

   Create a calculation to determine whether the dependent's date of birth exists in this or a prior period, using the result of the previous calculation.

   a) Access the Create Value Comparison Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth Exists in Period or Prior Period*
Category	*Absence*
1st Operand	*Dependent DOB Exists*
Operator	*greater than*
2nd Operand	*0*

6. Dependent Age GTE 0 and < 4 as of Period End Date

   Create a calculation to determine whether the dependent's age is greater than or equal to zero and less than 4 as of the period end date, using 2 of the previous calculation results as conditions.

   a) Access the Create Logic Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Age GTE 0 and < 4 as of Period End Date*
Category	*Absence*
Operator	*AND*
Calculation	*Dependent Age < 4 as of Period End*
	Dependent DOB Exists in Period or Prior Period

7. CC Dependent Age < 4 as of Period End Date

   Create a calculation to check that the dependent's age is under 4 as of the period end date, using the previous calculation as a condition, and returning a result if the condition is true.

   a) Access the Create Conditional Calculation task.
   b) Enter or select these values:

Field	Value
Name	*CC Dependent Age < 4 as of Period End Date*
Category	*Absence*
Order	*a*
Condition	*Dependent Age GTE 0 and < 4 as of Period End Date*
Result	*1*
Default Response	*0*

8. Number of Dependents Under Age 4 as of Period End Date

   Create a calculation to determine the number of dependents under the age of 4 as of the end of the period by aggregating the result of the previous calculation.

   a) Access the Create Aggregate Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Number of Dependents Under Age 4 as of Period End Date*
Category	*Absence*
Function	*Sum*
Operand	*CC Dependent Age < 4 as of Period End Date*
Instances for Operand Calculation	*Dependents*

9. Parental Leave Upper Limit

   You can now create the top-level calculation for the Time Off Plan Balance Upper Limit value using the previous calculation that ties all of the results together.

   a) Access the Create Arithmetic Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Parental Leave Upper Limit*
Category	*Absence*
1st Operand	*Number of Dependents Under Age of 4 as of Period End Date*
Operator	*Multiply*
2nd Operand	*5*

Next Steps

Example: Create a Worker Eligibility Rule for Parental Leave

Example: Create a Worker Eligibility Rule for Parental Leave

This example illustrates how to create a worker eligibility rule for a parental leave time off plan.

Context

You'll create a value comparison calculation for an eligibility rule that checks whether the worker has a dependent under the age of 4 as of the period end date. You'll use this calculation later when configuring worker eligibility for the time off plan.

Prerequisites

Security:

- *Set Up: Calculations - Generic* domain in the Core Payroll functional area.
- *Set Up: Time Off* and *Set Up: Time Off (Calculations - Generic)* domains in the Time Off and Leave functional area.

Steps

1. Access the Create Value Comparison Calculation task.
2. Enter or select these values and click OK and Done.

Field	Value
Name	*Worker Has Dependent Under 4 as of Period End Date*
Category	*Absence*
1st Operand	*Number of Dependents Under 4 as of Period End Date*
Operator	*greater than or equal to*
2nd Operand	*1*

Next Steps

Example: Configure an Accrual for Parental Leave

Example: Configure an Accrual for Parental Leave

This example illustrates how to configure a series of nested calculations for an accrual calculation value that adds to the balance for a time off plan for parental leave. This top-level arithmetic calculation (*Parental Leave Entitlement Based on Birthdays in Current Period*) enables Workday to calculate an accrual of 5 days for a worker in a period when at least 1 of their dependents has a birthday. The accrual starts from the child's date of birth, and repeats on their first, second, and third birthdays.

Context

You'll create 18 separate calculations that together feed into the final result for a top-level accrual calculation, a calculation for a scheduling rule that starts the accrual for a worker when their child is born in the current period, and an accrual where you'll add the top-level calculation and the scheduling rule:

- Dependent Date of Birth LTE Period End Date
- Dependent Date of Birth GTE Period Start Date
- Dependent Date of Birth in Current Period
- Dependent Date of Birth + 1 Year
- Dependent Date of Birth + 1 Year LTE Period End Date
- Dependent Date of Birth + 1 Year GTE Period Start Date
- Dependent Date of Birth + 2 Years

- Dependent Date of Birth + 2 Years LTE Period End Date
- Dependent Date of Birth + 2 Years GTE Period Start Date
- Dependent Date of Birth + 3 Years
- Dependent Date of Birth + 3 Years LTE Period End Date
- Dependent Date of Birth + 3 Years GTE Period Start Date
- Dependent 1st Birthday in Current Period
- Dependent 2nd Birthday in Current Period
- Dependent 3rd Birthday in Current Period
- Dependents Born with Birthdays in Current Period
- Number of Dependents Born in Current Period
- Parental Leave Entitlement Based on Birthdays in Current Period
- Worker Has Dependent Born in Current Period
- Create an accrual for parental leave.

Prerequisites

Security:

- *Set Up: Calculations - Generic* domain in the Core Payroll functional area.
- *Set Up: Time Off* and *Set Up: Time Off (Calculations - Generic)* domains in the Time Off and Leave functional area.

Steps

1. Dependent Date of Birth LTE Period End Date

   Create a calculation to determine whether the dependent's date of birth occurs on or before the end of the period, using the result of 2 Workday-owned IVCs as the operands.

   a) Access the Create Value Comparison Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth LTE Period End Date*
Category	*Absence*
1st Operand	*Dependent: Date of Birth*
Operator	*less than or equal too*
2nd Operand	*Period: Period End Date*

2. Dependent Date of Birth GTE Period Start Date

   Create a calculation to determine whether the dependent's date of birth occurs on or after the start of the period, using the result of 2 Workday-owned IVCs as the operands.

   a) Access the Create Value Comparison Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth GTE Period Start Date*
Category	*Absence*
1st Operand	*Dependent: Date of Birth*
Operator	*greater than or equal too*
2nd Operand	*Period: Period Start Date*

3. Dependent Date of Birth in Current Period

   Create a calculation to determine whether the dependent's date of birth is in the current period using the results of the previous calculations.

   a) Access the Create Logic Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth in Current Period*
Category	*Absence*
Operator	*AND*
Calculation	*Dependent Date of Birth GTE Period Start Date*
	Dependent Date of Birth LTE Period End Date

4. Dependent Date of Birth + 1 Year

   Create a calculation to determine the date of the first birthday for the dependent, using a Workday-owned IVC.

   a) Access the Create Date Increment/Decrement Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth + 1 Year*
Category	*Absence*
Start Date	*Dependent: Date of Birth*
Year	1

5. Dependent Date of Birth + 1 Year LTE Period End Date

   Create a calculation to determine whether the dependent's first birthday occurs on or or before the end of the period, using the result of the previous calculation.

   a) Access the Create Value Comparison Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth + 1 Year LTE Period End Date*
Category	*Absence*
1st Operand	*Dependent Date of Birth + 1 Year*
Operator	*less than or equal to*
2nd Operand	*Period: Period End Date*

6. Dependent Date of Birth + 1 Year GTE Period Start Date

   Create a calculation to determine whether the dependent's first birthday occurs on or after the start of the period, using the result of the previous calculation.

   a) Access the Create Value Comparison Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth + 1 Year GTE Period Start Date*
Category	*Absence*
1st Operand	*Dependent Date of Birth + 1 Year*
Operator	*greater than or equal to*
2nd Operand	*Period: Period Start Date*

7. Dependent Date of Birth + 2 Years

   Create a calculation to determine the date of the second birthday for the dependent, using a Workday-owned IVC.

   a) Access the Create Date Increment/Decrement Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth + 2 Years*
Category	*Absence*
Start Date	*Dependent: Date of Birth*
Year	2

8. Dependent Date of Birth + 2 Years LTE Period End Date

   Create a calculation to determine whether the dependent's second birthday occurs on or before the end of the period, using the result of the previous calculation.

   a) Access the Create Value Comparison Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth + 2 Years LTE Period End Date*
Category	*Absence*
1st Operand	*Dependent Date of Birth + 2 Years*
Operator	*less than or equal to*
2nd Operand	*Period: Period End Date*

9. Dependent Date of Birth + 2 Years GTE Period Start Date

   Create a calculation to determine whether the dependent's second birthday occurs on or after the start of the period, using the result of the previous calculation.

   a) Access the Create Value Comparison Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth + 2 Years GTE Period Start Date*
Category	*Absence*
1st Operand	*Dependent Date of Birth + 2 Years*
Operator	*greater than or equal to*
2nd Operand	*Period: Period Start Date*

10. Dependent Date of Birth + 3 Years

    Create a calculation to determine the date of the third birthday for the dependent, using a Workday-owned IVC.

    a) Access the Create Date Increment/Decrement Calculation task.
    b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth + 3 Years*
Category	*Absence*
Start Date	*Dependent: Date of Birth*
Year	3

11. Dependent Date of Birth + 3 Years LTE Period End Date

    Create a calculation to determine whether the dependent's third birthday occurs on or or before the end of the period, using the result of the previous calculation.

    a) Access the Create Value Comparison Calculation task.
    b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth + 3 Years LTE Period End Date*
Category	*Absence*
1st Operand	*Dependent Date of Birth + 3 Years*
Operator	*less than or equal to*
2nd Operand	*Period: Period End Date*

12. Dependent Date of Birth + 3 Years GTE Period Start Date

    Create a calculation to determine whether the dependent's third birthday occurs on or after the start of the period, using the result of the previous calculation.

    a) Access the Create Value Comparison Calculation task.
    b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Date of Birth + 3 Years GTE Period Start Date*
Category	*Absence*
1st Operand	*Dependent Date of Birth + 3 Years*
Operator	*greater than or equal to*
2nd Operand	*Period: Period Start Date*

13. Dependent 1st Birthday in Current Period

    Create a calculation to determine whether the dependent's first birthday is in the current period.

    a) Access the Create Logic Calculation task.
    b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent 1st Birthday in Current Period*
Category	*Absence*
Operator	*AND*
Calculation	*Dependent Date of Birth + 1 Year GTE Period Start Date*
	Dependent Date of Birth + 1 Year LTE Period End Date

14. Dependent 2nd Birthday in Current Period

    Create a calculation to determine whether the dependent's second birthday is in the current period.

    a) Access the Create Logic Calculation task.
    b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent 2nd Birthday in Current Period*
Category	*Absence*
Operator	*AND*
Calculation	*Dependent Date of Birth + 2 Years GTE Period Start Date*
	Dependent Date of Birth + 2 Years LTE Period End Date

15. Dependent 3rd Birthday in Current Period

    Create a calculation to determine whether the dependent's third birthday is in the current period.

    a) Access the Create Logic Calculation task.
    b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent 3rd Birthday in Current Period*
Category	*Absence*
Operator	*AND*
Calculation	*Dependent Date of Birth+ 3 Years GTE Period Start Date*
	Dependent Date of Birth + 3 Years LTE Period End Date

16. Dependents Born with Birthdays in Current Period

    Create a calculation to check that the worker has dependent's who are born or have birthdays in the current period, using the previous calculations, and return a result for each condition if true.

    a) Access the Create Conditional Calculation task.
    b) Enter or select these values:

Field	Value
Name	*Dependents Born with Birthdays in Current Period*
Category	*Absence*
Default Response	*0*

    c) Add 4 rows in the Conditional Calculations grid:

Order	Condition	Result
a	*Dependent Date of Birth in Current Period*	*1*
b	*Dependent 1st Birthday in Current Period*	*1*
c	*Dependent 2nd Birthday in Current Period*	*1*
d	*Dependent 3rd Birthday in Current Period*	*1*

    d) Click OK and Done.

17. Number of Dependents Born in Current Period

    Create a calculation to determine the number of dependents born in the current period using the results of the previous calculation.

    a) Access the Create Aggregate Calculation task.
    b) Enter or select these values and click OK and Done.

Field	Value
Name	*Number of Dependents Born in Current Period*
Category	*Absence*

Field	Value
Function	*Sum*
Operand	*Dependents Born with Birthdays in Current Period*
Instances for Operand Calculation	*Dependents*

18. Parental Leave Entitlement Based on Birthdays in Current Period

    Create a calculation for the parental leave accrual entitlement based on birthdays in the current period. This is the top-level calculation for the accrual.

    a) Access the Create Arithmetic Calculation task.
    b) Enter or select these values and click OK and Done.

Field	Value
Name	*Parental Leave Entitlement Based on Birthdays Current Period*
Category	*Absence*
1st Operand	*Number of Dependents Born in Current Period*
Operator	*Multiply*
2nd Operand	*5*

19. Worker Has Dependent Born in Current Period

    Create a calculation for the scheduling rule for the accrual.

    a) Access the Create Value Comparison Calculation task.
    b) Enter or select these values and click OK and Done.

Field	Value
Name	*Worker Has Dependent Born in Current Period*
Category	*Absence*
1st Operand	*Number of Dependents Born in Current Period*
Operator	*greater than or equal to*
2nd Operand	*1*

20. Create an accrual for parental leave.

    a) Access the Create Accrual task.
    b) Enter or select these values and click OK and Done.

Field	Value
Name	*Parental Leave Accrual*
Code	*parental_leave_accrual*
Calculation	*Parental Leave Entitlement Based on Birthdays Current Period*
Priority	*2*
Options	*None*

    c) In the Scheduling grid, add a row and select *Worker Has Dependent Born in Current Period*
    d) Click OK.

Next Steps

Example: Create a Time Off Plan for Parental Leave

Example: Create a Time Off Plan for Parental Leave

This example illustrates how to set up a time off plan for parental leave.

Context

You're configuring the time off plan so that the plan's balance never goes above 5 days, despite the workers never using any of their accrual. Instead, when the accrual attempts to award 5 days, Workday forfeits the accrual as the worker's balance is already 5 days.

Example: Adam has another child that is born in March 2021, so receives an extra 5 days in March, as well as the 5 days for his child born in April. The upper limit increases against the time off plan to allow it to go up to 10 days while 2 children are under the age of 4. From April 2023, when 1 child becomes 4, this limit drops back to 5 days again.

Create a time off plan with:

- A calendar year balance period with unlimited carryover so the balance doesn't reset on January 1 of each year.
- An upper limit. Workday checks how many children the worker has under the age of 4 and prevents the balance going above the annual limit of 5 days per child.

Steps

1. Access the Create Time Off Plan task.
2. Enter or select these values and click OK.

Field	Value
Name	*Parental Leave Time Off Plan*
Track Balance	*Yes*
Balance Period	*YTD - Current Calendar Year (based on Period End Date)*
Period Schedule	*Monthly*
Unit of Time	*Days*
Effective Date	*01/01/2019*

3. On the Balance tab, enter or select these values.

Field	Value
Balance Visibility	*Eligible in period (based on As of Date)*
Calendar Display	*Plan*
Date	*Balance Period Start Date*

4. On the Calculation tab, enter or select these values.

Field	Value
Accrual Frequency Method for Time Off Plan	*Start of Period*
Time Off Plan Balance for Lower Limit	*0*
Time Off Plan Balance for Upper Limit	*Parental Leave Upper Limit*

Field	Value
Daily Quantity Default	*1*
Days to Include	*Workdays (Non-Holiday)*

5. On the Accrual tab, click Add Row and select *Parental Leave Accrual*.
6. On the Time Off tab, click Add Row and select Create Time Off.
    a) Enter or select these values:

Field	Value
Name	*Parental Leave Time Off*
Code	*parental_leave_time_off*

    b) From the Time Off Type prompt, select Create Time Off Type. For Name, enter *Parental Leave*, and click OK.
    c) For Entry Option, select *Enter through Time Off Only*.
    d) On the Details tab, for Priority, enter *2*.
    e) Click OK.
7. On the Eligibility tab, click Add Row in the Worker Eligibility grid and select *Worker Has Dependent Under 4 as of Period End Date*.
8. Click OK.

Next Steps

Example: Create an Absence Balance

Example: Create an Absence Balance

This example illustrates how to create an absence balance to calculate the balance for a parental leave time off plan as of the prior calendar month.

Context

You'll use the absence balance calculation later when creating the accrual adjustment calculation.

Prerequisites

Example: Create a Time Off Plan for Parental Leave.

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Steps

1. Access the Create Absence Balance task.
2. Enter or select these values:

Field	Value
Name	*Parental Leave Time Off Plan Balance as of Prior Calendar Month*
Absence Calculation	*Parental Leave Time Off Plan*
Balance Period	*MTD - Prior Calendar Month (based on Period End Date)*
Calculate as of Balance Period End Date	*Yes*

3. Click OK.

Next Steps

Example: Configure an Accrual Adjustment for Parental Leave

Example: Configure an Accrual Adjustment for Parental Leave

This example Illustrates how to configure a series of nested calculations for an accrual calculation value to adjust the balance for a time off plan for parental leave. This top-level arithmetic calculation (*Parental Leave Adjustment*) enables Workday to subtract the plan balance as of the prior calendar month from the parental leave upper limit as an accrual adjustment.

Context

You'll create 8 separate calculations that together feed into the final result for the top-level calculation. These calculations include 2 scheduling rules that adjust the accrual for periods in which a worker's entitlement reduces. The adjustment occurs when the worker's time off plan balance, as of the end of the prior period, is above the upper limit that they're entitled to, as of the current period start date. In these instances, the accrual awards a negative value to bring the balance down to the upper limit of the time off plan:

- Prior Period End Date
- Dependent Age at Prior Period End Date
- Dependent Age < 4 as of Prior Period End Date
- Dependent Age is GTE 0 and < 4 as of Prior Period End
- CC Dependent Age < 4 as of Prior Period End Date
- Number of Dependents Under 4 as of Period End Date
- Number of Dependents Under 4 as of Prior Period End Date
- Number of Dependents Under 4 as of Period End Date < Prior Period Value
- Parental Leave Time Off Plan Balance as of Prior Calendar Month > Upper Limit Value
- Parental Leave Adjustment

Prerequisites

Example: Create an Absence Balance

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Steps

1. Prior Period End Date

   Create a calculation to determine the end date of the prior period, using a Workday-owned instance value calculation (IVC).

   a) Access the Create Date Increment/Decrement Calculation task.

   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Prior Period End Date*
Category	*Absence*
Start Date	*Period: Period Start Date*
Day	-1

2. Dependent Age at Prior Period End Date

   Create a calculation to return the dependent's age at the end of the prior period, using an IVC and the result of the previous calculation.

   a) Access the Create Date Difference Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Age at Prior Period End Date*
Category	*Absence*
Interval	*Year*
Start Date	*Dependent: Date of Birth*
End Date	*Prior Period End Date*

3. Dependent Age < 4 as of Prior Period End Date

   Create a calculation to determine whether the dependent's age is less than 4 as of the end of the prior period, using the result of the previous calculation.

   a) Access the Create Value Comparison Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Age < 4 as of Prior Period End Date*
Category	*Absence*
1st Operand	*Dependent Age at Prior Period End Date*
Operator	*less than*
2nd Operand	*4*

4. Dependent Age is GTE 0 and < 4 as of Prior Period End

   Create a calculation to determine whether the dependent's age is greater than or equal to zero and less than 4 as of the period end date.

   a) Access the Create Logic Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Dependent Age is GTE 0 and < 4 as of Prior Period End*
Category	*Absence*
Operator	*AND*
Calculation	*Dependent Age < 4 as of Prior Period End Date*
	Dependent Date of Birth Exists in Period or Prior Period

5. CC Dependent Age < 4 as of Prior Period End Date

   Create a calculation to check that the dependent's age is under 4 as of the prior period end date, using the previous calculation as a condition, and returning a result if the condition is true.

   a) Access the Create Conditional Calculation task.
   b) Enter or select these values:

Field	Value
Name	*CC Dependent Age < 4 as of Prior Period End Date*
Category	*Absence*
Order	*a*
Condition	*Dependent Age is GTE 0 and < 4 as of Prior Period End*
Result	*1*
Default Response	*0*

6. Number of Dependents Under 4 as of Period End Date

   Create a calculation to determine the number of dependents under the age of 4 as of the end of the period by aggregating the results of the previous calculation.

   a) Access the Create Aggregate Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Number of Dependents Under 4 as of Period End Date*
Category	*Absence*
Function	*Sum*
Operand	*CC Dependent Age < 4 as of Period End Date*
Instances for Operand Calculation	*Dependents*

7. Number of Dependents Under 4 as of Prior Period End Date

   Create a calculation to determine the number of dependents under the age of 4 as of the end of the prior period by aggregating the result of the previous calculation.

   a) Access the Create Aggregate Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Number of Dependents Under 4 as of Prior Period End Date*
Category	*Absence*
Function	*Sum*
Operand	*CC Dependent Age < 4 as of Prior Period End Date*
Instances for Operand Calculation	*Dependents*

8. Number of Dependents Under 4 as of Period End Date < Prior Period Value

   Create a calculation for the scheduling rule for the accrual adjustment that checks whether the number of dependents under the age of 4 as of the period end date is less than the prior period.

   a) Access the Create Value Comparison Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Number of Dependents Under 4 as of Period End Date < Prior Period Value*
Category	*Absence*
1st Operand	*Number of Dependents Under 4 as of Period End Date*
Operator	*less than*
2nd Operand	*Number of Dependents Under 4 as of Prior Period End Date*

9. Parental Leave Time Off Plan Balance as of Prior Calendar Month > Upper Limit Value

   Create another calculation for the scheduling rule for the accrual adjustment. The rule determines whether the balance of the time off plan as of the prior period is greater than the time off plan's upper limit.

   a) Access the Create Value Comparison Calculation task.
   b) Enter or select these values and click OK and Done.

Field	Value
Name	*Parental Leave Time Off Plan Balance as of Prior Calendar Month > Upper Limit Value*
Category	*Absence*
1st Operand	*Parental Leave Time Off Plan Balance as of Prior Calendar Month*
Operator	*greater than*
2nd Operand	*Parental Leave Upper Limit*

10. Parental Leave Adjustment

    You can now create the top-level calculation for the accrual Calculation value using the previous calculation that ties all of the results together.

    a) Access the Create Arithmetic Calculation task.
    b) Enter or select these values and click OK and Done.

Field	Value
Name	*Parental Leave Adjustment Calculation*
Category	*Absence*
1st Operand	*Parental Leave Upper Limit*
Operator	*Subtract*
2nd Operand	*Parental Leave Time Off Plan Balance as of Prior Calendar Month*

Next Steps

Example: Add an Accrual Adjustment to the Plan

Example: Add an Accrual Adjustment to the Plan

This example illustrates how to add an accrual adjustment to the time off plan.

Context

You'll add the accrual adjustment that you configured in the previous example.

Prerequisites

Complete these examples:

- Example: Configure a Parental Leave Upper Limit
- Example: Configure an Accrual for Parental Leave
- Example: Create a Worker Eligibility Rule for Parental Leave
- Example: Create a Time Off Plan for Parental Leave
- Example: Create an Absence Balance
- Example: Configure an Accrual Adjustment for Parental Leave

Security:

- *Set Up: Calculations - Generic* domain in the Core Payroll functional area.
- *Set Up: Time Off* and *Set Up: Time Off (Calculations - Generic)* domains in the Time Off and Leave functional area.

Steps

1. Access the Edit Time Off Plan task.
2. From the Time Off Plan prompt, select *Parental Leave Time Off Plan* and select the *Update Existing Effective Date* option, and then *01/01/2019*.
3. Click OK.
4. On the Accrual tab, click Add Row.
5. In the Adds to Balance column, select Create Accrual.
6. Enter or select these values and click OK and Done.

Field	Value
Name	*Parental Leave Adjustment Accrual*
Code	*parental_leave_adjustment_accrual*
Calculation	*Parental Leave Adjustment Calculation*
Priority	*1*
Options	*None*

7. In the Scheduling grid, add 2 rows, and enter or select these calculations:
   - *Number of Dependents Under 4 as of Period End Date < Prior Period Value*
   - *Parental Leave Time Off Plan Balance as of Prior Calendar Month > Upper Limit Value*

Time Off Requests

Steps: Set Up Time Off Notifications

Prerequisites

- ../../../../manage-workday/tenant-configuration/notifications-and-alerts/email-notifications/tar1431980339489.dita.
- ../../../../manage-workday/tenant-configuration/mobile-setup/dan1370796452612.dita.

Context

You can create and send automated email and mobile time off notifications for:

- Workers who you want to remind to take time off, based on specific criteria.
- Managers and administrators who have time off requests requiring their approval.

You can also run reports with completion analytics to report on who has taken action on the notifications within a specified time period.

Steps

1. Copy Reports.

   Copy and modify a standard report based on the Worker business object as a basis for the notification recipient audience. Example: Create a copy of the Time Off Approvers with Events Awaiting Action report and share with absence administrators.

   Security:

   - *Indexed Data Source: Workers* domain in the Staffing functional area.
   - *Worker Data: Time Off (Time Off)* domain in the Time Off and Leave functional area.
2. Access the Edit Tenant Setup - Notifications task.

   See: Reference: Edit Tenant Setup - Notifications.

   Security: *Set Up: Tenant Setup - BP and Notifications* in the System functional area.
3. Select the Absence Management tab in the Notification Delivery Settings section to override the parent notification type delivery settings. Workday mutes email and push notifications for the routing rule by default.
4. Unmute email and push notifications.
   a) In the Rule prompt, select *Notification Routing Rule for Notification Parent Type Absence Management* rule.
   b) From the related actions menu of the rule, select the Notification Routing Rule for Notification Parent Type Absence Management link in the pop-up window.
   c) On the View Notification Routing Rule report, select Notification Routing Rule > Edit from the related actions menu of the rule.
   d) Click Add to add notification channels.
   e) Select *Email* in the Channel prompt and *Immediately* in the Default Frequency prompt to enable email notifications.
   f) Select *Mobile Push Notifications* in the Channel prompt and *Immediately* in the Default Frequency prompt to enable mobile push notifications.
5. (Optional) Access the Create Distribution Time Period task.

   Create custom time periods that you can select in the Content prompt when you create scheduled distributions for absence management or time tracking. When you run the Scheduled Distribution Report, Workday uses these time periods to determine if workers took action on the notification on time. Example: You can create a custom time period that Workday uses to look forward by 10 days from the date of the notification to search for time off event requests.

Security: *Administer Scheduled Distribution* domain in the System functional area.

6. Access the Create Scheduled Distribution task.

   Enter the distribution Item Details.

   a) Select the notification Content Type.

      - When you select *Request Time Off*, Workday sends notifications to workers to remind them to take time off. The notifications include a link or an Inbox button that directs workers to the *Request Time Off* or *Request Absence* business process.
      - When you select *Review Time Off*, Workday sends notifications to managers and administrators who have time off requests that require their approval. The notifications include a link or an Inbox button that directs the manager or absence partner to their Inbox for approval.

   b) Under Content, select the time period that you want to include in the search:

      - A custom period.
      - *Last 14 Days* to search minus 14 days from the date you send out the notification.
      - *Last 7 Days* to search minus 7 days from the date you send out the notification.
      - *This Month* to search from the first day of the month to the date you send out the notification.
7. Complete the scheduled distribution Audience details.

   Select a saved audience or create a new audience. From the Type prompt, select:

   - *Organization*, if you selected *Request Time Off/ Request Absence* in Step 7.
   - *Custom Report*, if you selected *Review Time Off* in Step 7, and your custom report based on Time Off Approvers with Events Awaiting Action. In the Report Criteria section, filter the audience results by specifying report field values such as:

     - Coordinated Time Off Type
     - Start Date
     - End Date

   When defining audiences for scheduled distributions, consider that the time periods in your report criteria make sense in terms of the content time period that you selected in Step 7.
8. Complete the Setup details.
9. Complete the Messages details to define the time off notification message content for each channel.
10. For Distribution Frequency, select a Run Frequency to specify how often you want to send the notification.
11. Complete the Schedule details by naming the request and initiate the schedule distribution job.
12. Create a new custom report or access a Workday-delivered standard report that allows you to report on scheduled distributions. Example: You can edit the report named Scheduled Distribution Report.

    Ensure your report has a row that includes the Completion Status report field on the *Connect Record* business object.

    Security: *Modify* access on the *Administer Scheduled Distributions* domain.

Next Steps

After the scheduled distribution runs, run the scheduled distribution report to check whether workers, managers, and administrators took the appropriate action in the specific time period. When the content type for the notification is:

- *Request Time Off/ Request Absence*, the Completion Status report field returns true if the notification recipient has created a new time off entry within the time period.

- *Review Time Off*, the Completion Status report field returns true if the notification recipient no longer has any time off events requiring their approval within the time period.

2020R2 What's New Post: Scheduled Distributions in Absence Management

Enter Time Off Requests

Prerequisites

- Set up time off plans.
- Configure the *Request Time Off* or the legacy *Absence Calendar* business process and security policy in the Time Off and Leave functional area.

Context

You can enter a time off request on behalf of a worker using the Request Absence task.

When entering a request for workers, you can project time off balances and view:

- Current balances for time off plans.
- Holidays if the worker has a holiday calendar.
- Time off requests.

Workers can enter time off requests using the Request Absence task on the Manage Absence report on the Home dashboard. They can also use the Workday mobile app to request time off.

Steps

1. Access the Manage Absence report.

   To project balances for a future date, update the Balance as of date.
2. Click Switch Worker and select the worker.

   Workday displays the current aggregate balance of all the worker's time off plans as of the date specified in the Balance as of field. If a worker has both hour-based and day-based plans, it displays total hours and days separately.

   You can configure the Balances as of date in the New Absence Calendar Experience option on the Edit Tenant Setup - HCM task.
3. On the Manage Absence calendar, select the days for the time off request.
4. Click Request Absence.
5. Enter details for the time off. As you complete this task, consider:

Option	Description
Type of Absence	Displays only the time off types, absence tables, and leave types that the worker is eligible for, either: • On the request date. • On the first day of the request, if you selected multiple dates as part of the same request.
Position	Displays only if you select a time off type that is position-based.

Option	Description
	When a worker has only 1 position that's eligible for the time off, Workday displays it. A plus sign (+) after a position name identifies it as a secondary position.
Start Time End Time	Displays only if you select a time off type that you've configured to display an optional or required start and end time.
Daily Quantity	Applies to each date requested. Example: If Mary is taking 2 days off from a daily plan, enter *1* for each day. If she's taking 8 hours off each day and the plan is hourly, enter *8*. If the time off or time off plan has a defined Daily Quantity Default, Workday displays a value that's based on the first day of the request. If the time off is configured to Calculate Quantity Based on Start and End Time, Workday displays a read-only value in the Daily Quantity field. This value equals the duration of time between Start Time and End Time. Note: In the Absence Calendar Experience, when you request absence on behalf of another worker, if you've selected the Restrict Requests to Days to Include on Calendar check box when you configure the calculation details for the time off plan, Workday: • Sets the Daily Quantity to 0 on the unscheduled days. • Treats the Restrict Requests to Days to Include on Calendar validation as True on all tiers. Workday displays an alert for the employee self-service experience to indicate that your request only includes days that aren't working days and you can edit individual days to include the days or go back to the calendar to remove them.
Comment	The comment that's associated with the time off entry. The comment is visible on the Details tab of the *Request Time Off* business process event. When users enter a time off request for multiple days, they can enter a different comment for each day.

Option	Description
	You can hide this field for all users or specific security groups by accessing the Configure Optional Fields task, and selecting the: • Request Time Off functional area. • *Time Off Entry Comment* field. See Hide or Require Optional Fields.
Comment to Approver	The comment that's associated with the *Request Time Off* business process. The comment is visible to the approver and on the Process tab of the *Request Time Off* business process event.

Result

If the time off request requires approval, Workday routes it to the reviewers.

Workday saves a time off request for later, if it fails to validate either the:

- Leave of absence.
- Business process.

You can revise the request in My Tasks.

Next Steps

- To view the latest plan balance that takes into account the requested time off, enter a Balance as of date that falls after the time off dates.
- If you need to correct a request that has already been approved, use the Manage Absence report.

Examples

2025R1 Feature Release Note: Hide Comment Field on Time Off Entries

The Next Level: PATT Touchpoints with Assignments

Review Time Off Requests

Prerequisites

Configure the *Request Time Off* or the legacy *Absence Calendar* business process and security policy in the Time Off and Leave functional area.

Context

Review a new or revised time off request in My Tasks and approve, deny, or return the request to the initiator for revision. When reviewing a request, you can view:

- The worker's time off balances.
- Previous requests, including in-progress requests.
- Adjustments.

Steps

1. Access the time off request in My Tasks.

2. (Optional) Click View Balances to review the Time Off Balance as of Current Date grid to view how the request impacts available, requested, and remaining time off for time off plans that track balances.

   For absence tables, in the Request Details grid, you can drill down into the amount requested to see from which tier Workday deducts time off.
3. Enter a Comment if you're denying or sending back the request to the initiator for revision.
4. Click Approve, Deny, or Send Back.

Result

When you send back a request, Workday sends the Revise Time Off task to the initiator's My Tasks.

You can use the Approved Time Off report to view approved time off requests.

Note:

This report references the approval date of time off requests, and not the actual absence or time off dates. Example: Your direct reports have approved time off in February. You run the report using start and end dates for February. Workday doesn't include their time off for February because you approved their time off requests in January. To view only time off within a specific date range, use the All Worker Time Off report instead.

Examples

Set Up Mass Operations

Correct Approved Time Off Requests

Prerequisites

- Ensure the time off request has an *Approved* status.
- Configure the *Correct Time Off* business process and security policy in the Time Off and Leave functional area.

Context

You can correct an approved time off request on behalf of a worker. You can review projected time off balances for the worker and see pending requests awaiting approval. You can also view adjustments. Workers can use the Workday mobile app to correct time off requests.

Steps

1. Access the Correct Time Off task.
2. Select a time off entry or Select All.
3. Edit the time off request. As you complete this task, consider:

Option	Description
Type	Select Edit Time Off Type on the Edit Tenant Setup - HCM task to enable workers to change time off type.
Position	Displays only if the time off is associated with a position-based plan.
Start Time End Time	Displays only if you select a time off type that has optional or required start and end time configured.

Option	Description
Daily Quantity	You can't change the daily quantity for time offs that are configured to Calculate Quantity Based on Start and End Time.
Reason	Displays only if you define reasons on the time off.
Comment	Comment for the time off request.

4. To delete a time off entry, set the Daily Quantity to zero or remove the row.
5. Submit the correction.

Review Time Off Corrections

Prerequisites

Configure the *Request Time Off* and *Correct Time Off* business process or the legacy *Absence Calendar* business process and their related security policies in the Time Off and Leave functional area.

Context

You can review a corrected time off request in My Tasks and approve, deny, or return the request to the initiator for revision. When reviewing the request, you can view:

- Projected time off balances.
- Previous requests including those that are in-progress (submitted but not yet approved).
- Any adjustments made.

If a reviewer isn't available or you want to approve multiple time off corrections that are in-progress, use the Mass Operation Management task. This task advances business process requests for a group of workers using a custom report. Your custom report must generate a list of time off correction events that need approval. Configure relevant security groups in the *Manual Advance* action of the *Correct Time Off* business process security policy.

Steps

1. Access the time off correction in My Tasks.
2. (Optional) Review the Balance Projection grid to see how the correction impacts requested and remaining time off.
    - The grid applies only to time off plans that track balances.
    - The Requested balance displays the difference between the original and corrected time off and can be a positive or negative number.
3. Enter a comment if you're denying or sending back the corrected request for revision.
4. Click Approve, Deny, or Send Back.

Concept: Balance Projections for Time Off on page 2528

Examples

Set Up Mass Operations

Concept: Importing Time Off Request Events

You can load large volumes of new time off request events into Workday using an Enterprise Interface Builder (EIB) based on the *Import Time Off Request Event Batch* web service. You can use this web service to:

- Load batches of time off events in bulk.
- Load time off request events in Workday from a third-party tool.
- Migrate validated time off events into Workday.

When loading new time off request events, Workday recommends that you:

- Use this web service for performant data loads when the batch exceeds either:
    - 100 time off requests against an absence table.
    - 1,000 requests directly against a time off type or plan.
- Don't disable the Maximum Unpaid Time Off Units Allowed time off validation as disabling it can lead to bad data with absence tables.
- Don’t include time off requests more than 99 weeks old.
- Don't load multiple files in parallel as it reduces performance and introduces risk.
- Don't turn off re-evaluation as it can create invalid data that impacts workers’ balances and payroll.
- For extremely large volumes of data, split the data across multiple files. However, it introduces risk.
- Include all time off entries for a worker in the same file.
- Load the data in 1 file to ensure easy management of large volumes of data.
- Order requests chronologically, from oldest to most recent.

Tips for Entering Data in the EIB Spreadsheet

As you complete the Import Time Off Request Event Batch EIB template, consider these fields:

Field	Notes
Header Key	Determines the batch for a time off request event. Use the same header key to group all events in a batch. Example: To load events in 2 batches, use *1* for the first 500 rows and *2* for the next 1,000 rows.
Line Key	An incremental value for each row within a header key batch. Example: Use *1* for the first row, *2* for the second row, *3* for the third row, and so on. Restart the numbering at 1 for a new batch.
Row ID	A unique numerical value for each time off entry.
Time Off Entry ID	An optional, unique value for each entry that you're loading. If you specify a value, it must be unique. When you leave it blank, Workday generates an ID automatically.

Business Process

Importing a batch of time off request events launches the *Request Time Off* business process. You can add users to the security groups of the *Import Time Off Request Event Batch (WS Background Process)* initiating action to enable them to load time off request events in batches.

Rescinding and Correcting Time Off Request Events

The *Request Time Off* business process doesn't enable you to rescind any incorrect time off entries that you inadvertently uploaded. However, you can use the Adjust Time Off EIB to correct the incorrect entries unless the entries are still in-progress. In that case, you can use the *Mass Cancel* business process.

Validating Time Off Request Events

Workday runs a set of validations on all time off entries after it has passed through the web service operation and flags invalid entries. These validations maintain data quality when importing time off requests in to Workday. If your EIB spreadsheet contains invalid time off entries, you can view the errors in a *Failure Report*. Workday generates the failure report after you run the Launch / Schedule Integration task to upload the EIB spreadsheet.

Examples

Set Up Inbound EIB

Launch EIB Spreadsheet Upload

Example: Bulk Load Time Off Requests into Workday on page 2395

Concept: Updating Time Off Requests that are Awaiting Approval

You can update time off requests while they are in the approval process if the time off request has an *In Progress* status. You have several options for updating a time off request before it is approved. You can:

- Send the request back to the initiator with a comment asking the worker to make the revision.
- Deny the request and add a comment asking the worker to enter a new request with the correct information.
- Approve the request, then use the Correct Time Off task.
- Cancel the *Request Time Off* business process and use the Enter Time Off task to enter a new request on the worker's behalf.

  To cancel the business process:

  - Find the worker and select a related action of View Time Off.
  - In the Time Off Event column, select a related action of Business Process > Cancel from the time off event.

Related Information
Tasks

Review Time Off Requests on page 2431

Correct Approved Time Off Requests on page 2432

Concept: Canceling Time Off Requests

You can cancel a time off request if it has a status of *In Progress* and you belong to a security group on the *Cancel* action on the business process security policy.

If the request has a status of *Successfully Completed*, you can no longer cancel it. Instead, correct the request:

- Workers can use the Correct My Time Off or Correct My Absence tasks.
- Administrators can use the Correct Time Off or Correct Absence task.

To cancel a time off request in My Tasks, click the gear icon and then select Cancel.

Note: The More > Cancel button that displays on the notification doesn't cancel the business process event.

To cancel a time off event from elsewhere in Workday, select Business Process > Cancel from the related actions menu of the business process event.

To delete unsubmitted time off requests entered through Time Tracking, access either of these tasks and click the unsubmitted time block:

- Enter My Time
- Enter Time

On the Enter Time dialog, click Delete.

Correct Approved Time Off Requests on page 2432

Buy and Sell Time Off

Setup Considerations: Buy Time Off

You can use this topic to help make decisions when planning your configuration and use of Buy Time Off. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Buy Time Off provides you the ability to configure time offs that your workers can buy using the Buy Time Off task. You can configure the:

- Time period when workers can buy time offs.
- Maximum quantity of time off that workers can buy.
- Period in which the maximum quantity of time off applies.
- Allowable time off increments for workers to buy.
- Time when worker’s time off balance is updated.
- Time when payroll adjustments start and end.
- Pay rate to use for payroll adjustments.

Business Benefits

With this feature, you can configure time offs that can be purchased so that workers can buy time off, allowing them to take more time off than they currently have accrued, and pay off the purchased time off in 1 or more pay periods. Workday automatically adjusts the workers’ time off balance when time off is bought.

Use Cases

Administrators can define the criteria for workers to buy time off on the accruals and buy schedules, including the pay rate at which the time off is purchased, and when the worker’s time off balance is updated. They can use calculations when creating earnings and deductions.

Workers can buy time off when needed. They can also view details of the time offs that they bought, including the pay rate at which they bought the time off, and the time off balance.

Workday Payroll can automate the purchase of time off that workers buy.

Managers and administrators can use the standard report or create custom reports to identify the:

- Time offs that workers bought.

- Accruals that have been configured for buying.
- Pay component related calculations for time off bought.

Questions to Consider

Questions	Considerations
How do you want your employees to view the task for buying time off? Example: Should they see “purchase leave” or some other term?	You can use custom labels to override the "buy time off" term. Employees see the custom label and can search for the custom label when they buy time off.
When do you allow employees to buy time off? Only during a specific time frame, such as open enrollment or any time throughout the course of a year?	You can set up schedules to allow when workers can buy time off. Different time offs can have different schedules. You can configure the schedule using the Create Schedule for Buying Time Off task, as well as on the accrual that is configured for buying, under the Available to Buy During field.
What pay rate do you want to use when employees buy time off?	When you set up the accrual, you can select the pay rate you want the time off to be purchased at: • *At the start of first pay adjustment*. Workday uses the worker’s pay rate at the start of the first pay adjustment period for all pay periods. This is fixed. • *Current rate during each pay period*. Workday uses the worker’s pay rate for each pay period. This could vary if the worker’s pay rate changes in a pay period. • *When time off was purchased*. Workday uses the worker’s pay rate at the time when they purchased time off for all pay periods. This is fixed.

Recommendations

When testing payroll, consider your business requirements as well as any scenarios that may occur. For example:

- A worker who bought time off is terminated before the full amount is paid back. Workday will calculate the amount that the worker owes and reduce their pay by the full amount.
- A worker is on leave and has no gross pay. Review your configuration for workers on leave on the Nonactive (On Cycle, On Demand Replacement) tab of the run category, as well as how you track arrears and configure recouping.

Ensure you test how Workday handles the scenarios with your configuration, so you know how to advise your workers.

Requirements

No impact.

Limitations

- Managers and administrators can’t buy time off on behalf of workers.
- You can't add accruals configured for buying time off with position-based time off plans.
- You can't use manual pay inputs in Workday Payroll. On the deduction or earning, clear the Input Amount Allowed? check box in the Calculation Details section and clear the Input Allowed? check box in the Related Calculations grid.

- When using third-party payroll, Payroll Effective Change Interface (PECI) and Payroll Interface Common Output File (PICOF) aren't currently supported. You can add the new report fields on the new Buy Time Off Event business object in custom integrations or manual inputs in your payroll system.
- Buy Time Off shouldn't be considered FLSA eligible.

Tenant Setup

No impact.

Security

Configure the *Buy Time Off* security domain in the Time Off and Leave functional area.

Business Processes

Business Process	Considerations
Buy Time Off	Enables: • Workers to buy time off. • Editable documents to be dynamically generated when a worker buys time off.

Reporting

Reports / Report Fields / Tasks	Considerations
Time Off Bought by Workers	Enables you to identify workers who have bought time off within a selected date range and view details of the time off they bought.
Maintain Accrual and Time Off Adjustments/ Overrides	Enables you to view details of time off bought by a worker.
All Accruals	These additional columns on the All Accruals report enables you to easily view which accruals are configured for buying: • Allow to Buy Time Off • Buy Time Off Display Name • Fixed Period • Anytime • Buy Schedule • Balance Updated in Period • Maximum Limit to Buy • Period in which balance is updated • Balance Period • Allowable Increments to Buy • Pay Rate for Adjustments

<table>
<tr><th>Reports / Report Fields / Tasks</th><th>Considerations</th></tr>
<tr><td>Report Fields</td><td>You can use these report fields on the Buy Time Off Event business object (secured to the Public Reporting Items domain) in your custom reports to view bought time off details:

Accrual
Date Payroll Adjustments Begin
Date Payroll Adjustments End
Date Time Off Balance Updated
Date Time Off Bought
Effective Date of Pay Rate for Payroll Adjustments
Pay Rate for Adjustments
Time Off Quantity Bought
Unit of Time

You can use these report fields on the Accrual business object (secured to the Public Reporting Items domain) in your custom reports to view configuration options:

Allow to Buy Time Off
Allowable Increments to Buy
Anytime
Balance Period
Balance Updated in Period
Buy Schedule
Buy Time Off Display Name
Fixed Period
Maximum Limit to Buy
Pay Rate for Adjustments
Period in which balance is updated

You can use the Accrual on Buy Time Off Event report field on the Absence Component business object (secured to the Set Up: Calculations - Generic domain) to identify the accrual against which time off was bought and can be used in the context of Workday Payroll.</td></tr>
<tr><td>Report Data Source (RDS) and RDS Filter</td><td>
Buy Time Off Events for Workers (secured to the Worker Data: Time Off and Worker Data: Time Off (Time Off Manager View) domains). Enables you to create custom reports to view instances of workers who bought time off.
Buy Time Off Events by Organization and Date Range RDS filter on the Buy Time Off Events for Workers RDS. Enables you to view instances of workers across multiple organizations who bought time off within a selected date range.
</td></tr>
</table>

Reports / Report Fields / Tasks	Considerations
Calculations	You can use these calculations when you create earnings and deductions: • Quantity of Bought Time Off to Pay Off in the Current Pay Period • Last Pay Period to Pay Off Bought Time Off • Quantity of Bought Time Off to be Paid • Quantity of Bought Time Off to Pay Off Each Pay Period • Time Off Bought in a Buy Time Off Event • Total Pay Periods to Pay Off Bought Time Off
Pay Component Groups	You can create custom reports to identify the pay component related calculations for time off bought: • Buy Time Off in Days • Buy Time Off in Hours • Pay Rate for Time Off Bought in Days • Pay Rate for Time Off Bought in Hours

Integrations

Integrations or Web Services	Considerations
Get Schedules for Buying Time Off	Retrieves the buy schedule information.
Put Schedule for Buying Time Off	Uploads: • A new buy schedule or a buy schedule that was created in a third-party system or in another Workday tenant. • Additional fields to an existing buy schedule.
Get Accruals, *Put Accrual*, and *Put Time Off Plan*	These web services have additional fields for buy time off options.

Connections and Touchpoints

When using Workday Payroll, Buy Time Off interacts with this feature in Workday:

Feature	Considerations
Payroll Calculations	You can create either a memo earning to help convey the pay rate to a deduction or a negative earning to reduce gross wages without creating a deduction. Worker eligibility isn't needed on both the earning and deduction. Workday uses the Pay Component Group for the pay component related calculations to determine the workers who bought time off for the period schedule used in the earning and deduction. We don't recommend setting the pay component for proration on the earning and deduction, as this may cause calculation issues. See Steps: Set Up Payroll for Buy Time Off.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Concepts

Setup Considerations: Earnings and Deductions

Tasks

Add Earnings or Deductions to Pay Component Groups

Examples

2024R2 Feature Release Note: Buy Time Off

Steps: Set Up Buy Time Off

Prerequisites

Security: *Buy Time Off* domain in the Time Off and Leave functional area.

Context

You can set up Buy Time Off to enable workers to buy time off when needed and to pay off the purchased time off in 1 or more pay periods using the Buy Time Off task. You can configure the:

- Time period when workers can buy time offs.
- Maximum quantity of time off that workers can buy.
- Period in which the maximum quantity of time off applies.
- Allowable time off increments for workers to buy.
- Time when worker's time off balance is updated.
- Time when payroll adjustments start and end.
- Pay rate to use for payroll adjustments.

You can configure multiple time frames on a buy schedule. You must set up separate accruals for buying and accruing time offs.

When you configure time offs for buying:

- Managers and administrators can't buy time off on behalf of workers.
- You can't add accruals configured for buying time off with position-based time off plans.
- You can't use manual pay inputs.

Steps

1. Create Accruals on page 2340.

   Set up the accrual for buying.
2. Access the Create Time Off Plan or Edit Time Off Plan task to link the accrual you created to a time off plan on the Accrual tab.

   This accrual must have either *Start of Period* or *End of Period* for the Accrual Frequency Method.

   Additionally, you can add regular accruals to the time off plan.
3. Access the Create Schedule for Buying Time Off task.
   a) The period schedule you select must match the period schedule on the time off plan that is associated with the accrual.
   b) Define 1 or more time periods for workers to buy time off. Consider:
      - Selecting dates based on the time zone for the worker.
      - When you select a period from the Updated Balance in Period prompt, Workday derives the exact date when the time off bought is updated either from the Accrual Frequency

Method defined on the time off plan or on the Time Off Plan Overrides tab of the accrual when you configure a time off plan override.
- A date range to derive the pay periods in which payroll adjustments, either deductions or negative earnings, for time off bought are made from the Start Payroll Adjustments on and the End Payroll Adjustments on prompts.

A buy schedule must be linked to an accrual to enable workers to buy time off during fixed periods.

4. Edit Business Process Security Policies.
   a) Select *Time Off and Leave* as the functional area and *Buy Time Off* as the business process.
   b) Edit permissions to determine the security groups:
      - For the Buy Time Off initiating action.
      - That can view all, approve, cancel, rescind, and deny buy time off requests for workers.
5. Edit Business Processes.
   a) Create a default definition for the *Buy Time Off* business process.
   b) (Optional) To dynamically generate editable documents when workers buy time off, add a *Generate Document* action step to the *Buy Time Off* business process. See Steps: Set Up Document Generation for Absence Business Processes on page 2230.
6. (Optional) Set Up Worklets.

   Add the Buy Time Off task to 1 or both of these worklets:
   - Absence
   - Time Off
7. (Optional) Access the Configure Profile Group task.
   a) From the Profile Group prompt, select *Time Off for Worker Profile*.
   b) In the Report column in the grid, select *Time Off Bought* to display the Time Off Bought tab on the worker profile.
8. (Optional) Create Custom Labels.

   Create a custom label for buy time off.
9. (Optional) Steps: Set Up Workday Payroll for Buy Time Off on page 2443.

Result

Workers can buy time off when they access the Buy Time Off task from the:

- Absence or Time Off worklets.
- Time and Absence related actions of their worker profile.
- Time Off Balance and Time Off Bought tabs on the Time Off section of their worker profile.
- Actions menu on the Manage Absence report.

They can also access the task on their mobile devices (Android, iPhone, and iPad) from their worker profile:

- Time and Absence related actions menu.
- Time Off Bought tab on the Time Off section.

Next Steps

You can review time offs bought by workers with the:

- Maintain Accrual and Time Off Adjustments/Overrides task.
- Time Off Bought by Workers report.

Setup Considerations: Earnings and Deductions

Tasks

Steps: Create Deductions

Steps: Create Earnings

Add Earnings or Deductions to Pay Component Groups

Examples

2024R2 Feature Release Note: Buy Time Off

Steps: Set Up Workday Payroll for Buy Time Off

Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

Context

You can create either a memo earning to help convey the pay rate to a deduction or a negative earning to reduce gross wages without creating a deduction. Worker eligibility isn't needed on both the earning and deduction. Workday uses the Pay Component Group (PCG) for the pay component related calculations (PCRCs) to determine the workers who bought time off for the period schedule used in the earning and deduction. Workday doesn't recommend setting the pay component for proration on the earning and deduction, as this may cause calculation issues. The rate of pay will be determined at the end of the period, and mid-period compensation changes will not be taken into account.

Steps

1. Access the Create Earning task.
2. On the Effective Dated tab, consider:

Option	Description
Calculation Details	From the Calculation prompt, select a base minimum calculation. For a: • Memo earning, select *Rate*. • Negative earning, select *Hours (unprorated) * Rate * -1.00*. You can add any calculation that you need. For example: If you allow workers to buy time off at 80% of their pay rate, you would create an arithmetic calculation for *Rate * 0.8*. If needed, ensure you have an appropriate Override Frequency on the calculation. For example: *Hourly* or *Daily*.
Related Calculations grid	Consider these PCRCs, ensuring you have the correct PCGs for the PCRCs: • Rate: Both the memo earning and negative earning need a rate calculation. Select only 1 PCG in the Groups column based on how you calculate the rate and how the time off was bought, either *Pay Rate for Time Off Bought in Hours* or *Pay Rate for Time Off Bought in Days*. From

Option	Description
	the Override Calculation prompt, select *Compensation: Compensation Element Value (using PC Freq Override)*. • Hours (unprorated): An hours PCRC is only needed if you use a negative earning. Select *Buy Time Off in Hours* or *Buy Time Off in Days* in the Groups column and *Quantity of Bought Time Off to Pay Off in the Current Pay Period* for the Override Calculation.
Compensation Element	Add the compensation element that considers the buy back rate.
Input Amount Allowed?	You can't use manual pay inputs in Workday Payroll. Clear the Input Amount Allowed? check box in the: • Calculation Details section • Related Calculations grid

See Enter Earning or Deduction Calculations.

3. On the Non-Effective Dated tab, in the Groups field, select the appropriate PCG.

   See Add Earnings or Deductions to Pay Component Groups.

4. Access the Create Deduction task if you created a memo earning in Step 1.
5. On the Effective Dated tab, consider:

Option	Description
Calculation Details	From the Calculation prompt, select *Hours (unprorated) * Rate*.
Related Calculations grid	Consider these PCRCs, ensuring you have the correct PCGs for the PCRCs: • Rate: Select *Select Earning - Rate*. Note that *Earning* is the PCRC on the earning that you configured in Step 1. For example: If the earning in Step 1 is called *Buy Time Off Memo*, select *Buy Time Off Memo - Rate*. • Hours (unprorated): Select *Buy Time Off in Hours* in the Groups column and *Quantity of Bought Time Off to Pay Off in the Current Pay Period* for the Override Calculation.
Input Amount Allowed?	You can't use manual pay inputs in Workday Payroll. Clear the Input Amount Allowed? check box in the: • Calculation Details section • Related Calculations grid

See Enter Earning or Deduction Calculations.

6. On the Non-Effective Dated tab, in the Groups field, select the appropriate PCG.

   See Add Earnings or Deductions to Pay Component Groups.

Result

The earning or deduction is available for use in payroll processing upon the effective date.

Setup Considerations: Earnings and Deductions

Tasks

Steps: Create Deductions

Steps: Create Earnings

Examples

2024R2 Feature Release Note: Buy Time Off

Concept: Buy Time Off

With Buy Time Off, your workers can buy time off when needed and pay off the bought time off in 1 or more pay periods. Workday automatically adjusts the workers' time off balance when time off is bought. Administrators and managers can't buy time off on behalf of workers.

Example: Workers Can Buy Time Off During Scheduled Times in a Year

Scenario

Your organization wants to set up Buy Time Off for workers to purchase additional time off twice a year, in June and December. For time off purchased in June, the time off balance is updated on July 1, and payroll deductions occur from July to December. For time off purchased in December, the time off balance is updated on January 1 of the following year, and payroll deductions occur from January to December of the following year.

Setup

You can create a buy schedule for June and December to allow workers to buy time off, defining when the balance will be updated for each schedule, and when payroll adjustments will start and end. Link this schedule to the accrual that is set up for buying. If you use Workday Payroll, create a deduction so that the time off purchased by the workers can be deducted from their paycheck in the corresponding pay periods.

Result

If a worker purchases time off in both December and June, 2 deductions, 1 for each purchase, will be applied in the pay periods starting in July.

Example: Workers Can Buy Time Off at Any Time

Scenario

Your organization has a monthly time off plan with an accrual configuration that allows workers to purchase time off at any point during the year. The Accrual Frequency is set to *Start of Period* and the Balance Updated in Period is set to *Next Period*.

Result

If a worker purchases time off on March 15, the time off balance will be updated on April 1. Payroll adjustments will be calculated from April 1 of the current year through March 31 of the following year.

Worker Experience

Your workers can access the Buy Time Off task from the:

- Search.
- Absence or Time Off worklets.
- Time and Absence related actions of their worker profile.
- Time Off Balance and Time Off Bought tabs on the Time Off section of their worker profile.
- Actions menu on the Manage Absence report.

They can also access the Buy Time Off task on their mobile devices (Android, iPhone, and iPad) from their worker profile:

- Time and Absence related actions menu.
- Time Off Bought tab on the Time Off section.

On the Buy Time Off task, workers can select an accrual they want to buy time off from and the quantity of time off and consider:

<table>
<tr><th>Option</th><th>Description</th></tr>
<tr><td>Type of Time Off</td><td> Defaults to the accrual that workers are eligible to buy from when workers are only eligible to buy from 1 accrual. Workday displays the accrual either as the Buy Time Off display name that is configured on the accrual or the name of the accrual. Accruals are available for workers to select from when: You select the Allow to Buy option for the accrual.
Workers are eligible to buy time off from the accrual.
The current date is valid for workers to buy time off. The accrual is configured with either of these options:
Anytime.
Fixed Period, and the current date is within the start and end dates that are defined on the buy schedule.</td></tr>
<tr><td>Hours or Days</td><td>Workers can enter the quantity of time off they want to buy. Workday displays the label as either Hours or Days based on the unit of time defined on the time off plan of the accrual.</td></tr>
<tr><td>Note</td><td> Displays the allowed quantity of time off that the worker can buy. The note is not displayed when you haven’t configured these prompts on the accrual: Maximum Limit to Buy on the Buy Options tab.</td></tr>
</table>

Option	Description
	• Upper Limit Override on the Time Off Plan Overrides tab.
Comments	Workers can enter comments if you enable it on the *Buy Time Off* business process security policy.

When workers submit their buy time off requests, Workday routes the event for approval based on how you set up the *Buy Time Off* business process. Workers can only request time off against purchased quantities if the buy time off event is approved.

You can also set up the business process to auto complete.

When workers buy their time off, they can view details of the time off bought on the Time Off Bought tab on the:

- My Absence, My Time Off, and View Time Off reports.
- Time Off Balance tab on the Time Off section of their worker profile.

The details of the time off bought include the accrual that the time off was bought from, the quantity of time off, the date when the time off was bought, the date when the time off balance is updated, the status of the buy time off event, and the Cancel or Rescind options, if applicable.

Time Off Balance Updates

Once the status of the buy time off event is successfully completed, the time off balance updates with the quantity bought on the date based on the configuration:

- When workers can buy time off at any time and the Balance Updated in Period is set to:
  - *Current Period*, the time off balance will be updated in the period corresponding to the date that the workers bought time off.
  - *Next Period*, the time off balance will be updated in the next period corresponding to the date that the workers bought time off.
- When workers can buy time off during fixed periods, the time off balance will be updated based on the period selected in the buy schedule.

The date when the time off balance is updated is based on the accrual frequency method that is defined on the time off plan, either *Start of Period* or *End of Period*, or as defined on the Time Off Plan Overrides tab on the accrual.

Reporting

You can run the Time Off Bought by Workers report to view a list of workers who have bought time off within a selected date range and details of the time off bought, including the accrual from which the time off was bought, the date when the time off balance is updated and when payroll adjustments begin and end, the pay rate for the payroll adjustment, and the status of the buy time off event.

You can also view details of time off bought by a worker on the Buy and Sell Time Off Adjustments tab from the Maintain Accrual and Time Off Adjustments/Overrides task, including the accrual from which the time off was bought, the period and date in which the time off balance is updated, and the buy time off event. Workday only displays events in approved or completed status in the grid.

You can run the All Accruals report to view which accruals have been configured for buying.

Related Information

Examples

2024R2 Feature Release Note: Buy Time Off

Steps: Set Up Sell Time Off

Prerequisites

Security: *Set Up: Time Off* domain in the Time Off and Leave functional area.

Context

You can set up Sell Time Off to enable workers to sell back a portion of their accrued time off using the Sell Time Off task. You can configure the:

- Maximum quantity of time off that workers can sell.
- Minimum time off balance to maintain when workers sell time off.
- Time off increments and types that workers can sell.
- Worker eligibility rules to determine who can sell time off.

You can configure multiple time frames on a sell schedule. You must set up separate time offs for selling and requesting time offs.

When you configure time offs for selling:

- Managers and administrators can't sell time off on behalf of workers.
- You can only associate the time offs with worker-based time off plans.
- You can't link the time offs to an absence table.
- You can't rescind or cancel sell time off.
- You can't use time off validations.

Steps

1. (Optional) Access the Create Schedule for Selling Time Off task.

   Create a schedule for workers to sell time off during a fixed period.

   a) Select the time frame that you want workers to be able to sell time off.
   b) In the Update Balance On prompt, select the date that you want Workday to update the worker's time off balance when they sell time off.

   Dates are based on the time zone for the worker from 00:00 (midnight) to 23:59.
2. Access the Create Time Off task. See: Steps: Set Up Time Offs on page 2278.

   Create time offs for workers to sell time off.

   a) Select the Allow to Sell Time Off check box.
   b) As you complete the Sell Options tab, consider:

Option	Description
Available to Sell During	Specify when workers can sell their time off: • *Fixed Period*. When you want workers to sell time off only during the period defined in the sell schedule. • *Anytime*. When you want workers to sell time off at any time. Workday updates the time off balance on the day that the workers sell their time off.
Maximum Limit to Sell	Select the maximum quantity of time off that workers can sell.
Maximum Limit Applies to	When you define the Maximum Limit to Sell, Workday requires you to select either the:

Option	Description
	• *Period in which balance is updated*. When you want workers to be able to sell the maximum quantity of time off in each period when the balance is updated. • *Balance Period*. When you want workers to be able to sell the maximum quantity of time off during the entire balance period.
Sell Increments	Select the multiples in which you want workers to sell time off. Example: When you set the sell increment to 8, workers can only sell time offs in multiples of 8, such as 16 and 24.

c) On the Time Off Plan Overrides tab, enter a lower limit to define the minimum balance a worker needs to maintain after they sell time off.

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

3. Access either the Create Time Off Plan or Edit Time Off Plan task. See: Create Time Off Plans That Track Balances on page 2302.

   On the Time Off tab, link your time off to a worker-based time off plan.
4. (Optional) Create Segment-Based Security Groups.

   Configure the *Access Time Off (Segmented)* security policy in the Time Off and Leave functional area. When you configure segmented security for workers, they can only sell the time offs that they have access to.
5. Edit Business Process Security Policies.
   a) Select *Time Off and Leave* as the functional area and *Sell Time Off* as the business process.
   b) Edit permissions to determine the security groups:
      - For the *Sell Time Off* initiating action.
      - That can view all, approve, or deny sell time off requests for workers.
6. Edit Business Processes.
   a) Configure a default definition for the *Sell Time Off* business process.
   b) (Optional) To dynamically generate editable documents when workers sell time off, add a *Generate Document* action step to the *Sell Time Off* business process. See Steps: Set Up Document Generation for Absence Business Processes on page 2230.
7. (Optional) Set Up Worklets.

   Add the Sell Time Off task to 1 or both of these worklets:
   - Absence
   - Time Off
8. (Optional) Access the Configure Profile Group task.

   Add the Time Off Sold tab to the worker profile.
   a) From the Profile Group prompt, select *Time Off for Worker Profile*.
   b) In the Report column in the grid, select *Time Off Sold* to display the Time Off Sold tab on the worker profile.

   Security: *Set Up: System* domain in the System functional area.

9. (Optional) Create Custom Labels.

   Create a custom label for sell time off. You can't use custom labels to update the names of setup tasks. Example: Create Time Off.

Result

Workers can sell time off by accessing the Sell Time Off task from the:

- Absence or Time Off worklets.
- Time and Absence related actions of their worker profile.
- Time Off Balance and Time Off Sold tabs on the Time Off section of their worker profile.

They can also access the task on their mobile devices (Android, iPhone, and iPad) from their worker profile:

- Time and Absence related actions menu.
- Time Off Sold tab on the Time Off section.

Next Steps

You can review details of time offs sold by workers with the:

- Maintain Accrual and Time Off Adjustments/Overrides task.
- Time Off Sold by Workers report.

Adjust Time Off for Worker on page 2456

Examples

2023R2 What's New Post: Sell Time Off

2024R2 Feature Release Note: Sell Time Off Reporting

Concept: Sell Time Off

Your workers can use Sell Time Off to sell back a portion of their accrued time off.

Worker Experience

Workers can access the Sell Time Off task from the:

- Search.
- Absence or Time Off worklets.
- Time and Absence related actions of their worker profile.
- Time Off Balance and Time Off Sold tabs on the Time Off section of their worker profile.

They can also access the Sell Time Off task on their mobile devices (Android, iPhone, and iPad) from their worker profile:

- Time and Absence related actions menu.
- Time Off Sold tab on the Time Off section.

Workers can select a time off type and enter the time off quantity they want to sell. When workers submit their sell time off requests, Workday routes the event for approval based on how you set up the *Sell Time Off* business process.

You can also set up the business process to autocomplete.

On the Sell Time Off task, workers can consider:

Option	Description
Type of Time Off	Defaults to the time off that workers are eligible to sell when there's only 1 time off. When workers are eligible to sell more than 1 time off, they can select a time off type. Displays when: • You configure the time off for Sell Time Off. • The time off is linked to a time off plan. • The time off is available for workers to sell. • The time off is in the time frame of your sell schedule.
Hours or Days	Workers can enter the time off quantity they want to sell. Workday displays the label as either Hours or Days based on the unit of time defined on the time off plan.
Comments	Workers can enter comments if you enable it on the *Sell Time Off* business process security policy.

When workers sell their time off, they can view details of the time off sold on the:

- Time Off Balance and Time Off Sold tabs on the Time Off section of their worker profile.
- View Time Off related actions of their worker profile.

Reporting

You can run the Time Off Sold by Workers report to monitor the type and quantity of time offs sold by all workers across 1 or more organizations within a selected date range.

You can also view details of time off sold by workers on the Buy and Sell Time Off Adjustments tab on the Maintain Accrual and Time Off Adjustments/Overrides task. Details include the time off type, the quantity of time off the worker sells, the date and the period in which Workday updates the time off balance with the time off sold, and a link to the sell time off event details. Workday only displays events in approved or completed status in the grid.

Time Off Adjustments

Setup Considerations: Time Off Adjustments

You can use this topic to help make decisions when planning your configuration and use of time off adjustments. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Time off adjustments enable you to change time off plan balances for a worker during a single processing period.

Business Benefits

- Provides flexibility by enabling you to reduce or increase time off balances for workers in exceptional circumstances and update payroll with the latest information automatically.
- Makes it easier to track time off in lieu.

Use Cases

With time off adjustments, you can:

- Adjust a worker’s balance for sick leave or compassionate leave time offs.
- Record time off retroactively if the worker or manager didn't request it in Workday.
- Use time off adjustments to offset an automated termination adjustment.
- Suspend time off limits for workers.

Questions to Consider

Question	Consideration
Which time offs and time off plans do you want to adjust?	You can only adjust time offs for plans that track balances. You can specify adjustments in hours or days, based on the units of the time off plan. You can only adjust time offs that allow adjustments.
When do you want to enter your adjustments?	The timing of accrual processing can reduce or eliminate a time off adjustment. Whether Workday records the adjustment as paid time off depends on: • When accrual processing occurs. • Whether the time off balance exceeds the time off lower limit at the time of processing. You can configure accrual processing to occur based on: • The start or end of the period. • A custom frequency. • A scheduling rule.
Does your time off have a lower limit set?	Time off limits can reduce or eliminate a time off adjustment. Example: A Paid Time Off plan has a lower limit of zero hours. Joan has an accrual balance of 9 hours and takes off 6 hours. If you enter a time off adjustment of 5, Workday records only 3 adjusted hours as paid time off, because any amount over 3 hours exceeds the time off lower limit. You need to consider time off lower limits together with validations on the time off such as Maximum Unpaid Time Off Units Allowed. If there's no unpaid days validation on the time off, time off

Question	Consideration
	adjustments can result in a negative time off balance.
Do you use absence tables?	You can use an absence table to group time off requests that span multiple related time offs. Workday doesn't re-evaluate time off balances or time off events in absence tiers automatically when you adjust time offs. However, you can manually recalculate a worker's or multiple workers' balances.
Does the time off span multiple periods?	You can adjust time offs and accruals for any period, including periods for which a worker is ineligible. You can't, however, configure time off adjustments that span multiple periods. If you want to adjust a time off for multiple periods, you need a separate entry for each period. A time off adjustment adds to or subtracts from the time off units of a worker for a single processing period. By contrast, an override replaces the standard accrual calculation with the override units and can span more than 1 processing period. You can't override individual time offs. Overrides apply to accruals only.
When do you want to include the adjustment in your time off calculations?	You can select any reference date within the selected period. Workday updates balances dynamically after you make adjustments.
Do want to run retroactive pay processing for a period you're adjusting?	If you use Workday Payroll, when you enter a time off adjustment for a prior period and run retro processing, Workday Payroll picks up the adjustment and retroactively updates the employees pay.
Do you know whether the worker is eligible for the time off adjustment you want to make?	Before making an adjustment, you can: • Test whether the worker is eligible for a time off using the Evaluate Absence Eligibility report. • Check the worker profile and compare the worker data with the eligibility rules to identify any discrepancies.
Do you need to adjust time off balances for workers who relocate to a different country or region?	When workers relocate, their eligibility for time off plans might change. You can configure time off plans to transfer their balances to another time off plan, pay out time off balances, or both when they lose eligibility due to a job change. Transfer balance payouts create time off adjustments for the worker. You can edit the reference date on the time off adjustments to change the country or pay results for the payout.
Do you need to adjust time off balances for multiple workers?	To adjust time off balances for multiple workers, you can link adjustments to batch IDs created using the *Put Absence Input* web service. Batch

Question	Consideration
	IDs enable you to manage time off adjustments for multiple employees at the same time. You can also delete adjustments that you make in error.

Recommendations

For optimum performance, Workday recommends that:

- When running the Recalculate Worker Time Off Balances task, don't select all workers, all time off plans, or a start date more than 13 months before the current date.
- Schedule bulk recalculations to run at night or during off-peak hours.

Requirements

Enable the Adjustments Allowed option for the time off.

Limitations

- Because absence tiers re-evaluation doesn’t occur automatically after a time off adjustment, if you adjust time offs that are part of an absence table, you'll need to re-evaluate the tiers. To reduce the likelihood of impacting existing time off events, we recommend that you don't make time off adjustments for absence table time offs retrospectively.
- You can configure a time off as the one to use for termination adjustments to offset the plan balance at termination. However, Workday doesn't process balance adjustments of greater than 1000 units.

Tenant Setup

No impact.

Security

Configure these domains in the Time Off and Leave functional area:

Domain	Consideration
Process: Calculated Balances (Run)	Users with access to this domain can run calculated balances process for a time off plan for a specific start date.
Set Up: Time Off (Calculations - Absence Specific)	Users with access to this domain can define absence-specific calculations such as: • Accruals. • Time offs. • Time off plan balances. They can also define: • Balance periods used within accruals and time off plans. • Periods and their schedules.
Worker Data: Time Off (Adjustments and Overrides)	Users with access to this domain can adjust time off for workers.
Worker Data: Time Off (Limit Overrides)	Users with access to this domain can suspend time off limits for workers.

Business Processes

Business Process	Consideration
Correct Time Off	Enables: • Users to adjust time off for a worker. • Editable documents to be dynamically generated when users adjust time off for a worker.
Change Job	Workday recommends that you add an *Automated Accrual Adjustment* service step after the *Completion* step to the *Change Job* business process.
Termination	Enables users to adjust time off balances for terminated workers. Workday recommends that you add an *Adjust Time Off Balances* service step after the completion step of the *Termination* business process.
Time Off Balance Transfer	This subprocess enables the transfer of a time off balance to another plan when a worker's eligibility changes.

Reporting

Reports or Dashboards	Consideration
Time Off Balances and Liability by Organization	You can view your liability for employees' time off plan balances as of a specific date before deciding which time offs you need to adjust.
Accrual and Time Off Adjustments/Overrides	Find out what adjustments and overrides you've made to time offs for organizations within a specified time period.
Accrual and Time Off Adjustments/Overrides by Batch ID	View a batch of time off adjustments and overrides that you made for multiple workers using the *Put Absence Input* web service. You can use a batch ID to identify the batch.
Time Off Balance	View time off balances for a worker before determining whether to make an adjustment.

You can use these data sources to create custom reports:

Data Source	Consideration
Accrual and Time Off Adjustments/Overrides	This data source doesn't include terminated workers, so custom reports that use this data source won't display workers with terminated adjustments.
Workers for Organizations parm for Time Off Liability Reporting	Use this data source to view the liability of an organization for time off balances and decide where you might need to make time off adjustments.

Integrations

Web Service	Consideration
Put Absence Input	Use this web service to load time off adjustments or updates to existing adjustments for workers into Workday. You can use batch IDs to bulk load adjustments for multiple workers.
Get Absence Inputs	Use this web service to extract time off adjustment details for workers from Workday.

Connections and Touchpoints

Touchpoint	Consideration
Time Tracking	You can adjust time off entered.
Workday Payroll	Adjustments that you make can affect payroll earnings that are based on a worker's time off.
Third-party payroll	Third-party payroll interfaces can detect time off adjustments that affect payroll earnings.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Transfer Time Off Balances on page 2515

Adjust Time Off for Worker

Prerequisites

- Enable the Adjustments Allowed option for the time off.
- Security: *Worker Data: Time Off (Adjustments and Overrides)* domain in the Time Off and Leave functional area.

Context

Adjust the time for a worker during 1 processing period. Before making an adjustment, review their current time off plan balance on the Time Off Balance report.

- If the worker isn’t eligible, Workday processes the adjustment only if you modify the time off eligibility criteria.

- Time off limits and the timing of accrual processing can reduce or eliminate an adjustment.

  You can use the Maintain Accrual and Time Off Limit Overrides task to suspend time off limits for an employee.

You can also use the *Put Absence Input* web service to adjust time off.

Steps

1. Access the Maintain Accrual and Time Off Adjustments/Overrides task.
2. Search for the worker.
3. On the Adjustments tab, specify:

Option	Description
Select Accrual/Time Off	The time off to adjust, such as *Sick Time Off*. The prompt automatically displays the time offs the worker is eligible for. Alternatively, you can select from the Absence Accruals and Time Off Worker Ineligible folder. Note: Workday processes the adjustment if you modify the time off eligibility criteria for workers that are ineligible.
Units	The number of hours or days for the adjustment. A positive number reduces the time off plan balance. A negative number increases the plan balance and can be useful if you need to offset an automated termination adjustment.
Period	The period to adjust. The prompt automatically displays periods associated with the time off plan that includes the time off. Time off adjustments can't span multiple periods. To select a period for which the worker is ineligible for the time off, select from the All Periods for Start Period folder.
Reference Date	Determines when to include the adjustment in time off calculations. You can select any date in the Period. Balances reflect the adjustment if you calculated on or after the reference date. Example: The period is February 1 to 28. If the reference date is February 18, time off balances displayed on or after that date reflect the adjustment.
Position	Applies only if the time off is associated with a position-based time off plan.
Batch ID	You can link the adjustment to a batch ID created using the *Put Absence Input* web service. Batch IDs enable you to manage time off adjustments for multiple employees at the same time.

4. If adjusting a time off for which the worker or position isn't eligible, modify the time off eligibility.
   a) Access the Edit Time Off Plan task or the Edit Time Off task, depending on where you defined eligibility for the time off.
   b) Add this Workday-provided calculation to the eligibility rules: *Absence Input (Period-Specific) Exists for the Job for Absence Component.*

      This rule works for both worker-based and position-based time off plans. For position-based plans, Workday looks for input for the position.

      Add the calculation on a separate row.
5. (Optional) Access the Delete Accrual and Time Off Adjustments/Overrides by Batch ID task to delete.

Example

Adjusting Time Off for a Worker

Adam's time off plan balance is 40, but should be 32. To adjust his time off and have Workday reflect the adjustment when you display balances, complete these fields:

Select Accrual/ Time Off	Units	Period	Reference Date
Vacation Time Off	*8*	*06/01/2011 - 06/30/2011*	*06/15/2011*

Adjusting Time Off for Which a Worker is Not Eligible

Tim transfers to a new organization and loses eligibility for time off. To eliminate and pay out his remaining time off balance of 32 hours:

1. Use the Edit Time Off Plan task to enter a worker eligibility override that uses the calculation *Absence Input (Period Specific) Exists for the Job for Absence Component*.
2. Use the Maintain Accrual and Time Off Adjustments/Overrides task to enter a time off adjustment for 32 hours in the current period.

Next Steps

Use these reports to view time off adjustments:

- Accrual and Time Off Adjustments/Overrides. View for a selected organization.
- Accrual and Time Off Adjustments/Overrides by Batch ID.

Access the Delete Accrual and Time Off Adjustments/Overrides by Batch ID task to delete time off adjustments, accrual adjustments, and overrides.

Related Information

Concepts

Concept: Termination Adjustments on page 2459

Concept: Accrual and Time Off Limits on page 2355

Tasks

Steps: Set Up Time Offs on page 2278

Create Time Off Plans That Track Balances on page 2302

Concept: Termination Adjustments

Workday generates a termination time adjustment for employees upon their termination. It sets the remaining time off plan balance to zero. The adjustment takes into account time offs, accruals, and any other adjustments for dates on or before the termination date.

To generate termination adjustments, specify a time off plan to use for the adjustments and include a step in the *Termination* business process.

Note: To receive a termination adjustment, an employee must meet eligibility requirements for the time off plan, its accruals, and the adjusting time off on the termination effective date. Workday doesn't process balance adjustments of greater than 1000 units.

Viewing Termination Adjustments

You can view a worker's termination adjustment after the service step from the Termination Business Process runs. Use the termination adjustment to calculate how much paid or unpaid time off the worker has.

You can use the Adjustment tab of the Maintain Accrual and Time Off Adjustments/Overrides page to view the termination adjustments.

The Reference Date column displays the termination date. You can view the worker's termination adjustment details. Workday hides termination adjustments from employees until the day after their termination date. Employees continue to see their unadjusted balances and can request time off as before. They won't receive validation errors if their plan balance is too low to cover requests because of a termination adjustment.

Managing Termination Adjustments

Workday updates termination adjustments in response to certain events that happen after you create an adjustment.

You can't update a termination adjustment directly. You can use the Adjustment tab of the Maintain Accrual and Time Off Adjustments/Overrides page to enter a time off adjustment to offset the termination adjustment.

Events that update termination adjustments	• Time off requests or corrections for dates on or before the termination date. • Rescinded terminations. Workday restores the plan balance and removes the Adjustments tab from the Maintain Accrual and Time Off Adjustments/Overrides page. • Corrections to termination dates. Example: You correct a termination date of October 20 to November 15. Workday updates the termination adjustment for any time off, adjustments, overrides, or accruals between the original and the corrected termination dates. Any correction to the termination event triggers a recalculation.
Events that don't update termination adjustments	• Manual adjustments. • Accrual overrides and overrides to time off plan balances entered after a termination adjustment generates.

- Requests to take compensatory time off (time off in lieu) entered through Workday Time Tracking.

Concepts

Concept: Eligibility for Time Off Plans, Time Off, and Accruals on page 2319

Tasks

Steps: Enable Termination Adjustments for Time Off Plans on page 2282

Adjust Time Off for Worker on page 2456

Examples: Effect of Limits and Accrual Timing on Adjustments and Overrides

Time off limits and accrual limits can reduce or even eliminate adjustments and overrides made to a worker's time off or accrual.

Example 1: Accrual Limits	The Vacation time off plan has an accrual limit of 120 hours. Alex has an accrual balance of 110 hours going into the next balance period. The standard monthly accrual is 12 hours. • If you enter an accrual adjustment of 3 hours, Workday adds only 10 hours to the initial balance of 110. • If you enter an override of 15 hours (instead of the adjustment), Workday still adds only 10 hours to the initial balance of 110.
Example 2: Time Off Limits	The Vacation time off plan has a lower limit of zero hours. Alex has an accrual balance of 5 hours and takes off 4 hours. If you enter a time off adjustment of 4, Workday records only 1 adjusted hour as paid time off, because any time off over 5 hours exceeds the time off lower limit.

Effect of Accrual Timing on Adjustments and Overrides

Example 1: Accrual Adjustments	The Vacation time off plan has an accrual limit of 120 hours. The standard monthly accrual is 10 hours. Alex has an accrual balance of 110 hours going into the next balance period. You enter an accrual adjustment of 2 hours, and Alex requests 12 hours of time off. • If accrual processing occurs at the beginning of the period, Workday adds the 2 hours to the 10 normally accrued, increasing the balance to 122. It applies the limit and determines that the 120 limit is exceeded by 2. Workday reduces the accrual by 2. • If accrual processing occurs at the end of the period, Workday reduces the accrual balance of 110 by the 12 hours of time off, leaving a remaining balance of 98. It adds the adjustment of 2 for a total of 110, and applies

limit testing. The limit isn't exceeded so Alex doesn't lose vacation time.

Example 2: Accrual Overrides

The Vacation time off plan has an accrual limit of 120 hours. The standard monthly accrual is 10 hours. Alex has an accrual balance of 110 hours going into the next balance period. You enter an accrual override of 15 hours, and Alex requests 12 hours of time off.

- If accrual processing occurs at the beginning of the period, Workday adds the 15 hours to the 110 already accrued. It applies the limit and determines that the 120 limit is exceeded by 5. Workday reduces the accrual for the period to 10.
- If accrual processing occurs at the end of the period, Workday reduces the accrual balance of 110 by the 12 hours of time off, leaving a remaining balance of 98. It adds the override of 15 for a total of 113, and applies limit testing. The limit isn't exceeded so Alex doesn't lose vacation time.

Example 3: Time Off Adjustments

The time off lower limit for sick time is zero hours. Sue has a balance of 2 hours going into the current period. She accrues 2 additional sick hours for the period, takes 2 hours off during the period, and you enter a time off adjustment of 4.

- If accrual processing occurs at the beginning of the period, Workday records 2 of the adjusted hours as paid time off. The other 2 hours exceed the time off lower limit.
- If accrual processing occurs at the end of the period, Workday doesn't record the adjustment as paid time off because it exceeds the time off lower limit.

Forfeiture Adjustments

Concept: Forfeiture Adjustments

With the Time Off Forfeiture Adjustments Process, Workday generates forfeiture adjustments that pay out unused, expiring accruals.

Initial Forfeiture Adjustment Creation

For time off plans with the Time Off Forfeiture Adjustment field defined, the Time Off Forfeiture Adjustment Process (also referred to as the scheduled job) automatically runs on the last day of the time off period to create forfeiture adjustments for expiring accruals that are forfeited in the current period and the previous 3 periods. The Maintain Time Off Forfeiture Adjustment Settings task gives you the option to change the number of prior periods evaluated as part of the scheduled job.

Automatic Recalculation Process

Workday runs a background process every 15 minutes that automatically recalculates forfeiture adjustments for changes up to 12 months back. This is triggered by the following retroactive changes:

- Approved Time Off Request or Correction
- Approved Time Review Event
- Accrual Adjustment, Accrual Override or Time Off Adjustment
- Accrual Expiration Override

When a change is observed, the system updates only the amount on the adjustment and deletes any adjustments that are no longer valid for an expiring accrual.

Ad-Hoc Forfeiture Adjustments

You can use the Run Time Off Forfeiture Adjustment Process task (secured to the *Process: Time Off Forfeiture Adjustment* domain) to create and recalculate forfeiture adjustments for a subset of workers on an ad-hoc basis. As an administrator, you can use the ad-hoc job to make changes for those circumstances that you want to take more immediate action on, such as when a change isn't observed, or you have items that need to be expedited to payroll.

Troubleshooting and Error Handling

These automated processes include built-in retry and error handling mechanisms to reduce the need for manual intervention.

If the Time Off Forfeiture Adjustment Process fails on a period end date, Workday automatically attempts to re-run the job for the next three consecutive days. If the job still fails after three retries, the most likely cause is an issue with calculating time off plan balances. To fix this, you should:

- Troubleshoot the time off plan's setup and configuration. A significant number of calculation errors often indicate a configuration problem, which might show up as a stack trace error for many workers.
- Manually relaunch the job using the Run Time Off Forfeiture Adjustment Process task and select the Use Dates from Last Scheduled Run checkbox to resume the process from where it left off.

  Note: If you don't select the Use Dates from Last Scheduled Run checkbox, automatic calculations won't resume until the next scheduled run.

To prevent system performance issues, Workday stops an Automatic Recalculation job run running the 15 minute background process if it reaches a specific failure threshold. For a specific worker and time off plan, Workday attempts to recalculate the failed records up to three additional times before disabling automatic recalculations for the worker.

You can identify these disabled records by running the Workers with Automatic Recalculation of Time Off Forfeiture Adjustments Disabled report.

To reprocess these records, you must manually launch the Run Time Off Forfeiture Adjustment Process task and select the Recalculate only checkbox. If no action is taken, Workday attempts to recalculate these records during the next scheduled job run.

Tasks

Steps: Enable Forfeiture Adjustments for Time Off Plans on page 2463

Reference

FAQ: Forfeiture Adjustments on page 2464

Steps: Enable Forfeiture Adjustments for Time Off Plans

Prerequisites

- Configure the time off plan to track balances.
- Add at least 1 accrual with expiration to the time off plan.

Context

You can create time offs enabled for forfeiture adjustment and configure time off plans to automatically pay out unused, expiring accruals.

Steps

1. Access the Create Time Offs task.
    a) Select the Enable for Forfeiture Adjustment checkbox.
    b) On the Forfeiture tab, select a Forfeiture Type of Expiring Accruals.

       Note: When setting the Priority on the Details tab, Workday recommends giving the forfeiture time off the lowest priority (highest number). This ensures it's processed after all other time offs on the time off plan.
2. Access the Create Time Off Plan or Edit Time Off Plan task.
    a) On the Time Off tab, add the time off to the plan.
    b) Select the time off as the Time Off for Forfeiture Adjustment.

       Note: You cannot define the Time Off for Forfeiture Adjustment field on a past dated time off plan snapshot. This field automatically populates once you add a forfeiture time off to your time off plan definition.
3. Access the Domain Security Policies for Functional Area report and select Time Off and Leave as the functional area.
    a) Enable the domain security policy *Process: Time Off Forfeiture Adjustment*.
    b) Edit Permissions to grant user based security groups access to functionality related to the Time Off Forfeiture Adjustment Process.
    c) Activate Pending Security Policy Changes.
4. *(Optional)* Access the Maintain Time Off Forfeiture Adjustment Settings task to define the number of past periods the scheduled job evaluates when creating new forfeiture adjustments.

Result

Workday creates and recalculates forfeiture adjustments that take effect on the accrual expiration date and are visible to administrators on the:

- Forfeiture Adjustments tab of the Maintain Accrual and Time Off Adjustments/Overrides task.

  Note: Deleted forfeiture adjustments won't display on the Forfeiture Adjustments tab. If no forfeiture adjustments exist, this tab is hidden.
- Time Off Forfeiture Adjustments for Workers report.

Next Steps

Map the Absence Component Related Calc (ACRC) of the forfeiture time off to an Earning or External Earning for payout.

- If using Workday Payroll, access the Create Earning or Edit Earning task.
- If using Third-Party Payroll, access the Create External Earning or Edit External Earning task.

FAQ: Forfeiture Adjustments on page 2464

FAQ: Forfeiture Adjustments

What absence components can be paid out at this time?	Only expiring accruals that have been forfeited can be paid out. At this time the Time Off Forfeiture Adjustment Process doesn't support the automatic payout of expired carryover, forfeited carryover, or forfeited accruals in excess of an upper limit.
Can I specify which expiring accrual I wish to pay out on a time off plan?	No, you cannot specify which expiring accrual to payout. However, if you have a need to only payout a subset of workers, you can configure an eligibility override on the forfeiture time off so that the job only pays out for a subset of workers.
Do time offs enabled for forfeiture adjustment respect lower limits?	Yes, forfeiture time offs respect time off plan lower limits and time off limit overrides. However, we recommend avoiding a positive lower limit configuration when possible. If the forfeiture adjustment amount is greater than the lower limit, expiring accrual units that exceed the limit will appear in the Time Off Unpaid in Period column instead of the Expiring Accrual Forfeited in Period column in reports like Time Off Results by Period. While the results are still correct, this can create a perceived discrepancy, making it seem like the balances don't add up correctly.
I updated the reference date of an accrual adjustment for an expiring accrual that was previously paid out. Why am I not seeing a forfeiture adjustment that reflects this change?	In the event of changes to the Reference Date (Accrual Date), Workday deletes the forfeiture line item during the recalculation process and will create a new forfeiture adjustment the next time the scheduled job runs.
I used the Maintain Accrual Expiration Override task to update the expiration date of an expiring accrual, which was previously paid out. Why am I not seeing a forfeiture adjustment that reflects this change?	For observed changes impacting the Expiration Date of an Accrual, Workday deletes the forfeiture line item during the recalculation process and will create a new forfeiture adjustment the next time the scheduled job runs.
A worker has a Floating Holiday Accrual that expired on 8/29/2025. On 9/22/2025, I updated the Floating Holiday Time Off Plan, which has a monthly period schedule, to include the necessary forfeiture time off setup, effective 9/1/2025. My Time Off Forfeiture Adjustment Settings are configured to evaluate the prior 3 periods, I expected the job	When evaluating which prior periods to create forfeiture adjustments for, Workday's scheduled job will always consider both the first time off plan snapshot with a Time Off for Forfeiture Adjustment defined and your Time Off Forfeiture Adjustment Settings (which define the number of prior periods the scheduled job evaluates when creating new

to create adjustments for the 3 periods preceding September. Why wasn't a forfeiture adjustment created when the Time Off Forfeiture Adjustment Process ran on 9/30/2025?	forfeiture adjustments). Workday considers the maximum of these two dates when creating new forfeiture adjustments.
A worker, Ben Adams, has a Floating Holiday Accrual that expired on 8/5/2025. On 9/22/2025, I updated the Floating Holiday Time Off Plan (which has a monthly period schedule) to include the necessary forfeiture time off setup up, effective 9/1/2025. Why wasn't a forfeiture adjustment created by running the Run TIme Off Forfeiture Adjustment Process with the below inputs on 9/29/2025?	• ***Time Off Plan: Floating Holiday*** • ***Workers to Include: Ben Adams*** • ***Start Date: 8/1/2025*** • ***End Date: 9/30/2025***
I thought that the ad-hoc job would create adjustments for the prompted date range?	When evaluating which prior periods to create forfeiture adjustments for, Workday's ad-hoc job will always consider both the first time off plan snapshot with a Time Off for Forfeiture Adjustment defined and the prompted Start Date. Workday considers the maximum of these two dates when creating new forfeiture adjustments.
I accrued 8 Floating Holiday hours on 7/4/2025. I used 3 of these Floating Holiday hours to take time off on 8/15/2025, and the remaining 5 hours expire on 9/4/2025. On 9/22/2025 I updated my Floating Holiday Time Off Plan (which has a monthly period schedule) to include the necessary forfeiture time off setup up, effective 9/1/2025. When the Time Off Forfeiture Adjustment Process ran on 9/30/2025, it created a forfeiture adjustment to payout the unused hours, as expected. However, on 10/5/2025, I corrected my 8/15/2025 Floating Holiday entry from 3 to 2 units. Why am I not seeing this correction reflected as part of the recalculation process?	Workday's automatic recalculation process considers both the first time off plan snapshot with a Time Off for Forfeiture Adjustment defined and the 12 month recalculation guardrail. The maximum of these two dates is the date in which Workday will recalculate existing forfeiture adjustments from.
What time does the Time Off Forfeiture Adjustment Process run on the last day of the absence period?	This job runs at 3:20 AM local tenant time Sunday – Friday. On Saturdays it runs at 2:15 PM local tenant time. Local tenant time is based on the default time zone configured in Edit Tenant Setup - System task. If the time zone setting is blank, Workday will use Pacific Time.
Where can I view the status of a scheduled job run?	You can verify the status of a scheduled job run using the Workday-Delivered Find Time Off Forfeiture Adjustment Runs for Scheduled Background Process report as well as via the Process Monitor.
Can the Ad-Hoc Run Time Off Forfeiture Adjustment Process be scheduled?	No, not at this time. This ad-hoc task is meant to be used in special circumstances when you need to take more immediate action, such as when a change isn't observed, or you have items that need to be expedited to payroll.

My organization has had a policy change and no longer requires expiring accruals to be paid out as of 1/1/2026 (Enabled Forfeiture Adjustment on the 9/1/2025 snapshot). Will I need to create a new time off plan?	No, you do not need to create a new time off plan. You can remove time off from the Time Off for Forfeiture Adjustment field on the payout section of your time off plan. If you want to continue recalculating (updating/deleting) forfeiture adjustments that were previously created, create a new time off plan snapshot for 1/1/2026 and remove the time off defined in the Time Off for Forfeiture Adjustment field. If you no longer want to support the recalculation of existing forfeiture adjustments, edit the 9/1/2025 snapshot on 1/1/2026 and remove the time off defined in the Time Off Forfeiture Adjustment field.

Absence Tables

Setup Considerations: Absence Tables

You can use this topic to help make decisions when planning your configuration and use of absence tables functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

You can use absence tables to group related time offs. Workers requesting absence that spans different time off plans can request a single time off type. Workday automatically selects the appropriate time off for each portion of the absence.

Business Benefits

Absence tables increase efficiency by:

- Reducing the number of time off requests a worker needs to make.
- Consolidating the number of times off types a worker can select from.
- Reducing multiple time off request approvals for managers.

Use Cases

You can use absence tables to manage absences that have different pay rates over their duration, such as:

- Parental leave.
- Sick leave.

You can also create an absence table to manage time off requests that span multiple time off plans. Example: When you create an absence table that includes floating holiday and vacation time off plans, workers requesting time off don't have to specify a plan.

Note: Users can request time off against absence tables on mobile. Workday supports absence tables on Android, iPad, and iPhone, enabling you to manage time off requests that span multiple absence tiers.

Questions to Consider

Question	Considerations
How do you use multiple time off plans to manage 1 absence type?	You can create an absence table for the absence type. You can then set up absence tiers using new or existing time off plans to manage the absence type.
How do you set up time off plans that workers can use when they exhaust the balance of another time off plan?	You can create an absence table with a tier for each time off plan. You can assign a higher priority to the time off plan that you want the worker to use first. The request moves to the next tier with available balance when it exhausts the balance of the current tier.
How do you manage absences that have varying pay rates over time?	You can create an absence table with a tier for each rate of pay. You can then configure your payroll to apply the appropriate rate of pay to each time off tier.
How do you manage waiting periods for sickness?	You can set up waiting period tiers with quantity-per-occurrence calculations to ensure that a certain quantity of time off units for sickness is unpaid or at a different pay rate whenever there's a new absence occurrence.
How do you manage future time off requests using absence tiers?	Tier reevaluation enables Workday assess new time off requests and ensure that tier balances reduce chronologically. Workday runs a reevaluation job that automatically identifies and corrects future-dated absence-table event records, based on newly entered, or the correction of existing, absence table events. Workday uses the balances of tier time off plans in priority order of the absence table tiers. The reevaluation job triggers when the *Request Time Off* and *Correct Time Off* business processes complete and in response to time off events against absence tables where there are future-approved absence table events. These time off events include: • Requests and corrections against an absence table. • Corrections against a standard time off that's on an absence table. • Cancellations. • Deny requests. When you set up absence tables, you should consider the effective dates of absence table

Question	Considerations
	objects. Absence tables don't have effective dates. However, tier time off plans set up within an absence table include effective-dated time off plans and time off events. The effective date of these objects can impact when related tiers become effective and available for use in absence requests and balance visibility.
Which absence types do you want to group in an absence table?	You can group absence types that use the same unit. To request an absence based on an absence table, a worker must be eligible for at least 1 tier plan. When a worker is eligible for some but not all tiers, Workday deducts time off from tiers they're eligible for.
How do you want to alert workers when they enter an invalid request?	You can create validation messages that display when workers attempt to enter an absence that doesn't meet your configurations. You can add these validations to your absence tables: • Increments • Maximum • Minimum You can prevent workers requesting unpaid absence by setting the *Maximum Unpaid Time Off Units Allowed* validation on each time off tier.
How do workers enter time off requests for all days of the week?	Absence tables use the Days to Include configuration on each tier time off plan. Example: You set Days to Include to Monday to Friday on tier 1 but to all days on tier 2. Time off requests that include Saturday use the balance from tier 2.

Recommendations

Workday recommends that you always enable Workday to identify and correct absence events automatically. So, for all new absence tables that you create, the Enable Reevaluation check box is selected by default.

Set the Daily Quantity Default in the time off plan of the first tier to the value that you want to use in the absence table. The remaining tiers in your absence table use this value automatically.

Lower limits and the *Maximum Unpaid Time Off Units Allowed* validation ensure that workers exhaust the balance of one time off plan before using another, except when you configure Quantity per Occurrence values.

Select time off plans that use the same period schedule and balance period.

If adding quantity-per-occurrence calculations on existing absence tables that aren't already enabled for absence occurrences, add the calculations before enabling the tables for occurrences. This approach helps avoid unnecessary recalculation of new occurrences.

Note: Adding quantity-per-occurrence values on absence tables that already have related time off entries doesn't change the existing tier splitting. Workday only applies the values to new time off entries against the absence table, or when running table reevaluation.

Requirements

Set up or reuse existing time off plans for each tier of your absence table. Each time off plan must:

- Track balances.
- Use the same time unit.

Limitations

- You can't enter start and end times against absence table requests on the legacy absence and time off calendars. You need to set up Absence Calendar Experience to enable start and end times on absence tables.
- You can't add intermittent time offs to an absence table. Intermittent time offs subtract from the leave balance without having the employee on a leave through the *Request Leave of Absence* business process. When creating or editing absence tables, Workday provides a validation that prevents you adding intermittent time offs. When creating or editing leave types, Workday provides a validation that prevents you adding time offs as intermittent time offs if they're already in use on an absence table.
- Validations for an individual time off don't display when you use that time off in an absence table, except for the *Maximum Unpaid Time Off Units Allowed* validation.
- Period-based calculations aren't available for validations on absence tables.
- You can't use effective dates with absence tables. You can enter effective dates on tier time off plans.
- Workers can't request against a time off type after you add it to an absence table. Their subsequent time off requests are against the absence table. You can override the tier order of absence requests.

Tenant Setup

Access the Edit Tenant Setup - HCM task to enable quantity per occurrence on absence table tiers.

Security

Users with security enabled for the *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area can view, edit, and create absence tables.

Business Processes

You can update entry condition rules that you use for business process validations to include the Absence Table or Time Off for Time Off Event report field.

Reporting

Reports	Considerations
All Absence Tables	View all absence tables in your tenant and their related time off plans.
Absence Tier Time Off Entry Details	View absence tier usage by worker time off requests. You can also use the report to confirm that tier priority is working correctly. The report indicates reevaluated events.
View Absence Table	View detailed information for a specific absence table, including its related absence table tiers and validations.

You can add the Time Off/Absence Table report field from the *Coordinated Time Off Entry* business object to your existing custom reports to view absence table usage.

Integrations

You can use these web services to add, adjust, or bulk upload time off requests to absence tables:

- *Adjust Time Off*
- *Enter Time Off*
- *Import Time Off Request Event Batch*

Connections and Touchpoints

Product	Touchpoint
Payroll	Create separate earnings and deductions for each time off plan that you use in your absence table.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up Absence Third-Party Calendar Integration
2025R1 Feature Release Note: Start and End Times on Absence Tables

Create Absence Tables

Prerequisites

Review setup considerations for absence tables.

Configure time off plan and time offs. You can also configure new plans and time offs directly from the task. For each:

- Time off plan, set the Time Off Plan Balance Lower Limit on the Calculation tab. Workday uses this value to determine when to move to another tier. You don't have to set this calculation for the final tier if the plan used is unpaid.
- Time off, add the *Maximum Unpaid Time Off Units Allowed* validation to the Data Entry Validations section on the Validations tab. This validation helps calculate when to change tiers.

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Context

You can create an absence table to manage time off requests that span multiple time off plans. You create a tier for each unique time off plan and time off combination, and assign a priority to each tier of the table. Workday evaluates eligibility settings, validations, and balances to determine which tier to use when satisfying the time off request.

Example: Your U.S. time off and leave package includes both a floating holiday and a vacation time off plan. Workers must use their floating holidays before vacation days. As the absence administrator, you create an absence table with 2 tiers:

- Tier 1: Floating holiday time off plan.
- Tier 2: Vacation time off plan.

You assign the higher priority to Tier 1. When a worker requests time off against the absence table, Workday processes time off entries against the Tier 1 balance until the worker exhausts the balance. Workday then jumps to Tier 2 to process the rest of the request.

Steps

1. Access the Create Absence Table task.

   Workday recommends that you always enable Workday to identify and correct absence events automatically. So, for all new absence tables that you create, the Enable Reevaluation check box is selected by default.

   Note: You can't clear the Enable Reevaluation check box to deactivate table reevaluation when the absence table is in use and has an approved, sent back, or submitted request against it. However, you can enable it.

   Reevaluation:

   - Occurs in response to the completion of business process events, such as *Absence Calendar*, *Request Time Off*, *Correct Time Off*, and *Enter Time*, for new time off entries or corrections.
   - Doesn't occur upon entry or amendment of any time off, accrual adjustments, or overrides.

   When you enter time off requests or correct entries, reevaluation updates absence table events that occur on or after the time off requests or corrections. Example: Today is 02-11-2022 and a worker has a time off entry against an absence table from 02-07-2022 to 02-11-2022. If the worker enters time off against the table for 02-01-2022 to 02-04-2022, Workday reevaluates the approved time off entries from 02-07-2022 to 02-11-2022.
2. (Optional) Select the Require Position on Time Off Request check box to restrict absence table entries to position-based time off plans or worker-based time offs that require a position in the request. Workday updates the prompts in the absence table tiers and the Validations tab to restrict the values that you can select based on this option. You can only select or deselect this option when there are no approved entries for the absence table.
3. Add a new tier for each time off plan and unique time off combination.

   Note: You can create as many tiers as you want. However, the more tiers, the more processing, which might impact performance.

   As you complete each tier, consider:

Option	Description
Priority	The alphanumeric entry must be unique for each tier.
Time Off Plan	Select an existing plan or create a new one. All plans in the table must: • Use the same unit of time. • Track balances.
Time Offs	Select a unique time off for each tier. Example: Tier 1 and Tier 2 can use the same time off plan, but must each use a different time off. Workday doesn't support intermittent time offs.
Quantity per Occurrence	(Optional) Displays when you enable quantity per occurrence on absence table tiers on the Edit Tenant Setup - HCM task. Select a constant value calculation for a static value, or create a calculation to allocate an amount of time off units to the tier per absence occurrence. Example: Create a conditional calculation that allocates time off units based on the results of value comparison calculations. You can use these instance value calculations (IVCs):

Option	Description
	• Count of Absence Occurrences Starting in Current Balance Period • Count of Absence Occurrences Starting in Prior 12 Months • Count of Absence Occurrences in Current Balance Period See Concept: Absence Tables Conditional Cascading on page 2479.

4. On the Details tab, specify whether workers can enter time off against the absence table in Absence Management, Time Tracking, or both. Select an Entry Option:
   - *Enter through Time Off Only* (using the Request Absence or Manage Absence tasks).
   - *Enter through Time Tracking Only* (using the Enter Time by Week, Enter Time for Worker (High-Volume Time Entry), or Enter Time (Micro-Edit) tasks).
   - *Enter through Time Tracking or Time Off*.
5. (Optional) Select the check boxes that apply, depending on the Entry Option value. This table indicates whether you can select each one for days or hours-based absence tables.

Check Box	Description	Entry Option	Days-Based	Hours-Based
Display Start and End Time	To enable workers to enter start and end times for time off requests.	*Enter through Time Off Only*	Yes	Yes
		Enter through Time Time Tracking Only	No	No
		Enter through Time Tracking or Time Off	No	No
Start and End Time Required	To require workers to enter start and end times on time off requests.	*Enter through Time Off Only*	Yes	Yes
		Enter through Time Time Tracking Only	No	No
		Enter through Time Tracking or Time Off	No	No
Calculate Quantity Based on Start and End Time	To prevent workers overriding the number of hours for the daily quantity. This option ensures that: • The quantity of time that workers request per day equals the duration of time between	*Enter through Time Off Only*	No	Yes

Check Box	Description	Entry Option	Days-Based	Hours-Based
	the start time and end time. • Workday ignores the daily quantity default.			
		Enter through Time Time Tracking Only	No	Yes
		Enter through Time Tracking or Time Off	No	Yes
Default Start and End Time from Schedule	To automatically populate the Start Time and End Time fields for each day from the worker's schedule. Workday uses either the worker's published schedule from Workday Scheduling, if one exists, or the worker's assigned work schedule calendar. If neither exists, Workday leaves the start and end times empty.	*Enter through Time Off Only*	Yes	Yes
		Enter through Time Time Tracking Only	No	Yes
		Enter through Time Tracking or Time Off	No	Yes
Enable Crossing Midnight	To enable workers to enter time off that starts and ends on consecutive days. This enables Workday to process time off requests that cross midnight as a single time off entry.	*Enter through Time Off Only*	Yes	Yes
		Enter through Time Time Tracking Only	No	Yes
		Enter through Time Tracking or Time Off	No	Yes

Note: You need to set up Absence Calendar Experience to enable the start and end times on absence tables. See Setup Considerations: Absence Calendar Experience.

6. On the Validations tab, add a row in the table for each validation that you need.

   Values that you enter must be compatible with the unit of time in the time off plan on each absence table tier.

Option	Description
Consecutive Day Maximum	Specify the maximum numbers of consecutive days of time off workers can request. Example: You enter 3 to prevent workers from requesting more than 3 consecutive days of time off.
Minimum	Specify the minimum amount of time off workers can request for each time off entry, not the sum of time off entries each day. Example: Select a constant value, such as 4 hours or 0.5, or a calculation that returns different values for full-time and part-time workers.
Maximum	Specify the maximum amount of time off workers can request. Example: Select a constant value, such as 8 hours or 1 day, or a calculation that returns different limits based on a worker's work schedule calendar, holiday schedule calendar, or both. You can set limits dynamically based on the number of hours the worker is scheduled to work on the time off date. Example: 8 hours Monday, Tuesday, Wednesday, and Thursday, 12 hours on Friday, and zero hours on holidays. Specify whether the maximum applies to: • Each request (*Individual Time Off Entry*). • All time off entries for the same date. • Requests for the same date for the time offs you select in the Time Off Validation Set field.
Increments	Specify the increments for entering time off. Example: Select a constant value, such as 4 hours or 0.5, or a calculation that returns different values for full-time and part-time workers.
Hide Default Validation Text	Select to hide the default validation text when a worker enters a time off request if you define custom text on the validation. Note: Workday displays the validations from the effective dated snapshot of the time off plan when the worker entered their time off request. Updates in subsequent snapshots don't display.

Result

Workers can select the absence table in their absence request when eligible for 1 or more time off plans in the table.

Example

At Alice's company, workers can request up to 15 days of time off. Alice requests 10 days and selects the *Vacation* absence table. She has these balances:

- Tier 1 balance: zero days.

  The *Maximum Unpaid Time Off Units Allowed* validation on the Tier 1 time off is set to 8 Days.
- Tier 2 balance: 10 days.

Alice can select the absence table because she's eligible for both time off plans in the table. Workday takes 8 days from the Tier 1 balance because the validation lets Alice take 8 unpaid days. Workday jumps to Tier 2 and takes the 2 final days.

Next Steps

Test whether a worker is eligible for time off plans, accruals, or time offs.

2023R2 What's New Post: Position-Based Absence Tables

Reevaluate Absence Table Time Off Entries

Prerequisites

Security: *Set Up: Time Off* domain in the Time Off and Leave functional area.

Note: You can only reevaluate and correct approved time off for specific workers if:

- You've permission to correct their time off, based on the *Correct Time Off* business process security policy.
- You're a member of a role-based security group with contextual access for the worker.

Context

You can reevaluate absence table time off entries for workers or organizations manually when:

- You enter time off plan balance overrides or adjustments.
- Their eligibility changes.

When you need to reevaluate absence table time off entries for more than 10,000 workers, Workday recommends that:

- You split the workers or organizations evenly across multiple runs.
- Each run doesn't exceed 10,000 workers.

This table indicates performance testing metrics for reevaluation of absence table time off entries for 10,000 workers.

Time Off Plan Complexity	Example	Average Execution Time
High	A time off plan with a rolling period accrual of 10 days sick leave per year. Workday looks back to each day in the	07:03:28

Time Off Plan Complexity	Example	Average Execution Time
	12-month period for expired accruals and restores them to the employee's balance.	
Low	A time off plan with no rolling accruals and eligibility rules on the time off plan.	01:43:00

Note: Workday recommends that you use the Reevaluate Absence Table Time Off Entries task to reevaluate time off events. Workday will no longer maintain the Reevaluate Time Off Events task going forward.

Steps

1. Access the Reevaluate Absence Table Time Off Entries task.

   For optimal performance, we recommend that you:

   - Avoid running this task on Fridays due to the Workday Scheduled Maintenance window.
   - Allow the current reevaluation to complete before running the task again.
2. Select either:

   - *Workers*
   - *Organizations*
3. Select 1 or more workers or organizations and the absence table that you want to reevaluate.

   Note: This task only processes time off entries for members of the organizations that you select from the Organizations prompt and doesn't include entries for members of subordinate organizations.
4. (Optional) Select an As Of date from which to reevaluate absence table time off entries.

   Workday reevaluates as of the earliest time off entry date that's on or after the As Of date. When left blank, Workday reevaluates as of the current date.

   Note: If a worker has a termination date in the middle of an absence that's already approved, the time off entries after the termination date need to be removed before the reevaluation can take effect. You can remove a time off entry by correcting the daily or hourly quantity to zero.

Result

Workday generates a notification when the Reevaluate Absence Table Time Off Entries task completes.

Concept: Absence Tiers

When a worker requests time off that spans multiple time off plans, you can group the request into tiers of an absence table. Workday recommends absence tiers if you:

- Use multiple time off plans to manage 1 type of absence.

- Have time off plans that workers can use only when they exhaust the balance of another time off plan.
- Use separate time off plans for different rates of pay.

You can add a tier for each time off plan (tier plan) and a unique time off. You also prioritize the time off tier. In a time off request, the worker can select any absence table name with a tier plan that they're eligible for. As the worker reports time off, Workday assesses their time off plan eligibility and balances to determine which tier plan to draw from.

Example: Your company provides these sickness entitlements to French workers:

Tier	Days	Entitlement
1	1-10	100% of salary rate.
2	11-20	50% of salary rate.
3	Additional days	Zero % of salary rate.

You create time off plans for each entitlement and add them to an absence table with 3 tiers using the Create Absence Table task. Workday applies the appropriate plan to worker sick time requests based on priority and the worker's available time in each plan.

You can see if a time off request uses an absence table on the Review Time Off Request task in their inbox. They can drill down into the amount requested to see which tier plan balance Workday deducts from. You can see if a time off plan is attached to an absence table in the time off plan Usage field.

Time Off Validations for an Absence Table

Workday uses these validations for absence table events:

Validation	Description
Consecutive Day Maximum	The maximum number of consecutive days a worker can take time off.
Increments	The increments for entering time off.
Maximum	If the worker isn't eligible for Tier 1, the Maximum value from Tier 1 still applies for the request against the absence table. This validation is a data entry that is the maximum number of units you can request against an object. Example: You can request a maximum of 8 hours per day. This applies for any request against the absence table.
Maximum Unpaid Time Off Units Allowed	Workday uses this validation to know when to jump to the next tier. Note: Set the Time Off Plan Lower Limit so that Workday knows at what point to jump to the next tier.
Minimum	The minimum amount of time a worker can request.

Absence Table Configuration Details

Absence tables must have:

- Consistent Units across tiers.
- Unique time offs within the table.

- A unique priority for each tier.
- No active Reasons for time offs.
- No intermittent time offs.

Unsupported Time Off Plan Configurations

For time off plans linked to an absence table, Workday doesn't support:

- Changes to Unit of Time.
- Deletion of time offs linked to the absence table.
- Time off reasons.
- Adjustments and overrides for time offs and accruals.

Unsupported Time Off Validations (Suppressed for Processing)

Workday supports these validations at the time off level only. You can't specify these validations on absence tables:

- *Consecutive Day Minimum*
- *Multiple Time Off Requests Not Allowed for Same Date*
- *Time Off Date before Maximum Override Balance Date Not Allowed*

Processing a Time Off Request Against an Absence Table

Workday processes a worker's time off requests against an absence table by cascading through its tiers in priority order, based on:

- Available balance.
- Days to include.
- Eligibility.

For each day in a time off request against the absence table, Workday checks these criteria against each tier time off plan to account for changes that occur during the specified period. Example: You make an effective-dated change to a time off plan configuration, or the worker becomes eligible for a new time off plan and its corresponding accruals.

For time off requests against an absence table:

- The Include All Selected Days check box doesn't display.
- Workday automatically treats the *Restrict Request to Days to Include on Calendar* validation as *True* on all tiers.
- Workday respects Days to Include across tiers.

Reports

You can use the Absence Tier Time Off Entry Details report that displays all absence table events for an organization within a specified date range.

The Type column displays 1 of these absence table names selected in a time off request:

- My Time Off/Time Off Requests
- Time Off and Leave Requests
- Previous Time Off Requests

Manage Absence

For absences on the calendar, Workday:

- Automatically calculates the Default Daily Quantity from the first tier.

- Restricts the request to days to include on the calendar for the entire absence table. Example: A worker selects Friday and Saturday, but the absence table uses Monday - Friday. Workday doesn't display Saturday for Quantities per Day.

Absence Tiers Reevaluation

You can enable automatic identification and correction of absence table events based on the input of new, or correction of existing, absence events. The completion of any of these business processes triggers the reevaluation job:

- *Enter Absence*
- *Request Absence*
- *Enter Time Off*
- *Request Time Off*
- *Correct Time Off*

Reevaluation doesn't occur upon entry or amendment of any time off, accrual adjustments, or overrides.

If the events require corrections, the chronological order of absence table events then uses time offs in the prioritized order per absence table tiers.

Example: Betty Liu has a 10-day sickness event against the absence table in February. This event uses the first tier of the absence table, paying Betty 100% of her salary. Betty retroactively enters another sickness event for 10 days in January. The reevaluation job runs to correct the events so that the earlier event uses the absence table tier with the higher priority, in this case, the first tier. The second event uses the second tier, paying Betty 50% of her salary for the February sickness. Both events correct automatically to follow the tier priorities in absence events chronologically.

Select the Enable Reevaluation check box on these tasks to enable reevaluation:

- Create Absence Table
- Edit Absence Table

The Absence Tier Time Off Entry Details report displays reevaluated events with links back to the triggering events.

Conditional Cascading

Concept: Absence Tables Conditional Cascading

When workers request time off that spans multiple time off plans, you can group the request into tiers of an absence table. Each tier comprises a different time off plan, but all tiers manage the same type of absence. You can configure conditional cascading on absence tables to allocate a quantity of time off units per tier based on absence occurrences. This feature helps you to support regulatory requirements such as waiting periods for time off due to sickness. Example: You set up a waiting period tier to delay payment until employees use a certain number of time off units at the beginning of each new absence occurrence.

Allocating units to tiers based on absence occurrences:

- Removes balance period restrictions.
- Reduces the need for manual adjustments and time off data corrections.

To use this feature, you must:

- Enable quantity per occurrence on absence table tiers on the Edit Tenant Setup - HCM task.
- Configure absence occurrences, selecting the Enable for Absence Occurrences check box beside each absence table that applies.

  Note: This feature doesn't apply to absence tables that are part of a custom type.

You can use the Quantity per Occurrence value on tiers to configure a numeric calculation that:

- Determines when to cascade to the next tier.

- Overrides any Maximum Unpaid Time Off Units Allowed validations and available time off plan balance on individual tiers.

You can enter an amount, or select conditional calculations based on the number of absence occurrences:

- In the current balance period.
- Starting in the current balance period.
- Starting in the prior 12 months.

The Quantity per Occurrence value on a tier takes precedence over the available balance for the tier. Workday doesn't apply:

- Maximum Unpaid Time Off Units Allowed validation on tiers that have a Quantity per Occurrence value.
- Quantity per Occurrence values when you disable occurrences for an absence table.

Reevaluation

Workday reevaluates absence table tiers and quantity-per-occurrence values when corrected or revised time off requests either:

- Join with existing entries into an absence occurrence.
- Split occurrences.

Revaluation can affect how Workday splits time off units for existing entries against absence tables with Quantity per Occurrence values. When a scheduled job recalculates flagged absence occurrences, Workday reevaluates the absence table for impacted time off entries.

You can configure Workday to automatically reevaluate absence tables by selecting the Enable Reevaluation check box on 1 of these tasks:

- Create Absence Table
- Edit Absence Table

Workday doesn't run absence table reevaluation on absence table entries when:

- The table is part of a custom occurrence type.
- You trigger the recalculate absence occurrences job using either the Configure Absence Occurrences or Recalculate Absence Occurrences task.

Reports

When workers access these reports and time off entry options, Workday supports balance-splitting time off units between absence table tiers, based on Quantity per Occurrence values:

- Correct Absence
- Correct My Time Off (Mobile)
- Correct Time Off
- Enter Absence
- Enter Time
- Enter Time by Week
- Enter Time Off
- High-Volume Time Entry
- Request Absence
- Request Time Off
- Revise Time Off
- Revise Time Off Correction
- Time Off (Mobile)

You can view quantity-per-occurrence values for individual tiers on the All Absence Tables report. Workday displays the Absence Table Tier Quantity per Occurrence column:

- Only when there's a tier with a calculation in this field.
- Regardless of the Enable Quantity per Occurrence on Absence Table Tiers tenant setting.

When workers correct, enter, request, or revise time off against an absence table, Workday:

- Uses all of the quantity-per-occurrence value on a tier before using any balance from the next tier.
- Displays the number of units for each tier on the Absence Tier Time Off Entry Details report.

When workers exhaust their balance midway through a request for a day, Workday splits the balance over the quantity per occurrence and the next available tier. Example: *Tier A* has a Quantity per Occurrence value of 4 hours. When a worker requests 8 hours for a specific day against an absence table, Workday splits the balance and allocates 4 hours to *Tier A* and 4 hours against the next available tier.

Conditional Cascading Examples

Example: Count Absence Occurrences Starting in the Current Balance Period

This example illustrates how to create a calculation for a quantity-per-occurrence value on an absence table tier. The calculation counts absence occurrences that start in the current balance period and match the absence table type. Workday uses the result to determine the quantity of time off units to allocate to the tier.

Context

Global Modern Services applies different waiting periods to paid sick time off plans depending on the country. Their *USA Sick Time Off* absence table configuration includes a waiting period tier called *Waiting Period Plan 1*. Workday uses the Quantity per Occurrence value to allocate time off units to the waiting period tier for each request. Each tier in the absence table includes an hours-based plan. You create the time offs, time off plans, and *USA Sick Time Off* absence table:

Priority	Absence Tier Plan	Time Off Plan Balance	Time Off Plan Balance Lower Limit	Time Off Name	Maximum Unpaid Time Off Units Allowed	Days to Include	Accrual per Period
1	*Waiting Period Plan 1*	*0*	*0*	*Time Off A*	*None*	*Workdays (Non-Holiday)*	*0*
2	*Time Off Plan 2*	*4*	*0*	*Time Off B*	*0*	*Workdays (Non-Holiday)*	*4*
3	*Time Off Plan 3*	*4*	*0*	*Time Off C*	*None*	*Workdays (Non-Holiday)*	*0*

You're preparing to configure the Quantity per Occurrence value. You want to create a conditional calculation that allocates time off units based on the results of value comparison calculations. If the count is:

- *1*, the quantity is *3*.
- *2*, the quantity is *4*.
- Greater than or equal to *3*, the quantity is *5*.

Otherwise, the quantity is zero. Each of these calculations uses the Count of Absence Occurrences Starting in Current Balance Period instance value calculation (IVC).

Prerequisites

Create the absence table, leaving the Quantity per Occurrence fields empty.

Create and assign calendars.

Set up absence occurrences.

Enable quantity per occurrence on absence table tiers on the Edit Tenant Setup - HCM task.

Security:

- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.
- These domains in the Time Off and Leave functional area:
    - *Set Up: Time Off (Calculations - Absence Specific)*
    - *Set Up: Time Off (Calculations - Generic)*
    - *Worker Data: Time Off (Time Off)*
    - *Worker Data: Time Off (Time Off Manager View)*

Steps

1. Create the value comparison calculations.
    a) Access the Create Value Comparison Calculation task and enter:

Field	Value
Name	*If count = 1 starting in current balance period*
Category	*Absence*
Comment	*True if the count of absence occurrences for the absence type in the current balance period is equal to 1.*
1st Operand	*Count of Absence Occurrences Starting in Current Balance Period*
Operator	*equal to*
2nd Operand	*1*

    b) Click OK and Done.
    c) Access the Create Value Comparison Calculation task and enter:

Field	Value
Name	*If count = 2 starting in current balance period*
Category	*Absence*

Field	Value
Comment	*True if the count of absence occurrences for the absence type starting in the current balance period is equal to 2.*
1st Operand	*Count of Absence Occurrences Starting in Current Balance Period*
Operator	*equal to*
2nd Operand	*2*

d) Click OK and Done.

e) Access the Create Value Comparison Calculation task and enter:

Field	Value
Name	*If count >= 3 starting in current balance period*
Category	*Absence*
Comment	*True if the count of absence occurrences for the absence type starting in the current balance period is greater than or equal to 3.*
1st Operand	*Count of Absence Occurrences Starting in Current Balance Period*
Operator	*greater than or equal to*
2nd Operand	*3*

f) Click OK and Done.

2. Create a conditional calculation for the Quantity per Occurrence value for a time off type starting in the current balance period.
   a) Access the Create Conditional Calculation task and enter:

Field	Value
Name	*Quantity Based on Count Starting in Current Balance Period*
Category	*Absence*
Comment	*If count = 1 then 3* *If count = 2 then 4* *If count >= 3 then 5* *Else 0*
Default Response	*0*

   b) Add these rows to the Calculation:

Order	Condition	Result
a	*If count = 1 starting in current balance period*	*3*
b	*If count = 2 starting in current balance period*	*4*

Order	Condition	Result
c	*If count >= 3 starting in current balance period*	*5*

c) Click OK and Done.

3. Add the calculation to the absence table tier.
   a) Access the Edit Absence Table task and select the *USA Sick Time Off* absence table.
   b) In the Quantity per Occurrence column for the *Waiting Period Plan 1* absence tier plan, select *Quantity Based on Count Starting in Current Balance Period*.
   c) Click OK and Done.

Result

You can access the:

- View Absence Occurrences Summary report to find out how many occurrences workers have that start within the period for which they're requesting time off.
- Absence Tier Time Off Entry Details report to review how Workday splits the units by absence table tier, based on the quantity-per-occurrence calculation.

Tier Allocation

Seth requests 5 hours time off on Tuesday (2021-01-12), using the *USA Sick Time Off* absence table. Alison, Seth's manager, accesses the:

- View Absence Occurrences Summary report after approving the request. She can see that Seth currently only has 1 absence occurrence.
- Absence Tier Time Off Entry Details report. She can see that for Seth's time off request, Workday allocates 3 hours to the tier time off for the waiting period (*Time Off A*) and 2 hours to *Time Off B*.

Seth then retroactively requests 5 hours of time off for both Thursday (2020-12-31) and Monday (2021-01-04). Workday treats it as a single occurrence starting in the previous balance period. As the IVC only applies to the current balance period, Workday allocates:

- 3 hours to *Time Off A* and 2 hours to *Time Off B* for Thursday.
- 2 hours to *Time Off B* and 3 hours to *Time Off C* for Monday.

Seth also requests 5 hours time off on Wednesday (2021-01-13), using *USA Sick Time Off*. Workday displays an error message that prevents Seth completing the request due to an insufficient balance.

Seth discards the request and instead requests 5 hours time off on Thursday (2021-01-14). There's now a day between the requests, so Workday separates the occurrence allocating 4 hours to *Time Off A* and 1 hour to *Time Off C*.

Alison reminds Seth to log a request of 5 hours for time off taken on the previous Friday (2021-01-08).

After Workday runs a reevaluation job, the time off request on Friday becomes the first occurrence based on the IVC. Workday reevaluates the time off units for the requests and allocates for Friday (2021-01-08):

- 3 hours to *Time Off A*
- 2 hours to *Time Off B*.

As part of a correction event for the 5-hour request on Tuesday (2021-01-12), Workday:

- Adds 1 hour to *Time Off A* because Tuesday becomes the 2nd occurrence. The original allocation value changes from 3 to 4.
- Allocates the remaining 1 hour for the request to *Time Off C*.
- Deducts 2 hours from *Time Off B* as the request for Friday exceeds the tier balance of 4.

As part of a correction event for Thursday (2021-01-14), Workday:

- Allocates 1 hour to *Time Off A* as Thursday becomes the 3rd occurrence. The original allocation value changes from 4 to 5.
- Deducts 1 hour from *Time Off C*.

Example: Count Absence Occurrences Starting in the Prior 12 Months

This example illustrates how to create a calculation for a quantity-per-occurrence value on an absence table tier. The calculation counts the absence occurrences that start within the 12 months before the start date of the current occurrence. Workday counts occurrences up to, but excluding, the current occurrence. Workday only counts occurrence types that match the absence table in context.

Context

Global Modern Services applies different waiting periods to paid sick time off plans depending on the country. Their *UK Sick Time Off* absence table configuration includes a waiting period tier called *Waiting Period Plan 4*. Workday uses the Quantity per Occurrence value to allocate time off units to the waiting period tier for each request. The quantity depends on the number of absence occurrences. Each tier in the absence table includes an hours-based plan. You create the time offs, time off plans, and *UK Sick Time Off* absence table:

Priority	Absence Tier Plan	Time Off Plan Balance	Time Off Plan Balance Lower Limit	Time Off Name	Maximum Unpaid Time Off Units Allowed	Days to Include	Accrual per Period
1	*Waiting Period Plan 4*	*0*	*0*	*Time Off D*	*None*	*Workdays (Non-Holiday)*	*0*
2	*Time Off Plan 5*	*4*	*0*	*Time Off E*	*0*	*Workdays (Non-Holiday)*	*4*
3	*Time Off Plan 6*	*4*	*0*	*Time Off F*	*None*	*Workdays (Non-Holiday)*	*0*

You're preparing to configure the Quantity per Occurrence value. You want to create a conditional calculation that allocates time off units, based on the results of value comparison calculations. If the count is:

- *1*, the quantity is *1*.
- *2*, the quantity is *3*.
- Greater than or equal to *3*, the quantity is *4*.

Otherwise, the quantity is zero. Each of these calculations uses the Count of Absence Occurrences Starting in Prior 12 Months instance value calculation (IVC).

Prerequisites

Create the absence table, leaving the Quantity per Occurrence fields empty.

Create and assign calendars.

Set up absence occurrences.

Security:

- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.
- These domains in the Time Off and Leave functional area:
  - *Set Up: Time Off (Calculations - Absence Specific)*
  - *Set Up: Time Off (Calculations - Generic)*
  - *Worker Data: Time Off (Time Off)*
  - *Worker Data: Time Off (Time Off Manager View)*

Steps

1. Create the value comparison calculations.
   a) Access the Create Value Comparison Calculation task and enter:

Field	Value
Name	*If count = 1 starting in prior 12 months*
Category	*Absence*
Comment	*True if the count of absence occurrences for the absence type starting in the prior 12 months is equal to 1.*
1st Operand	*Count of Absence Occurrences Starting in Prior 12 Months*
Operator	*equal to*
2nd Operand	*1*

   b) Click OK and Done.
   c) Access the Create Value Comparison Calculation task and enter:

Field	Value
Name	*If count = 2 starting in prior 12 months*
Category	*Absence*
Comment	*True if the count of absence occurrences for the absence type starting in the prior 12 months is equal to 2.*
1st Operand	*Count of Absence Occurrences Starting in Prior 12 Months*
Operator	*equal to*

Field	Value
2nd Operand	*2*

d) Click OK and Done.
e) Access the Create Value Comparison Calculation task and enter:

Field	Value
Name	*If count >=3 starting in prior 12 months*
Category	*Absence*
Comment	*True if the count of absence occurrences for the absence type starting in the prior 12 months is greater than or equal to 3.*
1st Operand	*Count of Absence Occurrences Starting in Prior 12 Months*
Operator	*greater than or equal to*
2nd Operand	*3*

f) Click OK and Done.

2. Create a conditional calculation for the Quantity per Occurrence value for a time off type starting in the prior 12 months.
   a) Access the Create Conditional Calculation task and enter:

Field	Value
Name	*Quantity Based on Count Starting in Prior 12 Months*
Category	*Absence*
Comment	*If count = 1 then 1* *If count = 2 then 3* *If count >= 3 then 4* *Else 0*
Default Response	*0*

   b) Add these rows to the Calculation:

Order	Condition	Result
a	*If count = 1 starting in prior 12 months*	*1*
b	*If count = 2 starting in prior 12 months*	*3*
c	*If count >=3 starting in prior 12 months*	*4*

   c) Click OK and Done.

3. Add the calculation to the absence table tier.
    a) Access the Edit Absence Table task and select the *UK Sick Time Off* absence table.
    b) In the Quantity per Occurrence column for the *Waiting Period Plan 4* absence tier plan, select *Quantity Based on Count Starting in Prior 12 Months*.
    c) Click OK and Done.

Result

You can access the:

- View Absence Occurrences Summary report to find out how many occurrences workers have that start within 12 months before a worker's time off request.
- Absence Tier Time Off Entry Details report to review how Workday splits the units by absence table tier, based on the quantity-per-occurrence calculation.

Tier Allocation

Seth makes a single time off request for 2 separate dates using the *UK Sick Time Off* absence table for 5 hours each on:

- Friday (2021-01-29)
- Monday (2022-02-14

The Count of Absence Occurrences Starting in Prior 12 Months IVC returns *0* because:

- The dates are over a year apart.
- Seth doesn't have any other absence occurrences during this time.
- Workday doesn't include the current occurrence.

Workday allocates:

- 4 hours to the second tier (*Time Off E*) and 1 hour to the third tier (*Time Off F*) for 2021-01-29.
- 5 hours to *Time Off E* for 2022-02-14.

Seth makes another 2 requests for time off for 5 hours each on:

- Friday (2021-02-19)
- Monday (2022-01-31)

Alison, Seth's manager, accesses the:

- View Absence Occurrences Summary report to see that Seth now has absence occurrences starting in the prior 12 months.
- Absence Tier Time Off Entry Details report to see that for Seth's time off request on 2021-02-19, the waiting period applies because the Count of Absence Occurrences Starting in Prior 12 Months IVC returns *1*, excluding the current occurrence. Workday allocates:
    - 1 hour to the waiting period tier (*Time Off D*), overriding the zero balance.
    - 4 hours to *Time Off E*.

The waiting period also applies for the time off request on 2022-01-31. Workday allocates:

- 1 hour to *Time Off D*.
- 3 hours to *Time Off E*.
- 1 hour to *Time Off F*, after depleting the balance of *Time Off E*.

Example: Count Absence Occurrences in the Current Balance Period

This example illustrates how to create a calculation for a quantity-per-occurrence value on an absence table tier. The calculation counts the absence occurrences that fall within or span the balance period for the time off plan as of the occurrence start date. The calculation determines the quantity based on that number.

Context

Global Modern Services applies different waiting periods to paid sick time off plans depending on the country. Their *Ireland Sick Time Off* absence table configuration includes a waiting period tier called *Waiting Period Plan 7*. Workday uses the Quantity per Occurrence value to allocate time off units to the waiting period tier for each request. The quantity depends on the number of absence occurrences in the current balance period. Each tier in the absence table includes an hours-based plan. You create the time offs, time off plans, and *Ireland Sick Time Off* absence table:

Priority	Absence Tier Plan	Time Off Plan Balance	Time Off Plan Balance Lower Limit	Time Off Name	Maximum Unpaid Time Off Units Allowed	Days to Include	Accrual per Period
1	*Waiting Period Plan 7*	*0*	*0*	*Time Off G*	*None*	*Workdays (Non-Holiday)*	*0*
2	*Time Off Plan 8*	*4*	*0*	*Time Off H*	*0*	*Workdays (Non-Holiday)*	*4*
3	*Time Off Plan 9*	*4*	*0*	*Time Off I*	*None*	*Workdays (Non-Holiday)*	*0*

You're preparing to configure the Quantity per Occurrence value. You want to create a conditional calculation that allocates time off units based on the results of value comparison calculations. If the count is:

- *1*, the quantity is *0*.
- *2*, the quantity is *2*.
- Greater than or equal to *3*, the quantity is *3*.

Otherwise, the quantity is zero. Each of these calculations uses the Count of Absence Occurrences in Current Balance Period instance value calculation (IVC).

Prerequisites

Create the absence table, leaving the Quantity per Occurrence fields empty.

Create and assign calendars.

Set up absence occurrences.

Security:

- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.
- These domains in the Time Off and Leave functional area:
  - *Set Up: Time Off (Calculations - Absence Specific)*
  - *Set Up: Time Off (Calculations - Generic)*
  - *Worker Data: Time Off (Time Off)*
  - *Worker Data: Time Off (Time Off Manager View)*

Steps

1. Create the value comparison calculations.
   a) Access the Create Value Comparison Calculation task and enter:

Field	Value
Name	*If count = 1 in current balance period*
Category	*Absence*
Comment	*True if the count of absence occurrences for the time off type in the current balance period is equal to 1.*
1st Operand	*Count of Absence Occurrences in Current Balance Period*
Operator	*equal to*
2nd Operand	*1*

   b) Click OK and Done.
   c) Access the Create Value Comparison Calculation task and enter:

Field	Value
Name	*If count = 2 in current balance period*
Category	*Absence*
Comment	*True if the count of absence occurrences for the time off type in the current balance period is equal to 2.*
1st Operand	*Count of Absence Occurrences in Current Balance Period*
Operator	*equal to*
2nd Operand	*2*

   d) Click OK and Done.
   e) Access the Create Value Comparison Calculation task and enter:

Field	Value
Name	*If count >= 3 in current balance period*
Category	*Absence*
Comment	*True if the count of absence occurrences for the time off type in the current balance period is greater than or equal to 3.*
1st Operand	*Count of Absence Occurrences in Current Balance Period*
Operator	*greater than or equal to*
2nd Operand	*3*

   f) Click OK and Done.

2. Create a conditional calculation for the Quantity per Occurrence value for a time off type in the current balance period.
    a) Access the Create Conditional Calculation task and enter:

Field	Value
Name	*Quantity Based on Count in Current Balance Period*
Category	*Absence*
Comment	*If count = 1 then 0* *If count = 2 then 2* *If count >= 3 then 3* *Else 0*
Default Response	*0*

    b) Add these rows to the Calculation:

Order	Condition	Result
a	*If count = 1 in current balance period*	*0*
b	*If count = 2 in current balance period*	*2*
c	*If count >= 3 in current balance period*	*3*

    c) Click OK and Done.
3. Add the calculation to the absence table tier.
    a) Access the Edit Absence Table task and select the *Ireland Sick Time Off* absence table.
    b) In the Quantity per Occurrence column for the *Waiting Period Plan 7* absence tier plan, select *Quantity Based on Count in Current Balance Period*.
    c) Click OK and Done.

Result

You can access the:

- View Absence Occurrences Summary report to find out how many occurrences workers have that start or end within the period, span the period, or start and end within the period.
- Absence Tier Time Off Entry Details report to review how Workday splits units by absence table tier when workers request time off.

Tier Allocation

Jamie requests 5 hours time off on Tuesday (2021-02-11) using the *Ireland Sick Time Off* absence table. Alex, Jamie's manager, accesses the:

- View Absence Occurrences Summary report. Alex can see that Jamie has 1 absence occurrence for Wednesday (2021-01-13), starting in the current balance period. Jamie has another 3-day occurrence from Wednesday (2020-12-30) to Monday (2021-01-04), starting before and continuing into the period. Because the time off occurs at either side of a weekend and bank holiday, Workday joins the days into a single occurrence.
- Absence Tier Time Off Entry Details report. Because the Count of Absence Occurrences in Current Balance returns *3*, Alex can see that for Jamie's time off request on 2021-02-11, a waiting period applies.

Workday allocates:

- 3 hours to the first tier (*Time Off G*).
- 2 hours to the second tier (*Time Off H*).

Example: Allocate an Amount of Time Off Units for Each New Absence Occurrence

This example illustrates how to specify a quantity-per-occurrence value on an absence table tier to allocate the same amount of time off units for each new absence occurrence.

Context

Global Modern Services applies different waiting periods to paid sick time off plans depending on the country. Their *Spain Sick Time Off* absence table configuration includes a waiting period tier called *Waiting Period Plan 10*. Workday uses a static Quantity per Occurrence value to allocate time off units to the waiting period tier for the absence occurrences associated with the request. Each tier in the absence table includes a days-based plan. You create the time offs, time off plans, and *Spain Sick Time Off* absence table:

Priority	Absence Tier Plan	Time Off Plan Balance	Time Off Plan Balance Lower Limit	Time Off Name	Maximum Unpaid Time Off Units Allowed	Days to Include	Accrual per Period
1	*Waiting Period Plan 10*	*0*	*0*	*Time Off J*	*None*	*Workdays (Non-Holiday)*	*0*
2	*Time Off Plan 11*	*4*	*0*	*Time Off K*	*0*	*Workdays (Non-Holiday)*	*4*
3	*Time Off Plan 12*	*4*	*0*	*Time Off L*	*None*	*Workdays (Non-Holiday)*	*0*

Prerequisites

Create the absence table, leaving the Quantity per Occurrence fields empty.

Set up absence occurrences.

Security:

- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.
- These domains in the Time Off and Leave functional area:
  - *Set Up: Time Off (Calculations - Absence Specific)*
  - *Set Up: Time Off (Calculations - Generic)*
  - *Worker Data: Time Off (Time Off)*
  - *Worker Data: Time Off (Time Off Manager View)*

Steps

1. Access the Edit Absence Table task and select the *Spain Sick Time Off* absence table.
2. In the Quantity per Occurrence column for the *Waiting Period Plan 10* absence tier plan, enter *3*.
3. Click OK and Done.

Result

You can access the Absence Tier Time Off Entry Details report to review how Workday splits the units by absence table tier, based on the Quantity per Occurrence static value.

Tier Allocation

Sarah requests time off for these 10 days in a single time off request:

- Wednesday - Friday (2022-09-07 to 2022-09-09).
- Monday-Friday (2022-09-12 to 2022-09-16)
- Monday-Tuesday (2022-09-19 to 2022-09-20)

Workday treats the groups of days as 1 occurrence because the Days to Include value is *Workdays (Non-Holiday)* and Sarah doesn't select weekends.

Workday allocates:

- 3 days to the first tier (*Time Off J*).
- 7 days to the second tier (*Time Off K*).

Maintain Related Absence Occurrences

Prerequisites

- Enable Quantity per Occurrence on absence table tiers. See Reference: Edit Tenant Setup - HCM.
- Create or edit absence tables for each absence table type that workers can select when requesting time off. Select a numeric constant value calculation for the Quantity per Occurrence value on an absence table tier to configure a waiting period that allocates a quantity of time off units per absence occurrence. Don't add a *Maximum Unpaid Time Off Units Allowed* validation on any tier. Workday doesn't support this validation for related absence occurrences.
- Enable absence tables for occurrences. See Configure Absence Occurrences.
- Security: *Worker Data: Related Absence Occurrences* domain in the Time Off and Leave functional area.

Context

In several European countries, statutory sick leave gives workers an entitlement for each occurrence of sickness. However, if a doctor determines that new periods of sickness are related to previous ones, all related sicknesses share the same entitlement.

When workers are sick and entitled to receive sick payments for time off, organizations sometimes apply an unpaid waiting period at the start of the sickness that only applies for that specific occurrence. If a worker's sickness is related to a previous sickness, Workday applies the same waiting period to the second occurrence, as Workday treats it as a continuation of the first one. The worker only starts receiving sick payments when an occurrence or related occurrence exhausts the waiting period quantity. Example: You have a 3-day unpaid waiting period and you enter 5 days time off for sickness from August 7 to August 11. The remaining 2 days are paid. If you have a subsequent occurrence from the August 21 to August 25, the first 3 days are unpaid and the next 2 days are paid if the occurrences are unrelated.

You can relate absence occurrences by linking them within a group. This changes the tier allocation behavior because the waiting period applies to the combined occurrences. Workday calculates the tier splitting automatically based on the links in the group.

Steps

1. Access the Maintain Related Absence Occurrences task.
2. As you complete the task, consider:

Option	Description
Workers	Select workers that have absence occurrences that you want to relate.

Option	Description
Start Date	Select a start date to filter groups based on a specific start date.
End Date	Select an end date to filter groups based on a specific end date.

3. Click OK.

   Note: If the workers that you select don't already have groups created, Workday displays an empty grid. Otherwise, Workday enables you to edit the groups and create new ones.
4. To relate absence occurrences for a worker, link them within a group:
   a) Add a row and select a worker.
   b) In the Links in Group columns, add a row for each related absence occurrence and select an occurrence from the Absence Occurrence for Worker prompt. Workday displays the date range of the occurrence and the name of the absence table related to the time off.
   c) Select link start and end dates to group entire or partial date ranges from an absence occurrence.
5. Click OK.

   Note: Workday filters groups based on the criteria in the initial pop-up window. If you add new groups for other workers or different start and end dates, Workday saves the groups but hides them when you click OK. You can view the new groups when you access the task again and select matching criteria.

Result

Workday runs an absence table reevaluation job automatically and reapplies the Quantity per Occurrence value across the related absence occurrences, treating them as a single occurrence in terms of tier splitting.

Access the Absence Tier Time Off Entry Details report to view how Workday allocates time off units to absence table tiers for each time off entry in the related absence occurrences. The Automatic Time Off Correction Event column indicates corrections to the tier allocation when the links that you add in the Maintain Related Absence Occurrences task impact tier allocation and units cascade to the next tier.

Linking doesn't change the number of absence occurrences for reporting purposes, but Workday treats them as one in terms of tier splitting and allocating time off units. These reports continue to display the related absence occurrences separately:

- View Absence Occurrences Detail
- View Absence Occurrences Summary

Example Steps: Group Related Absence Occurrences

Context

This example illustrates how to group multiple absence occurrences so that Workday treats them as a single occurrence in terms of quantity-per-occurrence tier allocation.

In Global Modern Services (GMS), when workers request time off due to illness, the company applies an unpaid waiting period of 3 days to each period of illness. However, when a new period of illness is related to a previous one, the waiting period applies to both.

Steps

1. Create an absence table to enable workers to enter time off due to illness and apply a waiting period.

   See Example: Create an Absence Table That Applies a Waiting Period.

2. Enable the absence table for absence occurrences so that Workday can calculate absence occurrences for the absence type.

   See Example: Enable an Absence Table for Absence Occurrences.
3. As a manager, sign into Workday and enter time off for your test user. Example: Sign in to Workday as Steve Morgan and enter time off for Logan McNeil.

   In 2020, Logan has these time off entries against an absence table for short-term sickness called *GMS Sick Days*:

   - May 21 to May 27
   - July 3 to July 5
   - September 3 to September 11
   - October 29
   - November 30 to December 4
   - December 16 to December 24
4. Access the View Absence Occurrences Detail report.

   Note that there are 6 separate absence occurrences, 1 for each period of absence, which is either a set of continuous days or a single day.
5. Access the Absence Tier Time Off Entry Details for Worker report.

   Note that for each new occurrence, Workday resets the entitlement and allocates the quantity-per-occurrence value of 3 units to the first tier, which is the waiting period tier, and then cascades to the next tier for the additional units.
6. Link several of the absence occurrences for Logan who has a reoccurring illness.

   See Example: Link Related Absence Occurrences Together report.
7. Access the Absence Tier Time Off Entry Details for Worker report.

   Note that this time Workday combines the related absence occurrences and applies the quantity-per-occurrence value to each combined occurrence.

Example: Create an Absence Table That Applies a Waiting Period

This example illustrates how to create an absence table to enable workers to enter time off due to illness and apply a waiting period.

Context

You'll create an absence table that:

- Combines 2 day-based time off plans under 1 absence type.
- Applies a waiting period by including a quantity-per-occurrence value that allocates time off units to the first tier for each absence occurrence.

Prerequisites

- Enable quantity per occurrence on absence table tiers in your tenant.
- Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Steps

1. Access the Create Absence Table task.

   Create the *GMS Sick Days* absence table to enable GMS workers or their managers to enter time off when they're sick.

   a) For Name, enter *GMS Sick Days*.
   b) On the Absence Table Tiers tab, add a row with a Priority of *1*.

2. From the Absence Tier Plan prompt, select Create Time Off Plan.
    a) Enter or select these values:

Field	Value
Name	*GMS Sick Days Tier 1 Waiting Period Plan*
Track Balance	Select the check box.
Balance Period	*YTD - Current Calendar Year (based on Period Start*
Period Schedule	*Monthly*
Unit of Time	*Days*
Balance Visibility	*Eligible in period (based on As of Date)*
Calendar Display	*Plan and Type*
Carryover Date	*First Period of Balance Period Start Date*
Limit	Zero
Accrual Frequency Method for Time Off Plan	*Start of Period*
Days to Include	*All Days*
Effective Date	*01/01/2020*

3. On the Accrual tab, add a row.
    a) From the Adds to Balance prompt, select Create Accrual.
    b) Enter or select these values and click OK:

Field	Value
Name	*GMS Sick Days Tier 1 Accrual*
Code	*gms-sick-days-tier1-accrual*
Calculation	Zero
Priority	*1*
Adjustments/Overrides Allowed	Select the check box.
Options	*None*

4. On the Time Off tab, add a row.
    a) From the Subtracts from Balance prompt, select Create Time Off.
    b) Enter these values:

Field	Value
Name	*GMS Sick Days Tier 1 Time Off*

Field	Value
Code	*gms-sick-days-tier1-timeoff*

c) From the Time Off Type prompt, select Create Time Off Type.
d) Enter these values and click OK:

Field	Value
Name	*GMS Sick Days Time Off*
Time Off Type ID	*gms-sick-days-timeoff*

e) Enter or select these values:

Field	Value
Priority	1
Adjustments Allowed	Select the check box.
Entry Option	*Enter through Time Off Only*

f) Click OK. Workday adds the new *GMS Sick Days Tier 1 Waiting Period Plan* and *GMS Sick Days Tier 1 Time Off* components to the Absence Tier Plan and Time Off prompts, respectively.

5. From the Quantity per Occurrence prompt, select By Category, Type > Common > Constant Value Calculation *3*.
6. On the Absence Table Tiers tab, add a second row with a Priority of *2*.
7. Repeat steps 2 through 4 for the next tier. This time, name the new time off plan, accrual, and time off components *GMS Sick Days Tier 2 Plan*, *GMS Sick Days Tier 2 Accrual*, and *GMS Sick Days Tier 2 Time Off*, respectively.
8. From the Time Off Type prompt, select the same *GMS Sick Days Time Off* type that you created earlier.
9. Click OK. Workday adds the new *GMS Sick Days Tier 2 Plan* and *GMS Sick Days Tier 2 Time Off* components to the Absence Tier Plan and Time Off prompts, respectively.
10. Click OK and Done.

Example: Enable an Absence Table for Absence Occurrences

This example illustrates how to enable an absence table for absence occurrences so that Workday can calculate absence occurrences for the absence type.

Context

You'll enable absence occurrences for an absence table that applies a waiting period when workers request time off against an absence type for sickness.

Prerequisites

- Example: Create an Absence Table That Applies a Waiting Period
- Security: These domains in the Time Off and Leave functional area:
  - *Set Up: Leave of Absence*
  - *Set Up: Time Off*

Steps

1. Access the Configure Absence Occurrences task.
2. In the Absence Tables grid, select the Enable for Absence Occurrences check box in the row that corresponds to the *GMS Sick Days* absence table.

3. Click OK.

Result

Next Steps

Example: Link Related Absence Occurrences Together

This example illustrates how to group multiple absence occurrences so that Workday treats them as a single occurrence in terms of quantity-per-occurrence tier allocation.

Context

You're an Absence administrator for GMS and you want to link 4 of the absence occurrences for Logan who has a reoccurring illness:

- May 21 to May 27
- September 3 to September 11
- October 29
- December 16 to December 24

Steps

1. Access the Maintain Related Absence Occurrences task and add a row.
2. From the Worker prompt, select *Logan McNeil*.
3. In the Links in Group section, add 4 rows.
4. Select these date values from the Absence Occurrence for Worker prompt:
    - *2020-05-21 - 2020-05-27. GMS Sick Days*
    - *2020-09-03 - 2020-09-11. GMS Sick Days*
    - *2020-10-29 - 2020-10-29. GMS Sick Days*
    - *2020-12-16 - 2020-12-24. GMS Sick Days*
5. Click OK and Done.

Accrual Adjustments and Overrides

Setup Considerations: Accrual Adjustments and Overrides

You can use this topic to make configuration decisions for accrual adjustments and overrides. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Accrual adjustments and overrides track, calculate, and adjust a worker's time off balance without the need for manual intervention.

Business Benefits

Accrual adjustments and overrides:

- Build onto existing accrual functionality as needed.
- Lower operational costs allocated to accrual adjustments.

Use Cases

- Use adjustments and overrides when workers change or lose their accrual eligibility due to a change in employment status or change in collective agreement assignment.
- Adjust a specific worker's accrual amount as part of their contract negotiations. This adjustment can require an override of the worker-based time off plan.
- Automatically adjust a front-loaded accrual for floating holidays when a worker converts from part time to full time.
- Transfer or pay out time off balances when workers become eligible for a different time off plan. Example: Workers move from a role with an hourly time off plan to 1 with a daily plan. Their existing balances, and future time off requests, transfer to the new time off plan. The units change from hours to days.
- You can reward workers with additional time off for a length of time. Workers can also negotiate additional accrual to front load at the beginning of a period.

Questions to Consider

Question	Considerations
Do your part-time and full-time employees accrue at different rates?	You might need to do an accrual adjustment when employees change from 1 type to the other, or when employees' collective agreement assignment changes.
When do you schedule your accruals?	If your workers accrue time off at the end of each month, configure your lower limit calculation to enable workers to use their accrual before they accrue it. Workers can book time off even if they haven't accrued the requisite number of units.
Are you adding the adjustment retroactively?	If yes, retroactive adjustments can impact a worker's time off balance. Example: You increase a worker's accrual in April and the adjustment can apply for the remainder of the calendar year.
Do you want to adjust workers' accruals when they become eligible for a new time off plan in the middle of a balance period?	On the time off plan, you can configure an accrual with options such as: • Adjustments or overrides allowed. • *Front-loaded* or *Based on As of Date* If you add the *Automated Accrual Adjustment* service step to the *Change Job*, *Assign Collective Agreement*, or *End Collective Agreement* business process, Workday adjusts the accrual for workers during the period if their accrual value changes. Changes are a result of a change job event when: • Workers gain or lose eligibility to the accrual itself. • Condition rules resolve differently. Example: A worker's time type or location changes. When accrual calculations evaluate differently for workers in the middle of a balance period, after a change job event, the service creates an

Question	Considerations
	automated accrual adjustment that reflects the transfer date.

Recommendations

- Configure accrue-as-you-go plans where time offs connect to Payroll Earnings and don't have a definable accrual calculation. Example: Workers generally accrue bereavement leave in an amount that matches their leave request rather than in weekly or monthly increments.
- Set Accrual - Adjustments / Overrides Allowed for plans that accrue.
- Don't set Accrual - Adjustments / Overrides Allowed for accrue-as-you-go plans.
- Check for impacts on future-dated time off requests.
- Rerun the Schedule Time Off Calculated Balance Process task when you add the adjustment retroactively. Example: Evaluate if a previously unpaid time off request requires payment.
- When overriding a worker's accrual and balance, ensure that you configure your balance override to include the accrual amount. Example: You want to override a worker's balance at the start of a period to zero. They also accrue 5 hours at the start of that period. Set the balance override to -5 hours, or use the Maintain Accrual and Time Off Adjustments Overrides task to set the accrual to zero.
- When you use the Maintain Accrual and Time Off Adjustments Overrides task to set an accrual override, specify an end date, where possible.
- When creating accruals, consider mid-year hires. Example: You can create different accruals for workers with hire dates on or before the balance-period start date, and new workers with hire dates during the year. This is important when you don't want new hires to receive automated accrual adjustments. Create:
    - A *Front-loaded* accrual with a calculation that doesn't include proration for the periods before new worker hire dates, but allows adjustments and overrides, and responds to the *Automated Accrual Adjustments* service. Example: Full year entitlement for the time off plan is 30 days. You use eligibility overrides to ensure that only workers with hire dates on or before the balance-period start date are eligible.
    - An accrual with a calculation that prorates the time off plan balance from the new hire's hire date to the end of the balance period. This ensures workers hired after the balance-period start date receive a reduced entitlement for the balance period. Select an Options value of *None* to prevent the *Automated Accrual Adjustment* service impacting the accrual for new hires. Use eligibility overrides to ensure that only workers with hire dates after the balance-period start date are eligible for the accrual. Example: New hires that join the organization half-way through the year receive half of the full year entitlement of 30 days, resulting in an accrued value of 15 days.
- When creating accruals for mid-year hires that should receive automated accrual adjustments for *Change Job*, *Assign Collective Agreement*, or *End Collective Agreement*, events within their first year, ensure that any conditions in the accrual calculation identify workers as mid-year hires and not just within the period they were hired. Example: Instead of using the delivered *Scheduling: Worker Hired Mid-Period* calculation, use a logic calculation such as *Worker: Current Calendar Year Hire Date (Not Terminated in Current Period)* for calendar-year balance periods and adjust as necessary for alternative balance periods. Taking this approach helps to avoid unexpected results in the automated adjustments for mid-year hires.

Requirements

Front-loaded accruals must use 1 of these schedules:

- Front-loaded or annual - first period of year (based on period end date). Automatic proration can insert accruals.
- Mid-period hire or termination.

- Annual period schedule.

Limitations

- You can't use front-loaded accruals or Based On as of Date accruals with position-based time off plans.
- Automatic accrual adjustments for front-loaded accruals can apply to workers with hire dates that occur after the start date of a period, but might lead to unexpected results. Example: The start of the period that the front-loaded accrual uses is January 1, worker's hire date is February 12. Automatic accrual adjustments apply if a worker changes jobs, using the *Change Job* business process, during the period. Example: If the worker changes jobs in August the accrual adjusts automatically based on their hire date in February.
- The *Automated Accrual Adjustment* service on the *Change Job*, *Assign Collective Agreement*, and *End Collective Agreement* business process creates adjustments for both position-based and worker-based time off plans. However, Workday doesn't display position references on the Automated Adjustments tab of the Maintain Accrual and Time Off Adjustments/Overrides task. Although the service creates automated accrual adjustments for positions, but not always for non-primary positions, Workday doesn't reflect the adjustments on the worker's balance.
- You can't edit or delete time off plan accrual adjustments and overrides for terminated workers. When you don't specify an end date for an accrual override, if you rehire the workers, their overrides remain. This can cause incorrect absence balance and payroll calculations, resulting in the need to rescind the hire and termination, if your business process allows.
- Automated accrual adjustments don't create adjustments that exceed the upper or lower limits for the time off plan.

Tenant Setup

No impact.

Security

Users with security enabled for the *Worker Data: Time Off (Adjustments and Overrides)* domain in the Time Off and Leave functional area can set up adjustments and overrides.

Business Processes

Workday recommends that you add the *Automated Accrual Adjustment* service step after the *Completion* step on the:

- *Change Job* business process
- *Assign Collective Agreement* business process
- *End Collective Agreement* business process

Reporting

Before you make an accrual adjustment or override, use the Time Off Balance report to review the time off plan balance for the relevant worker. This report displays their current annual leave allowance of 20 days. Example: You want to grant a worker 25 days annual leave. You create the adjustment of +5 days.

You can use the Accrual and Time Off Adjustments/Overrides report data source to create custom reports.

Integrations

The EIB based on the *Get Absence Inputs* web service enables you to extract multiple time off plan overrides from Workday.

You can use the *Put Absence Input* web service to override time off plan balances.

Connections and Touchpoints

Time off accrual adjustments impact any payroll calculations that reference the time offs. Example: Paid vacation and unpaid sick leave. You can time-limit retroactive time off accrual adjustments for Payroll or Time Tracking.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Other Impacts

Adjustments can impact:

- Carryover balance.
- Total accrual if the time off plan includes limits.

The Next Level: Absence Accruals

Manually Adjust or Override a Worker's Accrual

Prerequisites

- Review setup considerations for accrual adjustments and overrides.
- Enable the Adjustments/Overrides Allowed option.
- Security: *Worker Data: Time Off (Adjustments and Overrides)* domain in Time Off and Leave functional area.

Context

An accrual adjustment adds to or subtracts from the accrual units of a worker for a single processing period. By contrast, an override replaces the standard accrual calculation with the override units and can span more than 1 processing period. Before adjusting an accrual, review the worker's current time off plan balance on the Time Off Balance report.

- If the worker isn’t eligible for the accrual, Workday processes the adjustment only if you modify the accrual eligibility criteria. This rule doesn't apply to front-loaded or based-on-as-of-date accruals. You can only create adjustments for those accruals for which the worker is eligible.
- Workday applies override instructions before adjustments.

  Example: The standard accrual is 12 hours and you enter an override of 15 and an adjustment of 2. The employee accrues 17 hours.
- Accrual limits and the timing of accrual processing can reduce or eliminate an adjustment.
- If the accrual occurs more than once during the period, Workday applies the adjustment to each accrual.

This topic describes how you can manually adjust accruals in Workday. You can also use the *Put Absence Input* web service to adjust accruals.

Steps

1. Access the Maintain Accrual and Time Off Adjustments/Overrides task.
2. Select the Worker.

3. On the Adjustments tab, add a row for each adjustment.

   As you complete the task, consider:

Option	Description
Select Accrual/Time Off	Select the accrual or time off from the Eligible As Of Today or Not Eligible As Of Today prompts. Note: If you select an accrual the worker is ineligible for, modify the accrual eligibility criteria so that Workday can process the adjustment.
Units	Enter the number of units to add to the worker's standard accrual or enter a negative number to subtract from the standard accrual units.
Period	The period to adjust. Workday automatically displays periods associated with the time off plan that includes the accrual. To select a period for which the worker is ineligible for the accrual, select from the All Periods for Start Period folder.
Reference Date	Displays the first day of the period. Note: If an accrual expires, you can change the reference date to any date in the selected period and your accrual adjustment will be effective as of that date.
Position	Applies only if the accrual is associated with a position-based time off request.
Batch ID	You can link the adjustment to a batch ID created using the *Put Absence Input* web service. Batch IDs enable you to manage accrual adjustments and overrides for multiple workers at the same time. You can view adjustments and overrides in the Accrual and Time Off Adjustments/Overrides by Batch ID report. You can also delete previously loaded adjustments and overrides using the Delete Accrual and Time Off Adjustments/Overrides by Batch ID task and then reload them.

4. On the Automated Adjustments tab, add a row for each front-loaded or based-on-as-of-date accrual adjustment.

   As you complete the task, consider:

Option	Description
Units	Enter the number of units to add to the worker's standard accrual or enter a negative number to subtract from the standard accrual units.

Option	Description
Reference Date	Workday automatically populates the first day of the period.

5. (Optional) If you're adjusting an accrual that the worker or position isn't eligible for, modify the accrual eligibility.
    a) Access the Edit Time Off Plan task or the Edit Accrual task, depending on where you defined eligibility for the accrual.
    b) Add 1 or more of these calculations to the eligibility rules:
        - *Absence Input (Ongoing) Exists for the Job for Absence Component*
        - *Absence Input (Period-Specific) Exists for the Job for Absence Component*
        - *Absence Input Exists for the Job for Absence Component*

        These rules work for both worker-based and position-based time off plans.

        Add the calculation on a separate row.
6. (Optional) If you're overriding an accrual for the worker to occur in a period that's not the scheduled period for that accrual, modify the scheduling logic to allow overrides as an exception.
    a) Access the Edit Accrual task and select the accrual.
    b) On the Calculations tab, add 1 or more rows to the Scheduling grid with 1 or more of these calculations:
        - *Absence Input (Period-Specific) Exists for the Job for Absence Component*
        - *Absence Input Exists for the Job for Absence Component*

Example

Adjusting an Accrual for a Worker

The standard vacation accrual calculation is 6 hours each month. As a bonus, you want to give Julie an additional 4 hours of accrual for March. The bonus lets her accrue 10 hours that month. Enter these values:

Select Accrual/Time Off	Units	Period
Vacation Accrual	*4*	*03/01/2011 - 03/31/2011*

Donating Time Off to Another Worker

Peter accrues 10 hours of paid time off (PTO) each month. He wants to donate 16 hours to Martha. To record the transfer of hours, enter an adjustment of 16 units for Peter and 16 units for Martha. For Peter, the time off results for the period then display an accrual of -6 hours for the period.

Adjusting an Accrual for which a Worker is Not Eligible

Workday processes the accrual for floating holidays at the beginning of the year. Because Julie was hired midyear, she didn't receive an accrual, but you want to give her 2 hours of accrual. To give Julie the hours:

1. Access the Edit Time Off Plan task.

2. Enter a worker eligibility override that uses the calculation *Absence Input (Period Specific) Exists for the Job for Absence Component*.
3. Access the Maintain Accrual and Time Off Adjustments/Overrides task.
4. Enter an accrual adjustment for 2 hours in the current period.

Overriding a Worker's Accrual	The standard accrual calculation for a new hire is 4 hours each month for the first year of employment. Julie has negotiated a higher rate of 6 hours each month for her first year. You want to override Julie's standard accrual for March 1, 2011 (her start date) through February 29, 2012, so that she accrues 6 hours each month for her first year.

Select Accrual	Units	Start Period	End Period
Vacation Accrual	*6*	*03/01/2021 - 03/31/2021*	*02/01/2022 - 02/29/2022*

Next Steps

To view accrual adjustments, access these reports:

- Accrual and Time Off Adjustments/Overrides. View for a selected organization.
- Accrual and Time Off Adjustments/Overrides by Batch ID.

Create Time Off Plan Overrides for Time Offs

Prerequisites

- Create a time off.
- Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Context

Configure eligibility criteria, limits, and other rules for a time off that override the rules on a time off plan.

Steps

1. Access the Edit Time Off task.

   Configure the overrides on the Time Off Plan Overrides tab.
2. Specify Worker Eligibility eligibility rules to override the time off plan's eligibility rules.
3. In the Limit Override section, define a lower time off limit that's different from the lower limit defined for the plan.

   The lower limit controls how much time off to pay when workers exceed their available balance.

Option	Description
Value	Select a constant value or a calculation that returns the minimum number of hours or days allowed in the time off plan balance. Time off

Option	Description
	units that reduce the balance below the limit are unpaid. Example: -40 hours or 5 days depending on the unit of time the plan uses. Note: If there's no paid time off when workers reduce their time off balance to zero, enter zero. To enable workers to receive paid time off when their balance falls below zero, enter a negative value.
Based On	Select the time off plan that includes the time off that you're defining. Workday displays the time off plan's balance period.

4. In the Daily Quantity Default field, select a value to display when you enter this time off, if it's different from the time off plan's default.

   If you select a conditional calculation, the default quantity is based on the first day requested.

   Example: You select a calculation that returns a worker's scheduled hours, or 8 hours for workers without a schedule. Jane enters a request for personal time off for Monday, Tuesday, and Friday. Because she's scheduled to work 4 hours on Monday, the default quantity for each day of the request is 4.

   Workday generates an error if the quantity exceeds the maximum validation value or causes a request to fail other validations.

Result

When you add the time off to a time off plan that has different rules, the overrides take precedence.

Limiting Paid Vacation to -16 Hours

On the Time Off Plan Overrides tab, specify:

- A lower limit of -16 hours in the Value field.
- *Vacation* plan in the Based On field.

If Andy uses all his vacation time (balance = zero) and then takes 10 more hours, Workday pays all 10 hours, as they fall within the -16 limit. However, if Andy requests an additional 10 hours, Workday pays only 6 of these hours. Workday tracks the remaining hours as unpaid time.

Concepts

Concept: Eligibility for Time Off Plans, Time Off, and Accruals on page 2319

Override Time Off Plan Carryover

Prerequisites

- Configure the time off plan to track balances and enable overrides.
- Security: *Worker Data: Time Off (Time Off Balances)* domain in the Time Off and Leave functional area.

Context

You can override a worker's potential carryover units and expiration for a time off plan carryover balance.

When you override a worker's time off plan potential carryover, Workday doesn't update the worker's carryover balances.

You can use the *Put Carryover Override* web service to accomplish the same goal for multiple workers.

Steps

1. Access the Maintain Time Off Plan Carryover Overrides task.
2. As you complete the task consider:

Option	Description
Carryover Date	The date for which you want to override the potential carryover units and expiration.
Limit Override	A non-negative number that can override the Carryover Limit. Workday automatically populates your Carryover Limit value from the plan you select.
Carryover Expiration Override	A mandatory date for which Carryover expiration can be overwritten. Workday automatically populates this date based on: • The selected plan defined carryover. • Amount of Time Before Expiration. • Unit of Time For Expiration. • Carryover Date.

Suspend Accrual or Time Off Limits for a Worker

Prerequisites

- The accrual or time off is limited.
- Security: *Worker Data: Time Off (Limit Overrides)* domain in Time Off and Leave functional area.

Context

Suspend an accrual or time off limit for a worker for 1 or more absence processing periods.

Steps

1. Access the Maintain Accrual and Time Off Limit Overrides task.
2. As you complete the task, consider:

Option	Description
Start and End	The first and last periods to suspend limits for. Available periods are associated with the time off plan that uses the selected accrual or time off.
Position	This field is active only if the accrual or time off belongs to a position-based time off plan.

Steps: Bulk-Prorate Accruals

Prerequisites

Create accruals with an accrual type of *Based on As of Date* or *Front-Loaded*.

Security: These domains:

- *Business Process Administration* and *Manage: Business Process Definitions* in the System functional area.

- *Set Up: Time Off* in the Time Off and Leave functional area.

Context

You can configure your staffing business processes to bulk-prorate accruals for workers automatically in response to job and collective agreement changes.

Steps

1. Edit Business Processes.

   Add the *Bulk Automated Accrual Adjustment* service step after the *Completion* step on these business processes:

   - *Assign Employee Collective Agreement*
   - *Change Job*
   - *End Collective Agreement Assignment*
2. Access the Evaluate and Process Events Impacting Absence task.

   Workday runs a background job immediately that initiates evaluation and processing of accrual proration. From this point onwards, Workday initiates the background job automatically every 15 minutes.

Result

When workers have collective agreement or change job events that impact their accrual entitlements, the *Bulk Automated Accrual Adjustment* service step updates the *Bulk Absence Proration* background job to prorate accruals for impacting events. The step creates automated adjustments in bulk for all eligible workers if the accrual is configured as:

- *Based on As of Date* (for mid-period accruals).
- *Front-Loaded*

Related Information
Examples
2024R2 Feature Release Note: Bulk Prorate Accruals

Examples: Effect of Limits and Accrual Timing on Adjustments and Overrides

Time off limits and accrual limits can reduce or even eliminate adjustments and overrides made to a worker's time off or accrual.

Example 1: Accrual Limits	The Vacation time off plan has an accrual limit of 120 hours. Alex has an accrual balance of 110 hours going into the next balance period. The standard monthly accrual is 12 hours. • If you enter an accrual adjustment of 3 hours, Workday adds only 10 hours to the initial balance of 110. • If you enter an override of 15 hours (instead of the adjustment), Workday still adds only 10 hours to the initial balance of 110.
Example 2: Time Off Limits	The Vacation time off plan has a lower limit of zero hours. Alex has an accrual balance of 5 hours and takes off 4 hours. If you enter a time off adjustment of 4, Workday records only 1 adjusted hour as paid time off, because any time off over 5 hours exceeds the time off lower limit.

Effect of Accrual Timing on Adjustments and Overrides

Example 1: Accrual Adjustments

The Vacation time off plan has an accrual limit of 120 hours. The standard monthly accrual is 10 hours. Alex has an accrual balance of 110 hours going into the next balance period. You enter an accrual adjustment of 2 hours, and Alex requests 12 hours of time off.

- If accrual processing occurs at the beginning of the period, Workday adds the 2 hours to the 10 normally accrued, increasing the balance to 122. It applies the limit and determines that the 120 limit is exceeded by 2. Workday reduces the accrual by 2.
- If accrual processing occurs at the end of the period, Workday reduces the accrual balance of 110 by the 12 hours of time off, leaving a remaining balance of 98. It adds the adjustment of 2 for a total of 110, and applies limit testing. The limit isn't exceeded so Alex doesn't lose vacation time.

Example 2: Accrual Overrides

The Vacation time off plan has an accrual limit of 120 hours. The standard monthly accrual is 10 hours. Alex has an accrual balance of 110 hours going into the next balance period. You enter an accrual override of 15 hours, and Alex requests 12 hours of time off.

- If accrual processing occurs at the beginning of the period, Workday adds the 15 hours to the 110 already accrued. It applies the limit and determines that the 120 limit is exceeded by 5. Workday reduces the accrual for the period to 10.
- If accrual processing occurs at the end of the period, Workday reduces the accrual balance of 110 by the 12 hours of time off, leaving a remaining balance of 98. It adds the override of 15 for a total of 113, and applies limit testing. The limit isn't exceeded so Alex doesn't lose vacation time.

Example 3: Time Off Adjustments

The time off lower limit for sick time is zero hours. Sue has a balance of 2 hours going into the current period. She accrues 2 additional sick hours for the period, takes 2 hours off during the period, and you enter a time off adjustment of 4.

- If accrual processing occurs at the beginning of the period, Workday records 2 of the adjusted hours as paid time off. The other 2 hours exceed the time off lower limit.
- If accrual processing occurs at the end of the period, Workday doesn't record the

	adjustment as paid time off because it exceeds the time off lower limit.

FAQ: Bulk Prorate Accruals

Where does Workday display accrual adjustments for the Bulk Automated Accrual Adjustment service step?	When you add the *Bulk Automated Accrual Adjustment* service step on the *Assign Employee Collective Agreement*, *Change Job*, or *End Collective Agreement Assignment* business processes, Workday displays accrual adjustments on the Automated Adjustments tab of the Maintain Accrual and Time Off Adjustments/Overrides task.
What's the difference between the Automated Accrual Adjustment service step and the Bulk Automated Accrual Adjustment service step?	When you add the *Automated Accrual Adjustment* service step on the business processes, Workday evaluates adjustments to accruals on time off plans when job change transactions are processed manually or through an EIB. Workday executes the service step separately for each worker with a job change transaction. Unlike the *Automated Accrual Adjustment* service step, Workday doesn't execute the *Bulk Automated Accrual Adjustment* step separately for each worker. Instead, it flags events such as *Change Job* or *Collective Agreement* for later batch processing. Once Workday flags an event for processing, a background job that runs every 15 minutes processes these flagged events in batches. This approach is more efficient than using the *Automated Accrual Adjustment* step. The calculation results for the accrual adjustments are the same but it's more efficient to use the *Bulk Automated Accrual Adjustment* step if you're triggering the step from a mass action or Import web service EIB. If you use separate business process definitions for web service transactions from those initiated through the user interface (UI), we recommend that you add the *Bulk Automated Accrual Adjustment* step to these definitions instead of the *Automated Accrual Adjustment* step.
What do I need to do before adopting the Bulk Automated Accrual Adjustment service step on the Change Job business process?	Remove the *Automated Accrual Adjustment* service step from the *Change Job* business process. If you try to use both of these service steps in the same business process definition, Workday displays an error. You can use the service steps on different business process definitions. Example: If you use specific rule-based business process definitions for EIBs and others for those initiated through the UI, you can replace the *Automated Accrual Adjustment* step with the *Bulk Automated Accrual Adjustment* step within the EIB business process definition and continue to use the *Automated Accrual Adjustment* step in your business process definitions initiated through the UI.

Time Off Plan Balances

Setup Considerations: Absence Balances

You can use this topic to help make decisions when planning your configuration and use of absence balances functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Absence balances are the difference between the time off a worker accrues and uses at a specified time.

Business Benefits

Workday absence balances functionality enables you to:

- Optimize performance for time off transactions and reports.
- View a worker's current balance, project future balances, and configure the accrual rate.
- Accurately estimate a worker's unused time off when reviewing a time off request.
- Automatically recalculate a worker's balance when you view their existing balance.
- Improve efficiency by scheduling when you store your time off plan balances.

Use Cases

You can configure absence balances to track and manage time off units for different scenarios, including:

- Worker transfers from 1 locale to another where there's a difference in annual leave regulations.
- Changes in accrual rates. Example: A length of service award.
- Midterm terminations or hires.
- Using balances in eligibility criteria by creating a calculation that references a time off plan balance. You can then use the calculation in a value comparison calculation.

Questions to Consider

Questions	Considerations
What balances do you want to track?	Workday enables you to plan resources and budget correctly by tracking: • Accrued time off. • Time off taken. • Accruals minus time off. • Number of hours or days employees have carried over from one time period to the next.
When do you want to calculate absence balances?	Workday stores balances on the third Sunday of every month at 01:00:00 in your local time zone. You can store balance values and accrual amounts by manually scheduling processes for time off plans and business requirements.

Questions	Considerations
How do you want to manage balances for terminated workers?	You can configure the *Termination* business process that enables you to either forfeit or pay out balances.
When do you want to prorate absence balances?	You can prorate balances that workers receive if their accrual value changes as a result of a change job event. The change could be due to a worker gaining or losing eligibility to the accrual itself within a period, or calculations within the accrual resolving differently. You can prorate the accrual: • Up front. • At the start or end of a period.
Who do you want to be able to view absence balances?	You can hide certain balance types from employees. Example: Sick leave. Managers or administrators can view these balances on reports.

Recommendations

Workday recommends:

- Optimizing performance by scheduling processes to store absence balances regularly. When you store balances regularly, Workday uses the stored balances and accrual amounts as the starting point for subsequent dynamic calculations instead of starting over from a worker's initial processing period. Workday dynamically calculates the balances and accrual amounts on reports based on the rules that you set on the time off plan.
- Tracking balances on time off plans that have a definable accrual. When you have a time off plan with an unlimited or always unpaid balance, create an accrual that uses zero as the calculation.

To avoid confusion, Workday recommends that you hide balances on:

- Accrue-as-you-go time off plans, when the balance is zero.
- Time off plans that don’t have accruals.

Requirements

Don't edit past period schedules because it causes errors in your balance calculations.

Limitations

- Workday doesn’t support transferring negative time off balances.
- You can only transfer balances for worker-based time off plans.
- For performance reasons, we recommend that you don't complete bulk job changes that include balance transfers.

Tenant Setup

To improve performance when generating payslips and storing absence balances, select these check boxes on the Edit Tenant Setup - Payroll task:

- Following Pay Complete
- Only for Workers With Check Payments or Payslip Printing Enabled

Security

Configure these security domains in the Time Off and Leave functional area:

Domains	Considerations
Set Up: Time Off (Calculations - Absence Specific)	Users can create absence balance calculations.
Worker Data: Time Off (Time Off Balances)	Users can override time off plan balances.
Process: Calculated Balances (Run)	Users can: • Manually schedule storage of time off balances. • Remove existing stored balances. • Recalculate balances for workers.

Business Processes

Business Processes	Considerations
Change Job	To transfer time off balances, add the *Maintain Time Off Plan Transfer Balance* action step.
Change Job	To change future time off requests to another plan when worker eligibility changes, add the *Update Time Off Requests* action step.
Change Job	To prorate balances that workers receive when their eligibility for accruals changes, add the *Automated Accrual Adjustment* service step. This setting enables Workday to review the Front-Loaded or As Of Date settings on the accrual before making the adjustment.
Termination	To cancel any remaining balance on termination for a one-time time off adjustment, add the *Adjust Time Off Balances* service step.

Reporting

Reports or Dashboards	Considerations
All Absence Balances View Absence Balance	View absence balances and where they are in use based on your tenant configuration.
All Calculated Balance Recalculation Changes	View worker calculations to confirm how changes to balances impact on their balances.
Calculated Balances for Organization (by Worker)	View calculated balances and accruals for an organization by worker for the calculated run date. The report displays workers who have a difference between their previous: • Balance and new balance. • Accrual and new accrual. This report doesn't support intersection security groups.

Reports or Dashboards	Considerations
Carryover Balances for Organization (by Carryover Date) Carryover Balances for Organization (by Worker)	View when carryover expires for workers or organizations to plan for resource allocation or budgetary requirements.
Time Off Results Detail Time Off Results Summary	View balances for specific time off plans to plan your resources correctly.
View Override Balances for Organization	Use this report to view all workers with a time off plan balance override by organization. Unlike the Maintain Time Off Plan Override Balances task, however, this report doesn't split the total balance units by associated balance period when workers have overrides for more than 1 period. Workday uses contextual role-based security on the Unit of Time field to determine whether to display a row for the worker. Example: When workers with the Absence Partner role run the report, they can see data for other workers in their organization, but not for workers in organizations that also have an assigned Absence Partner role.
View Schedules for Time Off Calculated Balance Process	View time off plan schedules and access tasks to change or cancel them.

Integrations

Web Services	Considerations
Get Carryover Override	View a worker's carryover expiration or limit override for their eligible time off plan.
Get Override Balances	Set time off plan override balances for an employee and their time off plan.
Get Time Off Plan Balances	View dynamic time off plan balances by worker and time off plan.
Put Override Balance	Load absence balance information into Workday from an external source.

Connections and Touchpoints

Features	Considerations
Workday Payroll	You can display absence balances on payslips.
Carryover	You can include absence balances in calculations to define your carryover limit.
Time Off	You can use absence balances to determine whether a time off request is paid or unpaid.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Setup Considerations: Accrual Adjustments and Overrides on page 2498

Tasks

Create Absence Balances on page 2527

Reference

The Next Level: The Calculation Engine Behind Absence Management

The Next Level: Store Absence Balances

Steps: Transfer Time Off Balances

Prerequisites

Review setup considerations for absence balances.

You can only transfer balances for time off plans that:

- Allow overrides.
- Aren't position-based.
- Don't have expiring accruals configured.
- Track balances.

Context

Transfer balances from a time off plan to another, pay out time off balances, or both, when a worker loses eligibility for a time off plan.

Example: Kristin relocates from New York to Paris. As a result, she loses eligibility for the *USA Paid Time Off* plan and gains eligibility for the *FRA Paid Vacation* plan. You must transfer her current balance of 80 hours to her new time off plan.

Note: You can't transfer negative time off balances.

Steps

1. Add these action steps to the *Change Job* business process:

    - *Maintain Time Off Plan Transfer Balance*: This step triggers a review of the HR change and determines if there are any effects on time off eligibility. Example: If a job change is a location change and plan eligibility is based on country, Workday sends a My Tasks notification to the configured security groups. The notification includes the previous time off plan and balance as well as the new plan the worker is eligible for. If there are no effects on time off plans eligibility, Workday doesn't send a notification
    - *Update Time Off Requests*.: This step triggers a review of the HR change and determines the impact on any existing time off requests. If a user has submitted a time off request after the effective date of the HR change, Workday notifies the configured security groups. The notification includes a list of the time off requests so that you can update the requests accordingly. If the HR change doesn't affect any time off requests, Workday doesn't send a time off notification

    You can add these steps in any order to the business process as long as they occur after the completion step. See Edit Business Processes.

2. (Optional) Access the Maintain Time Off Unit of Time Conversion Calculations task if your organization uses time off plans with different units of time.

   Configure unit conversions when you transfer balances to a time off plan that uses a different unit of time. Example: Convert 8 hours to 1 day. If your organization only uses time off plan with the same units,

   Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.
3. (Optional) Map default time off plans for balance transfers and time offs for balance transfer adjustments.
   a) Access the Create Time Off Plans task.
   b) On the Balance tab, select a Balance Transfer Default(s).

      You can select time off plans that you want the balance transfers to default to. Values default if there's a 1 to 1 relationship between the previous time off plan and that plan that you select here. If the previous time off plan has a current balance and carryover balance, the combined balance defaults into the current balance of the balance transfer default plan. It's important to consider how your organization configures the eligibility of time off plans. Example: Your organization might configure eligibility by location. Eligibility rules on the time off plan determine which plan acts as the default for the transfer.
   c) On the Time Off tab, select a Time Off for Balance Transfer Adjustment. Select time offs that Payroll can pay out to the worker, if needed, when the worker isn't eligible for any other time off plan.

   See Create Time Off Plans That Track Balances on page 2302.
4. (Optional) Update eligibility to allow workers to gain eligibility for a time off plan, based on the effective date of their balance transfer, and not the period start and end dates of the plan.
   a) Access the Create Time Off Plans task.
   b) On the Eligibility tab, use the *Time Off Eligibility Impacted Mid Period* logic calculation in an eligibility rule.

      Note: Workday recommends that you use this calculation only for eligibility rules in time off plans and not for calculations in accruals or scheduling rules.

      To prevent errors and resolve the calculation for null values when transferring balances, Workday uses default values of *1/3/0001* and *1/2/0002* for the transfer balance effective date.
5. (Optional) Access the Time Off Balance report for a worker to view their time off plan balances:
   a) Review each time off plan that they're eligible for. On the Balance tab of each time off plan, note whether there are any time off plans listed in the Balance Transfer Defaults column.
   b) On the Time Offs tab, note whether there are any time offs in the Time Off for Balance Transfer Adjustment column. If you decide to pay out this plan during a transfer, Workday uses this time off to zero-out the plans balance.
6. Transfer a worker's current balance to their newly eligible plans, pay out their balances, or both.

   You can review tasks for the *Maintain Time Off Plan Transfer Balance* action step in My Tasks when a worker loses eligibility for a time off plan. If their time off plan has balance transfer defaults, they automatically populate in the Maintain Time Off Plan Transfer Balances task and you can change them as necessary.
7. Change the time offs in a worker's time off requests to time offs that are compatible with their newly eligible plans.

   You can review tasks for the *Update Time Off Requests* action step in My Tasks. If a worker has time off requests that occur after the effective date of the time off plan eligibility change, the task prompts you to update future time off requests.

Result

When a worker loses eligibility for a time off plan, Workday automatically displays events in My Tasks prompting you to:

- Transfer the worker's time off plan balances.
- Update any time off requests.

When the balance transfer successfully completes, you can view the updated balance on any task or report that displays the balance.

Example

This example illustrates how you can use the *Time Off Eligibility Impacted Mid Period* logic calculation in an eligibility rule on these tasks:

- Create Time Off Plan
- Edit Time Off Plan

Workers at Global Modern Services in San Francisco or Boston are eligible for either of these time off plans, based on their job location, or whether they become eligible midperiod due to a job change:

- *Semi-Monthly (Worker-Based Time Off Plan CA)*
- *Semi-Monthly (Worker-Based Time Off Plan MA)*

You set the Country / Country Region values on the Eligibility tab of the time off plans to *California* and *Massachusetts*, respectively. On the *Semi-Monthly (Worker-Based Time Off Plan MA)* time off plan, you add a logic calculation to the Worker Eligibility grid with:

Operator	Calculation
OR	*Time Off Eligibility Impacted Mid Period*

Alex Jones changes job location from San Francisco to Boston on 2015-12-29. You can enter a time off request against *Monthly (Worker-Based Time Off Plan MA)* for Alex for 2015-12-25 and 2016-01-02 because they changed job midperiod, but not for 2015-12-10.

Next Steps

Optionally, you can use the Maintain Time Off Override Balances task to view or edit the worker's balance in previous and new time off plans. You can also use the Maintain Accrual and Time Off Adjustments/ Overrides task to view or edit payout adjustments, if any. Any edits you make on these tasks override the edits on the Maintain Time Off Plan Transfer Balances task.

Examples
Example: Transfer Time Off Balances on page 2533

Steps: Prorate Front-Loaded Balances

Context

Prorate balances that workers receive up front when their eligibility for accruals changes.

Steps

1. Add the *Automated Accrual Adjustment* service step to the *Change Job* business process.

   The service step automatically prorates any front-loaded balances that the worker has, based on the effective date of the job change. Workday creates an accrual adjustment when it detects a change in what the worker accrues based on a calculation within an accrual. Example: An accrual calculation previously returned 40 hours for a worker, but as a result of a staffing event, the accrual calculation now returns 32 hours.

See Set Up Rule Based Consolidated Templates for Job Changes on page 859 and Edit Business Processes.

2. Create a front-loaded accrual that includes a conditional calculation with 1 or more conditions.

   See Create Front-Loaded Accruals on page 2348.

3. Schedule time off plans to accrue at the beginning of the year and add the front-loaded accruals to them.

   See Create Time Off Plans That Track Balances on page 2302.

   a) Access the Create Time Off Plan task.
   b) Select a Balance Period that is based on a year.
   c) In the Period Schedule field, select *Annual*.

      You can select a different period schedule if the front-loaded accrual uses either of these scheduling rules:

      - *Scheduling: Front-Loaded*
      - *Scheduling: Annual - 1st Period of Year (based on Period End Date) or Mid-Period Hire or Termination*
   d) In the Accrual Frequency Method field, select *Start of Period*.
   e) On the Accruals tab, add the front-loaded accruals.

Result

When workers have job changes that affect their eligibility for front-loaded accruals, Workday detects changes in calculation conditions and creates adjustments to prorate their balance for the period.

Example

At Global Modern Services, full-time workers receive 20 days of time off at the beginning of every year while part-time workers receive 10 days. All workers use a semimonthly period schedule. On August 10, Oscar moves from a full-time position to a part-time position and still has the 20 days he received at the beginning of the year. To reflect the amount of time he spent in each position, Workday prorates his balance to 16.083333 days.

Calculation Details

Adjustment	Calculation
Full periods	As of August 10, 9 full periods remain in the year so the adjustment for the full periods is: (-10 days/24 periods) * (9 periods) = -3.75 days.
Partial period	August 10 is in the middle of the August 1 - August 15 period. As of August 10, 6 days remain in the period so the adjustment for the partial period is: (-10 days/24 periods) * (6 days left in period/15 days in

Adjustment	Calculation
	period) = -0.166667 days.
Final adjustment	Add the adjustments for the full periods and the partial period to calculate the final adjustment: (-3.75 days) + (-0.166667 days) = -3.916667 days.
Final adjustment applied	Apply the final adjustment to Oscar's current balance of 20 days: 20 days - 3.916667 = 16.083333 days.

Summarized calculation: 20 days - [(10 days/24 periods) * (9 full periods + (6 days left in period/15 days in period))] = 16.083333 days.

Next Steps

(Optional) Use the Maintain Accrual and Time Off Adjustments/Overrides task to confirm the adjustment amount on the Automated Adjustments tab. If needed, use the task to create a manual adjustment or override.

Related Information

Tasks

Edit Business Processes

Steps: Prorate Based-On-As-Of-Date Balances

Context

You can prorate balances, to the day, that workers receive at the start or end of a period when their eligibility for accruals changes within a period. Based-on-as-of-date, accruals support single and multiple changes in eligibility within a period.

Steps

1. Add the *Automated Accrual Adjustment* service step to the *Change Job* business process.

   The service step automatically prorates any time off balances that the worker has, based on the effective date of the job change.

   See Set Up Rule Based Consolidated Templates for Job Changes on page 859.
2. Create or edit an accrual that uses the Based on As of Date option.

   See Create Based-on-As-of-Date Accruals on page 2350.

3. Ensure that the Accrual Frequency Method for the time off plan is set to either *Start of Period* or *End of Period*.
   a) Access the Edit Time Off Plan.
   b) Check the Calculation tab for the value of the Accrual Frequency Method. If the value is:
      - Either *Start of Period* or *End of Period*, you don't need an override.
      - *Custom Frequency*, or different than in the accrual, override the time off plan setting:
        1. On the Balance tab, select Overrides Allowed.
        2. On the Accrual tab, edit the accrual and select the Adjustments/Overrides Allowed check box.
        3. On the Time Off Plan Overrides tab, create an override with either *Start of Period* or *End of Period* as the Accrual Frequency Method.

Result

When a worker has a job change within the period that affects their eligibility for the accrual, Workday calculates the proration based on the as of date. Workday creates an accrual adjustment for the period.

Example

Single Adjustment

Oscar works at Global Modern Services in the United Kingdom. Employees have an accrual of 2 days each month if full time; otherwise, they have an accrual of 1.2 days each month. Employees receive the accruals at the start of the period, using a monthly period schedule. On October 23, Oscar changes from a part-time to a full-time position. To reflect the amount of time he spent in each position, Workday adjusts his accrual to 1.4322.

Calculation Details

Adjustment	Calculation
Start of Period	Oscar receives 1.2 days of accrual at the beginning of the period. For the first part of the period (22 days), Oscar works as a part-time employee and receives an accrual balance of 0.8516 days. (1.2/31)*22 = 0.8516
Change During the Period	Within the period schedule, Oscar changes to full-time for 9 days. (2/31)*9 = 0.5806
Updated Accrual Balance for the Period	Oscar receives an updated accrual balance of 1.4322 at the Start of Period. 0.8516 + 0.5806 = 1.4322
Automated Accrual Adjustment	For the final accrual adjustment, Workday subtracts the Start of Period accrual balance from the new accrual balance. The line item adjustment on the Automated Adjustments tab for Oscar is 0.2322 = (1.4322 - 1.2).

Next Steps

(Optional) Use the Maintain Accrual and Time Off Adjustments/Overrides task to confirm the adjustment amount on the Automated Adjustments tab. If needed, use the task to create a manual adjustment or override. Time off balances update wherever Workday displays the balances.

Edit Business Processes

Examples

Example: Multiple Eligibility Adjustments Within a Period on page 2537

Override Time Off Plan Balances

Prerequisites

- Configure the time off plan to track balances and enable overrides.
- Security: *Worker Data: Time Off (Time Off Balances)* domain in Time Off and Leave functional area.

Context

Override a worker's time off plan balance or a carryover balance.

When you override a worker's time off plan balance, Workday doesn't update the balance again for dates on or before the override date, including retroactive time off entries. You can prevent users from entering time off requests for dates before the balance override date. Add the *Time Off Date before Maximum Override Balance Date Not Allowed* validation to the time off.

To override the time off plan balances for a group of workers with balances that third-party applications maintain, use the *Put Override Balance* web service. Verify that balances loaded correctly with the View Override Balances by Batch ID report. If necessary, use the Delete Override Balances by Batch ID task to delete uploaded balances.

Steps

1. Access the worker's Time Off Balance report and make a note of the balance and carryover balances for the time off plan.
2. Access the Maintain Time Off Plan Override Balances task for the worker.

   Note: Don't use this task to override expiration rules defined on an accrual. Instead, access the Maintain Accrual Expiration Overrides task to handle accrual expiration exceptions or special employee circumstances. See Override Accrual Expiration Dates for a Worker on page 2354.
3. As you complete this task consider:

Field	Description
Time Off Plan	Select the plan that you want to override from the plans that the worker is eligible for today, in the past, or in the future. Workday categorizes the plans that the worker is: • Eligible for as of today. • Not eligible for as of today.
Override Balance Date	Select the date for which you want to override the plan balance or carryover balance. Workday overrides balances as of the period start date. This prompt displays the start date for periods in which the worker is eligible. If the eligibility rules evaluate as of the period

Field	Description

	end date, the worker isn't eligible as of today, so the period start date won't be available for selection. For time off plans:
	• With an Accrual Frequency Method for Time Off Plan option of *Custom Frequency*, select from the start date of the period to override:
	  • The balance carryover date.
	  • Any date on which the accrual can occur.
	  • The balance carryover expiration date.
	• Without a custom accrual frequency, select from the start date of the period to override any carryover expiration date.

Position	(Optional) The worker's position for position-based time off plans.
Units	A positive or negative number for the new balance amount. For any balance that you don't want to change, enter the current amount that you recorded in step 1. Workday sets the balance to zero if you don't enter a value.

Next Steps

Select the View Calculated and Override Balances from the worker's related action menu to see override balances for a worker.

Access the View Override Balances for Organization report to view all workers with a time off plan balance override by organization.

Manually Schedule Storage of Time Off Balances

Prerequisites

- Configure time off plans to track balances.
- Security: *Process: Calculated Balances (Run)* domain in the Time Off and Leave functional area.

Context

You can manually schedule processes to store time off balances and accrual amounts for time off plans to:

- Optimize performance for time off transactions and reports.
- Provide balances for payroll processes of earnings mapped to time off.

Workday uses stored balances as a starting point for calculating balances for subsequent dates, instead of returning to each worker's initial processing period.

Note: To maintain a minimum level of performance, Workday checks every month whether a time off plan has stored balances as of a date within the previous 13 months. If it hasn't, Workday automatically stores balances as of 13 months before the third Sunday of that month. However, for optimal performance, Workday highly recommends that you manually schedule processes customized for your time off plans and business requirements.

Steps

1. Access the Schedule Time Off Calculated Balance Process task.
2. In the Run Frequency field, specify when you want the process to run.
3. On the Time Off Plans tab, specify:

Field	Description
Process Name	Example: *All Time Off Plans with an Annual Period Schedule*.
Time Off Plans	You can process plans with different period schedules together. Example: Plans with a monthly period schedule and plans with a quarterly period schedule. For the best performance, include each plan in 1 schedule only.

4. If you selected *Run Now* or *Run Once in the Future*, specify how far back in time you want to store balances.

   Count the number of days between the current date (or the future run date) and the period for which you want to store balances. Enter the result in the Days Before Run Date field. Workday calculates and stores balances for the first date of that period.

   Don't run the process for the current period or future periods. The Days Before Run Date shouldn’t be set to zero. As a best practice, set this value to 91 days or more.

   Example: Your time off plan has a monthly period schedule. Today is 2020-11-11 (the run date) and you want to store balances for the plan December 2019 period. You determine that there are 315 days from 2019-12-31 and today, and 345 days from 2019-12-01 to today. So, you enter a number from 315 to 345 in the Days Before Run Date field. When the process runs, Workday calculates and stores balances for 2019-12-01.
5. If scheduling the process to run later, enter instructions on the Schedule tab and click OK.

   When you click OK, the process runs immediately unless you scheduled it to run in the future.

Result

When the process runs, Workday calculates and stores the updated balances and accrual amounts.

After the process completes, it automatically recalculates and stores balances and accrual amounts in response to retroactive absence-related transactions for a worker. Example: Time off and leave requests entered for dates before you last ran the process. Workday doesn't recalculate balances and accrual amounts in response to:

- Job changes entered after the fact.
- Retroactive configuration changes to time off, accruals, or time off plans.

Example: After you run the process on April 1, Kevin enters time off for March 15. You also increase the accrual rate for vacation time to 4 extra hours a month for all workers, effective March 1. Workday automatically recalculates and stores Kevin's time off balances to reflect his March 15 day off. Workday doesn’t recalculate balances or accrual amounts in response to the accrual change.

Example

These examples demonstrate scheduling options for storing balances:

Run once a year on the second Friday of February.	• Run Frequency = *Monthly Recurrence* • Month(s) = *February* • Recurrence Type = Day of the Week: *Second Friday* • Start Time = *12:30 AM*
Run on the last day of each calendar quarter.	• Run Frequency = *Monthly Recurrence* • Month(s) = *March, June, September, December* • Recurrence Type = Day(s) of the Month: *Last Day of the Month* • Start Time = *12:30 AM*
Run at midnight tonight for a prior period (a catch-up run).	You have 3 monthly time off plans that have been in use for 2 years. You've never run the process. To catch up, you decide to store balances as of 1 year ago. Enter these values the first time you run the process: • Run Frequency = *Run Once in the Future* • Days Before Run Date = 365 • Start Time = *12:00 AM* Run once more for a more recent period and then schedule the process to run on a recurring basis.

Next Steps

- To edit or delete a schedule with a recurring frequency, access the View Schedules for Time Off Calculated Balance Process report.
- To cancel a run or remove stored balances, use the Cancel Time Off Calculated Balances Run task.

  When selecting the run, check the run date displayed after the process name to ensure that you cancel the correct run.

FAQ: Time Off Balances on page 2538

The Next Level: Store Absence Balances

View and Edit Schedules for Storing Time Off Balances

Prerequisites

Security: *Process: Calculated Balances (Run)* domain in Time Off and Leave functional area.

Context

View, edit, or delete manually scheduled *Time Off Calculated Balance* processes. You can also check the next and last run dates for schedules with a recurring frequency and view the list of plans not included in a schedule.

Steps

1. Access the View Schedules for Time Off Calculated Balance Process report.

   Expired plans (plans without a Next Run Date) are listed first.
2. Click:

   - Edit to extend the end date for an expiring plan or make other edits.
   - Delete to delete the schedule, but not the results of previous runs.
   - View Last Results for the number of balances last updated for each plan and to access the list of workers processed.
   - View Process Monitor to see processing results for runs within a selected date range.

   Note: All users secured to the *Process: Calculated Balances (Run)* domain can edit information on the Schedule tab, but only the schedule owner can edit the Time Off Plans tab or delete a schedule. The schedule creator can transfer ownership to another user by accessing the Scheduled Future Processes task. From the request name, select Scheduled Future Process > Transfer Ownership from the related actions menu of the request name.

Tasks

Manually Schedule Storage of Time Off Balances on page 2522

Remove Stored Balances

Prerequisites

Security: *Process: Calculated Balances (Run)* domain in the Time Off and Leave functional area.

Context

Remove stored balances that are incorrect by canceling a run of the *Calculate Time Off Balances* process. Stored balances can be incorrect if you make a retroactive job change that is effective before a stored balance date. They can also be incorrect if you make an absence-related configuration change after storing balances.

You might need to cancel an entire run if you make retroactive changes that affect a large number of workers. Example: You retroactively change a time off plan accrual rate, effective before the last time the plan balances were stored. Everyone who uses that time off plan will have incorrect balances unless you remove the balances from the last run.

If you make a retroactive change for an individual worker, use the Schedule Time Off Calculate Balance Process task instead to recalculate that worker's balances.

Steps

1. (Optional) Verify the time off plan and balance date for which you need to remove balances.

   Select Time and Absence > View Calculated and Override Balances from a worker's related actions menu.

   The Balance Date on the report is the date that the balances were stored as of, not the date the balances were stored.

   Example: If on 2019-06-01 you stored balances as of 2018-05-01, the Balance Date is 2018-05-01.
2. (Optional) Identify the time off calculated balances run that includes the balances you need to remove.
   a) Access the Cancel Time Off Calculated Balances Run task.

      The dates displayed in the Calculated Time Off Balance Run prompt are when processes ran, not the dates that the balances were stored as of.

      Example: If on 2020-06-01 you stored balances as of 2019-05-01, the date displayed in the prompt is 2020-06-01.
   b) From the related actions menu of a run, select the name of the background process.
   c) Verify that the run includes the time off plan and balance date for which you need to remove balances.
3. Access the Cancel Time Off Calculated Balances Run task.

   Cancel the run that includes the incorrect balances.

   Note: Canceling a run removes all of the balances that were stored in that run, not just the incorrect balances. You might need to recalculate balances for all workers with removed balances.

Result

Workday removes the balances stored in the canceled run. Workday then uses the balances stored previous to the canceled run to calculate balances for the affected workers.

Next Steps

If you want to recalculate stored balances for a different date, use the Recalculate Worker Time Off Balances task to recalculate balances for each worker.

Recalculate Balances for Workers

Prerequisites

- Configure the worker's time off plan to track balances.
- Security: *Process: Calculated Balances (Run)* domain in the Time Off and Leave functional area.

Context

Manually recalculate a worker's or multiple workers' balances when you:

- Make a retroactive job change that is effective before the worker's last stored time off balance date.
- Make an absence-related configuration change after storing balances.

Recalculating the worker's balances after a retroactive change ensures that the stored balance and the relevant calculations are correct.

Example: You retroactively promote Kevin to a new position that has a higher accrual rate, effective as of February 15. His time off plan balances are stored on March 1 and don't automatically take into account his new accrual rate. As a result, you must manually recalculate his balances with a start date that is before February 15.

Steps

1. Access the Recalculate Worker Time Off Balances task.

   As you complete the Worker section, consider:

Option	Description
Run for All Workers	Workday recommends that you don't run this process for all workers as it can impact performance.
Run for All Time Off Plans	Workday recommends that you don't run this process for all time off plans as it can impact performance.
Start Date	If recalculating balances due to a retroactive change, select a date that is before or on the effective date of the retroactive change. If recalculating balances due to absence-related configuration changes such as accrual calculation or eligibility, select a date that is either: • The same as the effective date of the change. • Before or on the effective date of the change. Select a date that is less than 18 months in the past from the current date for optimum tenant performance.

2. (Optional) Complete the Schedule section to run the process on a future date.

Result

Workday recalculates the worker's balance and stores it as of the period. Workday also persists accrual amounts in the 6-month period before the date the balance is stored.

FAQ: Time Off Balances on page 2538

Create Absence Balances

Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.

Context

Create balances for calculating accrual, time off, or other absence values over a balance period that differs from the standard time off plan year.

If you're defining time off plan balances (accruals less time off), use the Create Time Off Plan task.

Steps

1. Access the Create Absence Balance task.
2. In the Absence Calculation field, select the accrual, time off, or time off plan for which you want to define a balance.
3. Select a Balance Period to specify over what time period to accumulate the values.

   Workday recommends that you reference a prior period to avoid an infinite loop error.
4. (Optional) Select the Calculate as of Balance Period End Date check box.

   When you select the check box, Workday calculates to the end of the period instead of stopping at the as of date. Example: Select the check box to calculate the balance to the end of the year if an absence balance has a calculation period of *YTD - Current Calendar Year (based on Period End Date)*.

   Note: Selecting this check box can can lead to issues such as stack-trace or calculation errors when you also use the absence balance in an accrual calculation.

Example

You created a time off called *Sick Time* and want to create a balance that returns the amount of sick time taken over the last 3 months.

1. Select *Sick Time* in the Absence Calculation field.
2. In the Balance Period field, specify an accumulation period of the last 3 months.
3. Leave the Calculate as of Balance Period End Date check box unselected.

Tasks
Create Time Off Plans That Track Balances on page 2302

Concept: Balance Projections for Time Off

Balance Projections

You can use the Projected Balances section to view a worker's:

- Current time off balances.
- Project future balances.

Workday displays the Projected Balances section on these items in My Tasks:

- Revise time off requests.
- Review time off corrections.
- Revise time off corrections.

Projected balance information displays only for time off plans that track balances. The grid lists the time off plans and related time offs the worker is eligible for, such as floating holiday or vacation. For each plan, it displays these balances:

Field	Description
Available	Available hours or days in the worker's time off plan balance, up to and including the date shown in the The projected balances below are calculated as of date field. Available time off = Accrued time - (Approved + Pending time off requests). Requests with a status of Saved for Later don’t display.

Field	Description
Requested	Hours or days in the current time off request.
Remaining	Available hours or days minus paid hours or days in the current request up to and including the date shown in the The projected balances below are calculated as of date field. An exception to this rule can apply when the time off plan has a lower time off limit.
Unpaid	Unpaid hours or days in the current request. Only displayed to users reviewing submitted time off requests or corrections.

Values are current as of the date displayed above the Projected Balances grid and take into account termination adjustments, if they exist.

How Workday Calculates Remaining Time

Available time - Requested time = Remaining time.

If the worker's time off request falls below the lower limit defined for the time off plan balance, the Remaining balance displays the lower limit.

Example 1: Time Off Lower Limit = zero

The *Vacation* time off plan enables workers to take unpaid vacation when they deplete their plan balance. The time off plan has these settings:

- Time off lower limit = Zero
- Unpaid Time Allowed? = Yes

If Morgan's balance is 6 hours and she requests 8 hours of time off, Workday displays these projected balances:

Available	Requested	Remaining	Unpaid (only visible to reviewers)
6	8	Zero	2

Example 2: Time Off Lower Limit = -4

The *Sick* time off plan enables workers to take up to 4 additional hours of paid sick time. The time off plan has these settings:

- Time off lower limit = -4
- Unpaid Time Allowed? = Yes

Amit's sick time balance is 6 hours and he requests 8 hours of sick time off. Workday displays these projected balances:

Available	Requested	Remaining	Unpaid (only visible to reviewers)
6	8	-2	Zero

If Amit requests 12 hours instead or 8, his balances display as:

Available	Requested	Remaining	Unpaid (only visible to reviewers)
6	12	-4	2

How Corrections Affect Balance Projections

When you correct an approved time off request, the Requested balance displays the difference between the amount of time originally requested and the corrected amount.

Example:

- If you increase the original request from 4 hours to 6, the Requested field displays +2.
- If you decrease the original request from 6 hours to 4, the Requested field displays -2.

The Available balance reflects the previously approved time off request.

FAQ: Time Off Balances on page 2538

Concept: Guidelines for Storing Time Off Balances

Workday calculates time off plan balances and accrual amounts dynamically based on time off plan rules when workers access time off tasks and reports in your tenant. Workday accesses reports in the background that run calculations from a specific point in time to access the balance values.

All workers have time off history. Workday pulls many events into their worker profile, including time off events, accruals that accumulate, and carryover from balance period to balance period. Workday accesses the same information at different speeds, depending on whether you configure Workday to store balances:

- If you don't configure the tenant to store balances, processing takes much longer. If there isn't a specific point in time to reference, Workday runs calculations starting from when balances were first entered in Workday. Workday has to go back to the workers' initial history to calculate all of the absence components and output their absence balance results.
- In contrast, if you store balances at intervals, when workers access their time off plan balances, Workday displays calculated results from the most recent stored balances. Because Workday is using a more recent date, the processing time is much faster, providing a better, more efficient user experience.

To optimize performance, you can schedule processes to store balances on a regular basis for all time off plans that track balances. When you use the Schedule Time Off Calculated Balance Process task to store balances as of 91 days or more and accruals, Workday uses the stored balances and accrual amounts as the starting point for subsequent dynamic calculations.

You can store balances as of the start date of any period within the time off plan's period schedule. You can't store balances for a future date.

If you experience performance issues related to absence, use the View Schedules for Time Off Calculated Balance Process report to check whether you have schedules for storing time off balances. If not, create them.

Best Practices for Performance

To maintain a minimum level of performance, Workday checks every month whether a time off plan has stored balances as of a date within the past 13 months. If not, Workday automatically stores balances as of 13 months before the third Sunday of that month. However, Workday recommends that you manually schedule processes customized for your time off plans and business requirements.

We recommend that you:

- Don't store balances as of today's date.
- Run the Schedule Time Off Calculated Balance Process as of 91 days or more. When storing balances, Workday uses the period start date, derived from the plan's period schedule.
- Don't run the Schedule Time Off Calculated Balance Process more often than the frequency of your period schedule. Examples: If the period schedule for the time off plan is:

    - Biweekly. You can run the process biweekly. Don't run the process weekly.
    - Monthly. You can run the process monthly or less often than monthly. Don't run the process weekly or biweekly.
    - Quarterly. Run the process every 3 months. Don't run the process weekly, biweekly, or monthly.

  Note: Don't run the process for the current period. Set the value of Days Before Run Date to greater than zero. As a best practice, set to 91 days or more. The main benefit of setting the value to 91 days or more is to ensure that Workday stores the accrual, which further improves performance.
- Edit the schedule of the job to process fewer plans at the same time or increase the recurrence frequency.
- Schedule the process to run at night.

  Note:

  For initial Workday deployment projects or for Mergers and Acquisitions, consider the order of operations as this can impact processing times for calculations. For optimal performance, when loading balances for terminated workers to your Workday tenants, Workday recommends performing these steps in this order:

    1. Load time off
    2. Store balances.
    3. Terminate worker.
- Use Import web services for time off and absence for high-volume record transactions of more than 2000 rows per load.
- Be mindful of reporting schedules and synching them up. Ensure that you run reports before running scheduled time off calculated balances. Run your reports quarterly and calculate stored balances at least quarterly. Providing a starting point to calculate balances helps the reporting framework recall the information. If you're running quarterly company-wide Absence accrual reports, it's better to run the reports close to the time after your recent scheduled stored balance run. Custom reports and indexed data sources, such as Workers for HCM Reporting, are key considerations for efficient performance, helping to recall absence balances stored in a more performant way.
- If your organization has more than 100,000 active HCM workers, you should review your tenant performance because of the volume of transactions that you're likely to have. Supporting this number of workers can require additional attention to assess tenant run time and end-user experiences.

- Run the Schedule Time Off Calculated Balance Process process after employees have finished entering time off for the period.

  Example: Wait until employees enter their time off at the end of the year before running the process for December. This method reduces the number of times Workday must recalculate and store balances in response to retroactive entries.

Tenant Setup

Review how the Absence worklet displays balances. If you notice that they're taking a long time to load, or the worklet is taking a long time to populate, consider accessing the Edit Tenant Setup - HCM task and navigate to the Time Off section. Select the Disable Absence Worklet Balances option. Workers can continue to view their balances on the calendar when they view their absences or request absence.

Review your tenant settings for Payroll. Access the Edit Tenant Setup - Payroll task, navigate to the Payslips section, and enable the Persist Absence Data for Payslips options to improve performance for payslips and the web service for *Get Payroll Payslips*. The persistence occurs between pay calculation and pay completion. Workday looks at the persisted absence data from the pay result, except when the payroll was completed before you enabled the option.

Performance Impacts

These factors add to the complexity of time off balance calculations. Consider whether you must run the process more often for some or all plans:

- Period schedule frequency. Example: Weekly or monthly. Don't use daily period schedules in time off plans. Workday recommends that you select a weekly schedule at a minimum.
- Limits: upper, lower, and carryover.
- Multiple accruals associated with the balance.
- Multiple time offs associated with the plan.
- Plan balance that is dependent on another plan balance.
- Number of periods processed in the period schedule.
- Number of employees eligible for the plan. Configure country eligibility on time off plans or holiday calendars.
- Volume of overrides and adjustments.
- Volume of time off requests with time calculations entered through Workday Time Tracking.
- Volume of time off and corrections loaded through web services.

Some general recommendations:

- Include each plan in 1 schedule only.
- Consider storing balances for complex accruals, and for those that use rolling accruals. Not doing so can adversely impact tenant results and run times.
- Ensure that period schedules are limited to only the length of time needed to load balances for workers. Creating period schedules too far in the past, and not consistently storing those balances, results in Workday taking longer to dynamically calculate balances.
- Ensure that you're using advanced lookup table calculations.
- When you use *Time Off Paid* Absence Component Related Calculations (ACRCs), these calculations need to evaluate other calculations, such as the lower limit to return a value. Often, it isn't necessary to use this ACRC if the plan is using a lower limit and the Maximum Unpaid Time Off Units Allowed validation. If possible, use the *Time Off Total* ACRC instead, as this doesn't evaluate other calculations.
- Review your security configurations. Complex configurations on Absence-related domains and business process security policies can impact access to tasks and business processes.

Integrations

Many integrations use the reporting framework to retrieve data for external web services. If balances aren't stored and the web service runs, this can impact run times of scheduled integrations. Consider the performance impact for the tenant pushing or pulling information for inbound and outbound transactions.

For outbound transactions, check whether the integration is accessing balances based on a period of time. The amount of data and timeframe can impact performance. If possible, try to limit those timeframes. If you know that an integration takes a long time to run, consider running the integration at a different time, or whether storing balances can make the integration go faster.

Workday Community: Augmenting Absence for Optimal Performance

The Next Level: Store Absence Balances

Example: Transfer Time Off Balances

This example illustrates how you can transfer time off balances when a worker's eligibility for a time off plan changes.

Context

Alan is moving from San Francisco to Copenhagen, effective 2020-02-16. He currently has time off balances on these plans:

Time Off Plan	Time Off Plan Balance
USA Paid Time Off Plan (Salaried)	103.125 hours
Floating Holiday Plan	6.25 hours
USA Sick Plan	2.5 hours
USA Vacation Plan	7.5 hours

Effective 2020-02-16, he's eligible for the DNK Vacation Plan.

You need to:

- Transfer all balances from Alan's previous time off plans to the DNK Vacation Plan.
- Pay 2 hours (0.25 days) of balance from Floating Holiday Plan to the DNK Vacation Plan.

Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Steps

1. Select Business Process > Edit Definition from the related actions menu of the *Change Job* business process.
2. Click OK.
3. On the Business Process Steps tab, add 2 rows and select these options:

Type	Specify	Group
Action	*Maintain Time Off Plan Transfer Balance*	• *Absence Administrator* • *Absence Partner*

Type	Specify	Group
Action	*Update Time Off Requests*	• *Absence Administrator* • *Absence Partner* • *Manager*

4. Click OK.
5. Access the Maintain Time Off Unit of Time Conversion Calculations task.
6. Select *Create Arithmetic Calculation* from the Hours to Days prompt.
7. On the Create Arithmetic Calculation page, enter these values:

Field	Value
Name	Hours to Days
Category	*Absence*
1st Operand	*1*
Operator	*Divide*
2nd Operand	*8*

8. Select *Create Arithmetic Calculation* from the Days to Hours prompt.
9. On the Create Arithmetic Calculation page, enter these values:

Field	Value
Name	Days to Hours
Category	*Absence*
1st Operand	*1*
Operator	*Multiply*
2nd Operand	*8*

10. Access the Edit Time Off Plan task.
11. Select *USA Paid Time Off Plan (Salaried)* from the Time Off Plan prompt.
12. Select *DNK Vacation Plan* from the Balance Transfer Default(s) prompt on the Balance tab.
13. Click OK.
14. Access the Edit Time Off Plan task.
15. Select *Floating Holiday Plan* from the Time Off Plan prompt.
16. Select *Floating Holiday Time Off* from the Time Off for Balance Transfer Adjustment prompt on the Time Off tab.
17. Click OK.
18. Launch the Start Job Change initiating action.

    Change Alan's work location from San Francisco to Copenhagen:

Field	Value
When do you want this change to take effect	*02/16/2020*
What do you want to do?	*Change Location*
Where will this person be located after this change	*Copenhagen*

Field	Value
Employee Type	*Regular*
Time Type	*Full Time*
FTE	*100%*
Company	*Global Modern Services (Denmark)*
Region	*EU-Northern*

See Reference: Change Job Initiation.

19. Access the Maintain Time Off Plan Transfer Balances task from My Tasks.
    a) Select the worker and the time off balance transfer event that results from the *Change Job* business process.
20. On the left panel, click the USA Paid Time Off Plan (Salaried) tab.

    Workday:

    - Converts *103.125 hours* to *12.890625 days*.
    - Transfers the time off balance from *USA Paid Time Off Plan (Salaried)* to the default time off plan, *DNK Vacation Plan*.
21. On the left panel, click the Floating Holiday Plan tab.
22. In the Transfer To grid, add a row for the *DNK Vacation Plan* and select these values:
    - Units: *0.53125* (4.25 hrs / 8)
    - Unit of Time: *Days*
23. Enter *0.25* (Days) Units to Payout in the Payout Adjustment section.
24. On the left panel, click the USA Sick Plan tab.
25. In the Transfer To grid, add a row for the *DNK Vacation Plan* and select these values:
    - Units: *0.3125* (2.5 hrs / 8)
    - Unit of Time: *Days*
26. On the left panel, click the USA Vacation Plan tab.
27. In the Transfer To grid, add a row for the *DNK Vacation Plan* and select these values:
    - Units: *0.9375* (7.5 hrs / 8)
    - Unit of Time: *Days*
28. Click Submit.

    If you transfer balances for more than 1 plan, Workday validates multiple transfers when you submit the time off transfer balance request.

Result

Alan's new time off plan, *DNK Vacation Plan*, contains a balance of *14.671875 days*.

Next Steps

(Optional) You can view or edit Alan's balance in his previous and new time off plans using the Maintain Time Off Override Balances task.

You can run the Maintain Accrual and Time Off Adjustments/Overrides task to view or edit the payout adjustment on the *Floating Holiday Plan*.

Tasks

Steps: Transfer Time Off Balances on page 2515

Change Location on page 824
Edit Business Processes

Example: Single Eligibility Adjustment Within a Period

Context

At Global Modern Services in the United States, full-time employees have a vacation accrual of 12 hours each 2-week period. Otherwise, they have an accrual of 6 hours each period. This example displays in-period adjustments for Alex, who goes part-time midperiod. We compare the adjustments for the accrual with both Start of Period or End of Period accrual frequency methods.

As the absence administrator, you've added the Automated Accrual Adjustment service to the Change Job business process to enable Based-on-As-of-Date accruals. You've also configured a semi-monthy time off plan and an accrual with these settings:

- The Accrual Period is 12/1/17 - 12/15/17.
- Semi-Monthly (Worker Based) Time Off Plan > Type: *Hours*
- Semi-Monthly (Worker Based) Accrual:
    - Calculation Tab:
        - Calculation: Accrual = 12 when Time Type is Full Time, otherwise Accrual = 6
        - Adjustments/Overrides Allowed: Selected
        - Options: *Based on As of Date*
        - Schedule is blank
    - Time Off Plan Overrides Tab:
        - Accrual Frequency Method: *Start of Period* or *End of Period*

Steps

1. On 12/14, you run the *Change Job* business process to convert Alex from a full-time to a part-time worker.
2. Workday processes the change in eligibility by:
    - Adjusting the period accrual from full-time to part-time for the last 2 days in the period.
    - Automatically adjusting the accrual balance at either the Start of Period or End of Period.

Result

Activity	Accrual Frequency Method: Start of Period	Accrual Frequency Method: End of Period
Eligibility Change 1: 12/14/17	***Full-Time to Part-Time***	***Full-Time to Part Time***
Full-Time Accrual	10.4 hours = (12 hrs / 15 days) * 13 days	10.4 hours = (12 hrs / 15 days) * 13 days
Part-Time Accrual	0.8 hours = (6 hrs /15 days) * 2 days	0.8 hours = (6 hours / 15 days) * 2 days
Adjusted Period Balance (Sum of 2 Accruals)	11.2 hours = 10.4 hours + 0.8 hours	11.2 hours = 10.4 hours + 0.8 hours
First Line adjustment on the Automated Adjustments tabs for Period (Adjusted Period Balance - Original Accrual)	-0.8 hours = 11.2 hours -12 hours	5.2 hours = 11.2 hours - 6 hours

Related Information

Tasks

Steps: Prorate Based-On-As-Of-Date Balances on page 2519

Example: Multiple Eligibility Adjustments Within a Period

Context

At Global Modern Services in the United States, full-time employees have a vacation accrual of 12 hours each 2-week period. Otherwise, they have an accrual of 6 hours each period. This example displays in-period adjustments for Tony, who briefly goes part-time midperiod, and then returns to full-time. We compare the adjustments for the accrual with both Start of Period or End of Period accrual frequency methods.

As the absence administrator, you've added the Automated Accrual Adjustment service to the Change Job business process to enable Based-on-As-of-Date accruals. You've also configured a semi-monthly time off plan and an accrual with these settings:

- The Accrual Period is 12/1/17 - 12/15/17.
- Semi-Monthly (Worker Based) Time Off Plan > Type: *Hours*
- Semi-Monthly (Worker Based) Accrual:
    - Calculation Tab:
        - Calculation: Accrual = 12 when Time Type is Full Time, otherwise Accrual = 6
        - Adjustments/Overrides Allowed: Selected
        - Options: *Based on As of Date*
        - Schedule is blank
    - Time Off Plan Overrides Tab:
        - Accrual Frequency Method: *Start of Period* or *End of Period*

Steps

1. On 12/11, you run the *Change Job* business process to convert Tony from a full-time to a part-time worker.

   Workday processes the change in eligibility by:

    - Adjusting his period accrual from full-time to part-time for the last 5 days in the period.
    - Automatically adjusting the accrual balance at either the Start of Period or End of Period.
2. On 12/14, Tony goes back to full-time status and you run the *Change Job* business process again.

   Workday processes the change in eligibility by:

    - Adjusting his eligibility from part-time back to full-time for the last 2 days of the period.
    - Automatically adjusting the balance for the period at either the Start of Period or End of Period.

Result

Activity	Accrual Frequency Method: Start of Period	Accrual Frequency Method: End of Period
Eligibility Change 1: 12/11/17	***Full-Time to Part Time***	***Full-Time to Part Time***
Full-Time Accrual	8.0 hours = (12 hours / 15 days) * 10 days	8.0 hours = (12 hours / 15 days) * 10 days
Part-Time Accrual	2.0 hours = (6 hours /15 days) * 5 days	2.0 hours = (6 hours /15 days) * 5 days

Activity	Accrual Frequency Method: Start of Period	Accrual Frequency Method: End of Period
Adjusted Period Balance (Sum of 2 Accruals)	10 hours = (8.0 hours + 2.0 hours)	10.0 hours = 8.0 hours + 2.0 hours
First Line adjustment on the Automated Adjustments tab. (Adjusted Period Balance - Original Accrual)	-2.0 hours = (10.0 hours - 12 hours)	4.0 hours = (10.0 hours - 6 hours)
Eligibility Change 2: 12/14/17	***Part-Time to Full-Time***	***Part-Time to Full-Time***
Full-Time Accrual	8.0 hours = (12 hours / 15 days) * 10 days	8.0 hours = (12 hours / 15 days) * 10 days
Part-Time Accrual	1.2 hours = (6 hours / 15 days) * 3 days	1.2 hours = (6 hours / 15 days) * 3 days
Full-Time Accrual	1.6 hours = (12 hours / 15 days) * 2 days	1.6 hours = (12 hours / 15 days) * 2 days
Adjusted Period Balance (Sum of 3 Accruals)	10.8 hours = 8.0 hours + 1.2 hours + 1.6 hours	10.8 hours = 8.0 hours + 1.2 hours + 1.6 hours)
Second Line Adjustment on the Automated Adjustments tab for Start of Period (Adjusted Period Balance - First Adjusted Period Balance)	0.8 hours = 10.8 hours – 10.0 hours	N/A
Second Line Adjustment on the Automated Adjustments tab for End of Period (Adjusted Period Balance - (End of Period Accrual + First Line Adjustment))	N/A	-5.2 = 10.8 hours – (12 hours + 4.0 hours)

FAQ: Time Off Balances

- What balances can Workday Absence Management track?
- How do I define balances in Workday Absence Management?
- How do I calculate and view carryover balances?
- What happens to balances when an employee is terminated?
- How do I specify the balance period for time off plan, accrual, and time off balances?
- Do I need to manually store balance values and accrual amounts?
- When does Workday automatically store balances?
- Why does the automatic process store balances as of 13 months before the run date?
- Why is the automatic process taking longer than usual?
- Will I notice anything when I use Workday while the automatic process runs?
- What happens if the automatic process fails?
- Does Workday adjust calculated balances for retroactive changes?
- How do I know if my tenant performance is impacted in terms of calculating and loading absence balances?

What balances can Workday Absence Management track?

For time off plans configured to track balances, Workday calculates and displays these balances on various pages and reports:

Balance	Description
Accrual	Accrued time off for the balance period.
Time Off	Time off taken during the balance period.
Time Off Plan	Accruals less time off for the balance period.
Carryover	Number of hours or days employees have carried over from 1 time off plan balance period to the next.

You can specify the *balance period* on the Create Time Off Plan task.

How do I define balances in Workday Absence Management?

Workday automatically creates balances for accruals, time offs, the time off plan, and carryover, when you configure a time off plan as follows:

- Enable balance tracking on the Balance tab of the Create Time Off Plan or Edit Time Off Plan task by selecting the:
    - Track Balance check box.
    - Period of time over which to accumulate balances in the Balance Period field.
- Associate the accrual and time off calculations that add to and subtract from the plan balance on the Calculation tab.

Workday automatically carries over the unused balance of employee time off plans to the next plan year. You can limit or prevent carryover by entering a carryover Limit when setting up the plan.

See Create Time Off Plans That Track Balances on page 2302.

You can use the Create Absence Balance task to calculate a balance that is different from the plan. Example: You have a balance period of a year for the time off plan, but you want 1 of the time offs to be 1 month. The Absence Balance task helps you define the time frame to calculate a balance.

How do I calculate and view carryover balances?

Workday calculates carryover balance values dynamically when you access a report or page, unless the carryover Limit defined for the time off plan is zero. For optimal performance, use the

	Schedule Time Off Calculated Balance Process task to create a schedule for calculating and storing balances on a regularly. To view carryover balances, use these reports: • Carryover Balances for Organization (by Worker) • Carryover Balances for Organization (by Carryover Date) Don't use these reports for time off plans that have a carryover date that varies by worker. Example: Plans with a balance period that is based on employee anniversary dates. See Concept: Guidelines for Storing Time Off Balances on page 2530 and Manually Schedule Storage of Time Off Balances on page 2522.
What happens to balances when an employee is terminated?	You can configure whether to forfeit or pay out balances to employees. To have Workday automatically create a termination adjustment that zeros out the employee time off plan balance, see Steps: Enable Termination Adjustments for Time Off Plans on page 2282.
How do I specify the balance period for time off plan, accrual, and time off balances?	Define the balance period for a time off plan on the Create Time Off Plan and Edit Time Off Plan tasks. Workday uses the balance period for a time off plan as the default balance period for the accrual and time off calculations that add to and subtract from the plan balance. Example: If the balance period for a vacation plan balance is year-to-date, the balance period for vacation accruals and time off is also year-to-date. If you must sum the same accrual, time off, or time off plan balance hours over a different period of time, use the Create Absence Balance task to associate the accrual, time off, and time off plan balance calculations with a different balance period. Because Workday doesn't hard-code balance periods in the calculations, you can match the same calculations with different balance periods as needed.
Do I need to manually store balance values and accrual amounts?	Workday recommends that you store balance values and accrual amounts by manually scheduling processes that you customize for your time off plans and business requirements. Workday does automatically store balances regularly, but only to ensure a minimum level of performance. As a best practice, manually configure your own processes to store balances.

	See Concept: Guidelines for Storing Time Off Balances on page 2530 and Manually Schedule Storage of Time Off Balances on page 2522.
When does Workday automatically store balances?	Workday automatically runs a process to store balances on the third Sunday of every month at 01:00:00 in your local time zone. If the most recently stored balance date of a time off plan is: • Less than 13 months before the run date: Workday doesn't store balances for that time off plan during that run. • Greater than 13 months before the run date: Workday stores balances as of 13 months before the run date and accrual amounts in the 6-month period before the stored balance date.
Why does the automatic process store balances as of 13 months before the run date?	The 13-month period allows for retroactive changes. Workday doesn't automatically recalculate balances for changes that are effective before the worker's last stored time off balance date such as: • Retroactive job changes. • Absence-related configuration. Example: Changes to accrual rates.
Why is the automatic process taking longer than usual?	Storing balances can take longer if you increase the volume or complexity of the data that Workday has to process. Example: You add time off plans for a significant number of workers and don't manually schedule processes to store balances for them. The automatic process might take noticeably longer to run than it did before.
Will I notice anything when I use Workday while the automatic process runs?	No, the automatic process runs in the background and shouldn't slow down Workday while it runs.
What happens if the automatic process fails?	Workday continuously monitors the automatic process. If a process fails, Workday: • First checks for internal issues before investigating your tenant configuration. • Communicates any necessary configuration changes to you.
Does Workday adjust calculated balances for retroactive changes?	It depends on the type of retroactive change and whether the change is effective before or after the worker's last stored balance date:

Retroactive Change Type	Effective Before Worker's Last Stored Balance Date	Effective After Worker's Last Stored Balance Date
Job changes or configuration changes to time offs, accruals, or time off plans.	No, you must manually remove the balances stored after the change and recalculate balances as of a date before the change. Example: You retroactively change Kevin's accrual rate, effective as of February 15. Workday most recently stored the balances of his time off plans as of March 1. As a result, you must manually remove his March 1 balances and recalculate his balances as of a date before February 15. See Recalculate Balances for Workers on page 2526.	Yes.
Absence-related transactions, such as time off requests or corrections.	Yes.	Not applicable. In this case, Workday doesn't need to recalculate balances.

Retroactive Change Type	Effective Before Worker's Last Stored Balance Date	Effective After Worker's Last Stored Balance Date
		Workday takes the retroactive change into account when calculating balances from the last storage point.

How do I know if my tenant performance is impacted in terms of calculating and loading absence balances?	You might notice that Absence-related landing pages, reports, and tasks are taking too long to load or complete. Example: • Viewing time off balances from your worker profile. • Requesting time off or absence. • Running pay calculations. • Generating payslips that reference absence balances. • Running integrations, EIBs, or web services that reference absence balances. You might also experience time-out errors for Absence-related tasks. When accessing reports that drive absence balances, if processing is taking too long, Workday requests that you output the results to your Drive. If you experience performance issues related to absence, use the View Schedules for Time Off Calculated Balance Process report to check whether you have schedules for storing time off balances. If not, create them. See Concept: Guidelines for Storing Time Off Balances.

Time Off Reports and Dashboards

Report Liability for Time Off

Context

Report the liability of an organization for time off balances. For the time off plans and date you select, Workday reports the plan balance and total liability for each worker. For workers paid in a different currency, Workday displays the liability in the currency paid.

Steps

1. Access the Time Off Liability report.
2. Select the Hourly Frequency, Daily Frequency, or both depending on the time off units (*Days* or *Hours*) the plans use.

   Workday uses the annualization factor defined for the selected frequency to determine the worker's hourly or daily rate for the report.

   - For plans that use days: Daily rate = worker's annual salary / annualization factor.
   - For plans that use hours: Hourly rate = worker's annual salary / annualization factor.

   Note: Workday calculates a worker's annual salary according to the same logic used by Workday Compensation.

   If you don't select an hourly or daily frequency, Workday calculates a worker's liability by multiplying the annual salary by the plan balance (hours or days).

   To view or edit frequencies and their corresponding annualization factors, use the Maintain Frequencies task.
3. Select the As of Date for the balances.

   Workday automatically populates current date.

Result

Workday reports the time off liability for the workers and time off plans that meet your selection criteria. The Organization column displays the supervisory organization for the worker's primary position.

Example

Aaron's annual salary is 50,000 USD. You can calculate the rate for Aaron's liability when you:

1. Create the Time Off Liability report for the hour-based Vacation time off plan.
2. Select an hourly frequency that has an annualization factor of 2080.

Liability rate: 50,000 / 2080 = 24.04

Enable Absence Administrator Home Worklet

Prerequisites

Security:

- *Set Up: Calendar* domain in the System functional area.
- *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.
- *Set Up: Time Off* domain in the Time Off and Leave functional area.

Context

The Absence Administrator Home worklet acts as a central location for cards that display frequently used Absence tasks and reports. You must have access to both the card and the tasks on the card. Any tasks that you don't have access to will not display.

Steps

1. From the Workday Home page, click Menu.
2. Click Add Apps.
3. In the Find Apps field, enter *Absence Admin*.
4. Add the Absence Admin app.
5. Click Back to Menu.

Concept: Time Off Results by Period Reporting

Workday provides these standard reports, enabling you to view details of workers' time offs, such as accruals, time offs taken, time off balances, paid and unpaid time off for each period, and time offs to pay out when a worker is terminated:

Report	Considerations
My Time Off Results by Period	Workers can monitor and view details of their time offs for the time off plans that they're eligible for in the period. This report displays a subset of the columns in the standard Time Off Results by Period report.
Time Off Results by Period for Workers	Managers and administrators can use this report to view details of workers' time offs for the time off plans that workers are eligible for in 1 or more periods. When managers and administrators access the report, they can select an organization, 1 or more workers, or both. Note: If you leave the Organization and Workers fields empty, the report won't display any results. This report displays a subset of the columns in the standard Time Off Results by Period report.
Time Off Results by Period	Workers, managers, and administrators can access this report to view time off details in a balance period.

You can copy the My Time Off Results by Period and Time Off Results by Period for Workers reports to create custom versions of those reports. You can also create new custom reports by using the:

- Report fields on the Worker Time Off Results by Period business object.
- Time Off Results by Period data source.
- Time Off Results by Period for Workers data source.

When you create the custom report, consider that:

- The number of report fields that you add to the report can impact the report performance.
- You can hide the Workday-delivered reports by accessing the Hide Workday Delivered Report task.

Report Output

The report output of the Time Off Results by Period for Workers and My Time Off Results by Period reports displays a maximum of 10,000 rows, first sorted alphabetically by worker, then by time off plan, followed by ascending order of period. The maximum output also applies when you schedule the reports, and when you create new custom reports using either the Time Off Results by Period or Time Off Results by Period for Workers report data sources.

When the report output returns more than 10,000 rows, Workday recommends that you run multiple reports, using the prompts to filter the output to return less than 10,000 results each, instead of running 1 large report.

For optimal performance when you access the reports, Workday recommends:

- Storing time off balances up to 13 months back, using the Schedule Time Off Calculated Balance Process task.
- Building your period schedules no more than 2 years in the future from the current period.

Reference: Time Off Reports

Standard Time Off Reports

To view the list of Workday-provided reports and their descriptions, access the Workday Standard Reports report, and select Time Off and Leave.

Reports Available as Related Actions

In addition to the standard reports, you can access several time off reports from the related actions menu of a worker. Select Time and Absence and the report name.

- View Calculated and Override Balances
- View Carryover Balances
- View Time Off
- View Time Off Balance
- View Time Off Results by Period

The View Time Off Balance report that is available as a related action on the worker profile automatically shows the data as of today's date. Therefore if you run the report for today's date, the report doesn't account for future-dated Time Off Paid Year to Date. To account for future-dated time off, workers must enter a future date.

Report Availability and Balance Tracking

These reports are available only for time off plans that track balances:

- Carryover Balance for Organization (by Carryover Date)
- Carryover Balances for Organization (by Worker)
- My Time Off Balances Details
- My Time Off Results by Period
- Time Off Results Detail
- Time Off Results by Period for Workers
- Time Off Results Summary
- View Calculated and Override Balances
- View Carryover Balances
- View Override Balances for Organization
- View Schedules for Time Off Calculated Balance Process
- View Time Off Balance
- View Time Off Results by Period
- Worker Time Off Balances Details

Use the View Time Off Balance report to review information you enabled for the balance plan visibility type. Examples:

- Past, current, or projected time off balances.
- Carryover amounts.
- Year-to-date accruals.
- Paid time off year to date.
- Time off plan balances (carryover plus year-to-date accruals minus time off taken).
- Balances that include pending events.

In time off plans, accruals can occur at the beginning or at the end of the period. The View Time Off Balance report might not record all accruals for an absence period. Depending on the As Of Date, the accrual might not be visible until the end of the period. The report displays values based on the Balance As Of Date that you enter.

Time Off and Leave Calendar

Managers can use the Time Off and Leave Calendar report to view submitted and approved requests for their direct reports 1 week at a time. If a worker has multiple positions, the manager sees requests for all positions.

To add a link to the calendar from the Team Time Off worklet, use the Configure Worklet task.

You can control whether the calendar displays time offs, leaves, or both by configuring these domains:

- *Worker Data: Time Off (Time Off Manager View)*
- *Worker Data: Leave of Absence (Leave of Absence Manager View)*

Troubleshooting Time Off

Troubleshooting: Time Off

This topic provides strategies for diagnosing and resolving these time off issues:

- Workers can't request a particular type of time off.
- Workers hired midperiod don't accrue time off.
- Workers terminated midperiod don't accrue time off.
- Workers hired and terminated midperiod within the same period don't accrue time off.
- Workday doesn't create a termination adjustment for workers terminated midperiod.
- Rehired workers or workers with multiple termination dates lose their previously accrued time off. on page 2550
- Workers with service date changes lose their previously accrued time off. on page 2550
- Workers receive an error stating that they can't submit multiple time off requests for the same date.
- Users experience slow responses when requesting time off and running time off reports.
- Workers due to terminate in the current or a future period can't view their time off plan balance. on page 2552
- Worker data includes invalid absence records. on page 2553
- Absence table tier results in unpaid time off when a lower-priority absence tier has sufficient balance. on page 2553
- Inconsistent results showing for workers on the Time Off Results by Period report on page 2553

Workers can't request a particular type of time off.

Cause: The eligibility rules are incorrect for the time off plan or the time off. Eligibility rules on the time off override eligibility rules on the plan.

Solution:

Steps

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

1. Access the Edit Time Off Plan task.
2. On the Eligibility tab, create or edit rules to be based on the period end date and period start date to cover workers hired and terminated.

Cause: The period schedule doesn’t include the period for which the worker is requesting time off.

Solution:

Steps

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

1. Access the View Period Schedule report.
2. Select Period Schedule > Edit from the related actions menu of the schedule and add the missing period.

Cause: The worker hasn't met the waiting period requirements.

Solution:

Steps

Security: *Set Up: Time Off* domain in the Time Off and Leave functional area.

1. Access the Edit Time Off task.
2. Configure an override on the Time Off Plan Overrides tab for a waiting period.

Workers hired midperiod don't accrue time off.

Cause: The eligibility rules for the time off plan include a period start date that's before the worker's hire date.

Solution:

Steps

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

1. Access the Edit Time Off Plan task.
2. On the Eligibility tab, create or edit rules to be based on the period end date to cover the new hires.

Workers terminated midperiod don't accrue time off.

Cause: The eligibility rules for the time off plan include a period end date, when terminated workers aren't eligible for the plan.

Solution:

Steps

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

1. Access the Edit Time Off Plan task.
2. On the Eligibility tab, create or edit rules to be based on the period start date to cover workers terminated midperiod.

Workers hired and terminated midperiod within the same period don't accrue time off.

Cause: Most absence calculations in Workday evaluate the time off eligibility rules as of either the:

- Period Start Date
- Period End Date

When workers are hired and terminated between those dates in the same period, they won't pass eligibility.

Solution: Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Steps

1. Access the Edit Time Off Plan task.
2. On the Eligibility tab, create or edit rules based on the worker being in the selection list to remove the need to evaluate as of the period start and end dates.

Workday doesn't create a termination adjustment for workers terminated midperiod.

Cause: Eligibility rules for the time off plan are based on period end date so the worker is no longer eligible for the plan.

Solution:

Steps

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

1. Access the Edit Time Off Plan task.
2. On the Eligibility tab, create or edit rules to be based on the period start date to cover workers terminated midperiod.

Rehired workers or workers with multiple termination dates lose their previously accrued time off.

Cause	Solution
You based a workers' accrual eligibility on their hire dates, which change when you rehire them.	Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area. 1. Access the View Accrual report and select the accrual. 2. From the related actions menu of the accrual, select Accrual > Edit. 3. On the Time Off Plan Overrides tab, update the worker eligibility rule to use a different calculation. Examples: • *Recent Hire Date as of Period End Date* • *Recent Hire Date as of Period Start Date*
You based time off plan eligibility on workers' termination dates but the worker was terminated multiple times.	Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area. 1. Access the Edit Time Off Plan task and select the time off plan. 2. On the Eligibility tab, update the eligibility rule to use a different calculation. Examples: • *Recent Termination Date based on Period End Date* • *Recent Termination Date based on Period Start Date*

Workers with service date changes lose their previously accrued time off.

Cause	Solution
You based an accrual calculation on workers' continuous service dates, which change when you rehire them.	Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area. 1. Access the View Accrual report and select the accrual. 2. From the related actions menu of the accrual, select Accrual > Edit.

Cause	Solution
	3. On the Calculation tab, drill into the calculation. 4. Update the calculation to use a different calculation. Examples: • *Recent Continuous Service Date Based on Period End Date* • *Recent Continuous Service Date based on Period Start Date*
You based an accrual scheduling rule on their seniority service dates, which change when you rehire them.	Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area. 1. Access the View Accrual report and select the accrual. 2. From the related actions menu of the accrual, select Accrual > Edit. 3. On the Calculation tab, drill into the scheduling rule in the Scheduling column. 4. Update the calculations in the scheduling rule to use a different calculation. Examples: • *Recent Seniority Date Based on Period End Date* • *Recent Seniority Date Based on Period Start Date*
You based an accrual calculation on their union seniority dates, which change when you rehire them.	Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area. 1. Access the View Accrual report and select the accrual. 2. From the related actions menu of the accrual, select Accrual > Edit. 3. On the Calculation tab, drill into the calculation. 4. Update the calculation to use a different calculation. Examples: • *Recent Union Seniority Date Based on Period End Date* • *Recent Union Seniority Date Based on Period Start Date*
You based time off plan eligibility on workers' time off service dates.	Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area. 1. Access the Edit Time Off Plan task and select the time off plan.

Cause	Solution
	2. On the Eligibility tab, update the eligibility rule to use a different calculation. Examples: • *Recent Time Off Service Date Based on Period End Date* • *Recent Time Off Service Date Based on Period Start Date*

Workers receive an error stating that they can't submit multiple time off requests for the same date.

Cause: The same recurring event occurs in more than 1 holiday calendar for the worker.

Solution: The worker has more than 1 holiday calendar. Set up the holiday as a recurring event on 1 calendar and as a one-time event on another.

Example: You set up New Year's Day as a recurring event on the 2011 calendar and a one-time event on a 2012 calendar. As a result, the worker receives the sum of the time off from the 2 events.

Steps

Security: *Set Up: Calendar* domain in the System functional area.

1. Access the View Holiday Calendar report.
2. Find the holiday in the Calendar Event column and review the Recurring Event column.
3. Delete the one-time event by selecting Calendar Event > Delete from the related actions menu of the holiday name.

Cause: The worker has 1 holiday calendar with the same holiday listed twice.

Solution:

Steps

Security: *Set Up: Calendar* domain in the System functional area.

1. Access the View Holiday Calendar report.
2. Select Calendar Event > Delete from the related actions menu of the holiday name to delete 1 of the holiday events.

Users experience slow responses when requesting time off and running time off reports.

Cause: You're not storing calculated time off balances on a regular basis.

Solution:

Steps

Security: *Process: Calculated Balances (Run)* domain in the Time Off and Leave functional area.

1. Access the Schedule Time Off Calculated Balance Process task.
2. Run or schedule the process that calculates and stores balances for time off plans.

Workers due to terminate in the current or a future period can't view their time off plan balance.

Cause: Workers don't meet the visibility conditions for the time off plan.

Solution:

Steps

Security: These domains in the Time Off and Leave functional area:

- *Set Up: Time Off*
- *Set Up: Time Off (Calculations - Absence Specific)*

1. Access the Edit Time Off Plan task.
2. Change the Balance Visibility Type for the plan.

Worker data includes invalid absence records.

Cause: This problem might occur when there are unsubmitted time off corrections for workers.

Solution:

Steps

Security: *Set Up: Time Off* domain in the Time Off and Leave functional area.

1. Access the Cleanup Invalid Absence Data task.
2. Update or remove invalid absence data.

   Example: You can delete unsubmitted time off corrections.

Absence table tier results in unpaid time off when a lower-priority absence tier has sufficient balance.

Cause: Workday doesn't automatically reevaluate absence table tiers in response to changes in eligibility rules, or adjustments and overrides on accrual and time off balances.

Solution:

Steps

Security: *Set Up: Time Off* domain in the Time Off and Leave functional area.

1. Access the Reevaluate Absence Table Time Off Entries task.
2. Select 1 or more workers or organizations and the absence table that you want to reevaluate. You can also select an as-of date from which to reevalulate time off entries.

   Note: You can only reevaluate and correct approved time off for specific workers if:

   - You've permission to correct their time off, based on the *Correct Time Off* business process security policy.
   - You're a member of a role-based security group with contextual access for the worker.

Inconsistent results showing for workers on the Time Off Results by Period report

Cause: Workers aren't eligible for time off plans as of today. When you access the Time Off Results by Period report, you might find that:

- You can only select 1 time off plan from the Time Off Plans prompt for a future date even when workers are eligible for multiple plans on future dates. Example: On 2022-01-01, a worker isn't eligible for *Time Off Plan A* and *Time Off Plan B* until 2025-01-01. However, Workday only displays *Time Off Plan A* in the Time Off Plans prompt.
- Workday displays an error message indicating that the request timed out. Searching for a time off plan or period took too long and you need to refine your search.

Solution: Workday calculates time off balances dynamically. Period schedules for more than 2 years in the future can cause performance issues. Workday doesn't support future-dated eligibility more than 2 years in the future on the Time Off Results by Period report. This limitation is due to the number of calculations that Workday needs to resolve to view balances more than 2 years in advance.

For optimal performance, Workday recommends that you build period schedules no more than 2 years in the future from the current period.

Steps

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

1. Access the Create Period Schedule task.
2. Select the period Frequency.
3. Select a Usage of *Absence*.
4. Enter the Period Start Date and the Period End Date for each period.
5. Add periods for the current and next year.
6. Assign the period schedule to 1 or more time off plans.

Leave of Absence

Set Up Leave of Absence

Setup Considerations: Leave of Absence

You can use this topic to help make decisions when planning your configuration and use of leave of absence functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday leave of absence functionality enables:

- Workers to record when they're taking leave from work with an estimated or flexible end date.

- Administrators to manage the impacts a leave of absence can have on other areas of Workday and other systems. Example: Headcount Reporting or Payroll.

Business Benefits

You can use Workday leave of absence functionality to:

- Track costs as you can use reports to view how much absenteeism is costing your organization and calculate your absence liability.
- Minimize risks as you ensure that your leave policies are consistent with country-specific requirements.
- Improve efficiency in your organization as managers can use reports, predict trends, and plan resources accordingly.
- Integrate with a Payroll solution to enable you to process payments to workers on leave.
- Streamline the process of moving workers from one leave type to another. Example: Paid to unpaid maternity leave.
- Create a variety of leave types and families that can suit the specific requirements of your organization. This functionality improves the user experience as they can quickly find the correct leave type for their request.

Use Cases

- Enable workers to view and request some types of leave, but not others.
- Place workers on, and return them from, a leave of absence.
- Request documentation, other required information, or both from workers when they enter leave requests.
- Import large volumes of leave of absence events into Workday.

Questions to Consider

When deciding if you should create a time off or leave of absence, consider:

Question	Consideration
When do you expect your workers to return to work?	You can create: • A time off for absences that have a short duration with a known return to work date. Workday creates a time off request for each day a worker expects to be off work. Example: Use annual leave for a vacation with a planned return date. • A leave of absence for longer durations, or for time away from work with an estimated end date. Example: Use parental leave for new parents.
How do you want your workers status to display?	You can create: • A time off if you want your workers' status to remain unchanged. • A leave of absence if you want your worker's status to display as *On Leave*. You can configure if this status displays on each leave type. Example: You can configure Workday to hide workers on leave from search.

Question	Consideration
How do you want to restrict a worker's absence balance?	You can create: • A time off if you want your worker to accrue their balance over time. Example: Paid sick leave can accrue over a period to enable workers to take up to 10 days per year. • A leave of absence if no accrual is necessary. Leave Types have an entitlement that each eligible worker can use. Example: You grant parental leave based on your worker's eligibility and company requirements.
How do you want your workers to return to work?	You can create: • A time off if you want a worker to return to work without their manager approving it. • A leave of absence if managers must ensure that a worker's leave of absence ends before they can return to work. A worker's status displays as *On Leave* until their manager returns them to work.
What periods do you use when tracking absences?	You can create: • A time off if you want your workers to accrue their balance within a specified period. The period schedule used for Time Off aligns with the schedule you use for Payroll. • A leave of absence if the balance period is rolling backwards or forwards from the effective date of the leave, or first date of the leave.

When setting up leaves of absence, consider:

Question	Consideration
What details do you want your workers to enter when requesting a leave of absence?	When setting up leave of absence types, you can: • Create rules to display what data is necessary for each leave type request. Managers can use this information to ensure that their workers complete their requests correctly. • Include forms that your organization requires to secure reimbursement from the government. Example: Workday sends government forms to a worker who enters a parental leave request. • Configure reasons for workers to select when they're entering an absence request. You can view the reason usage count in your reports to predict trends and plan resources.

Question	Consideration
	• Configure additional fields that a worker completes when entering a leave of absence request. You can use Workday-delivered fields or add custom fields and label overrides for these fields. Example: Child's Birth Date. You can configure your leave type to make these fields obligatory. You can also hide these fields from a worker. When a reviewer checks the request, Workday displays the hidden fields. If the hidden field requires a value, the reviewer enters the value.
How do you want to pay your workers when they are on leave?	You can: • Configure cascading leaves of absence that have different rates of pay over the duration of the leaves. • Select which leaves of absence have a payroll effect. Your payroll administrator can configure rules for how you pay your worker who is on leave. You can create separate leave types when a worker changes from 1 payment rate to a different rate. You can also create cascading leaves to move a worker from 1 leave to the other when their balance expires.
Which leave types do you want to make available to your workers?	You can create eligibility rules to restrict access to leave types. You can also add leave types to security segments to ensure that workers can only view leave types for which they're eligible. Example: Restrict eligibility to full-time workers, or require that workers work at least 250 hours in the last 12 months.
How do you want to display leave types?	You can group leave types together in leave families. Workers can select from relevant leave types in these categories when entering a leave request. This functionality improves the user experience as they can quickly find the correct leave type for their request. Workday delivers country-specific leave families and their respective leave types. Example: Create 1 leave family called *Company Leave* for disability and bereavement leave, and another called *Family Leave* for maternity and parental care leaves. You can also group leave types for a specific country or region together in a leave family.
How do you want to inform your workers about their request status?	When you set up leaves of absence, workers can use self-service tasks to view the status of their requests. You can also create validation messages to alert workers as they enter their request. Example: You can display an alert when

Question	Consideration
	workers enter leave requests that exceed their leave balance.
Which nonwork days do you want to include in your leave balances?	You can configure which days to include in your workers leave balances. Example: A worker requests study leave over months in which there are national holidays. You can configure your leave type to include, or exclude, holidays when deducting the leave balance.
How do your workers return to work after a leave of absence?	You can configure Workday to alert your managers when their workers are returning from leave. Workers can send their own return from leave requests using the employee self-service tasks. Workday also increases efficiency by enabling you to return a group of workers from leave.
How do you identify which workers are on leave?	You can display *(On Leave)* after the worker's name. If your worker has more than 1 position and is taking leave from one, you can configure the notation to display beside that position. Example: A worker holds 3 positions: Professor, researcher, and physician. All of the leave types they're eligible for are set to display the *(On Leave)* status if: • They take a worker-based leave of absence *(On Leave)* displays after their name and 3 positions. • They take a position-based leave from their professor position only *(On Leave)* displays after the professor position only.
How do you want to view the number of days a worker takes on leave?	You can create a report that displays all approved leaves for a worker. You can configure this report to display the number of days the worker is absent in a specific time frame. Example: Create a report to display the total number of sick days a worker takes over 6 months.
How do you want to correct approved leave of absence requests?	You can configure your business processes to enable managers to correct an approved leave of, or return from, absence request. Corrections trigger a notification to the Payroll Interface Partner of the worker's organization if the leave type has a payroll effect.
How do you want to create country-specific leave types?	You can use the Global Library report to view high-level descriptions of sample leave types.
How do you want to process entitlements during a leave of absence?	You can calculate entitlements from a leave family or a specific leave type. If the leave type is linked to other leave types or time offs, you can display the combined entitlement balance for the related leaves and time offs.

Question	Consideration
If you allow workers to go on partial leave of absence, how do you want them to request the leave?	You can configure leave types that: • Enable workers to enter a leave percentage when requesting leave. • Prorate leave units taken for workers when they request leave of absence, based on the leave percentage that they enter on the request.
How do you want your workers to accrue time off while on leave?	You can suspend a worker's accrual when they are on leave. Alternatively you can prorate the accrual for the period in which the worker is on leave.

Recommendations

Note:

In September 2025, we plan to retire these legacy reports and tasks:

- Absence Calendar
- Place Worker on Leave
- Request Leave of Absence
- Time Off and Leave Calendar
- Time Off Calendar

To aid in your transition to Absence Calendar Experience on desktop and mobile, Workday recommends that you familiarize yourself and groups of users by configuring the initiating actions for the experience instead. See Steps: Set Up the Absence Calendar Experience on page 2243.

Workday recommends that you:

- Avoid configuring your accrual for a balance period when a worker is on leave, when you create a time off.
- Create validations for leave types that track balances. These validations alert workers that they might not have the balance to complete their leave of absence request.
- Use leave reasons and additional data functionality to provide necessary leave data to assist administration.

Requirements

Ensure that leave periods don't overlap for cascading leaves.

Limitations

- Cascading leaves end one leave before starting the next one. It isn’t a continuous leave. This can cause issues when generating reports as it can display that the worker has taken more than 1 leave. Consider returning a worker from their existing leave, so that the subsequent cascaded leave is the only 1 present.
- Workers must enter at least 1 day for a leave of absence request.
- For privacy, you can't directly reference report fields related to the Leave Request Event business object in Workday Payroll calculations, such as the leave reason.
- Workday Payroll doesn't support retro-pay calculation for multiple returns from leave in a single event. To return workers or correct returns from multiple leave request events, select only 1 leave

request event at a time. Workday creates a separate leave return event for each leave request event. See:

- Correct Return from Leave of Absence Requests
- Return Workers from Leave

- Workday Payroll for Canada doesn't support the ROE feature with cascading leaves of absence.
- Workday Payroll for the UK doesn't support cascading leave types linked to statutory payments.
- The maximum duration that you can set for a leave type is 50 years.
- Leave types don't support entitlements with an accrual. Set entitlements at the beginning of the leave event to deduct during the balance period of the leave type.
- Use the same unit of time for any intermittent time off associated with a corresponding leave type.
- Workday doesn't generate absence calculations with leave types that correspond with payroll calculations.
- Workers remain *On Leave* after termination, unless returned from leave during the termination process.

Tenant Setup

Select Allow Job Overlap for Leave to overlap workers in the same position when the incumbent starts a leave of absence. This setting automatically applies to any position filled by a worker who goes on leave.

Security

- Users with access to the:
  - *Set Up: Leave of Absence* domain in the Time Off and Leave functional area can create types of leave. They can also control access to the leave types by creating rules.
  - *Set Up: Maintain Additional Fields* domain in the System functional area can add, change, remove, and view additional fields for Absence in Workday.
- You can create eligibility rules to restrict access to leave types. You can also add leave types to security segments to ensure that eligible workers can view leave types.
- Configure the *Request Leave of Absence* business process to enable users to place other workers on leave or correct leave requests.
- Users with access to an initiating security group for the *Request Return from Leave of Absence* business process can return workers from a leave of absence.

Business Processes

Business Process	Considerations
Absence Calendar (Legacy)	The *Enter Absence* initiating action on the legacy *Absence Calendar* business process security policy enables secured workers to use their absence calendar to place other workers on leave.
Request Leave Of Absence	You can add steps to this business process to: • Request supporting documentation when a worker is entering a request. • Dynamically generate editable documents when a worker is entering a request. • Configure who can approve leave requests and correct leave end dates if they change. • Enable users to request a change to a worker's compensation, benefits, or both, when they take a leave of absence or return from leave.

Business Process	Considerations
	• Enable users to bulk load leave of absence events.
Request Return from Leave of Absence	You can add steps to this business process to: • Enable workers to request a return from a leave of absence on behalf of someone. • Enable users to update service dates manually, such as the continuous service date. • Enable users to request a change to the compensation and/ or benefits of a worker when the worker takes a leave of absence or returns from leave. • Enable users to bulk load request return from leave of absence events. • Enable editable documents to be dynamically generated when a worker requests a return from a leave of absence.
Termination	Add automated leave processing after the completion step to enable you to terminate workers while they're on leave.

Reporting

Reports or Dashboards	Considerations
All Leave Families	Use this report to view all the leave families that you can use to group leave types so that workers can select them when requesting leave of absence.
All Leave Type Security Segments View Leave Type Security Segment	Use these reports to view the leave types to which workers have access.
Enter Absence	Use this report to view the leave types that the worker is eligible for on the first day of the leave request.
Leave Results for Worker (includes leave balance) Leave Results for Organization (includes leave balances) Maintain Worker Documents	Use these reports to predict trends and plan for costs of workers being on a leave of absence.
Team Absence Calendar	Use this report to analyze absence requests so that you can better manage team resources.
View Leave Family	Use this report to view a specific leave of absence family. Details include: • Each leave type that is part of the leave family. • If the leave family is active. • Its availability to workers in each location. • Effects on payroll processing.

Reports or Dashboards	Considerations
	• Usage count.
View Leave of Absence Rule	View the condition rules that make up a specific leave of absence rule.
View Leave Type	Use this report to view the eligibility criteria and leave impacts for a specific leave type.
View Worker Leave of Absence Eligibility by Organization	Use this report to view leave of absence eligibility details for active workers within the selected organizations, as of the current day.
Workers on Leave	You can identify workers on leave and check that any existing ongoing payments they have are still applicable during the leave.
Workers Returned from Leave Workers Returning from Leave	You can identify workers that returned or are returning from leave and check that you've correctly configured payroll for them.

Integrations

Web Services	Consideration
Get Leave Families *Put Leave Family*	Use these web services to view existing, or upload your own leave families.
Get Leave Type Reasons *Put Leave Type Reason*	Use these web services to view existing, or upload your own reasons for a leave of absence.
Get Leave Types *Put Leave Type*	Use these web services to view existing, or upload your own leave types.
Import Request Leave of Absence Events	Use this web service to: • Load large volumes of request leave of absence events in batches. • Correct multiple request leave of absence events for workers. • Optionally, add a comment for each request leave of absence event.
Import Request Return from Leave of Absence Events	Use this web service to: • Load large volumes of request return from leave of absence events in batches. • Correct multiple request return from leave of absence events for workers. • Add a comment for each request return from leave of absence event.
Request Leave of Absence	Use to enter new, or correct existing, leave of absence requests.
Request Return from Leave of Absence	Use this web service to request a worker's return to work from a leave of absence.

Connections and Touchpoints

Touchpoint	Consideration
Benefits	Workday Benefits can reference leaves of absences to change the employee's benefit elections, report a life event, and update the benefit elections accordingly.
Payroll	When a worker is on a leave with payroll effect enabled, Workday processes them as on leave. Workday processes workers with other leave types as active. You can define different payroll processing rules for workers who are on leave. Workday Payroll also provides several features that enable you to meet regulatory reporting requirements for workers on leave.
Talent	Workday Talent removes workers from the type of leave from the employee reviews and feedback processes.
Time Off	Workday can suspend accruals when a worker is on a leave of absence.
Time Tracking	Workers can enter and submit time through Workday Time Tracking while they're on leave. You can also create a time validation to prevent submission.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

The Next Level: PATT Touchpoints with Assignments

Examples

Example: Set Up Parental Leave on page 2591

Steps: Set Up Leave of Absence

Prerequisites

To create position-based leave types, enable multiple jobs functionality in your Workday tenant.

Review setup considerations for leaves of absence.

Context

When you set up leaves of absence, workers can use self-service pages to enter leave of absence requests and view the status of their requests. Managers and administrators can place workers on leave, return workers from leave, and track leave.

Steps

1. Edit Business Processes.
   a) To send leave requests for review and approval, configure these business processes:
      - *Request Leave of Absence*
      - *Request Return from Leave of Absence*
   b) (Optional) To dynamically generate editable documents when workers request leave of absence or request return from leave of absence, add a *Generate Document* action step to the *Request Leave of Absence* or *Request Return from Leave of Absence* business process. See Steps: Set Up Document Generation for Absence Business Processes on page 2230.
2. Access the Maintain Leave Families task.

   To set up leave type categories that you can select when entering a leave request and use for tracking, create leave of absence families.

   Example: Create a leave family named:

   - Company Leave for disability and bereavement leave.
   - Family Leave for maternity and parental care leaves.

   Security: *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.
3. (Optional) Create Leave of Absence Rules on page 2566.
4. Create Leave Types on page 2568.
5. Configure the Absence dashboard to track absence reports, manager self-service tasks, and analytics.

   See Steps: Set Up Dashboards and Landing Pages.

The Next Level: PATT Touchpoints with Assignments

Steps: Set Up Segmented Security for Leave Types

Prerequisites

Create leave types.

Context

Restrict members of segment-based security groups to designated leave types so that they can only select specific leave types when:

- Requesting or entering leave of absence.
- Correcting leave events.
- Requesting or entering return from leave of absence.

Note: You can ensure that members of a security group can select all leave types, including types restricted to segment-based security groups. Secure the group directly to the *Access Leave Type (Segmented)* domain.

Steps

1. Access the Domain Security Policies for Functional Area report .

   Review the segment-based security groups on the *Access Leave Type (Segmented)* domain security policy. This domain enables you to configure access to security segments for leave types.

   If not already enabled, select Domain Security Policy > Enable from the related actions menu of the security policy for the *Access Leave Type (Segmented)* domain in the Time Off and Leave functional area.

   Security: The *Security Activation* and *Security Configuration* domains in the System functional area.
2. Access the Create Leave Type Security Segment task.

   Create a leave type security segment that defines the group of restricted leave types.

   In the Leave Types prompt, select the leave types that comprise the segment.

   Security: *Set Up: Leave of Absence* domain in Time Off and Leave functional area.
3. Create Segment-Based Security Groups.

   Create a segment-based security group and associate it to the leave type segment.

   a) In the Security Groups prompt, select the groups that have access to the leave types.
   b) In the Access to Segments prompt, select the leave type security segments to which members of the specified groups have access.
4. Edit Domain Security Policies.

   a) Add the segment-based security groups to the *Access Leave Type (Segmented)* domain in the Time Off and Leave functional area.
   b) If necessary, remove the security groups from the domain security policy that are also in the segment-based security group.

      If you don't remove the security groups:

      - The domain-level permissions override the segment-based permissions.
      - Members of security groups secured directly to the domain can access all leave types.

      If the *Access Leave Type (Segmented)* domain security policy includes security groups that aren't associated with a leave type segment, Workday doesn't apply any security segment restrictions to users in the security group, even if they're also in a security group that's associated with another leave type segment. Example: Your company has 4 leave types: *Adoption*, *Parental*, *Maternity*, and *Sabbatical*. You configure these segment-based security groups and add them to the domain.

Segment-Based Security Group	Access Leave Type (Segmented) Domain Access	Associated with a Segment	Leave Type	Considerations
Group A - Administrators	Yes	No	N/A	Users can access all leave types when correcting leave events, requesting leave of absence, or requesting return from leave of absence. This overrides

Segment-Based Security Group	Access Leave Type (Segmented) Domain Access	Associated with a Segment	Leave Type	Considerations
				the *Group B - Employee as Self* security configuration.
Group B - Employee as Self	Yes	Yes	*Adoption*, *Parental*, and *Maternity*.	Users can access only the *Adoption*, *Parental*, and *Maternity* leave types. They can't access the *Sabbatical* leave type.

5. Activate Pending Authentication Policy Changes.

Result

When members of the segment-based security groups enter or request leaves of absence, they can only select the leave types that comprise the leave type security segment. The members can also correct only requests with the leave types to which they have security access.

The All Leave Type Security Segments report enables you to see the leave types to which segment-based security groups have access.

Related Information
Reference
The Next Level: Using Absence to Record Furloughed Leave

Create Leave of Absence Rules

Prerequisites

Security: *Set Up: Leave of Absence* domain in Time Off and Leave functional area.

Context

You can create leave of absence rules to define:

- Worker eligibility for leave types.
- Validations that prevent the submission of invalid leave requests.

When you don't configure leave of absence rules, you can only limit eligibility for a leave type to workers in selected countries or regions.

Eligibility rules apply when entering leave requests. The Leave Type prompt displays only those leave types that the worker is eligible for on the start date of the request. Example: Restrict eligibility to full-time workers, or require that workers work at least 1,250 hours in the last 12 months.

Validation rules apply when submitting leave requests. Workday applies the rule to each day of the requested leave. Example: The length of a worker's requested leave can't exceed the maximum number of days allowed each year. If the validation fails, Workday issues a warning or error and sets requests that are in error to a *Save for Later* status.

Use report fields or create calculated fields to build rules. You can associate the same leave of absence rule with multiple leave types.

Steps

1. Access the Create Leave of Absence Rule task.
2. Enter the Description, which Workday displays in the validation warning or error message.
3. As you complete the task, consider:

Field	Description
Source External Field or Condition Rule	Select a report field or calculated field. Fields available are based on these business objects: • *Worker* • *Leave Request Event* • *Leave Type* • *Position* For eligibility rules, select fields based on the *Worker* or *Position* business object only, as Workday applies these rules before the leave type or event information is known. Pay attention to names and descriptions when selecting values. Example: *Worker*, *Job*, *Primary Job*, and *Across Jobs* indicate whether a field resolves for a worker, a worker's primary job, or all jobs. In general, when a field related to a position is called from a worker-based leave type, it resolves based on the primary position. If called from a position-based leave type, it resolves based on the applicable position.
Relational Operator	The type of report field or calculated field determines available options.
Comparison Type	Specify whether to compare the source to another field or to a value you enter.
Comparison Value	Select a comparison field or enter the value to compare to the source.
Order	Use this column to control the processing order for the statements.

4. When 2 or more rows exist, set the *And* or *Or* option at the beginning of each statement to control how the statement is used with the line above.

   All conditions in an expression connected by *And* must be true for the expression to be true. Any of the conditions in an expression connected by *Or* can be true for the expression to be true.
5. Use the parentheses columns when you've 3 or more rows and a combination of Ands and Ors.

   Example: To have (a and b) or c, use:

   - The opening parenthesis at the beginning of statement a.
   - *And* before statement b
   - The closing parenthesis at the end of statement b.
   - *Or* at the beginning of statement c.

6. Click OK.
7. (Optional) Define a message to display in place of the rule description when the rule is used to validate leave requests:
    a. From the related actions menu of the rule select Validation > Configure Validation Message.
    b. Specify if the message begins with Text or a value from an External Field.
    c. Add rows to enter additional information for the message.

    Workday displays the concatenated text in validation error or warning messages.

Example

When workers enter leave requests that exceed their leave balance, you want to display this message:

The leave balance for <leave type> is exceeded with this leave request. The leave balance prior to this request was <# of units>.

To configure the message, enter this message in the Validation Message section of the Configure Validation Message page:

Text/External Field (Radio Button)	Entry
Text	*The leave balance for*
External Field	*Leave Type* (report field based on Leave Request Event)
Text	*is exceeded with this leave request.*
Text	*The leave balance prior to this request was*
External Field	*Outstanding Leave Balance for Leave Type this Balance Year (Prior to Current Leave)* (report field based on Coordinated Leave/Time Off)
External Field	*Unit of Time for Leave Tracking* (report field based on Leave Request Event)
Text	. (dot or period character)

Next Steps

After you define leave of absence rules, you can:

- Use the Create Leave Type or Edit Leave Type task to associate the rules with leave types, either as additional eligibility criteria or to perform data entry validation.
- Review the rules using the View Leave of Absence Rule report or the All Condition Rules report.

    When accessing the All Condition Rules report, select *Leave of Absence Rule* as a filter.

Related Information
Examples
Example: Create Leave of Absence Rules for Leave Type on page 2578
Example: Require Workers to Use Time Off Before FMLA on page 2579

Create Leave Types

Prerequisites

- Create leave of absence families.
- Create leave of absence rules if you want to define worker eligibility requirements or validations for leave requests.

- Security: *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.

Context

A leave type defines the set of rules that apply to a specific type of leave, such as jury duty or Family or Medical Leave of Absence (FMLA). It identifies:

- The leave of absence family.
- The unit of time for leave requests.
- Worker eligibility, validation, and other rules.
- Whether to track balances.

If your Workday tenant is enabled for multiple jobs, the leave type also indicates whether the leave type is position-based.

You can link a leave type to other leave types and time offs so that Workday calculates combined balances for leave.

Steps

1. Access the Create Leave Type task.
2. As you complete the task, consider:

Field	Description
Leave Type	Enter a name that represents the reason for the leave.
Leave Type ID	Web service API and EIB uploads use the ID. If you leave this field empty, Workday automatically assigns a value.
Position Based	The check box displays if your Workday tenant is configured to support multiple jobs on the Edit Tenant Setup - HCM task (Position Setup Options field). Workday enables you to configure multiple jobs positions for: • Contingent workers. • Employees. Select to track leaves of absence for workers by position. You can't change this setting once leave requests or other leave data exists. When a leave type is position-based, you must provide the worker's position when entering a leave request. Balances are also position-based. Typically, eligibility rules, validations, supporting data, and entitlement calculations apply to the worker's position as well. However, when defining these rules you can instead use report fields or calculated fields that refer to the primary job or across all jobs. Leave the check box unselected to specify that the leave type and balances are worker-based. Eligibility rules, validations, supporting data, and entitlement calculations typically apply

Field	Description
	to the worker's primary position, unless you define these rules to look across all jobs.
Leave Family	Specify the leave types for workers to select while requesting a leave of absence.
Inactive	Makes the leave type unavailable for use. When selected, workers can't request or be placed on inactive leave types. Standard reports continue to track workers already on leave and display details for the leave type.
Leave Payment Type	(Optional) Link the leave type to a Workday-delivered earning for a statutory payment type so that Workday Payroll can process statutory payments based on the leave type. Examples: • Maternity leave payment type for Payroll for the UK. • Part-time therapeutic leaves or reclassification leaves for Payroll for France.
On Leave Status Visibility Type	While a worker is on leave, Workday displays the *(On Leave)* status next to the worker's name. Select whether the status displays: • Always. • Never. • Only to users who are authorized to view the worker's leave of absence.

3. Define Eligibility Criteria to control whether the leave type is available for selection when entering a leave request:

Field	Description
Country/Country Region	Restricts the availability of the leave type to selected locations. The worker’s work address on the first day of the leave must be in one of the selected locations. If empty, the leave type is available in all locations.
Additional Criteria	Select leave of absence rules that define additional criteria workers must meet on the first day of the requested leave to be eligible for the leave. Workers must meet all additional criteria.
Enabled for Worker Type	Specify whether the leave type is available for employees, contingent workers, or all workers.

4. In the Leave Impacts section, specify how a leave affects areas outside of Workday Absence Management.

   Examples:

   - To stop paying workers who are on this leave, select Payroll Effect. If you're using Workday Payroll, you can continue to pay workers on leave according to run category criteria.
   - To adjust seniority calculation for Payroll for France, select Continuous Service Accrual Effect. You can later map the leave type to a parental leave or parental presence value on the Maintain Absence Mapping for Payroll France task. Workday deducts half of the number of days on leave, rounded down to the nearest day, from the adjusted seniority calculation.
5. On the Validations / Supporting Data tab, select the validation rules to apply to leave of absence requests:

Field	Description
Leave of Absence Rule	When a worker submits a request or saves the request for later, Workday: • Applies the rules to each day of the requested leave. • Issues a warning if a request is invalid. • Routes requests with warnings for review. Workday generates errors or warnings when leave of absence requests don't meet the validation conditions.
Do Not Allow Request	Select this check box to issue an error for invalid requests instead of a warning. Workday doesn't allow the request and requests with errors remain in a *Save for Later* status until deleted or corrected. Don't select this check box to issue a warning for invalid requests but allow the request.
Allow Override for Entry on Behalf of Worker	Enable workers placing a request on behalf of another worker to enter the request regardless of the error condition. In this case, both errors and warnings display as warnings.

6. Identify any Supporting Data to display to workers on the request confirmation page or when reviewing a request.

   Supporting data provides information relevant to the request that can help workers understand the reason for a warning or error. The information can also help reviewers determine reasons for approving or rejecting requests.

Field	Description
Value to Display	Identify the types of data to display, such as: • Months of service for the worker. • Actual hours worked. • Available leave balances as of the first day of the leave. Select from the report fields or calculated fields for the *Worker*, *Leave of Absence Type*, *Leave Request Event*, or *Position* business object.

Field	Description
	Workday retrieves supporting data based on the worker as of the first day of the leave. If the leave type is linked to other leave types or time offs, you can display the combined entitlement balance for the related leaves and time offs.
Label Override	Enter text to display instead of the name of the report field or calculated field you selected in the Value to Display field.
Hide from Worker Self Service	Prevent supporting information from displaying on self-service pages.

7. On the Balance/Leave Taken tab, configure balance tracking options.
   a) Provide information Workday needs to calculate balances for leave taken:

Field	Description
Track Balance	Select to track leave balances for workers. If balance tracking doesn't apply, complete only these fields on this tab: • Unit of Time • Days to Include
Balance Calendar Start Date Balance Calendar End Date	Select calculated fields that define the start and end dates for the balance calendar.
Unit of Time	Select *Days* or *Hours* as the unit of time for leave requests and entitlement balances.
Calendar Display	Select from these options to specify how to display leave entitlement balances on the calendar: • *Do Not Show Balance* • *Family and Type* • *Type*

   b) Define Leave Entitlement options:

Field	Description
Entitlement per Event	Grant workers the full entitlement for every request for this leave type, regardless of the timing of the requests. When you select this option, you can link multiple requests for this leave type within the same balance calendar so that the requests draw from the same entitlement balance.
Entitlement Units	Select from these options to specify whether there's a maximum number of days or hours available to workers for this leave type:

Field	Description
	• *Numeric*: Enter a literal numeric value. • *Calculation*: Select a calculated field that's based on the *Worker* or *Position* object. • *None of the above*.

c) Identify Days to Include:

This field determines which days to count as taken within each leave request and, for leaves tracked in hours, determines the number of hours to count for each day taken based on the position or worker's scheduled weekly hours. This field doesn't apply to other leaves in the same family or to time offs identified in the Intermittent Time Offs field. The Days to Include value on the time off plan controls the intermittent time offs.

Select the Configure Days to Include option to display the Include Holidays from Holiday Calendar check box and Included Days field.

d) If applicable, identify coordinated leave types and time offs.

Workday reduces the balance for this leave type by units taken for the leave types and time offs you select.

If your Workday tenant is configured to support multiple jobs, these rules apply:

- If the leave type is position-based and a coordinated leave or time off is worker-based, units taken for worker-based absences reduce the leave balance for each of a worker's positions.
- If the leave type is worker-based and a coordinated leave or time off is position-based, units taken for each position reduce the worker's leave balance.

Field	Description
Include all Leave Types from Leave Family	Select to include units taken for all other leave types in the same family as units taken for this leave type. Families containing all leaves types with the same unit of time as the leave type you're defining are available for selection.
Additional Leave Types	Select other leave types that count as units taken for this leave type. Configure any leave types that you select in this field to reference the leave type you're defining.
Intermittent Time Offs	Select all time offs that count as units taken for this leave type. You can associate a time off with only 1 leave type. Eligibility and validation rules defined for the leave also apply to the time offs. Intermittent time offs subtract from the leave balance without having the employee on a leave through the *Request Leave of Absence* business process.

e) (Optional) Select the Prorate by Leave Percentage check box to enable proration of leave units on leave requests by the Leave Percentage additional field on the leave type. Workday reduces the balance entitlement by the prorated amount when workers take leave that's not full time.

Note: You need to configure Absence Calendar Experience if you enable proration.

8. (Optional) To have the end of a worker's leave trigger a request for another type of leave, select the Next Leave Type on the Cascading Leave tab.

   Example: If you're defining a short-term leave type and you want it to cascade to a long-term leave type, select a long-term leave type. Example: Select Disability > USA Long Term Disability.

   Your selection depends on whether this leave type is worker-based or position-based.

   Workday generates a request to place the worker on the next leave type at the end of the current leave if the:

   - *Request Leave of Absence* business process is configured for cascading leave.
   - Employee meets the eligibility requirements for the next leave type.

   Note: Workday Payroll for the UK doesn't support cascading leave types that are linked to statutory payments, except for Statutory Sick Pay.
9. (Optional) On the Additional Fields tab, configure:

Field	Description
Leave Reasons	Select Leave Reason Required if workers must select a reason when entering a request. The Reason ID is used in web service API and EIB uploads of leave requests. Workday updates the Usage Count each time a request includes the leave reason. When you make a reason Inactive, it's hidden on requests that are pending approval.
Additional Fields	Select additional fields to display on leave requests. Example: Select: • *Leave Percentage* to enable workers to enter a percentage of leave units. Workday uses this value if you enable proration on the Balance/Leave Taken tab. • *Child's Birth Date* or *Expected Due Date* to enable workers to provide information required for maternity or paternity leave. Example: When workers request UK Statutory Maternity Leave, they must report the child's expected due date. If you can't find a field that you require, consider creating a custom additional field using the Maintain Additional Fields task. Once created, you can then select the custom field in the Additional Fields grid. Security: *Set Up: Maintain Additional Fields* domain in the System functional area. You can also use the information captured in these fields to create leave of absence rules: • For validations and supporting data.

Field	Description
	• To determine eligibility or balances. Using report fields, you can also create condition rules within the *Request Leave of Absence* business process to route leave requests for approval based on the information provided in these fields. Enter a Label Override if you want to display a different name for the additional field on the Request Absence task. Workday displays the label override for the field on the leave event instead of the field name. Select Required if the worker must enter a value when submitting a leave request. If you add a required field or change an empty optional field to required, while leave requests are in a *Save for Later* status or pending approval, you can't submit or approve the requests until you add the missing data. Select Hide from Employee Self Service to prevent workers from seeing the field when entering requests. When a reviewer checks the request, Workday displays the hidden fields. If the hidden field requires a value, the reviewer must enter the value. Additional fields display on leave requests in a predefined order. When you save the leave type, Workday displays the fields in the order that they occur in requests. Information entered in these fields cascades to the next leave, if: • This leave type belongs to a sequence of cascading leave types. • The next leave type has the same additional fields.

Next Steps

You can use:

- The View Leave Type report to review details for a selected leave type.
- These reports to see which leave types belong to each family and details for each leave type:
  - View Leave Family
  - All Leave Families
- The Prorate by Leave Percentage report field on the *Leave of Absence Event* business object in custom reports and condition rules to report on the proration state of all your leave requests.

Create Statutory Leave Types for UK Payroll

Reference

Examples

Copy Leave Types

Prerequisites

- Create leave types.
- Security: *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.

Context

You can create new leave types by duplicating existing types and their configuration values into new instances that you can rename and reuse. This allows you to:

- Avoid error-prone manual processes, as you no longer need to recreate leave types from scratch.
- Accelerate implementation time.

Steps

1. Access a report that displays leave types. Example:
    - All Leave of Absence Types
    - Leave Results for Organization
    - Leave Results for Worker
    - View Leave Type
2. From the related actions menu of the leave type, select Leave Type > Copy.

    Workday copies everything in the configuration except for these values:
    - Leave Type ID
    - Intermittent Time Offs
    - Cascading Leave

    You can configure these values immediately on the Copy Leave Type task, or later on the Edit Leave Type task, if needed. See Create Leave Types on page 2568.
3. (Optional) Workday automatically populates the Leave Type field by appending *(Copy)* to the name of the existing leave type. You can edit the value to rename the new leave type instance.
4. Click OK.

Schedule Leave Type Effects Synchronization

Prerequisites

Security: *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.

Context

You can synchronize your leave type configurations on all existing leave request events if you've changed your configuration on the Edit Leave Type task after workers have already requested leave. You can synchronize changes to the:

- Leave Impacts section (on the Details tab).
- Prorate by Leave Percentage setting (on the Balance/Leave Taken tab).

These changes indicate whether:

- The leave event impacts other areas in Workday for workers.
- To prorate leave units by the value of the Leave Percentage additional field on the request.

Steps

1. Access the Schedule Leave Type Effects Synchronization task.
2. Enter a Request Name for the background process so that you can later easily identify the job in the Process Monitor.
3. As you complete the Synchronize Leave Type Effects Processing tab, consider:

option	Description
Leave Types	Select 1 or more leave types to synchronize.
Professional Leave Effect	Select to indicate that the related leave type is a professional leave type, which might affect the timing of professional leave eligibility.
Prorate by Leave Percentage	Select to prorate the number of leave units by the value of the Leave Percentage additional field on the request. Workday reduces the worker's balance entitlement by a prorated amount when the leave isn't full time.
Sabbatical Effect	Select to indicate that the related leave type is a sabbatical leave type, which might affect the timing of sabbatical eligibility.
Scheduling Effect	Select to indicate that the related leave type is a scheduling leave type. You can schedule workers to work while on this type of leave.
Talent Effect	Select to indicate that Workday should remove the worker on this type of leave from the Worker prompt of specific employee reviews and feedback in Talent.
Tenure Effect	Select to indicate that the related leave type is a tenure leave type and might affect the timing of tenure eligibility.

4. (Optional) Select Start Date and End Date values to synchronize successfully completed leave events within a date range. For the date range, you can specify a start date, end date, or both. If you don't select any dates, Workday synchronizes all leave events.
5. (Optional) As you complete the Schedule tab, consider:

Option	Description
Priority	Setting a higher priority can reduce potential queuing. Workday launches *Critical* priority

Option	Description
	jobs first, and processes them in any order. Workday repeats this process for each lower priority category, in order of priority.
Run Once in the Future	Select all of these values to schedule the synchronization process to run on a specific date, at a specific time, and in a specific time zone. If you don't specify all of these values, Workday runs the process immediately.

6. Click OK.

FAQ: How do I tell workers what documents to submit for leaves of absence?

How do I tell workers what documents to submit for leaves of absence?

You can add instructional text to steps in the leave of absence business processes. Example: Add a message to the initiation step of the *Request Leave of Absence* business process that reads: Review the Leave Policy Document for required documentation.

You can also associate condition rules with the review step to display for reviewers a list of the documents required for the requested leave type.

Concept: Leave of Absence Business Processes on page 2602

Example: Create Leave of Absence Rules for Leave Type

Context

This example illustrates how to:

- Make employees who complete 6 months of service eligible for education leave.
- Require workers to enter a comment and attach supporting documentation when requesting leave of absence for educational purposes. Example: Workers might need to attach a document that verifies their upcoming exam schedule or college registration details.

Prerequisites

- Create a leave type named Education. See Create Leave Types on page 2568.
- Security: *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.

Steps

1. Access the Create Leave of Absence Rule task.
2. In the Description field, enter *Months of Service > 6*.
3. In the Rule Conditions grid, enter these values:

Option	Value
Source External Field or Condition Rule	*Length of Service in Months from Continuous Service Date*
Relational Operator	*greater than*
Comparison Type	*Value specified in this filter*
Comparison Value	*6*

4. Click OK.
5. Access the Create Leave of Absence Rule task.
6. In the Description field, enter *Comment Mandatory*.
7. In the Rule Conditions grid, enter these values:

Option	Value
Source External Field or Condition Rule	*Comment is included on a Leave of Absence Event*
Relational Operator	*is not blank*
Comparison Type	*Value specified in this filter*

8. Click OK.
9. Access the Create Leave of Absence Rule task.
10. In the Description field, enter *Supporting Document Mandatory*.
11. In the Rule Conditions grid, enter these values:

Option	Value
Source External Field or Condition Rule	*Document is linked to Leave of Absence Event*
Relational Operator	*is not blank*
Comparison Type	*Value specified in this filter*

12. Click OK.
13. Access the Edit Leave Type task.
14. Select *Education* from the Leave Type prompt.
15. On the Details tab, select *Months of Service > 6* from the Additional Criteria prompt.
16. On the Validations / Supporting Data tab, add 2 rows to the Validations grid and enter these values:

	Leave of Absence Rule	Do Not Allow Request
Row 1	*Comment Mandatory*	Select
Row 2	*Supporting Document Mandatory*	Select

17. Click OK and Done.

Example: Require Workers to Use Time Off Before FMLA

This example illustrates how to define a rule that hides a leave type from workers who haven't exhausted a specific time off plan balance as of the first day of their request.

Context

You want to set up a leave type for FMLA so that workers must exhaust their balance on a time off plan for paid time off (PTO) before they can request leave.

Prerequisites

Create the FMLA leave type. Example: *FMLA> USA FMLA Non-Military*.

Security:

- *Custom Field Management* domain in the System functional area.
- *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.

Steps

1. Access the Create Calculated Field task.

   Create a true/false condition that determines which time off plan to check when a worker enters the dates for a leave of absence request.

   a) Enter these values:

Field	Value
Field Name	*Time Off Plan is USA Paid Time Off (Salaried)*
Business Object	*Time Off Plan*
Function	*True/False Condition*

   b) Click OK.

   c) Select these values on the Calculation tab:

Field	Value
Field	*Time Off Plan*
Operator	*in the selection list*
Comparison Type	*Value specified in this filter*
Comparison Value	Select the time off plan that you want to check. Example: *USA Paid Time Off (Salaried)*.

2. Click Create Another Calculation.

   Create a calculation that retrieves the time off plan balance when *Time Off Plan is USA Paid Time Off (Salaried)* is true.

   a) Enter these values:

Field	Value
Field Name	*Retrieve Time Off Plan Balance of USA Paid Time Off (Salaried)*
Business Object	*Worker*
Function	*Sum Related Instances*

   b) Click OK.

   c) Select these values on the Calculation tab:

Field	Value
Related Field	*All Eligible Time Off Plans for Worker*
Sum	*Instances where condition is true* *Time Off Plan is USA Paid Time Off (Salaried)*
Field to Sum	*Time Off Balance for Worker*

   d) Click OK.

   e) Click Done.

3. Access the Create Leave of Absence Rule task.
    a) As you complete the task, consider:

Field	Value
Description	*PTO Balance Must Be Used Before FMLA Can Be Requested*
Comment	*True if the PTO time off plan balance is less than or equal to zero. You can use this rule in an Absence eligibility rule. Workday evaluates the balance as of the First Day of Leave.*
And/Or	*And*
Source External Field or Condition Rule	*Retrieve Time Off Plan Balance of USA Paid Time Off (Salaried)*
Relational Operator	*less than or equal to*
Comparison Type	*Value specified in this filter*
Comparison Value	Zero

    b) Click OK.
4. Access the Edit Leave Type task for the FMLA leave.
    a) Select the leave type. Example: *FMLA> USA FMLA Non-Military*.
    b) Click OK.
    c) On the Details tab, in the Eligibility Criteria section, select the new *PTO Balance Must Be Used Before FMLA Can Be Requested* rule from the Additional Criteria prompt.

       When workers request this leave, Workday checks their eligibility as of the first day of leave.
    d) Click OK.

Result

When requesting leave of absence, after they select the first day of absence, eligible workers can select the leave type if their PTO balance is less than or equal to zero. Managers can select the leave type when entering absence on behalf of their eligible workers.

Tasks
Create Leave Types on page 2568

Example: Track Balances for Coordinated Leaves and Time Off

This example illustrates how to create validation rules that track balances for coordinated leaves and time off.

Context

Your organization wants to track balances for the *FMLA* and *FMLA - Military* leave types to prevent employees from exceeding annual entitlement limits of 60 days for *FMLA* leave and 130 days for *FMLA - Military* leave. You also want to reduce the balance for *FMLA* leave by time off taken as intermittent FMLA.

Prerequisites

- Create:
  - An *FMLA Time Off Plan* and an *Intermittent FMLA* time off that subtracts from the plan balance. Don't define an accrual; time off taken reduces the *FMLA* leave entitlement balance instead.
  - A leave of absence rule called *Continuous Service Months >=12* to use as an eligibility rule.
- Security: *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.

Steps

1. Access the Maintain Leave Families task and create a leave family called *Family Medical Leave*.
2. Access the Create Leave of Absence Rule task.

   Create a rule that compares the combined balance of time already taken for *FMLA* leave, *FMLA - Military* leave, and *Intermittent FMLA* time off to an employee's remaining leave entitlement. This rule determines if the remaining entitlement is sufficient to cover a new leave or time off request.

Field	Value
Description	*Sufficient Balance Exists*
Source External Field or Condition Rule	*Sufficient Balance Exists for Leave or Time Off Request*
Relational Operator	*equal to*
Comparison Type	*Value specified in this filter*
Comparison Value	*True*

3. Access the Create Leave Type task and create an *FMLA* leave type:
   a) On the Details tab, select:

Field	Value
Leave Type	*FMLA*
Leave Family	*Family Medical Leave*
Country / Country Region	*United States of America*
Additional Criteria	*Continuous Service Months >=12*

   Note: Workday also applies the eligibility criteria to requests for *Intermittent FMLA* time off.

   b) On the Validations/Supporting Data tab, select the Validations that apply to requests for *FMLA* leave and *Intermittent FMLA* time off:

Field	Value
Leave of Absence Rule	*Sufficient Balance Exists*
Do Not Allow Request	Select the check box.

   If you want to apply the same validation to requests for *FMLA - Military* leave, add it to the leave type too.

   c) On the Balance/Leave Taken tab, enter:

Field	Description
Track Balance	Select the check box.

Field	Description
Balance Calendar Start Date	*Leave Balance Calendar - Effective Date (First Day of Leave) minus 12 months*
Balance Calendar End Date	*Effective Date of Leave Event*
Unit of Time	*Days*
Entitlement Units (Numeric)	*60*
Days to Include	*Weekdays (Mon-Fri)*
Include all Leave Types from Leave Family	Select the check box.
Intermittent Time Off	*Intermittent FMLA*

Note: Because *FMLA - Military* and *FMLA* belong to the same family and are the only members of that family, you can select Include all Leave Types from Leave Family. Alternatively, you can select *FMLA - Military* in the Additional Leave Types field. However, you must also select *FMLA* as an additional leave type when you define *FMLA - Military* leave.

4. Create a leave type for *FMLA - Military* leave:
    a) On the Details tab, select *Family Medical Leave* as the Leave Family.
    b) On the Balance/Leave Taken tab, enter:

Option	Description
Track Balance	Select the check box.
Balance Calendar Start Date	*Leave Balance Calendar - Effective Date (First Day of Leave) minus 12 months*
Balance Calendar End Date	*Effective Date of Leave Event*
Unit of Time	*Days*
Entitlement Units (Numeric)	*130*
Days to Include	*Weekdays (Mon-Fri)*
Include All Leave Types from Leave Family	Select the check box.

Result

When employees enter requests for *FMLA* leave, *FMLA - Military* leave, or *Intermittent FMLA* time off, Workday checks the combined amount of leave and time taken to determine if they have enough entitlement to cover the current request.

When employees request *FMLA* leave, *FMLA-Military* leave, or *Intermittent FMLA* time off, Workday:

- Checks the combined amount of leave and time taken.
- Determines if they have enough entitlement to cover the current request.

Example results:

- Julie has taken 55 days of *FMLA* leave over the last 12 months. She enters a new request for 10 days of *Intermittent FMLA* time off. The validation rule checks her FMLA entitlement balance for each day of requested time off. It generates an error for days 6 through 10, because she'll have exhausted her FMLA entitlement.
- Larry enters a request for 15 days of *FMLA* leave. He's already taken 50 days of *FMLA - Military* leave within the last 12 months. Workday generates an error for the last 5 days of his request because Larry's *FMLA* entitlement balance has already been reduced by the 50 days of leave taken for *FMLA - Military*.

Concept: Coordinated Leaves and Time Off on page 2600

Tasks

Create Leave Types on page 2568

Create Leave of Absence Rules on page 2566

Examples

Example: Display Balances for Plans with Intermittent Time Off on page 2375

Example: Track Balances Rolling Forward for Coordinated Leaves and Time Off

This example illustrates how to use the First Day of Active Leave Balance Period or Leave Request report field in calculated fields within leave types to track balances rolling forward for coordinated leaves and time off. This helps ensure that events that cross periods are linked to the correct period.

Context

Your organization wants to track balances for Family or Medical Leave of Absence (FMLA) leave taken by measuring forward from the first day of leave.

Prerequisites

Create an FMLA leave type.

Security:

- *Custom Field Management* domain in System functional area.
- *Set Up: Leave of Absence* domain in Time Off and Leave functional area.

Steps

1. Access the Create Calculated Field task.

   Create a calculated field that extracts the start date from the leave request event.

   a) Enter these values:

Field	Value
Field Name	*Rolling Forward - Start Date*
Business Object	*Leave Request Event*
Function	*Build Date*

   b) Click OK and enter these values on the Calculation tab:

Field	Value
Extract Year from Date Field	*First Day of Active Leave Balance Period or Leave Request*
Extract Month from Date Field	*First Day of Active Leave Balance Period or Leave Request*
Extract Day from Date Field	*First Day of Active Leave Balance Period or Leave Request*

2. Click OK and Create Another Calculation to create a calculated field that extracts the end date.
    a) Enter these values:

Field	Value
Field Name	*Rolling Forward - End Date*
Business Object	*Leave Request Event*
Function	*Increment or Decrement Date*

    b) Click OK and enter these values on the Calculation tab:

Field	Value
Date Field	*Rolling Forward - Start Date*
Years to Add or Subtract	*1*
Days to Add or Subtract	*-1*

    c) Click Done.
3. Access the Edit Leave Type task and select the FMLA leave type.
4. Select the Balance/Leave Taken tab and enter these values:

Field	Value
Track Balance	Select this check box.
Balance Calendar Start Date	Select the new *Rolling Forward - Start Date* calculated field.
Balance Calendar End Date	Select the new *Rolling Forward - End Date* calculated field.
Unit of Time	*Days*

Result

Example results:

Rachel began her FMLA leave on 2021-07-01 and is using it intermittently to care for her spouse. Rachel asks for an update on how much leave she has left on 2021-08-01. You can use the Leave Results for Worker report to find out how much leave she used between 2021-07-01 and 2021-08-01. Rachel has until 2022-08-01 to use her entire 12 weeks. So far, she only used 2 days, so she has 58 days left.

Example: Set Up Cascading Leave

This example illustrates how to configure:

- Short-term leave to cascade to long-term leave when entitlement for short-term leave depletes.
- Long-term leave to cascade to personal leave when entitlement for long-term leave depletes.

Context

At your company, when employees use up their short-term leave entitlements, they move to long-term leave, and then when long-term leave depletes, to personal leave. Set up cascading leaves to make this process as streamlined as possible.

Prerequisites

Define these leave types to track balances, making all either position-based or worker-based:

- *Short-Term Leave*
- *Long-Term Leave*
- *Personal Leave*

Security: These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*
- *Set Up: Tenant Setup - BP and Notifications*

Set Up: Leave of Absence domain in the Time Off and Leave functional area.

Steps

1. Configure *Short-Term Leave* to cascade to *Long-Term Leave*:
    a) Access the Edit Leave Type task.
    b) Select the *Short-Term Leave* Leave Type.
    c) On the Cascading Leave tab, select *Long-Term Leave* as the Next Leave Type.
2. Configure *Long-Term Leave* to cascade to *Personal Leave*:
    a) Access the Edit Leave Type task.
    b) Select the *Long-Term Leave* Leave Type.
    c) On the Cascading Leave tab, select *Personal Leave* as the Next Leave Type.
3. Configure the *Request Leave of Absence* business process to support cascading leaves:
    a) From the related actions menu of the business process, select Business Process > Edit Definition.
    b) In the Business Process Steps grid, add a step with these values after the completion step and click OK:

Field	Value
Type	*Service*

Field	Value
Specify	*Automated Leave Processing*

When you add this service step, Workday automatically adds this step condition:

This Leave Request is not returned or in the process of returning

This condition prevents automated leave processing from running on leaves when Workday is in the process of returning workers from these leaves.

Automated leave processing can automatically:

- Initiate the *Return from Leave* business process when workers use up all of their leave entitlement or reach their estimated last day of leave.
- Return workers from leave when you configure the *Termination* business process to synchronize termination and return-from-leave dates for employees terminated while on leave.
- Return workers from leave and cascade them from 1 leave to the next when they exhaust their entitlements.

Note: If your *Request Leave of Absence* or *Request Return from Leave of Absence* business process has other steps such as *Approval*, *To Do*, and so on, Workday respects those steps. The *Automated Leave Processing* step only automates the initiation step.

Automated Leave Processing doesn't support retroactive leave events. When you enter a leave in the past, Workday doesn't cascade leave if the date that you want to cascade is in the past.

c) In the Step column, select Business Process > Maintain Step Delay from the related actions menu.
d) For Delay Is Based On, select the *Field* option, and then select a field.

   For cascading leave, Workday recommends that you select *Last Date of Entitlement or Estimated Last Day or Actual Return Date*.

   Workday automatically adds a condition for the step delay, that you can view, but not change, in the If column of the Business Process Steps grid.
e) To enable Workday to recalculate the step delay for corrected leaves, Workday recommends that you select the Recalculate Delay upon Correct check box.

4. Consider which user to configure as the processing user for delayed steps.

   Note: To calculate the entitlement correctly, the processing user needs access to all of the fields in the calculation. This step isn't necessary when all fields in the calculation are secured to *Public Reporting Items* in the Tenant Non-Configurable functional area. Workday uses the processing user that you select for all delay steps. Before you select this user, consider the impact of this decision on delay steps on other business processes.

   a) Access the Edit Tenant Setup - Business Processes task.
   b) Select a user from the User for Business Process Time Delay Background Processes prompt.

      When you don't specify a user, Workday uses the scheduler as the initiating user. The scheduler only has access to the *Public Reporting Items* domain. If you use a field in the entitlement calculation that's secured to a restricted domain, the scheduler can't resolve it, resulting in an incorrect estimated last day of leave.

Result

Workday automatically generates requests to return employees from leave, regardless of the leave type, when they meet the conditions specified by the delay step. It also generates a request for the next leave type for employees returning from *Short-Term Leave* or *Long-Term Leave*.

Concepts

Concept: Cascading Leave on page 2597

Tasks

Create Leave Types on page 2568

Example: Set Up Supplemental Sick Leave at Reducing Rates of Pay

This example illustrates how to configure cascading leave of absence to streamline moving workers from paid to supplemental and unpaid leave.

Context

When workers go out on leave of absence, such as long-term sick leave, your company offers them paid or supplemental sick leave entitlements at reducing rates of pay. When they use up all of their paid leave, Workday cascades them to unpaid leave. You want to set up cascading leave to streamline the process, using a rolling forward balance calendar.

Prerequisites

Define these FMLA leave types, making all either position-based or worker-based:

- *100% Supplemental Sick Leave*
- *60% Supplemental Sick Leave*
- *Unpaid Sick Leave*

Security: These domains in the System functional area:

- *Custom Field Management*
- *Business Process Administration*
- *Manage: Business Process Definitions*
- *Set Up: Tenant Setup - BP and Notifications*

Set Up: Leave of Absence domain in the Time Off and Leave functional area.

Steps

1. Access the Create Calculated Field task.

   Create a true/false condition that determines whether the worker has more than 5 years of service.

   a) Enter these values:

Field	Value
Field Name	*Years of Service > 5 years*
Business Object	*Worker*
Function	*True/False Condition*

   b) Click OK.

   c) Select these values on the Calculation tab:

Field	Value
And/Or	*And*
Field	*Length of Service in Months from Benefits Service Date*
Operator	*greater than*

Field	Value
Comparison Type	*Value specified in this filter*
Comparison Value	*60*

d) Click OK.

2. Click Create Another Calculation.

   Create a calculated field that evaluates the supplemental sick leave entitlement. If the *Years of Service > 5 years* condition is true, the supplemental sick leave entitlement for the worker is 10 days.

   a) Enter these values:

Field	Value
Field Name	*Supplemental Sick Entitlement*
Business Object	*Worker*
Function	*Evaluate Expression*

   b) Click OK.
   c) Select these values on the Calculation tab.

Field	Value
Field Type	*Numeric*
Default Value	Zero

   d) Add a row with these values:

Field	Value
Condition	*Years of Service > 5 years*
Return Value If Condition Is True	*10*

   e) Click OK and Done.

3. Set up the next leave to cascade to when workers use up all of their entitlement for the current leave.

   a) Access the Edit Leave Type task.
   b) Select the leave type. Example: *100% Supplemental Sick Leave*.
   c) On the Balance/Leave Taken tab, select the Track Balance check box.
   d) Configure the leave type to use a rolling-forward balance calendar. Enter these values:

Field	Value
Balance Start Date	*Leave Balance Calendar - Effective Date (First Day of Leave)*
Balance Calendar End Date	*Leave Balance Calendar - Effective Date (First Day of Leave) plus 12 months*
Unit of Time	*Days*

Field	Value
Calendar Display	*Do not show balance*

e) In the Leave Entitlement section, for Entitlement Units, select the *Calculation* option, and select the new *Supplemental Sick Entitlement* calculated field.

f) In the Leave Taken section, for Days to Include, select *All Days*.

g) On the Cascading Leave tab, select *60% Supplemental Sick Leave* from the Next Leave Type prompt.

h) Repeat Steps 3a to 3f to configure the *60% Supplemental Sick Leave* type in the same way.

i) On the Cascading Leave tab, select *Unpaid Sick Leave* from the Next Leave Type prompt.

j) Click OK.

4. Edit the *Request Leave of Absence* business process. Add the *Automated Leave Processing* service step after the completion step.

   a) From the related actions menu, select Business Process > Edit Definition.

   b) Add a new row with these values:

Field	Value
Order	*c*
Type	*Service*
Specify	*Automated Leave Processing*

   c) Click OK.

5. Add a step delay on the *Automated Leave Processing* service step to determine when automated leave processing should:

   - Return workers from their current leave.
   - Initiate the *Request Leave of Absence* business process to cascade them to the next leave.

   a) From the related actions menu of the step, select Business Process > Maintain Step Delay, and click OK.

   b) For Delay Is Based On, select the *Field* option, and then select *Last Date of Entitlement or Estimated Last Day or Actual Return Date*.

   c) To enable Workday to recalculate the step delay for corrected leaves, select the Recalculate Delay upon Correct check box.

   d) Click OK.

6. Configure the user to use as the processing user for delayed steps.

   a) Access the Edit Tenant Setup - Business Processes task.

   b) Select a user from the User for Business Process Time Delay Background Processes prompt.

   Note: To calculate the entitlement correctly, the processing user needs access to all of the fields in the calculation. This step isn't necessary when all fields in the calculation are secured to *Public Reporting Items* in the Tenant Non-Configurable functional area. Because the *Length of Service in Months from Benefits Service Date* field is secured to *Worker Data: Current Staffing Information* in the Staffing functional area, you need to select a processing user who has access to this domain. Workday uses the processing user that you select for all delay steps. Before you select this user, consider the impact of this decision on delay steps on other business processes.

7. Test the configuration.
    a) Access the Place Worker on Leave task.
    b) Select a worker.
    c) Enter these values:

Field	Value
First Day of Leave	*2022-04-01*
Estimated Last Day of Leave	*2022-04-15*
Leave Type	*100% Supplemental Sick Leave* Note that the worker has a 10-day entitlement.

    d) Click Submit.
    e) In the pop-up window, click View Details.
    f) Expand the Details and Process section. On the Process tab, verify that Workday delays the *Service: Automated Leave Processing* step by 10 days, based on the worker's years of service, until 2022-04-10.
    g) Access the Job Profile for the worker after 2022-04-10.
    h) On the Worker History report, verify that:
        - The automated Leave Return request event for the worker occurs on the correct date.
        - Workday places the worker on a new leave the next day.
    i) Drill into the original leave request event. On the Process tab, verify that the *Service: Automated Leave Processing* step completed on the expected date.
    j) Drill into the automated Leave Return request. On the Details tab, verify that Workday returned the worker from supplemental sick leave on the correct date (2022-04-10).
    k) Drill into the cascaded Leave Request Event. On the Details tab, verify that Workday cascaded the worker to the correct:
        - Leave Type: Example: *60% Supplemental Sick Leave*.
        - First Day of Leave: Example: 2022-04-11.
        - Estimated Last Day of Leave: Example: 2022-04-20, based on the remaining units that the worker has for *60% Supplemental Sick Leave*.

Related Information
Concepts
Concept: Cascading Leave on page 2597

Example: Set Up Parental Leave

Context

In your country, couples can take a total 480 days of paid leave per child, with each parent entitled to 240 days of leave. Parents of multiples, such as twins, can take an additional 180 days per additional child. Single parents can use the entire amount granted to couples.

Parents can take an unlimited number of days of parental leave in a year, as long as they don't exceed the total entitlement. Parents can take parental leave anytime from 60 days before the child's delivery date up until the child's eighth birthday. They can divide up their entitlement into multiple leave requests.

You need to create a leave type that:

- Grants parents the amount of leave appropriate to their situation.
- Has a balance calendar that begins on the first day of leave and ends on the child's eighth birthday.
- Can support multiple leave request events.
- Validates that the first day of leave isn't more than 60 days before the birth date (expected due date).

Prerequisites

Security:

- *Custom Field Management* domain in System functional area.
- *Set Up: Leave of Absence* domain in Time Off and Leave functional area.

Steps

1. Create a condition for parent employees who aren't single.
   a) Access the Create Calculated Field task.
   b) As you complete the task, consider:

Field	Value
Field Name	*Single Parent is False*
Business Object	*Leave Request Event*
Function	*True/False Condition*
Field	*Single Parent Indicator*
Operator	*equal to*
Comparison Type	*Value specified in this filter*
Comparison Value	Leave unchecked.

   c) On the Additional Info tab, select the *Leave of Absence* Category.
2. Create a condition for employees who are single parents.
   a) Access the Create Calculated Field task.
   b) As you complete the task, consider:

Field	Value
Field Name	*Single Parent is True*
Business Object	*Leave Request Event*
Function	*True/False Condition*
Field	*Single Parent Indicator*
Operator	*equal to*
Comparison Type	*Value specified in this filter*
Comparison Value	Check this box.

   c) On the Additional Info tab, select the *Leave of Absence* category.
3. Create a numeric constant that returns 180.
   a) Access the Create Calculated Field task.
   b) As you complete the task, consider:

Field	Value
Field Name	*180*
Business Object	*Leave Request Event*
Function	*Numeric Constant*

Field	Value
Numeric Constant	*180*

c) On the Additional Info tab, select the *Leave of Absence* Category.

4. Create an arithmetic calculation that calculates the entitlement per additional child, multiplied by the number of additional children.
   a) Access the Create Calculated Field task.
   b) As you complete the task, consider:

Field	Value
Field Name	*180 * (Number of babies -1)*
Business Object	*Leave Request Event*
Function	*Arithmetic Calculation*

c) Define the Arithmetic Expression:

(	Field	)	Operator
	180		** (Multiply)*
(	*Number of Babies/ Adopted Children*		*- (Subtract)*
	1	*)*	

d) On the Additional Info tab, select the *Leave of Absence* Category.

5. Create a numeric constant that returns 240.
   a) Access the Create Calculated Field task.
   b) As you complete the task, consider:

Field	Value
Field Name	*240*
Business Object	*Leave Request Event*
Function	*Numeric Constant*
Numeric Constant	*240*

c) On the Additional Info tab, select the *Leave of Absence* Category.

6. Create a numeric constant that returns 480.
   a) Access the Create Calculated Field task.
   b) As you complete the task, consider:

Field	Value
Field Name	*480*
Business Object	*Leave Request Event*
Function	*Numeric Constant*
Numeric Constant	*480*

c) On the Additional Info tab, select the *Leave of Absence* Category.

7. Create an arithmetic calculation that calculates the total entitlement for a parent employee who isn't single.
   a) Access the Create Calculated Field task.
   b) As you complete the task, consider:

Field	Value
Field Name	*240 + (180 * (Number of babies - 1))*
Business Object	*Leave Request Event*
Function	*Arithmetic Calculation*

   c) Define the Arithmetic Expression:

Field	Operator
240	*+ (Add)*
*180 * (Number of babies - 1)*	

   d) On the Additional Info tab, select the *Leave of Absence* Category.
8. Create an arithmetic calculation that calculates the total entitlement for an employee who is a single parent.
   a) Access the Create Calculated Field task.
   b) As you complete the task, consider:

Field	Value
Field Name	*480 + (180 * (Number of babies - 1))*
Business Object	*Leave Request Event*
Function	*Arithmetic Calculation*

   c) Define the Arithmetic Expression:

Field	Operator
480	*+ (Add)*
*180 * (Number of babies - 1)*	

   d) On the Additional Info tab, select the *Leave of Absence* Category.
9. Create a calculated field that returns an employee's total entitlement based on their parental status (single or not single).
   a) Access the Create Calculated Field task.
   b) As you complete the task, consider:

Field	Value
Field Name	*Parental Entitlement*
Business Object	*Leave Request Event*
Function	*Evaluate Expression*
Field Type	*Numeric*

Field	Value
Default Value	*0*

c) Enter these conditions and values:

Condition	Return Value if Condition is True
Single Parent is False	*240 + (180 * (Number of babies - 1))*
Single Parent is True	*480 + (180 * (Number of babies - 1))*

d) On the Additional Info tab, select the *Leave of Absence* Category.

10. Create a calculated field that calculates the end date for the balance calendar.

a) Access the Create Calculated Field task.

b) As you complete the task, consider:

Field	Value
Field Name	*Child's Birth Date + 8 Years*
Business Object	*Leave Request Event*
Function	*Increment or Decrement Date*
Date Field	*Child's Birth Date*
Years to Add or Subtract	*8*
Days to Add or Subtract	*-1*
Return Blank Date on Error	Check this box

c) On the Additional Info tab, select the *Leave of Absence* Category.

11. Configure the leave type.

a) Access the Create Leave Type task.

b) Select the Country/Country Region to which this leave type applies.

c) On the Validations/Supporting Data tab, add a leave of absence rule that the start date occurs not more than 60 days before the child's expected due date.

d) On the Balance/Leave Taken tab:

Field	Option
Track Balance	Select this check box.
Balance Calendar Start Date	*Leave Balance Calendar - Effective Date (First Day of Leave)*
Balance Calendar End Date	*Child's Birth Date + 8 Years*
Unit of Time	*Days*
Entitlement per Event	Select this check box
Entitlement Units (calculation)	*Parental Entitlement*

e) On the Additional Fields tab, add these additional fields:

- *Child's Birth Date* (make this field required).
- *Number of Babies/Adopted Children* (make this field required).
- *Single Parent Indicator*.

Result

Employees enter this information when they request parental leave:

- Child's birth date.
- Number of children.
- Whether the employee is a single parent.

Workday uses this information to calculate:

- Their total entitlement based on whether they're a single parent and the number of children in this event.
- The start and end dates of their balance calendar based on the child's birth date.

Tasks

Create Leave Types on page 2568

Create Leave of Absence Rules on page 2566

Example: Add Leave Entitlement Overrides to Leave Requests

This example illustrates how to:

- Add the Leave Entitlement Override field as an additional field on a leave type to enable managers or workers to override the worker's original leave entitlement.
- Set a default value for the leave entitlement override calculation in Workday when workers or managers don't enter a value on the leave request.

Context

You want to configure your *Compassionate Care* leave type so that workers can specify a leave entitlement override when they request leave of absence for this leave type. Example: Your organization might enable workers to share entitlements with partners who don't work in the organization. When workers don't specify a leave entitlement override, you want to specify a default value of 90 units.

Prerequisites

Create the *Compassionate Care* leave type for the *Family Leave* leave family.

Steps

1. Add the Leave Entitlement Override field to the leave type.
    a) Access the Edit Leave Type task.
    b) Select *Leave Family> Family Leave> Compassionate Care* from the Leave Type prompt.
    c) On the Additional Fields tab, add a row with the *Leave Entitlement Override* field.
    d) Click OK.
2. Create a calculated field that uses the Leave Entitlement Override value in the leave request to calculate the leave entitlement.
    a) Access the Create Calculated Field task.
    b) As you complete the task, consider:

Field	Value
Field Name	*Leave Entitlement Override >0*
Business Object	*Leave Request Event*

Field	Value
Function	*True/False Condition*

c) On the Calculation tab, create the condition rule:

And/Or	Field	Operator	Comparison Type	Comparison Value
And	*Leave Entitlement Override*	*greater than*	*Value specified in this filter*	*0*

d) Click OK.

3. Create a calculated field that uses a default value when the leave entitlement override isn't greater than zero.
   a) Access the Create Calculated Field task.
   b) As you complete the task, consider:

Field	Value
Field Name	*Leave Override if > 0 Else 90*
Business Object	*Leave Request Event*
Function	*Evaluate Expression*

   c) On the Calculation tab, enter these values:

Field	Value
Field Type	*Numeric*
Default Value	*90*
Condition	*Leave Entitlement Override > 0*
Return Value If Condition is True	*Leave Entitlement Override*

   d) Click OK and Done.
4. Change the leave type to use the new calculations.
   a) Access the Edit Leave Type task.
   b) Select *Leave Family> Family Leave> Compassionate Care* from the Leave Type prompt.
   c) Click OK.
   d) On the Balance/Leave Taken tab, in the Leave Entitlement section, select *Leave Override if > 0 Else 90* from the Entitlement Units (Calculation) prompt.
   e) Click OK and Done.

Result

Workers can enter the leave entitlement override as additional information when they request leave of absence for this leave type. Workday uses this information to calculate the total leave entitlement or uses the default value when workers leave the override field blank.

Reference: Additional Fields for Leave Types on page 2604

Concept: Cascading Leave

Cascading leaves streamline the process of moving workers from one leave type to another, such as from paid to unpaid maternity leave. You define the sequence of leave types and conditions that ends 1 leave type and begins the next. When a leave ends, Workday generates a request to return the worker from leave and a separate request to begin the next leave.

Note: Workday Payroll for the UK doesn't support cascading leave types that are linked to statutory payments, except for Statutory Sick Pay.

Defining Conditions for Triggering the Next Leave

- Define the sequence of leaves by identifying the Next Leave Type for each leave. You can use either the Create Leave Type or the Edit Leave Type task.
- Add the *Automated Leave Processing* service with a step delay, after the completion step to the *Request Leave of Absence* business process.

The Automated Leave Processing Service

- The service generates a return request for all leaves, including returns that aren't part of a cascade.

  Limit automation of return requests to cascading leaves. Add condition rules to the service step in the business process, specifying which leave types to include or exclude.
- The step delay controls when to generate requests to return workers from leave and start the next leave.

  You can use the *Last Date of Entitlement or Estimated Last Day or Actual Return Date* report field to create a step delay condition. This report field returns either:

  - The last day of entitlement if the leave type used in the request tracks balances.
  - The estimated last day of leave if the leave type doesn't track balances.
  - The date on which the workers exhaust their leave balance entitlement.

  The report field can't return an actual return date when used in a step delay for the *Automated Leave Process* service. The date isn't available until after the service initiates the *Request Return from Leave of Absence* business process.

  You can also use calculated date fields to define step delay rules for different sets of workers, leaves, or both.
- A leave request reaches the completion step in the business process. The delay step then sets the return date and doesn't adjust it in response to subsequent changes.

  Example: The delay step uses the Estimated Last Day of Leave. A manager approves and completes a leave request with an Estimated Last Day of Leave of July 11. The administrator then changes the date to August 11. Workday generates the return request for July 11.

When a Worker's Leave Ends

The *Automated Leave Processing* service checks daily for workers who meet the conditions for ending the leave that the delay step specifies. For workers who meet these conditions, Workday generates:

- A request to return the worker from leave. The value of Actual Last Day of Leave uses the sent date of the return request.

  Note: Workday generates a return request if the manager placed the worker on leave or the leave cascaded from another leave type.

- A request to start the next leave type if the worker meets its eligibility requirements. It displays the:
  - Leave Type.
  - Last Day of Work. The same date for all leaves in the sequence.
  - First Day of Leave. The Actual Last Day of Leave + 1 day. It considers Days to Include as defined for the next leave type.
  - Estimated Last Day of Leave.
    - Leave types that track balances: Workday determines this date from the entitlement.
    - Leave types that don't track balances: Workday displays the Estimated Last Day of Leave from the previous leave if the date is before the first day of the new leave.
  - Data entered under the Additional Fields section, if the previous request had the same fields.

  The reviewer enters the Leave Reason.

  Workday doesn’t copy the original leave reason to the next leave type. You can access the Leave Results for Worker report to view the original leave reason for the leave result item in the Reason column.

  Note: Workday generates requests for the next leave with warnings if it has validation warnings or errors.

Preventing the Leave of a Worker from Cascading

To prevent the leave for a worker from cascading, you can:

- Return the worker from leave before Workday generates the next leave request.
- Deny the next leave request.

If your *Request Leave of Absence* business process sets leave requests to the completion step without requiring approval, you can rescind the next leave.

Leave Request Routing

The initiator of the original leave request is the initiator of the return request and the next leave request.

Create a condition rule in the business process to identify requests for cascading leave that you want to route differently. You can use the *Leave Event is Part of Cascade* report field as the condition rule.

Report Fields for Cascading Leaves

- *Cascading Leave Event - Succeeding*
- *Leave Type for succeeding cascading Leave Event*
- *Cascading Leave Event - Preceding*
- *Leave Type for preceding cascading Leave Event*
- *Leave Event is Part of Cascade*

Viewing the Sequence of Leaves

To see the full sequence of leaves for a cascading leave, access either of these reports:

- View Leave Family
- All Leave Families

Tasks

Create Leave Types on page 2568

Examples

Example: Set Up Cascading Leave on page 2585
Example: Set Up Supplemental Sick Leave at Reducing Rates of Pay on page 2588

Concept: Coordinated Leaves and Time Off

You can configure Workday to calculate balances for multiple leave types and time offs. Example: The balance for long-term disability can reflect days taken for short-term or long-term disability. Validation rules can check whether a worker has a sufficient balance across linked leave types and time offs for their request.

Workday deducts intermittent time off that's linked to a leave type for leave of absence from both the time off plan balance and the leave entitlement balance. A leave validation that checks whether sufficient balance exists can trigger for a time off request even though the time off plan has an available balance because Workday evaluates the time off and leave of absence balances independently. You can also enable workers to take leave of absence without placing them on leave, by configuring a time off on a time off plan that doesn't track balance, and then selecting that time off as an intermittent time off on a leave type.

To link related leave types and time offs to a source leave type, use the Create Leave Type task. These conditions apply:

- Leave types and time offs must use the same unit of time.
- You can link leave types and time offs, even if the time offs have different position-based settings.
- You can associate a time off type with one leave type only.
- Time off requests are subject to:
    - The eligibility and validation rules defined for the leave type.
    - The time off eligibility and validation rules.

  Workday applies the eligibility requirements defined for the time off first.

Calculating Leave Entitlement

When calculating the entitlement balance for coordinated leaves and time off, Workday:

- Calculates the entitlement for the requested leave type as of the leave start date (or *as of* date, if generating reports).
- Applies the Days to Include option defined for each leave type to count the number of leave days taken.
- Reduces the leave balance by the sum of the leave days and time off taken.

Tasks

Create Leave Types on page 2568

Examples

Example: Track Balances for Coordinated Leaves and Time Off on page 2581

Example: Display Balances for Plans with Intermittent Time Off on page 2375

Concept: Calculating Leave Taken

To determine the number of days to count as taken for a leave request, Workday:

- Uses the Days to Include option on the Balance/Leave Taken tab of the Create Leave Type task.
- Calculates the hours for each day taken, if the leave type is hourly.
- Takes the total scheduled hours for a worker across all eligible positions and divides it by the number of days in the week.
- Prorates leave units if you select Prorate by Leave Percentage for the leave type and workers enter a leave percentage on the leave request.

Options that reference work days require a holiday calendar and a work schedule calendar.

This table explains how Workday determines days and hours taken for each option:

Days to Include	Days Counted as Taken	Hours Counted for Each Day Taken	Example
All Days	Every day	Scheduled weekly hours divided by 7.	Jane is scheduled to work 35 hours a week. Each day of leave is equal to 35 ÷ 7, or 5 hours.
Weekdays (Mon - Fri)	Monday through Friday only.	Scheduled weekly hours divided by 5. Workday ignores weekends.	Dawn is scheduled to work 35 hours each week. Each day of leave on a weekday equals 35 ÷ 5, or 7 hours. Workday doesn't count hours for Saturday or Sunday.
Workdays (Non-Holiday)	Work days the worker is scheduled to work, excluding work days that are holidays.	Scheduled hours for the leave date, as determined by the work schedule and holiday schedule. Workday doesn't include hours during holidays, even if the worker is scheduled to work that day.	Hahn is scheduled to work: • 9 hours on Monday. • 8 hours on Tuesday. • 8 hours on Wednesday, a holiday. Workday counts 9 hours for Monday, 8 hours for Tuesday, and no hours for Wednesday.
Workdays (Work Hours Exceed Holiday Hours)	Work days the worker is scheduled to work, including work days that are holidays, if the scheduled hours exceed the holiday hours.	Scheduled hours for the leave date, based on the work schedule, minus any holiday hours for the same day.	Robert is scheduled to work 8 hours on Monday but has 4 hours of holiday that day. Workday counts 4 hours as leave for Monday. Workday doesn't count hours for a day that Robert books 8 hours of holiday. Even if he's scheduled to work 4 hours on that day.
Configure Days to Include	Days defined in the Included Days prompt. Select the Include Holidays from the Holiday Calendar check box to include holidays.	Scheduled hours for the leave date. Select the Include Holidays from the Holiday Calendar check box to include hours from holidays.	David requests leaves from Sunday through Friday, Workday counts leaves from his scheduled days; Sunday through Thursday.

Create Leave Types on page 2568

Steps: Create Calendars

Concept: Leave of Absence Business Processes

Workday provides 2 business processes for leaves of absence:

- *Request Leave of Absence*
- *Request Return from Leave of Absence*

Configure the business process definitions for your organizations to route requests to the appropriate roles for review and approval. You can also add steps for specific roles.

This table lists the steps you can add to each business process. All are action steps, except the *Automated Leave Processing* service.

Action or Service	Description	***Request Leave of Absence***	***Request Return from Leave of Absence***
Assign Roles	Enable users to request a change to the organization role (or roles) of a worker when the worker takes a leave of absence or returns from leave.	X	X
Automated Leave Processing	Generate requests to return workers from leave when specified conditions are met. When you configure leave types for cascading leave, the service also generates requests to place eligible workers on the next leave in the sequence.	X	
Change Benefit Elections	Determine if a leave of absence or return from leave affects an employee's benefit coverage.	X	X
Edit Service Dates	Enable users to update service dates manually, such as the continuous service date. You can set up a condition rule to trigger this action if the leave type affects the continuous service date.		X

Action or Service	Description	***Request Leave of Absence***	***Request Return from Leave of Absence***
Generate Document	Dynamically generate editable documents when workers access tasks that initiate the configured business processes.	X	X
Manage Business Processes for Worker	Enable users to reassign Workday tasks that are currently assigned to a worker who is taking a leave of absence.	X	
Request Compensation Change for Leave of Absence	Enable users to request a change to the compensation of a worker when the worker takes a leave of absence or returns from leave.	X	X
Request Delegation Change	Enable users to delegate their business process step to another user.	X	X
Review COBRA Eligibility	Enable selected roles to review and identify COBRA eligibility. You can set up a condition rule that triggers this step only in the U.S.	X	
Review Leave of Absence	Require one or more roles to approve leave requests.	X	
Review Payroll Interface Data Extract	Generate a data extract of the leave request for review by the Payroll Administrator before extracting data to a third-party payroll system. That system then uses the leave dates to set the worker as active or inactive in payroll according to policy.	X	X
Review Return from Leave of Absence	Require one or more roles to approve requests to return from leave.		X

Reference: Additional Fields for Leave Types

Additional fields enable you to capture data related to global statutory requirements. You can use the information captured by the additional fields for any purpose, such as determining eligibility or balances. Configure an absence rule that references the field that performs the calculation or validation.

Additional Field	Description	Example
Adoption Notification Date	The date of the formal notification of adoption. Used in Workday Payroll for the UK for Statutory Adoption Pay, Ordinary Paternity Leave, and Statutory Shared Parental Pay.	
Adoption Placement Date	The date the adopted child places with one or more adoptive parents.	
Age of Dependent	The age of the dependent associated with the leave request.	
Case Number	The case number for the leave event.	
Cesarean Section Birth	Some leaves calculate entitlements based on whether the parent has had a cesarean section.	
Child's Birth Date	The date of birth of the child associated with the leave request.	
Child Disability Indicator	Child disability can impact some leave entitlements. You can use this field for social insurance reporting requirements and to potentially increase entitlement for the worker.	
Date Baby Arrived Home From Hospital	The date when the baby associated with the leave request arrived home from the hospital.	In the Netherlands, the spouse or partner of the mother of a newborn child has an entitlement to 2 days of paid paternity leave. Take the leave within the first 4 weeks of the baby's birth, if born at home. Take the leave from the date that the baby came home, if born in a hospital.
Date Child Entered Country	The date that a child adopted from overseas entered the	

Additional Field	Description	Example
	country. Used in Workday Payroll for the UK for Statutory Adoption Pay, Ordinary Paternity Leave, and Statutory Shared Parental Pay.	
Date of Recall	Used for the Record of Employment (ROE) report in Canada.	
Dependent Detail	The name of a spouse or partner. Used in Workday Payroll for the UK for Statutory Shared Parental Pay.	
Expected Due Date	The child's expected birth date. Used in Workday Payroll for the UK for Statutory Maternity Pay, Ordinary Paternity Leave, and Statutory Shared Parental Pay.	In the UK, the earliest that a maternity leave can start is usually 11 weeks before the expected due date.
Last Date for Which Paid	Used for the Record of Employment (ROE) report in Canada.	
Leave Entitlement Override	Used to override a worker's original leave entitlement. You can also use it to enter an entitlement that Workday can't calculate. Example: When you store the calculation's required data stored outside of Workday. The override units match the leave entitlement units. The maximum leave entitlement override is 99,999.	Jonathan works for a Workday customer in the UK, unlike his wife Adeyola. Jonathan wishes to take Shared Parental Leave. His legal entitlement depends upon how much maternity leave Adeyola has taken. Set Jonathan's new entitlement limit. Example: Jonathan's entitlement is less than the maximum because of the maternity leave his wife has already taken.
Leave Percentage	Used when workers take partial leave of absence, this field enables workers to enter the percentage of time they want to take when they're requesting leave. When you enable proration on the leave type, Workday prorates the leave units taken by the leave percentage and reduces the leave entitlement balance accordingly. The maximum leave percentage is 100. Typically, workers enter a value between 1 and 100 to indicate the percentage of leave they want to take. Workers should only enter a decimal value of less than 1 when they want to	Due to a medical condition, Nicolas works half days for a month. On the leave request, he enters 50 in the Leave Percentage field to indicate 50 percent and not 0.50.

Additional Field	Description	Example
	indicate a value lower than 1 percent.	
Location During Leave	The location for a worker on leave at another academic institution.	
Multiple Child Indicator	Multiple births, such as twins, can impact some leave entitlements.	
Number of Babies/Adopted Children	Some leaves calculate entitlements based on the number of children born or adopted at the same time. You can use this option along with the Multiple Child Indicator or independently.	In Norway, parents have 5 additional weeks of parental leave at 100% pay for their first child. They have 7 additional weeks at 80% pay per additional child.
Number of Child Dependents	Some leaves calculate entitlements based on the total number of child dependents.	In France, parents receive different entitlements for adoption leaves based on the number of child dependents they have before the adoption.
Number of Previous Births	Some leaves calculate entitlements based on the number of previous births that a mother has had.	
Number of Previous Maternity Leaves	Some leaves calculate entitlements based on the number of previous maternity leaves a mother has taken.	
Single Parent Indicator	Some leaves calculate entitlements based on whether the parent is a single parent.	
Social Security Disability Code	Used for the Mexican Social Security Institute (IMSS) Folio Code associated with long term leaves. Mexican authorities issue this number to reconcile government disability payments with the worker's absence from work.	
Stillbirth/Baby Deceased	Some leaves calculate entitlements based on whether a baby is stillborn or dies soon after birth.	
Stop Payment Date	The date that a leave payment should end. Used in Workday Payroll for the UK for Additional Statutory Paternity Pay (ASPP). However,	

Additional Field	Description	Example
	ASPP has been replaced by Statutory Shared Parental Pay and is no longer in use.	
Week of Confinement	The Sunday before a child's due date.	
Work Related	Used for the Record of Employment (ROE) report in Canada.

Reference: Leave Impacts

Use leave impacts to indicate whether a certain leave type will impact workers in other areas of Workday. Selecting a leave impact doesn't affect how Workday responds when a worker is on leave, except for these leave impacts:

- Inactivate Worker
- Payroll Effect

Use the Schedule Leave Type Effects Synchronization task to update these leave impacts on all existing leave events of a leave type if you've changed your leave type configuration after workers have already requested leave:

- Professional Leave Effect
- Sabbatical Effect
- Scheduling Effect
- Talent Effect
- Tenure Effect

Note: Workday sets the leave impacts when processing the request but doesn't automatically update a leave of absence record when the leave type configuration changes. You can update an existing leave request for a worker to reflect the new configuration. Use the Business Process > Correct related action on the leave request and resubmit the request without making changes.

To trigger certain actions when a worker is on leave, build rules using the report fields to detect those events.

Leave Impact	Description	Report Fields
Absence Accrual Effect	Indicates workers' leaves might affect time off accrual. You can configure eligibility criteria for a time off plan or accrual to prevent a worker from accruing time off while on a leave type with this effect. You can use these calculations to configure eligibility:	Effect - Absence Accrual

Leave Impact	Description	Report Fields
	• *On Leave as of Period Start Date with Absence Accrual Effect* • *On Leave as of Period End Date with Absence Accrual Effect*	
Benefit Effect	Indicates that the leave might require a change to the employee's benefits. To change the employee's benefit elections, report a life event and update the benefit elections accordingly. You can create condition rules for the business process to create To Dos and additional approvals.	Effect - Benefits
Continuous Service Accrual Effect	Indicates whether the leave requires a change to the employee's service accrual. This change might involve a manual change to the continuous service date of the employee. You can create condition rules for the business process to create To Dos and additional approvals.	
Inactivate Worker	Changes a worker's status to Inactive while on leave, but doesn't lock workers out of their Workday account. To prevent workers from accessing their Workday account while on leave, you must lock their Workday account. Selecting this leave impact affects headcount reporting and these web services: • *Get Leave Family* • *Get Leave Type* • *Put Leave Family* • *Put Leave Type* When the leave type is position-based, Workday changes the worker's status to Inactive only if all of the worker's positions are on leave with this effect.	Effect - Inactivate Worker Inactivate Employee
Payroll Effect	When selected, workers aren't paid while on leave. However,	Effect - Payroll

Leave Impact	Description	Report Fields
	if you're using Workday Payroll, you can continue to pay workers on leave according to run category criteria. Example: You can configure Workday Payroll to calculate medical deductions automatically while workers are on leave.	
Professional Leave Effect	Indicates whether the related leave type is a professional leave type. Professional leaves affect the timing of professional leave eligibility, which might require a manual change to a worker's professional leave records.	Professional Leave Effect
Sabbatical Effect	Indicates whether this leave affects the timing of sabbatical eligibility. If the leave impacts sabbatical eligibility, you might need to change the employee's sabbatical records manually.	Effect - Sabbatical Effect
Scheduling Effect	Indicates that you can schedule workers to work while on this type of leave.	Leave Impact – Scheduling
Stock Vesting Effect	Indicates that the leave might require a change to the employee's vesting schedule for stock grants. You can create condition rules for the business process to create To Dos and additional approvals.	Effect - Stock Vesting
Talent Effect	When you select this leave impact, Workday removes workers on this type of leave from the Worker prompt of select employee reviews and feedback in talent.	Talent Effect
Tenure Effect	Indicates whether this leave affects the timing of tenure eligibility, which might require a manual change to the employee's tenure records.	Effect - Tenure Effect

The Next Level: Using Absence to Record Furloughed Leave

Reference: Balance Calendars

Leave types that track balances require start and end dates that specify the period or balance calendar over which to calculate leave balances. A leave balance is the worker's entitlement minus the leave taken. You can create calculated fields for the start and end dates of common balance calendars. When creating or editing leave types, you can then select these calculated fields from the Balance Calendar Start Date and Balance Calendar End Date prompt on the Balance/Leave Taken tab. This table includes examples of calculated fields that you might need to configure for each type of calendar. When selecting calculated fields to use for the calendar, drill into the calculated field to view the report field that it uses to extract the value for the date.

Balance Calendar	Start Date	End Date	Recommendations
Anniversary-Based (Hire Date)	*Leave Balance Calendar - Hire Date (Month and Day) of Leave Event Year*	*Leave Balance Calendar - Hire Date (Month and Day) of Leave Event plus 12 months*	Ensure that the calculated field is based on the Leave Balance Calendar Start Date report field.
Fixed Calendar (01-Jan to 31-Dec)	*Leave Balance Calendar - January 1 of Leave Event Year*	*Leave Balance Calendar - December 31 of Leave Event Year*	Ensure that the calculated field is based on the Leave Balance Calendar Start Date report field.
Rolling-Backward (12-Month)	*Leave Balance Calendar - Effective Date (First Day of leave) minus 12 months*	*Effective Date of Leave Event*	Ensure that the calculated field is based on the Leave Balance Calendar Start Date report field.
Rolling-Forward (12-Month)	*Leave Balance Calendar - Effective Date (First Day of Leave)*	*Leave Balance Calendar - Effective Date (First Day of Leave) plus 12 months*	Ensure that the calculated field is based on the First Day of Active Leave Balance Period or Leave Request report field.

Managing Leaves of Absence

Place Workers on Leave

Prerequisites

- Set up a leave of absence.

- Configure the *Request Leave of Absence* business process and security policy in Time Off and Leave functional area.

Context

Place a worker on leave when they're unable to access Workday to enter their own request. Example: Long-term sick leave.

Steps

1. Access the Place Worker on Leave task.
2. Enter the leave dates:

Field	Description
Last Day of Work	Workday automatically populates this field with the date before the First Day of Absence.
First Day of Leave/Absence	The worker's business site location on the day controls the available Leave Type values.
Estimated Last Day of Leave/Absence	Workday considers a worker off leave the day after this date. Note: The total length of the leave of absence must be less than 50 years.

3. Select the Leave Type to identify why the worker is taking a leave of absence.
4. If applicable, select the Position to which this leave applies.
    - If you select position-based leave, the Position prompt becomes enabled. When a worker has only 1 position that is eligible for the leave, Workday displays that position.
    - If the worker is taking a leave of absence for all positions, enter a separate request for each position.
    - A plus sign (+) after the name of a position identifies it as a secondary position.
5. (Optional) If applicable, select a previous event of this leave type in the Links back to Prior Event field.

    This field is available when:

    - The leave type has entitlements per event.
    - This leave event is in the same balance period as a previous event of the same leave type.

    Linking events enables them to draw from the same entitlement balance. When workers have multiple eligible prior leave of absence events, you can select which event to link to. Intermittent time off is an exception. Workday draws from the balances of eligible events in chronological order, depleting the balance for the first event, before moving on to the next.
6. When the location of the worker or position is Canada, enter the Last Date for Which Paid.

    Workday automatically populates this field with the value of Last Day of Work.
7. Attach any documentation required for the leave.

    You can attach supporting documents when:

    - Reviewing and correcting requests.
    - Returning a worker from leave.
8. Click Submit or Save for Later.

    If you click Save for Later, you can access the request from My Tasks and click Revise.

    When you configure a leave type for balance tracking, requests in a *Save for Later* status don't reduce the available entitlement balance.

Result

When you submit the request, Workday routes it to the My Tasks of the appropriate reviewers. Reviewers can approve, deny, or return the request for revision. They can also change the leave return date and include attachments.

If the leave type inactivates the worker, Workday automatically sets the worker's status to inactive upon approval of the request. To correct or rescind the event, select it as a related action on the leave request from the View Worker History task.

Next Steps

To view leaves of absence, use these reports:

- Workers on Leave.
- Leave Results for Worker (includes leave balance).
- Leave Results for Organization (includes leave balances).
- Workers Returning from Leave.
- Maintain Worker Documents.

Examples

Create Work Schedule Calendars

Correct Leave of Absence Requests

Prerequisites

- The leave request action has a status of *Successfully Completed* in the worker's worker history.
- You belong to an initiating security group for the *Request Leave of Absence* business process.

Context

Correct an approved leave of absence request. If a return request has already been submitted, rescind the leave return action first.

Steps

1. Locate the worker, and select the related action: Worker History > View Worker History.
2. From the related actions menu of the leave request, select Business Process > Correct.

   You can also Rescind the business process.
3. Make the corrections.

   Complete any required fields added or optional fields marked as required for the leave type after the request is approved.

   Note: Workday doesn't apply validation rules to corrections.

Result

Corrections overwrite the existing request and don't require approval.

As part of the delivered business process, corrections trigger a notification to the Payroll Interface Partner of the worker's organization whenever the leave type has a payroll effect. This way, the Payroll Interface Partner can review the payroll interface data extract for any impact on payroll.

Return Workers from Leave

Context

Record a worker's return from a leave of absence. You can record a worker's return from multiple leaves at the same time, if:

- Your Workday tenant is configured for multiple jobs, and
- All the leave types are worker-based or for the same position.

You can enable workers to use the self-service Request Return from Leave task to enter their own requests to return from leave. Modify the *Request Return from Leave of Absence* business process by adding the *Employee as Self* and *Contingent Worker as Self* security groups to the initiating action of the business process.

To return a group of workers from a leave of absence, you can import data into the *Request Return from Leave of Absence* business process from a spreadsheet using Workday's Enterprise Interface Builder (EIB).

Workday Payroll doesn't support retro-pay calculation for multiple returns from leave in a single event. To return workers from multiple leave request events, select only 1 leave request event at a time. Workday creates a separate leave return event for each leave request event.

If a worker hasn’t returned from leave, and there isn’t a return from leave event for that worker, the Absence Calendar displays the leave of absence request up to the current date, beyond the estimated last day of leave.

Steps

1. Access the Return Worker from Leave task.
2. Select the Position, if applicable.

   This field displays only if the worker is out on at least 1 position-based leave. Entry is optional if the worker is also on a worker-based leave.

   To record the return from a worker-based leave, don't select a position.
3. (Optional) Enter the First Day Back at Work.
4. If the worker is on more than 1 leave, clear the Select check box for any leaves the worker is not yet returning from.
5. Enter the Actual Last Day of Leave.
6. To attach documentation required for the return from leave, expand the Supporting Documents section.

Result

If the *Request Return from Leave of Absence* business process includes an approval step, Workday routes the request to the Inbox of the next reviewer. Reviewers can approve, deny, or return the request for revision. They can also add attachments.

Workday sets the worker's status to active on the date following the Actual Last Day of Leave, and automatically sends any notifications that you have set up as part of the *Request Return from Leave of Absence* business process for the worker's organization.

Next Steps

To view information about employees returning from leaves of absence, use these reports:

- Workers Returning from Leave
- Workers Returned from Leave

Correct Return from Leave of Absence Requests

Prerequisites

- The leave return action has a status of *Successfully Completed* in the worker's worker history.
- You belong to an initiating security group for the *Request Return from Leave of Absence business process definition*.

Context

Correct a return from leave of absence request that has already been approved.

Steps

1. Locate the worker, and select the related action: Worker History > View Worker History.
2. From the related actions menu of the leave return business process, select Business Process > Correct.

   You can also Rescind the business process.
3. Make the corrections.
   The same fields are available for the correction as the initial request.
   Workday validates that the Actual Last Day of Leave is before the First Day Back at Work.

Result

Corrections overwrite the existing request and don't require approval.

As part of the delivered business process, corrections trigger a notification to the Payroll Interface Partner of the worker's organization whenever the leave type has a payroll effect. This way, the Payroll Interface Partner can review the payroll interface data extract for any impact on payroll.

Tasks

Edit Business Processes

Concept: Importing Leave of Absence Events

You can load large volumes of leave of absence events into Workday Absence using Workday Enterprise Interface Builder (EIB) and SOAP UI for these web services:

- *Import Request Leave of Absence*
- *Import Request Return From Leave of Absence*

You can use these web services to:

- Load leave events in Workday from a third-party tool.
- Migrate validated leave events into Workday.
- Load batches of leave events in bulk.
- Correct multiple leave events for multiple workers.

To avoid introducing risks when loading request leave of absence events, Workday recommends that you don't load these events in the same file:

- Events linked to prior events.
- New events and corrections.

Business Processes

Importing a batch of leave of absence events launches these respective business processes:

Business Process	Notes
Request Leave of Absence	You can add users to the security groups of the *Import Request Leave of Absence Events* initiating action to enable them to load request leave of absence events in batches.
Request Return from Leave of Absence	You can add users to the security groups of the *Import Request Return from Leave of Absence Events* initiating action to enable them to load request return from leave of absence events in batches.

When you migrate large volumes of leave events during deployment, Workday recommends that your business processes include either:

- Only the *Initiation* step.
- The *Completion* step as the last step.

When you load leave events using the import web services, Workday automatically completes the respective business process, then runs subprocesses.

Tips for Entering Data in the EIB Spreadsheet

As you complete the EIB template, consider these fields:

Field	Notes
Header Key	Determines the batch for a leave event. Use the same header key to group all events in a batch. Example: To load events in 2 batches, use *1* for the first 500 rows and *2* for the next 1,000 rows.
Line Key	An incremental value for each row within a header key batch. Example: Use *1* for the first row, *2* for the second row, *3* for the third row, and so on. Restart the numbering at 1 for each batch.
Request Leave of Absence ID	Workday assigns a value if you don't provide one. This field is available only on the Import Request Leave of Absence Events EIB spreadsheet.
Correction	Enter *Y* or *N* to indicate that you're correcting an existing leave event.
Leave of Absence Type	This field is available only on the Import Request Leave of Absence Events EIB spreadsheet.
First Day of Leave	The first date of a worker's leave. Example: *2020-03-25*. This field is available only on the Import Request Leave of Absence Events spreadsheet.
Estimated Last Day of Leave	The estimated last date of a worker's leave. Example: *2020-04-22*. This field is available only on the Import Request Leave of Absence Events spreadsheet.

Field	Notes
Row ID	A unique numerical value for each row. This field is available only on the Import Request Return from Leave of Absence Events spreadsheet.
Request Leave of Absence	To return a worker from leave, enter the unique Request Leave of Absence ID of the request leave of absence event. This field is available only on the Import Request Return from Leave of Absence Events spreadsheet.
First Day of Work	The date a worker returns to work. Example: *2020-04-24* This field is available only on the Import Request Return from Leave of Absence Events spreadsheet.
Actual Last Day of Leave	The actual last date of a worker's leave. Example: *2020-04-23* This field is available only on the Import Request Return from Leave of Absence Events spreadsheet.

Validating Leave of Absence Events

When you load events using the import web services, Workday validates each leave event.

The import web services ignore validation rules that you've configured on:

- Leave Type.
- Business process.

Once the web services complete importing leave events, you can view the validations for leave events in Workday.

Related Information
Examples

Set Up Inbound EIB

The Next Level: Using Absence to Record Furloughed Leave

Concept: Identifying Workers on Leave

When a worker is on leave, Workday displays an *(On Leave)* notation after the worker's name. This depends on the On Leave Status Visibility Type setting on the leave type. You can configure the leave type to display the *(On Leave)* status:

- Always.
- Never.
- Only to those who are authorized to see the worker's leave of absence. When you select the *Only Show to Users Secured to Leave of Absence Event* option for On Leave Status Visibility Type, anyone with view permission on the *Worker Data: Leave of Absence* domain can view the *(On Leave)* status for the worker.

Multiple Job Visibility

If your leave types display the *(On Leave)* status and your tenant has multiple jobs set up, you can display these notations when a worker goes on leave:

- *(On Leave)* displays after the worker's name and after every position if the worker is on a:
  - Worker-based leave.
  - Position-based leave for every position. (A plus sign displays (+) after a secondary position's name.)
- *(On Leave)* displays only after the positions that are on leave, not the worker's name, if the worker:
  - Is on a position-based leave for a subset of his positions, and
  - Isn't on a worker-based leave.

Note: *Only Show to Users Secured to Leave of Absence Event* displays notations for positions with leave events that managers can view. They see the *(On Leave)* notation after the worker's name only if they have permission to view leave events for all of the worker's positions.

Example: Worker-Based and Position-Based Leave Visibility

Jim has 3 positions: professor, researcher, and physician. All of the leave types he's eligible for are set to display the *(On Leave)* status.

- If Jim takes a worker-based leave of absence *(On Leave)* displays after his name and after each of his 3 positions.
- If he takes a position-based leave from his professor position only *(On Leave)* displays after his professor position only.
- If Jim takes a position-based leave for all 3 of his positions *(On Leave)* displays after his name and after each position.

Concurrent Leave Visibility

If a worker is on 2 or more leaves concurrently, Workday uses the least restrictive *On Leave Status Visibility Type* setting to determine whether to display the *(On Leave)* status. Workday re-evaluates the status visibility whenever you start or end a leave that overlaps with another.

Leave A Setting	Leave B Setting	Result
Always Show	*Always Show*	*Always Show*
Always Show	*Never Show*	*Always Show*
Always Show	*Only Show to Users Secured to Leave of Absence Event*	*Always Show*
Never Show	*Never Show*	*Never Show*
Never Show	*Only Show to Users Secured to Leave of Absence Event*	*Only Show to Users Secured to Leave of Absence Event*
Only Show to Users Secured to Leave of Absence Event	*Only Show to Users Secured to Leave of Absence Event*	*Only Show to Users Secured to Leave of Absence Event*

Reports

These reports display workers and positions on leave:

- Workers on Leave
- Workers Returning from Leave

Leave Balance Deduction Override

Setup Considerations: Leave Balance Deduction Override

You can use this topic to help make decisions when planning your configuration and use of Leave Balance Deduction Overrides. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Leave Balance Deduction Overrides enables you to configure leave types to allow workers to take the twice the amount of leave by deducting from their leave balance at half the rate.

Business Benefits

This helps you to allow workers to take their leave in accordance with local regulations.

Use Cases

A worker has an entitlement of 25 days of leave at their full rate. You can use a leave balance deduction override on the leave type so that they can instead take 50 days of leave at half of the rate of deduction.

A worker has an entitlement of 50 days for Paid Parental Leave at full rate of deduction. They submit a leave request for 25 days at full rate of deduction, followed by 50 days at half rate of deduction. Their leave balance will be 0 at the end of 75 days. This override enables you to allow leave to be taken at double the duration while deducting from the leave balance at half of the rate.

Questions to Consider

Which leave types do you want to enable Leave Balance Deduction Override on?	The main leave type and the additional leave type must both of the same type, position based or not.
Will you update existing leave types to have a Leave Balance Deduction Override?	If there are previous leave requests of the existing leave type, they will be retroactively updated.

Requirements

- Additional leave types that you select in the configuration must not track balances.
- The main leave type and the additional leave type for a Leave Balance Deduction Override must use the same units. The additional leave type that you select will count as units taken for the main leave type.

Limitations

Entitlement per Event isn't supported with Leave Balance Deduction Overrides.

Security

Set Up: Leave of Absence in the Time Off and Leave functional area to provide access to configure and view Leave Balance Deduction Overrides.

Reporting

You can use the All Leave Families report to see the leave types that have Leave Balance Deduction Override enabled in the Leave Balance Deduction Override column.

Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up a Leave Balance Deduction Override

Prerequisites

Security: This domain in the Time Off and Leave functional area:

- *Set Up: Leave of Absence.*

Context

You can enable a Leave Balance Deduction Override on a leave type so that workers can take twice the amount of leave by deducting from a leave balance at half of the rate.

Steps

1. Access the Create Leave Type task to create a new leave type, or Edit Leave Type task to access an existing leave type to enable Leave Balance Deduction Override on.
2. On the Balance/Leave Taken tab, select the Leave Balance Deduction Override check box.
3. Select one or more Additional Leave Types. Any additional leave type that you select must not track balances. The main leave type and the additional leave types must use the same units, and must be the same type, position based, or not position based. The additional leave type that you select will count as units taken for the main leave type.

Result

When a worker takes leave of the configured leave type, they will deduct from the balance at half of the original rate.

On the Request Absence task, workers will see their available and remaining leave balances that they can make a request against with the selected leave type. The Available Balance displays their balance at the override rate, which is double the entitlement. The Remaining Balance displays the available balance minus the requested amount.

Note: If you update an existing leave type, all previous leave requests of that type will be retroactively updated.

Note: A worker's leave entitlement is always shown at the of the full rate of deduction, not the Leave Balance Deduction Override rate.

Next Steps

Use the All Leave Families report to see which leave types have leave balance deduction override enabled.

Absence Event Tracking

Steps: Manage Absence Cases

Context

You can track and assist workers who are on long-term time offs and leaves of absence. You can track their progress as they reach milestones and checkpoints in their path to rejoining the workforce. You can define a checklist of various reintegration activities, such as meetings and compensation changes, and the timeline over which they occur. Many countries have statutory requirements for the reintegration process. Example: you can track the process of reintegration of workers who are returning after a long-term illness.

Steps

1. Configure the *Absence Case Event* business process.
    a) Define the steps in the business process definition that are part of the worker reintegration process. See Steps: Configure Business Process Definitions.
    b) (Optional) To dynamically generate editable documents when workers request long-term time off or leave of absence, add a *Generate Document* action step. See Steps: Set Up Document Generation for Absence Business Processes on page 2230.
2. (Optional) Edit Business Processes.
    a) Add the *Automated Absence Case Creation* service step after the completion step on these business processes:

        - *Request Leave*
        - *Request Time Off*

        The service step automatically initiates an absence case when a worker's leave of absence or time off meets the parameters configured for an absence case group.
    b) To dynamically generate editable documents when workers request time off, add a *Generate Document* action step to the *Request Time Off* business process. See Steps: Set Up Document Generation for Absence Business Processes on page 2230.
3. (Optional) Maintain Step Delay.

    Use the Processing Date for Automatic Absence Case Creation report field to add a step delay to the *Automated Absence Case Creation* service step. The step delay prevents the service step from initiating an absence case until the worker meets the parameters of their absence case group.

    Example: Anna's absence case group initiates absence cases after 4 weeks of qualifying absences. Anna requests a qualifying leave of absence today that's 10 weeks long. With the step delay, Workday doesn’t initiate an absence case until 4 weeks from today. Without the step delay, Workday initiates an absence case as soon as her manager approves her request.
4. Create Absence Case Groups on page 2621.
5. Initiate Absence Cases on page 2623.

Result

You can use the Manage Absence Cases report to create, view, and close absence cases for a worker.

Create Absence Case Groups

Prerequisites

Security:

- *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.
- *Set Up: Time Off* domain in the Time Off and Leave functional area.

Context

Absence case groups define the conditions that automatically initiate absence cases for workers. Groups are based on a set number of days of absence in a defined period.

Note: Absence case groups also apply when creating cases manually.

Regulatory requirements often define the conditions.

Example: Create an absence case group that aligns with the requirements of the Gatekeeper Improvement Act (Wet Verbetering Poortwachter) for workers in the Netherlands.

Steps

1. Access the Create Absence Case Group task.
2. Enter an Absence Case Group Name.
3. As you complete the task, consider:

Option	Description
Inactive	(Optional) Inactivate the absence case group. Workday doesn't automatically create absence cases, and you can't manually create absence cases, for inactive case groups.
Time Period Considered for Case (Days)	Enter the number of consecutive days over which to evaluate qualifying absences. The time period begins on the first day of any given qualifying absence.
Minimum Number of Qualifying Days	Enter the minimum number of days of qualifying absences in the time period required to initiate an absence case.
Minimum Number of Days Between First and Last Qualifying Days	Example: If the last qualifying day must be 27 days after the first qualifying day in the time period to initiate an absence case, enter 26.
Qualifying Leaves and Time Offs	Select from the leaves and time offs that aren't in use by other active absence case groups.

4. (Optional) In the Absence Case Outcomes grid, add a row for each possible outcome.

   You can select from this field when you create, correct, or close an absence case. Case outcome enables you to create a report of closed cases. Example: The case closes because the worker successfully reintegrates after a prolonged period of absence.
5. (Optional) On the Supporting Data tab, select Show Workability Percentage.

   This option enables you to enter a workability percentage for the absence cases in this group.

Result

If you've added the *Automated Absence Case Creation* service step to the *Request Leave of Absence* and *Request Time Off* business processes, Workday creates an absence case for a worker when their leave or time off event meets the parameters of the absence case group. You can also manually initiate absence cases for the absence case group.

Example

You've configured your business processes to initiate absence cases and you've created an absence case group with these parameters:

Parameter	Value
Time Period Considered for Case	28
Minimum Number of Qualifying Days	2
Minimum Number of Days Between First and Last Qualifying Days	26

Several of your workers are on various leaves and time offs that qualify for the absence case group. Whether Workday initiates absence cases depends on the details of their absences.

Hans	• Hans is absent on these dates: July 1 - August 15. • Time period considered for case: July 1 - July 28. • On July 2, Hans meets the minimum number of qualifying days. The gap between the first and last qualifying days (July 1 and July 2) is zero days. Workday doesn't initiate an absence case. • On July 28, the gap between the first and last qualifying days grows to 26. The gap matches the parameters for the absence case group. Workday initiates an absence case.

Edgar	• Edgar is absent on these dates:
	  ◦ July 1
	  ◦ July 27 - July 28
	• Time period considered for case: July 1 - July 28.
	• On July 27, Edgar meets the minimum number of qualifying days. The gap between the first and last qualifying days (July 1 and July 27) is 25 days. Workday doesn't initiate an absence case.
	• On July 28, the gap between the first and last qualifying days grows to 26. The gap matches the parameters for the absence case group. Workday initiates an absence case.

Lotte	• Lotte is absent on these dates:
	  ◦ July 1
	  ◦ July 10 - July 15
	  ◦ July 27 - July 28
	• Time period considered for case: July 1 - July 28.
	• On July 10, Lotte meets the minimum number of qualifying days. The gap between the first and last qualifying day is 8 days. Workday doesn't initiate an absence case.
	• On July 28, the gap between the first and last qualifying days grows to 26. The gap matches the parameters for the absence case group. Workday initiates an absence case.

Gerard	• Gerard is absent on these dates:
	  ◦ July 1
	  ◦ July 27 - July 28, for a time off that doesn't qualify for the absence case group.
	• Time period considered for case: July 1 - July 28.
	• Workday doesn't initiate an absence case because Gerard has only 1 qualifying day in the time period.

Jan	• Jan is absent on these dates: July 10 - July 15. • Time period considered for case: July 10 - August 6. • Workday doesn't initiate an absence case because the gap between the first and last qualifying days is 4 days. • If Jan has another qualifying absence on August 6, Workday initiates an absence case because the gap is 26 days.

Initiate Absence Cases

Prerequisites

- The worker must be on a qualifying leave or time off.
- Configure the *Absence Case Event* business process and security policy in the Time Off and Leave functional area.

Context

You can manually initiate an absence case for a worker if your business process or absence case group configurations don't apply to their situation.

Steps

1. Access the Create Absence Case task.
2. Select an Absence Case Group.

   You can select active groups for which the worker doesn't already have an absence case event in progress.
3. As you complete the task consider:

Option	Description
Workability Percentage	This field displays if it's configured for the absence case group. The workability percentage describes the amount of work that a worker who is on a part-time leave or time off is able to contribute.
Case Outcome	This field displays if case outcomes exist for the absence case group. You can also add or change the case outcome when you close the absence case. Example: You know the outcome of an absence case and want to keep a record. Select a case outcome to create an absence case retroactively.

4. Link at least 1 qualifying leave event or time off entry to the absence case.

   Add a row for each qualifying leave event or time off entry. Link at least 1 qualifying leave event or time off entry.

Result

Workday initiates an absence case for the worker according to the *Absence Case Event* business process definition.

Next Steps

Access the Manage Absence Cases report to create, view, and close absence cases for a worker.

Absence Occurrences

Setup Considerations: Absence Occurrences

You can use this topic to help make decisions when planning your configuration and use of the Absence Occurrences functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Absence occurrences enable you to monitor the:

- Number of times and consecutive days workers are absent during a period.
- Types of absences they take.

Workday automatically creates an occurrence based on leave events and individual time offs. Absence occurrences can be:

- Standard: Include only 1 absence type.
- Custom: Include multiple types.

Business Benefits

Absence occurrences:

- Increase efficiency in your absence reporting as you can view information for all absence types in 1 report.
- Reduce the risk of error in your absence reports by removing the need to count individual time off or leave events.
- Make it easier to control absenteeism and costs as you can identify trends and use the information to manage your resources.

Use Cases

- Prepare local regulatory reporting documents. Example: Your UK offices have Bradford Factor reporting, measuring how many times an absence occurred in a period.
- Group different types of absences together into 1 occurrence. Example: You can create an absence occurrence for a custom absence type to monitor when workers are absent for a block of consecutive days, including public holidays.

Questions to Consider

When setting up absence occurrences, consider:

Questions	Considerations
What absence types do you want to include in your absence occurrence reporting?	You can enable absence occurrences for these absence types: • Time offs. • Leave types. • Absence tables. Workday then includes these types in a standard absence occurrence, which groups consecutive days of the same absence type. You can create a custom absence occurrence to group different absence types in a way that suits your business needs.
What days do you want to base your absence occurrence on?	Workday creates standard absence occurrences based on the days to include setting in your time off plans or leave of absence types. For absence tables, Workday joins all days to include from all tiers. You can create custom absence occurrences that define which days to include. This configuration overrides the setting in each of the absence types that you include.
How far back do you want to report on absence occurrences?	You can report on absence occurrences for any time period if you convert your existing data when configuring absence occurrences. Ensure that you

Questions	Considerations
	specify a date as far as back as your reporting requirements.

Recommendations

Workday recommends that you:

- Decide whether you want to enable absence types for absence occurrences after you create them.
- Wait until after major planned data loads in your tenant complete before enabling absence occurrences during implementation. You can create absence occurrences for your existing absence data as of a specific date, for reporting purposes, by running a conversion when you configure absence occurrences. The conversion can take some time. You don't have to run it the first time, but Workday highly recommends you revisit the task and convert your absence data later. Conversion doesn't change the existing absence data.
- Maximize performance by minimizing the as of date, number of workers, and occurrence types when recalculating absence occurrence manually.

Requirements

No impact.

Limitations

Workday automatically recalculates absence occurrences based on certain changes. However, there's a slight delay as the job that detects and recalculates only runs every 4 hours.

When you inactivate a work schedule calendar, Workday doesn't recalculate absence occurrences for workers with direct assignments to the calendar before you inactivated it. You need to recalculate absence occurrences manually for these workers.

Absence occurrences don't support:

- Multiple work schedules per worker.
- Start and end times on time offs. Example: Rachel works Monday to Friday from 8:00 AM to 5:00 PM. If Rachel has time off all day on Monday and from 8:00 AM to 12:00 PM on Tuesday, Workday groups these 2 days into 1 occurrence. However, if Rachel has time off all day on Monday, and time off on Tuesday from 1:00 PM to 5:00 PM, Workday also groups the time off into 1 occurrence. This time off isn't truly consecutive, based on the start and end times of the time offs and Rachel's work schedule.

When maintaining related absence occurrences, Workday links occurrences on specific dates rather than individual time off entries. If an approved time off entry exists on a day that you link, this day remains linked even if someone adds new entries on the same day. Since the original entry's corresponding occurrence is still approved, Workday maintains the link. If the someone corrects the original entry, Workday drops the link because the entry is changed or in progress.

Tenant Setup

Access the Edit Tenant Setup - HCM task to enable quantity per occurrence on absence table tiers. See:

- Setup Considerations: Absence Tables on page 2466
- Create Absence Tables on page 2470

Security

Domains	Considerations
Worker Data: Absence Occurrences	Provides view access to the View Absence Occurrences Detail report and the Absence Occurrences for Workers data source.
Worker Data: Absence Occurrences (Manager View)	Provides managers view access to the View Absence Occurrences Summary report and the Absence Occurrences for Workers data source.
Worker Data: Related Absence Occurrences domain	Provide access to the Maintain Related Absence Occurrences task, enabling you to link and unlink absence occurrences and view linked occurrences.
Set Up: Time Off (General) *Set Up: Leave of Absence*	Provides access to configure absence occurrences and view absence occurrence types.

Business Processes

Business Processes	Considerations
Correct Time Off	Recalculates absence occurrences when a worker corrects their time off. Example: When workers correct their requests by setting the time off quantity to zero, as long as the correction is in progress, the time off is part of the occurrence. After approval, Workday removes the time off from any occurrence that it was previously part of.
Request Leave of Absence *Request Time Off* *Enter Time*	Recalculates absence occurrences when a worker requests a leave of absence or time off.
Request Return from Leave of Absence	Recalculates absence occurrences when workers or managers submit a return from a leave of absence. Example: When workers return from leave, Workday updates the absence occurrence end date to the leave actual end date rather than the estimated return date. Workday considers a worker to be off leave the day after the Estimated Last Day of Leave/Absence. Before a worker is returned, Workday uses the estimated last day of leave as the absence occurrence end date. If the estimated last day of leave is 01/05/2024 and the current date is 05/05/2024, if the worker is still on leave, the earlier estimated date impacts reporting where reports are based on the absence occurrence end date.

Reporting

You can use the Absence Occurrences for Workers report data source when creating custom reports on absence occurrences. You can also use these data source filters:

- Absence Occurrences by Organization and Date Range (Approved Only)
- Absence Occurrences by Organization and Date Range (Approved and In Progress)

Reports	Considerations
View Absence Occurrences Detail	Enables absence administrators to view individual occurrences for workers.
View Absence Occurrence Type	Enables absence administrators to view the details of your absence occurrence types.
View Absence Occurrences Summary	Enables managers to view an overview of the number of times workers are absent per absence type.

Integrations

Web Service	Considerations
Get Absence Occurrence Types	Use this web service to view existing absence occurrences types. We recommend you do this before creating a new absence occurrence type.
Put Absence Occurrence Types	Use this web service to enter absence occurrence types, saving time if you want to bulk load absence occurrence types.

Connections and Touchpoints

Features	Considerations
Absence Tables	You can enable absence tables for absence occurrences. Workday automatically flags absence occurrences of this type for recalculation when you change tier configurations in absence tables.
Change Work Schedule	Workday automatically flags absence occurrences for recalculation when either: • You change work schedule assignments for a worker. • Managers or workers make ad hoc work schedule changes in your organization.
Change Job	Workday automatically flags absence occurrences for recalculation when workers change jobs in your organization.
Holiday and Work Schedule Calendars	Workday automatically flags absence occurrences for recalculation when there are changes to your holiday and work schedule calendar events. When you create or edit work schedule calendars and work schedule calendar events (or delete

Features	Considerations
	work schedule calendar events), Workday flags absence occurrences for recalculation: • For approved time off or leave, for workers who were directly assigned to the work schedule calendar using the Assign Work Schedule task. • For absence occurrence types, including custom types, with days to include settings of *Workdays (Non-Holiday)* or *Workdays (Work hours exceeds Holiday hours)*. • From 31 days before the date of the change onwards.
Leave of Absence	You can enable leave of absence types for absence occurrences. Workday automatically flags absence occurrences of this type for recalculation when you change the days to include configuration.
Purge Plans	You can select Absence Occurrences as a purgeable data type and save it in a purge plan for subsequent use when purging person data for terminated workers. You can purge time off or leave data for a worker only if you're also purging absence occurrences.
Time Tracking	Workday recalculates absence occurrences when a worker requests time off through Time Tracking.
Time Off	You can enable time offs for absence occurrences. Workday automatically flags absence occurrences of this type for recalculation if you change the days to include configuration on the time off plan.
Union Membership	Workday automatically flags absence occurrences for recalculation when workers change union membership.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

2020R1 What's New Post: Absence Occurrences

The Next Level: Absence Occurrences and Absence Case Management

Steps: Set Up Absence Occurrences

Prerequisites

- Create absence tables, leave types, and time offs so that you can enable absence occurrences for these types.
- Review setup considerations for absence occurrences.

Context

You can configure absence occurrences to monitor the number of times and consecutive days that workers are absent, helping you to comply with regulatory and company-specific reporting requirements. You can configure absence occurrences for these absence types:

- Absence tables.
- Custom occurrence types that group different absence types.
- Leave types.
- Time offs.

Steps

1. Enable these domain security policies in the Time Off and Leave functional area so that users can access absence occurrence reports:
   - *Worker Data: Absence Occurrences*
   - *Worker Data: Absence Occurrences (Manager View)*

   See Steps: Enable Functional Areas and Security Policies.
2. Edit Domain Security Policies.

   Edit the domain security policy of these domains. Give View and Modify permissions to the security groups that need to access absence occurrence reports.
3. Activate Pending Security Policy Changes.
4. Configure Absence Occurrences on page 2631.
5. (Optional) Access the View Absence Occurrences Detail report.

   Perform compliance analysis for an organization or absence type.

   Example: You might need workers to take holidays for a specific number of consecutive days to meet local regulatory requirements. By selecting the Worker Does Not Have Matching Occurrences check box, you can see when workers haven't taken any vacation over a specific time period.

   By default, Workday doesn't join pending time off or leave events that require approval in absence occurrences. You can select the Include Pending Events check box to join pending events with approved events. Example: A worker's absence data contains 3 consecutive days with a status of approved, approved, and pending for their related time off or leave events. When you:

   - Don't select the check box, Workday returns an absence occurrence of 2 days.
   - Select the check box, Workday returns an absence occurrence of 3 days with a status of In Progress.

Next Steps

Workday runs a background job every 4 hours that automatically detects and recalculates absence occurrences based on certain changes. Example: When work schedules change for workers, their absence occurrences data might change due to changes to their working days.

Note: When you inactivate a work schedule calendar, Workday doesn't recalculate absence occurrences for workers with direct assignments to the calendar before you inactivated it. You need to recalculate absence occurrences manually for these workers.

You can use the Recalculate Absence Occurrences task to recalculate manually for a specific worker or occurrence type.

Concept: Calculating Leave Taken on page 2600

Reference

2020R1 What's New Post: Absence Occurrences

Configure Absence Occurrences

Prerequisites

Security: These domains in the Time Off and Leave functional area:

- *Set Up: Leave of Absence.*
- *Set Up: Time Off*

Context

You can select which absence tables, time offs, and leave types to enable for absence occurrences. When you enable absence types for absence occurrences, Workday creates standard absence occurrences based on the days to include settings on your time off plans and leave types. For absence tables, Workday joins all days to include from the time off plans on all tiers.

Note: When implementing absence occurrences, wait until after any major planned data loads in your tenant complete before enabling absence occurrences.

Steps

1. Access the Configure Absence Occurrences task.

   You can select the:

   - Select All check box to enable all instances of each absence type.
   - Enable for Absence Occurrences check box beside each absence table, time off, and leave type to enable a specific instance of each absence type.
2. (Optional) Select the Custom Type tab to create custom occurrence types for groups of absence types. As you complete this tab, consider:

Option	Description
Absences to Group	Select absence types to group. To group time offs in absence tables that might already have requests against them as individual time offs, select them from the Time Offs within Absence Tables prompt category.
Days to Include	When you configure this prompt, Workday determines the days to include when joining a block of absences into a single occurrence and overrides the days to include configuration in each of the absence types in the group. The *Workdays (Non-Holiday)* and *Workdays (Work hours exceed Holiday hours)* options require the setup of holiday and work schedule calendars.

Option	Description
	These options only apply to the worker's assigned work schedule calendar and not Workday Scheduling. Workday only includes the days that a worker is scheduled to work, based on their work schedule calendar. However, if a worker agrees to take a shift outside of their normal work schedule calendar, and their manager makes ad-hoc changes to reflect this, selecting the *Workdays (Non-Holiday)* option results in an absence occurrence when the worker is absent. Select the *Configure Days to Include* option to select the Include Holidays from Holiday Calendar check box and Included Days prompt.
Include Adjacent Public Holidays	Select this check box to extend the absence occurrence by joining public holidays that occur before or after the absence occurrence. Example: You select a Days to Include value of *Weekdays (Mon-Fri)*. A worker is absent from Tuesday to Friday and the Monday either before or after, or both, is a public holiday. When you: • Don't select the check box, Workday creates an absence occurrence from Tuesday to Friday. • Select the check box, Workday creates an absence occurrence that starts on the preceding public holiday (Monday) and ends on the following Monday (if also a public holiday), although there's no absence before or after the public holidays.

3. Click OK to save your absence type changes.
4. (Optional) Run the absence occurrence conversion so you can report on absence occurrences for specific dates.

   The conversion doesn't change the existing absence data. Instead, it creates absence occurrences for the existing absence data in your tenant. The conversion can take several hours to complete if you have a lot of absence data. Don't access absence occurrence data during an in-progress conversion as you might see some discrepancies.

   Click Cancel to run the conversion later, or to run the conversion now:

   a) Enter a Request Name.
   b) (Optional) Select a different As Of date, if required.

      Note: By default, the As Of field value is a year prior to the current date. You can specify a different date from which to convert your workers' existing absence data into occurrences. The conversion might take longer if you specify a date far back in the past. If you don't change the date, Workday converts absence data for the past year.

c) Select Include All Enabled to recalculate absence occurrences for all of the absence types that you enabled previously and the absence types that you just enabled. Otherwise, Workday only calculates absence occurrences for the absence types that you enabled this time.

d) Click OK.

Result

Workday creates an absence occurrence type for each absence type that you enable.

Next Steps

Run the View Absence Occurrence Type report to view the types that you enabled. You can remove absence occurrences that you enabled for an absence type in error. Access the Configure Absence Occurrences again and clear the Enable for Absence Occurrences check box beside the type.

Workday doesn't enable absence occurrences on new absence types automatically. When you create time offs, absence tables, and leave types, consider enabling them for absence occurrences.

Related Information

Tasks

Manage Ad Hoc Work Schedule Changes

Recalculate Absence Occurrences

Prerequisites

Security: These domains in the Time Off and Leave functional area:

- *Set Up: Leave of Absence*
- *Set Up: Time Off*

Context

You can recalculate occurrences manually on an ad hoc basis for worker or configuration changes. Example: When you inactivate a work schedule calendar, Workday doesn't recalculate absence occurrences for workers with direct assignments to the calendar automatically.

Steps

1. Access the Recalculate Absence Occurrences task.
2. Select a Run Frequency:
    - To recalculate absence occurrences now, select *Run Now*.
    - To schedule the recalculation job to run at a future date and time, in a specific time zone, select *Run Once in the Future*.
3. Enter a Request Name

    Workday uses the request name in reports.
4. Enter an As of Date.

    Workday recalculates absence occurrences that span or start on the as-of date and later. Example: If you enter today's date, Workday recalculates only occurrences with a date range that spans today or that have a start date of today or later. To ensure that Workday recalculates absence occurrences with issues, enter an as-of date that's on or before the start date of the occurrences.

Concept: Absence Occurrences

Absence occurrences enable you to group absences that occur on either side of nonworking days into 1 consecutive absence. Workday groups such days together even when workers or managers enter them as 1 or more requests.

Workday uses the Days to Include value from each absence type to automatically group absence occurrences for:

- Absence tables.
- Time offs.
- Leave types.

You can create custom absence occurrences types that define which days to include. Example: You want to group different absence types into a block of absence to adhere to the mandatory block leave requirement. This configuration overrides the setting in each of the absence types that you include.

You can use absence occurrences to:

- Monitor and report the number of times and consecutive days workers are absent during a period.
- Report workers who have and haven't taken the legally required number of consecutive days of absence during a period. Example: Workers in Switzerland legally require to take 10 consecutive days of vacation in a year.
- Monitor the types of absences workers take.

Global Modern Services (GMS) has an absence plan called *GBR Sickness Days*. Logan McNeil enables the plan for absence occurrences. Logan accesses the Manage Absence calendar for Emma Hobson. Emma was sick on Friday, May 1, 2020 and Monday, May 4, 2020. She entered her time off using the *GBR Sickness Days* absence plan. Because the plan has a Days to Include value of *Workdays (Non-Holiday)* and Emma's work schedule indicates that she works Monday to Friday, Workday joins these days. When Logan runs the View Absence Occurrences Detail report, Workday displays a single absence occurrence for the days that Emma was sick.

2020R1 What's New Post: Absence Occurrences

Example: Create Condition Rules for Absence Occurrences

Workday enables you to control data entry based on absence occurrences. This example illustrates how to create step condition rules on the *Request Time Off* business process to validate time off requests. However, you can configure the same condition rules for these Absence and Time Tracking business processes, where necessary:

- *Correct Time Off*
- *Enter Time*
- *Request Leave of Absence*
- *Request Time Off*
- *Request Return from Leave of Absence*

Context

Example: You're an Absence administrator for Global Modern Services. You want to create step condition rules to:

- Require attachments such as a medical certificate when workers are absent 7 calendar days or more.

- Prevent workers requesting absence based on the number of occurrences already in the calendar year.
- Require that workers take a block of time off that includes at least 10 consecutive working days during the calendar year.

Prerequisites

Enable absence occurrences for the absence types that you want to validate in the requests such as specific:

- Absence tables.
- Time offs.
- Leave types.
- Custom types.

Security: These domains in the System functional area

- *Business Process Administration*
- *Custom Field Management*
- *Manage: Business Process Definitions*

Steps

1. Access the Create Calculated Field task.

   Create a calculated field that checks whether the length of an absence occurrence is greater than or equal to 7.

   a) Enter these values:

Field	Value
Field Name	*Absence Occurrence with Length greater than or equal to 7*
Business Object	*Coordinated Absence Event*
Function	*Lookup Field with Prompts*

   b) Click OK.
   c) On the Calculation tab, select the *Length of Current Absence Occurrence Matches* report field from the Source Field prompt.
   d) In the Prompts for Source Field grid, enter these values:

Prompt Field	Value
Length Attribute	*Calendar Days*
Absence Occurrence Type	Select the absence type. Example: *Monthly Time Off*.
Length Value	7
Length Attribute Operator	*greater than or equal to*

2. Click OK and Create Another Calculation.

   Create a calculated field that checks whether the worker already has an occurrence for a specific absence type in the calendar year.

   a) Enter these values:

Field	Value
Field Name	*Absence Occurrence Event in the Calendar Year*
Business Object	*Coordinated Absence Event*
Function	*Lookup Field with Prompts*

   b) Click OK.
   c) On the Calculation tab, select the *Count of Absence Occurrences Matches* report field from the Source Field prompt.
   d) In the Prompts for Source Field grid, enter these values:

Prompt Field	Value Type	Value
Start Date	*Determine Value at Runtime*	*First Day of This Calendar Year*
End Date	*Determine Value at Runtime*	*Last Day of This Calendar Year*
Length Attribute	*Specify Value*	*Workdays*
Count Operator	*Specify Value*	*greater than or equal to*
Absence Occurrence Type	*Specify Value*	Select the absence type. Example: *Absence Table Sample (Days)*.
Length Attribute Operator	*Specify Value*	*greater than or equal to.*
Count of Occurrences	*Specify Value*	*2*

3. Click OK and Create Another Calculation.

   Create a calculated field that checks that the worker has requested a block of time off during the calendar year with at least 10 consecutive days.

   a) Enter these values:

Field	Value
Field Name	*Absence Occurrence with Length of 10 or more in the Calendar Year*
Business Object	*Coordinated Absence Event*
Function	*Lookup Field with Prompts*

   b) Click OK.
   c) On the Calculation tab, select the *Count of Absence Occurrences Matches* report field from the Source Field prompt.
   d) In the Prompts for Source Field grid, enter these values:

Prompt Field	Value Type	Value
Start Date	*Determine Value at Runtime*	*First Day of This Calendar Year*

Prompt Field	Value Type	Value
End Date	*Determine Value at Runtime*	*Last Day of This Calendar Year*
Length Attribute	*Specify Value*	*Calendar Days*
Count Operator	*Specify Value*	*less than or equal to*
Absence Occurrence Type	*Specify Value*	Select the absence type. Example: *Sample Custom Occurrence*.
Length Value	*Specify Value*	*10*
Length Attribute Operator	*Specify Value*	*greater than or equal to*
Count of Occurrences	*Specify Value*	*1*

e) Click Done.

4. Access the *Request Time Off* business process definition.

   Add the calculated fields that you just created to a condition rule on the business process.
5. From the related actions menu of the initiation step, select Business Process > Maintain Step Conditions.
6. Add a row to the Validation Conditions grid for the first condition.
   a) Select Create Condition Rule from the Rule prompt.
   b) In the Description field, enter: *Absence Occurrence is 7 or more days and there is no attachment.*
   c) Define the Rule Conditions.

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Attachments*	*is empty*	*Value specified in this filter*	
And	*Absence Occurrence with Length greater than or equal to 7*	*equal to*	*Value specified in this filter*	Select the check box.

   d) Select the *Warning* option in the Severity field.
7. Add a row to the Validation Conditions grid for the second condition.
   a) Select Create Condition Rule from the Rule prompt.
   b) In the Description field, enter: *Only 1 Absence Occurrence of this type allowed per calendar year.*
   c) Define the Rule Conditions.

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Absence Occurrence Event in the Calendar Year*	*equal to*	*Value specified in this filter*	Select the check box.

   d) Select the *Critical* option in the Severity field.

8. Add a row to the Validation Conditions grid for the third condition.
    a) Select Create Condition Rule from the Rule prompt.
    b) In the Description field, enter: *At least 1 Absence Occurrence of this type in the calendar year is 10 workdays or more.*
    c) Define the Rule Conditions.

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Absence Occurrence with Length of 10 or more in the Calendar Year*	*equal to*	*Value specified in this filter*	Select the check box.

    d) Select the *Warning* option in the Severity field.

Result

When workers request time off, Workday displays an:

- Alert if the absence occurrence is for 7 calendar days or more and they don't attach a supporting document.
- Error message that prevents them submitting the request, if they've already requested that absence type in the same calendar year.
- Alert if the absence occurrence is for less than 10 consecutive workdays during the calendar year.

Concept: Step Conditions

Tasks

Create Calculated Fields

Reference

The Next Level: Absence Occurrences and Absence Case Management

Troubleshooting: Absence Occurrences

Unexpected results for absence occurrence start or end dates on the View Absence Occurrences Detail report.

Cause: You didn't run the conversion to convert existing absence data into absence occurrences in your tenant.

Solution: Security: These domains in the Time Off and Leave functional area:

- *Set Up: Leave of Absence*
- *Set Up: Time Off*
- *Worker Data: Absence Occurrences*
- *Worker Data: Absence Occurrences (Manager View)*

Steps

1. Access the View Absence Occurrences Detail report to verify whether the conversion was run and created occurrences for all existing data. If not run, Workday won't have joined a day of absence that existed before you enabled absence occurrences for that type, with a new consecutive day, entered after you enabled absence occurrences.

2. Access the Configure Absence Occurrences task.
3. Ensure that the absence types that you want to enable are selected.
4. Click OK to run the conversion and convert all existing data for the selected absence types.

Unexpected results for actual grouping of days into a single occurrence or number of workdays.

Cause: Days to Include option isn't set correctly for the absence type.

Solution: Security: These domains in the Time Off and Leave functional area:

- *Set Up: Leave of Absence*
- *Set Up: Time Off*

Steps

1. Access 1 of these tasks depending on the absence type that the occurrence relates to:
   - Configure Absence Occurrence (for custom types).
   - Edit Leave Type.
   - Edit Time Off Plan (for absence table tiers or time off plans).
2. Ensure that you set the Days to Include option correctly.

   This option determines which days of absence to include and group as consecutive workdays of absence. For absence tables, Workday joins all days to include from the time off plans on all tiers. Example: If Days to Include is:
   - Monday for Tier 1 and Tuesday for Tier 2, the days to include for that absence table is Monday-Tuesday.
   - *Workdays (Non-Holidays)* or *Workdays (Work Hours exceed Holiday Hours)*, verify whether the worker actually has scheduled days for the occurrence date range.

FAQ: Absence Occurrences

What happens to absence occurrences when corrections for specific absence types and dates result in net absences equal to zero?	Absence occurrences only include the net absence taken on specific days. When you correct an absence for a specific day to zero, Workday no longer records an absence for that day. Example: An employee requests 1 day or 8 hours of paid time off, but later corrects the time entry by -8 hours to set the net time off to zero. If there are no absences on either side of that date, and the net result for the absence is zero after the correction, the View Absence Occurrences Detail report doesn't include an entry for the worker for that date. If the date that nets to zero is: • At either side of an absence occurrence, Workday reduces the absence occurrence by 1 day and adjusts the start and end dates accordingly. • In the middle of an absence occurrence, Workday splits the absence occurrence into 2 separate occurrences, 1 on each side of the day that nets to zero.

Absence Calculations

Evaluate Absence Calculations

Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

Context

You can evaluate absence accrual calculations for a worker from a given date to verify whether you configured the accruals correctly and identify discrepancies in your configuration. Workday enables you to drill into the calculation results of a worker's absence accrual for perform a detailed evaluation.

Steps

1. Access the Evaluate Absence Calculation report.
2. Select the accrual configuration that you want to evaluate, and a worker to evaluate against.
3. Specify an As Of date that's based on the accrual frequency method. Example: You want to evaluate a worker's accrual for January 2020 in a time off plan with a monthly period schedule. Select either 01/01/2020 or 01/31/2020, depending on the accrual frequency method.

Result

You can use the calculation results on the report to analyze the worker's accrual configuration and make changes if necessary.

The sidebar on the left in the lower pane displays the name of the calculation at each level. You can view the results of each calculation on the right. If the calculation contains embedded calculations, you can expand the folders in the sidebar to drill into each level and view any conditions and embedded calculation results. If there are multiple conditions, Workday displays the processing order and you can drill into view individual calculations, conditions, operators, and operands. Workday returns results in boolean format where 1 means true and 0 means false. See Reference: Boolean Calculations.

Note: Workday displays the calculation results of date fields in epoch Unix format. Example:1452844800000 converts to a human-readable timestamp of 2024-9-26 14:24:32.

Create Time Off Plans That Don't Track Balances on page 2313

Evaluate Absence Eligibility

Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in Time Off and Leave functional area.

Context

Test whether a worker is eligible for time off plans, accruals, or time offs as of a selected date. Use this report to verify whether you configured calculations correctly and to gain insight as to why a worker is eligible or ineligible for an absence component.

Steps

1. Access the Evaluate Absence Eligibility report.
2. Select the parameters with which to evaluate eligibility.

   If you select a position-based time off plan, accrual, or time off, you must also specify a Position. Workday automatically populates the field if the worker has only 1 position.
3. (Optional) In the results, click each calculation for configuration details.

   Workday represents calculations that use other calculations as folders. Expand the folders to view details for the nested calculations.

Result

The report displays whether or not the worker passes all of the eligibility criteria for that absence component as of the selected date. The calculation details also display any execution errors if a calculation fails to complete.

Tasks

Steps: Set Up Time Offs on page 2278
Create Accruals on page 2340
Create Time Off Plans That Track Balances on page 2302
Create Time Off Plans That Don't Track Balances on page 2313

Concept: Absence Calculations

You can create numeric, boolean, and date calculations as part of accrual calculations or eligibility criteria in different parts of Absence Management. Examples: Time off plans, accruals. You can create simple calculations, or you can nest calculations by selecting an existing calculation as an operand of another. You can use these types of calculations:

- Absence balances.
- Aggregate.
- Arithmetic.
- Conditional.
- Constant value.
- Date constant.
- Date extract.
- Date difference.
- Date increment.
- Instance set comparison.
- Lookup.
- Lookup tables.
- Value comparison.

Example: The monthly accrual for Betty Liu is based on her length of service. You can use these types of calculations to determine her accrual rate and to prorate this value by her full-time equivalent (FTE), respectively:

- Lookup, for her length of service.
- Arithmetic.

Note: Workday only supports custom fields under specific conditions in calculations. See Concept: Requirements for Custom Fields in Calculations..

Using Workday-Delivered Report Fields in Absence and Payroll

Absence and Payroll share the same calculation engine. You can use some fields in both Absence and Payroll, while some are intended for use only in Payroll. Using a report field in the wrong product area can lead to issues such as stack-trace errors and incorrect calculations. To identify whether the field is suitable for use in Absence, check:

- That the Category on the field includes *Time Off*.
- The field name. Typically, field names ending with *Period Start Date* or *Period End Date*, are suitable for use in Absence. Field names ending with *Sub-Period Start Date* or *Sub-Period End Date* are suitable for use only in Payroll.

As you review your Absence configuration for Payroll only fields, keep in mind that the calculations might currently be in use by both Absence and Payroll. Before you edit a calculation in Absence, check the usage to make sure that it's not also in use in Payroll. If it's in use in Payroll, create a new calculation for use in Absence.

You can use these report fields and instance value calculations (IVCs) to pull worked hours into absence calculations.

Report Field or IVC	Description
Pay Component for Workday Payroll Related Payroll Result Line	This report field provides the pay component of the Workday Payroll related payroll result line. Use to retrieve worked hours for specific pay components.
Payroll Hours Related Result Lines for Period	This report field provides completed hours for the worker where the result lines are for prorated or unprorated hours-related calculations and the period end date is within the date range of the absence period.
Payroll Hours Related Result Lines YTD	This report field provides completed hours for the worker where the result lines are for prorated or unprorated hours-related calculations and the period end date is within the date range of the balance period start and end dates.
Workday Payroll Related Result Line Amount	This IVC provides the amount of the Workday Payroll related result line.

Example: To calculate the amount of time off to grant Betty Liu each period, you want to:

- Sum the number of hours she's paid for in a period.
- Multiply the sum of hours worked by 0.25 hours of vacation per hour worked.

You can create:

- An aggregate calculation that uses the *Payroll Hours Related Result Lines for Period* report field to sum the actual hours that Betty Liu works.
- An arithmetic calculation that uses the result of the aggregate calculation.

Unsupported Periods in Absence

Workday doesn't support using calculations that reference academic pay periods or disbursement plan periods in Absence calculation fields as they don't use Absence period schedules. See:

- Setup Considerations: Period Schedules
- Create Period Schedules for Time Off
- Reference: Balance Calendars
- Set Up Academic Pay Period Calendar

Time Tracking

Time Tracking Basics

Steps: Set Up Time Tracking

Context

Configure Workday Time Tracking so that:

- Workers, administrators, and others can enter time.
- Workday automatically applies overtime, premiums, and other pay policies.
- Payroll can compensate workers for time worked.

Time Tracking setup is often an iterative process. It isn't necessary to follow these steps in the order listed.

Steps

1. Set up time entry rules.

   See Steps: Set Up Time Entry on page 2655.
2. Set Up Payroll and Time Tracking Period Schedules.

   Create time period schedules to define the dates for which workers can enter time.
3. Create Worker Eligibility Rules for Time Tracking on page 2826.

4. Create time calculations.

   Skip this step if you're not interested in having Workday perform calculations. Example: If you're using Workday Time Tracking only for project tracking.

   See Steps: Set Up Calculations for Time Tracking on page 2734.
5. Create Time Entry Validations on page 2812.
6. Create work schedules and holiday schedules.

   Define work schedule calendars to specify the days workers are scheduled to work and the start of the work week. You can also use work schedule calendars to assign dates to in/out time entries according to a day breaker other than midnight.

   By default the work week starts on Sunday at 12:00 AM. Even when the default settings apply, Workday recommends that you create a basic work schedule to indicate typical nonworking days.

   You can also create a holiday calendar so that holiday names display on the time entry calendar. When using a holiday calendar, you can also create calculations that take holidays into account.

   See Steps: Create Calendars.
7. Configure payroll to pay time.

   Configure Workday Payroll or Workday Cloud Connect for Third-Party Payroll to retrieve approved time when you run payroll.

   See Steps: Set Up Payroll to Pay Time on page 2831 or Select Fields for Payroll Extract.
8. (Optional) Specify how to manage time off.

   See Concept: Time Tracking and Absence Management on page 2834.
9. (Optional) Enable self-service users to use Time Tracking on mobile devices.

   See Steps: Enable Time Tracking for Mobile on page 2645.
10. (Optional) Create custom labels to replace the terms *check in*, *check out*, and their variations.

    You can use custom labels to replace these terms with alternatives that are appropriate for your organization. See:

    - Steps: Set Up Non-English Custom Labels for Time Tracking on page 2647
    - Create Custom Labels.
    - Steps: Set Up Non-English Custom Labels.

Next Steps

You can access the Run Time Configuration Analyzer Tool task to run a process that audits your Time Tracking configuration. Then access the View Time Configuration Analyzer Results report to view configuration information about your tenant including:

- Counts of Time Tracking workers.
- Time calculations.
- Time entry codes.
- Setup objects.

Workday also displays recommendations about how to address inefficiencies in your configuration, such as workers who have multiple work schedule calendars assigned and workers who have exceeded the recommended number of time calculations per worker. You aren't required to make configuration updates based on these warnings. They only reflect Workday recommendations.

Steps: Enable Time Tracking for Mobile

Context

You can enable self-service users to use Time Tracking features on mobile devices so they can:

- Check in and out.
- Be prevented from checking in or out if they're outside of a defined work location.
- Enter comments and select time types and worktags for check-in events.
- Receive reminders to check in and out.
- Respond to attestation questionnaires about their meals and breaks when checking in or at the end of their shift.
- Select reasons for check-out events.

When you use Workday Scheduling in addition to Time Tracking, you can enable managers to monitor and take action on daily time exceptions, such as late check-ins, from their mobile devices.

Steps

1. Edit Domain Security Policies.

   Activate and configure these domain security policies:

   - *Self-Service: Time Clock*.
   - *Self-Service: Time Calendar* or *Self-Service: Time Tracking High Volume*.
   - *Self-Service: Work Schedule*.
2. (Optional) Edit Business Process Security Policies.

   To use high-volume time entry, configure the *Enter Time* business process security policy to add relevant security groups to at least 1 of these domains:

   - *Enter Time*
   - *Time Block Micro-edit*
3. Enable standard mobile check-in.

   When you disable standard mobile check-in, workers must select a location or project when checking in.

   Note: Workday recommends enabling standard mobile check-in to take advantage of new Time Tracking features. In a future release, enabling standard mobile check-in will be required for mobile time entry.

   a) Access the Edit Tenant Setup - HCM task.

      Security: *Set Up: Tenant Setup - HCM* domain in the System functional area
   b) Select the Enable Standard Mobile Check-In check box.

      As a best practice, only change this setting when workers aren't checked in. If you change the setting while workers are checked in, workers might see a mix of both settings until they check out again.
4. (Optional) Track seconds for mobile users.

   The mobile time clock displays time with seconds for all workers. However, unless you've configured the workers' time entry templates to track seconds, Workday doesn't store the seconds or use them in calculations. As a best practice, track seconds for mobile users to eliminate this discrepancy, and for more accurate calculations.

a) Access the Create Time Entry Template task.

See Set Up Time Entry Templates on page 2673.

b) On the Effective-Dated tab, expand the Time Entry section.

c) Select the Track In and Out times down to the second check box.

5. (Optional) When you use Workday Scheduling and Time Tracking, you can enable managers to view daily time exceptions on the:

   - Attendance tab on the Team Schedule worklet.
   - Today's Attendance card on the mobile home page.

   On the Attendance tab, Workday displays the status of workers based on their schedule in Workday Scheduling. Managers can use their mobile devices to:

   - Call or text workers.
   - Edit time clock events for workers.
   - Enter missing clock events for the workers.
   - View lists of workers who are checked in, not checked in, or not checked out.
   - View the time clock history.
   - View the precise number of hours and minutes a worker is late or over.

   Add user or role-based groups to the *Manager: Time Exception Experience* domain in the Workday Scheduling functional area. Ensure that relevant security groups have access to these existing domains:

   - *Person Data: Work Phone*
   - *Self-Service: Current Staffing Information*
   - *Self-Service: Work Phone*
   - *Time Tracking: Edit Time Clock Event Date and Time*
   - *Worker Data: Add Clock Event*
   - *Worker Data: Edit Time Clock Events*
   - *Worker Data: Public Worker Reports*
   - *Worker Data: View Time Clock Events*

   Managers must access the Team Schedule or Schedule worklet once on mobile before Workday displays the new experience.

   Note: Note: To use this feature, you must have the Workday Scheduling SKU and configure your tenant for Workday Scheduling.

Next Steps

Use the Time Entry Created From report field to report on whether a worker used the Workday mobile application to check in to Workday.

Steps: Set Up Geofences for Mobile Time Entry on page 2693

Reference

2025R1 Feature Release Note: Connected Experience: Daily Time Exceptions

2024R2 Feature Release Note: Connected Experience: Daily Time Exceptions for Managers

Steps: Set Up Non-English Custom Labels for Time Tracking

Prerequisites

Security: *Custom Label Management for Non-English* domain in the System functional area.

Context

You can configure overrides for terms in a non-English language.

Steps

1. Access the Maintain Non-English Custom Labels task.
2. Configure these values:

Option	Description
User Language	Example: Select *Spanish (Neutral).*
Custom Label Context	Select *Time Core*.

3. Review the custom labels. In the Override Value column, enter the corresponding override value for each Default Value that you want to replace. Example: For the Spanish term *registro de entrada*, enter an equivalent *registro de ingreso* term.
4. Clear the corresponding Disabled check box to activate your non-English custom labels in Workday. Custom labels are disabled by default.
5. Click OK. Workday starts a background process that prepares the custom labels for the Maintain Non-English Custom Label Overrides task and the *Get Non-English Custom Label Overrides* web service.

   You can let the process complete or click Notify Me Later. When you click Notify Me Later, the process must finish running before you can use the Maintain Non-English Custom Label Override task.

   Note: The *Put Non-English Custom Labels* web service also triggers the background process.
6. Click Done.
7. Access the Maintain Non-English Custom Label Overrides task.
8. Configure these values:

Option	Description
User Language	Example: Select *Spanish (Neutral).*
Custom Label	Select the custom label that you want to override. Example: Select *registrar entrada*.

9. Review the proposed values and select either Keep Original or Use Proposed Value. If you want to use all the proposed values, select Use All Proposed Values.
10. Click OK and Done.
11. (Optional) Access the Rebuild Search Index task.

    Rebuild the search index. Workday recommends that you don't rebuild search indexes manually but wait for the Friday server restart, when indexes rebuild automatically.

Example

Your organization uses the Spanish term *registro de ingreso* instead of Workday's default Spanish term *registro de entrada*. You want to replace the term *registro de entrada* with a custom label override of *registro de ingreso*. After you configure overrides, when users sign into Workday with Spanish as their preferred display language setting, Workday displays the term *registro de ingreso* instead of *registro de entrada* on all time-related employee self-service reports and tasks.

Enable Time Administrator Home Worklet

Prerequisites

Security:

- *Process: Time Configuration Analyzer Tool* domain in the Time Tracking functional area.
- *Set Up: Time Tracking* domain in the Time Tracking functional area.
- *Set Up: Calendar* domain in the System functional area.

Context

The Time Administrator Home worklet provides a central location for cards that display frequently used Time Tracking tasks and reports. You must have access to both the card and the tasks on the card. Any tasks that you don't have access to will not display.

Steps

1. From the Workday Home page, click Menu.
2. Click Add Apps.
3. In the Find Apps field, enter *Time Admin*.
4. Add the Time Admin app.
5. Click Back to Menu.

Related Information
Reference
The Next Level: All Things: Time Tracking 2023R2

Set Up Intelligent Prompt Recommendations for Time Entry

Prerequisites

Security: *Set up: Time Tracking* domain in the Time Tracking functional area.

Context

You can enable machine learning prompt recommendations for the Time Type prompt on these tasks:

- Check In
- Edit and Approve Time
- Enter Time by Type
- Enter Time by Week
- Time Block Micro Edit
- Quick Add

Using prompt recommendations improves data accuracy and efficiency in entering time.

Workday displays recommendations based on the most recently used and most frequently used selections on the prompts.

You don't need to enable Innovation Services to use this feature.

Steps

1. Access the Maintain Machine Learning Prompt Recommendations task.

2. Enter these values:

Option	Description
Filter by Product Area	Select *Time Tracking* and any other product areas for which you want to configure prompt recommendations. Clear the check boxes for any product areas that you don't want to view in the task.
Enter Time by Type	You can enable prompt recommendations for the Time Type prompts on the Enter Time by Type task.
Check In	You can enable prompt recommendations for the Time Type prompts on the Check In task.
Enter Time by Week	You can enable prompt recommendations for the Time Type prompts on the Enter Time by Week task.
Quick Add	You can enable prompt recommendations for the Time Type prompts on the Quick Add task.
Time Block Micro Edit	You can enable prompt recommendations for the Time Type prompts on the Time Block Micro Edit task.

Result

Workday displays the machine learning recommendations either as pills below the prompts you enabled them for or in a Recommended folder on the prompts.

Example

On the Maintain Machine Learning Prompt Recommendations task, you enable recommendations for the Time Type field on the Check In task. Your workers want to enter their check-in details. On the *Time Type* prompt, a list of most commonly used time types display below the field.

Related Information

Reference: Form Completion Assistant

Concept: Time Tracking Flow

Entering Time

Validating Entered Time

Collecting Time from External Systems

Creating Reported Time Blocks

Creating Calculated Time Blocks

Submitting Time

Approving Time

You select a time entry method and configure time entry codes, time code groups, and time entry templates to control how workers and managers enter time.

Workers can enter time by:

- Checking in and out on the Time worklet.
- Logging time clock events in an external time collection system, imported through a web service.
- Using the Enter My Time report to record time on the time entry calendar.

Managers can enter worker time by using the:

- Enter Time for Worker report.
- Enter Time for Worker task for high-volume time entry.
- Mass Auto-Fill from Schedule task.
- Mass Enter Time report.

You can configure the *Enter Time* business process security policy so that managers, timekeepers, and administrators can enter time on behalf of workers. Workday displays time in the worker's time zone even if a manager in a different time zone enters time for that worker.

Workday runs validations at different points in the time entry process depending on the time entry method and the type of validation. Critical validations prevent workers from submitting the week or time period for approval, while workers can submit time with warning validations.

You can use web services to load time clock events or reported time blocks from external time collection systems into Workday. Use the web service:

- *Put Time Clock Events* to load small batches of time clock events on a frequent basis.
- *Import Time Clock Events* to load large batches of time clock events on an infrequent basis.
- *Import Reported Time Blocks* to load reported time blocks.

Workday matches time clock events to form reported time blocks, which workers can edit and submit using the time entry calendar. A time block identifies the number of hours, in/out times (if applicable), time entry code, and any worktags associated with the time.

Workday assigns time calculation tags to a reported time block based on the time entry code of the time block. Workday uses the time calculation tags to apply calculations to the reported time block to create calculated time blocks. Calculated time blocks identify the calculated quantity of time, time calculation tags applied to the time block, and can also include worktags.

Workers can individually submit time by week or by period from the time entry calendar. Workers can make changes to their submitted time as long as the time period remains open.

Managers can submit time for workers with these reports:

- Auto Submit Time
- Edit and Approve Time
- Mass Submit Time
- Submit Time for Worker

Workday routes submitted time to an approver according to the workflow in the *Enter Time* business process.

Managers can use these reports to approve time:

- Edit and Approve Time
- Review Project Time
- Review Time

After managers approve the submitted time, the time information can be used by:

- Payroll processes to compensate workers.
- Third-party scheduling or payroll vendors when you export the information using the *Get Calculated Time Blocks* web service.
- Workday Absence Management to calculate accrued time off.
- Workday Projects for billing and costing.
- Workday Scheduling, which uses reported time blocks to calculate how effectively a schedule met the organization's productivity goals.

FAQ: Time Tracking on Mobile

Are meal, break, and end of shift attestations available on the Time Tracking worklet on the mobile app?	When you configure attestations in the tenant and add them to workers' time entry templates, workers using Check In/Out on mobile can make time attestations.
Can I assign work schedules from the mobile app?	You can't initiate the action of assigning a work schedule from the mobile app. However, managers can take the same actions on the *Assign Work Schedule* business process on mobile that they

	can take from My Tasks on the desktop. Example: Managers can approve requests to assign work schedule calendars to workers.
Can I disable Enter My Time on mobile?	You can disable Enter My Time on mobile devices even for workers who have check-in and check-out capabilities enabled on desktop. If you're not using geofences, disabling Enter My Time can reduce check-outs from unapproved locations. To disable Enter My Time on mobile, on the Edit Tenant Setup - System task, select Disable Check In/Out on Mobile.
Can I disable Remind Me to Check Out for workers?	When you enable standard mobile check-in in the tenant-level settings, check-out reminders are automatically available and can't be turned off for workers. Workers can individually turn off their reminder messages.
Can I do all the same things I do on desktop on the mobile app?	You can access all tasks and reports using a mobile web browser. To see which tasks are available in the mobile app, see Reference: Time Tracking and Scheduling Tasks in Workday Mobile.
Can I make help text I've configured for the ***Enter Time*** business process visible on mobile?	No. Workday only displays the help text on desktop.
Can workers request time off on mobile?	Workers and managers can't make time off requests on the Time Tracking worklet on the mobile app. However, they can use the Absence Management worklet on the mobile app to request time off. When workers request time off, managers can use the Time Tracking worklet on the mobile app to take the same actions on the *Request Time Off* business process that they can from My Tasks on the desktop. Example: Managers can approve time off requests.
Can workers turn off check-out reminder notifications?	The Check Out Reminder feature is automatically available with standard mobile check-in. There's no tenant-level setting to disable these reminders. However, workers can disable notifications themselves. To turn off these notifications: 1. Access Settings on the Time Tracking worklet on the mobile app. 2. Select Push Notifications. 3. Toggle Check In/Out to off.
Do business processes work the same on desktop and mobile?	You can take the same actions on business processes on desktop and mobile even if the initiating action for the business process isn't available on mobile.
Do I need to make any configuration changes to use worktags with the mobile app?	No.
How can I ensure workers check in only from their scheduled shift location?	When you use Workday Scheduling, you can ensure workers only check in and out on mobile from locations where they're scheduled to work.

	See Steps: Set Up Geofences for Mobile Time Entry on page 2693.
How can I prevent workers from checking in or out on mobile devices?	Select Disable Check In/Out on Mobile on the Edit Tenant Setup - System task. This setting prevents workers in your tenant from using the check-in and check-out time entry option on the Workday mobile app. Workers can still check in or out when using web browsers on mobile devices. This setting doesn't disable the Enter My Time, Enter Time for Worker or My Schedule tasks.
How can I prevent workers from checking in or out on mobile devices when they're not at the work site?	Define 1 or more geofences in the Location Settings section of the time entry template. Workers can only check in and out on mobile when they are at the locations you define.
How can I restrict mobile time entry for specific subsets of workers?	Configure authentication policies to: • Block IP addresses. • Only allow access through specific networks. • Restrict access to Check In and Check Out tasks. See Concept: Authentication Policies
Is there a way to distinguish whether time blocks were entered on desktop or mobile?	No. You can use worktags to require a location when entering time. You can then use the location to determine whether a worker is at their workstation.
Once a worker has checked in, are break, meal, and check-out options all available?	Workers can choose from the out types configured on their time entry templates. Workers whose time entry templates allow meals and breaks have a Break button on their Home page card as well as a Check Out button. When they select Break, Workday prompts them to select *Break* or *Meal*, depending on the time entry template configuration.
What is the benefit of enabling standard mobile check-in?	Workers can add more details when checking in and out, including time type, comments, and worktags. Standard mobile check-in supports new mobile features, including meal and break attestations and geofences.

Time Tracking Hub

Concept: Time Tracking Hub

What Is Time Tracking Hub?

The Time Tracking Hub functional area includes a subset of existing Workday Time Tracking integrations, tasks, and reports. Time Tracking Hub is for customers who use a third-party time collection system and only need a limited set of Time Tracking features. If you use Time Tracking, you don't need to configure the Time Tracking Hub functional area. Time Tracking Hub:

- Enables you to import time blocks from a third-party time collection system into Workday. Once in Workday, you can use the reporting capabilities of Time Tracking to gain insight into time data.
- Doesn't include the ability to enter time or run time calculations.
- Integrates with other Workday products, including Workday Payroll and Workday Financial Management.
- Is a separate SKU and is unrelated to other hubs that are available in Workday.

Security

To set up Time Tracking Hub, configure these security domains, including their subordinate domains in the Time Tracking and Time Tracking Hub functional areas:

- *Process: Auto Submit Time*
- *Process: Import Time Blocks*
- *Process: Mass Submit Time*
- *Reports: Time Tracking*
- *Set Up: Time Tracking*
- *Worker Data: Time Tracking*
- *Worker Data: Time Tracking High Volume*

Any use of features outside of this description requires a subscription to the full Time Tracking product.

Time Entry Setup

Time Entry Setup Basics

Steps: Set Up Time Entry

Context

Configure the time entry experience for workers. Specify how workers can enter time, which time entry codes they can use, and what happens when they submit their time.

Steps

1. Select a Time Entry Method on page 2656.
2. Create Time Entry Codes on page 2657.
3. Create Time Code Groups on page 2661.
4. Create time entry templates.

   See: Steps: Create Time Entry Templates on page 2672.

5. Edit Business Process Security Policies.

   Configure the *Enter Time* business process.

   Define the workflow for Time Tracking and security requirements for entering and adjusting time.
6. Configure how Workday displays workers' position information during time entry.

   See: Reference: Edit Tenant Setup - HCM.
7. (Optional) Create Access Restrictions.

Related Information

Concepts

Concept: Enter Time Business Process on page 2669

Tasks

Steps: Set Up Time Tracking on page 2643

Examples

The Next Level: Time Tracking Configuration

The Next Level: PATT Touchpoints with Assignments

Select a Time Entry Method

Prerequisites

- Configure security for the *Enter My Time - High Volume (Delegation)* initiating action on the *Enter Time* business process policy.

  See Edit Business Process Security Policies.
- Security: *Security Configuration* domain in the System functional area.

Context

Specify whether workers use calendar-based time entry or high-volume time entry to enter time.

- When using calendar-based time entry, workers can enter and edit time directly on the time entry calendar. Consider using calendar-based time entry if you have workers who enter time for projects, enter exception time, or use time clocks and only need to make edits to entered time.
- When using high-volume time entry, the Enter Time for Worker and Enter My Time tasks are separate from the time entry calendar. You can view time entry calendars, but you can't enter or edit time directly on the calendar. Consider using high-volume time entry if you have large numbers of workers entering time at peak times of the day.

Workday recommends that you use calendar-based time entry for an improved time entry experience.

Domain security policies control access to the time entry methods, and Workday secures each time entry method to a separate set of domains. As a best practice, select only 1 time entry method for all of your workers and leave the domains for the other time entry method disabled. If different groups of workers need to use different time entry methods, configure the security groups so that no one has access to both methods.

Steps

1. Access the Domain Security Policies for Functional Area report.
2. From the Functional Area prompt, select *Time Tracking*.

3. Select a time entry method.
    - To use calendar-based time entry, enable and configure these domains:
        - *Self-Service: Time Tracking* and its subdomains.
        - *Worker Data: Time Tracking* and its subdomains.
    - To use high-volume time entry, enable and configure these domains:
        - *Self-Service: Time Tracking High Volume* and its subdomains.
        - *Worker Data: Time Tracking High Volume* and its subdomains.

Result

- Calendar-based time entry: The Enter Time for Worker and Enter My Time reports take you to the time entry calendar, where you can enter, edit, and submit time.
- High-volume time entry: The Enter Time for Worker and Enter My Time tasks display tables of time blocks. To submit time, access the Submit Time for Worker and Submit My Time tasks. You can also submit time on the time entry calendar by accessing the View Time for Worker or View My Calendar reports.

Note: If a worker sees duplicate time entry tasks, reports, and worklets, they've inadvertently been given security access to both time entry methods. Adjust your domain security policies so that workers have access to only 1 time entry method.

Related Information

Tasks

Edit Domain Security Policies

Create Time Entry Codes

Prerequisites

Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

Time entry codes describe the types of time workers can enter, such as *Worked Time*, *Training*, and *On Call*. They display in the Time Type prompt workers use when entering time.

Time code groups control who can use a set of time entry codes. Workers can use the time entry codes in:

- Their time code group.
- The default time entry code assigned to their time entry template.

Generally, create time entry codes only for the types of time you want workers to enter. Example: Create a code for overtime only if you want workers to specify which of their hours they want overtime pay. You might not need a time entry code for overtime if you define a time calculation that calculates overtime automatically.

Steps

1. Access the Create Time Entry Code task.
2. Enter a unique Name, such as *Worked Hours* or *Worked Time*.

    You can assign a different display name that workers see in the Display Name field.

3. Select the Units for entering time, typically *Days* or *Hours*.

   Access these values from the Common category:

   - *Hours*
   - *Days*
   - *Months*

   To define additional units such as Mile or Box, access the Maintain Units of Measure task.
4. Define General options for the time entry code.

   As you complete the task, consider:

Option	Description
Entry Method	If the Units are *Hours*, specify whether workers must enter hours only or in/out times. Example: 3 hours or 9:00 AM - 12:00 PM.
Display Name	(Optional) Enter a display name that workers see instead of the value in the Name field. You can give the same display name to more than 1 time entry code. Example: You might assign a display name of *Worked Time* to both the *Hours Only* and *In/Out* time entry codes.
Sort Priority	(Optional) Assign a sort priority to control the sequence of the time entry code in the Time Type prompt that workers see when entering time. Workday displays the time entry codes with smaller numbers higher in the list. Workday sorts codes alphabetically by default and when multiple time entry codes have the same sort priority.
Restrict Future Time Entry	(Optional) Restricts time entry for future dates when a worker: • Creates a new time block. • Edits an existing time block. This check box doesn't apply to: • Enter Time (Weekly) time entry method. • Time clock events. You can also restrict time entry for future dates on project hierarchies.

5. (Optional) If the Entry Method is *Hours Only*, select allowable increments for entering time.

   Workday requires that you enter hours as decimals. Example: Enter 1 hour and 30 minutes as *1.5* hours.

Increment For Hours Entry Examples	Workers Enter Time
0.01	As any value with 2 decimal places. Example: 0.15 or 1.33.
0.25	In multiples of 0.25 hours. Example: They can enter 2.5 hours, but not 2.1 hours.

6. (Optional) Enter a numeric value in the Default Quantity field. You can enter up to a maximum of 9999 units. Workday populates this value when workers enter time using Micro Edit through the time entry calendar.

   You can configure a default quantity for hours-based time entry codes where the time entry method is *Hours Only*. The Increment for Hours Entry you've configured on the time entry code must be in sync with the default quantity. Example:You enter *1 Hour* in the Increment for Hours Entry field. You can't enter a decimal value in the Default Quantity field such as *1.5*.

   You can also configure a default quantity for time entry codes where the unit is something other than hours. Example: You can enter a default quantity of 5 truck loads. Workday doesn't support default values for In/Out time entry codes.
7. (Optional) If the Entry Method is *In/Out Only*, select a rounding option.

   If a rounding option exists, Workday rounds each In and Out time to the nearest rounding marker. The breakpoint determines whether the time rounds up or down for calculation purposes. Workday then calculates the duration between the rounded In and Out times to 6 decimal places.

   For the *Custom Rounding* option, select rounding options for the In Time and Out Time separately.

   Note: If workers report time blocks that are shorter than the breakpoints, in and out times that Workday rounds separately can result in too much or too little time recorded for the workers.
8. Select the Default Calculation Tags to associate with calculated time that Workday generates when a worker enters time with this time entry code.

   The tags determine which:

   - Time calculations Workday applies to create calculated time.
   - Totals to update on the worker's time entry calendar.
9. On the Groups tab, define who can use the time entry code by adding it to one or more Time Code Groups.

   When using *Position*-based eligibility, workers can only select time entry codes that are valid for the position for which they're entering time. *Position*-based eligibility is available only for time code groups.
10. (Optional) On the Advanced tab, define advanced configurations for the time entry code.
    a) Select Worktag Entry Options for the time entry code.

       As you complete the task, consider:

Entry Option	Description
Default Value	The worktag value automatically populates during time entry. Workers can manually change the worktag value during time entry.
Hidden	Hides a worktag during time entry. Use this option if you've enabled a worktag on a time entry template, but you don't want to use it with this time entry code.
Required	When workers enter time with this time entry code, they must select a value for this worktag.

       For these options to apply, you must also enable the worktags on the worker's time entry template. The advanced worktag options on the time entry code refine the behavior of the worktags that you enable on the time entry template. If a worktag isn't enabled on a worker's time entry template, the worker can't enter a value for the worktag, even if you make it required for the time entry code.

b) In the Override Rate section, select override rate options for time entry.

As you complete the task, consider:

Field	Description
Allow Override Rate	Enable workers to override the default pay rate when entering time. The override rate that you manually enter onto a time block also overrides any override rate calculations that apply to the time block.
Currency	If you enable Allow Override Rate, specify the currency for the override rate. The currency displays on the time blocks on the time entry calendar. If you don't specify a currency, Workday doesn't display a currency on the time entry calendar. However, Workday does provide the default currency when sending time to Workday Payroll or Cloud Connect for Third Party Payroll.
Do Not Allow Self Service Edit	Prevent self-service users from entering an override rate on their own time blocks. Managers, administrators, or other authorized users entering time on behalf of a worker can still override the pay rate.

c) Select Allow Attachments to enable workers to attach documents, such as a jury summons or doctor's note, to time blocks that use this time entry code.

Result

Workers who are eligible for the new time entry code can select it when they enter time. Time entered using the new time entry code is included in the totals that display on the time entry calendar, if it has calculation tags that are included in the totals.

Next Steps

- If you've enabled attachments, configure segmented security to restrict access to Time Tracking documents.
- Review the time entry codes for accuracy using the All Time Entry Codes report.
- To stop using a time entry code, you can:
  - Inactivate it if an active time code group or time calculation isn't using the code.

    Use the Edit Time Entry Code task and select the Inactive check box.
  - Delete the code if it isn't the default time entry code for a time entry template. You can also delete the code if it isn’t associated with a reported time block. Use the Delete Time Entry Code task.

Create Time Code Groups

Prerequisites

- Create Worker Eligibility Rules for Time Tracking on page 2826.
- Create time entry codes.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

Time code groups identify the time entry codes and time request codes for which workers are eligible. The only time entry code that a worker can use without a time code group is the default time entry code on their time entry template.

Steps

1. Access the Create Time Code Group task.
2. As you complete the Time Entry tab, consider:

<table>
<tr><th>Option</th><th>Description</th></tr>
<tr><td>Worker Eligibility</td><td>Select 1 or more time tracking eligibility rules. Workers must meet the rule criteria to use the time entry codes in the group.

Workers must meet all the selected eligibility rule criteria when they enter time.

For workers with multiple jobs, you can create eligibility rules to evaluate either the worker's primary position or other jobs.

<table><tr><td>Job to Evaluate</td><td>Base Eligibility Rule on Business Object</td></tr><tr><td>Primary</td><td>Worker</td></tr><tr><td>Other</td><td>Position</td></tr></table></td></tr>
<tr><td>Country / Country Region</td><td>(Optional) Select countries or country regions that this time code group applies to. Selecting a value in this field improves performance for Time Tracking transactions that check time code groups.</td></tr>
<tr><td>Pay Rate Type</td><td>(Optional) Select the pay rate types that this time code group applies to. Selecting a value in this field improves performance for Time</td></tr>
</table>

Option	Description
	Tracking transactions that check time code groups.

Example: You configure a time code group and select *Salaried* and *Hourly* in the Pay Rate Type field and *Japan* in the Country / Country Region field. A worker's country must be Japan and their pay rate type must be salaried or hourly to be eligible for the time entry codes associated with this group.

3. On the Time Entry Codes tab, add:
   a) Time entry codes.
   b) (Optional) Time request codes, or both time entry codes and time request codes.

   Both a time entry code and a time request code can belong to multiple time code groups, and a worker can be eligible for multiple time code groups.

   Note: During editing or creating either one of those codes, you can add that code to time code groups.

Example

Example 1: Some of your workers in California belong to a company-wide union. These workers might be eligible for 2 time code groups:

- A *California workers* time code group with time entry codes, such as *California Meal Penalty*.
- A *Union workers* time code group with time entry codes, such as *Union Business.*

Example 2: Your organization has a global workforce who is subject to different requirements regarding overtime. These workers are eligible for different time code groups:

- A *California workers* time code group with time entry codes, such as *California Meal Penalty*, and no time request codes, as preapproval isn't required for overtime.
- A *German workers* time code group with time entry codes, such as *Union Business*, and an *Overtime* time request code, as preapproval of overtime is required.

Example 3: Workers in Germany are required to request overtime and on call time in advance. These workers might be eligible for 2 time request codes:

- A *German workers* time code group with an *Overtime* time request code and an *On Call* time request code, as both require preapproval, but are subject to different restrictions.

Next Steps

- Validate your changes by using the All Time Code Groups report to view time code groups. You can also use the View Worker's Time Eligibility report to view the time code group for a particular worker.
- To stop using a time code group, you can:
  - Inactivate the group if it has no active time entry codes and time request codes associated.

    Use the Edit Time Code Group task and select the Inactive check box.
  - Delete the group if it isn't associated with any eligibility rules.

    Use the Delete Time Code Group task.

Related Information
Concepts
Concept: Worker Eligibility for Time Tracking on page 2828

Steps: Set Up Tax Locations for Time Entry

Context

Set up time entry so that workers are taxed at rates that are based on the locations for which they enter time.

Example: Laura is a consultant based in Illinois, but she frequently works in California. During the last pay period, she worked 24 hours in Illinois and 64 hours in California. You need to enable her to specify that she worked 24 hours in Illinois and 64 hours in California so that Workday Payroll can tax her earnings for those hours at the appropriate rates.

Steps

1. Map tax authorities to locations.

   See Set Up Company Taxes by Location (USA).
2. Enable the *Location* worktag for time entry so that workers can specify a location when they enter time.

   See Steps: Set Up Worktags for Time Entry on page 2708.
3. (Optional) Configure default location worktags for projects so that workers don't have to manually specify a location whenever they enter time for a project.

   See Create Projects.
   a) Add *Location* as a Worktag Type.
   b) Select a location to use as the Default Worktag.

      The default location automatically populates when workers enter time for this project. They can override this location as necessary.

Result

When workers enter time, they can report a location for the time block. If you've configured a default *Location* worktag for a project, Workday automatically adds the default location to the time block when workers report time for that project. If necessary, the workers can override the default location and tag the time block with another location instead.

After you approve the time blocks, Workday Payroll withholds taxes on the workers' earnings based on the rates established by the tax authorities mapped to the locations specified on the time blocks.

Steps: Defer Time Clock Event Matching

Context

Note: Workday plans to retire the Defer Time Clock Event Processing option in a future release. Enabling this feature could impact performance in your tenant. Contact Workday Professional Services before using this feature.

When you have many workers simultaneously check in or out, postpone matching time clock events instead of automatically matching them. Run calculations for them in real time for more efficient time tracking.

Steps

1. Enable the Defer Time Clock Event Processing option.
    a) Access the Edit Tenant Setup - HCM task.
    b) Select Defer Time Clock Event Processing.
    c) (Optional) Select Use Automated Scheduling to have Workday automatically match pending time clock events.

    See Reference: Edit Tenant Setup - HCM.
2. (Optional) Schedule the Run Time Clock Event Processing task to match pending time clock events automatically on a regular basis.

    If you're using automated scheduling, Workday schedules the task for you, but you can also schedule additional processes.

    See Manually Schedule Time Clock Event Matching on page 2857.
3. (Optional) Schedule the Auto Submit Time task or the Mass Submit Time report to submit time at the end of a period automatically.

    If deferred time clock events exist when workers submit time, use the Auto Submit Time task or the Mass Submit Time report to prevent workers from manually matching their pending time clock events. Always check for and match pending time clock events before mass submitting time. Otherwise, you must resubmit the time after Workday matches the pending time clock events.

    See Mass Submit Time on page 2854 and Auto Submit Time on page 2852.
4. (Optional) Create and schedule a custom report using the Is Pending report field to check for any pending time clock events.

    As a best practice:

    - Schedule this report to run before the Mass Submit Time report so that you can resolve any pending time clock events before submitting time.
    - To stop deferring the time clock event matching, run this report to ensure that there are no pending time clock events.
5. (Optional) If you use the time entry calendar to review and submit time instead of mass submitting time, add a time entry validation that prevents workers from submitting time if there are pending or unmatched time clock events.

    If a worker submits time with pending time clock events, they must resubmit that period after the pending time clock events match.

    See Create Time Entry Validations on page 2812.

Related Information

Concepts

Concept: Time Clock Events on page 2863

Tasks

Set Up Time Clock Event Matching Options on page 2678

Create Predictive Scheduling Configurations

Prerequisites

Security: *Set Up: Time Calculations* in the Time Tracking Calculations functional area.

Context

You can use predictive scheduling configurations to define rules to control whether workers are paid a premium when they work without a sufficient break between shifts. After setting up configurations, create minimum rest time calculations. Workday uses configurations and calculations to apply time calculation tags to time blocks. You can then map the calculation tags to Payroll earnings to identify how to pay time.

Steps

1. Access the Create Predictive Scheduling Configuration task.
2. As you complete the General Options tab, consider:

Option	Description
Allowed Out Types	Select one or more out types that will trigger the calculation. Only select Meal or Break if you use these out types to indicate the end of a shift.
Minimum Rest Hours after Last Out (up to 48)	Define a threshold of hours that workers should be away from work between shifts. If a worker enters time before the threshold ends, Workday tags those hours with the calculation tag for minimum rest. You define the minimum rest calculation tag on the calculation.

Example

You enter *8* in the Minimum Rest Hours after Last Out (up to 48) field and *Out* in the Allowed Out Types field.

Jennifer works these hours:

In/Out	Time
In	6:00 AM
Out	12:00 PM
In	4:00 PM
Out	9:00 PM

Workday tags to Jennifer's time blocks that fall within the 8-hour minimum rest threshold you defined:

Time Block	Calculation Tags
6:00 AM-12:00 PM	Regular
4:00 PM-8:00 PM	Minimum Rest
8:00 PM-9:00 PM	Regular

Workday doesn't tag the 8:00 PM-9:00 PM time block because it is outside the 8-hour threshold.

Next Steps

- Create minimum rest time calculations that tag time blocks that meet the criteria you've defined on the configuration.

Related Information

Tasks

Create Minimum Rest Calculations on page 2740

Examples

Example: Calculate Minimum Rest Time on page 2783

Set Up Statutory Holiday Eligibility (CAN)

Prerequisites

- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

A statutory holiday configuration is a set of requirements that determines whether workers receive pay for a statutory holiday. You can create configurations for each province or territory in Canada based on:

- Regulatory requirements.
- Federal guidelines

Workday automatically populates certain values in the configurations, but you can modify the values to give workers a greater benefit.

After setting up configurations, you can create a holiday time block create calculation that Workday uses along with the configurations to create time blocks for the statutory holiday. Time Tracking then passes the time blocks to Workday Payroll to calculate the rate of pay.

Steps

1. Access the Create Statutory Holiday Configuration task.

   Create a configuration for each province or for federal regulations.
2. From the Jurisdiction prompt, select the calculation method for holiday-based pay:
   - Select Provincial to calculate holiday pay based on the provincial or territorial statutory holiday pay configured.
   - Select Federal to use federal guidelines to calculate statutory holiday pay for federal workers.
3. As you complete the Look Back Calculation (Time & Payroll) section, consider:

Option	Description
Look Back Period (Days)	The period of time preceding the statutory holiday over which Workday evaluates worked time to determine the rate of pay for a statutory holiday. Workday automatically populates the look back period based on requirements for the province you selected. This value isn't configurable.
Look Back Reference Point	Based on the provincial requirement, Workday automatically populates the reference point with either the week that precedes the holiday or the day of the holiday itself.
Worked Hours Calculation Tags	Select the hours to include in the earnings eligible for statutory holiday pay. To include paid time off in the look-back period, add the calculation tag for the worker's time off plan.
Include System Generated Time Blocks	Enables Workday to include system-generated time blocks in the related Holiday Time Block Create calculation quantity. The calculation quantity is the total hours worked over the look back period divided by the number of days in the look back period.

Option	Description
	Any system generated blocks included in the statutory holiday time calculation will be treated as hours.
Statutory Holiday Calculation Tag	Create a statutory holiday calculation tag. Example: Canada Statutory Holiday. You'll use this tag in holiday time block create calculations and on the earning in Workday Payroll.

4. As you complete the eligibility sections, consider:

Option	Description
Days Employed	The number of days that a worker must be employed before the holiday to be eligible for a statutory holiday.
Worked Days	The number of days an employee must have reported work hours to be eligible for a statutory holiday. Workday checks for time blocks or time offs that are tagged with *Worked Hours* calculation tags to determine whether a day was worked. Must be less than the Period Days/Months value.
Period Days/Months	The window during which the employee must meet the Worked Days requirement. Example: An employee must work at least 30 days or more in the 12 months before the holiday. If Period Unit is: • *Days*: Must be less than or equal to 30. • *Months*: Must be less than or equal to 12.
Must Work Scheduled Day Before and After Holiday	To be eligible for the statutory holiday, specify if an employee must work the: • Day before. • The day of. • The day after.
Use Workday Scheduling Data	Enables Workday to determine scheduled days based on schedules from the Workday Scheduling SKU instead of work schedule calendars from Time Tracking. You must have the Workday Scheduling product for this to take effect.

Next Steps

- Create time calculations that create statutory holiday time blocks for workers based on the configuration for their province or federal statutory holiday pay.
- Using Workday Payroll, setup earnings for holiday pay.

Related Information

Tasks

Create Time Calculations for Statutory Holidays (CAN) on page 2757

Examples

Concept: Statutory Holiday Look-Back Periods (CAN)

Example: Configure Statutory Holiday Pay for Provinces (CAN)

Example: Create Time Code Groups for Multiposition Workers

This example illustrates how to create time code groups for workers with more than 1 job.

Context

You need to enable a salaried worker in your company to enter additional time worked for a secondary role in a different internal organization.

Prerequisites

- Create a worker with a salaried and an hourly position.
- Security: *Set Up: Time Tracking* domain in the Time Tracking or Time Tracking Hub functional area.

Steps

1. Access the Create Time Tracking Eligibility Rule task.
2. In the Description field, enter *Position hourly pay*.
3. Select these values in the Rule Conditions grid:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Pay Rate Type* Select the *Pay Rate Type* option with the Position - Position Management business object. View the related actions menu to verify the business object associated with a Pay Rate Type option.	*in the selection list*	*Value specified in this filter*	*Hourly*

4. Click OK.
5. Access the Create Time Entry Code task.
6. Enter these values:

Options	Values
Name	*Regular - Position Based*
Units	*Hours*
Entry Method	*Hours Only*

Options	Values
Default Calculation Tags	*Regular*

7. Click OK and Done.
8. Access the Create Time Code Group task.
9. In the Name field, enter *Position hourly pay*.
10. On the Time Entry tab, select Position hourly pay from the Worker Eligibility prompt.
11. On the Time Entry Codes tab, select *Regular - Position Based* from the Time Entry Codes prompt.
12. Click OK and Done.

Concept: Enter Time Business Process

Time Entry Business Process

The *Enter Time* business process consists of 3 steps:

- Enter time. Separate initiating actions exist for the various time entry options. Example: Quick Add.
- Submit time.
- Approve time.

Initiation actions also exist for:

- Adjusting calculated time.
- Clearing all time blocks for a week.
- Running calculations.

You can configure the *Enter Time* business process to route time entries to the appropriate roles for review and approval. Example: You can route submitted time blocks for approval to a worker's:

- Manager.
- Timekeeper.
- Project manager (for time entered by project).
- Cost center manager (for time entries with a *Cost Center* worktag).
- Location manager (for time entries with a *Location* worktag).

You can also route time entries to multiple reviewers. For a worker with multiple positions, you can require approval from all managers or just 1 manager from each position.

The *Enter Time* business process doesn't include cancellations, rescinds, or corrections. Administrators, managers, or workers can enter, modify, or delete time blocks until the period is locked. When they delete or modify approved time blocks or time blocks that impact calculations, they must resubmit those time blocks.

Business Process Security

Security policies for the *Enter Time* business process control who can use various time entry features. You can configure the business process to restrict time entry, submission, and approval by role. Example: You can configure the *Enter Time* business process so that managers and Time Tracking administrators can enter time with Quick Add but employees can't.

Effort Certification

The *Enter Time* business process enables you to display a Certify Effort page to workers so that they can certify their reported time. Time entry templates include an option for selecting the text that displays at the top of the Certify Effort page.

Delegation

The *Enter Time* business process supports self-service delegation and also enables you to delegate initiating actions. Example: Managers typically enter time for themselves and their workers but can delegate these tasks to administrators.

Related Information

Examples

Concept: Business Processes

Edit Business Process Security Policies

The Next Level: Overview of Time Tracking

Concept: Time Tracking in Workday Assistant

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Using Workday Assistant for Time Tracking Tasks

Workers can use Workday Assistant to quickly access time entry tasks, reducing the number of clicks required to navigate to frequently used tasks. Example: When workers enter a phrase such as "enter my time" in Workday search, Assistant provides a link to the time entry calendar where the worker can enter time blocks.

Workday Assistant doesn't support:

- Entering time on mobile devices.
- Entering time for days in the past or future.
- High-volume time entry.
- Time approval.

To configure Workday Assistant for Time Tracking, you must be a member of a security group on these domains:

- *Manage Bot and User Conversations* in the System functional area.
- *Set Up: Edit Tenant Setup - Assistant* in the System functional area.
- *Set Up: Time Tracking* in the Time Tracking functional area.

You can enable workers to enter time using Workday Assistant by adding relevant workers to these security domains and business process security policies:

Functional Area or Business Process	Security Domain or Action	Notes
System Functional Area	• *Assistant* • *Bots*	Add workers to these domains so they can access Workday Assistant.
Time Tracking Functional Area	For check in and check out workers: • *Self Service: Time Clock* • *Process: Time Block REST APIs*	Add workers to these domains so they can enter time. Workday Assistant navigates workers to the time entry calendar when they need to enter time blocks.

Functional Area or Business Process	Security Domain or Action	Notes
	• *Process: Time Clock Event REST APIs* For workers who enter time on the calendar: • *Self Service: Time Calendar* • *Process: Time Block REST APIs* • *Process: Time Clock Event REST APIs*	
Enter Time Business Process	Ensure workers can access these initiating actions: • *Time Block Micro Edit* • *Submit Time* • *Submit Time (REST Service)*	Configure the business process security policy so workers can enter and submit time using Workday Assistant.

Steps: Set Up Time Entry on page 2655

Reference

Reference: Edit Tenant Setup - Assistant

Examples

The Next Level: Innovation Services for Time Tracking

Reference: Increments and Rounding for Time Entry

Select an increment or rounding option for time entry codes and time request codes that use units of hours.

Increments for hours-only time entry

Increment	Equivalent	Time Entry Example
0.01 Hours	36 seconds	*1.12* = 1 hour, 7 minutes, and 12 seconds
0.05 Hours	3 minutes	*1.15* = 1 hour and 9 minutes
0.1 Hours	6 minutes	*1.3* = 1 hour and 18 minutes
0.25 Hours	15 minutes	*1.75* = 1 hour and 45 minutes
0.5 Hours	30 minutes	*1.5* = 1 hour and 30 minutes
1 Hour	60 minutes	*2* = 2 hours

Rounding options for in/out time entry

Times before or at the breakpoint round down to the previous marker and times after the breakpoint round up to the next marker.

Rounding Option	Rounding Example	Calculation Example
No Rounding		8:02 AM to 9:10 AM is calculated as 1.133333 hours.

Rounding Option	Rounding Example	Calculation Example
3 Minute Marker (1-minute breakpoint)	8:01 AM rounds to 8:00 AM 8:02 AM rounds to 8:03 AM	8:01 AM to 9:02 AM is calculated as 1.05 hours.
5 Minute Marker (2-minute breakpoint)	8:02 AM rounds to 8:00 AM 8:03 AM rounds to 8:05 AM	8:02 AM to 9:03 AM is calculated as 1.083333 hours.
6 Minute Marker (2-minute breakpoint)	8:02 AM rounds to 8:00 AM 8:03 AM rounds to 8:06 AM	8:02 AM to 9:03 AM is calculated as 1.1 hours.
15 Minute Marker (7-minute breakpoint)	8:07 AM rounds to 8:00 AM 8:08 AM rounds to 8:15 AM	8:07 AM to 9:08 AM is calculated as 1.25 hours.
30 Minute Marker (15-minute breakpoint)	8:15 AM rounds to 8:00 AM 8:16 AM rounds to 8:30 AM	8:15 AM to 9:16 AM is calculated as 1.5 hours.

FAQ: How do I exempt workers from lockout dates?

When configuring a period schedule for time tracking, you can specify lockout dates when workers can't enter or adjust time. You can exempt workers from the lockout by assigning their user-based or role-based security group to the *Time Tracking: Exempt from Lockout* domain. Exempt workers can continue to enter and adjust time during the lockout period.

When you select the Allow Project Transfer in Closed Periods check box on the Set Up Project Billing Configuration task, workers who have access to the *Time Tracking: Exempt from Lockout* domain can transfer project time blocks in closed time entry periods.

Time Entry Templates

Steps: Create Time Entry Templates

Prerequisites

- Create time entry codes.
- Create time code groups.
- Create time tracking eligibility rules for assigning templates to workers.

Context

You can use time entry templates with effective dates to customize time entry calendars for workers.

Workday recommends that you create separate templates for each group of workers with similar compensation and time entry requirements. Typically, you create templates by organization. Example: You create separate templates for food service workers, IT personnel, and instructors.

Steps

1. Set Up Time Entry Templates on page 2673.
2. (Optional) Define related worktags for projects to enable workers to enter project task time.
   See: Steps: Set Up Worktags for Time Entry on page 2708.
3. (Optional) Set Up Time Clock Event Matching Options on page 2678.
4. (Optional) Set Up Time Entry Calendars on page 2679.
5. (Optional) Set Up Time Submission on page 2681
6. (Optional) Add an effort certification step to the *Enter Time* business process.
   See Steps: Set Up Effort Certification for Time Tracking on page 2682
7. (Optional) Set Up Calendar Totals on page 2683.
8. (Optional) Set Up Time Shift Options.
9. (Optional) See: Steps: Set Up Project Time Entry on page 2689.
10. (Optional) See: Steps: Set Up Meal and Break Validations on page 2808.
11. (Optional) See: Steps: Set Up End of Shift Time Attestations on page 2806.
12. (Optional) See: Steps: Set Up Geofences for Mobile Time Entry on page 2693.

Next Steps

Run these reports to verify time entry template details:

- All Time Entry Templates.
- All Time Entry Template Effective Dates.
- Audit - Workers with Multiple Time Entry Templates. Identify any workers who meet the eligibility rules for more than 1 time entry template.
- View Worker's Time Eligibility. Ensure that workers are eligible for only 1 time entry template.

You can copy time entry templates to create new time entry templates with similar configurations. From the related actions menu of a time entry template, select Time Entry Template > Copy.

You can copy effective-dated configurations to create similar configurations with different dates. Access the View Time Entry Template report, and click Copy Effective-Dated Data.

Note: Consider the impact on workers who have entered but not submitted time before you:

- Delete a template.
- Delete a template effective date.
- Inactivate a template.

Examples
2021R2 What's New Post: Time Off in Time Calculations

Set Up Time Entry Templates

Prerequisites

Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

You can configure the foundational aspects of a worker's time entry calendar, including:

- The default time entry code to associate with reported time.

- Whether workers are required to enter comments on time entries.
- Meal and break options.

Steps

1. Access the Create Time Entry Template task.
2. Select an effective date.

   You can add additional past- or future-dated dates.
3. Assign a Default Time Entry Code.

   The code you select:

   - Populates the Time Type prompt on the time entry calendar.
   - Applies to time entered for projects and tasks.
   - Ensures that all time has a time entry code.
   - Determines the section of the time entry calendar from which workers can select projects and tasks: Hours/Units or In/Out Times.

   Workers are eligible for the default code even when it doesn't belong to a time code group. However, we recommend that you always include the default time code in a time code group that the worker is eligible for.
4. (Optional) Select the Enable Workday Scheduling check box to enable Workday to use data from Workday Scheduling in Time Tracking.

   To enable Workday Scheduling or Workday Scheduling and Labor Optimization, contact your Customer Base Account Executive. Workday Scheduling and Labor Optimization are separate products (SKUs) that require separate licenses.
5. On the Effective-Dated tab, expand the Time Entry section.
6. Complete the In/Out Entry Options section, consider:

Option	Description
Allowable Types for Out Time	Select the type that your workers can use when reporting an Out time. Your selection here affects: • The default in/out patterns you can select. • Whether you can create time blocks for breaks. • Your options in the Time Shift section.
Default In/Out Pattern	The default in/out pattern displays in the In/Out Times section on the Enter Time grid. The pattern doesn't apply to alternate time entry methods (such as Quick Add or Auto-fill). Workers can add or subtract rows, and change the out type according to the time entry template and time entry code.
Track In and Out times down to the second	Track seconds for all reported times, calculated times, and durations associated with this time entry template.
Enable Optional Out Times	Makes the Out field optional when workers enter time using these time entry methods: • Enter Time by Week. • High-Volume Time Entry. • Time Entry Calendar.

Option	Description
	• Quick Add. Note: Incomplete time blocks don't match with time clock events.
Prevent Submission of Incomplete Time Blocks	Prevents workers from submitting time when their submission includes incomplete time blocks. This option is available only when you select Enable Optional Out Times.

7. (Optional) In the Worker Edits for Check In and Check Out Tasks section, enable workers using the check-in and check-out time entry methods to edit their check-in and check-out times on mobile devices.

   Set threshold values from 0-120 minutes.

   Note: You can't enable this feature when you enable:

   - Shift-based check-in
   - Geofences by scheduled shift location

   We recommend you don't enable this feature and time attestations on the same time entry template.
8. (Optional) Complete the Shift-Based Check-In section, consider:

Option	Description
Enable Shift-Based Check-In	Enables Workday Time Tracking to use data from shifts in Workday Scheduling during time entry. This option doesn't apply to work schedule calendars from Time Tracking.
Threshold Before Check-In (Minutes) Threshold After Check-In (Minutes)	Define the range during which Workday identifies and matches the shift with shift details. Example: You enter *15* in Threshold Before Check-In and *15* in Threshold After Check-In. A worker checks in at 7:50. Based on the 15-minute threshold, Workday checks for shifts starting between 7:35 and 8:05. Workday finds a shift that starts at 7:45 for the worker's Cashier position at the San Francisco location. Workday automatically populates *Cashier* in the Position field and *San Francisco* in the Location field when the worker checks in to work. When you don't define a position on the shift or the shift falls outside the threshold, Workday populates the worker's primary position.
Default Location	Select to enable Workday to automatically populate the location on time blocks during time entry to the location on the closest scheduled shift in Workday Scheduling.
Default Position	Select to enable Workday to automatically populate the position on time blocks during time entry. Workday populates the position

Option	Description
	on the closest scheduled shift in Workday Scheduling.

Note: You can't enable this feature when you enable worker edits on Check In or Check Out tasks.

9. (Optional) Complete the System Meals and Breaks section, consider:

Option	Description
Create Time Blocks for Breaks	Automatically creates time blocks for the time that workers are on break. This option applies only when *Break* is a valid out type for the time entry. You might find this option useful if you pay your workers for their break time. The time block created for a break inherits the time entry code of the preceding time block.
Copy Worktags for Breaks	Enables break blocks to automatically inherit worktags from the reported time block immediately before a break block. Break blocks always inherit time entry codes and calculation tags from the reported time blocks before them, regardless of this setting.
Create Time Blocks for Meals	When workers select the *Meal* out type, Workday automatically creates meal blocks for time that workers take for their meal. This option only applies when you select *Out, Meal and Break* or *Out and Meal* in the Allowable Types for Out Time prompt. The time block created for a meal inherits the time entry code and time calculation tags of the preceding time block. To prevent this inheritance, use a time block conditional calculation to update the tags.
Copy Worktags for Meals	Enables meal blocks to automatically inherit worktags from the reported time block immediately before the meal block.

10. (Optional) Complete the Time Entry Restrictions section, consider:

Option	Description
Require Comments on Time Entry Changes	Requires comment on the time block when a worker: • Creates new time blocks on a day in the past. • Edits existing time blocks. • Deletes existing time blocks. Workday doesn't require workers to enter a comment when they enter or modify time in the future. This option applies only when workers use these time entry methods:

Option	Description
	• Auto-fill from Prior Week. • Auto-fill from Schedule. • Enter Time by Type. • Enter Time by Week. • High-Volume Time Entry. • Quick Add. This option doesn't apply when workers use: • Enter Time (Weekly) time entry method. • Time clock events. Workday recommends that you don't select this check box when using these entry methods as workers can delete existing time blocks without requiring comments: • Auto-fill from Prior Week. • Auto-fill from Schedule. When you select this check box, Workday doesn't display the Clear option on the time entry calendar. This option prevents workers from deleting time blocks without entering a comment. You can view a worker's most recent comment on the History tab of the time block details.
Require Comments for Changes Older Than (Up To 3 Days)	The number of days before which you require workers to add comments for time entry changes. Workday populates this field to *0* when you select the Require Comments on Time Entry Changes check box. Example: Set the Require Comments for Changes Older Than (Up To 3 Days) field to *2*. On August 16, a worker must provide a comment when editing a time block from before or on August 14.
Restrict Check-In Before Scheduled Start Time	Activate to prevent workers from checking in earlier than a set threshold before their next shift start time.
Threshold Before Restricting Check-In (Minutes)	The number of minutes before the start of the next shift that workers can check in. Example: You set the threshold to 5 minutes. A worker is scheduled for 2 shifts: • 03:00 to 06:00 • 10:00 to 12:00 The worker can check in any time between 02:55 and 06:00 for the first shift and between 09:55 and 12:00 for the second shift.

11. (Optional) Expand the Eligibility section. Specify which workers are eligible for the time entry template by selecting 1 or more Time Tracking eligibility rules. When you select more than 1

eligibility rule, workers must meet the criteria for all of the rules you select. For workers with multiple jobs, template eligibility is based on the worker's primary job, but you can create conditions that evaluate all of a worker's positions.

Eligibility rules based on the Position business object aren't available for time entry templates.

Set Up Time Clock Event Matching Options

Prerequisites

- Create a time entry template.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

Specify how Workday should match time clock events into time blocks.

Steps

1. Access 1 of these tasks:
    - Create Time Entry Template
    - Edit Time Entry Template
2. On the Effective-Dated tab, expand the Time Entry section.
3. Select time clock event matching options:

Option	Description
Maximum Time Block Duration (Hours)	Enter the maximum number of hours that time clock events can be separated by for Workday to match them into a time block. If you don't specify a maximum, or if you specify a maximum of zero hours, Workday automatically populates a maximum of 24 hours. You can't specify a maximum greater than 24 hours.
Prevent Matching of Consecutive Check-Ins	Leave this option unchecked if you want to enable workers to change how they're tracking time without first checking out. They can select different: • Time entry codes • Positions • Project tasks • Worktags When you leave this option unchecked, Workday creates time blocks from pairs of consecutive check-in events. Each time block consists of: • A check-in event. • The details entered for the check-in event. • A check-out event that Workday creates from the second check-in of the pair. Check-ins are unmatched events until workers either check out or check in again.

Option	Description
Warn Worker on Consecutive Check-In	Displays a warning to employees to prevent workers from accidentally checking in multiple times. Also requires the worker to select a check box to confirm that they want to check in again.
Warning Message	You can use the Workday-delivered warning message or enter a custom message.

Set Up Time Entry Calendars

Prerequisites

- Create a time entry template.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

Specify the methods workers can use to enter time on their time entry calendar. Configure how a time entry calendar behaves and displays.

Steps

1. Access 1 of these tasks:
    - Create Time Entry Template
    - Edit Time Entry Template
2. On the Noneffective-Dated tab, expand the Calendar section.
3. Complete the View Options section:

Option	Description
Primary Calendar	Select whether Workday displays a calendar view that matches the worker's Time Tracking period schedule.
Default Calendar View	Select whether the default view for workers is the Weekly view or Monthly view.
Additional Enabled Calendar Views	Select so that workers can change their calendar view from the default to an additional enabled view.

4. Complete the Entry Methods section.
    a) Select the time entry options that workers can use to enter time. Also enable these options on the *Enter Time* business process security policy before workers can use them. While workers

can access some time entry methods from the Monthly calendar view, they still enter time 1 week at a time.

Time Entry Method	Description	View Availability
Auto-fill from Prior Week	Enable workers to copy hours from a prior week to the current week. This option doesn't include time off entries.	Monthly Period Weekly
Auto-fill from Schedule	Enable workers to copy hours from their work schedule to the current week.	Monthly Period Weekly
Quick Add	Enable workers to add several time blocks quickly with the same details, for the same week.	Monthly Period Weekly
Enter Time by Week	Enable workers to use a weekly grid option from the calendar to enter time for an entire week at once.	Weekly
Enter Time by Type	Enable workers to enter time for multiple time types at once for the current week. This option is only available for quantity-based time entry codes.	Monthly Period Weekly

b) Select a Default Time Entry Method.

Select a default time entry method that links to these time entry worklets:

- Last Week
- Select Week
- This Week

Currently, you can select only the *Enter Time by Type* time entry method. You can view this option only if you select the Enter Time by Type check box.

5. Complete the Additional Options section:

Option	Description
Auto Expand Payroll Costing Allocations	Automatically expand the Payroll Costing as of End of Week worklet on a worker's time entry calendar. This worklet displays the worker's default costing allocations.
Hide Pay Date Indicators Hide Time Period Locked Indicators Hide Time Period End Indicators	Hide the pay date, time period locked, or time period end indicators on the time entry calendar. If you don't hide the indicators, the time entry calendar displays them on the days the respective events take place.
Display Absence Balances	Display a View Absence Balances button on the time entry calendar. When workers select the button, Workday displays a modal that

Option	Description
	lists the worker's time off balances that you've configured to display to self-service workers. For workers to access this button, they must have View and Modify access on the *Worker Data: Time Calendar* domain security policy.
Include Scheduling Data	Display scheduling data on the period calendar.

Next Steps

Enable the selected time entry options on the *Enter Time* business process security policy.

2024R2 Feature Release Note: Enter Time by Period

2021R2 What's New Post: Time Tracking Monthly Calendar

Set Up Time Submission

Prerequisites

- Create a time entry template.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

Configure options that affect what happens when workers submit their time entries.

Steps

1. Access 1 of these tasks:
    - Create Time Entry Template
    - Edit Time Entry Template
2. On the Noneffective-Dated tab, expand the Business Process section.
3. Configure these fields:

Option	Description
Submit by Time Period	Enable workers to submit time entries for approval by time period rather than by week. Workday continues to run calculations by week.
Independent Events for Multiple Jobs	Create separate approval events for each position when a worker submits time for multiple positions. The approval events are independent of each other: If someone delays

Option	Description
	an approval, it doesn't hold up approval for another position. If selected, only managers associated with the position can approve workers' time entries in the Edit and Approve Time Report.
Route Time Approval by Worktags	Workday creates independent events for the worktags you select. You can use the worktags in the routing rules on the Enter Time business process definition to route time entries to approvers by worktag.
Submit Text	Select a message to display when workers submit their time using the time entry calendar. Use the Create Time Tracking Submit Text task to add messages. If left blank, the Workday-delivered default submit text displays when workers submit their time.
High Volume Confirmation Text	Select a message to display on the confirmation page when workers enter their time using high-volume time entry. Use the Create Time Tracking Submit Text task to add messages.
Effort Certifying Text	If workers are required to certify their reported time, select the text to display along with the certification check box. Use the Create Effort Certifying Text Task to add text. The Certify Effort page only displays when the *Enter Time* business process includes a *Certify Effort* action step.
Hide All Current Time	If selected, Workday hides the All Current Time section during the approval of a worker's time in My Tasks. Instead, only time blocks or time off entries included on the event are visible to the approver. If left blank, the All Current Time section remains visible by default during approval.
Allow Mass Auto-fill From Schedule	Enable the *Mass Autofill from Schedule* process to automatically populate workers' time entry calendars with time blocks based on their work schedules.

Steps: Set Up Effort Certification for Time Tracking

Context

Configure the *Enter Time* business process to have your workers certify their worked time for the week. Example: You could add an effort certifying step:

- After the initiating action to have workers certify their time upon submitting it, and
- After the final approval to have workers also certify time entered by others on their behalf.

In the effort certification step, a Certify Effort page displays and by clicking Approve, the worker certifies everything that displays on the page.

The Certify Effort page displays total hours worked during the week by time entry code, position, and worktags. Totals represent reported time blocks for time entry codes that use hours. The worker's cost allocation instructions (as of the last day of the time entry week) display across the top of the page and reflect any costing instructions defined for the worker and worker's position in Workday Payroll. Hours with no worktag overrides are allocated accordingly.

Steps

1. Select Business Process > Edit Definition from the related actions menu of the *Enter Time (Default Definition)* business process and add an effort certification step.

Option	Description
Order	Specify when the effort certification step should happen.
Type	Select *Action*.
Specify	Select *Certify Effort*.
Group	Specify who should complete the effort certification step.

2. (Optional) Access the Create Effort Certifying Text task.

   Create a custom effort certifying statement. If you do not create a custom statement, Workday displays default text when workers certify effort.

   a) Name your effort certifying text so you can identify it later.
   b) Write a statement for workers to use when certifying their hours for the week.

   Security: *Set Up: Effort Certification* domain in the Core Payroll functional area.
3. (Optional) Access the Create Time Entry Template task.

   a) On the Noneffective-Dated tab, expand the Business Process section.
   b) Select an effort certifying text to display.

   Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Result

You can use the View Effort Certifying Texts report to view all of the effort certifying statements you currently have.

Related Information
Examples
Steps: Set Up Effort Certification

Set Up Calendar Totals

Prerequisites

- Create a time entry template.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

Configure the totals that display on a worker's time entry calendar and time review events. Workday updates totals as a worker enters time and can include time off mapped to calculation tags.

When you enable time shift on the time entry template, Workday adds a shift date to each time block and calculated time off. Workday bases calculations of daily and weekly totals on the shift date. When a shift crosses a week breaker, Workday uses the shift date to determine in which week the time block or calculated time off belongs. Workday then adds the time to the total for that week.

Totals:

- Display the primary total on each day of the time entry calendar.
- Display in the primary unit of time.
- Also display the nonprimary total when you review, submit, or approve time.
- Display either reported or calculated time, depending on your configuration.

Additional Totals:

- Display based on worker eligibility for the effective-dated time entry template that is active at the end of the worker week based on the worker's work schedule calendar.
- Display in the Summary section.
- Always represent calculated time.
- Are visible to approvers through mobile Time Tracking approvals.

Steps

1. Access 1 of these tasks:
    - Create Time Entry Template
    - Edit Time Entry Template
2. (Optional) On the Effective-Dated tab, expand and complete the Totals section:

Option	Description
Total	The numbers 1 or 2 control the display order from left to right on time review events.
Unit	The unit for the reported daily total time that Workday displays on time review events when: • Managers and workers submit time. • Managers approve, send back, deny, or correct time. • Managers review time events in My Tasks.
Label	(Optional) Overrides the units of time. Example: *Stores Visited* overrides the *Each* unit.
Primary	The primary daily total. Workday displays the worker's primary reported daily total time on: • Each day on the time entry calendar. • High-volume time entry. • The Time worklet. Workday displays the secondary daily total in time review events only if the value of the reported daily total is nonzero.
Include Calculation Tags	(Optional) Time calculation tags that override your Totals grid configuration. Workday includes the hours associated with time calculation tags in the daily Hours totals on the time entry calendar.

Option	Description
	If you leave this field blank, Workday will base the daily Hours totals on reported dates and midnight day breakers.
Sum Based on Calculated Quantity	(Optional) Causes totals in these areas to respect calculated, rather than reported dates, and nonmidnight day breakers: • Time worklets. • Time submission tasks. • The time review event header and the Daily Totals section in the time approval in My Tasks. Workday automatically selects this check box when you add calculation tags to the Include Calculation Tags field. However, you can select it even if you don't select a particular calculation tag.

3. Complete the Additional Totals section:

Option	Description
Total	The numbers 1 through 12 control the display order.
Include Calculation Tags	Select 1 or more time calculation tags (that use the same unit of measure) to total.
Label	Name the totals that workers see on the time entry calendar and elsewhere throughout time entry.

Result

The configured totals display when you view a worker's time entry calendar.

When you or workers click Review on the time entry calendar, Workday displays Totals, then Additional Totals.

When you or workers enter time using high-volume time entry, Workday displays a Totals section and an Additional Totals section on the confirmation page.

Next Steps

(Optional) Translate calendar totals:

1. Access the View Time Entry Template report.
2. On the Effective-Dated tab, expand the Totals section.
3. From the related actions menu of the label you want to translate, select Translation > Translate Instance.
4. Select a Target Language.
5. In the Text Value column, enter the translated label.

Examples
2022R2 What's New Post: Enable Configurable Totals in Time Tracking
2023R1 What's New Post: Increase Number of Additional Totals

Set Up Time Shift Options

Prerequisites

- Create a time entry template.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

You can configure how Workday assigns dates to time blocks and calculated time offs that are part of a time shift. You can also control how Workday handles time blocks and calculated time offs that cross the day breaker. Configuring time shift options enables you to comply with commonly negotiated overtime and premium pay policies.

You can split time blocks and calculated time offs at the day breaker or group them into shifts. When you group time blocks and calculated time offs, Workday adds a shift date to each block based on the dates for the:

- Beginning of a shift.
- End of a shift.
- Majority of a shift.

You can use the shift date on the time block and calculated time off when you create these types of time calculations:

- Consecutive day.
- Minimum daily hours.
- Minimum weekly hours.
- Standard overtime.
- Time block conditional.
- Time block create.

Steps

1. Access the Create Time Entry Template or Edit Time Entry Template task.
2. On the Effective-Dated tab, expand the Time Shift section
3. Select a time shift option:

Option	Description
Workday Defined	Workday defines a time shift as a grouping of time blocks and calculated time offs that can each last up to 24 hours. You can separate time blocks within a shift using meals and breaks, which can be up to 24 hours long.
Custom	You can create your own shift definition by customizing the separations for the time block and calculated time off that count toward time shifts.

4. Select an option from the Group Time Blocks for Shift Based On prompt to define a shift date for shifts that cross the day breaker:

Option	Description
Begin of Shift End of Shift	Select to set the shift date to the beginning or end date for the shift. Example: You configure a worker's time entry template to have a 1-hour maximum meal

Option	Description
	duration. They work on Monday from 20:00 to midnight and then take a 1-hour meal break. They check in again at 01:00 on Tuesday and check out at 05:00. The meal break is within the 1-hour maximum, so Workday groups both time blocks into the same shift. When you group time blocks based on: • Begin of Shift: Workday sets the shift date of each time block to the date for Monday. • End of Shift: Workday sets the shift date of each time block to the date for Tuesday.
Majority of Shift	Select to set the shift date to the day on which the worker works the most hours in the shift. Workday determines the shift date by comparing the duration between the calculated In time of the first time block in the shift to the day breaker and the duration between the day breaker to the calculated Out time of the last time block in the shift. If there’s more time before the day breaker, Workday will assign the date of the first part of the shift. If there’s more time after the day breaker, Workday will assign the date of the last part of the shift. When there’s an equal amount of time before and after the day breaker, Workday will assign the date of the first part of the shift. Example: You configure a worker's time entry template to have a 2-hour maximum meal duration. They work on Wednesday from 22:00 to midnight and then take a 1-hour meal break. They check in again at 01:00 on Thursday and check out at 06:00. Workday groups the 2 hours worked on Wednesday and the 5 hours worked on Thursday into the same shift. The majority of the shift is on Thursday, so Workday sets the shift date of both time blocks to the date for Thursday.
Split by Day Breaker	Select to use a calculated date for time blocks. Example: A worker has a calendar with a 02:00 day breaker. They work a 4-hour shift from 01:00 to 05:00. Workday doesn't add a shift date to the time block. Workday tags the hour before the day breaker and the 3 hours after with different calculated dates.

Calculated time offs follow the same grouping rules as time blocks, based on the selection in the Group Time Blocks for Shift Based On prompt. Shifts can be entirely made up of calculated time offs.

Example

You want to configure time shift options for shifts that cross a week breaker.

On the time entry template, you group time blocks for a shift based on the beginning of the shift. The week begins on Monday.

Scenario: A worker checks in at 20:00 on Sunday and checks out at 04:00 on Monday. Workday creates these time blocks based on the day breaker:

Day Breaker	Reported Time Block	Calculated Time Block	Shift Date
Midnight	20:00 - 00:00	20:00 - 00:00	Sunday
	Sunday 00:00 - 04:00	Sunday 00:00 - 04:00	Sunday
Non-midnight	Monday 20:00 - 04:00	Monday 20:00 - 00:00	Sunday
01:00	Sunday	Sunday 00:00 - 01:00	
		Sunday 01:00 - 04:00	
		Monday	

Workday includes the hours worked on Monday and tagged with a Sunday shift date in the total for Sunday. When the worker submits hours for the week ending on Sunday, Workday includes the Monday hours tagged with the Sunday shift date.

Calculations based on the shift date include the hours from 00:00 to 04:00 on Monday in the totals for the previous week.

Scenario: When the same worker, who's scheduled shift is from Sunday at 20:00 to Monday at 04:00, calls in sick, a calculated time off is created. For calculated time offs, the reported time block isn't split by the day breaker when crossing weeks:

Day Breaker	Reported Time Off Block	Calculated Time Off Block	Shift Date
Midnight	20:00 - 04:00	20:00 - 00:00	Sunday
	Sunday	Sunday 00:00 - 04:00	Sunday
Non-midnight	20:00 - 04:00	Monday 20:00 - 00:00	Sunday
01:00	Sunday	Sunday 00:00 - 01:00	
		Sunday 01:00 - 04:00	
		Monday	

Next Steps

On the Create Time Calculation or Edit Time Calculation tasks, configure any calculations that evaluate shifts for Workday to calculate time according to the shift date.

Examples

The Next Level: Overview of Shift

The Next Level: Advanced Shift

The Next Level: Time Tracking Advanced Concepts

Steps: Set Up Project Time Entry

Prerequisites

- Create time entry codes.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

Configure time entry templates and time calculation tags so that workers can enter time for projects and project tasks.

Steps

1. Access the Create Time Entry Template task.
2. Select a Default Time Entry Code for project time entry.

   Workday applies the default time entry code to any time entered for projects. To track project time separately from nonproject time, use a default time entry code that you dedicate to project time entry. Then use eligibility for time code groups to make other time entry codes available to the worker. Selecting a default time entry code that tracks both project and nonproject time makes it difficult to separate them for calculations and reports.
3. (Optional) On the Noneffective-Dated tab, expand the Calendar section.
   a) Select Enter Time by Type to enable workers to enter multiple combinations of quantity-based time types and active worktags at once.
   b) Update the *Enter Time* business process security policy so that workers can use this option.

   If you select Auto-fill from Prior Week in addition to Enter Time by Type:

   - Workers can auto-fill time blocks from a prior week into their calendar.
   - The Also Copy Details and Comments check box is replaced with the Do not copy hours check box.
   - Workers can select Do not copy hours to copy projects from a prior week without copying hours.

   Workers can also access the Set Default Projects task through Enter Time by Type. Workers can save projects that Workday automatically populates in the time entry grid. To improve task performance, Workday recommends that workers save fewer projects or update saved projects on a less frequent basis.
4. On the Noneffective-Dated tab, expand the Projects section.

   Select time entry options:

Option	Description
Enable Time Entry by Project	When enabled, workers can select their assigned projects and tasks from the Time Type prompt when entering time. The default time entry code of the time entry template doesn't display in the Time Type prompt because Workday automatically applies it to the project time.
Require Project Role for Time Entry	Requires workers to select a project role when they enter time using these time entry methods:

Option	Description
	• Auto-fill from Prior Week. • Calendar-based time entry. • Enter Time by Type. • Quick Add. When enabled, Workday also displays Project Role on the Review Project Time task. Workday doesn't require workers to select a project role when they enter time through check-in or check-out events. Workday populates the Project Role field with roles based on the worker's assignments on a project's resource plan line.
Display Phase and Task on Time Block	Display project phase and task information on a time block for active projects. Workday uses start and end dates for the task resource and resource plan line to drive which resource plan line is available for time entry. During project time entry in Time Tracking, only workers assigned as task resources can enter time to a project plan task. If a project plan task has no task resources, then all workers on the resource plan can see and log time to that task. They can log for both billable and nonbillable projects. If you're using Workday Project Tracking, you can add workers to projects, but you can't add workers to a specific project plan task. When workers enter time for a project, they see all of the project plan tasks in the project and can enter time for any task. Restrict which projects and tasks display in the Time Type prompt by using project plan task Start Date and End Date.
Use High Volume Projects Prompt	Enable workers to bypass their assignments and select from all active projects and tasks when entering time. Selecting this option causes the Time Type prompt to be empty until workers search for their project. They can also browse through all active projects and tasks in the Projects and Project Plan Tasks folders. This option is useful if you have large volumes of projects or don't assign projects and tasks to individual workers.
Create Independent Events	Create separate approval events for each project that has time logged against it that week or time period. This way, the approval status of 1 project doesn't hold up the approval for another project. Approvers for multiple

Option	Description
	projects receive, and must act on, separate approval events for each project.
Display Project Customer on Enter Time by Type	Select to display the project customer on the Enter Time by Type time entry method.
Show Totals on Enter Time by Type	Select to display the Time Totals section on the Enter Time by Type time entry method.
Hide Do Not Bill	Select to hide the Do Not Bill check box on the Enter Time for Worker, Enter Time by Type, and Micro-Edit time entry methods.

5. (Optional) Complete the Set Default Projects section:

Option	Description
Display Project Customer Display Project Owner	Select to add Project Customer, Project Owner filters, or both, to the Set Default Projects task. Additional filters make it easier for workers to quickly select relevant projects.
Enable Project Search	Select to enable a Project Search button on these time entry methods: • Time entry calendar. • Quick Add • Check-In • Edit Time Clock Event When workers click Project Search, they can search for and select multiple projects, project tasks, or both and then click Update Results to add those projects to a grid view. They can then apply the projects and project tasks to their time entry.

6. On the Effective-Dated tab, expand the Eligibility section.

   Select a Worker Eligibility rule so that only workers who enter project time are eligible for this time entry template.
7. (Optional) Create Time Calculation Tags on page 2735.

   Create a *Project Time* time calculation tag and associate it with the default time entry code for project time entry.

   If you track project time only and don't perform time calculations, you don't need to create time calculation tags. If you use the Review Time or Review Project Time reports to review and approve project time blocks, create a time calculation tag for project time. These reports pull in time blocks based on their calculation tags.

Next Steps
Assign the worker to a project or resource plan.

The Next Level: Project Tracking

Set Up Time Entry Templates for Enter Time by Type (New!)

Prerequisites
Security:

- *Process: Put Reported Time Blocks for Worker* domain in the Time Tracking functional area or the Time Tracking Hub functional area.
- *Self Service: Time Calendar* domain the Time Tracking functional area.
- *Worker Data: Time Calendar* domain in the Time Tracking functional area or the Time Tracking Hub functional area.

Context

A time entry template enables you to configure options for project time entry for your workers.

Steps

1. Access the Edit Time Entry Template task.

   See Set Up Time Entry Templates in the Workday Administrator Guide.
2. Select a template to configure project time entry for your workers.
3. Select options in the Calendar section.

Option	Description
Default Calendar View	Select Weekly. When the default calendar view is Monthly, you can also access the Enter Time by Task (New!) task. Note: When you use Enter Time by Type (New!) as the default time entry method, you can't set Monthly as the default calendar view. You must enable Monthly as an additional calendar view to use Enter Time by Type (New!) as default time entry method.
Entry Methods	Enables time entry methods on the Weekly calendar: • Auto-fill from Prior Week • Quick Add • Enter Time by Type • Enter Time by Type (New!) You must select Enter Time by Type (New!) for it to display on the Actions prompt on the Weekly calendar. The other time entry methods are optional. From the Default Time Entry Method prompt, select *Enter Time by Type (New!)* to enable it as the first task on the Time worklet on the Workday Home page.

Option	Description
	When there is no selection for the Default Time Entry Method, the Enter Time calendar opens for you.

4. On the Projects tab, select these options:

Option	Description
Require Project Role for Time Entry	Requires workers to select a project role when they enter time using these time entry methods: • Auto-fill from Prior Week • Calendar-based time entry • Enter Time by Type • Enter Time by Type (New!) • Quick Add When enabled, Workday also displays Project Role on the Review Project Time task. Workday doesn't require workers to select a project role when they enter time through check-in or check-out events. Workday populates the Project Role field with roles based on the worker's assignments on a project's resource plan line.
Hide Do Not Bill	When enabled, hides the Do Not Bill check box on Micro-Edit and these time entry methods: • Enter Time by Type • Enter Time by Type (New!) • Enter Time for Worker
Enter Time by Type (New!)	When enabled, the search results view displays columns for: • Project Customer • Project Phase • Project Task • Project Owner

Tasks

Enter Time for Worker Using Enter Time by Type (New!) on page 2845

Steps: Set Up Geofences for Mobile Time Entry

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.

3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

- Create time entry templates.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

You can create geofences to prevent workers from checking in or out of work while using the Workday mobile application outside of a defined location. When you use Workday Scheduling, you can ensure workers only check in and out on mobile from the location where they're scheduled to work. You can configure 1 or more geofences for each time entry template. Workers are assigned geofence locations based on time entry template eligibility.

Example: You want to configure geofences that apply to the IT Organization. On the IT Organization time entry template, you add geofences for the San Francisco and San Jose locations. Members of the IT Organization can only check in to work from their mobile devices when they are within the San Francisco or San Jose geofences.

Note: You can't enable this feature when you enable worker edits to the Check In or Check Out tasks.

Steps

1. Enable *Standard Mobile Check-In*.
    a) Access the Edit Tenant Setup - HCM task.
    b) In the Time Tracking section, select the Enable Standard Mobile Check-In check box.

       See Steps: Enable Time Tracking for Mobile on page 2645.
2. Ensure that you enabled mobile check-in and check-out in your tenant.
    a) Access the Edit Tenant Setup - System task.
    b) In the Mobile section, make sure that the Disable Check In/Out on Mobile check box is clear.
3. Ensure that you enabled location services in your tenant.
    a) Access the Edit Tenant Setup - System task.
    b) In the Location Services section, make sure that the Disable Location Service check box is clear.

       When you enable geofences, Workday prompts workers to enable location services on their mobile device.

4. Configure geofences.
   a) Access 1 of these tasks:
      - Create Time Entry Template
      - Edit Time Entry Template
   b) (Optional) To configure geofences by scheduled shift location, select the Enable Workday Scheduling check box.
   c) On the Noneffective-Dated tab, expand the Location Settings section.
   d) Add a new row to create a geofence for each location. Workers you assigned to this time entry template will be able to check in and out from all the locations you add.

      You can select from existing Location values that include latitude and longitude. When you select an existing location, the latitude and longitude fields aren't editable from the time entry template.

      To modify the latitude and longitude for an existing location, access the related actions menu of the Location and edit the Location Details.

      You can also create a geofence for a new geographic location by entering custom Latitude and Longitude values.
   e) Define the length of the Radius for each geofence.

      Workday recommends making each radius greater than 100 meters to improve the functionality of the geofence. The accuracy of geofences is dependent on device hardware and the core location API functionality in the operating system.
   f) (Optional) To configure geofences by scheduled shift location, select the Enable Geofences by Scheduled Shift Location check box. You can also set thresholds of up to 120 minutes for check-in and check-out.
5. (Optional) Display a geofence map for workers on the Check In/Out task.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   a) ../../../../manage-workday/tenant-configuration/Machine-Learning-and-Innovation-Services/enable-innovation-services-feature-and-data-contribution.dita.
   b) On the Available Services tab in the Cross Application Services category, select the Third-Party Map service.

Result

When a worker attempts to check in or out outside the radius for the geofence, they receive an error message. The error message instructs them to move closer to their work location before attempting to check in or out. If you enable the Third-Party Map service, the worker sees a real-time map that displays their location relative to their work location.

You can use the Time Clock History report to view successful check-in and check-out events for a worker. Workday doesn't store location information in the report.

Concept: Scheduling Organizations on page 2159

Examples

2020R1 What's New Post: Geofencing for Check-In and Check-Out Events on Mobile

Reference: Edit Tenant Setup - System

Set Up Third-Party Scheduling

Prerequisites

- Create a time entry template.

- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

When you import scheduled shifts from third-party systems, you can enable Workday to retrieve related attributes from workers' imported shifts. On both desktop and mobile, when workers check in using the Check In or Add Clock Event tasks, Workday can automatically populate the time entry code, position, and worktags using the data imported from the third-party scheduling system.

Note:

- Workday doesn't currently support project time types on third-party schedules.
- You can't enable both third-party scheduling and Workday Scheduling.

Steps

1. Access 1 of these tasks:
    - Create Time Entry Template
    - Edit Time Entry Template
2. On the Noneffective-Dated tab, expand and complete the Third-Party Scheduling section.

Option	Description
Import from Third-Party Schedules	Select to use the *Import Ad Hoc Schedules* web service to import schedule events as schedule blocks. When workers check in, Workday searches for the nearest schedule block start time within a 12-hour timeframe. If Workday finds a schedule block for the worker, it applies any values specified in the block as default values on the check-in event. Example: You configure the *Channel* worktag with the value of Direct in the time entry code. The third-party scheduling event has a *Channel* attribute with the value of Partner. Workday automatically populates the *Channel* worktag with the value of Partner when the worker checks in. When Workday finds no scheduled shift or no value for an attribute in the schedule block, Workday uses the time entry code on the imported schedule event. Example: You configure the *Channel* worktag with the value of Direct in the Hours Worked time entry code. The third-party scheduling event has no attributes but specifies the time entry code to be Hours Worked. Workday automatically populates the *Channel* worktag with the value of Direct when the worker checks in. When there isn't a time entry code on the imported schedule event, Workday uses the default time entry code from the worker's time entry template and applies the value specified there. Example: You configure the *Channel* worktag with the value of Direct in the time entry code on the time entry template. The third-party scheduling event doesn't specify a time entry code or value for the *Channel*

Option	Description
	attribute. Workday automatically populates the *Channel* worktag with the value of Direct when the worker checks in.
Use Time Tracking Worktag Defaults	When you select the Import from Third-Party Schedules check box and: • Clear the Use Time Tracking Worktag Defaults check box, if both the scheduled shift and the time entry code don't specify values for a worktag, Workday doesn't assign a value to that worktag. • Also select the Use Time Tracking Worktag Defaults check box, if both the scheduled shift and the time entry code don't specify values for a worktag, Workday evaluates the time entry template configuration and applies worktag values to the check-in event according to the worktag precedence rules. See Reference: Worktag Precedence in Time Entry on page 2711. Example: You configure the *Store* worktag to default from the organizational assignment. If both the scheduled shift and the time entry code contain no value for *Store*, and you: • Clear the Use Time Tracking Worktag Defaults check box, then Workday doesn't assign a default value to *Store*. • Select the Use Time Tracking Worktag Defaults check box, then Workday populates the *Store* worktag with the default value from the worker's organizational assignment.

Related Information

Concepts

Concept: Importing Work Schedules

Example: Set Up Geofences by Scheduled Shift Location

This example illustrates how to configure geofences for shifts that are defined in Workday Scheduling.

Context

Your organization has 3 locations. Your workers check in and out on their mobile devices. You want to ensure that your workers can only check in at the locations where they're scheduled to work. You also want to prevent workers from checking in earlier than 10 minutes before their scheduled start time.

Prerequisites

- Enable Time Tracking for mobile. See Steps: Enable Time Tracking for Mobile on page 2645.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Steps

1. Access the Edit Time Entry Template task.
2. From the Time Entry Template prompt, select *USA - Scheduling - In/Out*.
3. Ensure that the Enable Workday Scheduling check box is selected.
4. On the Effective-Dated tab, expand the Time Entry section.
5. In the Time Entry Restrictions section:
    a) Select Restrict Check-In Before Scheduled Start Time.
    b) In the Threshold Before Restricting Check-In (Minutes) field, enter *10*.
6. On the Noneffective-Dated tab, expand the Location Settings section.
7. In the Geofences for Mobile Time Entry grid, add 3 rows and enter these values:

Location	Radius	Unit
San Francisco	120	Meter
San Jose (CA)	120	Meter
Oakland	120	Meter

8. Select Enable Geofences by Scheduled Shift Location.
9. In the Threshold Before Scheduled Start Time (Minutes) field, enter *10*.
10. In the Threshold After Scheduled End Time (Minutes) field, enter *20*.
11. Click OK and Done.

Result

Workers can only check in at their scheduled shift locations. They can check in up to 10 minutes before their scheduled start time. For the first 20 minutes after their scheduled end time, they can only check out at their scheduled shift locations.

Concepts: Time Entry Templates
Concept: Effective Dating for Time Entry Templates

You can apply effective dates to time entry templates to support changes in legislation, union agreements, or company policy, ensuring accurate time entries for workers. Example: When legal changes go into effect at the start of the year, a time tracking administrator can update configurations ahead of time and future-date the changes to go into effect on January 1.

Effective dating enables time tracking administrators to create time entry template configurations with effective-dated elements that impact time calculations, totals, and time entry recording. You can view current, past, and future effective-dated configurations to easily track changes over time.

Workday automatically updates time entry templates that were created before the 2025R1 release on 2025-03-15 to have effective-dated data with an effective date of 1930-01-01. When you edit an existing time entry template, you can edit data for existing effective dates or create new effective dates. Example: You have an In/Out time entry template. When you edit that template, you see an existing configuration with an effective date of 1930-01-01. You create a new configuration with an effective date of 2025-09-01 and update the eligibility rule.

When you change a historic time entry template configuration and the changes impact time calculations, you must run calculations for the impacted time period. To avoid negative payroll results, submit all time blocks for approval before you run payroll.

Delete Time Entry Templates or Effective-Dated Data

You can delete effective-dated configurations from time entry templates.

When the time entry template has only 1 effective-dated configuration or you want to delete an entire time entry template with multiple effective-dated configurations, use the Delete Time Entry Template task.

When a time entry template has more than 1 effective-dated configuration, use the Delete Time Entry Template Effective-Dated Data task to delete any of the configurations. When you delete data for an effective-dated time entry template that's used in a time block, we recommend rerunning the time calculations for that period.

Copy of an Effective-Dated Time Entry Template

To create a new effective-dated time entry template with a different date but similar configuration, copy an existing time entry template. To copy effective-dated time entry templates, use the Copy Time Entry Template task.

Concept: Worker Eligibility for Time Tracking on page 2828

Examples

2025R1 Feature Release Note: Effective-Dated Time Entry Templates

Concept: Geofences for Mobile Time Entry

Overview

Geofences are circular geographic areas surrounding a latitude and longitude point with a radius set in meters. You can create geofences to define where workers can check in or out while using the Workday mobile application. When you use Workday Scheduling, you can configure geofences to prevent workers from checking in or out at locations where they aren't scheduled to work.

Workday Mobile Application

Geofences only apply when workers are using the *Standard Mobile Check-In* time entry method to check in and out. Workday doesn’t prevent workers from checking in or out when they're outside geofences and they use a different time entry method. Example: Time entry calendar. If you want to use geofences, ensure that workers don't have access to other methods of entering time on mobile.

Geofences are only available on the Workday mobile application for iOS and Android. Workday doesn't prevent workers from entering time in Workday from a mobile browser or from a desktop.

Location Data Privacy

When you enable geofences, Workday:

- Prompts workers to enable location services on their mobile devices. If a worker decides not to enable location services, they won't be able to check in our out.
- Prevents workers from checking in or out when they're outside the geofence.
- Compares a worker’s location to the geofence coordinates on their device then deletes the location data.
- Doesn't keep a record of workers' attempts to check in or out from outside the geofence.
- Doesn't store your workers' locations and doesn't send the locations to Workday servers.
- Doesn't store the location in the internal storage or hard drive of the device.

Recommendations

Workers can decide not to enable location services on their mobile devices; therefore we recommend having an alternate method of checking in and out available. Example: A computer or kiosk at the work location where workers can check in and out.

To protect the data privacy of your workers, Workday doesn't offer the ability to report on your workers' locations or unsuccessful check-in or check-out events. You can report on workers' successful check-in and check-out events by using the Time Clock History report. This report doesn't include location data.

Concepts

Concept: Scheduling Organizations on page 2159

Examples

2020R1 What's New Post: Geofencing for Check-In and Check-Out Events on Mobile

Reference: Edit Tenant Setup - System

Concept: Project Time Entry

When you integrate Workday Time Tracking with Workday Projects, you can:

- Create and manage projects.
- Enable workers to enter time through Time Tracking for projects and tasks.
- Track project work.
- Analyze project workers' time.
- Evaluate the labor cost impact to projects.
- Analyze project costs.
- Use advanced resource management.

Configuration Considerations

A worker can select a project, role, or task when entering time when you:

- Add the worker to a resource plan for a project or a task.
- Configure the worker's time entry template to track project time entry.

Workday assigns the default time entry code of the time entry template to any time that you enter for projects and tasks. The default time entry code determines whether the worker enters hours or in/out times for their projects and tasks. Assign workers who enter project time to a template that uses a default time entry code dedicated to project time entry. You can enable workers to enter additional time entry codes by adjusting eligibility rules for time code groups.

If you track project time only and don't perform time calculations, you don't need to create time calculations, time calculation tags, or time calculation groups.

If you use the Review Time or Review Project Time reports to review and approve project time blocks, create a time calculation tag for project time. These reports pull in time blocks based on their calculation tags.

Billable Projects

Once you approve a worker's billable project time entries, Project Billing and Revenue processes them as billable transactions. If you edit an approved time block, you must submit and approve it again for it to become a billable transaction. You can use the Review Billable Project Transactions task to view, edit, and approve the transactions or to transfer the time to a different project.

The status of the time block reflects the billing status of the associated transaction. When the billing status of the transaction is one of the following, you can no longer edit the time block:

- Billed: The billable transaction has been invoiced.
- Billing in Progress: The billable transaction is included in a customer invoice proposal.

If you need to make changes after this point, you can delete the time block and re-add the updated information in a new time block. Deleting a billed time block creates a negative billing transaction that reverses the original transaction.

You can prevent the deletion of time blocks by configuring which of these activities locks them:

- Billing.
- Revenue recognition.
- Project.

Use the Set Up Project Billing Configuration task to configure this. To allow specific users to bypass the time block deletion lockdown for periods that aren't closed, assign them to the *Manage: Exemption from Deletion Lockdown for Project Billing* security domain.

Time Tracking offers a Do Not Bill option when you enter time for billable projects and project plan tasks. Although you can select the option at both the project and task levels, the option only affects billing for tasks. If you select this option at the project plan task level, Workday Projects tracks the transaction but doesn't bill the time. Selecting this option at the project level has no effect in Workday Projects. You can still select this option for tracking and reporting purposes.

Normalized Project Labor Costing

Workday enables you to evaluate the labor cost impact to projects, based on variances of a worker's daily reported time versus scheduled time. To allocate fully burdened costs across project time blocks in a day, use the normalization factor time block attribute. The normalization factor calculation divides the scheduled hours for a calculated day by the total reported hours for a day, including time off.

Once you approve the normalized project time block, if the worker has a reported project or project task, Workday immediately calculates and stores the approval on the worker time block.

When scheduled hours don't equal reported hours for a day, Workday stores the normalized factor needed to derive a normalized cost for project time blocks.

When you:

- Add a new reported time block to a day that contains project time blocks, Workday recalculates the normalization factor for all project time blocks or project tasks for the day.
- Change a project time block or project task to a time entry code, Workday removes the normalization factor.

Use the Normalization Factor report field on the Project Time Blocks report data source to determine the normalized cost for each project time block.

You can only access normalization factor values through custom reports.

Example: You create a matrix report to summarize the normalized labor costs grouped by Project, per period, when you multiply values for:

- Reported Quantity (on the project time block)
- Fully Burdened Cost
- Normalization Factor

Steps: Set Up Project Tracking

Review Billable Project Transactions

Concept: Time Shifts

A time shift is a grouping of consecutive time blocks that apply to workers who report In and Out times. A time shift can be defined with either:

- Only time worked.
- Only time off.

- Both.

Time shifts enable you to base calculations and validations on a worker's entire shift, whether or not the shift is fully contained within the worker's defined work day. Eligibility for time shift settings is based on worker eligibility for the time entry template on the last day of the week. The day breaker doesn't split time shifts, as it does with time blocks.

While time shifts can cross a week boundary, to ensure accurate time calculations and calendar totals, avoid time shifts that extend beyond 48 hours into the second week.

When you change time tracking eligibility in the second week of a shift that crosses from 1 week to another, use these reports to identify and view impacted shifts:

- Find Shift Blocks Crossing Weeks with Eligibility Changes
- View Shift Blocks Crossing Weeks with Eligibility Changes Results

If you configure daily evaluation of worker eligibility for time calculations, use the Time Calculation Eligibility Changes report instead.

When you find impacted shifts in the reports, you can make adjustments using the Adjust Calculated Time task.

Time Shift Options

Workday groups consecutive time blocks based on the type and duration of time block separations:

- Meal
- Break
- Out

You can use a Workday-defined shift definition or create a custom definition when you configure your time entry template.

Workday-Defined Shift

Workday defines a time shift as a grouping of time blocks, each with a maximum duration of 24 hours. When a time block ends with:

- A meal or break, the next time block can start anytime within the next 24 hours to be a part of the shift. When a break is longer than 24 hours, Workday ends the shift.
- An out, Workday ends the shift unless the next time block starts immediately afterward. Example: When a time block ends with an out at 10:35, and the next block begins at 10:35, Workday includes both blocks in the same shift.

Examples to enable you to determine what qualifies as a Workday-defined time shift.

Time Blocks Worked (Out Reason)	Time Shift?
08:00 - 12:00 (Break) 13:00 - 17:00 (Out)	Yes: Break duration is less than 24 hours.
08:00 - 12:00 (Out) 13:00 - 17:00 (Out)	No: Out duration is greater than zero.
08:00 - 10:00 (Out) 10:00 - 12:00 (Out)	Yes: Out duration is equal to zero.
Monday 08:00 - 11:00 (Meal) Tuesday 10:00 - 17:00 (Out)	Yes: Meal duration is less than 24 hours.
Monday 08:00 - 11:00 (Meal)	No: Meal duration is greater than 24 hours.

Time Blocks Worked (Out Reason)	Time Shift?
Tuesday 12:00 - 17:00 (Out)	

Custom Shift Definition

You can create a custom shift definition by customizing time block separations that count toward time shifts.

Example: You configure consecutive time blocks within the same shift to have separations that are less than these durations:

- 1-hour out.
- 2-hour meal.
- 30-minute break.

When you set maximum durations, workers can still report separations longer than the limit. When workers enter separations that exceed the maximum duration, Workday ends the shift at the time block immediately preceding the separation. The new shift starts in the time block immediately after the separation.

You can use time entry validations to alert workers when they report separations longer than a certain duration.

Shift Date

When you configure time shifts and group time blocks based on the beginning, end, or majority of a shift, Workday determines a shift date for each time block. You can define how Workday determines the shift date for time blocks that cross days.

Example: You configure a worker's time entry template with a maximum 1-hour meal break, and you group time blocks for shifts based on the date when the shift begins. The worker enters time from 18:00 to 23:00 on Friday. They take a 1-hour meal break, check in again on Saturday, and work from midnight to 03:00. Workday groups both time blocks into a single shift and sets the shift date of both blocks to the date on Friday.

The shift date also impacts time approval and time calculations. When you:

- Create time calculations, you can base calculations that have a Time Day Based On prompt on the shift date.
- View time blocks in the Edit and Approve Time or Review Time reports, Workday displays the reported time according to the shift date on the time blocks.

Calculated time off blocks receive a shift date when advanced shift is configured on the time entry template. Time calculations that reference shift date also use this for calculated time offs.

Worktags for Time Entry

Setup Considerations: Worktags in Time Tracking

You can use this topic to help make decisions when planning your configuration and use of worktags in Time Tracking. It explains:

- Why to set them up.
- How they fit into the rest of Workday.

- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

Worktags in Time Tracking enable you to capture and report on information about worker hours.

Business Benefits

- Expedite time approval by routing submitted hours to the correct manager when location or cost center worktags are assigned to time blocks.
- Guide data entry on tasks to ensure that workers enter valid data, reducing the need for input error messages.
- Inform your decision by using custom worktags to capture values important for your company reporting.
- Make it easy to track details associated with workers such as cost center, job profile, and location.
- Save time, ensure accuracy, and easily associate information with time blocks by automatically applying default worktag values.

Use Cases

Worktags in Time Tracking enable you to:

- Capture information about worker hours for costing and journal entries in the Workday Payroll general ledger.
- Capture information about worker hours for Project labor costing.
- Populate time blocks automatically with related worktag values from a worker's project, project plan task, or organizational assignments.
- Categorize and report on time entries.
- Classify information for analysis in reports, and send the information to Payroll and Projects.
- Import location information with work schedules for workers working at multiple locations.
- Route time entries for workers who work at multiple locations to the correct manager for approval.
- Route a worker's training hours to a different cost center than configured in Workday Payroll.
- Capture information about the hours of multiposition workers ensuring they're paid correctly for each position.
- Label manufacturing machines and track their use. You can require workers to select the machine they've used when they enter their hours.

Questions to Consider

Questions	Considerations
What types of time tracking data do you want to categorize for analysis?	You can categorize time against costing worktag types for use in financial reporting and costing. Example: For a specific project, you categorize hours worked to the default cost center of the project.
How can worktags automate or simplify data input?	You can automate data input on time entry by: • Applying organization assignment worktags to workers' time entries. Example: You can configure Workday to automatically apply

Questions	Considerations
	the cost centers of workers' organizational assignments to their time entries. • Configuring default worktags based on workers' time entry codes. Example: Enable Workday to automatically apply regions to the time entries of hourly workers. • Configuring related worktags. When workers and managers select a worktag, Workday automatically assigns the default values of related worktags to the time entry. • Configuring Workday to apply default values from projects or project plan task to time entries. • Configuring Workday to populate default worktag values that are hidden from workers during time entry. • Populating default *Location* worktag values from the schedule when you use Workday Scheduling and shift-based check-in. For US workers, you can set up tax location mapping (TLM). Payroll maps the reported location from a time block to US tax authority worktags. The worktags include *State*, *County*, *City*, and *Other*. Time Tracking then adds these worktags to the time block. You can simplify time entry tasks by: • Enabling workers to add worktags directly during time entry. • Presenting workers and managers with a filtered list of worktags they can select from. Example: You can ensure workers entering time for the western region see only the cost center worktags relevant to that region.
What Time Tracking worktags does Workday provide?	Workday supports these worktag types for Time Tracking: • *Allocation Pool* • *Appropriation* • *Business Unit* • *Cost Center* • *Fund* • *Gift* • *Grant* • *Job Profile* • *Location* • *Program* • *Region* You can also configure:

Questions	Considerations
	• 15 custom worktag types. • 10 custom organization types.

Recommendations

On time entry templates, configure default worktags from organizational assignments to limit the data workers need to enter.

Requirements

Use the Maintain Worktag Usage report to enable Workday to use worktags in Time Tracking.

Limitations

No impact.

Tenant Setup

You can select tenant-wide configurations on the Edit Tenant Setup - HCM task to enable mobile users to enter worktags when checking in. Select the Standard Mobile Check-In (Time) check box. See Reference: Edit Tenant Setup - HCM.

Security

Configure these domains in the Worktags functional area:

Domains	Considerations
Manage: Related Worktags	Administrators can manage default and allowed values for worktag types enabled for related worktags.
Set Up: Worktags	Administrators can enable and maintain worktags and view related reporting.
Worktag REST API	Administrators can use a web service to retrieve and load default and allowed values for any worktag.

Business Processes

You can configure the *Enter Time* business process to route time approvals by worktags.

Reporting

You can view worktag configurations on the:

- All Time Entry Templates report.
- All Time Entry Template Effective Dates report.
- View Time Entry Template task.

You can use these report data sources to create custom reports on Time Tracking worktag data for your organization:

- All Time Blocks
- All Time Clock Events
- All Time Blocks and Time Block Entries

Integrations

Web Service	Considerations
Get Calculated Time Blocks	Enables you to retrieve calculated time blocks with their related worktags.
Import Ad Hoc Schedules	Enables you to load large batches of scheduled time blocks and their worktag values.
Import Time Clock Events Put Time Clock Events	Enable you to import large and small batches of time clock events with worktag values. When you use the import time web services, Workday runs validations on the data to check for invalid time clock transactions. These web services only support the default validations that are required for related worktags. See Concept: Importing Time Clock Events on page 2865.
Import Reported Time Blocks	Enable you to import time blocks with worktag values.

Connections and Touchpoints

Features	Considerations
Absence	You can configure Workday to include worktag values with time off hours when workers and managers enter time offs through Absence.
Finance	With Workday Financial Management, you can use time entry worktags in account posting rules and as attributes in accounting results.
Payroll	Worktags entered during time entry override any default costing in Payroll that is defined at the worker or earning level. Worktags that define locations flow to Payroll for taxation.
Projects	When workers enter time for projects, you can configure Workday to add worktag values from the reported projects to the time entries.
Scheduling	When you use shift-based check-in, you can populate the *Location* worktag from a scheduled shift location in Workday Scheduling.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Examples

Example: Configure Worktag Rules for Project Cost and Revenue
2024R1 What's New Post: Worktags on Time Offs
2023R1 What's New Post: Default Worktags by Organization in Time Entry
2023R1 What's New Post: Route Time Approval by Worktag

Steps: Set Up Worktags for Time Entry

Context

You can use worktags in Time Tracking to capture information about a worker's hours for costing and other purposes. Example: Enable workers to select a cost center when entering time. Payroll then retrieves the cost center value assigned to time blocks when it pulls in time for a pay run.

Values for costing worktags entered through Time Tracking take precedence over a worker's default costing allocation configured through Workday Payroll.

Steps

1. Access the Maintain Worktag Usage report.

   In the Time Tracking section, add or remove the worktag types that you'd like to make available for time entry.

   Security: *Set Up: Enable Worktags* in the Worktags functional area.
2. (Optional) Steps: Define Custom Worktags.

   Add Time Tracking to the Worktag Usage column if you're using custom worktags.
3. Configure Related Worktags.
   a) The settings you define for related worktags will impact time entry in these ways:

Option	Description
Allowed Values Enabled	Workday only displays these values in prompts.
Required on Transaction	Workers must enter a value for this worktag.
Default Required	Workday automatically populates these values in prompts, unless you disable the Enable Default Values for Related Worktags option on time entry templates.

   You can configure related worktags for Project transactions and tasks to enable project time entry. You can also configure default worktags for project time entry. Workday populates default worktags for projects in this order:

   - Worktag rules configured for the project hierarchy.
   - Default worktags configured for the project.
   - Default worktags configured for the default time entry code on the worker's time entry template.

   b) (Optional) Define related worktag values and actions for each individual worktag.

   On the Details tab of worktag values, you can select the default worktags to populate for related worktags.

   Example: You set Location to Default Required for the *Cost Center* worktag on the Maintain Related Worktag Usage report. You then access the View Cost Center report and select the *San Francisco* cost center. You access the related actions menu of the *San Francisco* cost center and add *US - Central* and *US - West* as Allowed Worktags for the *Region* worktag type.

4. Access 1 of these tasks:

   - Create Time Entry Template
   - Edit Time Entry Template

   a) On the Effective-Dated tab, expand the Time Entry section.
   b) Complete the Worktags section:

Option	Description
Enable Default Values for Related Worktags	Controls whether related worktag default values populate during time entry. Disable the check box if your organization requires workers to positively report their worktag values.
Enable Related Worktags for Project Time Entries	Enables Workday to automatically populate and validate required and allowed worktag values when workers enter time for projects. Workday derives project-related worktag default values on time entries as of the worker's start date of the week. This occurs when a reported project is in a project hierarchy with worktags for employees or contingent workers who use the Enter Time by Type or Quick Add time entry methods.
Primary Worktags	During time entry, Workday displays each primary worktag as its own prompt and in the same order you define in the grid. You can define up to 10 primary worktags.
Additional Worktags	During time entry, Workday displays additional worktags together in a single Additional Worktags prompt. For time entry tasks with a single Worktags column, Workday displays both primary and additional worktags in the same column.
Hide from Self Service	When a self-service user enters time, this worktag won't be available for edit, but Workday will apply any defaults you've configured for it. The worktag and its associated rules will be available for users with the security access to enter time for the worker.
Default from Organizational Assignment	When selected, Workday defaults the worker's organizational assignment for this worktag type.

   Security: *Set Up: Time Tracking* in the Time Tracking functional area.

5. Create Time Entry Codes on page 2657.

   Associate worktags to a time entry code.

6. Steps: Set Up Time Requests on page 2717.

   Associate worktags to time requests. You can also select a default worktag value that workers enter with their time request. You can select Workday-delivered or custom worktags, but project worktags aren't supported.

Concept: How Payroll Processes Calculated Time on page 2833

Examples

Setup Considerations: Worktags

Reference: Worktag Types

2022R2 What's New Post: Default Worktags by Organization in Time Entry

Steps: Route Time Approval by Worktag

Prerequisites

Add the *Cost Center* and *Location* as primary worktags on the time entry template.

Context

You can route time entries with *Cost Center* or *Location* worktags to the relevant manager's My Tasks for approval.

Steps

1. Access 1 of these tasks:

   - Create Time Entry Template
   - Edit Time Entry Template

   Select 1 or both of these worktags from the Route Time Approval by Worktags prompt:

   - *Cost Center*
   - *Location*

   Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.
2. Edit Business Processes.

   Add an *Approval* step on the *Enter Time* business process to identify the cost center or location manager as the approver of the time entry.
3. Create Business Process Condition Rules.

   Add a condition rule on the *Approval* step of the *Enter Time* business process to determine whether the time block is associated with a *Cost Center* or *Location* worktag.

Related Information

Examples

Concept: My Tasks

2023R1 What's New Post: Route Time Approval by Worktag

Concept: Hidden Worktags in Time Tracking

You can hide worktags to:

- Simplify time entry while still recording the worktag values.
- Prevent them from being used with a time entry code.

When you configure Time Tracking worktags, hide them using these methods:

Method	Description
On the time entry template, select the Hide from Self Service check box.	Hides the worktag from workers during time entry. Managers and timekeepers can still view and enter values for the worktag. Workday displays the worktag values in the time block details.
On the time entry code, select *Hidden* from the Entry Option prompt.	Hides the worktag from all users during time entry. Workday displays the worktag values in the time block details. Use this option when you want to either: • Populate a worktag value but not enable anyone to edit it. • Ensure users can't enter a value for the worktag.

Reference: Time Tracking and Payroll Worktags

Conditions for passing worktag values from Time Tracking to Workday Payroll vary by worktag. Worktags must meet these requirements for Workday to pass them to Payroll:

Worktag	Required Conditions
Cost Center, *Region*, *Program*, *Fund*, *Business Unit*, *Grant*, *Project*, and custom organizations.	On the Costing tab of the Maintain Organization Types report, set the Use as Financial Worktag setting to *Yes* for the worktag. Associate custom organization worktags to a Custom Organization Worktag Dimension.
Custom worktags 1-15	On the Enable Custom Worktags task, select *Payroll* as the Worktag Usage. To include worktags in payroll journal entries, select both *Financial* and *Payroll*.
Job Profile and *Location*	Workday takes values provided by workers when entering time and passes them to Payroll, but: • Workday passes the *Job Profile* value to Payroll for informational purposes only; it doesn't affect payroll calculation. (The time entry calendar includes a separate Position field when a worker has multiple jobs. Workday passes the worker's position to Payroll with the other time block information.) • The *Location* worktag only affects tax withholdings if you've mapped tax authorities to the location.

Set Up Company Taxes by Location (USA)

Reference: Worktag Precedence in Time Entry

- Precedence Criteria on page 2712

- Project and Project Plan Task Criteria on page 2714
- Additional Considerations on page 2717

Precedence Criteria

When workers enter time, Workday prompts them to select 1 of these time types:

- Time off.
- Time entry code.
- Project or project plan task.

Then Workday evaluates these criteria in this order to determine worktag values for time entry:

Worktag Values Applied	Description	Examples
User-entered and imported worktag values	These worktag values always take precedence over all worktag defaulting rules for time entry: • Values entered by users. • Values imported from third-party clock integrations. • Values imported from the Workday Time Kiosk. When users enter a project, time entry code, or time off with a worktag type, they have the option to override any default worktag values.	When a worker enters a project with a worktag type, such as *Cost Center* or *Location*, Workday uses the value reported for the worktag type.
Project or project plan task if entered as the time type	When you enable related worktags for project time entries on the time entry template, Workday checks for worktag default values. First, Workday checks for worktag default values from derived worktag rules on the project hierarchy. When no derived worktag rules exist on the project hierarchy, Workday checks for related worktag values for a reported project. See Project and Project Plan Task Criteria on page 2714.	
Time entry code if entered as the time type	When workers enter a time entry code, Workday checks for worktag default values on the time entry code. You configure default worktag values on the Advanced tab of the Edit Time Entry Code task. Use the Worktag Entry Options grid to select an option for each worktag.	The time entry code, Worked Time, has a *Cost Center* worktag with the default value of Janitorial. When a worker enters time using this time entry code, Workday populates the *Cost Center* worktag of the time entry with the value Janitorial.

Worktag Values Applied	Description	Examples
	See Create Time Entry Codes on page 2657.	
Time off if entered as the time type	Workday populates time offs with worktag default values under any of these conditions: • Managers enter time offs in the Team Absence Calendar report in the Time and Scheduling Hub. • Managers enter time offs for workers through the absence calendar. • Workers enter time off as a time type during time entry. • Workers request time off through the absence calendar. • Administrators adjust time offs with the Maintain Accrual and Time Off Adjustments/Overrides task. See Steps: Set Up Worktags for Time Offs on page 2292.	You configure time off for a sick day to have a default *Region* worktag. When a worker enters time and selects *Sick (Days)* for the time type, Workday populates the time entry with the value of the *Region* worktag.
Location of shift-based check-in	Workday uses the shift scheduled nearest to a check-in time as the source for the location worktag value. To enable Workday to use a worker's scheduled shift location, you must use Workday Scheduling. On the time entry template, select these options: • Enable Workday Scheduling • Enable Shift-Based Check-In • Default Location	A worker checks in for their 9:00 AM shift at 9:10 AM. Workday displays the *Location* worktag for the shift scheduled for 9:00 AM.
Worker's organizational assignment	Workday checks the worker's organizational assignment for worktag values on the worker's primary position. When you configure worktags on the worker's time entry template, select Default from Organizational Assignment.	A worker has this organizational assignment: • *Cost Center* - A • *Location* - Chicago When the worker enters time, Workday populates the *Cost Center* and *Location* worktags with the default values

Worktag Values Applied	Description	Examples
		from the worker's organizational assignment.
Related worktags	When workers enter values for worktags that have related worktags, Workday populates the related worktags with their default values. Set related worktag defaults separately for each worktag type. Workday only populates related worktag values when the primary worktag in the related relationship is manually entered. See Configure Related Worktags.	A worker checks in for a shift in a particular store. They enter a value for the *Store* worktag that has a related *Department* worktag with a default value of Hardware. Workday adds the *Department* worktag with the value, Hardware, to the time entry.
Multiple related worktags	When entering multiple worktags that have the same related worktags but different values, Workday prioritizes the last worktag entered.	A *Cost Center* worktag type has a related *Region* worktag type with a default value of Region 1. A *Location* worktag type has a related *Region* worktag type with a default value of Region 2. A worker adds cost center details and then location information when entering time. The 2 different worktag types have different default values for the related *Region* worktag type, Because the worker entered the location information last, Workday populates the *Region* worktag type with the value, Region 2.

Project and Project Plan Task Criteria

Workday populates default worktag values from reported projects or project plan tasks in this order:

Worktag Values Applied	Description	Examples
Project hierarchy	When users don't enter a worktag, Workday checks that on the View Project Hierarchy report, the Worktag Rule Configuration tab has 1 of these: • Use All Worktags from Project enabled. See Configure Project Cost and Revenue in Project Hierarchies.	You configure project hierarchy worktag rules with Use All Worktags From Project enabled. Project 1 is part of Project Hierarchy A. Project 1 has a *Location* worktag type with New York as the default value. When workers enter time for Project 1, Workday adds the *Location* worktag value from Project 1, New York, to the time entry.

Worktag Values Applied	Description	Examples

	• A derived worktag rule for the employee or contingent worker in the Worktag Rules for Time section. You can configure the rule to derive worktag default values from:
	  • The worker organization assignment.
	  • The related worktag values for the project.
	
	You can configure a single derived worktag rule to populate some worktag default values from worker organization assignments and some from their projects.
	
	See Set Up Worktag Rules for Project Cost and Revenue.
		Project 2 is in Project Hierarchy B. You configure Project Hierarchy B with a derived worktag rule that has revenue following the worker. In the derived worktag rule, you configure the *Cost Center* worktag to populate from the worker's organizational assignment. A worker's cost center organizational assignment is 1000 - Office of CEO. When the worker enters time for Project 2, Workday populates the *Cost Center* worktag with the value from the worker's organizational assignment, 1000 - Office of CEO.
		
		See Example: Configure Worktag Rules for Project Cost and Revenue.

Project	When the project hierarchy of the reported project doesn't have a derived worktag rule for a given worktag type, then Workday checks for related worktag values on the project. See Create Projects.	A worker enters time for a project that has a related worktag default value for *Cost Center* defined on the project. Workday populates the *Cost Center* default worktag value into the time entry.

When you transfer project transactions during an open period, Workday resets any worktag values that workers overrode on the related time blocks back to their default values.

See Transfer Project Transactions and Manage Project Billing Transactions.

Third-Party Scheduling Criteria

Workday populates default worktag values based on shifts imported from third-party schedules in this order:

Worktag Values Applied	Description	Examples
Imported attribute	Workday checks the attributes of third-party scheduling events and applies the attribute values to the corresponding worktags.	You configure the *Channel* worktag with the value of Direct in the time entry code. The third-party scheduling event has a *Channel* attribute with the value of Partner. Workday automatically populates the *Channel* worktag with the value

<table>
<tr><th>Worktag Values Applied</th><th>Description</th><th>Examples</th></tr>
<tr><td></td><td></td><td>of Partner when the worker checks in.</td></tr>
<tr><td>Closest scheduled shift</td><td>Workday checks the worker's closest scheduled shift start time within a 12-hour timeframe for worktag values.</td><td>The third-party scheduling event has a 9:00 AM check-in. The closest scheduled shift begins at 8:30 AM and has a Cost Center worktag with the value of IT. Workday populates the Cost Center worktag of the check-in event with the value of IT.</td></tr>
<tr><td>Imported time entry code</td><td>Workday checks the time entry code of the third-party scheduling event and applies the values specified there.</td><td>The third-party scheduling event has a 9:00 AM check-in and time entry code of Worked Time. The closest scheduled shift has no worktags. Worked Time has a Division worktag with the value of North. Workday populates the Dvision worktag of the check-in event with the value of North.</td></tr>
<tr><td>Default time entry code</td><td>Workday uses the default time entry code from the worker's time entry template and applies the values specified there.</td><td>The third-party scheduling event has a 9:00 AM check-in and no time entry code. The closest scheduled shift has no worktags. The time entry code on the worker's time entry template has a Store worktag with the value of 601. Workday populates the Store worktag of the check-in event with the value of 601.</td></tr>
<tr><td>Time entry template</td><td>When both the scheduled shift and the time entry code don’t specify values for a worktag, Workday evaluates the time entry template configuration.
<table>
<tr><th>Select Use Time Tracking Worktag Defaults</th><th>Worktag Values Applied</th></tr>
<tr><td>No</td><td>None</td></tr>
<tr><td>Yes</td><td>Workday evaluates the time entry template configuration and applies worktag values to</td></tr>
</table>
</td><td>See Set Up Third-Party Scheduling on page 2695.</td></tr>
</table>

<table>
<tr><th>Worktag Values Applied</th><th>Description</th><th>Examples</th></tr>
<tr><td></td><td><table><tr><td>Select Use Time Tracking Worktag Defaults</td><td>Worktag Values Applied</td></tr><tr><td></td><td>the check-in event according to the worktag precedence rules.</td></tr></table></td><td></td></tr>
</table>

Additional Considerations

Worktag default values only populate into a time entry when the worktag type is available on a worker's time entry template. Worktag default values populate even when you configure the worktag to be:

- Hidden on the time entry code.
- Hidden from self-service on the time entry template.

Workers don't see hidden values on their time entries, but Workday still displays the hidden values in the time block details.

Related Information
Tasks
Configure Project Cost and Revenue in Project Hierarchies
Set Up Worktag Rules for Project Cost and Revenue

Time Requests

Steps: Set Up Time Requests

Context

You can set up the Time Requests experience for users by specifying how they can access time requests, which time request codes they can use, and what happens when they submit their time requests.

You can configure Time Requests to enable:

- Workers to request in advance the number of hours they want to work.
- Managers and administrators to view details of multiple workers' time requests, request time on behalf of workers, bulk load time requests, and review and approve time requests.
- Time request validations to prevent submission of invalid time requests.

With Time Requests, users can:

- View time request details for historical and future dates when they select a date range of up to 3 months.
- Request time for a duration ranging from a day up to a month.
- Select from multiple time request codes that they're eligible for when they request time.

Steps

1. (Optional) Access the Create Business Process Definition (Default Definition) task.

   Create the definition for the *Time Request* business process if it doesn't exist in your tenant.

   Security: These domains in the System functional area:

   - *Business Process Administration*
   - *Manage: Business Process Definitions*
2. Edit Business Process Security Policies.

   Add these security groups to these *Time Request* business process actions:

Action	Security Groups
Request Time	Employee as Self Manager
Delete Time Request	Employee as Self Manager
Edit Time Request	Employee as Self Manager
Request Time for My Team	Manager
Approve	Employee as Self Manager
Cancel	Employee as Self Manager
Reassign Tasks	Manager
Deny	Employee as Self Manager

3. Edit Business Processes.

   Add an *Approval* step to the *Time Request* business process.
4. Edit Domain Security Policies.

   Configure security for these domains in the Time Tracking functional area:

   - *Self-Service: My Time Requests*
   - *Worker Data: My Team's Time Requests*
   - *Worker Data: Time Tracking: My Team's Time Worklet*
5. Set Up Worklets.
   a) Add Time Requests to the Time worklet.
   b) Add My Team's Time Requests to the Team Time worklet.
6. Create Time Request Codes on page 2719.

   Create 1 or more time request codes based on your organization's requirements.
7. (Optional) For users to bulk load time requests using the Put Time Requests EIB, configure security for the *Process: Import Time Requests* domain in the Time Tracking functional area.
8. (Optional) Enable mass time requests.
   a) Access the Edit Tenant Setup - HCM task.
   b) In the Time Tracking section, select the Enable Mass Time Requests check box.

Result

Time Requests is available for users as an option from either the Time or Team Time worklet, search, and the Time and Absence related actions menu. Managers can also view and approve time requests for their teams, and bulk load time requests using the Put Time Requests EIB.

Next Steps

For reporting on time requests, you can use report fields on different business objects, depending on your reporting requirements. See Concept: Time Requests on page 2723.

Steps: Set Up Worktags for Time Entry on page 2708

Examples

2025R2 Feature Release Note: Mass Time Requests

2025R1 Feature Release Note: Rename Request Overtime to Time Requests

Create Time Request Codes

Prerequisites

Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

Time request codes describe the types of time that workers can request, such as overtime. They display in the Time Request Code prompt when workers request time.

Time code groups control who can use a set of time request codes. Workers can use the time request codes in their time code groups.

Create 1 or more time request codes based on your organization's requirements. Example: You can create a time request code named Weekend Overtime, which workers can select when they request to work overtime on the weekend.

Steps

1. Access the Create Time Request Code task.

   As you complete the task, consider:

Option	Description
Entry Method	Select the time entry method where the time request code is available for workers. The available methods are: • *Hours Only* • *In/Out Only* • Both *Hours Only* and *In/Out Only*
Calculation Tags	Select the calculation tags that you use to track time. Note: You can select non-overtime tags (such as *Time in Lieu*), to enable workers to request a different type of time.

Option	Description
Increment For Hours Entry	Select the allowable increment when workers enter time. The available increments are: • *0.01 Hours* • *0.05 Hours* • *0.1 Hours* • *0.25 Hours* • *0.5 Hours* • *1 Hour* Available only if you select either of these entry methods: • *Hours Only* • Both *Hours Only* and *In/Out Only*
Rounding Option	Select a rounding option. If a rounding option exists, Workday rounds each In and Out time to the nearest rounding marker. The breakpoint determines whether the time rounds up or down for calculation purposes. Workday then calculates the duration between the rounded In and Out times to 6 decimal places. The available rounding options are: • *No Rounding* • *3 Minute Marker (1 minute breakpoint)* • *5 Minute Marker (2 minute breakpoint)* • *6 Minute Marker (2 minute breakpoint)* • *15 Minute Marker (7 minute breakpoint)* • *30 Minute Marker (15 minute breakpoint)* Available only if you select either of these entry methods: • *In/Out Only* • Both *Hours Only* and *In/Out Only*

2. (Optional) On the General tab, select from Workday-delivered or custom worktags. You can also select a default worktag value that workers enter with their time request. Project worktags aren't currently supported.
3. On the Groups tab, select 1 or more time code groups to associate with the time request code.

4. On the Validations tab, consider:
    a) The Enable time requests that cross the week breaker check box that allows workers to enter time requests which span across their defined work week.
    b) The Require Comment check box that requires workers to enter a value in the Comment field when they submit the time request.
    c) The Enable single in/out requests check box that restricts workers to only be able to submit a single request with start and end times. If you don't enable this option, workers can submit a single request with the same time frame for multiple days.
    d) Enabling any time request validations that you want to use. The Workday-delivered validation types prevent workers from submitting invalid time requests. For each validation type, you can set a severity level and customize the default error message.

If you don't configure a custom validation message, the default error message is displayed.

Validation Type	Description	Default Error Message

Allowed Days after Current Date	The number of days after the current date that workers are allowed to submit a time request.
	Examples:
	• When you enter *0*, workers can either enter a time request for:
	  • Today only.
	  • A date range that begins in the past and ends today.
	• Today is March 20. When you enter *2*, workers can request time that starts on March 23.
		Enter a time request that is within the allowable time range for future-dated requests.

Allowed Days before Current Date	The number of days prior to the current date that workers are allowed to submit a time request.
	Examples:
	• When you enter *0*, workers can either enter a time request for:
	  • Today only.
	  • A date range that begins today and extends into the future.
	• Today is March 23. When you enter *2*, workers can request time for any date before March 21.
		Enter a time request that is within the allowable time range for past requests.

Validation Type	Description	Default Error Message
Allowed Days of the Week	The days that workers are allowed to submit a time request. Example: When you select *Monday*, *Tuesday*, *Wednesday*, *Thursday*, and *Friday*, workers can't request time on Saturday or Sunday.	This time request code is not allowed on this day. Select a different code.
Consecutive Day Requests	The number of consecutive days that workers are allowed to request time. Example: When you enter *10*, workers can request 10 days at a time. Note: The validation: • Only checks the start and end dates of the request, and doesn't check against the number of hours in the request. • Doesn't check against other existing time requests. Example: A submitted request exists for March 1-5. An additional request is submitted for March 6-12. No validation message is displayed, and the worker can submit the time request.	Enter a time request that is within the allowed limit for consecutive days.
Maximum Daily Limit for Time Requests	The total number of hours for each day that workers request time. Applies to time request codes that allow hours only entry method. Examples: When you enter *3*, and workers submit a time request that is for: • 1 day, they can submit a maximum of 3 hours. • 3 days, they can submit a maximum of 9 hours over the 3 days. Example: They can request 4 hours on Day 1, 3 hours on Day 2, and 2 hours on Day 3.	Enter a number of hours that doesn't exceed the daily limit.

Validation Type	Description	Default Error Message
	Note: The validation only takes into consideration submitted and approved time requests.	
Number of Days Allowed for Deletion	The number of days before today that you allow workers to delete their time requests. The value you enter determines how far back they can delete historical time requests. Examples: When you enter: • *0*, workers can't delete any requests prior to today. • *30*, workers can delete time requests up to a month in the past.	You can't delete time requests in this time frame.
Required Advance Notice before Time Request	The number of days prior to the start date of the time request that workers must submit the request. Example: Today is March 20. When you enter *5*, workers can only request time that starts on or after March 26.	Submit a time request that is within the advance notice timeframe.

Result

- Workers who are eligible for the new time request code can select it when they request time.
- You can identify the time request code that's associated with the time request:
  - When you access either the My Team's Time Requests or Time Requests report.
  - When you view the details of the time block on the worker's time entry calendar.

Related Information

Reference

Reference: Increments and Rounding for Time Entry on page 2671

Examples

2025R1 Feature Release Note: Rename Request Overtime to Time Requests

Concept: Time Requests

Time requests enable workers to request to work time that requires preapproval. Managers and administrators can:

- Request that workers be available to work time in advance.
- Submit a single time request to cover multiple workers. Example: When an entire team will need to stay late to attend a workshop.
- Bulk load time requests into Workday using the Put Time Requests EIB.
- Set up time request validations to prevent users from submitting invalid time requests.
- Review and approve time requests for multiple workers.

When users access the Time Requests report, they can enter a date range that is less than or equal to 3 months, allowing them to view details of time requests for historical and future dates. They can access the report from the:

- Actions menu on the time entry calendar.
- Team Time worklet.
- Time worklet.
- Time and Absence related actions of their worker profile.

From the New Request option, users can request time from a day up to a month, and select from multiple time request codes for which they're eligible.

For hours only requests of a long duration, we display time requests on the time entry calendar:

- On the start date of the request, the end date of the request, and every 7 days in between, in a weekly calendar view.
- As 1 continuous band for the duration of the request in a monthly calendar view.

Note: Once the time request is approved, the worker must enter the actual time worked in order for Workday to calculate their hours and pass them to Payroll.

Example

At your company, workers who attend career-related seminars after their scheduled shift are eligible for overtime pay for the duration of the seminar. Jerry submits an overtime request for his manager to preapprove 2 hours of overtime for a seminar he wants to attend next Tuesday. Jerry's manager receives the request and checks what her team has already requested to ensure Jerry's request stays within the team's budget requirements. After reviewing, she approves the request.

Matching Time Requests to Time Blocks

Time requests are matched to time blocks based on time calculation tags. Workday matches the time calculation tags on the time request code to those on the time block. Worktag values don't impact how Workday matches time requests to time blocks.

In/out time requests can't overlap one another. Also, hours only time requests can't overlap one another. However, in/out time requests may overlap with hours only time requests. When matching time requests to time blocks, in/out time requests are evaluated first, then hours only time requests. Hours only time requests are matched if the calendar date of the time block falls within the start and end dates of the time request.

A time block can only be matched to 1 time request. In the event that a time block overlaps with more than 1 in/out time request, it is matched to the earliest request only. Example: A worker has a time block for 2025-01-13 from 5:00 PM - 9:00 PM with the Overtime calculation tag. A worker submits 2 time requests using the Weekday Overtime time request code that has the Overtime time calculation tag:

- Time Request 1 on 2025-01-13 from 5:00 PM - 7:00 PM.
- Time Request 2 on 2025-01-13 from 7:00 PM - 8:00 PM.

The time block is only matched to Time Request 1.

Reporting

You can use these standard reports to view time requests, request time, and approve time requests:

- My Team's Time Requests
- Review and Approve Time Requests
- Time Requests

Based on your reporting requirements, you can use report fields on these business objects to report on time requests:

Business Object	Considerations
Requested and Worked Time Pairing	You can report on the differences between time requests and time worked, and time requests that cross the week breaker. Time blocks that share a time calculation tag with a time request code, but aren't matched to a time request, are still pulled into reports on this business object.
Time Day	You can report on time requests that are 1 day or less in duration. Note: The All Time Requests for a Day report field doesn't return time requests that span multiple days.
Time Month	You can report on these details for time requests that occur during a specific calendar month: • Monthly time request pairings. • Requested time for a month. • Time requests for a month. • Worked hours against a time request for a month. • Worked time against a time request for a month.
Time Request Code	You can report on details of the time request.
Time Request Code Worktag Joiner	You can identify the worktag that's associated with the time request.
Time Request Event	You can identify the time request block for the time request event and view details of the time request event.
Time Week	You can report on daily or multi-day requests that are fully retained within the week, and time requests that cross the day breaker.

Workday-Created Time Code Groups

Time request codes (formerly overtime request codes) are no longer linked to a time entry template, but to 1 or more time code groups. When Workday:

- Finds a time entry template with an overtime request code that uses the same time tracking eligibility rule as a time code group, Workday moves the overtime request code to that time code group for you.
- Is unable to match the time tracking eligibility rule for the time entry template and time code group, Workday creates a new time code group with the overtime request code. Workday uses this naming convention for the time code groups: [Overtime Request Code name] for [Eligibility Rule Name] - Workday created. To find the new time code group, run the All Time Code Groups or View Time Code Group report. You can keep and rename the Workday-created time code group, or you can move the time request code to an existing time code group and delete the one that Workday created.

Concepts

Concept: Put Time Requests EIB

Examples

2025R2 Feature Release Note: Mass Time Requests

2025R1 Feature Release Note: Rename Request Overtime to Time Requests

FAQ: Time Requests

Are workers paid based on time requests?

No. Time requests are different from reported time. Although time requests include time calculation tags, they aren't counted towards worked time. Workers need to enter time in line with the time they've requested in order to be paid.

Can I configure business process validations for time requests?

Workday doesn't recommend using business process validations for time requests. Business process validations can't be surfaced when the user enters a time request from the Time Requests or My Team’s Time Request reports. Business process validations that are triggered will show in My Tasks for the user.

Can users enter in/out requests for multiple days?

With this release, we support multiple day in/out requests. This allows users to easily create multiple time requests from one submission if they know they need to request the same time for multiple consecutive days.

For single day in/out requests, the Start Date needs to be the same as the End Date, even when crossing midnight.

These examples show the number of time requests created when a worker submits a single time request with the same Start and End Date and with different Start and End Dates:

Start Date	End Date	In Time	Out Time	Result
2025-03-17	2025-03-17	9:00 PM	2:00 AM	1 time request is created

Start Date	End Date	In Time	Out Time	Result
2025-03-17	2025-03-18	9:00 PM	2:00 AM	2 time requests are created

If you want to only allow users to submit a single request with start and end times, select the Enable single in/out requests check box on the time request code.

Can workers view their time requests on the time entry calendar?

Workers can view time requests on the classic calendar. If their time entry calendar is configured to show only the period calendar, they can view their time requests on the My Time Requests report. See Set Up Time Entry Calendars on page 2679.

How do I configure the Allowed Days after Current Date validation when time requests cross midnight?

The Allowed Days after Current Date validation is used to restrict the number of the days into the future for which the user can enter time requests. If you enter a value of *0*, users can only create time requests for today. Because time requests use calendar date, time requests that cross midnight are considered as next-day requests.

If you enter *0* for the Allowed Days after Current Date validation, and a worker enters a time request from 9:00 PM to 2:00 AM, the validation will fire. For this use case, set the value for the Allowed days after Current Date validation to *1*.

What's the purpose of the time calculation tag on a time request?

The time calculation tag on the time request is used to match the time request to the worked time when it is reported. You can track the variances in time requested and time reported for planning purposes. Once a time request is matched to a time block, the Calculated columns on the Time Requests and My Team’s Time Requests reports will display those details. You can also use the Requested and Worked Time Pairing business object to report on time requests and compare them to time worked.

Who can access the My Team’s Time Requests report?

The My Team’s Time Requests report is a manager report that allows managers to view the time requests for all of their direct reports. If another user needs to see the time requests, Workday recommends creating a custom report.

Why are there no data displayed in the Calculated columns on the Time Requests and My Team’s Time Requests reports?

The Calculated columns are blank because either:

- There isn’t a time block that matches the time request. View the Matching Time Requests to Time Blocks section in Concept: Time Requests on page 2723.

	• The time request isn't approved. Matching only occurs for time requests are in an Approved state.
Why are time requests not displayed in weekly totals?	Although time requests have time calculation tags, they aren't counted in weekly totals since time requests aren't the worker’s time that's passed to payroll.

Time Kiosk

Steps: Set Up Workday Time Kiosk

Context

Note: The solutions described in this section are not part of the Workday Service. See Legal Notice for details.

You can install the Workday Time Kiosk app on an iPad or Android tablet so that workers can check in and out on a common device. Time Tracking data flows from the tablet directly into Workday Time Tracking.

Workday Time Kiosk integration requires an integration system user (ISU) and integration system security group (ISSG).

Steps

1. Create Integration System User for Time Kiosk on page 2728.
2. Access the View Domain report.
    a) Select the *Process: Time Clock Event REST API’s* domain from the Domain prompt.
    b) Click OK.
    c) From the related actions menu of Domain Security Policy, select Domain Security Policy > Enable.

    Security: *Security Administration* domain in the System functional area.
3. Create Integration System Security Group for Time Kiosk on page 2729.
4. Set Up the Workday Time Kiosk App on page 2730.
5. (Optional) Access the Edit Tenant Setup - HCM task.

    When you want to display location next to position for multiposition workers, select *Location* from the Additional Info on Position Display prompt.

    Security: *Setup Administrator* domain in the System functional area.
6. (Optional) Steps: Set Up End of Shift Time Attestations on page 2806.

Next Steps

Managers and administrators can use the Maintain Invalid Time Clock Events for Workers task to correct or ignore invalid time clock events for the manager's direct reports.

Related Information

Examples

2025R1 Feature Release Note: Workday Time Kiosk

Workday Time Kiosk App

Create Integration System User for Time Kiosk

Prerequisites

Security: *Integration Security* domain in the Integration functional area.

Context

You can create an integration system user (ISU) for the Workday Time Kiosk, enabling you to assign the ISU to a security group with permissions to access the required integrations.

Steps

1. Access the Create Integration System User task.
2. Complete the task:

Option	Description
User Name	Enter *ISU_WD_Time_Clock*. If you enter a different name, your ISU won't configure properly.
New Password New Password Verify	Set a password. You won't need this password again.
Session Timeout Minutes	Keep the value at zero to prevent the integration system user session from expiring. Expired sessions can cause the integration to stop before it successfully completes.
Do Not Allow UI Sessions	Select the check box.

3. Click OK and Done.

Next Steps

Create an integration system security group for the Workday Time Kiosk.

Create Integration System Security Group for Time Kiosk

Prerequisites

- Create Integration System User for Time Kiosk on page 2728.
- Security: These domains in the System functional area:
  - *Security Activation*
  - *Security Configuration*

Context

You can create an integration system security group (ISSG) for the Workday Time Kiosk. You can then assign the integration system user (ISU) to the ISSG so that your ISU has permissions to access the required integrations.

Steps

1. Access the Create Security Group task.
2. Complete the task:

Option	Description
Type of Tenanted Security Group	Select *Integration System Security Group (Unconstrained)*.
Name	We recommend that you choose a name that identifies or references the app. Example: Time Kiosk Security Group.

3. Click OK.
4. From the Integration System Users prompt, select *ISU_WD_Time_Clock*.
5. Click OK.
6. From the related actions menu of the new ISSG, select Security Group > Maintain Domain Permission for Security Group.
7. Complete the task:

Option	Description
Domain Security Policies permitting Modify access	Select *Process: Time Clock Event REST API's*.
Domain Security Policies permitting View access	Select: • *Worker Data: All Positions* • *Worker Data: Current Staffing Information* • *Worker Data: Public Worker Reports* • *Worker Data: Time Calendar* • *Worker Data: Time Tracking*
Domain Security Policies permitting Put access	Select *Process: Time Clock Integration*.

8. Click OK.
9. Ensure Workday displays the *Process: Time Clock Event REST API's* domain in the Report/Task Permissions section with Modify access.
10. Click Done.
11. (Optional) Edit Domain Security Policies.

    You can configure the security policy when Workday doesn't display the domain with Modify access.

    a) From the Functional Area prompt, select *Time Tracking*.
    b) Select the *Process: Time Clock Event REST API's* domain.
    c) Click Edit Permissions.
    d) Enable Modify access for the ISSG.
12. Activate Pending Security Policy Changes.

Result

Workday assigns the SU_WD_Time_Clock ISU to the new ISSG.

Next Steps

Set up the Workday Time Kiosk app.

Related Information

Tasks

Create Integration System Security Groups

Set Up the Workday Time Kiosk App

Prerequisites

- Download 1 of these:
    - Workday Time Kiosk app from the App Store onto your iPad. This app isn't searchable by name and is accessible only through the direct link.
    - Workday Time Kiosk app from Google Play onto your Android tablet.
- Security: *Security Administration* domain in the System functional area.

Context

You can set up the Workday Time Kiosk app on an iPad or Android tablet and register it as an API client so that recorded time flows to Workday Time Tracking.

Steps

1. On the tablet, launch the app, and select Get Started.
2. Select Copy Certificate.

   The certificate is not confidential.
3. Share the certificate so that you can access it from Workday. Example: Send it in an email.
4. In Workday, access the Register API Client task.
5. Complete the task:

Option	Description
Client Name	We recommend that you enter a name that's specific to the tablet you're setting up.
Client Grant Type	Select *Jwt Bearer Grant*.
x509 Certificate	Select *Create x509 Public Key*. We recommend that you enter a name that's specific to the tablet you're setting up. In the Certificate field, paste the certificate that you copied in the app and shared.
Integration System User	Enter *ISU_WD_Time_Clock*.
Access Token Type	Select *Bearer*.
Scope (Functional Areas)	Select: • *Time Tracking* • *Staffing*

6. Click OK.
7. From the Client ID field, copy the ID.
8. Share the ID so that you can access it from the Time Kiosk app. Example: Send it in an email.
9. Click Done.
10. On the tablet, access the Workday Time Kiosk app.

    If the Workday Time Kiosk app is closed, relaunch the app and select I've Already Done This when it asks you to copy the certificate.

    a) As you enter your organization information, consider that the Organization ID is your tenant name and the Web Address is the URL for your tenant.
    b) Enter the client ID that you copied on the Register API Client task.
    c) Select *Submit Client ID*.
11. (Optional) Configure worktags that you want to associate with all time tracking events entered on the Time Kiosk app.

    The app supports these worktags:

    - *Cost Center*
    - *Location*

    If you don't configure these worktags on the tablet, the worktags will populate with the values associated with the time type the worker selects. The time type can be a time entry code, project, or project plan task. The worktag values you configure on the Time Kiosk take precedence over worktag values that populate from the time type.

a) Access 1 of these reports in Workday:
    - View Cost Center
    - View Location
b) Select the cost center or location.
c) Click OK.
d) From the related actions menu of the cost center or location, select Integration IDs > View IDs.
e) Copy the Workday ID.
f) Share the ID so that you can access it from the Time Kiosk app. Example: Send it in an email.
g) On the tablet, enter the Workday ID in the relevant field, Cost Center or Location.

Change Time Kiosk Settings

Prerequisites

Set up the Workday Time Kiosk app.

Context

On the tablet, you can update Workday Time Kiosk settings, such as:

- Employee ID type.
- Language.
- Time zone.
- *Location* and *Cost Center* worktag values.

Steps

1. Sign in to the Workday Time Kiosk.
2. Access the Settings page.

   Use your organization ID name as the password.
3. Update the settings.

   To use alphanumeric employee IDs, toggle off Numeric Employee ID.

Concept: Time Kiosk

Time Tracking customers can set up the Workday Time Kiosk so that workers can check in and out at a central location without needing to use a personal mobile device. This simplifies time recording when:

- You want a backup time recording method.
- Your workers don't all own mobile devices.
- Your workers don't have the Workday app.

To set up the Time Kiosk, you must install the Workday Time Kiosk app on a tablet that:

- Has an internet connection.
- Runs a supported version of iOS or Android. See Concept: Mobile Devices and Features.

The Workday Time Kiosk works even when offline so that workers can record their time during local network or Workday scheduled downtime. Data stored on the kiosk when it's offline is automatically transmitted to your tenant when you reconnect the app to the internet. The Time Kiosk will store locally encrypted employee data on the tablet for 30 days. To check in during downtime or when the Time Kiosk is offline, a worker must have checked into the device within the previous 30 days while the device was online. Reconnect the app to the internet as frequently as possible to ensure data stored during offline mode is transmitted to your tenant and to limit potential loss of the data.

Workers enter their employee IDs to check in and out on the app. Check-ins and check-outs flow to Workday as time clock events. The Time Kiosk supports both numeric and alphanumeric IDs. It doesn't support facial recognition, biometrics, or RFID.

The Workday Time Kiosk supports these languages:

- English (United States).
- Chinese (Simplified).
- Chinese (Traditional).
- Dutch.
- French (Canada).
- French (France).
- German.
- Italian.
- Japanese.
- Korean.
- Portuguese (Brazil).
- Spanish.

The Workday Time Kiosk also supports:

- Check in.
- Check out.
- Check out for break.
- Check out for meal.
- Early check-in restrictions.
- Multiposition workers.
- Time attestations.
- Time entry template default values for:
    - Time entry codes.
    - Worktags.

2025R2 Feature Release Note: Time Attestations on the Workday Time Kiosk

FAQ: Time Kiosk

Can employees download the Kiosk to their own devices? What about mobile phones?	We designed the Time Kiosk app to be used on tablets that run iOS or Android. We don't recommend using the application on personal devices.
Can the Time Kiosk support a third-party badge reader?	Some customers use badge scanners. See Workday Community: Barcode Scanner for Workday Time Kiosk
Does the Time Kiosk support facial recognition?	Workers log in using only their employee IDs. Clock partners can support facial recognition on their devices.
Is the Time Kiosk a separate app from the Workday app?	Yes, the Workday Time Kiosk app is a separate app from the Workday Mobile app. The standard Workday Mobile app is for end users and is available for anyone to download . The Time Kiosk

	app is only available to Time Tracking customers through a download link.
Is the worker PIN used to capture time on the Kiosk stored on the worker profile in Workday?	Workers use their Workday employee ID to log in and capture time.
Is there an add-on cost to use the Time Kiosk?	The Workday Time Kiosk is included with Workday Time Tracking at no additional cost.

Time Calculations

Steps: Set Up Calculations for Time Tracking

Context

Create calculations for overtime, premiums, and other pay policies to execute when workers enter time.

Steps

1. Create Time Calculation Tags on page 2735.

   Map the tags to payroll earnings to identify how to pay for time.
2. Create time calculations.

   See:

   - Create Accumulated Overtime Calculations.
   - Create Consecutive Day Calculations on page 2736.
   - Create Flextime Calculations.
   - Create Minimum Daily Hours Calculations on page 2739.
   - Create Minimum Rest Calculations on page 2740.
   - Create Minimum Weekly Hours Calculations on page 2742.
   - Create Override Rate Calculations on page 2744.
   - Create Predictive Scheduling Calculations.
   - Create Schedule Deviation Calculations on page 2745.
   - Create Shift Differential Calculations on page 2746.
   - Create Standard Overtime Calculations on page 2748.
   - Create Time Block Conditional Calculations on page 2751.
   - Set Up Time Block Create Calculations on page 2754.
   - Create Time Calculations for Statutory Holidays (CAN) on page 2757.
3. Assign Time Calculation Priorities on page 2758.
4. Create Time Calculation Groups on page 2760.

   Assign time calculations to time calculation groups.
5. Create Work Schedule Calendars.

   For biweekly calculations, specify a biweekly calculation start date on the work schedule calendars to which the calculations apply. The biweekly calculation start date determines the biweekly periods for biweekly time calculations.
6. (Optional) Configure working time or overtime restrictions based on your company or country policies.

   See Steps: Set Up the Time Accumulator Framework on page 2767.

Next Steps

- (Optional) Validate your changes by using the View Worker's Time Eligibility report.

- (Optional) Use the Time Calculation Debugger report to troubleshoot a worker's time calculations over a period.

2024R1 What's New Post: Effective Date Support in Time Tracking

Create Time Calculation Tags

Prerequisites

Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

Time calculation tags identify time blocks and separate reported time into different types of calculated time. Example: Regular, overtime, and double time.

Create time calculation tags that you can use to:

- Perform calculations on time blocks.
- Map to Payroll earnings to identify how to pay time.
- Display time and time off totals on the time entry calendar.
- Include calculated time blocks in time off accrual calculations to accommodate compensatory time off instead of overtime.

You can also assign calculation tags to time offs set up in Workday Absence Management so that Workday can tag time off for use in calculations. However, calculation tags only apply to time off while calculations are actually running. Workday doesn't store calculation tags on the time off once calculation processing is complete.

Steps

1. Access the Maintain Time Calculation Tags task.
2. As you complete the task, consider:

Option	Description
Name	Visible to workers on the time entry calendar unless you hide it. Examples: *Regular*, *Overtime*, *Sunday*, *Holiday*.

Temporary	Select if you don't want to store tags with calculated time. Typically, you store tags only when you:
	• Map tags to earnings in Workday Payroll.
	• Use tags in:
	    • Absence Management.
	    • Third-party applications.
	    • Time accumulators.
	Example: You need a *Sunday* tag to identify time blocks for overtime calculations but don't

Option	Description
	need to store the *Sunday* tag with calculated time blocks.
Hide from Calendar View	Prevents the tag from appearing when viewing time block details through the time entry calendar. Consider hiding tags that don't make sense to most users like tags used only for totals or payroll. The tag is always visible when adjusting time blocks.
Usage	Click to view details of tag usage.

Result

The time calculation tags are available for use when you create:

- Time entry codes.
- Time calculations.
- Earnings.
- Time offs.
- Accruals.

Next Steps

- If necessary, use the Delete Time Calculation Tag task to delete tags. You can't delete tags that you use in calculated time blocks or tags that map to time entry codes or accruals.
- Give users access to the View Time Calculation Tags report when you want them to be able to review, but not modify, time calculation tag usage and visibility.

Concepts

Concept: Time Calculation Tags on page 2798

Concept: Time Calculations on page 2794

Concept: Time Tracking and Absence Management on page 2834

Steps: Set Up Payroll to Pay Time on page 2831

Tasks

Steps: Set Up Time Offs on page 2278

Create Consecutive Day Calculations

Prerequisites

- Create Time Calculation Tags on page 2735.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

Create calculations based on consecutive days of work. Example: You can set up a calculation to pay workers overtime for all hours worked on or after the sixth consecutive day of work.

Steps

1. Access the Create Time Calculation task.
2. For Calculation Type, select *Consecutive Day Calculation*.

3. As you complete the Criteria section, consider:

Option	Description
Allow Rolling Consecutive Day	Enables Workday to calculate consecutive days worked across work schedule calendar weeks. When you select this option, workers who begin work in the middle of their work schedule week are eligible for consecutive day calculations. Example: Abbie has a work schedule calendar that begins Monday 4/16, but she works 7 consecutive days starting Wednesday 4/18 through Tuesday 4/24. If you select this option, Abbie's time on Tuesday 4/24 is tagged with the seventh consecutive day calculation tag, even though she worked across 2 work schedule calendar weeks.
Reset After Consecutive Day Found	Select to enable Workday to reset the consecutive day counter, rather than tagging each subsequent worked day with the consecutive day calculation tag. Example: After 7 consecutive days, the count of consecutive days returns to 1, so time calculation tags don't apply on the eighth through 13th consecutive days. On the 14th consecutive day, Workday again applies the consecutive day calculation tag.
Consecutive Day Number (up to 9)	Enter the number of the consecutive day on which to begin the calculation.

4. Select 1 or more calculation tags that identify the time blocks that are subject to the calculation.
   - If you select more than 1 tag in a row, time blocks must include all tags in that row in this calculation.
   - If you select tags in separate rows, time blocks must include all tags specified in at least 1 row in this calculation.
5. In the Results section, select the time calculation tags to add to or remove from the calculated time blocks.

   If you don't select Reset After Consecutive Day Found, Workday adds or removes the time calculation tags for each subsequent workday after the consecutive day calculation initially triggers. Example: If your calculation includes the Regular tag, but removes it after applying the Overtime tag, the subsequent days also remove the Regular time calculation tag. If you rerun time calculations, Workday won't recognize those blocks as Regular time, but will treat them as Overtime.

   If you selected Allow Rolling Consecutive Day, and a worker's consecutive days fall within more than 1 week, running calculations on the first week might remove the calculation tags that Workday uses to detect consecutive days. When the worker later enters time in the next week, the calculation won't include the untagged consecutive days from the first week in the total. Prevent this with 1 of these configurations:

   - Add the overtime tag that's in the Add Tags field to the Include Calculation Tags grid.
   - In the Remove Tags field, don't select the time calculation tags you added to the Include Calculation Tags grid.

   Example: If your calculation includes the Regular tag, you must either also include the Overtime tag or, in the Results section, add the Overtime tag and don't remove the Regular tag.

6. In the Time Day Based On field, consider:

Option	Description
Calculated Date	Select to tag calculated time blocks according to the day breaker option.
Shift Date	Select to tag calculated time blocks with the shift date according to the Group Time Blocks for Shift Based on option on the time entry template.

7. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Example

Workers receive overtime for all hours worked on or after the sixth consecutive day. To define a consecutive day calculation that applies this rule:

1. Specify the Criteria.

Field	Value
Allow Rolling Consecutive Day	Selected.
Reset After Consecutive Day Found	Selected.
Consecutive Day Number (up to 9)	*6*
Time Calculation Tags	*Regular*

2. Define the Results.

Field	Value
Add Tags	*Overtime*
Remove Tags	*Regular*

Next Steps

Assign time calculation priorities.

Example: Calculate Double Time on Seventh Consecutive Day on page 2778

Create Flextime Calculations

Prerequisites

- Create Time Calculation Tags on page 2735.
- Configure flextime bands on work schedule calendars. See Concept: Flextime Bands on page 2799.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

In a workplace with both mandatory and flexible hours, tag hours to track when employees are working.

Steps

1. Access the Create Time Calculation task.
2. For Calculation Type, select *Flextime Calculation*.
3. In the Include Calculation Tags section, add time calculation tags to apply to the hours in flextime bands.
4. In the Results section, add a row for each flextime band category you configured in the work schedule calendar, and select calculation tags to add or remove.

   Workday tags all flextime bands in a category with the same calculation tags.
5. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Next Steps

Assign time calculation priorities.

2022R2 What's New Post: Flexible Time Bands for Time Calculations

Tasks

Create Work Schedule Calendars

Create Minimum Daily Hours Calculations

Prerequisites

- Create Time Calculation Tags on page 2735.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

Create minimum daily hours calculations when workers who enter time are guaranteed a minimum number of hours in a day. When a worker enters less than the minimum number of hours, the calculation creates a new calculated time block that makes up the difference.

Steps

1. Access the Create Time Calculation task.
2. From the Calculation Type prompt, select *Minimum Daily Hours Calculation*.
3. In the Criteria section, enter the minimum number of hours per day as a fixed value, or select a calculated field to use as the minimum.

   When using a calculated field, select from any numeric field on the Worker or Time Day business object.
4. Select 1 or more calculation tags that identify the time blocks that are subject to the calculation.

   - When you select more than 1 tag in a row, time blocks must have all tags in that row to be included in this calculation.
   - When you select tags in separate rows, time blocks must have all tags specified in at least 1 row to be included in this calculation.

   The calculation only applies when at least one matching time block exists for the day.

5. In the Results section, select additional time calculation tags to add to the calculated time blocks.

   By default, Workday always copies calculation tags from the existing time block to the new calculated time block, unless you remove them.
6. In the Time Day Based On field select:
   - Calculated Date to tag calculated time blocks according to the day breaker option.
   - Shift Date to tag calculated time blocks with the shift date according to the Group Time Blocks for Shift Based on option on the time entry template.
7. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Result

Workday copies worktags from existing time blocks to the new calculated time blocks that are generated by minimum daily hours calculations.

Example

Workers who are called in to work are guaranteed a minimum of 4 hours of pay for the day. To define a minimum hours calculation that applies this rule:

1. Create a time entry code that workers use to report the time they're called out. Assign it a default calculation tag of *Call Out*.
2. Access the Create Time Calculation task.
3. From the Calculation Type prompt, select *Minimum Daily Hours Calculation*.
4. Specify the Criteria:

Field	Value
Minimum Hours	*4*
Time Calculation Tags	*Call Out*

5. In the Results section, from the Add Tags prompt, select *Call Out Guaranteed*.

Aaron is called in to work on his day off and he enters 3 hours of *Call Out* time. To meet the 4-hour minimum requirement, Workday generates 2 calculated time blocks*:*

- A 3-hour time block tagged *Call Out*.
- A 1-hour time block, tagged *Call Out Guaranteed*, to make up the difference.

Next Steps

Assign time calculation priorities.

Concepts

Concept: Effective Dating for Time Calculations on page 2796
Concept: Time Calculations on page 2794

Create Minimum Rest Calculations

Prerequisites

- Create predictive scheduling configurations.
- Create a time calculation tag to use in minimum rest calculations.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

A minimum rest calculation tags time blocks worked during a specified rest period. You can use minimum rest calculations to handle laws that require you to pay a premium if workers lack sufficient rest time between their shifts.

Minimum rest calculations don't account for time off blocks. Example: A worker is scheduled for a 12:00-8:00 PM shift. They work from 12:00-5:00 PM but then take 5:00-8:00 PM as sick time. The minimum rest calculation starts counting hours after the worker's 5:00 PM check-out.

Steps

1. Access the Create Time Calculation task.
2. For Calculation Type, select *Minimum Rest Calculation*.
3. As you complete the Criteria section, consider:

Option	Description
Predictive Scheduling Configuration	Select an existing predictive scheduling configuration or create a new one. After you select a configuration, Workday displays the Allowed Out Types and Minimum Rest Hours After Last Out fields. Workday generates these fields from the predictive scheduling configuration, and you can only edit them on the Edit Predictive Scheduling Configuration task.
Minimum Rest Grace Period after Last Out	Define a grace period that begins after a worker's out. During the grace period, Workday won't apply the minimum rest time calculation tag to time blocks. You can use the grace period to ensure that workers who check out for a short break don't qualify for the minimum rest premium. Example: You set a grace period of 2 hours. A worker checks out of work for a 1-hour break using the Out type you defined on the predictive scheduling configuration. After the break, the worker checks back in. Workday doesn't tag these time blocks with the minimum rest calculation tag because the worker's 1-hour break was within the 2-hour grace period.

4. In the Results section, select the time calculation tags to add to or remove from the eligible time blocks.
5. In the Advanced section, in the Do Not Modify field, select time calculation tags that you don't want Workday to modify.
6. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Example

Workers must take a 1 hour meal break. To tag time worked during meal breaks.

1. Specify the Minimum Rest Period Settings

Field	Value
Allowed Out Types	*Meal*
Minimum Rest Hours after Last Out (up to 48)	*1*

2. Define the Results.

Field	Value
Add Tags	*Missed Meal*

When a worker checks out at 11:00 with a reason of meal and checks back in at 11:30, Workday tags 11:30 to 12:00 with the *Missed Meal* tag. You can then report on the missed meal time or use the tag in time calculations to properly compensate the worker.

Next Steps

Assign time calculation priorities.

Example: Calculate Minimum Rest Time on page 2783

Create Minimum Weekly Hours Calculations

Prerequisites

- Create Time Calculation Tags on page 2735.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

Create minimum weekly hours calculations when you need the total number of hours in a week to add up to a certain number. When a worker enters less than the minimum number of hours, the calculation creates a new calculated time block that makes up the difference.

Steps

1. Access the Create Time Calculation task.
2. From the Calculation Type prompt, select *Minimum Weekly Hours Calculation*.
3. In the Criteria section, enter the minimum number of hours per week as a fixed value, or select a calculated field to use as the minimum.

   When using a calculated field, select from any numeric field on the Worker or Time Week business object.
4. Select 1 or more calculation tags that identify the time blocks that are subject to the calculation.
   - When you select more than 1 tag in a row, time blocks must have all tags in that row to be included in this calculation.
   - When you select tags in separate rows, time blocks must have all tags specified in at least 1 row to be included in this calculation.

5. In the Results section, select time calculation tags to add to the calculated time blocks.

   Workday doesn't copy calculation tags from the existing time blocks to the new calculated time block.
6. In the Time Day Based On field select:
   - Calculated Date to tag calculated time blocks according to the day breaker option.
   - Shift Date to tag calculated time blocks with the shift date according to the Group Time Blocks for Shift Based on option on the time entry template.
7. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Result

Workday displays calculated time blocks generated from the minimum weekly hours calculation on the time entry calendar. These hours display on the last day of the week even if the worker's job terminates midweek.

Workday doesn't copy worktags from existing time blocks to the new calculated time blocks that are generated by minimum weekly hours calculations.

Example

Salaried employees in your company who are located in California must report all hours worked. For these employees, payroll must be able to subtract any hours fewer than 40 in a week from the employee's salary using an unpaid earning. To define a minimum hours calculation that applies this rule:

1. Create an eligibility rule for salaried employees located in California. Call it *Salaried Time Reporters - California*.

   See Create Worker Eligibility Rules for Time Tracking on page 2826.
2. Create a time code group with a worker eligibility of *Salaried Time Reporters - California*. Call it *Salaried Group - California*.
3. Create a time entry code and call it *Hours Worked - Salaried*. Assign the time code group *Salaried Group - California*.
4. Access the Create Time Calculation task.
5. From the Calculation Type prompt, select *Minimum Weekly Hours Calculation*.
6. Specify the Criteria:

Field	Value
Minimum Hours	*40*
Time Calculation Tags	*Regular*

7. In the Results section, from the Add Tags prompt, select *Unpaid*.
8. In the Groups tab, create a time calculation group with a worker eligibility of *Salaried Employees - California*.

Jared is a salaried employee located in California. On Monday, he enters 8 hours using the *Hours Worked - Salaried* time entry code. On Saturday, the last day of the week, Workday displays 32 autogenerated hours on Jared's time entry calendar. Workday tags these hours as unpaid time. Each day Jared reports 8 more hours of worked time, and the total unpaid time decreases by 8 hours.

Next Steps

Assign time calculation priorities.

Concept: Effective Dating for Time Calculations on page 2796

Concept: Time Calculations on page 2794

Create Override Rate Calculations

Prerequisites

- Create Time Calculation Tags on page 2735.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

Create calculations to assign override rates to workers' time blocks based on the details of the work they're doing. Example: You might pay workers a different rate when they work for a particular cost center. You can define multiple override rates in 1 calculation, assigning a rate to each combination of worktag values.

Note: If you manually enter an override rate on a time block, that rate also overrides any override rate calculations that apply to the time block.

Steps

1. Access the Create Time Calculation task.
2. From the Calculation Type prompt, select *Override Rate Calculation*.
3. Select 1 or more Worktags.

   The worktags you select determine the worktag detail combinations to which you can assign override rates.
4. (Optional) Select a Start Date and End Date to define a time period for the calculation to be in effect.

   The calculation is in effect for the time blocks reported for the time period. The time block date can be different from the date the time block is actually reported. Example: If the calculation is in effect starting on 2014-01-01, Workday includes a time block reported on 2013-12-31 for 2014-01-01 in the calculation but doesn't include a time block reported on 2014-01-01 for 2013-12-31.
5. (Optional) Select Time Calculation Tags to further identify the time blocks to which you want to apply the override rates.
6. Add a row in the Rate Assignments table for each rate assignment that you want to define.
   a) Select a worktag value for each worktag.
   b) Enter an Override Rate for the worktag value or combination of worktag values.
   c) (Optional) Select a Currency for the override rate.

      When you don't specify a currency, Workday Payroll uses the worker's default currency when referencing the override rate.
7. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Result

When workers enter time blocks that match the worktag type and time calculation tag conditions that you specified, Workday applies the appropriate override rate to the time blocks.

Next Steps

Assign time calculation priorities.

Concept: Time Calculations on page 2794

Create Predictive Scheduling Calculations

Prerequisites

- Create Time Calculation Groups on page 2760.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

You can create 1 predictive scheduling calculation for your tenant. Workday uses the calculation to create penalty time blocks for workers when their schedule is changed without sufficient notice.

To use Predictive Scheduling, you need both the Time Tracking and Workday Scheduling products.

Steps

1. Access the Create Time Calculation task.
2. From the Calculation Type prompt, select *Predictive Scheduling Calculation*.
3. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Next Steps

Configure criteria for the calculation using the Create Predictive Scheduling Rule Sets task.

Related Information

Concepts

Concept: Effective Dating for Time Calculations on page 2796

Concept: Time Calculations on page 2794

Examples

Example: Calculate Minimum Rest Time on page 2783

Create Schedule Deviation Calculations

Prerequisites

- Create Time Calculation Tags on page 2735.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

Create schedule deviation calculations to tag time blocks a worker enters outside their schedule. You can use schedule deviation calculations to pay workers a premium for hours worked outside their scheduled shifts.

Steps

1. Access the Create Time Calculation task.
2. For Calculation Type, select *Schedule Deviation Calculation*.

3. (Optional) Select Use Workday Scheduling Data to enable Workday to pull a worker's scheduled hours from the Workday Scheduling SKU rather than work schedule calendars from Time Tracking. You must have the Workday Scheduling SKU enabled for this to take effect.
4. Select 1 or more calculation tags that identify the time blocks that are subject to this calculation. Example: If you include the Regular calculation tag, the calculation will tag Regular time worked outside the worker's schedule.
    - If you select more than 1 tag in a row, the time blocks must have the all tags in that row.
    - If you select tags in separate rows, the time blocks must have all the specified tags in at least 1 of the rows.
5. In the Results section, add the time calculation tags to add or remove from time blocks that are outside of the worker's schedule.

    You can tag hours differently based on when the time was worked outside of the schedule. Add time calculation tags to at least 1 of these sections:

    - Before First Scheduled In
    - Between Scheduled Shifts
    - After Last Scheduled Out
    - Unscheduled Days

    If you want to treat all time worked outside of the work schedule in the same way, select the same tags to add and remove in each section. By default, all calculation tags from the existing time blocks copy to calculated time blocks generated by this calculation unless you remove them.
6. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Next Steps

Assign time calculation priorities.

2021R2 What's New Post: Schedule Deviation Calculation

Create Shift Differential Calculations

Prerequisites

- Create Time Calculation Tags on page 2735.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

A shift differential calculation tags time blocks between certain hours so that you can pay in/out workers a shift differential. Example: You can tag hours during the midnight shift so that employees receive a premium for the hours worked.

Note: Time Tracking applies shift differentials based on actual times worked. Compensation plans can also apply shift differential premiums for all of a worker's hours regardless of the actual work times entered in Time Tracking. Before using this calculation, make sure that compensation plans don't already handle shift differentials.

Steps

1. Access the Create Time Calculation task.

2. From the Calculation Type prompt, select *Shift Differential Calculation*.
3. In the Criteria section, enter the Start Time and End Time.

   Workday tags time worked between the start and end time with the calculation tags.
4. Select 1 or more calculation tags that identify the time blocks that are subject to the calculation.
   - When you select more than 1 tag in a row, time blocks must have all tags in that row to be included in this calculation.
   - When you select tags in separate rows, time blocks must have all tags specified in at least 1 row to be included in this calculation.
5. In the Results section, select the time calculation tags to add to or remove from the calculated time blocks.
6. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Result

Workday splits reported time blocks that span the start or stop time.

Example

Employees receive a shift differential for all hours worked between 4:00 PM and 2:00 AM. To define a shift differential calculation that applies this rule:

1. Specify the Criteria:

Field	Value
Start Time	*4:00 PM*
End Time	*2:00 AM*

2. Define the Results:

Field	Value
Add Tags	*Shift 1*
Remove Tags	Leave empty

When a worker then enters time from 2:00 PM to 7:00 PM, Workday creates 2 time blocks:

- 2:00 PM to 4:00 PM (not tagged with the *Shift 1*).
- 4:00 PM to 7:00 PM (tagged with *Shift 1*).

Next Steps

Assign time calculation priorities.

Related Information
Concepts
Concept: Effective Dating for Time Calculations on page 2796

Examples
Example: Calculate the Majority of a Shift on page 2788

Create Standard Overtime Calculations

Prerequisites

- Create Time Calculation Tags on page 2735.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

Create standard overtime calculations to pay workers overtime after they work a certain number of hours during a specified period of time, such as a day or a week. When reported hours exceed the threshold you set, Workday creates a separate calculated time block for the overtime.

Steps

1. Access the Create Time Calculation task.
2. For Calculation Type, select *Standard Overtime Calculation*.
3. Define the threshold for overtime.

Option	Description
Period	Select 1 time period over which to calculate overtime: • *Biweekly*. • *Configurable Period*. Select to use a configurable time period. Example: Fiscal, rather than calendar, months. You can configure this value on work schedule calendars • *Daily*. • *Rolling 24 hours*. See Concept: Rolling 24-Hour Periods. • *Shift*. • *Weekly*.
Replace Hours Greater than (value)	Enter the threshold as a fixed value. Workday calculates any reported hours greater than this value as overtime.
Replace Hours Greater than (calculated field)	Select a calculated field to use as a threshold. Workday calculates as overtime any reported hours greater than the value returned by the calculated field. Valid calculated fields include any numeric calculated fields on these business objects: • *Worker*. • *Time Week*. • *Time Day* or *Time Shift*. This field isn't available for calculations based on biweekly periods.

4. Select 1 or more calculation tags that identify the time blocks that are subject to the calculation.
    - If you select more than 1 tag in a row, time blocks must have all tags in that row to include in this calculation.
    - If you select tags in separate rows, time blocks must have all tags specified in at least 1 row to be included in this calculation.

    To refine the selection criteria, use the Advanced options.
5. In the Results section, select the time calculation tags to add to or remove from the calculated time blocks that exceed the threshold.

    By default, all calculation tags from the existing time blocks copy to calculated time blocks generated by this calculation unless you remove them.
6. In the Time Day Based On field select one of these options:

Option	Description
Calculated Date	Tags calculated time blocks according to the day breaker.
Shift Date	Tags calculated time blocks with the shift date according to the Group Time Blocks for Shift Based on option on the time entry template.

7. (Optional) In the Advanced section, define additional options.

    These options give you greater control over how Workday selects time blocks and applies the results.

Option	Description
Include Scheduled Hours	Select to sum a worker's scheduled and reported hours to see if the worker exceeds the overtime threshold (the number in the Replace Hours Greater than field). Example: The weekly threshold is 40 hours. John has 35 scheduled hours, and enters 6 hours. Workday determines that John has 1 hour of overtime. This option is useful for workers who enter exceptions only. It requires that workers have a work schedule assigned.
Use Workday Scheduling Data	Select to enable Workday to determine a worker's scheduled hours from the Workday Scheduling SKU rather than work schedule calendars from Time Tracking. You must have the Workday Scheduling SKU enabled for this to take effect. This option is only available when you select the Include Scheduled Hours option.
Tag Time With Worktags First	Select to give a higher priority to time blocks with worktags when Workday adds and removes calculation tags. Example: Your company pays workers overtime when they work more than 8 hours in a day. On Monday, a worker has a 2-hour time block with a *Cost Center* worktag and an 8-hour time block with no worktags. Charge daily

Option	Description
	overtime to the cost center in the time block that has a worktag. If you don't select this option, Workday begins to add and remove time calculation tags as soon as the threshold is met.
Do Not Modify	Select calculation tags that Workday shouldn't modify. When Workday adds and removes calculation tags, it will give a lower priority to time blocks that have the calculation tags you select here. Example: The weekly overtime threshold is 40. Time blocks with the holiday calculation tag or regular calculation tag are subject to the overtime calculation. Do Not Modify is set to Holiday. James has 35 hours of regular time and 8 hours of holiday. Workday adds the overtime calculation tag to 3 of the regular hours, leaving the holiday hours unchanged.

8. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Result

When Workday executes the calculation, it checks each day to see if the threshold is met. Unless you define advanced options, it begins to generate calculation tags chronologically after the threshold is met.

Example: Monthly overtime calculations apply overtime tags to time blocks at the end of the month before time blocks earlier in the month. Daily overtime calculations apply overtime tags to time blocks later in the day before time blocks that are earlier in the day.

Worktags from existing time blocks carry forward to the new time blocks generated by the standard overtime calculation.

Example

Example 1: Overtime after 8 Hours in a Day

Workers earn overtime after 8 hours of work in a day. To define a standard overtime calculation that applies this rule:

1. Specify the Criteria.

Field	Value
Period	*Daily*
Replace Hours Greater than	*8*
Time Calculation Tags	*Regular*

2. Define the Results.

Field	Value
Add Tags	*Overtime*

Field	Value
Remove Tags	*Regular*

Susan enters 10 hours of regular time. Workday generates 2 calculated time blocks:

- An 8-hour time block tagged as *Regular*.
- A 2-hour time block tagged as *Overtime*.

Example 2: Overtime Calculations with Day Breaker

At Vincent's company, a daily overtime calculation applies when employees enter more than 8 worked hours in a day. Vincent enters a time block from 6:00 PM to 6:00 AM. If his day breaker falls within that worked time block, the day breaker splits the time block, and the overtime calculation applies to the resulting calculated time blocks. Possible calculated overtimes include:

If Vincent's Day Breaker is:	First Calculated Time Block	Second Calculated Time Block	Calculated Overtime
9:00 PM	6:00 PM - 9:00 PM	9:00 PM - 6:00 AM	1 hour
Midnight	6:00 PM - 12:00 AM	12:00 AM - 6:00 AM	No overtime
Noon	6:00 PM - 6:00 AM	N/A	4 hours

Next Steps

- Assign time calculation priorities.
- For biweekly overtime calculations, specify a biweekly calculation start date on the work schedule calendars to which the calculation applies.

Examples

Example: Calculate Nevada Rolling Overtime on page 2787

Example: Calculate Location-Based Overtime on page 2780

Example: Calculate Monthly Overtime on page 2785

Example: Calculate Double Time on Seventh Consecutive Day on page 2778

Create Time Block Conditional Calculations

Prerequisites

- Create Time Calculation Tags on page 2735.

- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

Create time block conditional calculations to tag time blocks that meet specific conditions when other types of time calculations don't support your requirements. Example: You can tag time entered on a holiday, a specific day of the week, or a particular job to pay a premium for that time.

Conditional calculations can be very powerful when combined with other types of time calculations. Example: You can combine:

- A standard overtime calculation that generates overtime for over 8 hours worked in a day.
- A time block conditional calculation to pay double time for over 8 hours worked in a day, if that day is Sunday.

Conditional time calculations don't split or create new time blocks; they act on existing time blocks.

Steps

1. Access the Create Time Calculation task.
2. For Calculation Type, select *Time Block Conditional Calculation*.
3. In the Criteria section, identify all the conditions that must be met to add or remove tags.

   You can select Workday-provided report fields or create your own true/false conditions based on the *Time Block*, *Time Shift*, *Time Day*, or *Time Week business object* using the Create Calculated Field task.

Option	Description
Time Block Conditions	Select from conditions based on the *Time Block* business object. A time block is a continuous amount of time, such as the number of hours worked or in/out times. Example: Create a true/false condition to tag time blocks that have *France* entered as the location.
Time Shift Conditions	Select from conditions based on the *Time Shift* business object. A time shift is a grouping of consecutive time blocks. Example: Create a true/false condition to tag all hours that exceed 8 hours in a particular shift.
Time Day Conditions	Select from conditions based on the *Time Day* business object. Most Workday-delivered conditions define the start and end times for a day based on the worker's day breaker option. However, you can create your own conditions based on calendar day. Example: 12:00 am to 12:00 am. Example: Select the Workday-delivered report field, *Is Sunday*, to tag time blocks that fall on a Sunday.

Option	Description
Time Week Conditions	Select from conditions based on the *Time Week* business object. A time week is the seven-day period that begins on the start date and day breaker time defined by the work schedule. Example: Create a true/false condition to tag all hours in a week where workers worked over 40 hours.
Worktags	(Optional) Specify the worktags time blocks must have to be subject to the calculation, such as a particular job profile: • Time blocks must have all the worktags that you select in the same row. • If you define more than 1 row, the time block must have all worktags specified in at least 1 row.
Time Calculation Tags	Specify the time calculation tags the time blocks must have to be subject to the calculation results: • Time blocks must have all the time calculation tags that you select in the same row. • If you define more than 1 row of tags, the time block must have all tags specified in at least 1 row.

4. In the Results section, select the time calculation tags to add to or remove from the eligible time blocks.
5. If the day breaker isn't midnight, and Time Day Conditions (such as *Is Holiday*) are Criteria for applying the calculation, specify whether to apply results based on the calendar date or the calculated date.

   In the Time Day Based On field select:

   - Calendar Date to tag calculated time blocks with the calendar date on which the work was performed.
   - Calculated Date to tag calculated time blocks according to the day breaker option.
   - Shift Date to tag calculated time blocks with the shift date according to the Group Time Blocks for Shift Based on option on the time entry template.

   Time Shift Conditions and Time Block Conditions do not require a Time Day Based On field.
6. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Example

Employees receive a premium for *Callout* time worked on Tuesdays that is charged to Marketing. To define a time block conditional calculation that applies this rule:

1. Specify the Criteria.

Field	Value
Time Day Conditions	*is Tuesday*
Worktags	*7200 Marketing Operations*
Time Calculation Tags	*Callout*

2. Define the Results.

Field	Value
Add Tags	*Premium*

Next Steps

Assign time calculation priorities.

Example: Calculate Location-Based Overtime on page 2780

Set Up Time Block Create Calculations

Prerequisites

- Create Time Calculation Tags on page 2735.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

Use time block create calculations to generate additional calculated time blocks based on specific time conditions. The additional time blocks are independent of other time blocks. Therefore, the calculation isn't tied to a time block and doesn't need an existing time block to execute. Example: You can use this calculation to:

- Reward workers who work a certain number of hours in a week with a bonus set of hours.
- Create a time block of 8 hours on a holiday, whether or not a worker reports time for that holiday.

Steps

1. Access the Create Time Calculation task.
2. For Calculation Type, select *Time Block Create Calculation*.
3. In the Criteria section, identify the conditions that must be met to generate the new time block. You can select from Workday-delivered conditions or create your own using the Create Calculated Field task.

Option	Description
Time Shift Conditions	Select from conditions based on the *Time Shift* business object.

Option	Description
Time Day Conditions	Select from conditions based on the *Time Day* business object. Most Workday-delivered conditions define the start and end times for a day based on the worker's day breaker option. However, you can create your own conditions based on the calendar day.
Time Week Conditions	Select from conditions based on the *Time Week* business object.

4. In the Results section:
   a) Specify the quantity of time for the new time block by entering a fixed value or selecting a calculated field.

      Valid calculated fields include any numeric calculated fields on these business objects:

      - *Worker*.
      - *Time Day* if the calculation uses Time Day Conditions or *Time Week* if the calculation uses Time Week Conditions.

   b) Select the time calculation tags to add to the new time block.
5. In the Time Day Based On field select:
   - Calculated Date to tag calculated time blocks according to the day breaker option.
   - Shift Date to tag calculated time blocks with the shift date according to the Group Time Blocks for Shift Based on option. This option is on the time entry template.
6. (Optional) In the Advanced section, define additional options.

   These options are available when you select a Time Day Condition in the Criteria section:

Option	Description
Must Work Scheduled Day Before Must Work Scheduled Day After	Workday generates time blocks for workers based on whether they worked the scheduled day before or after the day you specified in time day conditions. Workday searches up to 8 days before or after the selected time day condition to find the previous or next scheduled day. If you select both options, they must both be true for Workday to generate a time block. Example: A worker must work the scheduled day before a holiday to qualify for holiday pay.
Use Workday Scheduling Data	Select to enable Workday to determine a worker's scheduled hours from Workday Scheduling rather than work schedule calendars from Time Tracking. You must have the Workday Scheduling enabled for this to take effect. This option is only available when you select the Must Work Schedule Day Before option, Must Work Scheduled Day After option, or both.
Include Calculation Tags	Workday generates time blocks for workers when:

Option	Description
	• They have time blocks tagged with these calculation tags. • The time blocks are on a day that meets the time day conditions you configured.

7. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Result

For day- and shift-based calculations, Workday displays the additional time blocks on that day. For week-based calculations, the additional time blocks display on the last day of the week.

Workday includes the additional calculated time blocks in weekly totals. When you select Sum Based on Calculated Quantity on the time entry template, Workday also includes the additional calculated time blocks in the daily totals.

Example

Generate a bonus time block of 5 hours if a worker enters 45 or more hours in a week.

1. Create a calculated field called *Reported time in a week* that sums the time a worker has reported in a week:

    a. Access the Create Calculated Field task.
    b. Define the calculated field:

Field	Value
Field Name	*Reported time in a week*
Business Object	*Time Week*
Function	*Sum Related Instances*
Related Field	*Time Blocks for a Week*
Instances where condition is true	*Is Reported Time Block*
Field to Sum	*Total Hours (Time Tracking)*

2. Create a calculated field called *Reported time greater than or equal to 45 hours*. The report field returns true if the sum of reported time in a week is greater than or equal to 45 hours:

    a. Access the Create Calculated Field task.
    b. Define the calculated field:

Field	Value
Field Name	*Reported time greater than or equal to 45 hours*
Business Object	*Time Week*
Function	*True/False Condition*
Field	*Reported time in a week*
Operator	*greater than or equal to*
Comparison Type	*Value specified in this filter*
Comparison Value	*45*

3. Create the calculation:

Field	Value
Time Week Conditions	*Reported time greater than or equal to 45 hours*
Quantity (value)	*5*
Add Tags	*Regular*

Next Steps

Assign time calculation priorities.

Concept: Effective Dating for Time Calculations on page 2796
Concept: Time Calculations on page 2794
Concept: Calculated Fields

Create Time Calculations for Statutory Holidays (CAN)

Prerequisites

- Confirm that the workers are in a Canadian pay group.
- Create holiday calendars.
- Create statutory holiday configurations.
- Create a calculation tag to use in Canadian statutory holiday calculations.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

You can use holiday time block create calculations to create time blocks for workers on Canadian statutory holidays. Workday uses the statutory holiday configurations you make to determine which workers are eligible for the time calculation.

Steps

1. Access the Create Time Calculation task.
2. From the Calculation Type prompt, select *Holiday Time Block Create Calculation*.
    - The Holiday Time Block Create calculation supports effective dates, but this functionality does not apply to Canada statutory holidays. This is because the prerequisite task to create statutory holiday configurations does not support effective dates.
3. From the Jurisdiction prompt, select the calculation method for holiday-based pay.
    - To calculate holiday pay based on the provincial and territorial statutory holiday pay you configured on the Statutory Holiday Configuration task, select Provincial.
    - To use federal guidelines to calculate statutory holiday pay for federal workers, select Federal.
4. In the Eligibility Criteria section, select the Use Statutory Holiday Configuration Eligibility check box.

5. In the Results section, select Quantity - Use Statutory Holiday Configuration Look Back.

   Workday calculates the quantity by dividing the total hours worked over the look back period by the number of days in the look back period.

   The province you select isn't configurable. It determines the length of the look back period and the lookback reference point. On the statutory holiday configuration, you can view the:

   - Length of the look back period in days.
   - Whether the look back reference point is the end of the week preceding the holiday, or the day before the holiday.

   Workday determines the total hours worked by including hours that are:

   - Tagged with the calculation tags you define in the Worked Hours Calculation Tags field on the statutory holiday configuration.

   Workday determines the number of days in the look back period by totaling the days in the look back period on which there are time blocks.
6. In the Add Tags prompt, select the calculation tag you defined for the Canadian statutory holiday you configured.
7. In the Groups tab, add time calculation group snapshots to specify which workers are eligible for the calculation.

   The statutory holiday time block may list a different value than what is calculated in the statutory holiday earning pay component related calculation (PCRC) if there are unapproved time blocks in the look back period. Unapproved time blocks are not included in Payroll calculations.

Next Steps

- Assign time calculation priorities with the Maintain Time Calculation Priorities task.
- Using Workday Payroll, set up earnings for holiday pay.

Concepts

Concept: Time Calculations on page 2794

Set Up Statutory Holiday Eligibility (CAN) on page 2666

Example: Configure Statutory Holiday Pay for Provinces (CAN)

Assign Time Calculation Priorities

Prerequisites

- Define time calculations.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

Assigning a priority on a time calculation allows Workday to perform a series of calculations on a worker's time. A calculation can use the results from another calculation to support complex time tracking policies.

When you assign a priority to each time calculation, you specify the order of execution when a worker is subject to multiple time calculations. Without a priority, or with multiple calculations that have the same priority, time calculations can execute in an unexpected order, causing impacts to other areas such as Payroll. Workday recommends configuring time calculations so that workers aren't eligible for multiple time calculations that have the same priority.

In general, perform:

- Calculations that produce results for other calculations before the calculations that need them.
- Double time calculations before overtime calculations.

- Daily overtime calculations before weekly overtime calculations.

You must perform monthly overtime calculations last. Other calculations can't reference monthly overtime calculation tags.

Steps

1. Access the Maintain Time Calculation Priorities task.
2. In the Priority column, enter an alphanumeric value, such as *ABC10*, to represent the order in which to execute the time calculation.

   Time calculations are executed in alphanumeric order, with numerics having a higher priority. Example: A priority of 50 has a higher priority than A50.

   Note: When a worker is eligible for more than 1 time calculation that have the same priority, those time calculations can execute in an unexpected order.

   Tips for assigning priorities:

   - Leave gaps between priorities so that you can more easily change priorities, if necessary.
   - If using numeric characters, use the same number of digits for each priority. Example: 110, 120, 130.
   - Consider using separate ranges for time calculations that apply to different groups of employees, such as workers in different countries.

     Example:

     - USA1000 - USA2000 for the U.S.
     - FRA2001 - FRA3000 for France
3. Click OK and confirm that the priorities are in the order you expect.
4. Review the View Worker's Time Eligibility report to validate your changes for a particular worker.

Result

When Workday performs calculations, it executes the calculations according to the priorities you set. Workday also displays the priority when you view or edit a time calculation.

Example

Employees receive overtime when they work over 8 hours in a day or over 40 hours in a week. To apply these rules, define 2 overtime calculations that apply to time blocks with the *Regular* time calculation tag:

Calculation Rule	Priority
Daily Hours > 8	10
Weekly Hours > 40 (excludes hours greater than 8 in a day)	20

Sam enters 10 hours of worked time on Monday through Saturday. Workday first applies the daily overtime calculation, and creates 2 calculated time blocks for each day worked:

- 8 hours tagged *Regular*.
- 2 hours tagged *Overtime*.

It then applies the weekly overtime calculation to see if Sam's regular hours exceed the 40-hour threshold, starting from the end of the week. Workday tags the 8 hours of *Regular* time for Saturday as *Overtime*.

Create Time Calculation Groups

Prerequisites

- Create time calculations.
- Create Worker Eligibility Rules for Time Tracking on page 2826.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

Create time calculation groups to specify worker eligibility criteria for time calculations. Typically, eligibility for time calculation groups is based on location or union organization. Workers can qualify for multiple time calculation groups. Workday checks to see that the worker meets the eligibility rules on the last day of the week on the time entry calendar (or the worker's termination date if earlier).

Steps

1. Access the Create Time Calculation Group task.
2. Create a snapshot that is active as of a particular date.

   Select the effective date from the Effective Date prompt.
3. Select the time calculations to include in the group from the Time Calculations prompt.
4. Specify who is eligible for the time calculations from the Worker Eligibility prompt.

   Select one or more time tracking eligibility rules. Workers must meet the criteria for all eligibility rules you select when they report time.

   - Eligibility is based on the worker's primary job unless you define rules that reference all jobs instead.
   - Eligibility rules based on the *Position* are not available for time calculation groups.
5. (Optional) From the Country / Country Region prompt, select countries or country regions that the time calculation group applies to. Selecting a value in this field improves performance for Time Tracking transactions that check time calculation groups.

Example

Create a time calculation group for union workers. Select all time calculations that are valid for union members and specify that union membership is a requirement for eligibility.

Next Steps

- You can create additional calculation group snapshots by clicking Add +.
- Review the View Worker's Time Eligibility report to validate your changes for a particular worker.

Concepts
2024R1 What's New Post: Effective Date Support in Time Tracking

Steps: Set Up Calculated Time Offs

Prerequisites

- Create time entry templates.

  See Steps: Create Time Entry Templates on page 2672.
- Create time offs.

  See Steps: Set Up Time Offs on page 2278.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

You can create calculated time off, making it easier to take into account both worked time and time off. Workers can enter time off through Manage Absence or time entry calendar. Workday applies time calculation tags and time calculations to time off blocks. This feature enables you to ensure that workers receive the same premiums for their time off as they do for their worked time.

Steps

1. Access the Edit Time Entry Template task.
2. On the Effective-Dated tab, expand the Time Entry section.
3. (Optional) Complete the Time Off Calculations section:

Option	Description
Enable Calculated Time Off	Enables Workday to apply time calculations to time offs. When you select this option, it overrides the Run Calculations with Time Off Approval option on the Edit Tenant Setup - HCM task for this template.
Run Calculations After Date	Specify the date on which you want Workday to start creating calculated time off. This date can be in the past or the future. When you enter a date, enter the start day of the week so that Workday calculates all time off blocks in the week. Otherwise, Workday will calculate some of the blocks in the week but not the rest.

4. Access the Edit Time Off task for the time offs that you want Workday to apply time calculations to. As you complete the task, consider:

Option	Description
Time Calculation Tag	Select 1 or more time calculation tags to add to the time off blocks.
Calculate Quantity Based on Start and End Time	(Optional) Select this option for time offs used by workers who enter In and Out times. This option ensures that Workday will apply premiums as defined by shift differential calculations.
Enable Crossing Midnight	(Optional) Select this option to enable workers to submit a single time off request for a time off that's configured with start and end times when that time off crosses midnight. Available only when you select 1 of these Entry Option values: • *Enter through Time Off Only*, and you also select the Display Start and End Time check box. • *Enter through Time Tracking Only*, and you also select the Calculate Quantity Based on Start and End Time check box. • *Enter through Time Tracking or Time Off*, and you also select the Calculate

Option	Description
	Quantity Based on Start and End Time check box. Note: A time off that crosses midnight only has a reported block. To create a calculated time block for the time off, select the Enable Calculated Time Off check box on the time entry template.

5. Access the Edit Time Calculation task for any calculations that you want to apply to time offs. You can't use this feature with minimum rest time calculations.

   In the Include Calculation Tags grid, add the time calculation tag that you applied to the time off. Workday will include time off blocks with this calculation tag in time calculations.

Result

When you enter time off in the range of -7 to +7 days from the current date, Workday runs calculations in real time. If the range crosses into an adjacent week, Workday runs calculations for the entire current week and adjacent week. If you enter or edit time off outside of this range, Workday runs a job every 2 hours to perform the calculations.

After Workday applies calculations to time off blocks, the blocks have a Calculated tab and a History tab. Workday displays time off blocks that require submission as shaded gray (the same way Workday displays unsubmitted time blocks). After workers enter time off through the Absence calendar, they must also submit their time through the Time Tracking calendar for time calculations to run. Resubmit time if you make any adjustments after submitting time for the period.

Example

As of October 1, 2021, you assign Ben Adams to an evening shift. As an evening shift worker, Ben receives a premium for the hours worked between 8:00PM and 12:00AM. When Ben takes time off between 8:00PM and 12:00AM, he receives the same shift premium.

1. Access the Edit Time Entry Template task. Select the *USA - CA - In/Out - SHIFT* time entry template. Enter these values:

Field	Value
Enable Calculated Time Off	Select the check box.
Run Calculations After Date	*10/01/2021*

2. Access the Edit Time Off task. Select the *USA Vacation Time Off (Hourly)* time off. Enter these values:

Field	Value
Time Calculation Tag	*Paid Time Off*
Calculate Quantity Based on Start and End Time	Select the check box.

3. Access the Edit Time Calculation task. Select the *Shift Premium - Evening* shift differential calculation. In the Include Calculation Tags grid, add a row, and select the *Paid Time Off* time calculation tag.

Ben enters time off for October 14, 2021 from 8:00 PM to 12:00 AM, then submits his time. Ben's manager clicks the time off block on his calendar and views the details. She sees that Workday applied the *Shift Premium - Evening* tag.

Next Steps

- Access the My Team's Time and Time Off report to report on workers' reported time, calculated time, and calculated time off. It also displays blocks that workers need to resubmit on the time entry calendar.
- You can send notifications to workers who need to resubmit their time off on the time entry calendar. Copy the Workers with Time Off for Resubmission report. You can use the Alerts framework for My Tasks notifications, or the Scheduled Distributions framework for email or mobile push notifications.

  See Steps: Set Up Time Off Notifications on page 2427.

Related Information
Concepts
Concept: Calculated Time Offs on page 2803

Manually Run Time Calculations

Prerequisites

Security: *Process: Run Time Calculations for a Date Range* domain in the Time Tracking functional area.

Context

You can manually run time calculations when Workday doesn't automatically run calculations for these reasons:

- Worker eligibility changes for these Time Tracking components:
  - Time code groups.
  - Time entry templates.
  - Time period schedules.
  - Time calculation groups.
- You change time calculation configurations.
- A time calculation generates a calculated time block without an associated reported time block.
- You request time off, but you didn't configure your tenant to run time calculations automatically upon time off approval.
- You configure your tenant to defer time clock event matching and processing.
- You configure daily evaluation of worker eligibility for time calculations to run in the past.

Workday recommends that you don't run calculations for a period that contains work schedule calendar changes. If a period contains work schedule calendar changes, run time calculations for a subperiod instead.

Workday evaluates the worker's day breaker eligibility daily when running calculations. Workday evaluates the start day of week eligibility for each week included in the date range, rather than using only the start day of week that was effective at the start of the date range. If you select daily evaluation of worker eligibility for time calculations, then Workday evaluates eligibility daily for the date range.

When you manually run time calculations, Workday doesn't calculate time for terminated workers, even if the termination date is after the dates selected as the process parameters.

You can only run calculations on an open period. When you run calculations for a date range that includes both open and closed periods, Workday runs calculations only on the open periods. Example: You configure time entry to open on May 8, which is a holiday. When you run time calculations on May 1, Workday doesn't generate the holiday time block because the period isn't yet open. If you remove the restrictions on when time entry opens and run calculations on May 1, Workday generates the holiday time block.

To test the impact of manually running time calculations for an extensive date range, Workday recommends that you first manually run time calculations within a small date range and confirm that the output is what you expect. You can use the Time Calculation Debugger report to identify the time calculations that were evaluated and applied for a week for a worker.

Steps

1. Access the Run Time Calculations for a Date Range report.
2. Select the workers for whom you'd like to run calculations.

   You must have security access on the *Enter Time* business process security policy to select workers.

   If you select all workers in the report, once the process runs, Workday refreshes the worker list according to the criteria you select. The workers processed might change from the list of workers you initially selected.
3. Select a Run Frequency.

   When you select a recurring run frequency, Workday displays the Schedule tab, where you can configure when or how frequently to run time calculations for a particular date range.
4. Enter a Request Name.

   Workday uses the request name in reports.
5. As you complete the Selection Criteria section, consider:

Option	Description
Static Range	Select a Start Date and an End Date to define the fixed time period to run time calculations. Example: You want to run time calculations multiple times for the date range of 2024-12-24 to 2024-01-07 to capture time offs that workers may have forgotten to enter ahead of time.
Dynamic Range	Specify a date range that shifts based on the number of days in the Days Before Run Date and Days After Run Date fields, and the Next Run Date to run time calculations. Example: If you want to run time calculations every week for the previous week's time entries, schedule a weekly recurrence that runs every week and 7 days before the Next Run Date. The Next Run Date field displays the date when Workday will next run time calculations, based on the options you select on the Schedule tab. When you schedule a recurrence, Workday will run calculations for the dynamic period you set up. Note: If your run frequency is *Dependent* or *Custom Recurrence*, Workday doesn't display a date in the Next Run Date field, but will still use the days you specified in the Days Before Run Date and Days After Run Date fields to run calculations. If your run frequency is *Run Now*, the Next Run Date field displays today's date.

6. For a recurring run frequency, see Schedule Reports or Report Groups for considerations to complete the Schedule tab.

Example

You want to run time calculations every Monday morning at 8:00 AM for the 30 days prior. You want this schedule to occur from 2024-03-18 to 2024-06-16. When you access the Run Time Calculations for a Date Range report, select *Weekly Recurrence* for the run frequency. On the Schedule tab, set up a weekly recurrence on Mondays at 8:00 AM and choose a range of recurrence starting on *03/18/2024* and ending on *06/16/2024*. On the Selection Criteria tab, under the Dynamic Range section, the Next Run Date field displays 03/18/2024. Enter *30* in the Days Before Run Date field.

On 2024-03-18 at 8:00 AM, Workday runs time calculations on all time entries from 2024-02-17 to 2024-03-17. Next Monday, on 2024-03-25, Workday runs time calculations on all time entries from 2024-02-24 to 2024-03-24.

Next Steps

If the calculations change a worker's submitted time, you must resubmit that time.

You can run these reports to view the status or schedules of the calculations:

- Process Monitor
- Scheduled Future Processes

Related Information
Concepts
Concept: Daily Evaluation of Worker Eligibility for Time Calculations on page 2801

Concept: Time Calculation Debugger on page 2802
Tasks
Set Up Period Schedules for Time Tracking on page 2822

Reference: Time Calculation Types

You can create these types of time calculations using the Create Time Calculation task:

Calculation Type	What it Does	Copy worktags?	Example
Accumulated Overtime	Tags time blocks when workers exceed thresholds configured in the time accumulator threshold rules.	No	When workers exceed their monthly overtime limit, tag extra hours as double time.
Consecutive Day	Tags time blocks that occur every *Nth* consecutive day of the work week.	Yes	Tag regular hours entered for the seventh consecutive workday of the week as overtime.
Flextime	Tags time blocks to match the flextime configuration.	No	Tag mandatory core hours separately from flexible hours.
Holiday Time Block Create	Generates additional time blocks when a holiday exists on the day and optionally applies additional eligibility from the statutory holiday configuration.	No	Create a holiday time block for statutory holidays that meets the requirements for a particular province.

Calculation Type	What it Does	Copy worktags?	Example
Minimum Daily Hours	Creates additional calculated time blocks when reported time is below the minimum daily hours specified.	Yes	Generate additional hours for workers on call when they enter less than the guaranteed number of hours for a day.
Minimum Rest	Tags time blocks worked during a specified rest time.	No	Pay workers a premium if they've worked without taking sufficient rest between shifts.
Minimum Weekly Hours	Creates additional calculated time blocks when reported time is below the minimum weekly hours specified.	No	Generate unpaid hours for salaried employees when they enter less than the minimum number of hours for a week.
Override Rate	Assigns override rates to eligible calculated time blocks.	Yes	Pay workers a different rate when they work for a particular cost center.
Predictive Scheduling	Generates penalty time blocks when managers change workers' schedules without sufficient advanced notice.	No	Create a penalty time block when a manager changes a worker's shift less than 24 hours before the shift start time. To use Predictive Scheduling, you need both the Time Tracking and Workday Scheduling products.
Schedule Deviation	Tags time blocks that a worker worked outside of their work schedule calendar.	Yes	Pay workers when they work originally unscheduled hours.
Shift Differential	Tags time blocks between a particular start and stop time during the day.	Yes	Tag hours worked during the night shift for premium pay.
Standard Overtime	Creates additional calculated time blocks for hours that exceed an overtime threshold.	Yes	Tag overtime hours so Payroll pays them at the correct rate.
Time Block Conditional	Tags time blocks that meet true/false conditions based on the day, week, or individual time blocks.	Yes	Tag hours for premium pay based on the worker's job profile or other worktag values the worker enters.
Time Block Create	Generates additional time blocks based on certain time conditions.	No	Create a bonus time block of 5 hours if a worker works more

Calculation Type	What it Does	Copy worktags?	Example
			than 45 hours in a week.

Time Accumulator

Steps: Set Up the Time Accumulator Framework

Context

Time accumulators enable you to configure working time or overtime restrictions based on your company or country policies. Using accumulators can reduce the risk of workers exceeding your work-hour limits. The time accumulator framework can track working time over longer reference periods against a defined threshold. You can:

- Track the number of hours or days that an employee has accumulated based on 1 or more calculation tags.
- Define work-hour thresholds and compare them against the sum or average of hours for a worker over a reference period.
- Alert managers to take corrective actions before workers exceed work-hour limits.
- Use the accumulated overtime calculation to tag time differently when workers exceed their work-hour limits.
- Allow workers to opt out of time accumulator threshold rules for working time or overtime restrictions (such as working time directives), and opt back in when necessary.
- Allow managers to view their team's time accumulator threshold rules status, opt workers out of time accumulator threshold rules, and opt back in when necessary.

Steps

1. Create Time Accumulators on page 2768.
2. Create Custom Business Processes.

   Configure these business processes to route worker opt-out or opt-in requests for approval:

   - *Time Accumulator Threshold Rule Opt Out*
   - *Time Accumulator Threshold Rule Opt In*
3. Create Time Accumulator Threshold Rules on page 2769.
4. Maintain Time Accumulator Threshold Rule Priorities on page 2772.
5. Create Accumulated Overtime Calculations on page 2772.
6. Maintain priorities for accumulated overtime calculations.

   Enter lower priorities for accumulated overtime calculations to ensure that Workday runs the calculations last in the majority of cases for rules that contain this type of calculation.

   See Assign Time Calculation Priorities on page 2758.
7. Mass Assign Time Accumulator Threshold Rules on page 2773.
8. (Optional) Run Time Accumulator Calculations on page 2773.
9. (Optional) Add the *Assign Time Accumulator Threshold Rule* service step to these business processes:

   - *Change Job*
   - *Change Organization Assignments for Worker*
   - *Hire*

   The service assigns workers to threshold rules automatically based on changes that impact their eligibility.

   See Edit Business Processes.

10. (Optional) In the Time and Scheduling Hub, configure the Workers Approaching Time Accumulator Threshold card.

    Workday displays this card on the Overview section of the hub. The card helps managers quickly identify workers approaching or exceeding their threshold rule based on the threshold warning percentages.

    See Steps: Set Up the Time and Scheduling Hub.

Result

When workers enter time or time off as usual, Workday starts tracking the time against the time accumulator threshold rules.

Next Steps

- Access the View Worker's Time Eligibility report to verify the assignment of time accumulator threshold rules. After running the Mass Assign Time Accumulator Threshold Rules task, 1 or more threshold rules for a worker are visible on the report.
- Report on workers' time accumulations using these reports:
    - All Time Accumulators
    - All Time Accumulator Threshold Rules
    - Time Accumulations for Workers
    - View Time Accumulator Threshold Rule History for Workers

2023R1 What's New Post: Time Accumulator

2022R2 What's New Post: Time Accumulator

Create Time Accumulators

Prerequisites

Create time calculation tags to include in the time accumulator.

Security: *Set Up: Time Tracking* domain in the Time Tracking and Time Tracking Hub functional areas.

Context

You can create time accumulators to configure working time or overtime restrictions. Time accumulators run after time calculations and use time calculation tags to pull the appropriate time blocks into threshold calculations. You can include:

- Reported time off with a calculation tag. You can select the tag from the Time Calculation Tag prompt on the Create Time Off task. Workday pulls the time off units into the threshold calculation if you add the calculation tag to the time accumulator.
- Calculated time off. You can select Include Calculation Tags on the Create Time Entry Template task. Workday creates calculated blocks for time off and pulls them into the threshold calculation if you add the calculation tag to the time accumulator. When calculated time off isn't available, the accumulator includes reported time off if you add the calculation tag to the accumulator.

Steps

1. Access the Create Time Accumulator task.

2. As you complete the task, consider:

Option	Description
Add Time Calculation Tags	Select 1 or more time calculation tags for use in the accumulator. Don't use temporary time calculation tags. Workday adds time blocks with these tags if they're in the period of the rule. Alternatively, if you want to include all time calculation tags except the ones that you select, select the Exclude Selected Tags check box.
Time Day Based On	Select 1 of these options to include time blocks with the selected tags based on: • *Calculated Date*, for Workday-generated blocks, or blocks created using the *Time Block Create* calculation type that don't have a calendar date. • *Calendar Date*, for calculated blocks that are part of a period. • *Shift Date*, for groups of time blocks. When the shift date isn't available, Workday uses the calculated date.
Deduct Time Calculation Tags	Select 1 or more time calculation tags for use in the time accumulator. Don't use temporary time calculation tags. Workday deducts time blocks with these tags if they're in the period of the rule. Example: You can deduct time calculation tags for compensatory time or time off in lieu of overtime.

Related Information

Concepts

Create Time Calculation Tags on page 2735

Create Time Accumulator Threshold Rules

Prerequisites

- Create time accumulators to include in the rules.
- Security: *Set Up: Time Tracking* domain in the Time Tracking and Time Tracking Hub functional areas
- Configure the *Time Accumulator Threshold Rule Opt Out* and *Time Accumulator Threshold Rule Opt In* business processes and security policies in the Time Tracking functional area.

Context

You can create time accumulator threshold rules for a rule group to specify the hours a group of workers shouldn't exceed in a reference period.

Steps

1. Access the Create Time Accumulator Threshold Rules task.
2. Enter a Rule Group Name. You create threshold rules within rule groups. Create rule groups based on how you want to organize accumulator threshold rules in your organization.

3. (Optional) Enter percentages at which to display warnings on the Workers Approaching Time Accumulator Threshold card if you're using the card in the Time and Scheduling Hub.

   The threshold levels apply to all rules in the rule group. The value that you enter for Threshold Level 1 Warning Percent must be less than the Threshold Level 2 Warning Percent value.
4. Click Add Rule.
5. As you complete the grid, consider:

Option	Description
Time Accumulator	Select the time accumulator to which the rule applies.
Worker Eligibility	Select 1 or more worker eligibility rules for Time Tracking. For performance reasons, Workday recommends that workers aren't eligible for more than 2 time accumulators at a time. Workers can be eligible for multiple threshold rules per time accumulator without any performance impacts. Workday evaluates the eligibility when you assign workers to the rule using the Mass Assign Time Accumulator Threshold Rules task.
Start Date	Select the date from which the rule applies. Workday recommends that the start date aligns with the first day of the period.
End Date	(Optional) Rules without an end date start again when the Reference Period ends, based on the Length. Workday recommends that you specify an end date for rules that you want to use for a fixed period of time.
Reference Period	Select a Unit of Time, from 1 of these options: • *Rolling Periods* • *Static Periods* • *Period Schedules* Enter a Length when you select a rolling or static period. When you select *Period Schedule*, you can't enter a length.
Threshold	Select the Calculation option to use for comparison against the threshold Amount. The values that you can select depend on the unit of time for the reference period. See Reference: Time Accumulator Threshold Calculations on page 2776.
Standard Week Excludes	Select the days of the week to exclude from the rule when you select the *Average Quantity per Standard Day* calculation option. *Standard Day* is a calendar day. Workday counts hours with the specified calculation tags

Option	Description
	on any day, except on days that you select in this column. *Worked Day* is a day on which time or time off is present. Days without time or time off don't count. If you select an average as the calculation in the threshold rule, Workday divides the quantity in the accumulator by the number of days worked.
Calculated Results	Specify the time calculation tags to add or remove time if a worker exceeds their threshold limit. Example: When a worker exceeds 160 hours in a month, you might want to add a calculation tag for overtime and remove a calculation tag for regular time. Workday displays the Calculation Priority value after you configure the time accumulator threshold rule priority. See Maintain Time Accumulator Threshold Rule Priorities on page 2772. Workday includes rules in the accumulated overtime calculation only if they have calculation tags. Workers should be eligible for only 1 accumulated overtime calculation. If a worker is eligible for more than 1, Workday runs the calculation with the lower priority.
Opt-In/Opt-Out Configuration	(Optional) Select the Allow Opt Out check box to enable workers to opt out of the rule and opt back in when necessary. This also enables managers to opt their workers out of the rule and opt back in when necessary. Set the minimum number of days notice required for workers to opt out or back into the rule. Enter values from 0-99 for: • Opt Out Notice Period (Days) • Opt In Notice Period (Days Click Configure Display Text to enter the policy text that Workday displays to workers when they opt out or into time accumulator threshold rules. Ensure that you configure the *Time Accumulator Threshold Rule Opt Out* and *Time Accumulator Threshold Rule Opt In* business processes to enable workers to opt out of the rule and opt back in, and to enable managers to initiate the process to opt workers out of and into the rules.

Option	Description
	Workday displays an Opt Out button beside the rule on the worker's Time Accumulator Rules report, or an Opt In after the worker opts out. Managers can use Opt Workers Into Time Accumulator Threshold Rules and Opt Workers Out of Time Accumulator Threshold Rules tasks to opt workers out and back into the rules.

The Next Level: All Things: Time Tracking 2023R2

Maintain Time Accumulator Threshold Rule Priorities

Prerequisites

Create time accumulator threshold rules.

Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

You can set the evaluation order for time accumulator threshold rules. Workday evaluates rules with a higher priority first and the output of each rule flows into the subsequent rule.

Steps

1. Access the Maintain Time Accumulator Threshold Rule Priorities task.

   You can view all of the time accumulator threshold rules in your tenant, across all rule groups where you've added or removed time calculation tags.
2. In the Priority column, enter a priority value for each rule.

Result

Workday displays the rules in priority order. You can also sort by threshold rule. When you set the priority for a rule, Workday displays the priority on the View Time Accumulator Threshold Rules report.

Create Accumulated Overtime Calculations

Prerequisites

- Create Time Calculation Groups on page 2760.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Context

You can create accumulated overtime calculations for evaluating time accumulator threshold rules for workers.

Steps

1. Access the Create Time Calculation task.

2. From the Calculation Type prompt, select *Accumulated Overtime Calculation*.
3. In the Groups tab, add time calculation group snapshots with the appropriate effective dates to specify which workers are eligible for the calculation.

Next Steps

Configure criteria for the calculation using the Create Time Accumulator Threshold Rules task.

Concepts

Concept: Effective Dating for Time Calculations on page 2796

Mass Assign Time Accumulator Threshold Rules

Prerequisites

Security: *Process: Mass Assign Time Accumulator Threshold Rules* domain in the Time Tracking functional area.

Context

You can assign multiple workers to time accumulator threshold rules. You can only assign workers that you support in a role-based security group. When you don't have a role that includes all the workers you want to assign, create a new role, and assign yourself to the top level of the organization.

Steps

1. Access the Mass Assign Time Accumulator Threshold Rules task.
2. From the Run Frequency prompt, select when to initiate the time accumulator threshold rules assignment for workers.
3. Enter a Start Date and End Date to configure the date range for calculating time accumulations for the workers.

   The maximum date range is 90 days. To calculate time accumulations for more than 90 days, run the task multiple times. Each time, specify a range of up to 90 days further in the past.
4. (Optional) Use filtering to find the workers and evaluate whether they're eligible for time accumulator threshold rules.

   When you don't filter by organization, the results include all active workers as of the current date in all organizations for which you have a security role.
5. (Optional) From the Worker prompt, select 1 or more workers.

Result

Workers can use the Time Accumulator Rules report to view all the time accumulator threshold rules that they're eligible for so that they can:

- Understand what calculations apply to their time.
- Opt out of or opt back into rules.

Concepts

The Next Level: All Things: Time Tracking 2023R2

Run Time Accumulator Calculations

Prerequisites

Create time accumulators.

Security: *Process: Mass Assign Time Accumulator Threshold Rules* domain in the Time Tracking functional area.

Context

You can retroactively run time accumulator calculations for workers who are eligible for a threshold rule as of a date range. Workday includes time entry units for workers towards eligible time accumulator threshold rules.

Steps

1. Access the Run Time Accumulators task.
2. From the Run Frequency prompt, select whether to initiate the time accumulator calculations for workers now or at a later date.
3. Enter a Start Date and End Date to configure the date range for calculating time accumulations for the workers.

   The maximum date range is 90 days. To calculate time accumulations for more than 90 days, run the task multiple times. Each time, specify a range of up to 90 days further in the past.
4. From the Time Accumulator prompt, select 1 or more time accumulators to run.

Example: Track Working and Overtime Restrictions Against a Threshold

This example illustrates how to use time accumulators to track time over long reference periods against a specified threshold. Workday can then tag time differently once workers exceed the threshold.

Context

Your organization wants to use time accumulators to track regular working time and overtime for workers in:

- The US: You want to create 2 time accumulators and a threshold rule to ensure that workers don't exceed the working time restrictions. When workers work more than 160 hours in a month, you want to tag their regular working hours as overtime.
- Canada: You want to create a time accumulator for flextime and a threshold rule.

Prerequisites

- Create time entry templates.

  See Steps: Create Time Entry Templates.
- Create time offs.

  See Steps: Create a Time Off.
- Create Worker Eligibility Rules for Time Tracking.
- Create an accumulated overtime calculation.

  See Create Accumulated Overtime Calculations.
- Create Time Calculation Tags.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Steps

1. Create a time accumulator for regular working time.
   a) Access the Create Time Accumulator task and enter:

Field	Value
Name	*US Working Time*

Field	Value
Add Time Calculation Tags	*Regular*
Time Day Based On	*Calculated Date*

b) Click OK and Done.

2. Create a time accumulator for overtime.
    a) Access the Create Time Accumulator task and enter:

Field	Value
Name	*US Overtime*
Add Time Calculation Tags	*Overtime*
Time Day Based On	*Calculated Date*

b) Click OK and Done.

3. Create a time accumulator for flextime.
    a) Access the Create Time Accumulator task and enter:

Field	Value
Name	*Flextime*
Add Time Calculation Tags	*Flextime*
Time Day Based On	*Calculated Date*

4. Create the time accumulator threshold rule for US workers.
    a) Access the Create Time Accumulator Threshold Rules task and enter:

Field	Value
Rule Group Name	*US Shift Workers*
Threshold Level 1 Warning Percent	*65*
Threshold Level 2 Warning Percent	*90*

b) In the rule grid, add a row with these settings:

Field	Value
Rule Name	*Working Time*
Time Accumulator	*US Working Time*
Worker Eligibility	*USA-CA - Time Template - In/Out - Shift*
Start Date	*11/01/2022*
Unit of Time	*Static Months*
Length	*1*
Calculation	*Total Quantity per Period*
Amount	*160*
Add Calculation Tags	*Overtime*
Remove Calculation Tags	*Regular*

c) Click OK and Done.

5. Create the time accumulator threshold rule for Canadian workers.
    a) Access the Create Time Accumulator Threshold Rules task and enter:

Field	Value
Rule Group Name	*Canada Workers*
Threshold Level 1 Warning Percent	*65*
Threshold Level 2 Warning Percent	*90*

    b) In the rule grid, add a row with these settings:

Field	Value
Rule Name	*Flextime Accumulation*
Time Accumulator	*Flextime Accumulation*
Worker Eligibility	*Global Exclusions - Time Template - Hours Only Non Project Workers*
Start Date	*10/01/2022*
Unit of Time	*Static Months*
Length	*3*
Calculation	*Total Quantity per Period*
Amount	*20*
Add Calculation Tags	*Flextime Paid at 1.25*

    c) Click OK and Done.

Reference: Time Accumulator Threshold Calculations

You can configure time accumulator threshold rules using different combinations of reference period and threshold calculations. The calculation options that you can select depend on the selection that you make for Unit of Time in the Reference Period on the Create Time Accumulator Threshold Rules task.

Calculation	Units of Time	Description
Average Quantity per Week	*Rolling Weeks* and *Static Weeks*	The total quantity in the period to date based on added or deducted calculation tags, or both, divided by the number of weeks in the period. For rolling periods, Workday calculates the denominator after first adjusting the period start and end dates. Example: During week 1 of a rolling period, the denominator is *1*. In week 2, the denominator is *2*, and so on, until the final week in the period. When new weeks occur in a rolling period, Workday drops the previous week and maintains the period length until the end date of the rule.

Calculation	Units of Time	Description
		For static periods, Workday uses the period length of the threshold rule as the denominator.
Average Quantity per Worked Day	• *Rolling Days* and *Static Days* • *Rolling Months* and *Static Months* • *Rolling Weeks* and *Static Weeks*	The total number of units in the period to date based on added or deducted calculation tags, or both, divided by the number of days in the period.
Average Quantity per Month	*Rolling Months* and *Static Months*	The total quantity in the period to date based on added or deducted calculation tags, or both, divided by the number of months in the period. For rolling periods, Workday calculates the denominator after first adjusting the period start and end dates. Example: During month 1 of a rolling period, the denominator is 1. In month 2, the denominator is 2, and so on, until the final number of months in the period. When new months occur in a rolling period, Workday drops the previous month and maintains the period length until the end date of the rule. For static periods, Workday uses the period length of the threshold rule as the denominator.
Total Accumulated Days	*Indefinite*	The total number of days worked to date based on added or deducted calculation tags, or both.
Total Accumulated Quantity	*Indefinite*	The total number of accumulated hours to date based on added or deducted calculation tags, or both.
Total Days per Period	• *Rolling Days* and *Static Days* • *Rolling Months* and *Static Months* • *Rolling Weeks* and *Static Weeks*	The total number of days worked in the period to date based on added or deducted calculation tags, or both.
Total Quantity per Period	• *Rolling Days* and *Static Days*	The total number of units in the period to date based on added

Calculation	Units of Time	Description
	• *Rolling Months* and *Static Months* • *Rolling Weeks* and *Static Weeks*	or deducted calculation tags, or both.
Average Quantity per Standard Day	• *Rolling Days* and *Static Days* • *Rolling Months* and *Static Months* • *Rolling Weeks* and *Static Weeks*	The total number of units in the period to date based on added or deducted calculation tags, or both, divided by the number of days in the period. Workday excludes any days or holidays that you select under Standard Week Excludes. For rolling periods, Workday calculates the denominator after first adjusting the period start and end dates. For static periods, Workday uses the period start and end dates to determine the denominator. After determining the period start and end dates, Workday calculates the standard working days in the date range by excluding the days and holidays that you select on the threshold rule.

Time Tracking Calculation Examples

Example: Calculate Double Time on Seventh Consecutive Day

This example illustrates how to set up a consecutive day calculation and a standard overtime calculation to meet specific requirements.

Context

Workers are paid overtime for hours worked on the seventh consecutive day of work in a workweek. They're paid double time if they work more than 8 hours on the seventh consecutive day.

Prerequisites

Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Steps

1. Create a consecutive day calculation that tags all hours worked on the seventh consecutive day as *Overtime*.
    a) Access the Create Time Calculation task.
    b) In the Name field, enter *Seventh Day*.
    c) From the Calculation Type prompt, select *Consecutive Day Calculation*.
    d) Click OK.
    e) In the General Options tab, specify the Criteria:

Field	Value
Consecutive Day Number (up to 9)	*7*
Time Calculation Tags	*Regular*

    f) Specify the Results:

Field	Value
Add Tags	*Overtime* *7th Consecutive Day*
Remove Tags	*Regular*
Time Day Based On	*Calculated Date*

    g) In the Groups tab, add a row to the grid with these values:

Field	Value
Time Calculation Group	*USA - Overtime Calculations*
Effective Date	*Current Snapshot*

    h) Click OK.
2. Access the Maintain Time Calculation Priorities task to assign this calculation priority 055.
3. Click OK and Done.
4. Create a standard overtime calculation that tags double time after 8 hours of work on the seventh consecutive day.
    a) Access the Create Time Calculation task.
    b) In the Name field, enter *Seventh Day Double Time*.
    c) From the Calculation Type prompt, select *Standard Overtime Calculation*.
    d) Click OK.
    e) In the General Options tab, specify the Criteria:

Field	Value
Period	*Daily*
Replace Hours Greater than	*8*
Time Calculation Tags	*7th Consecutive Day*

    f) Specify the Results:

Field	Value
Add Tags	*Double Time*

Field	Value
Remove Tags	*Overtime*

g) In the Groups tab, add a row to the grid with these values:

Field	Value
Time Calculation Group	*USA - Overtime Calculations*
Effective Date	*Current Snapshot*

h) Click OK.

5. Access the Maintain Time Calculation Priorities task to assign this calculation priority 057 so that it executes after the consecutive day calculation.
6. Click OK and Done.

Result

When a worker reports 6 hours of worked time on the seventh consecutive day of work, Workday creates a 6-hour calculated time block tagged with *Overtime* and *7th Consecutive Day*. If the worker reports 11 hours of worked time on the seventh consecutive day of work, Workday creates 2 calculated time blocks:

- An 8-hour block tagged with *Overtime* and *7th Consecutive Day*.
- A 3-hour block tagged with *Double Time* and *7th Consecutive Day*.

Related Information
Tasks
Create Consecutive Day Calculations on page 2736
Create Standard Overtime Calculations on page 2748
Assign Time Calculation Priorities on page 2758

Example: Calculate Location-Based Overtime

This example illustrates how to combine calculated fields and time calculations to support location-based overtime requirements.

Context

Nonresidents working in XYZ State, USA are eligible for XYZ State double time. Workers in XYZ State are paid double time after 12 hours of work in a day, whether they're residents of the state or not.

Prerequisites
Security:

- *Custom Field Management* domain in the System functional area.
- *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Steps

1. Access the Create Calculated Field task to create calculated fields that build on each other. You'll use the final calculated field in this step in the time block conditional calculation.
   a) Create a calculated field that returns a worker's default state.

Field	Value
Field Name	*Worker's Default State for a Time Block*
Business Object	*Time Block*

Field	Value
Function	*Lookup Related Value*

b) Click OK.
c) In the Calculation tab, specify these values:

Field	Value
Lookup Field	*Worker* Select the *Worker* option with the Time Block business object. View the related actions menu to verify the business object associated with a Worker option.
Return Value	*Primary Address - State/Province*

d) Click OK.
e) Click Create Another Calculation.
f) Create a calculated field that returns a worker's default state as of the time block date.

Field	Value
Field Name	*Worker's Default State for a Time Block as of Time Block Date*
Business Object	*Time Block*
Function	*Lookup Value as of Date*

g) Click OK.
h) In the Calculation tab, specify these values:

Field	Value
Source Field	*Worker's Default State for a Time Block*
Effective Date	*Calculated Date*

i) Click OK.
j) Click Create Another Calculation.
k) Create a calculated field that returns the state for the time block if a worker overrides the default state for the time block.

Field	Value
Field Name	*Override State for a Time Block*
Business Object	*Time Block*
Function	*Lookup Related Value*

l) Click OK.
m) In the Calculation tab, specify these values:

Field	Value
Lookup Field	*Location*

Field	Value
Return Value	*Primary Address - State/Province*

n) Click OK.
o) Click Create Another Calculation.
p) Create a calculated field that returns true if a worker's default location is in XYZ State or if a worker specifies the location for the time block as XYZ State.

Field	Value
Field Name	*Time Block Worked in XYZ State*
Business Object	*Time Block*
Function	*True/False Condition*

q) Click OK.
r) In the Calculation tab, create the true/false condition. Add these rows to the grid:

And/Or	(	Field	Operator	Comparison Type	Comparison Value	)
And	*(*	*Override State for a Time Block*	*is blank*			
And		*Worker's Default State for a Time Block as of Time Block Date*	*equal to*	*Value specified in this filter*	*XYZ State*	*)*
Or		*Override State for a Time Block*	*equal to*	*Value specified in this filter*	*XYZ State*	

s) Click OK and Done.

2. Create a time block conditional calculation using the calculated field *Time Block Worked in XYZ State* that you defined in the previous step. This calculation tags all time blocks worked in XYZ State with an *XYZ State* calculation tag.
   a) Access the Create Time Calculation task.
   b) In the Name field, enter *XYZ State Time*.
   c) From the Calculation Type prompt, select *Time Block Conditional Calculation*.
   d) Click OK.
   e) In the Criteria section, from the Time Block Conditions prompt, select *Time Block Worked in XYZ State*.
   f) In the Results section, from the Add Tags prompt, create an *XYZ State* time calculation tag.
   g) In the Groups tab, specify time calculation groups so that all workers are eligible for this calculation, not just XYZ State residents. Add a row to the grid with these values:

Field	Value
Time Calculation Group	*USA - Overtime Calculations*
Effective Date	*Current Snapshot*

   h) Click OK.
3. Access the Maintain Time Calculation Priorities task, and assign this calculation a priority of 080.

4. Click OK and Done.
5. Create an overtime calculation that calculates double time if a worker works more than 12 hours in a day, for both XYZ State residents and nonresidents who worked in XYZ State.
    a) Access the Create Time Calculation task.
    b) In the Name field, enter *XYZ State Double Time*.
    c) From the Calculation Type prompt, select *Standard Overtime Calculation*.
    d) Click OK.
    e) In the General Options tab, specify the Criteria:

Field	Value
Period	*Daily*
Replace Hours Greater than (value)	*12*
Time Calculation Tags	*XYZ State*

    f) Specify the Results:

Field	Value
Add Tags	*Double Time*
Remove Tags	*Regular*
Time Day Based On	*Calculated Date*

    g) In the Groups tab, specify time calculation groups so that all workers are eligible for this calculation, not just XYZ State residents. Add a row to the grid with these values:

Field	Value
Time Calculation Group	*USA - Overtime Calculations*
Effective Date	*Current Snapshot*

    h) Click OK.
6. Access the Maintain Time Calculation Priorities task to assign this calculation priority 085 so that it executes after the time block conditional calculation.
7. Click OK and Done.

Result

When nonresidents work in XYZ State, they must specify which time blocks they worked in XYZ State so that Workday includes the time blocks in the double time calculations.

Related Information
Tasks

Create Standard Overtime Calculations on page 2748
Create Time Block Conditional Calculations on page 2751
Assign Time Calculation Priorities on page 2758

Example: Calculate Minimum Rest Time

This example illustrates how to configure Workday Time Tracking to accommodate minimum-rest laws. This example uses a predictive scheduling configuration and a minimum-rest-time calculation.

Context

At your company in Oregon, state law defines a 10-hour rest period for workers between shifts. When a worker must work before the 10-hour rest period is over, they receive premium pay for the hours worked within the rest period. You also want to ensure that any hours worked during the 3-hour grace period don't qualify for the minimum-rest premium.

Ali works these hours:

In/Out	Time
In	1:00 PM
Out	3:00 PM
In	5:00 PM
Out	10:00 PM

You want to ensure that you pay Ali the minimum-rest premium for hours worked from the end of the grace period to the end of the minimum-rest period.

Prerequisites

- Create a Time Calculation Group named Oregon Calculations. See Create Time Calculation Groups.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Steps

1. Access the Create Predictive Scheduling Configuration task.
2. Enter these values:

Option	Description
Name	*Oregon*
Allowed Out Types	*Out*
Minimum Rest Hours after Last Out (up to 48)	*10*

3. Click OK and Done.
4. Create a minimum rest calculation using the predictive scheduling configuration that you created. The time calculation tags hours worked during the minimum rest threshold with the *Minimum Rest* time calculation tag.
   a) Access the Create Time Calculation task.
   b) In the Name field, enter *Oregon Minimum Rest*.
   c) From the Calculation Type prompt, select *Minimum Rest Calculation*.
   d) Click OK.
   e) In the General Options tab, specify the Criteria:

Field	Value
Predictive Scheduling Configuration	*Oregon*
Minimum Rest Grace Period after Last Out	*3*

   f) Specify the Results:

Field	Value
Add Tags	Create a *Minimum Rest Premium* time calculation tag.

Field	Value
Remove Tags	*Regular*

g) In the Groups tab, add a row to the grid with these values:

Field	Value
Time Calculation Group	*Oregon Calculations*
Effective Date	*Current Snapshot*

h) Click OK.

5. Access the Maintain Time Calculation Priorities task to assign this calculation priority 010.
6. Click OK and Done.

Result

Ali’s second check-in, at 5:00 PM, is during the minimum-rest grace period. On Ali's 5:00-10:00 PM time block, Workday tags only the hours from the end of the grace period to the end of the rest threshold with the *Minimum Rest Premium* calculation tag:

Worked Time	Tags
1:00-3:00 PM	*Regular*
5:00-6:00 PM	*Regular*
6:00-10:00 PM	*Minimum Rest Premium*

Create Minimum Rest Calculations on page 2740
Assign Time Calculation Priorities on page 2758

Example: Calculate Monthly Overtime

This example illustrates how to configure work schedule calendars and create standard overtime calculations to calculate overtime on a monthly basis.

Context

You need to pay workers in Japan overtime when they work more than 150 hours in a month.

Prerequisites

- Create a time calculation group named Japan Monthly Overtime. See Create Time Calculation Groups on page 2760.
- Security:
  - *Set Up: Calendar* domain in the System functional area.
  - *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Steps

1. Access the Create Work Schedule Calendar task.
   a) In the Name field, enter *Japan - Work Schedule - Hourly*.
   b) In the Time Tracking section, in the Configurable Calculation Period field, select *Month - Starting on Day 1*. Workday calculates overtime over this period.
   c) Click OK and Done.
2. Access the Create Time Calculation task.
3. In the Name field, enter *Monthly Overtime*.
4. From the Calculation Type prompt, select *Standard Overtime Calculation*.
5. Click OK.
6. In the General Options tab, specify the Criteria:

Field	Value
Period	*Configurable Period* This value is based on the period that you selected on the work schedule calendar.
Replace Hours Greater than (value)	*150*
Time Calculation Tags	*Regular*

7. Specify the Results:

Field	Value
Add Tags	Create a *Monthly Overtime* time calculation tag.
Remove Tags	*Regular*
Time Day Based On	*Calculated Date*

8. In the Groups tab, add a row to the grid with these values:

Field	Value
Time Calculation Group	*Japan Monthly Overtime*
Effective Date	*Current Snapshot*

9. Click OK.
10. Access the Maintain Time Calculation Priorities task to assign this calculation priority 910.
11. Click OK and Done.

Result

When a worker who belongs to the *Japan Monthly Overtime* calculation group works more than 150 hours in a month, Workday tags their hours over 150 with the Monthly Overtime calculation tag and calculates the hours as overtime.

Examples

Create Work Schedule Calendars

Example: Calculate Nevada Rolling Overtime

This example illustrates how to create standard overtime calculations to comply with Nevada overtime regulations.

Context

Nevada law requires companies to pay certain groups of workers overtime when they work more than 8 hours in a 24-hour period. You need to create a calculation that tags the appropriate hours as overtime.

Prerequisites

- Create a Time Calculation Group named Nevada Daily OT. See Create Time Calculation Groups.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Steps

1. Access the Create Time Calculation task.
2. In the Name field, enter *Nevada Rolling Overtime*.
3. From Calculation Type prompt, select *Standard Overtime Calculation*.
4. Click OK.
5. In the General Options tab, specify the Criteria.

Field	Value
Period	*Rolling 24 Hours* This setting disables the Include Scheduled Hours check box in the Advanced section.
Rolling 24 Hour Period Begins	*Start of Day*
Replace Hours Greater than (value)	*8* Workday calculates any hours greater than *8* as overtime.
Time Calculation Tags	*Regular* To include *Hours Only* time entries or time off in the overtime calculation, a 24-hour period must begin on that day.

6. Specify the Results.

Field	Value
Add Tags	*Overtime*
Remove Tags	*Regular*

7. In the Groups tab, add a row to the grid with these values:

Field	Value
Time Calculation Group	*Nevada Daily OT*
Effective Date	*Current Snapshot*

8. Click OK.
9. Access the Maintain Time Calculation Priorities task to assign this calculation priority 200.
10. Click OK and Done.

Concept: Rolling 24-Hour Periods on page 2800

Tasks

Create Standard Overtime Calculations on page 2748
Assign Time Calculation Priorities on page 2758

Example: Calculate the Majority of a Shift

This example illustrates how to configure Workday Time Tracking to create calculations to pay workers appropriately depending on when they work the majority of their shift.

Context

At your company, the majority of a worker's worked hours in a shift falls between 6:00 PM and 6:00 AM. Workers are paid a premium rate for their entire shift (called *Shift 2* in this example).

Prerequisites

- Enable a time shift option on the time entry templates of the workers to whom you want these calculations to apply. See Set Up Time Shift Options on page 2686.
- Security: *Set Up: Time Calculations* domain in the Time Tracking Calculations functional area.

Steps

1. Create a shift differential calculation to tag all hours worked between 6:00 PM and 6:00 AM as *Shift 2*.
    a) Access the Create Time Calculation task.
    b) In the Name field, enter *Shift 2 Hours*.
    c) From the Calculation Type prompt, select *Shift Differential Calculation*.
    d) Click OK.
    e) In the General Options tab, specify the Criteria:

Field	Value
Start Time	*6:00 PM*
End Time	*6:00 AM*

    f) In the Results section, from the Add Tags prompt, create a *Shift 2* time calculation tag.
    g) In the Groups tab, add a row to the grid with these values:

Field	Value
Time Calculation Group	*Full-Time Hourly Worker*
Effective Date	*Current Snapshot*

    h) Click OK.
2. Access the Maintain Time Calculation Priorities task to assign the calculation priority 045.
3. Click OK and Done.
4. Access the Create Calculated Field task to create calculated fields that build on each other. You use the final calculated field created in this step in the time block conditional calculation.
    a) Create a calculated field that returns true if a time block is tagged as *Shift 2*.

Field	Value
Field Name	*Time Block Has Shift 2 Calc Tag*

Field	Value
Business Object	*Time Block*
Function	*True/False Condition*

b) Click OK.

c) In the Calculation tab, create the true/false condition. Add this row to the grid:

And/Or	(	Field	Operator	Comparison Type	Comparison Value	)
And		*Calculation Tags*	*any in the selection list*	*Value specified in this filter*	*Shift 2*	

d) Click OK.

e) Click Create Another Calculation.

f) Create a calculated field that sums all the time blocks in a shift tagged as *Shift 2*.

Field	Value
Field Name	*Total Shift 2 Hours for a Shift*
Business Object	*Time Shift*
Function	*Sum Related Instances*

g) Click OK.

h) In the Calculation tab, specify these values:

Field	Value
Related Field	*Time Blocks for a Time Shift*
Instances where condition is true	*Time Block Has Shift 2 Calc Tag*
Field to Sum	*Calculated Quantity*

i) Click OK.

j) Click Create Another Calculation.

k) Create a calculated field that calculates the percent of time in a shift that is tagged as *Shift 2*.

Field	Value
Field Name	*% of Shift in Shift 2*
Business Object	*Time Shift*
Function	*Arithmetic Calculation*

l) Click OK.

m) In the Calculation tab, from the Field Type prompt, select *Numeric*.

n) Add these rows to the grid:

(	Field	)	Operator			
	Total Shift 2 Hours for a Shift		*/ (Divide)*			
	Total Reported					

(	Field	)	Operator			
	Hours for a Shift					

o) Click OK.
p) Click Create Another Calculation.
q) Create a calculated field that returns true if the majority of a shift was worked in *Shift 2*.

Field	Value
Field Name	*Majority of Shift Worked in Shift 2*
Business Object	*Time Shift*
Function	*True/False Condition*

r) Click OK.
s) In the Calculation tab, create the true/false condition. Add this row to the grid:

And/Or	(	Field	Operator	Comparison Type	Comparison Value	)
And		*% of Shift in Shift 2*	*greater than*	*Value specified in this filter*	*0.5*	

t) Click OK and Done.

5. Use the calculated field, *Majority of Shift Worked in Shift 2*, to create the time block conditional calculation. This calculation tags the entire shift with *Shift 2 Premium* if the majority of the shift was worked in *Shift 2*.
   a) Access the Create Time Calculation task.
   b) In the Name field, enter *Shift 2 Premium Hours*.
   c) For the Calculation Type, select *Time Block Conditional Calculation*.
   d) Click OK.
   e) In the General Options tab, from the Time Shift Conditions prompt, select *Majority of Shift Worked in Shift 2*.
   f) In the Results section, from the Add Tags prompt, create a *Shift 2 Premium* time calculation tag.
   g) In the Groups tab, add a row to the grid with these values:

Field	Value
Time Calculation Group	*Full-Time Hourly Worker*
Effective Date	*Current Snapshot*

   h) Click OK.
6. Access the Maintain Time Calculation Priorities task to assign this calculation priority 050.
7. Click OK and Done.

Result

Workday tags any reported time between 6:00 PM and 6:00 AM as *Shift 2*. If workers work the majority of their shift in *Shift 2*, they receive a *Shift 2 Premium* for their entire shift.

Example: Daily Evaluation of Worker Eligibility for Time Calculations

This example illustrates different scenarios on how daily evaluation of worker eligibility for time calculations supports midweek changes in worker eligibility.

Context

Your company has the following time calculation eligibility set up for non-exempt and exempt workers, taking into account when non-exempt workers work overtime:

The Daily Overtime calculation is configured to:

- Create a new time block for daily hours over 8.
- Replace the default Regular calculation tag for the new time block with the Daily Overtime tag.

The Weekly Overtime calculation is configured to:

- Create a new time block for weekly hours over 35.
- Replace the default Regular calculation tag for the new time block with the Weekly Overtime tag.

The day breaker is midnight. When a worker moves from the non-exempt workers to exempt workers time calculation group or the other way around, their eligibility changes and the time calculation snapshots they are eligible for change as well:

Effective Date	Time Calculation Group	Time Calculations
January 1, 1930	Non-exempt workers	• Daily Overtime (OT) > 8 Hours • Weekly OT > 35 Hours
January 1, 1930	Exempt workers	Paid Holiday

Example 1 - A worker is eligible for the same calculation snapshots for the entire week.

Tenant-level setting Run Time Calculation Eligibility Day by Day is not selected.

Day of the Week	Worked Time / Calculated Time Blocks
Monday, April 1	10 hours worked • 8 hours Regular • 2 hours Daily OT
Tuesday, April 2	10 hours worked • 8 hours Regular • 2 hours Daily OT
Wednesday, April 3	10 hours worked • 8 hours Regular • 2 hours Daily OT
Thursday, April 4	10 hours worked • 8 hours Regular • 2 hours Daily OT
Friday, April 5	10 hours worked • 3 hours Regular • 2 hours Daily OT • 5 hours Weekly OT

Day of the Week	Worked Time / Calculated Time Blocks
Saturday, April 6	
Sunday, April 7	
Totals	• Regular: 35 • Daily OT: 10 • Weekly OT: 5

The worker receives daily overtime every day and hits the threshold for weekly overtime on Friday, April 5.

Example 2a: A worker at your organization is promoted and moves from non-exempt to exempt status on April 6.

Tenant-level setting Run Time Calculation Eligibility Day by Day is selected and daily evaluation starts on April 1.

Day of the Week	Worked Time / Calculated Time Blocks
Monday, April 1	10 hours worked • 8 hours Regular • 2 hours Daily OT
Tuesday, April 2	10 hours worked • 8 hours Regular • 2 hours Daily OT
Wednesday, April 3	8 hours worked • 8 hours Regular
Thursday, April 4	8 hours worked • 8 hours Regular
Friday, April 5	8 hours worked • 3 hours Regular • 5 hours Weekly OT
Saturday, April 6 • Exempt status	8 hours worked • 8 hours Regular
Sunday, April 7	
Totals	• Regular: 43 • Daily OT: 4 • Weekly OT: 5

The worker hits the 35 hour weekly overtime threshold before their eligibility changes, the weekly overtime block is applied to Friday.

Example 2b: A worker at your organization is promoted and moves from non-exempt to exempt status on April 5.

Tenant-level setting Run Time Calculation Eligibility Day by Day is selected and daily evaluation starts on April 1.

Day of the Week	Worked Time / Calculated Time Blocks
Monday, April 1	10 hours worked • 8 hours Regular • 2 hours Daily OT
Tuesday, April 2	10 hours worked • 8 hours Regular • 2 hours Daily OT

Day of the Week	Worked Time / Calculated Time Blocks
Wednesday, April 3	6 hours worked • 6 hours Regular
Thursday, April 4	6 hours worked • 6 hours Regular
Friday, April 5 • Exempt status	6 hours worked • 6 hours Regular
Saturday, April 6	
Sunday, April 7	
Totals	• Regular: 34 • Daily OT: 4

The worker does not hit the 35 hour weekly overtime threshold before their eligibility changes.

Example 3 - A worker at your organization changes roles and moves from exempt to non-exempt status on April 6.

Tenant-level setting Run Time Calculation Eligibility Day by Day is selected and daily evaluation starts on April 1.

Day of the Week	Worked Time / Calculated Time Blocks
Monday, April 1	10 hours worked • 10 hours Regular
Tuesday, April 2	10 hours worked • 10 hours Regular
Wednesday, April 3	10 hours worked • 10 hours Regular
Thursday, April 4	10 hours worked • 10 hours Regular
Friday, April 5	
Saturday, April 6 • Non-exempt status	10 hours worked • 2 hours Daily OT • 8 hours Weekly OT
Sunday, April 7	
Totals	• Regular: 40 • Daily OT: 2 • Weekly OT: 8

When the worker gains eligibility to the 35 hourly weekly overtime calculation on Saturday, Workday considers all regular hours in the week and only modifies time blocks for days on which the worker has eligibility to the weekly overtime calculation.

2024R2 Feature Release Note: Effective Date Support for Midweek Changes in Time Calculations

Time Tracking Calculation Concepts

Concept: Time Calculations

Time calculations are rules that Workday uses to generate calculated time blocks from time blocks that workers report. When you create time calculations that are active as of a particular date, each effective-dated configuration is a snapshot of the time calculation. Workday Payroll and third-party applications can use calculated time blocks to pay workers using complex pay rules rather than paying the same rate for all time worked.

Example: When a worker enters 10 hours of worked time for a day, Workday creates a reported time block of 10 hours. Without time calculations, the 10 hours would pass to payroll without specific rules for payment. Adding a time calculation for overtime can split the original 10 hours into 2 calculated time blocks: 1 block for 8 hours of regular time, and another block for 2 hours of overtime so that payroll can pay for time at the appropriate rates.

You can delete a time calculation snapshot as long as it isn't used in calculated time blocks. Workday doesn't recommend deleting time calculation snapshots that belong to a time calculation group snapshot. If a time calculation becomes invalid, remove it from the time calculation group snapshot on the effective date that the calculation becomes invalid. This ensures that time calculation group snapshots with earlier effective dates still have all calculations that were valid at that time. Example: A time calculation becomes invalid on 2025-01-01. Create a new time calculation group snapshot with an effective date of 2025-01-01, and remove the invalid time calculation from it.

Calculation Types

You can configure these types of calculations:

- Accumulated Overtime
- Consecutive Day
- Flextime
- Holiday Time Block Create
- Minimum Daily Hours
- Minimum Rest
- Minimum Weekly Hours
- Override Rate
- Predictive Scheduling
- Schedule Deviation
- Shift Differential
- Standard Overtime
- Time Block Conditional
- Time Block Create

Each calculation type specifies a different set of conditions that must exist to:

- Create new time blocks.
- Add time calculation tags.
- Replace time calculation tags.

You can create more than 1 of each type of calculation. Example: You can create multiple standard overtime calculations, each with different thresholds, or other parameters.

To meet complex time tracking requirements, you can:

- Create your own calculated fields to use in time calculations.
- Use multiple calculation tags as criteria for executing a time calculation.
- Use time block conditional calculations to tag time blocks for use in other time calculations.
- Use time calculation priorities to apply a series of time calculations to time blocks.

Eligibility

Workers are eligible for time calculations through the time calculation group that they belong to. A time calculation group snapshot defines a set of time calculation snapshots. You can assign eligibility rules to workers to specify who is eligible for the group and consequently, that set of calculations.

When you select the Run Time Calculation Eligibility Day by Day check box on the Edit Tenant Setup - HCM task to evaluate worker eligibility for time calculations daily, the evaluation starts on the date you select in the Start Daily Evaluation on Date field. When you select daily evaluation, Workday only applies the calculations for the days on which the worker is eligible, different than the end of week eligibility.

Running Time Calculations

Workday automatically runs time calculations whenever you add or edit a worker's reported or calculated time. You can also:

- Configure your tenant to have Workday automatically run calculations when you approve a worker's time off request by selecting Run Calculations with Time Off Approval on the Edit Tenant Setup - HCM task.
- Manually run time calculations.

When time calculations run, Workday:

- Applies the default calculation tags assigned to the time entry code the worker used to enter time to the original reported time block.
- Generates calculated time blocks.
- Executes time calculations for active snapshots, adding and removing calculation tags from calculated time blocks based on:
  - The employee's eligibility for time calculations.
  - Time calculation priorities.
- Removes temporary calculation tags.
- Stores the resulting calculated time blocks.

Days Evaluated by a Time Calculation

Workday evaluates time blocks for the week, or for a single day in the week, to determine whether to run calculations. Workday evaluates time blocks within a 2-week period for biweekly time calculations. The biweekly calculation start date on the worker's work schedule calendar determines the 2-week period.

Overtime calculations respect the day breaker options defined for a worker's schedule.

Validations

Time calculations don't include Workday-delivered validations. You might have time tracking policies you can't automate with delivered calculation types. You can create validations to alert users that the entered time requires an adjustment.

Example: Performing Overtime Calculations

Scenario: The *Daily Overtime* calculation is configured to:

- Create a new time block for daily hours over 8 that are entered using the time entry code, *Worked Time*.
- Replace the default *Regular* calculation tag for the new time block with the *Overtime* tag.

The day breaker is midnight.

When Raj enters 10 hours of *Worked Time*, from 8:00 AM to 6:00 PM, Workday:

1. Applies the *Regular* calculation tag to the reported time block of 10 hours.
2. Creates a calculated time block for 10 hours tagged as regular.

3. Splits the 10-hour time block into 2 calculated time blocks:
   - 8 hours tagged as *Regular*.
   - 2 hours tagged as *Overtime*.

Pia enters 10 hours of *Worked Time*, from 3:00 PM to 1:00 AM on July 5. In this case, Workday:

1. Applies the *Regular* calculation tag to the reported time block of 10 hours.
2. Creates 2 calculated time blocks tagged as *Regular*: 9 hours for July 5 and 1 hour for July 6.
3. Splits the 9-hour time block into 2 calculated time blocks:
   - 8 hours tagged as *Regular*.
   - 1 hour tagged as *Overtime*.
4. Stores the 3 final calculated time blocks.
   - 8 hours tagged as *Regular* for July 5.
   - 1 hour tagged as *Overtime* for July 5.
   - 1 hour tagged as *Regular* for July 6.

2024R1 What's New Post: Effective Date Support in Time Tracking

Concept: Effective Dating for Time Calculations

You can create snapshots of your time calculations and time calculation groups that are active as of particular dates by using effective dating. Each effective-dated configuration is a snapshot of the time calculation or time calculation group.

Effective-dated time calculations support changes in legislation or company policy, ensuring accurate pay for workers. You can still adjust time or run retro payroll on historical periods. Workday uses the correct calculations for the period. Example: As of 2024-09-01, the State of Colorado requires that workers be paid overtime when they work more than 12 hours in a single day. The legislation goes into effect on 2024-09-01. You add an effective date to your overtime calculation to include Colorado employees as of 2024-09-01. When you adjust time or run retro payroll for periods before 2024-09-01, Workday uses the criteria in effect for those periods.

Workday automatically updates time calculations and time calculation groups that were created before the 2024R1 release on 2024-03-09 to have 1 snapshot with an effective date of 1930-01-01. When you edit an existing time calculation or time calculation group, Workday prompts you to edit an existing effective-dated snapshot or create a new effective-dated snapshot. Example: You have a Colorado Overtime time calculation. When you edit that calculation, you see an existing calculation snapshot with an effective date of 1930-01-01. You create a new snapshot with an effective date of 2024-09-01 and update the eligibility rule. You now have 2 snapshots of the same time calculation.

Time calculation effective dates are based on the worker time zone. Example: When you create a new snapshot with an effective date of 2024-03-08, the snapshot takes effect at 12:00 AM CST on 2024-03-08 for workers in the CST time zone.

When you run calculations for a historical time period, you must submit all time blocks for approval before you run payroll to avoid negative payroll results.

To compare configuration changes across snapshots, you can run the All Time Calculation Snapshots and All Time Calculation Group Snapshots reports.

Limitations

- You can't add effective dates to time calculations for statutory holidays in Canada.
- For predictive scheduling and accumulated overtime calculations, you can only add 1 snapshot.
- You can't create new time calculation group snapshots from time calculations on the Edit Time Calculation task.
- You can't use effective dating with iLoad and web services versions older than 42. iLoad templates version 42 and later have new columns to support effective dating.

Effective Dating and Eligibility

If you select the tenant-level Run Time Calculation Eligibility Day by Day setting, Workday evaluates worker eligibility for time calculations starting on the date you select in the Start Daily Evaluation on Date field. For each time calculation with multiple snapshots, Workday uses the snapshot that is current at the beginning of the day and applies the calculation criteria on that snapshot.

If you don’t configure daily evaluation of worker eligibility for time calculations, Workday evaluates time calculation eligibility at the end of the week. For each time calculation with multiple snapshots, Workday uses the snapshot that is current as of the end of the week and applies the calculation criteria on that snapshot to the entire week.

Time Calculation and Time Calculation Group Snapshot Deletion

You can delete effective-dated time calculations and their snapshots on the Delete Time Calculation task. To delete a single snapshot, use the Delete Time Calculation Snapshot task. If you delete a time calculation snapshot that's used in a time block, we recommend rerunning time calculations for that period.

You can delete effective-dated time calculation groups and their snapshots on the Delete Time Calculation Group task. To delete a single snapshot, use the Delete Time Calculation Group Snapshot task.

Copy of an Effective-Dated Snapshot

To create a new effective-dated snapshot with a different date but similar configuration, copy an existing snapshot. To copy effective-dated snapshots, use the View Time Calculation or View Time Calculation Group report.

Example: Add an Effective-Dated Time Calculation

In 2024, your company pays a shift premium between 11:00 PM and 6:00 AM. Starting in 2025, a new policy will come into effect so that workers will receive the premium between 10:00 PM and 6:00 AM. You create a future-dated time calculation with the Create Time Calculation task, and 2025-01-01 as the effective date, along with other necessary configurations.

Example: Add an Effective-Dating Time Calculation Group

Your organization has a predictive scheduling calculation included in the Generic Shifts calculation group. The current eligibility rule for the calculation group is for workers in California. When your organization opens a new store in Colorado on 2024-04-01, workers in Colorado need to be eligible for the predictive scheduling calculation. You create a time calculation group snapshot with the Edit Time Calculation task, and 2024-04-01 as the effective date, along with other necessary configurations.

2024R1 What's New Post: Effective Date Support in Time Tracking

Tasks

Steps: Set Up Calculations for Time Tracking on page 2734
Create Time Calculation Groups on page 2760

Concept: Time Calculation Tags

What Are Time Calculation Tags?

Time calculation tags identify time blocks so that you can:

- Perform calculations on time blocks.
- Pay time.
- Display time and time off totals on the time entry calendar.
- Include calculated time blocks in time off accrual calculations to accommodate compensatory time off in lieu of overtime.

Workers can see the time calculation tags associated with their calculated time through the time entry calendar.

How Are Time Calculation Tags Assigned to Time Blocks?

When you create a time entry code, such as *Worked Time*, you assign it one or more time calculation tags, such as *Regular*. When an employee enters *Worked Time*, Workday assigns the *Regular* tag to the calculated time blocks. You can also assign calculation tags to time offs in Workday Absence Management so that Workday can tag time off for use in calculations. However, calculation tags only apply to time off while calculations are actually running. Workday doesn't store calculation tags on the time off once calculation processing is complete.

When defining time calculations, identify:

- Which calculation tags time blocks must have to be subject to the calculation.

  Example: The overtime calculation only considers time blocks that have the *Regular* tag.
- Calculation tags to add or remove from calculated time blocks.

  Example: Add the *Overtime* tag to time blocks when a worker exceeds 8 hours in a day.

Considerations for Creating Time Calculation Tags

The number of tags you need depends on how you use them and the complexity of your time tracking policies. Consider how you identify time blocks for time calculations, payroll, totals, and time off accruals. What calculation tags do you want workers to see for calculated time blocks on the time entry calendar? How do calculation tags correspond to earnings?

Example: If workers are eligible for daily overtime and weekly overtime, do you want workers to see daily overtime differentiated from weekly overtime when viewing their calculated time? Are these hours paid with separate earnings? If the answer to either question is yes, create separate tags for daily overtime and weekly overtime.

Also consider whether you want to total calculated time blocks by category, such as productive time and unproductive time. In this case, you might create a calculation tag for each.

Work closely with your payroll administrator to determine which tags you need for payroll.

It's also a good idea to map out the sequence for executing time calculations when deciding how granular to make your tags. The sequence could affect the number of tags a time calculation has to add or remove from time blocks.

A basic set of time reporting tags might include:

- Regular
- Overtime

- Double Time
- Shift 1, 2, and 3
- Holiday

You might need tags for other types of pay or other characteristics of time that affect how you track and pay it, such as:

- Call Out
- Company Meeting
- Premium

Related Information
Tasks
Create Time Calculation Tags on page 2735

Concept: Flextime Bands

Flextime bands enable you to configure flexible work arrangements by creating time bands on work schedule calendars. You can:

- Create separate flextime bands for mandatory and flexible hours.
- Identify categories of worked hours by creating flextime calculations that add or remove calculation tags on flextime bands.

Flextime Band Category	Description
Core	Mandatory hours.
Flex	Flexible hours. All flex hours receive the same time calculation tag.
Morning Flex Evening Flex	Apply different calculation tags to hours entered before and after core hours or for any other time ranges you want to configure.

When you create flextime bands, you can:

- Create multiple bands of each category on the same day.
- Use them with patterns and events.

Flextime bands:

- Apply to ad hoc changes on worker schedules.
- Aren't visible on My Team's Schedule or View My Schedule tasks.
- Can cross midnight and day breakers.
- Can have different start times and end times on different days.
- Can’t be greater than 24 hours.
- Can't overlap.
- Don't apply to worker-specific work schedule calendars that you assigned using the Assign Custom Work Schedule task.

You require your workers to work weekends from noon to 4:00 PM. They must work 8 hours each day, and they can work the other 4 hours anytime between 9:00 AM and 8:00 PM. Configure 3 flextime bands:

Category	Days	Start Time	End Time
Morning Flex	Saturday, Sunday	9:00 AM	12:00 PM
Core	Saturday, Sunday	12:00 PM	4:00 PM
Evening Flex	Saturday, Sunday	4:00 PM	8:00 PM

2022R2 What's New Post: Flexible Time Bands for Time Calculations

Tasks

Create Flextime Calculations on page 2738

Concept: Rolling 24-Hour Periods

Overtime regulations in Nevada require that you pay certain workers overtime when they work more than 8 hours in a 24-hour period. When you create a standard overtime calculation that accommodates this requirement, Workday starts the period when a worker begins work. Workday ends the period 24 hours later. When a worker works more than 8 hours within the 24-hour period, Workday counts the additional hours as overtime, even if they occur the next day.

Example: A worker starts work at 9:00 AM on Monday. The 24-hour period begins with a check-in at 9:00 AM. They work for 8 hours, then leave for the day. On Tuesday, they start work at 7:00 AM. The 24-hour period doesn't end until 9:00 AM on Tuesday, so any hours they work between 7:00 AM and 9:00 AM count as overtime.

The 24-hour period continues to start at the same time for each subsequent day until the worker has a break in consecutive 24-hour periods. A break occurs if the worker starts work more than 24 hours after the start time of the previous day.

Workday evaluates the previous 14 days to determine when the 24-hour period starts. If a worker works more than 14 days without a break of more than 24 hours, Workday applies the start time of the day exactly 14 days before the current day.

At your company, hourly workers in Nevada are eligible for daily overtime if they work for over 8 hours in a 24-hour period.

You define an overtime calculation that accommodates this requirement. A worker enters time for the week. Workday calculates overtime hours according to the 24-hour period start and end time:

Day	Time Blocks	24-Hour Period Start Time	24-Hour Period End Time	Calculated Overtime Hours	Regular Hours
Monday	8:00 AM-12:00 PM (Meal) 1:00 PM-5:30 PM (Out)	Monday 8:00 AM	Tuesday 8:00 AM	0.5	8
Tuesday	7:00 AM-12:00 PM (Meal) 1:00 PM-5:00 PM (Out)	Tuesday 8:00 AM	Wednesday 8:00 AM	1	8
Wednesday	8:30 AM-12:30 PM (Meal) 1:30 PM-5:30 PM (Out)	Wednesday 8:30 AM (Period Resets)	Thursday 8:30 AM	0	8
Thursday	8:00 AM-12:00 PM (Meal) 1:00 PM-5:00 PM (Out)	Thursday 8:30 AM	Friday 8:30 AM	0.5	7.5
Friday	1:00 PM-6:00 PM (Out)	Friday 1:00 PM	Saturday 1:00 PM	0	5

Day	Time Blocks	24-Hour Period Start Time	24-Hour Period End Time	Calculated Overtime Hours	Regular Hours
Saturday	10:00 PM-2:00 AM (Out)	Saturday 10:00 PM (Period Resets)	Sunday 10:00 PM	0	4

Concepts

Example: Calculate Nevada Rolling Overtime on page 2787

Concept: Daily Evaluation of Worker Eligibility for Time Calculations

The tenant-level Run Time Calculation Eligibility Day by Day setting provides you the option to evaluate worker eligibility for time calculations daily, rather than applying end of the week eligibility. This supports midweek changes in worker eligibility. The tenant-level setting includes selecting when you want daily evaluation of eligibility to begin. When you select a date in the middle of the week, daily evaluation applies to the entire week.

When you opt-in to this feature, Workday automatically applies the appropriate time calculation and time calculation group snapshots. Time calculation snapshots will be evaluated daily. This means that override rate changes or other premiums can change midweek without an eligibility change.

For non-daily calculations, Workday evaluates the hours that meet the calculation criteria for the period of the calculation, but only persists changes to the calculated time blocks on days for which the worker is eligible for the time calculation snapshot.

This feature will have an impact on your tenant performance and should be considered based on your business requirements. We recommend that you set up the Country / Country Region prompt on the time calculation groups to limit the performance impact before you opt-in to this feature.

You can run the Time Calculation Debugger report in the alternate state of your tenant-level setting so that you can compare changes in calculation results. For example, when your tenant-level setting is set to daily evaluation, deselect the Evaluate Time Calculation Eligibility Daily check box so that you can review the report output based on end of week eligibility. The options you select when you run the Time Calculation Debugger report don't change your tenant-level setting, and the report output is not persisted.

Reporting

When you select the Run Time Calculation Eligibility Day by Day tenant-level setting, you can identify worker eligibility changes for time calculation and time calculation group snapshots using the Time Calculation Eligibility Changes report. Since we have removed the time-calculation-related columns on the Find Shift Blocks Crossing Weeks with Eligibility Changes and View Shift Blocks Crossing Weeks with Eligibility Changes Results reports, when you enable daily evaluation, you can no longer use them to track time calculation eligibility changes.

Reference: Edit Tenant Setup - HCM

Concept: Shift Crossing Weeks with Eligibility Change

Workday supports shifts crossing weeks by applying the correct calculations based on the shift date of the prior week or the calculated date of the current week.

The table below illustrates the calculation processing based on the calculated eligibility setup that you configure with the Run Time Calculation Eligibility Day by Day tenant-level setting on the Edit Tenant Setup - HCM task.

Run Time Calculation Eligibility Day by Day	Calculation Processing
Not selected	The time calculation eligibility continues to be resolved as of the end date of the week. If the effective date of a job change falls in the middle of the week, time calculations that haven't run yet are still derived from the worker's end date of the week.
Selected	Time calculation eligibility is evaluated day by day.

Example: Ben's work schedule calendar has *Sunday* as the start day of week, a midnight day breaker, and *Begin of Shift* shift option on his time entry template. He works a shift that starts on Saturday, 2024-09-14, at 9:00 PM, and ends on Sunday, 2024-09-15, at 6:00 AM.

For the week of 2024-09-08 to 2024-09-14, he is eligible for a Daily Overtime Calculation > 8 Hours, based on the shift date. He changes time calculation group eligibility on 2024-09-15 and becomes eligible for a shift differential calculation from 3:00 AM - 7:00 AM. His time block has a shift date of 2024-09-14 and a calculated date of 2024-09-15. The portion of the time block on 2024-09-15 is tagged with 1 hour of Overtime, respecting the shift date, and 3 hours of Night Premium based on the change in eligibility.

Reference: Edit Tenant Setup - HCM

Concept: Time Calculation Debugger

You can run the Time Calculation Debugger report (secured to the *Process: Time Calculation Debugger Task* domain) to:

- Troubleshoot a worker's time calculations over a period.
- Provide insight into how time calculations are applied to a worker's time.

When you select a date to run the report, Workday defaults the calculation date range based on the Work Week Start Day in the Time Tracking section of the work schedule calendar.

You can also configure the Time Calculation Debugger report to run in the alternate state of your tenant-level setting. This enables you to compare changes in calculation results. When you expand the Evaluate Time Calculation Eligibility Settings section, the Configure When to Evaluate Time Calculation Eligibility check box displays and defaults to your current Run Time Calculation Eligibility Day by Day tenant-level setting on the Edit Tenant Setup – HCM task.

The output of the Time Calculation Debugger report is based on the options you select:

Run Time Calculation Eligibility Day by Day	Configure When to Evaluate Time Calculation Eligibility	Evaluate Time Calculation Eligibility Daily	Output
Selected or *Not Selected*	*Not selected*	Not applicable	The report output is based on the tenant-level setting.
Selected	*Selected*	*Not selected*	The report output is based on end of week eligibility.

Run Time Calculation Eligibility Day by Day	Configure When to Evaluate Time Calculation Eligibility	Evaluate Time Calculation Eligibility Daily	Output
Selected	*Selected*	*Selected*	The report output is based on daily eligibility.

Note: The options you select when you run the Time Calculation Debugger report don't change your tenant-level setting, and the report output is not persisted.

On the output page of the Time Calculation Debugger report, you can view the time calculation details for all the calculations that are applied to the worker's time blocks including time calculation tags. You can also access the Worker's Time Eligibility report or the Time Calculation Eligibility Changes report to further troubleshoot.

Reference: Edit Tenant Setup - HCM

Concept: Calculated Time Offs

Calculated Time Offs and Absence Tables

Workday evaluates absence tables similar to time offs to determine whether to run time calculations. Although absence tables may have start and end times, Workday considers absence tables as hours only. This means that time calculations won't run for calculation types, such as shift differential calculations, when workers enter time off against absence tables, and calculated time off blocks won't be created.

Calculated Time Offs Crossing Midnight

Workers can submit time offs as a single request for a time off that's configured with start and end times when that time off crosses midnight. You can configure this on the time off. See Create Time Offs on page 2294.

A time off that crosses midnight only has a reported block. To create a calculated time block, you need to select the Enable Calculated Time Off check box on the time entry template. See Steps: Set Up Calculated Time Offs on page 2760.

Calculated Time Offs Crossing the Week Breaker

When you submit time, you need to submit the time off for both weeks for the time off to be submitted. As a manager, you'll notice separate tasks for both weeks. You need to approve both in order for the time off to be submitted. Time offs crossing the week breaker can be deleted from either week.

Note: The total reported time off hours displays in 1 of the tasks. The other task will display 0 reported hours even though there are calculated hours to approve.

When you review time, both weeks need to be approved for the time off to be approved. When you review time by week, the time off only displays in the week in which it starts.

When using high-volume time entry with Enter Time for Worker, time offs that cross the week breaker are only reflected in the week in which they start.

When you mass submit time, you need to mass submit for both weeks for the time off to be submitted.

When you adjust calculated time, calculated time offs that cross the week breaker are split based on the day breaker. Only the hours that fall into the date range for the task can be edited. You can navigate to an adjacent week to edit the remaining hours.

Calculated Time Offs and Locked Periods

Time entry, including time offs entered through Time Tracking, are restricted by the lockout date on the time entry period of the period schedule. When the period is locked, users can't edit, or enter new time blocks or time offs unless the user has access to the *Time Tracking: Exempt from Lockout* domain.

Time offs entered through Absence don't have this restriction. When you use Absence to enter a time off that falls into a locked time entry period, and the Enable Calculated Time Off option is selected on the time entry template, you need to rerun time calculations to get the correct calculated time off.

Shift Date for Calculated Time Offs

Calculated time off blocks receive a shift date when advanced shift is configured on the time entry template. When advanced shift is configured, the daily totals on the time entry calendar reflect the shift date. Time calculations that reference shift date also use this for calculated time offs.

A time shift can be defined with either:

- Only time worked.
- Only time off.
- Both.

Reported time offs don't have a shift date and aren't counted as part of a shift.

Reported time off blocks that cross midnight use the start date of the time off as the reported date.

2025R2 Feature Release Note: Updates to Calculated Time Offs

Time Attestations

Setup Considerations: Time Attestations

You can use this topic to help make decisions when planning your configuration and use of time attestations. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Time attestations are questionnaires that workers answer about their meals and breaks when they check out at the end of their shift. Workday can also generate attestations when workers check back in from a meal or break. After workers submit their attestation, you can report on their responses.

Business Benefits

Attestations make it easier for you to:

- Determine if workers are complying with company, state, or federal meal and break policies and regulations.

- Gather attestation responses without the need for managers to follow up with workers after the fact or outside Workday.

Use Cases

- A worker missed their scheduled meal. When they check out at the end of their shift, they can indicate whether they waive their meal. They can then add a comment explaining why they missed it.
- A worker works more than 6 hours without taking a break. When they check out at the end of their shift, Workday prompts them to explain why they exceeded their allotted time between breaks.
- A worker returns to work early from their meal. Workday prevents them from checking back in to work until the full duration of their meal is complete.

Questions to Consider

Questions	Considerations
Do you need to ensure that employees are taking their meals, breaks, or both?	You can create separate attestation rules for meal violations and break violations.
Do you need to warn workers when checking back in to work if their meal or break was too short? Do you need to prevent them from logging back in?	You can set up a critical validation that will prevent workers from checking back in to work when they don't take a long enough meal or break. You can also create warning validations that merely warn the worker rather than preventing them from checking back in.
Do you need to enable employees to waive their meals?	When you create attestation prompts and responses, you can indicate that certain responses are meal waivers.
Do you need to pay workers for meals they miss, but don't waive?	You can use Time Block Create calculations to generate penalty time blocks for workers who miss their meal, but don’t waive it.
Do you need to generate a questionnaire that displays at the end of a shift, but is unrelated to meals or breaks?	You can create a condition rule for use in end of shift attestations. When the condition is met, Workday displays the attestation questions you configured. If you use a custom condition rule, don't use a meal break rule set.

Recommendations

Create a custom report that managers can use to view workers' violations, attestation responses, and comments.

Requirements

- Time attestations are only available for the check-in and check-out time entry method.

Limitations

- This feature isn’t available for use with third-party time clocks.
- You can only generate meal length or break length validations when workers use the Out types of *Meal* or *Break*. The validation won't trigger for the Out type of *Out*.
- This feature isn't compatible with enabling workers to edit their check-in and check-out times.

Tenant Setup

No impact.

Security

Consider these domains in the Time Tracking functional area:

Domain	Considerations
Reports: Time Tracking	Configure to report on workers' meal and break violations, attestation responses, and comments.
Set Up: Time Tracking	Configure to set up attestations.
Worker Data: Time Calendar	Configure to view time blocks that have violations.

Business Processes

No impact.

Reporting

No impact.

Integrations

No impact.

Connections and Touchpoints

Features	Considerations
Time Calculations	You can use Time Block Create calculations to generate a penalty time block for workers who work through their meal or break.
Payroll	Set up Payroll so that workers are paid for additional time worked during their meal or break.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Steps: Set Up End of Shift Time Attestations

Prerequisites

- Create time entry templates.

  See Steps: Create Time Entry Templates .
- Enable Standard Mobile Check-In.

  See Steps: Enable Time Tracking for Mobile .
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

You can configure time attestation questionnaires that workers must complete at the end of their shifts to determine compliance with meal, break, or other policies. You base the questionnaire on a meal break rule set or on a time attestation condition rule. You can only configure this feature for workers who use the check-in and check-out time entry method on desktop or mobile devices. Validations for meals and breaks run only when workers check out for meals and breaks.

Steps

1. Access the Maintain Time Attestation Prompts and Responses task.

   Configure questions and answers that you can use in time attestation questionnaires. Complete the Time Attestation Prompts tab:

Option	Description
Require Comments	Select the check box to require workers to enter a comment along with their response to this prompt.
Description	Describe the prompt. Workday only displays the Description field to administrators.

   As you complete the Time Attestation Responses tab, consider:

Option	Description
Require Comments	Select the check box to require workers to enter a comment when they select this response.
Is Waiver	Select the check box to mark the response as a waiver.
Description	Describe the response. Workday only displays the Description field to administrators.

2. Create Rules for Meals and Breaks on page 2810.
3. (Optional) Access the Create Time Attestation Condition Rule task.

   Create condition rules that workers must meet to generate attestation requests. The time attestation condition rules use Workday-delivered, worker-level conditions in the Source External Field or Condition Rule prompt.
4. Access the Create Time Attestation Rule task.

   Select End of Shift Attestation. Complete the task:

Option	Description
Time Attestation Condition Rule	Select a time attestation condition rule when you don't want to base attestations on meal and break rule sets. Use condition rules to capture attestation responses to ensure that legal and contractual requirements are being met. Example: You want to confirm that workers weren't injured during their shifts.
Prompt Order	Configure the order in which Workday displays attestation prompts to workers.
Violations	Select the violations of the meal break rule set that generate the attestation request. When you select a time attestation condition rule rather than meal break rule sets, you don't need to select violations.

Option	Description
	You can select *Always Show* to configure an attestation that always displays, even when there are no violations.
Prompt	Select a prompt that Workday displays to the worker when: • Their shift meets the conditions for the rules that you configured. • Their shift includes one or more of the violations that you configured.
Additional Prompt Additional Response	You can configure an additional level of prompts and responses based on workers' responses.

5. Access the Edit Time Entry Template task.

   On the Noneffective-Dated tab, expand the Attestations section.

   a) (Optional) Select a Meal Break Rule Set to apply to the time entry template.

      Use a meal break rule set to base attestations on meals and breaks. You don't need to select a meal beak rule set when you configure a condition rule on the time attestation rule.
   b) In the End of Shift Attestations grid, add a row for each attestation rule you want to apply to workers with this time entry template.

Next Steps

You can create penalty time blocks for workers who waive or don't take their required meals or breaks. Create custom fields using these report fields on the Time Shift business object and use these custom fields in time block create calculations:

- Has Break Violations (Attestations)
- Has Conditional Violations (Attestations)
- Has Meal Violations (Attestations)
- Has Meal or Break Violations (Attestations)

Related Information
Concepts
The Next Level: Time Attestations

Steps: Set Up Meal and Break Validations

Prerequisites

- Create time entry templates.

  See Steps: Create Time Entry Templates .
- Enable Standard Mobile Check-In.

  See Steps: Enable Time Tracking for Mobile .
- Security: These domains in the Time Tracking functional area:
  - *Reports: Time Tracking*
  - *Set Up: Time Tracking*
  - *Worker Data: Time Calendar*

Context

You can comply with labor regulations by configuring validations that display when workers check in early from a meal or break, preventing them from checking in until the meal or break is complete. This feature is only available for workers who use the check-in and check-out time entry method on desktop or mobile devices.

Steps

1. Access the Maintain Time Attestation Prompts and Responses task.

   Configure a bank of questions and answers that you can use in meal and break validations.

   As you complete the Time Attestation Prompts tab, consider:

Option	Description
Prompt Text	Configure a question that Workday displays when workers check in from their meal or break. Example: Are you sure you want to check in early?
Description	Workday only displays the Description field to administrators.

   As you complete the Time Attestation Responses tab, consider:

Option	Description
Is Waiver	Select the check box to mark the response as a waiver.
Require Comments	Requires workers to enter a comment when they select this response.

   Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.
2. Access the Create Time Attestation Rule task and select Meal Length.

   Selecting Meal Length will also give you the option to configure validations for breaks.

   As you complete the Rule Definition section, consider:

Option	Description
Out Type	Select the out type that triggers the validation.
Duration in Minutes	Define the length of the meal or break. Workday displays the validation when the worker tries to check in before the full duration of the meal or break is met.
Severity Level	Select one of these severity levels: • *Critical*: Prevents the worker from checking in until their meal or break has met the duration of time. • *Warning - Reason not Required*: Workday displays a warning but allows workers to check in. • *Warning - Reason Required*: Workday displays a warning and requires workers

Option	Description
	to enter a reason before allowing them to check in.
Show time in prompt	When you select this check box, Workday displays the number of minutes remaining in the worker's meal or break.

Security: *Set Up: Time Tracking* in the Time Tracking functional area.

3. Access 1 of these tasks to apply the meal break validation to a time entry template:
   - Create Time Entry Template
   - Edit Time Entry Template

   a) On the Noneffective-Dated tab, expand the Attestations section.
   b) Select the meal or break rule you created from the Meal Length Rule field or the Break Length Rule field.

   Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Next Steps

(Optional) Create end of shift time attestations.

Related Information
Concepts
The Next Level: Time Attestations

Create Rules for Meals and Breaks

Prerequisites

Security: Either of these domains:

- *Set Up: Time Tracking* domain in the Time Tracking functional area.
- *Set Up: Scheduling: High Level Scheduling Settings* in the Workday Scheduling functional area.

Context

You can define rules for the number, length, and placement of meals and breaks within a shift to comply with legal or company regulations. You can then use the rules when configuring time attestations.

Steps

1. Access the Create Meal Break Rule Set task.
2. Add a row and enter details related to the length of the shift.
3. As you complete the Meal and Break Details, consider:

Option	Description
Meal Order Break Order	You can configure the order of meals and breaks within a shift.
Length (Minutes)	Enter the length of the meal or break.
Waiver Allowed	Select when your company policies allow the worker to waive their meal.

Option	Description
Rule	Select a placement rule that determines when the meal or break must occur within the shift. If you're using Workday Scheduling, we recommend you create meal placement rules that provide for 60 minutes of worked time and the placement of a break before the first meal. Example: When breaks are at least 15 minutes long, and a break begins at least 1 hour after the beginning of the shift, place the meal at least 2.25 hours after the beginning of the shift.
Hours	The number of hours that correspond to the placement rule you select.

Note: When you create placement rules that don't allow time for meals or breaks, managers receive an error message when they try to create schedules. Example: You create a rule for an 8-hour shift. The rule requires 1 meal that must be at least 4 hours after the beginning of the shift and at least 4 hours before the end of the shift. Workday enables you to create the rule, but the rule doesn't allow for the placement of the meal. When you use this rule in Workday Scheduling, Workday creates the schedule and displays a message warning about the missing meal.

Example

Workers must receive 2 15-minute breaks and 1 30-minute meal when they work between 8 and 10 hours in a shift. You want to configure:

- The first break to occur after the first 2 hours of the shift.
- The second break to occur before the last 2 hours of the shift.
- The meal to be at least 4 hours after the beginning of the shift.

You also want to enable workers to waive their meal.

1. Enter these shift values:

Field	Value
If Shift Is	*greater than*
Length (Hours)	*8*
And If Shift Is	*less than*
Length (Hours)	*10*

2. Select Meal and Break Details, and enter these meal values:

Field	Value
Length (Minutes)	*30*
Waiver Allowed	*Yes*
Rule	*Begins At Least X Hours After Beginning of Shift*
Hours	*4*

3. Add a row to the breaks grid, and enter these values for the first break:

Field	Value
Length (Minutes)	*15*
Rule	*Begins At Least X Hours After Beginning of Shift*
Hours	*2*

4. Add a second break row, and enter these values:

Field	Value
Length (Minutes)	*15*
Rule	*Begins At Least X Hours Before End of Shift*
Hours	*2*

Next Steps

Create end of shift time attestations.

Time Entry Validations

Create Time Entry Validations

Prerequisites

Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

Create validations to:

- Warn workers when entering, or prevent workers from submitting, invalid time entries.
- Alert reviewers to conditions that need more careful review.

You can also organize validations into groups so that Workday applies them to a more narrow group of workers. Grouping subsets of time entry validations improves the performance of tasks that check for validations.

Steps

1. Access the Maintain Time Entry Validations report.
2. Click the New Validation button for the severity of the validation that you need:
    - *Critical* errors prevent workers from submitting time entries.
    - *Warning* validations display to workers and approvers, but don't prevent time from being submitted or approved.
3. Enter a Description of the error or warning.

    Workday uses the description as the error or warning message if you don't enter custom validation text.

    As a best practice, use the Description field to explain the conditions that trigger the message. Create custom validation text for the message that workers see.

4. (Optional) Assign the validation a Category.

   Assigning a category makes it easier for you to find the rule later. You can use the Maintain Condition Rule Categories task to add or delete categories.
5. (Optional) To copy an existing validation and modify it, select the validation in the Copy Condition from Rule field.
6. For Rule Conditions, describe the conditions that must be met to generate the error or warning.

   You can reference Workday-delivered conditions, as well as your own custom calculated fields, in the Source External Field or Condition Rule field.

   Build all validation conditions in reference to one of these business objects:

   - *Time Block*
   - *Time Day*
   - *Time Month*
   - *Time Shift*
   - *Time Week*
   - *Worker*

   All the error conditions that make up a validation rule should reference the same Time Tracking business object. Example: Don't reference both the *Time Day* and *Time Week* business objects in separate conditions in a single validation rule. If a validation includes conditions based on different business objects, it will fail to generate a warning or error. Alternatively, you can separate error conditions into different validation rules.
7. Click OK.
8. (Optional) Access the Create Time Entry Validation Group task. On the Time Entry Validations tab, select the validations to include in this group.
9. (Optional) On the Eligibility tab, select one or more time entry template effective dates to include in the validation group.

   When a worker is assigned to a time entry template with validation groups, but the worker isn't eligible for any of the groups, Workday only runs ungrouped validations for that worker.
10. (Optional) On the Optional Filters tab, select 1 or more values from the Country / Country Region field.
11. (Optional) To add custom validation text, select Validation > Configure Validation Message from the related actions menu of a validation.

    Your message can include static text as well as dynamic values from report fields and calculated fields.

Result

When workers create a time entry that meets the conditions for the validation, they receive a warning or error message. If the workers receive an error message, they can't submit the invalid time entry until it's resolved. Managers and other approvers see any warnings in the time entries that they receive for review.

Example

Issue a warning when workers enter more than 8 hours for a day.	1. Access the Maintain Time Entry Validations report. 2. Click New Validation next to Warning. 3. In the Description field, enter: *More than 8 hours are reported for the day*. 4. (Optional) Select *Time Tracking* as the Category.

5. Enter these values:

Field	Value
Source External Field or Condition Rule	*Total Reported Hours for a Day*
Relational Operator	*greater than*
Comparison Type	*Value specified in this filter*
Comparison Value	*8*

Prevent workers from entering compensatory time when they haven't worked at least 40 hours in a week.

1. Access the Maintain Time Entry Validations report.
2. Click New Validation next to Critical.
3. In the Description field, enter: *Comp time is not allowed when reported hours are less than 40.*
4. Enter these values:

Field	Value
Source External Field or Condition Rule	*Total Reported Hours for a Week*
Relational Operator	*less than*
Comparison Type	*Value specified in this filter*
Comparison Value	*40*

Prevent workers from submitting time on days when they're on leave of absence.

1. Access the Maintain Time Entry Validations report.
2. Click New Validation next to Critical.
3. In the Description field, enter: *You can't enter time if already on leave on the same day.*
4. Add a row with these values:

Field	Value
And/Or	*And*
Source External Field or Condition Rule	*Total Reported Hours for a Day*
Relational Operator	*is greater than*
Comparison Type	*Value specified in this filter*
Comparison Value	*0*

5.

Field	Value
And/Or	*And*

Field	Value
Source External Field or Condition Rule	*Leaves for a Day*
Comparison Type	*Value specified in this filter*
Relational Operator	*is not empty*

Concepts

Create Calculated Fields

The Next Level: Calculated Fields for Time Calculations and Time Entry Validations

The Next Level: Time Tracking: Performance Best Practices

Concept: Time Entry Validations

What Are Time Entry Validations?

Time entry validations are warnings or errors that prevent workers from entering or submitting invalid time entries. During time entry, Workday runs validations after time calculations when a worker clicks OK to enter time. Validations help workers catch time entry errors before you run payroll. They can also be useful for prompting unique time entry policies not supported by time calculation templates.

Example: If managers only pay overtime when certain conditions are met, you can configure a validation message to notify employees and reviewers that a manual adjustment is required.

You can customize your validation messages by using text and dynamic values from report fields and calculated fields. Example: Your messages can include dates and worker names.

Validation Rules

You can create validations by building rules that describe the conditions necessary to generate an error or warning. You can use eligibility rules in validations, such as to create a validation for a certain population of workers. You can also build rules based on calculated fields you create or using Workday-delivered report fields based on these business objects:

- Time Block: Validate individual time blocks.
- Time Shift: Validate a group of consecutive time blocks.
- Time Day: Validate multiple time blocks entered for the same day.
- Time Week: Validate multiple time blocks in the same week.
- Time Month: Validate multiple time blocks in the same month.
- Worker.

The correct business object to reference in a validation condition depends on the type of information you want to evaluate. Examples:

- To generate an error when employees work over 12 hours in a day, you reference the *Time Day* business object in the condition rule.
- To generate a warning when employees work over 50 hours in a week, you reference the *Time Week* business object in the condition rule.
- You can use the *Leaves for a Day* report field on the *Time Day* business object in time-entry validations to prevent workers from submitting time on days when they're on leave of absence.

All the error conditions that make up a validation rule should reference the same Time Tracking business object. Example: Don't reference both the *Time Day* and *Time Week* business objects in separate conditions in a single validation rule. If a validation includes conditions based on different business objects, it will fail to generate a warning or error. Alternatively, you can separate error conditions into different validation rules.

Restricting Validations to Certain Workers

To create a validation for a certain population of workers, include eligibility rules within a validation condition. You can even reference eligibility rules created for other purposes.

You can also group validations by country using time entry validation groups so that you can apply them to a more narrow group of workers. Grouping subsets of validations improves how tasks that check for time entry validations perform. For workers eligible for a time entry validation group, Workday runs only the validations in that group. Workday runs all ungrouped validations for workers who aren't eligible for a time entry validation group.

When Does Workday Run Validations?

Workday runs validations at different points in the time entry process, depending on the time entry method and the type of validation. Workday runs business process validations when a worker submits time. Workday runs custom validations that you create using the Maintain Time Entry Validations task at different points based on the time entry method:

- High-Volume Time Entry and Enter Time by Week validate time during time entry, therefore workers can't save time entries with critical validations.
- All other time entry methods validate time when calculations run, and prevent submission of time entries with critical validations.

Concept: Incomplete Time Blocks

When workers save a time entry without an out time, Workday creates an incomplete time block. Workday doesn't include incomplete time blocks in time calculations.

You can create time entry validations to remind workers to complete their time blocks.

You can prevent workers from submitting incomplete time blocks by selecting Prevent Submission of Incomplete Time Blocks on time entry templates.

You can configure the Out field as optional on time entry templates so that workers can enter time at the beginning of their shift without needing to estimate an out time. This gives workers more flexibility when entering time and reduces the need to manually correct time entries. When you enable optional out times on time entry templates, Workday doesn't require workers to enter an out time on these time entry methods:

- Enter Time by Week
- High-volume time entry
- Micro-edit
- Quick Add

You can prevent workers from submitting incomplete time blocks by selecting Prevent Submission of Incomplete Time Blocks on time entry templates.

You can also create reports to identify incomplete time blocks before payroll processing. You can use these reporting items when creating validations or custom reports:

- Incomplete Time Blocks report data source (RDS).
- Incomplete Time Blocks for a Day report field on the Time Day business object.
- Incomplete Time Blocks for a Week report field on the Time Week business object.

Related Information
Concepts
Steps: Create Time Entry Templates on page 2672

Example: Validate Holiday Time Entry

This example shows you how to create a time entry validation that references different *business objects*.

Context

The *Holiday* time entry code should only be used when workers enter time for holidays. You need to create a validation that prevents workers from entering *Holiday* time for non-holiday days.

This validation needs to reference report fields based on different business objects. Because the rule conditions on the validations must all reference fields on the same primary business object, you need to create a lookup related value calculated field to reference the field on the other business object.

Prerequisites

- Create a holiday calendar.
- Create a time entry code called *Holiday*.
- Security:
  - *Set Up: Time Tracking* domain in the Time Tracking functional area.
  - *Custom Field Management* domain in the System functional area.

Steps

1. Create a lookup related value calculated field that references the Is Holiday report field from the Time Day business object.
   a) Access the Create Calculated Field task.
   b) As you complete the task, consider:

Field	Notes
Field Name	*Time Day is Holiday*
Business Object	*Time Block*
Function	*Lookup Related Value*
Lookup Field	*Time Day for a Time Block*
Return Value	*Is Holiday*

2. Create the time entry validation.
   a) Access the Maintain Time Entry Validations report.
   b) Click New Validation, next to Critical.
   c) In the Description field, enter: *Holiday Time Entry*.
   d) Define the Rule Conditions.

   As you complete the task, consider:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	*Time Entry Code*	*in the selection list*	*Value specified in this filter*	*Holiday*
And	*Time Day is Holiday*	*equal to*	*Value specified in this filter*	Leave the check box blank.

3. Add a validation message.
    a) Access the Maintain Time Entry Validations report.
    b) Select Validation > Configure Validation Message from the related actions menu of the *Holiday Time Entry* validation.
    c) As you complete the task, consider:

Text/External Field	Value
Text	"
External Field	*Time Entry Code*
Text	" can only be used for holidays. Select a different time entry code for the time block on
External Field	*Formatted Calendar Date for a Time Block*

Result

When a worker attempts to enter time using the *Holiday* time entry code on a day that is not a holiday (example: 2014-10-27), Workday displays this error message: *"Holiday" can only be used for holidays. Select a different time entry code for the time block on 2014-10-27*.

Period Schedules

Setup Considerations: Period Schedules

You can use this topic to help make decisions when planning your configuration and use of period schedules. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What They Are

A period schedule is a set of sequential periods of a standard length that Workday uses in:

- Workday Absence to determine accrual frequency for time off plans that track balances, and to define worker eligibility for a time off plan.
- Workday Payroll to determine how often you pay workers and the span of days that the payment is for. They also control forward accruals for accounting entries.
- Workday Time Tracking to control when users can enter and adjust work hours.

Business Benefits

You can set up multiple period schedules with different frequencies according to your business needs.

You can save time and improve efficiency by using:

- An EIB integration to create a period schedule, or to add periods to an existing schedule.
- The same period schedules for multiple Workday products.

Workday increases flexibility by enabling you to automatically adjust payment dates that normally fall on a weekend.

Use Cases

- Define the length and payment dates for different payroll cycles. Example: Set up a biweekly schedule for regular payroll, and an annual schedule for bonus payments.
- Set up matching time period and pay period dates to pay employees for time worked on the same dates covered by the pay period.
- Establish when workers can enter time worked, and when administrators can make adjustments to workers' hours, for each period.
- Define payroll cutoff dates to exclude one-time payments after a certain date each period.
- Integrate holiday calendars to automatically adjust pay dates and accommodate non-business days.

Questions to Consider

Questions	Considerations
How many different cycles for payroll, time tracking, and absence exist in your company?	You need to create at least 1 schedule for every pay and time tracking cycle. You can share schedules in Absence, Time Tracking, and Payroll when the time period and the pay period dates align. When they don't, create separate period schedules for each product and map each period to pay periods. In payroll, pay groups with the same pay cycle and pay dates can share a schedule. Example: Pay groups for hourly and contingent workers can share a biweekly period schedule.
Do you use Workday Payroll in more than 1 country?	You can use a period schedule for multiple countries. When needed, you can set a different payment date on a period for each country. Specify the date override before you make any payments for the period.
Do you track balances in your time off plans?	If your time off plan tracks balances, you can create a period schedule that matches the frequency that your workers accrue time off. Example: Workers accrue 2 time off days per month.
When do you want workers to enter their time for a period?	You can set dates for each period between which workers can enter time for the period.
How do you want your workers to accrue time off?	You can configure your period schedule so that your workers accrue their time off at: • The start or end of a period. • A customized frequency. You can also front-load accruals. Example: Workers accrue 5 sick days at the start of the year.
Does your company have a holiday calendar?	You can integrate your company's holiday calendar to automatically adjust pay dates and accommodate non-business days.

Recommendations

To save time and reduce duplication of effort, review the period schedules in your tenant before you create a new schedule. You might be able to reuse a schedule with the same frequency.

Altering the start and end dates for a payroll schedule can impact retro, proration, and FLSA pay calculations. Instead of changing the dates for a period, create a new pay group and move workers to the new pay group on the date the change occurs.

When you create period schedules for Time Tracking:

- Lock time entry when you need to calculate payroll.
- Close time entry no more than 3 months after the period end date.
- Define Absence and Time Tracking eligibility criteria that match the guidelines you use to assign employees to pay groups.

When building a schedule, add periods for the current and next year. Doing so enables workers to request time off for dates into the future. For optimal performance, Workday recommends you build period schedules no more than 2 years in the future from the current period. For customers using commitments, you can configure period schedules beyond 2 years.

Requirements

You need at least 1 period in each schedule with dates before the effective date of your first Workday Payroll or HCM transactions.

When you create a semimonthly period schedule, the first period of each month must end on the 15th to ensure accurate time tracking processing.

Limitations

Workday doesn't automatically adjust payment dates that fall on a statutory holiday.

You can't change the payment date or your accrual configuration for a period after you've calculated payroll for that period. Cancel the pay calculation, make the changes to the period schedule, then rerun the pay calculation.

Workday doesn't support using calculations that reference academic pay periods or disbursement plan periods in Absence calculation fields as they don't use Absence period schedules. See:

- Reference: Balance Calendars
- Set Up Academic Pay Period Calendar

When you generate period schedule periods to extend an existing schedule, you:

- Can only add periods for weekly, biweekly, semimonthly, monthly, and annual schedules.
- Can only add periods to period schedules that have less than 2 years of future periods already added.
- Need to edit the schedule to update the time tracking, payroll GL accruals, and payroll settlement date overrides information for generated periods.

Tenant Setup

No impact.

Security

Domains	Considerations
• *Set Up: Payroll (Pay Group Specific)* in the Core Payroll functional area.	Enable you to create and manage period schedules for payroll.

Domains	Considerations
• *Set Up: Payroll Interface* in the Payroll Interface functional area.	
Set Up: Period Schedule in the Project Tracking functional area.	Enables you to create and manage period schedules for projects.
Set Up: Time Off (Calculations - Absence Specific in the Time Off and Leave functional area.	Enables you to create and manage period schedules for time off plans.
Set Up: Time Tracking in the Time Tracking and Time Tracking Hub functional areas.	Enables you to create and manage period schedules for time tracking.

Business Processes

No impact.

Reporting

Reports	Considerations
Audit - Workers with Multiple Time Period Schedules	Enables you to identify workers who meet eligibility requirements for more than 1 Time Tracking period schedule.
Tenant Analyzer	Enables you to verify your period schedule setup against Workday recommendations.
View Period Schedule	After adding periods to a schedule, enables you to verify that dates are correct for all new periods.

Integrations

Integrations or Web Services	Considerations
Get Period Schedule	Retrieves period schedule information.
Put Period Schedule	Uploads a new period schedule or adds periods to an existing schedule.

Connections and Touchpoints

Features	Considerations
Continuous payroll calculation	You can set up a period schedule that enables you to automatically: • Run a full calculation to open each period. • Stop continuous calculations so you can complete final audits.
Pay groups	When you create a pay group, you select the period schedule that Workday uses for each run category.
Payroll accounting	Workday creates forward accruals when a pay period spans multiple accounting reporting periods.

Features	Considerations
Payroll calculation	Workday calculates payroll results for a specified pay period. For each pay group, complete payroll for a period before you calculate payroll for the next period.
Payslips	A payslip displays pay for the time period you define.
Time off plans	You can run Absence Management reports based on the period schedules. Workday uses the period schedule to: • Define worker eligibility for time off plans. • Determine the frequency of accruals for time off plans that track balances.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Related Information

Tasks

Set Up Period Schedules for Time Tracking on page 2822

Set Up Payroll and Time Tracking Period Schedules

Create Period Schedules for Time Off on page 2338

Create or Edit Period Schedule for Payroll Interface

Set Up Period Schedules for Time Tracking

Prerequisites

If using Workday Payroll and Time Tracking, determine whether to create shared period schedules.

Security:

- *Set Up: Period Schedule* domain in the Projects functional area.
- *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.
- *Set Up: Time Tracking* domain in the Time Tracking functional area.

(Optional) If you're using Workday Payroll (or third-party payroll systems) and Time Tracking to create shared period schedules:

- *Set Up: Payroll Interface* domain in the Payroll Interface functional area.
- *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll area.

Context

Create period schedules to define consecutive periods, such as weekly or monthly, for Time Tracking.

This topic describes how to manually set up period schedules for Time Tracking. You can also import period schedules from a spreadsheet using Workday's Enterprise Interface Builder (EIB).

Steps

1. Access the Create Period Schedule task.

2. Define the schedule:

Option	Description
Frequency	Examples: *Weekly*, *Bi-weekly*, or *Monthly*
Usage	Select *Time Tracking*.

3. Add a row for the first period in the schedule and enter the Period Start Date and Period End Date.
4. Specify the dates available for time entry.

   As you complete the task, consider:

Option	Description
Open Time Entry	The date and time that workers can begin entering time for the period. Leave empty if there are no restrictions. You can only run calculations on an open period.
Lock Time Entry	The date and time after which workers can no longer enter time or change time entries for the period. As a best practice, lock the period for payroll processing. You can make payroll administrators and other users exempt from the lockout so that they can make last-minute changes to time blocks during the initial lockout period. Exempt users must belong to a user-based or role-based security group associated with the *Time Tracking: Exempt from Lockout* domain.
Unlock for Adjustments	Select to unlock the period after payroll is complete so that you can enter and correct time for the period using either: • Workday Payroll retro pay calculations to automatically process corrections. • Manual adjustments.
Close Time Entry	The final close date and time for the period. Prevents all users from making additional time entries and corrections for the time period. When you select the Allow Project Transfer in Closed Periods check box on the Set Up Project Billing Configuration task, users can transfer project time blocks in closed time entry periods. Workday recommends that you select a date that is no more than 3 months after the period end date.

   Note: Period schedules always open, lock, unlock, and close in Pacific time.
5. Click OK.

6. Link time periods to pay periods and define eligibility for the time period schedule:
    a) From the related actions menu of the period schedule, select Period Schedule > Edit.
    b) Click the expand icon for the Time Tracking section.
    c) Select the corresponding pay period schedule in the Link to Payroll Period Schedule field.
    d) For Worker Eligibility, select all conditions workers must meet to have the schedule assigned.

        You can select from rules created with the Create Time Tracking Eligibility Rules task. Workers should be eligible for 1 time period schedule only. Review the Audit - Workers with Multiple Time Period Schedules report to identify workers who are eligible for more than 1 time period schedule. As a best practice, define eligibility criteria that match the guidelines you use to assign employees to pay groups.
    e) In the Periods grid, select the pay period that corresponds to each time period in the Link to Payroll Period field.

        The pay period determines the dates for which to pull time into payroll.
7. Define which workers are eligible for the period schedule for Time Tracking:
    a) From the related actions menu of the period schedule name, select Period Schedule > Edit.
    b) Click the expand icon for the Time Tracking section.
    c) For Worker Eligibility, select all conditions workers must meet to have the schedule assigned. Workers must meet all the conditions you define here to be eligible for the schedule.

        You can select from rules created with the Create Time Tracking Eligibility Rules task.

Result

When you save the period schedule, the Period Number column displays the sequential number assigned to each period that has a payment date in the same calendar year.

Next Steps

- Review the Audit - Workers with Multiple Time Period Schedules report for workers who meet eligibility requirements for more than 1 time period schedule.

    As a best practice, run this report periodically to ensure that workers have no more than 1 time period schedule.
- Use the Edit Period Schedule task, as needed, to update the period schedule.
- You can extend period schedules for up to 2 years using the Generate Period Schedule Periods task.

Set Up Project Billing Configurations

Concept: Period Schedules for Time Tracking

What Is a Time Period Schedule?

The time period schedule, in combination with the pay period schedule, determines when employees receive pay for time worked. It defines:

- The dates that are open for time entry.

    You can set lock dates to prevent employees from entering time while payroll is being processed.

- Which time entries (dates) to load for a pay period.

To enter time, an employee must have a time period schedule assigned.

Time period schedules don't determine the start and end dates of an employee's work week. By default, the work week begins on Sunday, unless the employee's work schedule specifies a different start date.

Time period start and end dates don't have to be the same as the pay period start and end dates. In addition, you can map multiple time periods to a single pay period. Example: You could map multiple weekly time periods to a semi-monthly pay period.

Considerations for Defining Period Schedules

How you configure period schedules depends on your payroll practices:

Time period and pay period dates match.	If you pay employees for time worked on the same dates covered by the pay period, Workday Payroll and Time Tracking can share the same period schedule. This scenario can be used to pay all time in arrears, where employees are paid all time worked several days after they've worked. Scenario: • The pay period is 2019-01-01 to 2019-01-14. • The payment date is 2019-01-21. • When you run payroll for 2019-01-01 to 2019-01-14, you want to pay time worked for the same dates. Solution: Create a period schedule that has a Usage of both *Payroll* and *Time Tracking*. Best practice: If weekly time periods align with weekly pay periods, create a shared period schedule that also coincides with the work schedule.
Time period and pay period dates don't match.	Use this method when regular time is paid through Payroll and non-regular time is pulled from Time Tracking on a lag. You can use this method to pay regular time current and non-regular time in arrears. Note: When you pay time on a lag, the payroll administrator must use the Run Retro Pay Calculation task before running payroll each period. This enables Workday Payroll to pay time for days outside the current pay period being processed. Scenario: • The payroll period is 2019-11-16 to 2019-11-30. • The pay date is 2019-11-30. • When you run payroll for this period, you want to pay time worked from 2019-11-11 to 2019-11-24 (a 2-week period). • You want to define weekly time periods so that you can lock out time periods at the end of each week to better enforce time entry.

Solution:

- Create a pay period schedule with a Usage of *Payroll*.
- Create a separate time period schedule with a Usage of *Time Tracking*.
- Link the period schedules by mapping:
  - The time period schedule to a pay period schedule.
  - Each time period to the corresponding pay period.

    Example: Map both the 2019-11-11 to 2019-11-17 and the 2019-11-18 to 2019-11-24 time periods to the 2019-11-16 to 2019-11-30 pay period.

How Are Period Schedules Assigned to Workers?

- Assign time period schedules to workers by selecting worker eligibility rules when defining time period schedules.
- Assign payroll period schedules to workers by linking period schedules to pay groups.

Worker Eligibility for Time Tracking

Create Worker Eligibility Rules for Time Tracking

Prerequisites

Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

To define worker eligibility, create rules you can assign to these Time Tracking components:

- Time code groups.
- Time entry templates.
- Time calculation groups.
- Time period schedules.

Workday provides many fields based on the *Worker* business object that you can reference in eligibility rules. For position-specific data, delivered fields on the *Worker* object usually reference a worker's primary position. To handle workers with multiple positions, you can either:

- Define conditions on the *Worker* object that reference all of a worker's positions.
- Define position-specific eligibility on the *Worker* object using a calculated field to extract a field from the *Position* object.

When you create eligibility rules for time code groups, you can also define position-specific eligibility on the *Position* object.

You can also create your own calculated fields to use in eligibility rules.

Steps

1. Access the Create Time Tracking Eligibility Rules task.
2. For the Description, enter the rule name.
3. In the Source External Field or Condition Rule, select a report field or calculated field.

   The type of report field or calculated field determines available options. Rules that reference fields based on the *Position* business object can only be used for determining eligibility for time code groups.
4. Select a Relational Operator.
5. For Comparison Type, specify whether to compare the source to another field or to a value you enter.
6. For Comparison Value, select a comparison field or enter the value to compare to the source.
7. Click + to add a row for another statement.
8. Use the arrows in the Order column to control the processing order for the statements.
9. When 2 or more logical statements exist, set the *And* or *Or* option at the beginning of each statement. This option controls how Workday uses the statement with the preceding line.
   - All conditions in an expression connected by *And* must be true for the expression to be true.
   - At least one of any of the conditions in an expression connected by *Or* must be true for the expression to be true.
10. Use the parentheses columns when there are 3 or more logical statements and a combination of *And*s and *Or*s.

    Example: To say (a and b) or c:
    - Use the opening parenthesis at the beginning of statement a.
    - *And* before statement b and a closing parenthesis at the end of statement b.
    - *Or* at the beginning of statement c.

Result

You can review the rule using the View Time Tracking Eligibility Rule report and assign it to the various Time Tracking components.

Example

To identify the set of time entry codes available to hourly workers in the U.S., create an eligibility rule called *Hourly Workers - U.S.*. Assign it to the time code group for hourly U.S. workers.

1. Complete these fields:

Field	Description
Condition Rule	*Hourly Worker - U.S.*
Description	*Hourly Worker - U.S.*

2. For Rule Conditions, enter:

Row	And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
1	And	Compensation Plans Effective	any in the selection list	Value specified in this filter	Hourly Plan
2	And	Location Address - Country	in the selection list	Value specified in this filter	United States of America

3. Access the Edit Time Code Group task for hourly U.S. workers and select *Hourly Worker - U.S.* in the Worker Eligibility field.

Next Steps

- Assign eligibility rules to:
  - Time code groups.
  - Time entry templates.
  - Time calculation groups.
  - Time periods.
- Review eligibility for a particular worker using the View Worker's Time Eligibility report.
- Delete an eligibility rule, if necessary, using the Delete Time Tracking Eligibility Rule task.

  You can't delete an eligibility rule that you assigned to any Time Tracking objects.

The Next Level: Overview of Primary Position Designation Impact

Concept: Worker Eligibility for Time Tracking

What Are Worker Eligibility Rules?

Time Tracking eligibility rules control a worker's ability to enter time by listing the conditions they must meet to be eligible for various Time Tracking components.

Example: An eligibility rule called *In/Out Workers* might specify that workers:

- Are hourly.
- Work in the company called Global Modern Services.

Eligibility for work schedules and holiday calendars, which other Workday applications share, aren't based on Time Tracking eligibility rules.

Assign worker eligibility rules to:

- Time code groups to identify which time entry codes a worker can use to enter time.
- Time entry templates to control the appearance of a worker's time entry calendar and its features.
- Time period schedules to identify the dates for which workers can enter time.

- Time calculation groups to identify the time calculations that apply to workers.

Each worker should be eligible for only 1:

- Time entry template
- Time period schedule
- Work schedule calendar

A worker can be eligible for multiple time code groups and calculation groups.

When Are Eligibility Rules Applied?

This table describes when Workday evaluates whether a worker meets the eligibility criteria for a Time Tracking component:

Component	When Must Worker Meet Eligibility?
Time entry template	On the last day of the week displayed on the time entry calendar (or the termination date of the worker if earlier). This applies to time shift settings and to time entry methods that record or populate time for multiple days at a time. Example: Auto-Fill from Schedule. On the day that time is being entered or populated. This applies to time entry methods that record or populate time for one day at a time. Example: Check In.
Time entry code (based on eligibility for time code group)	The default time entry code that Workday populates depends on how the worker records time. Examples: • When a worker checks in on a mobile device, Workday uses the eligibility for the default time entry code on the check-in date. • With Auto-fill from Schedule, Workday applies the default time entry code at the end of the week when autofilling the worker's time entries. You can't specify a date with this time entry method, so Workday uses the eligibility for the default time entry code on the last day of the week.
Time calculation (based on eligibility for time calculation group)	If you don't select the Run Time Calculation Eligibility Day by Day check box on the Edit Tenant Setup - HCM task, the worker must meet eligibility: • On the last day of the week displayed on the time entry calendar (or the termination date of the worker if earlier). • On the first day of the week, if the worker loses eligibility for all time calculation groups due to a midweek change. Example: A worker moves from being nonexempt to exempt. • For biweekly time calculations, the worker must meet eligibility on the last day of the

Component	When Must Worker Meet Eligibility?
	biweekly period (or the termination date of the worker if earlier). If you select the Run Time Calculation Eligibility Day by Day check box to evaluate worker eligibility for time calculations daily, the worker must meet eligibility on the date you select in the Start Daily Evaluation on Date field.
Time period schedule	On the last day of the week displayed on the time entry calendar (or the termination date of the worker if earlier).
Time entry validation group	For an object that is 1 day or less, Workday evaluates eligibility that day. For objects longer than 1 day, Workday evaluates eligibility on the last day of the time span. Example: For validations on an object that spans 1 week, Workday evaluates the eligibility on the last day of the week.

Concept: Daily Evaluation of Worker Eligibility for Time Calculations on page 2801

Concept: Effective Dating for Time Entry Templates on page 2698

Examples

Concept: Day Breakers

Create Work Schedule Calendars

Contributed Solution: Shifts Crossing Weeks with Eligibility Change in Time Tracking

Reference: Time Tracking Eligibility Reports

You can use the View Worker's Time Eligibility report (secured to the *Set Up: Time Tracking* domain) to view a worker's:

- Time entry templates.
- Time period schedules.
- Time calculation groups and time calculations.
- Time code groups and time codes.
- Work schedule calendars.
- History of work schedule calendar changes.

Workday displays the worker's eligibility information as of the:

- Date you select.
- Beginning and end of the period that date is in.

You can use the View Worker Time Eligibility by Organization report (secured to the *Set Up: Time Tracking* domain) to view the Time Tracking components for all workers in a specific organization.

You can use these audit reports (secured to the *Set Up: Time Tracking* domain) to identify setup issues or to validate eligibility changes you make:

- Audit - Workers with Multiple Time Entry Templates
- Audit - Workers with Multiple Time Period Schedules
- Audit - Workers with Multiple Work Schedule Calendars

Reference: Worker Eligibility for Time Entry Methods

Workday checks worker eligibility for time entry components based on the time entry method configured on the time entry template.

With these time entry methods, for all effective-dated fields except weekly totals, workers must meet eligibility on the day the time is reported:

- All public time entry web services and APIs.
- Check In/Check Out.
- Edit and Approve Time report.
- Enter My Time report.
- Enter My Time task.
- Enter Time.
- Enter Time by Week.
- Enter Time for Worker report.
- Enter Time for Worker task.
- Mass Enter Time report.
- Mobile Check In/Check Out.

With these time entry methods, for all effective-dated fields, noneffective-dated fields, and weekly totals, workers must meet eligibility on the last day of the week displayed on the time entry calendar (or the termination date of the worker if earlier):

- Add Time Clock Event
- Auto-Fill from Prior Week
- Auto-Fill from Schedule
- Edit Time Clock Event
- Enter Time by Type
- Mass Auto-fill from Schedule
- Quick Add

Time Tracking, Payroll, and Absence

Steps: Set Up Payroll to Pay Time

Prerequisites

Create time calculation tags.

Context

Configure Workday Payroll to retrieve and pay approved calculated time from Workday Time Tracking.

Steps

1. (Optional) Set Up Company Taxes by Location (USA).

   Set up tax location mapping to have Workday map reported locations from time blocks to tax authority worktags.

2. Set Up Payroll and Time Tracking Period Schedules.

   Map time periods to pay periods to define:

   - The dates for which workers can enter time.
   - The dates for which Payroll retrieves calculated time each pay period.
   - Lockout dates to prevent time entry while processing payroll.
3. Set up retro pay functionality.

   To process prior period time adjustments and to pay time on a lag, use the Run Retro Pay Calculation task before running payroll each period.

   See Steps: Set Up Retro Processing.
4. Configure Earnings to Retrieve Calculated Time on page 2832.
5. To have Workday Payroll retrieve values for custom worktags that are associated with hours, set the worktag usage to *Payroll*.

Result

During the Run Pay Calculation task, Workday retrieves the time periods. Workday then filters for approved calculated time blocks that have calculation tags that match the tags assigned to the earnings.

Concepts
Concept: Period Schedules for Time Tracking on page 2824
Create Time Calculation Tags on page 2735
Steps: Set Up Worktags for Time Entry on page 2708
Steps: Create Earnings
The Next Level: PATT Touchpoints Webinar

Configure Earnings to Retrieve Calculated Time

Prerequisites

- Set up payroll and time tracking period schedules.
- Set up retro pay functionality.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

Context

You can configure earnings to retrieve approved calculated time based on time calculation tags.

Steps

1. Access the Create Earning or Edit Earning task.
2. In the Worker Eligibility section, add eligibility criteria.

   To prevent payslips from showing a zero value for the earning when no approved hours exist, select *Timesheet Approved Hours for Earning <> 0*.
3. In the Calculation Details section, define Related Calculations to:

   - Aggregate hours that have the selected time calculation tags. Example: For an *Hourly Pay* earning, add a related calculation of *Hours (unprorated)*. For the Override Value select *Timesheet: Approved Hours for Earning for Sub-period*.
   - Use override rates in Payroll calculations, if you have configured time entry codes to accept override rates. Example: For an *Hourly Pay* earning, add a related calculation of *Rate*. For the Override Value select *Time Tracking: Override Rate for Time Block*.

4. On the Time section of the Effective Dated tab, specify which time to pay with the earning.

   Payroll only pulls time blocks that have the tags you select in the Time Calculation Tags column. Example: You select the *Overtime* time calculation tag. You can map the same calculation tag to more than 1 earning; however, you can't use the same hours in more than 1 net-to-gross result.

   In order for earnings to process time blocks, time blocks must have:

   - All the time calculation tags that you select in the same row, or
   - All tags specified in at least 1 row, if you define more than 1 row of tags.

Result

When you use the Run Pay Calculation task, Payroll retrieves approved calculated time that has calculation tags that match the tags assigned to the earnings.

Concept: How Payroll Processes Calculated Time

Integrating Workday Payroll and Time Tracking

Workday Payroll can pay employees for approved calculated time tracked through Workday Time Tracking. To configure the applications to work together, you must map earnings to time calculation tags and link time periods to pay periods.

How Workday Payroll Retrieves Time for a Pay Run

During the Run Pay Calculation task, Workday:

1. Retrieves the time periods mapped to the processing pay period.
2. Determines the dates for pulling in time based on the start and end dates of the mapped time periods.
3. Filters for approved calculated time blocks.

   If processing a subperiod, Workday looks for time on dates:

   - On or after the start date of the payroll subperiod.
   - On or before the end date of the payroll subperiod or the time period end date, whichever is earlier.
4. For the earnings, Workday retrieves approved calculated time that has calculation tags that match the tags assigned to the earnings.

Best Practices for Payroll Administrators

- Be sure that all corrections to time are approved before completing the retro pay calculation process. This prevents Workday from creating a negative retro difference for the time originally paid. Use these reports to identify workers with unapproved corrections to time blocks:
  - Retro Calculation Processing Report > View Retro Results
  - Retro Pay Calculation Results for Group of Workers
  - Retro Pay Calculation Results for Worker
  - Retro Pay Calc Result Audit Detail Report
- Use the Run Retro Pay Calculation task before each payroll:
  - To process prior period corrections.
  - When you pay time on a lag.

- Run payroll when the time period is locked.

  The time period schedule identifies lock dates during which workers can't enter time. Users with the appropriate security can change the lock date for a period if you need more time to complete the payroll.
- Recalculate payroll as necessary.

  Use the Run Pay Calculation task and select either Smart Calculation or Smart Calculation Based on Events (limited to time and time off entries).

Aggregating Time

Workday can pull details such as worktags and override rates from calculated time blocks into Payroll for costing and other purposes. Workday creates separate payroll result lines for each combination of worktags and override rates. If a worker has multiple jobs, Workday aggregates time blocks by position. You can set up aggregation on the Time Block Aggregation tab of the Maintain Pay Component Related Calculations for Aggregation task.

Using Override Rates

If configured for a time entry code, you can enter an override rate for a time block. If a time block has an override rate, the override rate is available to Workday Payroll and can be used in a payroll calculation. To use the override rate in a payroll calculation, use the *Time Tracking: Override Rate for Time Block* instance value calculation.

Concept: Time Tracking and Absence Management

Tracking Time Off

When you use both Workday Absence Management and Time Tracking:

- You can configure a time off so workers can request it using the *Request Time Off* business process or enter it through Time Tracking. You can also configure the time off so workers can use both options.
- Time offs entered through the *Request Time Off* business process display on the time entry calendar when workers submit them for approval.
- You can access the Request Absence task and Manage Absence report from the worker's time entry calendar only if you add security groups to 1 these initiating actions:
  - *Request Time Off for Self* and *Request Time Off for Worker* on the *Request Time Off* business process.
  - *Edit Time Off for Self* and *Edit Time Off for Worker* on the *Correct Time Off* business process.

Note: If you're using the legacy Absence Calendar, the tasks are called Request Absence and Enter Absence. Labels for related actions, reports, and report fields also use *Absence* instead of *Time Off*.

Including Time Off in Calculations and Totals	Use the Create Time Off task to assign time calculation tags to time offs that you want to include in: • Time calculations. • Totals that display at the top of a worker's time entry calendar.

Example: To count *Paid Time Off* hours as regular hours when calculating overtime, assign the *Regular* calculation tag to *Paid Time Off*.

Time off hours inherit calculation tags from the time off object. Time calculations don't add or remove any other tags.

Note: Once Workday includes a time off in a time calculation, no recalculation occurs if you then edit time off for that week. Use the Time Entry Re calculate report field in a business process or report to identify these situations. Then access the Enter Time for Worker task for the same week and click OK to execute the time calculations again.

Options for Entering Time Off

Method of Entry	Configuration	Approval Routing	Time Off Plan Balances
Time Tracking: Select the time off from the Time Type prompt when entering time. Time off and worked time is submitted and approved as 1 event.	Select *Enter through Time Tracking Only* on the Create Time Off page.	Controlled by the *Enter Time* business process. The business process event is created when you click OK.	Time off reduces the time off plan balance after approval. It updates the pending balance as soon as Workday saves it.
Absence Management: Access the Request Absence task or the Manage Absence report.	Select *Enter through Time Off Only* on the Create Time Off page.	Controlled by the *Request Time Off* business process. A separate time off event is created when you click Submit.	Time off reduces the time off plan balance after approval. If saved for later, Workday excludes it from the pending balance.

Method of Entry	Configuration	Approval Routing	Time Off Plan Balances
Both Time Tracking and Absence Management: Select the time off either from the Time Type prompt when entering time or through the Request Absence task or the Manage Absence report.	Select *Enter through Time Tracking or Time Off* on the Create Time Off page.	Controlled by either the *Enter Time* or the *Request Time Off* or *Correct Time Off* business process, depending on where the worker entered the time off.	Time off reduces the time off plan balance after approval. Visibility in the pending balance depends on which method the worker used to enter the time off.

Workday only permits 1 method of entry for each time off.

When deciding how you want workers to enter a particular time off, consider who must approve it and whether workers should request it ahead of time. Example: You might want workers to enter unplanned sick time through the Time Type prompt, and planned sick and vacation time through the Request Absence task. If you want managers to approve time off and worked time in the same event, use the *Enter through Time Tracking Only* option. You can also use the *Enter through Time Tracking or Time Off* option.

All time off, regardless of how workers enter it, is subject to the data entry validations configured in Workday Absence Management.

Time Off Configuration

Use the Create Time Off task to configure these fields:

- Time Calculation Tags
- Entry Option

Time offs and time entry codes that have the same calculation tags must use the same units.

Time Offs with Start and End Times	You can require workers to enter start and end times when they enter time off through Time Tracking and Absence Management. Use the Edit Time Off task to configure Start and End Time Required. Workday calculates the duration of the time off based on the start and end times the worker supplies. Workers can also correct start and end times using the Correct Time Off task. This task causes Workday to update the length of the time off.
Paying Time Off	Workday doesn't send any calculation tags to payroll for time off. To pay time off, map earnings to Absence Component Related Calculations (ACRC), not time calculation tags.

Accruals

You can base accruals defined in Workday Absence Management on a worker's calculated time. Example: You can create an accrual that entitles workers to compensatory time off instead of overtime.

- Assign calculation tags to the accrual to specify which time blocks to consider as a basis for compensatory time.
- For the accrual calculation, select *Calculated Time for Period for Accrual* (an instance value calculation).

  This calculation sums the hours for time blocks with the mapped calculation tags for the date range that corresponds to the accrual period. Another option is to create your own calculation that references *Calculated Time for Period for Accrual*. Example: Your calculation might return 2 hours of accrual for every 4 hours of overtime.

When Workday maps a calculation tag to an accrual, the accrual adds to the time off plan balance immediately upon saving or submitting the calculated time blocks.

Accrual Configuration	Use the Create Accrual task to configure these fields:
	• Calculation
	    • Note:You can only use the calculation Approved Calculated Time for Day for Accrual(an instance value calculation) if your accrual has expiration defined.
	• Time Calculation Tags
	    • Note: Accruals and time entry codes that have the same calculation tags must use the same units.

Adjustments, Overrides, and Corrections

Regardless of how workers enter time off, you can use these Absence Management tasks for adjustments and overrides:

- Correct Time Off

  Once time off has been approved, it can only be corrected using the Correct Time Off task.

- Maintain Accrual and Time Off Adjustments/Overrides
- Maintain Time Off Plan Override Balances
- Maintain Accrual and Time Off Limit Overrides

Leaves

Employees can enter and submit time through Time Tracking while they are on leave unless you create a time validation to prevent submission.

FAQ: Paying Time

How can we prevent employees from entering time when we're running payroll?	Enter lock dates on the time period schedule. See Set Up Payroll and Time Tracking Period Schedules.
Payroll is taking longer than we expected this pay period. Can we extend the lockout period for time entry?	Yes. An administrator with the appropriate security can change the lock dates for the time period schedule.
What happens if a worker has both time entries and payroll input for the same earning during a week?	Workday Payroll will process both and report the results on separate payroll result lines (payroll input doesn't override reported time). Example: If 40 hours of payroll input are entered for Lupe, and she enters another 3 hours through Time Tracking, 43 hours are processed.
How do I change the cost center or other worktag value entered for a worker's time after Workday Payroll retrieves the time?	As a best practice, use the Enter Time for Worker task to change the worktag value. Recalculate payroll to retrieve the corrected value.
What happens when time is entered after the payroll is complete?	To pay the time during the next on-cycle payroll, the payroll administrator should use the Run the Retro Pay Calculation task before running the next payroll.
What happens if time is corrected after it has been paid?	Correcting a paid time block changes its status to *Modified after Paid*. Workday Payroll will pick up the modified time block, after its approval, when you run the retro pay calculation process. Be sure all corrections are approved before completing the Retro Pay Calculation process to prevent a negative retro difference for the time already paid.

A worker who was eligible for overtime transferred midweek to a group that's not eligible for overtime. If he worked overtime hours before the transfer, will these be passed to payroll?	When you select the Run Time Calculation Eligibility Day by Day check box on the Edit Tenant Setup - HCM task to evaluate worker eligibility for time calculations daily, any overtime hours for the worker prior to the transfer will be automatically sent to payroll. When you don't select the check box, then not automatically. A worker must meet the eligibility requirements for the overtime calculation on the last day of the week for which time was reported. Since the worker did not meet eligibility criteria for the time calculation group at the end of the week, the overtime calculation is not executed. To enter overtime hours for the worker, use the Adjust Calculated Time task or make an adjustment in payroll.
Can more than one earning process the same hours?	Yes. However, you can't include the same hours in more than 1 gross-to-net result. Example: You can map time tagged as *Regular* and *Shift Differential* to both: • An *Hourly Pay* earning. • A *Shift Differential* earning. You can't include the same hours in a regular pay run and a separate bonus run.
We want workers to enter all hours through Time Tracking, but only want to pass exception hours to payroll for processing. Is this possible?	Yes. To accomplish this, don't map the calculation tag for regular hours to a payroll earning; only map the calculation tags for exception time to earnings.

How can I tell if a worker's time has been paid?	On the time entry calendar, Workday adds the word *Paid* to a reported time block after all related calculated time blocks are paid (after Payroll has a status of *Complete*).
	
	In addition, Workday delivers several report fields you can use in reports to determine how Payroll used time blocks. These report fields are based on the *Worker Time Block business object*:
	• *Payroll Status for Calculated Time Block*
	Possible statuses are:
	  ◦ Not Yet Pulled Into Payroll
	  ◦ Pulled into Payroll / Not Yet Completed
	  ◦ Payroll Completed
	  ◦ Modified After Paid
	• *Payroll Result for Calculated Time Block*
	• *Payroll Result Lines for Calculated Time Block*
	
	Use this report field, based on the *Payroll Result Line* business object, to see which time blocks were paid by a particular result:

	• *Time Block(s) for Result Line*
How do I figure out why an employee wasn't paid for some or all of his time?	Possible reasons include: • The earning isn't configured correctly. See Steps: Set Up Payroll to Pay Time on page 2831. • The worker didn't meet the eligibility requirements for the earning that is mapped to the time block. • The worker wasn't active during the pay period. • The worker has changed the time, but the change hasn't been approved yet. Check the time block history through the time entry.
Can time entries be paid by off-cycle payments?	Yes, time entries can be paid by replacement payments, but not by additional payments or manual replacement payments.
Is it possible to override the hourly pay rate when I enter time?	Yes. You can configure the time entry code to enable users to override the pay rate. You can also specify the currency of the override rate and restrict self-service users from entering override rates for their own time blocks. See Concept: How Payroll Processes Calculated Time on page 2833.

Time Management Hub

Steps: Set Up Employee Self-Service (ESS) Time Management Hub

Prerequisites

Note:

To use this feature, you must subscribe to one of these SKUs:

- Workday Time Tracking
- Workday Scheduling
- Workday Absence Management

If you want to purchase a SKU, contact your Customer Account Executive.

- For setting up hubs:
  - Security: These domains in the System functional area:
    - *Set Up: Tenant Setup – General*
    - *Set Up: Tenant Setup – Hub*

Context

The Time Management Hub is a customizable space that provides self-service workers with a single point of access to time management tasks and reports in one central location. You can configure the hub for your business needs by:

- Configuring announcements.
- Adding custom labels.
- Adding custom reports, dashboards, and tasks.
- Creating, reordering, and removing navigation items.

Workers have access to the hub's reports and tasks only if they have access to the domains that secure them. See Reference: Employee Self-Service (ESS) Time Management Hub for more information about the available reports and tasks in the Time Management Hub.

Steps

1. Edit Domain Security Policies.

   Configure the *Self-Service: Time Management Hub* domain security policy in these functional areas:

   - Time Off and Leave
   - Time Tracking
   - Scheduling
2. Set Up Hubs.

   Configure the Time Management Hub Overview page and the available items in the Navigation menu.

   Security: *Set Up: Tenant Setup – General* and *Set Up: Tenant Setup – Hub* domains in the System functional area.

Next Steps

You can hide legacy worklets in the global navigation menu for Time Tracking, Absence, and Scheduling tasks by removing user access to the following domains:

- *Self-Service: Worklets: Time Calendar and Scheduling* (Time and Scheduling - HVTE)
- *Self-Service: Worklets: High-Volume Time Entry and Scheduling* (Scheduling and Time and Scheduling - Calendar)
- *Self-Service: Worklets: Time Tracking* (Time - Calendar)
- *Self-Service: Worklets: Time Tracking High Volume* (Time - HVTE)
- *Self-Service: Worklets: Absence* (Absence)
- *Self-Service: Worklets: Time Off and Leave* (Time Off & Time Off and Leave)

Reference: Employee Self-Service (ESS) Time Management Hub

The Time Management Hub is a space for self-service workers to access time management tasks and reports in one central location.

You can configure the sections and cards that are accessible to workers from the Overview page of the Time Management Hub. By default, the Tasks and Reports section provides access to these commonly used time management tasks and reports:

- (Desktop Only) Request Absence
- (Desktop Only) Request Return from Leave of Absence
- Buy Time Off
- Sell Time Off
- (Desktop Only) Time Requests
- (Mobile only) Check In/Out

These cards also display by default on the Overview page:

Card	Security	Description
Time Clock	*Self-Service: Time Clock (Modify)*	Check in and check out on desktop.
Enter My Time (Desktop) Enter My Time (Mobile)	*Self-Service: Time Calendar (View)* *Self-Service: Time Tracking High Volume Enter Time (Modify)*	Enter time using the Time Entry Calendar (for users with access to the *Self-Service: Time Calendar* domain) or the High Volume Time Entry task.
Submit Time	*Self-Service: Time Tracking High Volume Submit Time (Modify)*	Enables high-volume time entry users to submit time. You have the option to submit only if you have unsubmitted time.
My Expiring Accruals	*Self-Service: Time Off Balances (View)*	Manage and track time off accruals that are expiring soon. Values displayed are as of today's date.
Absence Balances	*Self-Service: Time Off Balances*	View available time off balances as of today's date. Workday recommends hiding this card on the Maintain Hubs task when the Disable Absence Worklet Balances option is enabled on the Edit Tenant Setup - HCM task.
Upcoming Shifts	*Self-Service: View Schedule (View)*	View upcoming published scheduled shifts. This card only displays schedule information from Workday Scheduling.

The configurable Time Management Hub navigation menu enables easy access to additional relevant tasks and reports:

- My Schedule
- My Work Availability
- Open Shift Board
- My Team's Schedule
- Manage Absence
- (Desktop only) Time Clock History
- (Desktop only) Review My Time by Week
- (Desktop only) My Absence

To use the Time Management Hub, your organization's product subscriptions must include at least one of these SKUs:

- Workday Time Tracking
- Workday Scheduling
- Workday Absence Management

Entering and Correcting Time

Enter Time for Worker Using Calendar-Based Time Entry

Prerequisites

- Assign the worker a:
  - Time entry template.
  - Time period.
- Ensure the dates for which you're entering time aren't locked in the time period schedule.
- Security: *Worker Data: Time Calendar* domain in the Time Tracking functional area.

Context

Managers can enter time or edit existing time entries for workers using the time entry calendar. The appearance of the time entry calendar can vary depending on the template assigned to the worker. You can configure the calendar to display automatically in a weekly view or monthly view, and can give managers the ability to select the view they prefer. You can also enable managers to switch to a view that matches a worker's Time Tracking period schedule. Workers can enter and edit their own time using the Enter My Time report, which displays the same calendar views you configure for managers. Workers always enter and view time in their time zone.

You can also use the *Import Reported Time Blocks* web service to add time blocks from a third-party source.

To enter or edit time clock events for a worker, use the Time Clock History report.

Steps

1. Access the Enter Time for Worker report.
2. Click Actions.

   Depending on the security configuration on the *Enter Time* business process and the worker's time entry template, you might have several alternate time entry options. Alternate options include *Auto-fill from Prior Week* and *Quick Add*. You can also click directly on the time entry calendar to add a single time block or on an existing time block to edit it.
3. Select a Time Type.

   Time types can include time entry codes, projects, and time offs. The worker's eligibility for time code groups determines which time entry codes are available.
4. Enter the number of hours for the time block or the in or out times.
5. If the worker has more than 1 position, select a Position for the time block.
6. (Optional) Click Details to add values to worktags on the time block or to override the pay rate for the time block.

Result

Workday updates the worker's time entry calendar with your changes.

Next Steps

- Submit the worker's time if you deleted approved time blocks or time blocks that impact time calculations, such as overtime. Otherwise, you don't need to submit.

- (Optional) If necessary, force the *Enter Time* business process to advance to the next step or to completion. You can't manually advance your own time entries.
    - Use the Mass Advance Business Process task to manually advance all events for a time period, worker, or date range.
    - Use the Mass Operation Management task to advance all events for a specific list of workers captured by a custom report.

Related Information

Concepts

Concept: Business Process Management

Concept: Enter Time by Period on page 2871

Steps: Create Time Entry Templates on page 2672

Adjust Calculated Time on page 2858

The Next Level: Overview of Time Tracking

2021R2 What's New Post: Time Tracking Monthly Calendar

Enter Time for Worker Using High-Volume Time Entry

Prerequisites

- The worker you are entering time for must be assigned a:
    - Time entry template.
    - Time period.
- Enter dates that aren't locked in the time period schedule.
- Security: *Worker Data: Time Tracking High Volume Enter Time* domain in the Time Tracking functional area.

Context

Managers can enter and edit time on a worker's behalf using high-volume time entry. They can Auto-fill from Prior Week if the worker's time entry template and the *Enter Time* business process security policy are configured for this. With some configurations, workers can enter and edit their own time using high-volume time entry with the Enter My Time task.

Steps

1. Access the Enter Time for Worker task.

   Workday generates time block rows based on the default in/out patterns on the worker's time entry template.
2. As you complete the task, consider:

Option	Description
Time Type	Workday bases the available time entry codes on the worker's eligibility for time code groups.
Out Reason	Workday bases the available out reasons on the configuration of the worker's time entry template.
Worktags	Workday bases the available worktags on the configuration of the time block's time entry code and the worker's time entry template.

Result

Workday updates the worker's time entry calendar with your changes.

Next Steps

- If necessary, force the *Enter Time* business process to advance to the next step or to completion. You can't manually advance your own time entries.
  - Use the Mass Advance Business Process task to manually advance all events for a time period, worker, or date range.
  - Use the Mass Operation Management task to advance all events for a specific list of workers captured by a custom report.

Related Information

Concepts

Concept: Business Process Management

Steps: Create Time Entry Templates on page 2672

Adjust Calculated Time on page 2858

Reference: Time Entry Options on page 2876

Enter Time for Worker Using Enter Time by Type (New!)

Prerequisites

Set up a time entry template.

See: Set Up Time Entry Templates for Enter Time by Type (New!) on page 2692

Security:

- *Process: Put Reported Time Blocks for Worker* domain in the Time Tracking functional area or the Time Tracking Hub functional area.
- *Self Service: Time Calendar* domain the Time Tracking functional area.
- *Worker Data: Time Calendar* domain in the Time Tracking functional area or the Time Tracking Hub functional area.

Context

You can configure time entry to enable workers and managers to quickly search for and enter time by project type.

Steps

1. Before you can access the Enter Time by Type (New!) task, set up security groups on the *Process: Put Reported Time Blocks for Worker* domain.

   See Edit Domain Security Policies in the Workday Administrator Guide.
2. Access the *Enter Time* business process.

   From the related actions menu of the *Enter Time* business process, select View Business Process Security Policy > Enter Time by Type (New!). Select the security groups that can access the task.
3. Access the Enter My Time task to enter time as an ESS.
4. (Optional) Access the Enter Time for Worker task to enter time as an MSS for a worker.
5. From the Actions prompt, select *Enter Time by Type (New!)*.
6. From the Time Type prompt, enter text to search for a project.
7. (Optional) Click Expand Search to launch the Enter Time by Type (New!) side panel and enter text to search for and select frequently-used projects to bookmark for quick access. A project that you

bookmark can appear as a Time Type prompt. You can remove a bookmark when it is no longer relevant.

Workday displays the projects used most recently when the side panel loads as the default view before you start your search.

You can search by full or partial names for:

- Project name
- Project plan task

Example: Enter MMM to display a list of all project names, project phases, and project plan tasks that include MMM. Workday sorts the search results alphabetically by customer, project name, project phase, and project task based on the configuration.

Search results appear on the All tab and bookmarked projects appear on the Bookmark tab.

When the search engine reaches the maximum number of results, refine your search to see relevant results. Workday runs an eligibility check on all search results and displays results only to workers who are eligible to search.

8. Select the projects to display on the Enter Time by Type (New!) grid.

   Projects display by customer name, project name, and project phase.
9. For each project, enter the time worked each day in the rows that you can edit. To make the process of entering time more efficient, you can:

   - Copy and paste numbers in the grid to single or multiple cells in the gird. You can also copy time quantity data from Excel or other external source and paste it to single or multiple cells in the grid. Time quantities must be valid numerical values. This action only copies the Time Quantity. It doesn't copy details such as worktags or comments.
   - Click Actions to copy Time Types from the prior week to the grid. This doesn't override existing time blocks and doesn't copy details such as worktags or comments.
   - Search for and add Time Types to the grid.
   - Filter the view of Time Types that you want to display in the grid.
   - Expand, collapse, and delete rows. Click Update after you delete a row to have the deletion take effect.

   You can't edit a time block on the grid or in the side panel when a cell:

   - Displays a system-generated block such as Paid Holiday.
   - Displays an In/Out block that allows In/Out Only as the entry method.
   - Displays a time off block with an absence time type.
   - Is on a date that is locked per the period schedule.
   - Is restricted from future entry per the Time Entry Code,
   - Is restricted from future entry per the Project Hierarchy Time Entry Code setting.
   - References more than 1 block of time of the same time type.
   - Isn't editable because you are no longer eligible for a project or project plan task.
   - Is tied to a billable transaction that is being invoiced.

   Note: You can only make edits for multiple time blocks in a day in the side panel.
10. Click Update to save time entered. Workday doesn't save time blocks if you leave the grid without clicking Update.

11. Click the pencil icon to edit details of time in the side panel. The options are:

    - Time Quantity.
    - Comment.
    - Worktags, which include default worktags for your configuration. Workday evaluates worktags daily to account for mid-week changes.
    - Position, which applies to workers with multiple positions and depends on your configuration.
    - Project Role, if configured to be visible to workers.
    - Do Not Bill, if configured to be visible to workers.

    On the side panel, you can:

    - Edit time blocks by clicking the Pencil icon. When you add a new time block, the default time quantity displays. This doesn't happen when you add a new time block on the grid. An administrator must configure the default time quantity in the time entry code for it to display in the side panel.
    - View details by clicking the Note icon. You can see details of Workday generated time blocks such as paid holidays or minimum hours worked.
    - Add or Remove individual time blocks.
    - Display the Time Block status.

    When you click Save on the side panel, Workday runs calculations and system validations to create time blocks. You must resolve any errors before you can save on the side panel.
12. Click Update to run calculations and validations for the time blocks entered in the timesheet grid. After the calculations run, Workday updates the weekly summary.

    You can run calculations to get daily totals of hours in the grid and weekly totals of hours in the grid, depending on how you set up the Time Entry Template. See Set Up Time Entry Templates in the Workday Administrator Guide.

    When you click Update, consider:

Condition	Behavior
Critical system errors	Workday won't create time blocks when there are critical system errors. Example: When there are incorrect time increments or missing worktags, Workday highlights the cell and displays a message that the update failed. You must resolve these errors to create time blocks. If you leave the task without resolving the critical errors, your time entry isn't saved.
Custom (customer-configured) alerts and error validations	When a custom error validation displays, Workday can create the time block and submit the time block. When a custom validation displays, Workday can create the time block, but can't submit it until you resolve the custom validation error.
Update button is grayed out	The Update button isn't available when there is nothing to update. Example: There is no entered time quantity, there are system errors that need to be resolved, or all changes were made and saved on the side panel.
Weekly navigation disabled	When you leave the task without resolving errors or without clicking Update, you lose the time you entered and Workday disables

Condition	Behavior
	navigation in the calendar until you click Update.
Row with empty time quantity	A row might not have any entered time. Workday doesn't remove the row with a time quantity of zero when you click Update or Submit. Workday removes the row if you leave the task and no time blocks are saved.

13. Click Submit to route a completed timesheet for approval and processing.

Result

The status of a timesheet displays next to the Update button. The status can be: Approved, Denied, Sent Back, Not Submitted, Submitted. When some time blocks are entered, but not submitted, the entire timesheet status shows as Not Submitted. Individual time blocks on the grid can have different statuses.

Tasks

Set Up Time Entry Templates for Enter Time by Type (New!) on page 2692

Enter Time Requests for Worker

Prerequisites

- Steps: Set Up Time Requests on page 2717.
- Security: *Worker Data: My Team's Time* domain in the Time Tracking functional area.

Context

Managers and administrators can view details of workers' time requests for historical and future dates, and request time on behalf of workers.

Steps

1. Access the My Team's Time Requests report.
2. Select a date range to view time requests for historical and future dates.

   You can select a date range of up to 3 months.
3. (Optional) In the Workers prompt, select 1 or more workers.
4. Click New Request to request time on behalf of a worker.
5. In the Worker prompt, select the worker.
6. Select the date range you want the worker to be available to work.

   You can select a duration ranging from 1 day up to a month.
7. In the Time Request Code prompt, select a time request code for which the worker is eligible.
8. Depending on the entry methods configured for the time request code, consider:

Option	Description
Scheduled by	If required, select either: • *Start/End Time* • *Total Hours*
Start Time End Time	If required, enter a time range from 1 day up to a month. Available when either:

Option	Description
	• The entry method of the time request code is *In/Out Only*. • You select *Start/End Time* from the Schedule by field.
Total Hours	If required, enter the total number of hours for the time request. Available when either: • The entry method of the time request code is *Hours Only*. • You select *Total Hours* from the Schedule by field.

9. Click Submit.
10. (Optional) Bulk load time requests through the Put Time Requests EIB (secured to the *Process: Import Time Requests* domain in the Time Tracking functional area).

Result

Workday updates the worker's time entry calendar with the requested time block.

Example

Manager Plans for Overtime Work in Upcoming Month

Ben Adams' manager needs to budget for overtime hours for the month of February. The manager doesn't know how many overtime hours Ben will work, but can put in a request on Ben's behalf. He forecasts that Ben will work 15 hours of overtime, selects the dates in February and the appropriate overtime request code that allows time requests to cross the week breaker. This time request allows Ben's manager to reconcile the overtime hours that Ben actually worked against the time he requested for Ben.

Next Steps

- The worker must enter the actual time worked in order for Workday to calculate their hours and pass them to Payroll.
- Review and approve time requests from the Review and Approve Time Requests report (secured to the *Worker Data: My Team's Time Requests* domain).

Concept: Put Time Requests EIB

2025R1 Feature Release Note: Rename Request Overtime to Time Requests

Mass Enter Time

Prerequisites

Security:

- *Reports: Time Tracking* domain in the Time Tracking functional area.
- Configure the *Reported Time Batch Event* business process security policy in the Time Tracking functional area.

Context

Enter time for multiple workers at once. Example: Add holiday hours for all administrative assistants on New Year's Day. The Mass Enter Time report enables you to filter for workers by various facets, such as supervisory organization or job profile.

Steps

1. Access the Mass Enter Time report.
2. Search for and select the workers for whom you wish to enter time.

   You can customize the facets and filters that are available to you by copying this report to make a custom report. Workday delivers over a hundred different facets to select from.
3. Select a Date, Time Type, and optionally, Worktags.

   Worktags aren't available for time off entries.
4. Depending on the time type, enter:
   - A Quantity for projects, time offs, or quantity-based time entry codes.
   - An In time, Out time, and Out Reason for time entry codes that track *In* and *Out* times.
5. (Optional) For time entry codes that track *In* and *Out* times, click Add to add more time blocks with the same date, time type, and worktags.
6. Review the time entry details, Workers to be processed and, if applicable, Workers unable to be processed.

   To revise the time entry, click Back. To change the worker selection, rerun the report.

   Note: If you entered a time off, workers in the Workers to be processed list are subject to additional time off validations. Validations run after this event is submitted and approved or completed. If the workers fail these additional validations, they move to the Workers unable to be processed list after the additional validations complete.

Result

Workday adds the time blocks to the selected workers' time entry calendars using the *Reported Time Batch Event* business process. Submitting this task doesn't submit the time entries for manager approval. Manager approvals use the *Enter Time* business process.

Time off entries go through additional time off validations after the *Reported Time Batch Event* business process event is approved or completed. Workday doesn't add time blocks for workers who fail the time off validations.

Next Steps

- Access approved or completed events to see if any workers failed the additional time off validations.
- Submit time entries for approval.
- To undo the mass time entry, rescind the *Reported Time Batch Event* business process.

The Next Level: A Day in the Life of a Time Tracking Administrator

Mass Auto-Fill from Schedule

Prerequisites

- Enable the workers' time entry templates for mass autofill from schedule.

- Ensure that the workers have schedule blocks to autofill, typically through:
    - Work schedule calendars for which they're eligible or to which they're assigned.
    - Changes that workers make to their work schedules.
    - Ad hoc schedule changes that aren't reflected on work schedule calendars.
    - The *Import Ad Hoc Schedules* web service.
- Security: *Process: Mass Auto-Fill from Schedule* domain in the Time Tracking functional area.

Context

Use the Mass Autofill from Schedule process to populate time blocks for multiple workers at once based on their work schedules. Workday uses data from Workday Scheduling when Workday Scheduling is enabled on workers' time entry templates. Workday populates time blocks with scheduled start and end times, but doesn’t populate worktag values. Workers must manually enter worktag values on time blocks before they submit time. This feature saves time for workers who only report schedule exceptions.

This process doesn't autofill time blocks for dates that:

- Fall into a period locked for Payroll.
- Fall into a period unlocked for adjustments.
- Are after a worker's termination date.
- Have any time off entries.
- Are holidays.

Note: Period schedules always open, lock, unlock, and close in Pacific time.

Steps

1. Access the Mass Auto-fill from Schedule task.
2. As you complete the task, consider:

Option	Description
Request Name	The request name identifies this job in reports.
Run Frequency	If your run frequency isn't *Run Now*, configure scheduling details on the Schedule tab. Select a Start Date that is no more than 7 days in the future.
Time Entry Templates	Select the time entry templates that are assigned to the workers for whom you wish to autofill time. Only the time entry templates that you enabled for mass autofill from schedule are available for selection.
Exclude Workers on Leave	When selected: • Prevents Workday from filling time blocks for workers who have approved leave of absence events during the period you're autofilling time for. • Doesn't delete time blocks that workers have on their calendar when you run the autofill process. Once a worker returns from a leave of absence, mass autofill resumes populating time blocks that occur after the Actual Last

Option	Description
	Date of leave entered on the *Return From Leave* business process.
OK to Proceed	Select the check box to confirm the criteria and scheduling details.

Result

When the process completes, workers receive the autofilled time blocks and can view and edit them before submitting them. Workday generates time blocks for all workers who are eligible for the time entry templates you selected.

Once you mass autofill time blocks from a work schedule, you're no longer able to edit the work schedule for those dates.

The process autofills time blocks in either the current week or the upcoming week, depending on the worker's start day of the week.

Example: For a worker whose work week starts on Sunday:

- If the process runs on Sunday, it autofills time blocks in the current week.
- If the process runs on any other day of the week, Monday - Saturday, it autofills time blocks for the upcoming week.

The Mass Autofill from Schedule process also clears existing time blocks in the week being filled that:

- Track in and out times.
- Share the same time entry code as the time blocks being autofilled.

Processes scheduled for the future display in the Scheduled Future Processes report. You can view the status of in-progress and recently completed processes on the Process Monitor report.

Next Steps

If you've set up a weekly recurrence, add the *Auto-fill time by schedule* service step to the *Hire* business process to automatically populate the time blocks of new hires if they begin after the Mass Autofill from Schedule process runs for a week. See: Concept: Auto-Fill Time by Schedule Service Step on page 2873.

Auto Submit Time

Prerequisites

- Security: *Process: Auto Submit Time* domain in the Time Tracking functional area.
- Configure the *Submit Time* initiating action on the *Enter Time* business process and security policy in the Time Tracking functional area.

Context

Create schedules to submit time automatically when you don’t want to create separate schedules to mass submit time for each period. Auto submit time saves you time and effort and increases efficiency in managing the submission of time by eliminating the need to schedule the submission of time for each period and the need to manually select the list of workers.

If any time blocks are found in a period that satisfy the selection criteria, Workday submits all time blocks in that period.

Example: Instead of setting 52 different schedules to run mass submit time every week of the year, you can now set up 1 auto submit time schedule to run every Sunday at 11:55 p.m. for the previous 7 days. Workday will find all unsubmitted time for workers eligible for the selected time entry template(s) and submit the period in which this time is found.

When you import time blocks that overlap with existing time blocks, you must resolve the overlapping time blocks once they are in Workday. Correct the time blocks on the timesheet before submitting time.

Note: Don't run the Auto Submit Time task from an integration system user account.

Steps

1. Access the Auto Submit Time task.
2. Select a Run Frequency and click Next.

   The run frequency determines how frequently to submit time entries for a particular date range.
3. Enter a Request Name. The request name identifies this job in reports.
4. Enter these values in the Selection Criteria tab:

Option	Description
Auto Submit Periods With	Any Unsubmitted Time: To submit imported and user-entered time. Any Imported Time: To submit all imported unsubmitted time. Imported Time With Auto Submit Value True: To submit time that has Auto Submit value set to *True* in the *Import Reported Time Blocks*, *Import Time Clock Events*, and *Put Time Clock Events* web services. Selecting this option also submits any user-entered time block in the period that satisfies the selection criteria. Example: You are scheduling an auto submit for a worker for a given period with the Auto Submit value set to *True* for time blocks in the *Import Reported Time Blocks* web service. You are also scheduling a second batch of auto submit for the same worker for the same period with the Auto Submit value set to *False* for some time blocks in the *Import Reported Time Blocks* web service. In this case, Workday will submit the entire period, including the time blocks with Auto Submit value set to *False*.
Time Entry Template	When you run the Auto Submit Time task, Workday will submit time for workers eligible for the time entry templates that you select and the workers you have access to. Workday won't submit time for terminated workers when you run the Auto Submit Time task. Workday accounts for worker changes between the time you scheduled the job and when the scheduled job runs.

Option	Description
	You don't have to update the schedule if worker eligibility changes every week.
On Leave	Select either Include, Exclude, or On Leave Workers Only.
Workers	You can select only workers you have access to.
Exclude Current and Future Periods	Select this to exclude workers' current and future periods from being submitted automatically.

5. In the Dynamic Range section, enter the number of days before and after the actual run date that you want to check for unsubmitted time that matches the selection criteria.

   Example: If you enter 6 for Days Before Run Date for a weekly recurring schedule, you can capture the unsubmitted time from Sunday to the previous Monday.

   Example: If you set the Days Before Run Date to 6 days for a Run Now frequency, you can capture the unsubmitted time for the current date and for 6 days prior to the current date.
6. In the Schedule tab, set the recurrence criteria and range of recurrence.

   You can schedule the recurrence for up to 5 times after the end of the next calendar year.

   Example: If you schedule a monthly recurrence starting October 2024, you can schedule it through only May 2026, as that would be 5 recurrences after the end of the next calendar year.
7. Click OK and Done.

Result

When the process completes, Workday automatically submits time for all workers who meet the selection criteria as of the run date.

Next Steps

- Review the *Enter Time* business process custom notification frequency if you create frequent schedules to automatically submit time to ensure approvers don't receive too many approval notifications.
- Use the Reported Time Blocks for a Date Range report to check the successfully submitted time blocks for a specific date range.
- To edit or delete a background process scheduled to run once in the future or on a recurring basis, access the Scheduled Future Processes report. See Manage Scheduled Future Processes.

Related Information

Concepts

Automatically Submit Time

Mass Submit Time

Prerequisites

- Security: *Process: Mass Submit Time* domain in the Time Tracking functional area.
- Configure the *Submit Time* initiating action on the *Enter Time* business process and security policy in the Time Tracking functional area.

Context

Submit large volumes of time entries when you don't need or want your workers to submit their time individually. You can mass submit time entries for workers who clock in and out and rarely, if ever, use their time entry calendar to enter and submit time. You can also mass submit time to ensure that stray time entries that workers forgot to submit, or were unable to submit, are accounted for.

When you mass submit time offs that cross from 1 week into another week, you need to mass submit for both weeks for the time off to be submitted.

Note: Don’t run the Mass Submit Time report from an integration system user account.

Steps

1. Access the Mass Submit Time report.
2. (Optional) Select filters to refine the list of workers.
3. Select the workers for whom you'd like to submit time.

   The report displays all active workers as of the current date. When you run the report, it includes workers who had time entries as of that period and submits them. New hires and terminated workers don't appear in the report, but Workday submits time for them, too, if they've entered time for the period.

   Note: This also applies to any custom reports based on Mass Submit Time.

   Example: You terminated Steve from the Operations supervisory organization in a previous period (February 2022). When you run Mass Submit Time for the Operations supervisory organization for February 2019, Steve won't appear in the report but his time is correctly submitted.
4. Select a Run Frequency.

   The run frequency determines when or how frequently to submit time entries for a particular date range.

   Note: When you create a custom report based on Mass Submit Time and add custom facet filters or custom filters, Workday won't account for any worker changes between the time you scheduled the job and when the scheduled job runs. If you use the standard report, Workday accounts for worker changes between the time you scheduled the job and when the scheduled job runs.
5. Enter a Request Name. The request name identifies this job in reports.
6. Select a date range to submit time for in the Period Selection for Submit Time field.

   - To mass submit time entries for a period schedule on a recurring basis, set up additional mass submit jobs for each date range that belongs to the period. If you schedule this task to recur on a regular basis, Workday mass submits all unsubmitted time entries for the same period every time the task runs.
   - Workday uses the start and end dates of the period to determine which time entries to submit. Unless you select the Use Period Schedule Eligibility check box, workers don't have to be eligible for the selected period to have their time entries in that period submitted.
   - If you're not using period schedule eligibility, select the exact period of time that you want to mass submit.
7. (Optional) Select the Use Period Schedule Eligibility check box to limit the worker selection to workers who are eligible for the selected period.

   If you don't select this check box, Workday submits all time entries for:

   - The weeks or time periods that intersect with the selected time period.
   - The workers who meet the filter conditions.
   - The workers whose time entries you have the security access to submit time for.
8. If your run frequency isn't *Run Now*, you can refine run frequency details on the Schedule tab.

   The details you select define how often Mass Submit will run for the period instance you selected on the Period Selection tab.

Result

Workday sends you a notification that includes the names of the workers whose time you submitted as well as a summary of the time submitted.

Processes scheduled for the future display in the Scheduled Future Processes report. You can view the status of in-progress and recently completed processes on the Process Monitor report.

When the process completes, all workers who meet the eligibility conditions as of the run date have their time mass submitted.

Next Steps

You can copy the Mass Submit Time report into a custom report and add unique facets. However, the Pay Group and Time Entry Template facets aren't available for use. The unique facets that you use aren't effective dated.

The Next Level: A Day in the Life of a Time Tracking Administrator

Manage Time Clock Events

Prerequisites

Security: Configure these domains in the Time Tracking functional area:

- *Time Tracking: Edit Time Clock Event Date and Time*
- *Worker Data: Add Time Clock Events*
- *Worker Data: Delete Time Clock Events*
- *Worker Data: Match Clock Events*
- *Worker Data: View/Edit Time Clock Events*

Context

You can manage time clock events on behalf of a worker by adding, editing, and deleting time clock events using the Time Clock History report. Time is always entered and displayed in the worker's time zone. Managers and administrators can use the Maintain Invalid Time Clock Events for Workers task to correct or ignore invalid time clock events for the manager's direct reports.

Steps

1. Access the Time Clock History report for the worker.
2. Select a Start Date.

   The report displays all time clock events for the week containing the Start Date.
3. To manually add a time clock event, click Add Clock Event and select an Event Type.
   a) (Optional) Change the Date and Time of the time clock event.
   b) Select an Event Type.

      - For a check-in, select a Time Type. The available time entry codes are based on the worker's eligibility for time code groups.
      - The available check-out types are based on the worker's time entry template.
      - To perform a transfer, add 2 check-in events in a row. Workday treats the second check-in event as a check-out and creates a time block with the work details of the first check-in event.

      Workday doesn't prevent you from entering time clock events out of sequence. Example: 2 check-out events in a row. This gives you more flexibility when handling exceptional cases.

Verify that you're adding the appropriate event type to prevent Workday from matching time clock events in unexpected ways.

4. To edit or delete a time clock event, click Edit or Delete.
    - When you edit a matched time clock event, the associated time block updates with the edited information. Editing the time block doesn't affect the underlying time clock events.
    - If you delete a matched time clock event, Workday deletes the associated time block. The remaining time clock event reverts to an unmatched status.
    - You can also use the Time Clock History report to edit time clock events loaded through web services from an external time collection system.

Related Information

Concepts

Concept: Time Clock Events on page 2863

Reference: Time Clock Event Security on page 2875

Manually Schedule Time Clock Event Matching

Prerequisites

- Enable the *Defer Time Clock Event Processing* option on the Edit Tenant Setup - HCM task.
- Security: *Process: Time Clock Event Processing* domain in the Time Tracking functional area.

Context

Note: Workday plans to retire the Defer Time Clock Event Processing option in a future release. Enabling this feature could impact performance in your tenant. Contact Workday Professional Services before using this feature.

Manually schedule a process that matches deferred time clock events and runs calculations for all workers in your tenant.

If your tenant uses automated scheduling for time clock event processing, any processes you manually schedule run in addition to the automated process.

To match pending time clock events for an individual worker, use the Time Clock History report instead.

Steps

1. Access the Run Time Clock Event Processing task.
2. Select a Run Frequency.
3. Enter a Request Name.

    The request name identifies this job in reports.
4. If your run frequency is anything other than *Run Now*, configure scheduling details.

Result

Processes scheduled for the future display in the Scheduled Future Processes report. You can view the status of in-progress and recently completed Process Time From Events jobs on the Process Monitor report.

If a pending time clock event fails to match, its status becomes *Unmatched*.

Next Steps

Resolve any remaining unmatched time clock events.

Related Information

Concepts

Concept: Time Clock Events on page 2863

Adjust Calculated Time

Prerequisites

- Confirm that you're not entering time for locked days in the time period calendar.
- Configure the *Enter Time* business process and security policy in the Time Tracking functional area.

Context

Modify or add calculated time on behalf of a worker. Use this task if the existing calculation types don't meet a business requirement. You can also use this task if there's an exception for a particular worker. Example: You assigned a worker a new work schedule calendar in the middle of a biweekly period. The new work schedule calendar has a different biweekly calculation start date. As a result, you need to adjust the worker's biweekly overtime calculation results.

Considerations for adjusting calculated time:

- This task applies to time entries only. Adjust time off entries through Absence Management.
- You can't adjust your own calculated time.
- Calculated time offs that cross the week breaker are split based on the day breaker. Only the hours that fall into the date range of this task can be edited. You can navigate to an adjacent week to edit the remaining hours.
- You can make adjustments at any time. However, submitting calculated time adjustments automatically routes time entries for the week or period time entries for approval. Even if a worker hasn't submitted their time or you previously approved it, Workday routes it for approval.

  Note: Only adjust calculated time after you've finished making time entries for that week or time period. After adjusting calculated time, Workday no longer runs calculations for that week or time period.

Steps

1. Access the Adjust Calculated Time task.
2. Select a Worker and the Date within the week or period you want to adjust.

   You can make adjustments to the calculated time in the week in which the selected date falls. Example: You configured the worker's time entry template to submit time by period. The date you select falls in a week that includes more than 1 time period. You can make adjustments for time entries in the days of the week that are in the time period of the selected date.

   Example: Monday - Wednesday is part of 1 time period and Thursday - Friday are part of another time period for a worker who submits time by periods. If you select the date of Wednesday, you can make adjustments for Monday, Tuesday, or Wednesday.

3. To modify or add calculated time:
    a) Adjust the quantity of hours for a calculated time block resulting from reported time.
        - To delete a row, adjust the hours of the row to zero.
        - To change a calculation tag or worktag, adjust the hours of the existing row to zero. Then add a new row with the new calculation tag or worktag.
        - If you need to change the time entry code, use the Enter Time for Worker task instead.
    b) To add calculated time blocks manually without a related reported time block, add a row under Additional Calculated Time (not resulting from Reported Time).

       You can select any time code, not just time codes for which the worker is eligible. If you select a code the worker isn't normally eligible for, verify that the worker meets payroll eligibility rules for the applicable earning.
    c) Select Confirm Calculated Time Adjustments.
4. (Optional) To revert back to Workday-generated calculated time, select Clear Adjustments (Revert to system calculations).

   If the worker is eligible for biweekly time calculations, this option clears all calculated time adjustments for the current week and the other week of the biweekly period.

Result

The adjusted calculated time blocks route for approval. The status of adjusted time blocks displays as *Adjusted* on the time entry calendar.

Example

Gina logged 5 hours of work on a special project last Friday. Normally, your company pays workers who work on the special project a regular rate. However, Gina is paid at an overtime rate. Logan, who has the appropriate security access, accesses the Adjust Calculated Time task. Logan changes the calculation tags for the 5 hours on Friday for the special project from *Regular* to *Overtime*. She adjusts the quantity of regular hours from 5 to zero and adds a new row with 5 hours of overtime.

Next Steps

(Optional) Create a time validation that warns workers who try to enter time for a week or time period with adjustments.

FAQ: Time Entry

- A worker checked in on mobile, and their manager used the time entry calendar to check them out. Why isn't the worker's Home page card showing that they've checked out, and why didn't Workday update their status on the mobile app? on page 2861
- How can I populate my work details from previous check-in when I use the check-in time entry method? on page 2861

Why don't I see the Quick Add, Auto-fill from Schedule, or Auto-fill from Prior Week options when entering time?	Check to see that you have: 1. Enabled the options on the relevant time entry template. 2. Configured the *Enter Time* business process security policy so that you have security access to the time entry options. 3. Activated the pending security changes.
When I select Auto-fill, why can't I copy time from a prior week?	The worker doesn't have any reported time for the week you're trying to copy from. If there are no weeks to copy from at all, the worker hasn't reported any time for any week.
Why don't I see any of my previously entered hours on the Quick Add page?	Quick Add only adds time blocks to your calendar; it doesn't display, modify, or overwrite any time blocks you've already entered. However, you'll get an error if you try to add hours that conflict with existing time blocks on your calendar.
Why do I get the message ***Date is not available for time entry for xxx*** when I try to enter time on behalf of a worker?	Workday can't find a period schedule for that worker. There are a couple of reasons this could happen: • The worker doesn't have a time period schedule or the schedule doesn't include the week you want to enter time for. • The worker isn't active.
Why isn't my time off showing up on my time entry calendar?	You've probably saved your time off request for later and haven't submitted it yet. Any time off entered through the Request Time Off task doesn't display on your calendar until it's submitted. However, time offs entered as a Time Type will display on your calendar as soon as you enter them.
Why aren't worker time entries transferring to the time entry calendar correctly? Example: The worker enters 9:00 AM - 12:00 PM, but it displays on their calendar as 7:00 AM - 10:00 AM.	You probably haven't configured local time zones for the worker, the location, or the tenant. Workday first tries to use the worker's time zone, but if you didn't configure it, Workday looks for the time zone of the location. If you didn't configure the location time zone, Workday then looks for the time zone of the tenant. If you didn't configure the tenant's time zone either, Workday uses Pacific Time for all time entries. See Concept: Support for Local Time Zones.
How can I add worktag values to the My Favorites category folder on the Worktags prompt?	Select Favorite from the related actions menu on the worktag.

What is the difference between time blocks with the ***Never Submitted*** status and time blocks with the ***Not Submitted*** status?	The *Never Submitted* status is for time blocks deleted prior to approval, while the *Not Submitted* status is for time blocks not yet submitted for approval.
I changed a worker's position. Why is the new position displayed on time blocks dated before the change?	You updated the worker's position details without changing their job. Use the *Change Job* business process to add the new position to time blocks from the effective date of the change. See Transfer, Promote, or Change Job on page 821.
A worker checked in on mobile, and their manager used the time entry calendar to check them out. Why isn't the worker's Home page card showing that they've checked out, and why didn't Workday update their status on the mobile app?	Workday updates Home page cards and check-in/out buttons on the mobile app through time clock events, not time blocks. Workday creates time blocks, not time clock events, when you use Correct Unmatched Event by selecting either: • Unmatched events on the time entry calendar. • Edit Time Entry on the Edit and Approve Time report. To add time clock events, use any of these methods: • From the related actions menu for the worker, select Time and Absence > Add Time Clock Event. • On the Edit and Approve Time report, add a check-out event to an unmatched check-in by selecting Autofill Scheduled Out. • Use the Time Clock History or My Time Clock Historyreport.
How can I populate my work details from previous check-in when I use the check-in time entry method?	Select the Use default values from previous check-in check box in the Check In task to copy over details such as time type, position, and worktags from the prior check-in. This option is available when checking in after a meal or break.

FAQ: Enter Time by Period

For workers with a weekly time tracking period schedule and a semimonthly payroll schedule, what view does Workday display in the period time calendar?	Workday displays the calendar view that matches the workers' time tracking period schedule, so these workers see a weekly calendar view.
Can I make the period calendar available to only some of our workers?	You can enable different calendar views for different populations of your workers based on the time entry templates you assign them. You configure the calendar view in the Calendar section of workers' time entry templates. To enable the period calendar for workers, from the Primary Calendar prompt, select: • *Classic* to display the period calendar as an additional view.

	• *Period* to display the period calendar as the primary view. • *Period Only* to display the period calendar as the only view.
Is the period calendar view supported on the Mobile App?	No. Workday displays a weekly view on mobile app.
Where do my workers see time blocks that cross midnight?	Workday displays In/Out time blocks on the day associated with the In time of the time block. However, the daily totals are based on the reported or calculated quantities you configure on the workers' time entry templates.
For nonmidnight day breakers, does the calendar have 8 days in each row?	The report calendar always has 7 days per row. Workday displays time blocks that cross the day breaker on the calendar day that matches your day breaker configuration.

Troubleshooting: All Imported Time Clock Events Unmatched

Cause: You imported the:

- Time clock events while the period was locked or closed.
- Same time clock events twice.

Solution: Delete a small number of unmatched time clock events:

Security: Configure the *Worker Data: View/Edit Time Clock Events* domain in the Time Tracking functional area.

Steps

1. Access the Time Clock History report for the worker.
2. Select a Start Date that includes the week of the unmatched events.
3. Delete the unmatched events.

Solution: Delete a large number of unmatched time clock events using the Enterprise Interface Builder (EIB):

Note: To delete multiple time clock events, you must have their unique Time Clock Event IDs. Otherwise, follow the steps for deleting a small number of unmatched events.

Security: *Integration Build* domain in the Integration functional area.

Steps

1. (Optional) Access the Maintain Invalid Time Clock Events task to check for errors and see the volume of unprocessed and unmatched time clock events.
2. Access the Create EIB task.

   Select Inbound.
3. On the Get Data page, in the Data Format section, from the Web Service Operation prompt, select *Put Time Clock Events (Web Service)*.

   Accept the default settings.
4. On the View Integration System report, from the related actions menu of the EIB, select Template Model > Generate Spreadsheet Template.

   Select Confirm.
5. On the View Background Process report, click Refresh.

   Download the empty Put_Time_Clock_Events.xlsx spreadsheet from the Output Files tab.

6. In the spreadsheet, enter the time clock event data you want to delete. Use only the first 4 columns of the spreadsheet.

Column	Description
Spreadsheet Key	Determines how many entries Workday batches for each job. We recommend that you batch together 1,000 time block entries per job. Example: Use *1* for the first 1,000 rows and *2* for the next 1,000 rows.
Row ID	An incremental value for each row. Example: Use *1* for the first row, *2* for the second row, and *3* for the third row.
Time Clock Event ID	Each time clock event has a unique ID. You must enter the ID to delete the event.
Delete Time Clock Event	Enter *Y* to indicate that you want to delete the time block.

7. Access the Launch / Schedule Integration task.

   From the Integration prompt, select Put TCE.

   Security: *Process: Time Clock Integration* domain in the Time Tracking functional area.
8. On Schedule an Integration, in the Integration Attachment row, from the Value prompt, select Create Integration Attachment.

   Attach the completed spreadsheet.
9. (Optional) To verify that no errors or unmatched time clock events remain, access the Maintain Invalid Time Clock Events task.

Concepts: Entering and Correcting Time

Concept: Time Clock Events

Time clock events describe a worker's actions on the Workday Time Tracking time clock or a third-party time collection system. Example: A check-in or check-out. Workday matches time clock events together and translates them into time blocks that display on the worker's time entry calendar.

Creating Time Clock Events

Workers can check in and out directly in Workday using:

- The Time worklet.
- Mobile devices. When you select the Enable Standard Mobile Check-In check box on the Edit Tenant Setup - HCM task, workers can enter time types, worktags, and comments when checking in. They can also specify out reasons when checking out.
- The My Time Clock History report on desktop to manually add time clock events, if granted the appropriate security. If managers have the appropriate security, they can also use the Time Clock History report on desktop to add, edit, or delete time clock events on behalf of workers.

You can use the time clock as the exclusive time entry method for a worker. You can also use it as a supplement to Enter My Time task or report. You can restrict workers to checking in or out only at work locations by limiting access to time-clock tasks to certain IP addresses. You can also use geofences to ensure that workers only check in and out on their mobile devices when they're at their work locations.

You can also use these web services to load time clock events from a third-party time collection system:

- *Put Time Clock Events*
- *Import Time Clock Events*

Matching Time Clock Events

Unless you configure your tenant to defer the matching process, Workday matches a time clock event as soon as you create it. If you defer matching, new time clock events are *Pending* until they've gone through the matching process. Workday displays pending time clock events on a worker's time entry calendar, but they don't need to be corrected. You can schedule the matching process for all pending time clock events in your tenant using the Run Time Clock Event Processing task. You can also match pending time clock events for an individual worker using the Time Clock History report.

When matching, Workday attempts to find a matching clock event, such as a check-in event with a check-out event. Workday then links the 2 events together to create a time block, which displays on the worker's time entry calendar. When creating a time block, Workday honors the rounding option of the time entry code and runs time calculations.

Generally, Workday matches a check-in event with a subsequent check-out event. However, in the case of 2 check-in events in a row, Workday treats the second check-in event like a check-out event. Then Workday creates a time block with the work details of the first check-in. This enables workers to check in to another task without having to check out of their current task. You can prevent matching consecutive check-in events by configuring the time entry template.

When Workday can't find a matching time clock event, it leaves the time clock event unmatched until you add another event that can match it. If a pending time clock event fails to match, it becomes an unmatched time clock event, rather than remaining as a pending time clock event.

Adding Missing Time Clock Events

Unmatched time clock events result from missing check-in or check-out events. Missing events can occur when you import time from third-party clocks or time collection systems. They can also occur when workers check in or out using:

- Home page cards.
- The mobile app.
- The Time worklet.

To add missing time clock events:

- From the related actions menu for the worker, select Time and Absence > Add Time Clock Event.
- Import additional time clock events.
- On the Edit and Approve Time report, add a check-out event to an unmatched check-in by selecting Autofill Scheduled Out.
- Use the Time Clock History or My Time Clock History report.

Generating Time Blocks from Missing Time Clock Events

Workday generates time blocks and not matching time clock events when you correct unmatched events on the:

- Edit and Approve Time report by selecting Edit Time Entry.
- Time entry calendar.

Example: A worker checks in on mobile at 9:00 AM, but they forget to check out at 5:00 PM. Their manager finds the unmatched check-in on the time entry calendar and corrects the unmatched event there. Workday doesn't update the worker's mobile or Home page card with a check-out because the time entry calendar created a time block and not a check-out event.

Time Clock Events on the Time Entry Calendar

Workday displays both pending and unmatched time clock events on the time entry calendar in chronological order until they're matched into time blocks. You can correct unmatched time clock events from the time entry calendar, but not pending time clock events. When you correct an unmatched time clock event by adding a corresponding in or out time, Workday creates a time block but not another time clock event.

Examples

Create Access Restrictions

Concept: Importing Time Clock Events

You can import data from a third-party time collection system into Workday Time Tracking using the *Put Time Clock Events* or *Import Time Clock Events* web services. These web services import raw clock data as time clock events, which Workday matches to create time blocks and run calculations. Workers can edit the time blocks before submitting them.

Importing Large Batches of Time Clock Events

If you use *Put Time Clock Events* to import more than 1,000 time clock transactions, the integration could take a significant time to complete and might hold up other Workday processes. In this case, use the *Import Time Clock Events* web service.

Use the *Import Time Clock Events* web service when you need to import large batches of 1,000 or more time clock events on an infrequent basis. Example: Importing time clock events for implementation testing or loading a single large batch after an integration with a third-party system fails. *Import Time Clock Events* runs as a background process, so it doesn't hold up other Workday tasks running at the same time.

The Import web service pattern enables you to use Workday Enterprise Interface Builder (EIB). To retrieve processing errors after using *Import Time Clock Events*, you can use the:

- *Get Import Process Messages* web service.
- Unprocessed Time Clock Events report.

Importing Small Batches of Time Clock Events

Use the *Put Time Clock Events* public web service operation when you need to import time clock events from a third-party system in near real-time. The third-party system should queue up clock events into batches and initiate a call to *Put Time Clock Events*. If Workday is unable to receive a batch, the third-party system must continue to queue time clock events until Workday is available.

When using the *Put Time Clock Events* web service, we recommend that you:

- Send time clock events in their raw form (not matched to time blocks or processed in any other way).
- Send batches every 2-5 minutes.
- Send time clock events in the order that they occurred to ensure Workday matches them into time blocks as accurately as possible.
- Don't send a batch with more than 150 time clock transactions. If you have more than 150 time clock transactions to send, break them into smaller batches.

Required Fields

Time clock events imported into Workday must include these details:

Field	Notes
Time Clock Event Date Time	Date and time of the time clock event. If you don't specify a time zone offset, Workday assumes a UTC offset of zero.
Clock Event Type Reference	Workday accepts 4 time clock event types: *In*, *Out*, *Break*, and *Meal*.
Employee ID	
Position ID	Required if the worker has multiple jobs and the time clock event type is *In*.
Time Clock Event ID	Required for edit and delete transactions so that Workday can identify which time clock event to edit or delete.
Delete Time Clock Event	When flagged, identifies the transaction as a deletion. If you're importing a deletion, the only required fields are: • *Time Clock Event ID* • *Delete Time Clock Event*

All other fields are optional.

Errors and Validations

Data accepted by the web service operation might still be invalid within Time Tracking. Workday runs a separate set of validations on the data after it has passed through the web service operation and flags invalid time clock transactions. Workday doesn't match invalid time clock transactions to time blocks, but causes them to be in error until you correct the transaction. Use the Maintain Invalid Time Clock Events task to view, fix, or ignore transactions that are in error.

Invalid or missing values in these fields cause the time clock event to be in error until corrected:

- *Employee ID*
- *Position ID*
- *Time Clock Event Date Time*
- *Clock Event Type Reference*

The fields below are optional, but if sent, must be valid values in Workday. Invalid values cause the time clock transaction to be in error until corrected. These fields apply to *In* time clock event types only. If the time entry code is blank, Workday applies the default time entry code from the worker's time entry template.

- *Time Entry Code*
- *Project ID*
- *Task ID*
- *Override Rate*
- *Business Unit*
- *Cost Center*
- *Custom Organization 01 - Custom Organization 10*
- *Custom Worktag 01 - Custom Worktag 15*
- *Fund*
- *Grant*
- *Job Profile*

- *Location*
- *Program*
- *Region*

Editing and Deleting Time Clock Event Data

You can edit or delete time clock events using the *Put Time Clock Events* web service. When importing an edit transaction using the web service, include the time clock event ID in the file. When you import edit transactions, Workday replaces the existing details on the time clock event with the details of the new transaction. Include all of the details that you want to preserve in addition to the edited fields. When importing a delete transaction, set the *Delete Time Clock Event* field to *Y* (for yes).

In addition to importing edits and deletions, you can manage time clock events directly in Workday.

Report or Task	Considerations
Maintain Invalid Time Clock Events for Workers task.	Managers and administrators can edit or ignore invalid time clock events for the manager's direct reports.
Time Clock History report.	You can edit and delete any type of time clock event.

The Next Level: Time Tracking Reports, Dashboards, and Integrations

Concept: Importing Reported Time Blocks

The *Import Reported Time Blocks* web service enables you to import reported time blocks into Workday Time Tracking using Workday Enterprise Interface Builder. Consider using this web service to:

- Import time blocks that workers didn't enter through self-service time entry.
- Load a batch of time blocks in bulk, such as holiday time blocks.
- Import large batches of time blocks for testing purposes.
- Edit and delete time blocks in mass.
- Approve or rescind the imported time blocks using the *Reported Time Batch Event* business process.
- Use imported time blocks in calculations, route them to managers for approval, and pass them to Payroll for payment.

Spreadsheet Setup

As you complete the EIB template, consider these fields:

Element	Notes
Header Key	An incremental value for every set of 1,000 rows of data. The header key determines how many entries Workday batches for each job. We recommend that you batch together 1,000 time block entries per job. Example: Use *1* for the first 1,000 rows and use *2* for the next 1,000 rows.

Element	Notes
	Don't use a different header key for each row, as this will cause each row to run as separate jobs and leads to performance issues. This field is only available on web service versions earlier than 36.2.
Line Key	An incremental value for each row (within a header key batch). Example: Use *1* for the first row, *2* for the second row, and *3* for the third row. Start the numbering over again, with 1, for each batch. This field is only available on web service versions earlier than 36.2.
Spreadsheet Key	An incremental value for each row. Example: Use *1* for the first row, *2* for the second row, and *3* for the third row.
Worker	The employee ID for the worker.
Worker Time Block	The reference ID for the worker time block. After you import time blocks into Workday, Workday assigns the worker time block a reference ID. To edit or delete a time block, you must enter the reference ID for the time block. To view the reference IDs for a group of worker time blocks, use the Reference ID report field on the *Time Block* business object. To view the reference ID for a single time block, access the related actions menu of the time block.
Delete Time Block	Enter Y or N to indicate whether to delete the time block.
In Date Time Out Date Time	Use these columns to enter the date and time of In/Out time blocks. Times are automatically in PST, so you might need to populate a UTC offset amount to load time blocks correctly. Example: October 25, 2018 at 8:00AM CET is: *2018-10-25T08:00:00+02:00*
Time Entry Code	The reference ID of the time entry code. Access the time entry code reference ID using the related actions menu of the time entry code.
Quantity Date	Use these columns to enter the date and quantity of Hours Only time blocks.
Comment	Enter a comment for a time block. The Require Comments on Time Entry Changes setting on the time entry template doesn't apply to web services.

Element	Notes
Project Role	The worker's project role. This value is derived from the worker's assignments on a project's resource plan line.

Editing and Deleting Time Blocks

To edit a time block, enter the Time Block Reference ID in the Worker Time Block column along with the updated time block information. When you import the batch, Workday will override the values on the existing block with the new values you entered. To delete a time block, enter *Y* in the Delete Time Block column of the EIB spreadsheet.

The same restrictions that apply to the time entry calendar apply to the EIB. If you can't delete a time block on the calendar, then you can't delete it through the web service. Example: If the time block belongs to a locked period.

Reported Time Batch Event Business Process

Importing a batch of reported time blocks launches the *Reported Time Batch Event* business process. Update the business process security policy so that relevant workers can approve or rescind the time blocks before Workday processes and creates time blocks. If approval steps conflict with the requirements of your organization, add a business process condition for external load so that Workday automatically processes the time blocks.

Workday treats time blocks identically to reported time blocks created directly in Workday, meaning that:

- The time blocks display on the worker's time entry calendar in a *Not Submitted* status.
- The imported time blocks are subject to the same calculations and validations as time blocks entered directly into Workday.
- Workers can make corrections and submit the time blocks for manager approval.

Rescinding Batches

You can rescind a *Reported Time Batch Event* business process event to back out a batch of time blocks you imported. To rescind an event, navigate to the related actions menu of the event and select Business Process > Rescind or use the Mass Rescind Business Processes task.

When you rescind, Workday removes all of the time blocks that you imported in the batch event. However, rescinding a batch won't back out changes you made by editing or deleting time blocks. To restore those blocks, you must run another import with the correct time block information.

Using the *Import Reported Time Blocks* web service EIB, Kevin:

- Edits an existing time block on 2019-02-04.
- Deletes an existing time block on 2019-02-07.
- Creates a new time block on 2019-02-08.

Worker	Worker Time Block	Delete Time Block	Date	Quantity
21722	WORKER_TIME_BLOCK_-1-38		2019-02-04	8
21722	WORKER_TIME_BLOCK_-1-41	Y	2019-02-07	8
21722			2019-02-08	8

The time blocks display on the worker's time entry calendar as:

2019-02-04	2019-02-05	2019-02-06	2019-02-07	2019-02-08
8 hours				8 hours

Later, Kevin decides to rescind the *Reported Time Batch Event* business process event. Workday:

- Removes the new time block that Kevin imported for 2019-02-08.
- Doesn't change the edited time block on 2019-02-04.
- Doesn't restore the deleted time block on 2019-02-07.

After Kevin rescinds, the time blocks display on the worker's time entry calendar as:

2019-02-04	2019-02-05	2019-02-06	2019-02-07	2019-02-08
8 hours				

Overlapping Time Blocks

When you import time blocks that overlap with existing time blocks, you must resolve the overlapping time blocks once they are in Workday. Correct the time blocks on the timesheet before submitting time.

Note: While the Worker Time Block Inbound Connector is still available, we recommend using the *Import Reported Time Blocks* web service for improved error handling and performance.

Examples

Concept: Workday Web Services

Workday Community: Import Reported Time Blocks EIB - Inbound

Concept: Exporting Time Blocks

You can use the *Get Calculated Time Blocks* web service (secured to the *Process: Export Time Blocks* security domain) to export time blocks from Workday Time Tracking to third-party scheduling or payroll vendors. Once Workday exports the time blocks, you can use your third-party system to do things such as:

- Compare scheduled hours to worked hours.
- Forecast schedules based on historical time data.
- Pass time blocks to payroll for processing.

The *Get Calculated Time Blocks* web service exports calculated time blocks, rather than reported time blocks. Workday generates these time blocks when you run time calculations on the time blocks that workers report.

Use SOAP UI to prototype and test the *Get Calculated Time Blocks* web service, and to filter time blocks by these attributes:

- Date Range
- Status
- Supervisory Organization
- Workday ID
- Worker

Examples

Concept: Workday Web Services

Concept: Enter Time by Period

Workday displays a period view on the time entry calendar that matches each worker's Time Tracking period schedule. This makes it easy for managers and workers to enter all time for a period at once. The period calendar view supports these period schedules:

- Weekly
- Biweekly
- Semimonthly
- Monthly

You can access the period calendar view on desktop on these reports:

- Enter My Time
- Enter Time for Worker

Workers can add time blocks by clicking a calendar day and can enter time for a week using:

- Auto-fill from Prior Week
- Auto-fill from Schedule
- Enter Time by Type
- Enter Time by Type (New!)
- Quick Add

You can configure the period calendar to be:

- An additional view with the classic calendar as the primary view.
- The primary view with the classic calendar as an additional view.
- The only view.

Concept: Daily Time Exceptions

When you use Workday Scheduling and Time Tracking, you can enable managers to view and act on daily time exceptions on their mobile devices using the:

- Attendance tab on the Team Schedule worklet.
- Today’s Attendance card on the mobile home page.

On the Attendance tab, Workday displays workers in these sections based on their schedule in Workday Scheduling:

- Checked In
- Not Checked In
- Not Checked Out

Managers can use their mobile devices to:

- Call or text workers.
- Edit time clock events for workers.
- Enter missing clock events for the workers.
- View lists of workers who are checked in, not checked in, or not checked out.
- View the time clock history.
- View the precise number of hours and minutes a worker is late or over.

Contacting Workers

Managers can text or call workers who have:

- Updated their work contact information in Workday.
- Set their work contact information to Public and Primary.

Matching Logic for Checked In

- Workday includes direct reports with shifts and time clock data for the day.
- When the worker checks in to a shift, they appear in the Checked In section.
- Workday displays a green tag when the worker checks in on or before their scheduled start time.
- We display a yellow tag when a worker checks in after their scheduled start time.
- Workday treats noncontiguous shifts as separate shifts.
- When a worker checks in, Workday matches the check-in to the closest start time of a shift.

Matching Logic for Not Checked In

- Workday includes direct reports with shifts and time clock data for the day.
- When 15 minutes pass without a check-in event for a shift, Workday adds the worker to the Not Checked In section.
- When the worker checks in to the shift, Workday removes the worker from the Not Checked In section.
- When a worker has multiple contiguous shifts (Example: 3:00-7:00 and 7:00-11:00):
    - Workday applies the first check-in to the entire day of shifts.
    - When a worker checks out after the first shift, they need to check back in for the second shift.
    - The worker can be late for the second shift, depending on the check-in time.
    - When a worker checks out after the second shift has begun, we assume that the worker has left early. Workday doesn't include them in the Not Checked In section for the second shift.

Matching Logic for Not Checked Out

- Workday includes direct reports with shifts and time clock data for the day.
- When 15 minutes pass without a check-out event for a shift that has a check-in event, Workday adds the worker to the Not Checked Out section.
- When a worker doesn't check in or out for a shift, Workday doesn't include them in the Not Checked Out section.
- When a worker has multiple contiguous shifts, Workday applies the first check-out to the entire day of shifts unless the worker checks back in from a shift.
- We ensure shifts stay in the Not Checked Out section for 24 hours after the shift ends.

2024R2 Feature Release Note: Connected Experience: Daily Time Exceptions for Managers

Concept: Auto-Fill Time by Schedule Service Step

You can add the *Auto-fill Time by Schedule* service step to the *Hire* business process to automatically populate the time blocks for new hires if they begin after the Mass Autofill from Schedule process runs for a week. The service step fills in time blocks from the worker's Hire Date through the end of their first week.

In order for Workday to populate time blocks, the worker must be:

- Eligible for a time entry template with the Auto-fill from Schedule option enabled.
- Eligible for a time entry template included in a scheduled Mass Autofill from Schedule run within the 6 days following the worker's hire date.

The service step will populate scheduled hours based on the week in which the hire date falls. The week is based on the Start Day of Week on the worker's work schedule calendar.

- If the worker is hired in the current week, scheduled hours will be populated from the hire date until the last day of the week.
- If the worker is hired with an effective date in the past, scheduled hours will be populated in the current week.
- If the worker is hired with an effective date in the future, scheduled hours will be populated from the hire date until the last day of that week.

If the week to be populated includes a holiday (based on the holiday calendar) Workday populates hours for the holiday.

You can add a step delay to the service step so it doesn't run until the worker's hire date.

Tasks

Mass Auto-Fill from Schedule on page 2850

References: Entering and Correcting Time

Reference: Time Block and Time Clock Event Sources

You can report on the source of time entries using the Source report field and the Time Clock Event Source report field. You can view the Source when you click the View Details button on a time block. You can also view both fields on the Time Block Audit report.

If a time block is entered as a quantity, the Source report field will indicate one of 8 possible values depending on the time entry method used:

- Adjusted
- External
- Manually Added
- Mass Auto-fill from Schedule
- Mass Enter Time
- Mobile
- System Generated
- User Entered

If a time block is formed from 2 matched time clock events it will have 2 possible Source values: Time Clock Events and Time Clock Events (Mobile). The source Workday displays is determined by the source of the second time clock event. When the second time clock event has a Time Clock (Mobile) source, the time block source is Time Clock Events (Mobile). When the second time clock event has a non-mobile source, the time block source is Time Clock Events.

In time clock events the Source report field will indicate one of 4 possible values depending on the time entry method used:

- Time Clock
- External
- Time Clock(Mobile)
- Manually Added

Time clock event Source report fields are separate from time block Source report fields. For reporting purposes there is only 1 Source field that can be used by both time clock events and time blocks. These are the possible values that Workday returns in the Source report field:

Source	Description
Adjusted	A time block added through the Adjust Calculated Time task.
External	A time block or a time clock event loaded into Workday through an integration.
Manually Added	A time clock event generated through the Adjust Calculated Time task or the Add Clock Event task.
Mass Auto-fill from Schedule	A time block added through the Mass Autofill from Schedule task.
Mass Enter Time	A time block added through the Mass Enter Time task.
Mobile	A time block created through the Workday mobile application.
System Generated	A time block created through calculations. Example: A time block create calculation.
Time Clock	A time clock event created through the check in or check out time entry method using Workday on desktop (through the task or worklet).
Time Clock (Mobile)	A time clock event created through the check in or check out time entry method on the Workday mobile application.
Time Clock Events	A time block with a second event created outside of the Workday mobile application.
Time Clock Events (Mobile)	A time block with a second event created on the Workday mobile application from clocking in and out.
User Entered	A time block entered through a time entry method in Workday. Example: Enter Time calendar.

These are the possible values that Workday returns in the Time Clock Event Source field:

Time Clock Event Source	Description
Time Clock	A check-in or check-out clock event created through the web.
External	A time clock event created through an external time collection system and loaded into Workday.

Time Clock (Mobile)	A time clock event created through the check-in and check-out on the Workday mobile application.
Manually Added	A time clock event created through the Time Clock History report or the My Time Clock History report.

These are the possible permutations of In and Out Time Clock Event Source fields and the resulting value Workday returns in the time block Source field.

Time Clock Event Source In	Time Clock Event Source Out	Time Block Source
Time Clock	Time Clock	Time Clock Events
Time Clock	External	Time Clock Events
Time Clock	Time Clock(Mobile)	Time Clock Events (Mobile)
Time Clock	Manually Added	Time Clock Events
External	Time Clock	Time Clock Events
External	External	Time Clock Events
External	Time Clock(Mobile)	Time Clock Events (Mobile)
External	Manually Added	Time Clock Events
Time Clock(Mobile)	Time Clock	Time Clock Events
Time Clock(Mobile)	External	Time Clock Events
Time Clock(Mobile)	Time Clock(Mobile)	Time Clock Events (Mobile)
Time Clock(Mobile)	Manually Added	Time Clock Events
Manually Added	Time Clock	Time Clock Events
Manually Added	External	Time Clock Events
Manually Added	Time Clock(Mobile)	Time Clock Events (Mobile)
Manually Added	Manually Added	Time Clock Events

Reference: Time Clock Event Security

You can modify security for time clock-related tasks using these domains:

Domains	Notes
Self-Service: Time Clock	Enables workers to check in and check out in Time Tracking and on mobile.
Self-Service: Add Time Clock Events *Worker Data: Add Time Clock Events*	Enables users to edit the details of existing time clock events. *Worker Data: Add Time Clock Events* includes permission to edit the date and time of time clock events, but *Self-Service: Add Time Clock Events* doesn't.
Self-Service: View/Edit Time Clock Events *Worker Data: View/Edit Time Clock Events*	Select Modify on the domain's security policy to enable workers to edit time clock event details, not including date and time.
Self-Service: Match Clock Events *Worker Data: Match Clock Events*	When using deferred time clock event processing, enables users to match pending clock events for an individual worker.

Domains	Notes
Time Tracking: Edit Time Clock Event Date and Time	Enables timekeepers or administrators to edit the date and time of matched time clock events. To access this domain, users must also have access to *Worker Data: View/Edit Time Clock Events*. The Employee Self-Service (ESS) security group can't edit the date and time of time clock events.
Self-Service: Delete Time Clock Events *Worker Data: Delete Time Clock Events*	Enables users to delete time clock events.
Process: Time Clock Event Processing	Enables users to schedule the process that matches pending time clock events.

Related Information

Concepts

Concept: Time Clock Events on page 2863

Manage Time Clock Events on page 2856

Reference: Time Entry Options

Time Tracking provides a number of options that workers can use to enter time. The available options for workers depend on time entry configurations, business process security policies, and whether the workers are using calendar-based time entry or high volume time entry.

Option	Description
Auto-fill from Prior Week	Copy time blocks from 1 of the 5 preceding weeks into the current week. This option is useful for workers who enter time or project time on a weekly basis and enter similar time from week to week. Workday: • Copies project time. • Copies details, such as active worktags, override rates, calculation tags, and comments. • Doesn't copy time blocks with an inactive time entry code or a code the worker no longer qualifies for.
Auto-fill from Schedule	Copy scheduled hours from a worker's work schedule calendar using the default time entry code. You can specify which days to copy. The default time entry code controls whether Workday autofills schedules as in/out times or hours only. For in/out times, Workday only fills out types of *Out* (not *Meal* or *Break*). If a worker has multiple jobs, Workday fills the work schedule for the worker's primary job. Conditions for using this option: • Workers are logging time in hours, not days. • Workers must have a work schedule calendar.

Option	Description
	• You haven't enabled project tracking for the time entry template.
Clear	Clear all time entries for the week, including time off entered using the Time Type prompt. This action doesn't clear any time off entries you entered using the Enter Time Off task. Note: This option is only available if every day in the week is unlocked for the user accessing the Clear task.
Enter Time	Manually enter or update individual time entries using Micro-edit. Employees who can use Time Tracking to enter time and who also have access to Workday Assistant chatbot can verbally enter time for the current day.
Enter Time by Week	Enter time for an entire week within a single grid. This option is useful for workers who: • Enter time weekly but don't enter project time. • Want to update time that was entered using another time entry method. This option uses the same interface as high volume time entry but is accessible from the time entry calendar.
Enter Time Weekly	A weekly grid view of the time entry calendar with a tab for each day. You can configure this option on the Enter Time business process security policy. The initiating action is called Enter Time with this description: *Open a daily time entry grid to enter time day-by-day*. Note: Workday plans to deprecate this option in a future update.
Enter Time Off	Access the Enter Time Off task directly from the time entry calendar. Time off displays on the calendar after you submit it (but not when saved for later). Note: Enter Time Off is accessible only if the *Request Time Off* business process has security groups defined for the initiating action of *Enter Time Off*, with the description: *Enter Time Off on behalf of a worker from the time entry calendar (Time Tracking Only)*. Workday doesn’t support start and end times when entering time off using absence tables.
Quick Add	Add time blocks with the same details for multiple days at once. Example: If you work every day from 09:00 to 12:00 but your afternoon hours

Option	Description
	vary, Quick Add is a good option for reporting your morning hours all at once.
Enter Time by Type	Enter time for multiple time types at once for an entire week. This option is useful for workers who: • Enter project-based time. • Often use worktags or positions for time entry. Enter Time by Type isn't available for time entry codes that use In and Out times.
Run Calculations	Manually order Workday to run calculations for the week.

Conditions That Apply to Both Auto-Fill Options

- Workers can edit autofilled entries.
- Workday:
  - Clears existing time blocks for the current week (excluding time off entries).
  - Runs calculations and validations after copying time blocks.
- Workday doesn't:
  - Delete time off entries entered for the current week.
  - Autofill time off entries.
  - Autofill locked days where the worker isn't active.
  - Display the autofill option for a locked work week.

Security for Time Entry Options

To use any of the time entry options, you must:

- Enable the appropriate security on the *Enter Time* business security policy.
- Enable the option on the time entry template for the worker, if applicable.

Reviewing and Approving Time

Setup Considerations: Review Time and Project Time

You can use this topic to help make decisions when planning your configuration and use of the Review Time and Review Project Time reports. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday delivers 2 configurable reports that you can set up to enable managers to review and approve time in a consolidated view:

- The Review Time report is for managers or timekeepers who belong to the same supervisory organization as the workers on their project. Reviewers can use this report to review and approve project and nonproject time entries and time offs.
- The Review Project Time report is for project managers who approve time for the workers on their project, but who aren't in their supervisory organization. Project managers can only use this report to review and approve project time.

Business Benefits

When you grant managers access to the Review Time and Review Project Time reports, they can:

- Save time by approving multiple time entries at once rather than approving each entry one-by-one in My Tasks.
- View additional details about time entries that are eligible or ineligible for approval.
- Gain context about a worker's time by viewing their daily and weekly time entry totals, time block details, and comments.
- Approve workers' time entries by week or by period.

Use Cases

Review Time

- Managers or timekeepers need to approve time entries or time offs for multiple workers at once.
- Project managers are in the same supervisory organization as the workers on their projects.

Review Project Time

- Project managers in your organization need to review and approve time for multiple workers at once.
- Your organization includes project managers who only approve project time entries for the workers on their projects.
- Project managers are in a different supervisory organization from the workers in their projects.

Questions to Consider

Which report should I grant workers access to?

Decide which report to enable based on the time approver's relationship to the workers.

Role	Reviewing and Approving	Report
• Timekeeper • Manager • Project manager who belongs to the same supervisory organization as the workers they're approving time for.	• Project time entries. • Nonproject time entries. • Time offs.	Review Time
• Project Manager • Project manager who belongs to a different supervisory organization from the workers they're approving time for.	• Project time entries.	Review Project Time

Recommendations

To reduce confusion, we recommend that you enable managers to use either the Review Time report or the Review Project Time report, but not both.

As you create training materials for managers about using the Review Project Time report, we recommend that you include these considerations:

- You can save filters on the Review Project Time filter page to quickly run the report with the same filters.
- Saved filters continue to populate the same date that you entered the first time you ran the task. Update the Date field to the relevant date when you run the task again.

Requirements

The Review Project Time report displays time entries based on time calculation tags. If you've never enabled time calculation tags before, you must create them to use the Review Project Time report. Create a Project Time calculation tag that is applied to all project time entries. You don’t need to create calculations or calculation groups.

Enable Create Independent Events on relevant time entry templates so that Workday creates separate approval events for each project when workers enter time against multiple projects.

Limitations

No impact.

Tenant Setup

You can configure tenant-wide settings that control what the reports display using these tasks:

- Edit Time Approval Template
- Edit Project Time Approval Settings

Security

Review Time

Security Domain	Considerations
Manager: Time Tracking Manager Approval	Secures the Review Time report. Grant managers access to this domain.
Set Up: Time Tracking	Secures the Edit Time Approval Template task that you can use to configure the Review Time report. Administrators should have access to this domain.

Review Project Time

Security Domain	Considerations
Project Manager: Time Tracking Project Manager Approval	Secures the Review Project Time report. Grant project managers access to this domain.
Set Up: Time Tracking	Secures the Edit Project Time Approval Settings task that you can use to configure the Review Time report. Administrators should have access to this domain.

Business Processes

Configure the *Enter Time* business process to route time entries to the project manager for approval.

Reporting

No impact.

Integrations

No impact.

Connections and Touchpoints

Features	Considerations
Workday Projects	Workers display in the Review Project Time report when they're assigned as resources on the same resource plan as the project manager.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Related Information
Concepts
Concept: Enter Time Business Process on page 2669
Concept: Project Time Entry on page 2700
Steps: Set Up Project Time Entry on page 2689
Preconfigured Content: HCM Delivered Configurations

Set Up the Review Time Report

Prerequisites

- Create time calculation tags.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

The Review Time report is a configurable report that enables managers or timekeepers to review and approve time for multiple workers at once. From the report, you can select a worker's name to view additional time entry data as well as absence balances. You can use the Review Time report as an alternative to My Tasks.

Note: The Workers prompt is limited to 1,500 workers. When your search results exceed this limit, the prompt displays an error: Error: Too many results. Refine search to narrow results. To prevent this error, refine your search criteria.

Steps

1. Access the Edit Time Approval Template task.

   To use 1 template, configure additional settings on the Global Time Approval Template. To enable time approvers in different countries to review different time totals, create multiple templates.

   As you complete the task, consider:

Option	Description
Review Time by Period	Select to enable approvers to review and approve time for nonweekly periods. Workday displays a Period Schedule prompt on the report that approvers can use to select

Option	Description
	a period schedule. The report displays all workers who are eligible for the selected period schedule. Reviewers should select a Period Schedule, rather than running the report without selecting one. When you select Review Time by Period, Workday doesn't display the Start Day of Week prompt.
Start Day of Week	Select the day that begins the week to approve. When managers review time by week, they can only approve time for workers with the same Start Day of Week. Managers can see hours for direct reports whose work week begins on a different day, but they can't use the report to approve the hours.
Worked Hours Calculation Tags	Select tags that identify worked time. These tags determine which hours display in the Submitted Time, Unsubmitted Time, and Approved Time columns in the report.

2. (Optional) On the Default Worker Filters tab, select additional search fields to display on the report:

    - Show Employee Type
    - Show Worker Type
    - Show Pay Rate Type
    - Show Job Exempt Status

    You can add values that automatically populate in the search fields you've added. To add filters to the report that approvers can't modify, add values without selecting the check box to display the field in the report. Workday applies an implicit filter to the report according to the values that you've entered.
3. (Optional) On the Time Summary tab, add the total columns you want to include in reports.

    - You can create more than 12 totals, but managers can only see 12 totals.
    - To display the total time employees actually reported to time approvers, increase the number of totals shown, and display only those columns where there's a value.

Option	Description
Order	Columns display in Review Time in numerical order from left to right starting with *Total 1*.
Title	To avoid confusion, include the type of unit in the column title. Example: Holiday Time (Days).
Calculation Tags	Select 1 or more calculation tags. Ensure that the calculation tags you select for each column use the same units. The sum of the time blocks with those tags will display in the column.
Always shown when 0	When checked, enables time approvers to see zero in the totals row.

Option	Description
	Example: If you always want to display an overtime total to the time approver, regardless of whether a worker has worked overtime: • Create an overtime row. • Select Always shown when 0 on the overtime total row.

4. (Optional) Select these options to display additional information in the report:

Option	Description
Include Warning Indicators	Displays: • An indicator in the Unsubmitted Hours column when the worker has unsubmitted time. • An indicator in the Hours to Approve column when the worker has time irregularities that might need attention. • A Workers with Alerts filter.
Include Count of Incomplete Time Entries	Displays the total number of incomplete time entries for the worker.
Include Scheduled Weekly Hours	Displays the worker's scheduled hours from their job profile.
Enable Workday Scheduling	Select to enable Workday to use data from Workday Scheduling in the report.
Include Time Anomalies	Select to enable Workday to display time anomalies in the report. Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.
Minimum Time Anomaly Confidence Level	Controls the minimum confidence level that a time anomaly must meet for Workday to display it. The confidence level is: • Low when it corresponds to 50 to 80 percent. • Medium when it corresponds to 80 to 90 percent. • High when it corresponds to 90 to 100 percent. Example: You set the value to Low. Workday then displays time blocks that have a Low, Medium, and High anomaly confidence level.
Include In/Out Comments	Displays the check-in and check-out comments from the worker's time clock events.

Option	Description
	Workday automatically displays the worker's time block comments.

5. On the Eligibility tab, from the Country prompt, select the countries where managers or administrators will be running the report. When their country isn't included in a template, the report runs with the Global Time Approval Template.
6. Add reviewers to the *Manager: Time Tracking Manager Approval* domain.
7. Authorize reviewers to approve or manually advance the approval step on the *Enter Time* business process.

Next Steps

If you approve time entries after running a payroll calculation, use the Run Pay Calculation task. Select Smart Calculation or Smart Calculation Based on Events.

Access the All Time Approval Templates report to view all time approval templates.

Concepts
Concept: Time Anomalies on page 2906
Troubleshooting: Review Time Report on page 2913

Set Up the Review Project Time Report

Prerequisites

- Set up project time entry, including calculation tags.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

The Review Project Time report enables project managers to review and approve time for multiple project workers at once as an alternative to My Tasks. This report displays workers based on their role on a project hierarchy, rather than based on their membership in a supervisory organization. Therefore, the report enables project managers to review time for workers in their projects even though the workers are outside the project manager's own supervisory organization.

Steps

1. Access the Edit Project Time Approval Settings task.

   As you complete the task, consider:

Option	Description
Review Time by Period	Select to enable approvers to review and approve time for nonweekly periods. Workday displays a Period Schedule prompt on the report that approvers can use to select a period schedule. The report displays all workers who are eligible for the selected period schedule. Reviewers should select a Period Schedule, rather than running the report without selecting one.

Option	Description
	When you select Review Time by Period, Workday doesn't display the Start Day of Week prompt.
Start Day of Week	Select the day that begins the week to approve. When you review time by week, you can only approve time for workers whose work week begins on the same day as the Start Day of Week. You can still see hours for workers whose work week begins on a different day, but you can't use the report to approve the hours.
Worked Hours Calculation Tags	Select tags that identify worked time. These tags determine which hours display in the Submitted Time, Unsubmitted Time, and Approved Time columns in the report.
Default Worker Filters	(Optional) Select Show Employee Type, Show Worker Type, Show Pay Rate Type, or Show Job Exempt Status to display additional search fields on the report. Add values that automatically populate in the search fields you've added. To add filters to the report that approvers can't modify, add values without selecting the check box to display the field in the report. Workday applies an implicit filter to the report according to the values that you've entered.

2. (Optional) On the Time Summary tab, select Show Billable and Non-Billable to display additional Billable and Non-Billable columns in the report.
3. (Optional) Add up to 12 additional breakdown columns to the report.

Option	Description
Column	Columns display in numerical order from left to right starting with *Total 1*.
Title	Include the type of unit in the column title to avoid confusion. Example: Holiday Time (Days).
Calculation Tags	Select 1 or more calculation tags. Ensure that the calculation tags you select for each column use the same units. The sum of the time blocks with those tags will display in the column.

4. Add reviewers to the *Project Manager: Time Tracking Project Manager Approval* domain.
5. Authorize project managers to approve or manually advance the approval step on the *Enter Time* business process.

Next Steps

If you approve time entries after running a payroll calculation, use the Run Pay Calculation task. Select Smart Calculation or Smart Calculation Based on Events.

Related Information

Concepts

Steps: Set Up Project Time Entry on page 2689

Steps: Set Up Machine Learning for Time Anomalies

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

- Deploy Workday Time Tracking. We recommend you deploy Time Tracking at least 1 year before implementing time anomaly detection.
- Create time approval templates.

Context

You can enable Workday to use machine learning to detect atypical time entries so that you can:

- Create custom reports to view time anomaly scores and top time anomaly reasons for time blocks.
- Access the Time Anomaly Trends report to view time anomaly trends by supervisory organization.
- Enable managers and timekeepers to see and take action on time anomalies within the Review Time report.

Steps

1. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   On the Innovation Services and Data Selection Opt-In report, select the HCM: Workforce Management Machine Learning Services section.

   Note: To build a machine learning model that can detect time anomalies, you must opt in to all of these categories:

   - Time Configuration Data
   - Worker Data
   - Historical Schedule Block Data
   - Worker Time and Absence Data

   You can also opt into User Feature Delivery Data to help Workday detect time anomalies.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.
2. Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality..

   Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.
3. (Optional) Access the Edit Time Approval Template task.

   Select the Include Time Anomalies check box to display time anomalies in the Review Time report.

   Security: *Set Up: Time Tracking* in the Time Tracking functional area.

Next Steps

We recommend that you train the machine learning model in the Production tenant for at least 3 weeks. When you train in a Production tenant, you ensure that the model has a constant stream of real data to train on so that it can learn patterns of acceptable and unacceptable time blocks.

If you need to test in a nonproduction tenant, you can enable time anomaly detection in Implementation tenants. If you began testing in an Implementation tenant before 2024-10-04, you now need to enable on-demand data extraction to continue regular data extraction.

Related Information

Concepts

Concept: Time Anomalies on page 2906

Workday Community: Time Anomalies

The Next Level: Time Anomalies

Test Time Anomalies in Implementation Tenants

Prerequisites

- Enable Workday to use machine learning to detect atypical time entries in an Implementation tenant.

  See Steps: Set Up Machine Learning for Time Anomalies on page 2887.
- Security: *Manage: Innovation Services* domain in the Innovation Services functional area.

Context

You can test time anomaly detection in an Implementation tenant.

Note: If you began testing in an Implementation tenant before 2024-10-04, you must now enable on-demand data extraction to continue extracting data.

Steps

1. Access the Run On-Demand Machine Learning Activation for Implementation Tenant task.
2. In the HCM: HCM: Workforce Management Machine Learning Services innovation service row, select Confirm Run.

Result

Workday immediately extracts data and sets up weekly data extractions. Workday uses this extracted data to train the machine learning model. To generate time anomalies in the Implementation tenant, where live data is not available, you need to submit and either approve or deny time blocks.

Next Steps

Monitor the results in the Time Anomaly Trends report.
Related Information
Concepts

Concept: Time Anomalies on page 2906

Set Up Scheduled vs. Actuals Reporting

Prerequisites

Security: These domains in the Time Tracking functional area:

- *Set Up: Time Tracking*
- *Worker Data: Reports*
- *Worker Data: Work Schedule*

Context

You can configure the View Scheduled vs. Actual Hours for Workers report so that managers and timekeepers can analyze the difference between workers' scheduled hours and the actual hours they worked. Managers can use the report to identify gaps in scheduling, allocate resources properly, and report on schedule accuracy to minimize labor inefficiencies.

Workday calculates the variance between scheduled hours and actual hours using this formula:

Actual hours - scheduled hours + time off hours (or time off days multiplied by scheduled hours for time off plans in days).

Example: A worker was scheduled to work for 8 hours. They worked 4 hours and took 4 hours of time off.

4 hours (worked) - *8* hours (scheduled) + 4 hours (time off) = *0* hour variance.

The actual hours include calculated time adjustments made through the Adjust Calculated Time task.

On the View Scheduled vs. Actual Hours for Workers report, Workday:

- Dates time blocks according to the reported date at the beginning of the time block.
- Doesn't include workers on days they're on leave.
- Evaluates time blocks according to the reported date at the beginning of the time block.
- Only includes time from the In/Out time entry method. The report doesn't display time entered through the Hours Only time entry method.

When workers enter time off in both days and hours on the same day, Workday displays time off in days in the Time Off Quantity columns. The report includes time off hours and days only in the worker rows and not in the daily variance total at the top of the page.

Steps

1. Access the Edit Scheduled vs. Actuals Settings task. As you complete the task, consider:

Option	Description
Actual Hours Calculation Tags to Exclude	Exclude time blocks with certain calculation tags from displaying in the Actual Hours value in the report. Example: You want to compare scheduled and actual hours, but don't want to include holiday hours. Select the *Holiday Time* calculation tag.
Pay Rate Types to Exclude	Exclude workers with certain pay rate types from appearing in the report.
Job Exempt Status	Define the job status to limit which workers to include in the report.

2. In the Analytic Indicator Configuration section, you can configure values that control whether Workday displays critical icons, warning icons, or both on the report.

   In the Critical and Warning fields, you can enter a value greater than or equal to zero. Workday applies the threshold values as absolute values. Therefore, the analytic indicators will display whether actual hours and time off are greater than or less than scheduled hours.

   Example: You enter 2.5 as the Critical value. Workday will display a critical icon for a worker who works at least 2.5 hours more than or less than their scheduled hours.

Result

Managers and timekeepers can access the View Scheduled vs. Actual Hours for Workers report. This report is for frontline managers, so the Supervisory Organization prompt returns only the organizations managed by the person running the report. Timekeepers who do not manage any organizations can run the report by manually entering the organizations that they have access to.

When workers are assigned to more than 1 work schedule calendar and 1 of their work schedule calendars is inactivated, the newly assigned work schedule calendar will override all scheduled hours from the time the previous work schedule calendar was inactivated. Ensure that workers are only assigned 1 work schedule calendar at a time.

Example

To configure the report to exclude breaks from workers' actual hours, from the Actual Hours Calculation Tags to Exclude prompt, select *Break*.

Next Steps

Add a menu to the Time and Absence dashboard, and add the View Scheduled vs. Actual Hours for Workers report as a task link. See Add Dashboard Menus.

Steps: Report on Time Across Supervisory Organizations

Context

You can configure security and create custom reports so time reviewers can report on time for workers outside their supervisory organization. You can enable reporting for reviewers such as project, location, or cost center managers.

Steps

1. Create Role-Based Security Groups.

   Workday recommends that you use constrained, role-based security groups for the assignable roles reporting on project time.

   In the Group Criteria section, select the Assignable Role.
2. Maintain Security Group Permissions.

   Grant the security group access to these domains:

   - *Manage: Project Plan* (Only for project time reporting).
   - *Reports: Time Tracking*.
3. Create Custom Reports.

   Create custom reports on the All Time Blocks report data source (RDS) using RDS filters. Select one of these filters based on the needs of the reviewer:

   - *Reported Time Blocks for Projects/Project Hierarchies*
   - *Reported Time Blocks for Projects/Project Hierarchies and Company*
   - *All Time Blocks for Workers by Cost Center*
   - *All Time Blocks for Workers by Location*

   Cost center and location managers who use these RDS filters will be able to view all time blocks for the workers. They'll also be able to see time worked for different cost centers or location hierarchies.

   Note: If you create reports with other filters, users (such as managers) must belong to an unconstrained security group to view time for workers outside their organization.

Run Custom Time Tracking Reports with Data Source Filters

Prerequisites

- Create Custom Reports. Create custom reports built off any of these data sources:
  - Schedule Blocks
  - Time Day
  - Time Week
  - Time Month
  - Time Exceptions for a Period
- Security: *Reports: Time Tracking* domain in the Time Tracking or Time Tracking Hub functional area.

Context

When you run custom Time Tracking reports, Workday gathers data from multiple sources for all active workers. Filtering this data before running reports is more efficient than filtering it afterwards.

Steps

1. Access the Run Custom Report task.
2. Run the custom Time Tracking report.
3. Set up data source filtering. As you complete the task, consider:

Option	Description
Exclude workers who have never entered time or time off	When you have many workers who don’t report time or time off, limit the report to display only workers who do.
Exclude Scheduling Data	When you include scheduling data, Workday checks for eligibility for work schedule

Option	Description
	calendars while running the report. Improve performance by excluding scheduling data when you don't want to report on it.
Workers	Select a subset of workers by choosing the workers individually. You can select active, inactive, and terminated workers.
Locations	Select all workers at a specific location.
Job Profiles	Select workers by job family or job profile.

Result

The report will include all workers who match any of the filter categories you selected.

Example

This example illustrates how you can filter data sources when running a Time Tracking report.

Field	Value
Exclude workers who have never entered time or time off	Yes
Exclude Scheduling Data	Yes
Workers	*Betty Liu*
Job Profiles	*Accountant*
Locations	*San Francisco*

If these workers have entered time or time off, the report will include Betty Liu, all accountants, and all workers in San Francisco.

Steps: Set Up Time Tracking Notifications

Context

Create and send notifications to groups of employees who have:

- Unmatched time clock events.
- No time entries.
- Unapproved time review events.
- Unsubmitted time entries.

You can send notifications according to a notification schedule and can report on workers who have taken action.

Steps

1. (Optional) Access the Create Distribution Time Period task.

   Create custom time periods that you can select in the Content prompt when you create scheduled distributions for time tracking. When you run the Scheduled Distribution Report, Workday uses these time periods to determine if workers took action on the notification on time. Custom time periods enable you to set periods of up to 100 days or 3 months, looking either forward or backward in time.

Example: You can create a custom time period that Workday uses to look back by 10 days from the date of the notification to correct unmatched time clock events.

Security: *Administer Scheduled Distributions* domain in the System functional area.

2. Copy Reports.
    a) Copy and modify these reports:
        - Unmatched Time Clock Events by Worker
        - Workers with No Time Entry
        - Workers with Unapproved Time Review Events
        - Workers with Unsubmitted Time

        Workday bases the Start Date, End Date, and Time Period fields on the creation date of the time blocks or time review events.
    b) Access the Share tab of the copied report.

        Add the time tracking administrator to the Authorized Groups or Authorized Users.
3. Run the custom time tracking reports.

    Enter a Time Period.
4. Access the Edit Tenant Setup - Notifications task.

    Workday mutes email and mobile push notifications for the routing rule by default.
    a) In the Notification Delivery Settings section, select Time Tracking.
    b) From the Rule prompt, select *Create Notification Routing Rule*.

        See Create Notification Routing Rules.

    See Concept: Notifications.

    Security: *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.
5. Access the Create Scheduled Distribution task.

    You can create and send notifications to employees identified in the custom reports.

    Security: *Administer Scheduled Distributions* domain in the System functional area.

    As you complete the task, consider:

Option	Description
Content Type	• Send the Review Time task to reviewers who have time review events pending their approval. • Select *Enter Time* to send the Enter My Time task to workers who have unsubmitted time entries, unmatched time clock events, or no time entries. • Select *Worker Notifications* to distribute notifications without linking to a task.
Content	Select the period of time from the notification launch date that you want to include in the search. Use the same time period that you selected when you ran your custom time tracking reports. Scheduled distributions don't expire, so you don't need to relaunch or reconfigure them. • *Last 14 Days* to search minus 14 days from the date that you send out the notification.

Option	Description
	• *Last 7 Days* to search minus 7 days from the date that you send out the notification. • *This Month* to search from the first day of the month until the date that you send out the notification.
Type	Select the audience for your report from an organization or from a custom report. When you use a custom report, in the Report Criteria grid, select the same time period you selected for Content.
Selection	Select a report from the time tracking custom reports that you created and ran.
Channels	Select the notification channels.
Message	Enter the message that you want to include in your notification. You can include links in your message.
Run Frequency	Select the frequency for sending the distribution.

Next Steps

(Optional) Run the Distribution Records report to validate which recipients took action on the notification.

Related Information
Tasks

Steps: Schedule Worker Communication Notifications

Schedule a Notification to Send in the Future

Set Up the Edit and Approve Time Report

Prerequisites

- Create time calculation tags.
- Security: *Set Up: Time Tracking* domain in the Time Tracking functional area.

Context

The Edit and Approve Time report is a configurable report that enables managers or timekeepers to review, edit, submit, and approve time for all their workers in a consolidated view. From the report, you can select a worker's name to view summary totals and validations. You can use the Edit and Approve Time report as an alternative to My Tasks .

The Edit and Approve Time report totals each day by hours. When you track time by days, Workday doesn't show values in the Summary section.

Steps

1. Access the Edit Time Approval Template task.

   Complete the task:

Option	Description
Review Time by Period	Select to enable approvers to review and approve time for nonweekly periods. Workday displays a View Options prompt on the report that approvers can use to select a weekly or period schedule. The report displays all workers who are eligible for the selected schedule. For period schedules, reviewers must select the period schedule they want to view. When reviewers select Review Time by Period, Workday doesn't display the Start Day of Week prompt.
Start Day of Week	When you enable only the weekly view, select the day that begins the week to approve. When managers review time by week, they can only approve time for workers with the same Start Day of Week. Managers can see hours for direct reports whose work week begins on a different day, but they can't use the report to approve the hours.

2. (Optional) On the Default Worker Filters tab, select additional search fields to display on the report:

   - Show Employee Type
   - Show Worker Type
   - Show Pay Rate Type
   - Show Job Exempt Status

   You can add values that automatically populate in the search fields you've added. To add filters to the report that approvers can't modify, add values without selecting the check box to display the field in the report. Workday applies an implicit filter to the report according to the values that you've entered.
3. (Optional) Complete the Edit and Approve Time tab:

Option	Description
Collapse Top Summary Cards	Select when you want the summary card at the top of the report to be collapsed by default.
Don't Display Scheduling Data	Select when you don't want to include scheduling data from Workday Scheduling or the work schedule calendar. Clear the check box to display: • Scheduled in and out times on each calendar day. • Total scheduled hours for the period in each worker row. For workers who have time entry templates with the Enable Workday Scheduling check

Option	Description
	box selected, we display Workday Scheduling data on the Edit and Approve Time report. For all other workers, we display scheduling data from the work schedule calendar.
Disable Autofill	Select to disable the autofilling of out times on unmatched time clock events and incomplete time blocks. When you don't disable autofill, Workday displays check-ins with their matching out times from workers' schedules.

4. On the Eligibility tab, from the Country prompt, select the countries where managers or administrators will be running the report. When their country isn't included in a template, the report runs with the Global Time Approval Template.
5. (Optional) If your managers submit time by period, approve time by period, or both submit and approve by period, access the Edit Time Entry Template task.

   On the Noneffective-Dated tab, expand the Business Process section. Select Submit by Time Period.
6. Add reviewers to the *Manager: Time Tracking Manager Edit and Approve* domain.

Next Steps

If you approve time entries after running a payroll calculation, use the Run Pay Calculation task. Select Smart Calculation or Smart Calculation Based on Events.

2025R2 Feature Release Note: Display Scheduling Data on the Edit and Approve Time Report

Mass Approve Time

Prerequisites

Security:

- *Custom Report Creation* domain in the System functional area.
- *Business Process Administration* domain in the System functional area.

Context

You can use the Mass Operation Management task to mass advance time review events (*Enter Time* business process events that need approval). This task reduces the need for approvers to review each event.

Note: We recommend using Mass Operation Management for improved performance and usability. However, you can also use the Mass Advance Business Process task to advance an event for an individual worker.

Steps

1. Access the Create Custom Report task.

   Create a custom report that generates a list of time review events that need approval. At minimum, the report must:

   - Be *Advanced* or *Simple*.
   - Use the *All Time Review Events* data source.
   - Use the *Mass Advance Criteria for Time Period* data source filter.
   - Contain a filter with an AND condition setting the Manually Advanceable report field to a value of Yes.
   - Return fewer than 50,000 time review events.
2. Access the Mass Operation Management task. As you complete the task, consider:

Option	Description
Mass Operation Type	Select *Advance Business Process*.
Input Report	Select the custom report you created earlier.
Run Frequency	Select a run frequency.
3. Select the Send to Completion check box to ensure that you complete all approvals.

   If you don't select this check box, Workday advances the business processes only 1 step forward. Not selecting the check box can result in incomplete time review events if your *Enter Time* business processes have more than 1 step after initiation.
4. Select the Enter Time process to get to the correct fields.

Result

When the process completes successfully, Workday approves all time review events.

Next Steps

If you've approved time entries after running a payroll calculation, use the Run Pay Calculation task and select either Smart Calculation or Smart Calculation Based on Events.

Concept: Business Process Management

Set Up Mass Operations

The Next Level: Time Tracking Advanced Concepts

Steps: Set Up Attendance Management

Prerequisites

Security: These domains in the Time Tracking functional area:

- *Reports: Time Tracking*
- *Set Up: Time Attendance*

Context

You can define attendance alerts for your organization and use a points system to encourage attendance policy compliance. You can associate attendance events with points and give managers the ability to justify attendance infractions or override points when needed. Workday also displays attendance alerts on the Edit and Approve Time report.

Steps

1. Access the Create Time Attendance Status task.
2. Create 1 or more attendance statuses.
   Example: You want Workday to alert you when a worker checks in or checks out more than 10 minutes before or after their scheduled time. You create these attendance statuses:
   - Early Check-In (>10 min.)
   - Late Check-In (>10 min.)
   - Early Check-Out (>10 min.)
   - Late Check-Out (>10 min.)
3. Access the Create Time Attendance Point Configuration task.

   Enter a point value for each time attendance status. You can also enter a date in the Expires After (Days) field so that after a particular number of days, Workday removes the attendance points from the worker. Enter a value between 1 and 366.
4. Access the Create Time Attendance Justification Reason task.
5. Create reasons that managers can select to justify an attendance event. Example: Medical Appointment.
6. Access the Create Time Attendance Rule Set task.
7. As you complete the task, consider:

Option	Description
Effective Date	Enter an effective date. When testing, ensure that the attendance rule set is active on or after the date that you're testing.
Order	Workday runs the rules in order of priority. Workday only applies 1 attendance status per check-in or check-out event.
Attendance Status	Select an attendance status that you've created, or create a new one.
Time Punch Type	Workday automatically populates this field based on your selection in the Shift Event column.
Minutes	Enter the number of minutes before or after a shift event when Workday should apply this status to the time block.
Relational Operator	Select either Less Than or Greater Than.
Shift Event	The shift event from the worker's work schedule calendar or Workday Scheduling. When you don't want to track attendance for meals and breaks, select: • *First In of the Schedule Shift* to evaluate the first scheduled shift block of the day. Example: The morning work block before a meal. • *Last Out of the Schedule Shift* to evaluate the last scheduled shift block of the day.

Option	Description
	Example: The afternoon work block after a meal.

Example: To create a rule that applies the status Late from Meal Break to workers who are more than 10 minutes late returning their 30-minute meals, enter these values:

Attendance Status	*Late from Meal Break*
Minutes	*40*
Relational Operator	*greater than*
Shift Event	*After Meal Start*

8. (Optional) Set Up No Shows on page 2900.
9. Access the Create Time Attendance Rule Eligibility task.
10. Select a Rule Set and eligibility rules to apply the rule set to groups of workers.

    You can select groups of workers based on Time Tracking eligibility rules and increase performance by adding a country or job profile.

    Workday recommends that workers only be eligible for 1 time attendance rule set at a time. When workers are eligible for multiple time attendance rule sets at once, Workday only applies 1 rule set. Workday applies the oldest rule set first.
11. To give managers the ability to modify time attendance data, configure these security domains in the Time Tracking functional area:
    - *Maintain: Adjust Attendance Points for Workers*
    - *Worker Data: Justify Time Attendance Status*
    - *Worker Data: Mass Justify Time Attendance Status*

Example

This example illustrates how Workday evaluates time attendance when shifts contain meal breaks.

A worker is scheduled to work the 8:00 AM - 4:30 PM shift with a 12:00 PM - 12:30 PM meal break. To check time attendance, Workday splits the shift into these shifts:

Shift	Hours
Shift 1	8:00 AM - 12:00 PM
Shift 2	12:30 PM - 4:30 PM

The worker works these hours:

In	Out
8:00 AM	12:45 PM
1:15 PM	4:30 PM

Late Attendance Status Rule	Result
10 minutes > *Scheduled Shift Start*	Late. Workday compares the 1:15 PM check-in with the start time of shift 2.
10 minutes > *First In of the Schedule Shift*	No attendance status.

Late Attendance Status Rule	Result
	Workday only compares the 8:00 AM check-in with the start time of the full shift.

Next Steps

You can access these reports to view time attendance data:

- Time Attendance Entry Records for Workers
- Time Attendance Points for Workers

2023R2 What's New Post: Attendance Management
Tasks
Edit Domain Security Policies

Set Up No Shows

Prerequisites

Security:

- *Reports: Time Tracking*
- *Set Up: Time Attendance*

Context

You can configure Workday so that when workers don't check in for their shift, Workday creates a No Show block on the calendar. When you click into the block, Workday displays:

- The details of the scheduled shift.
- The attendance points the worker received due to the No Show.
- When the attendance points expire.

These blocks are different from time blocks and won't be included when you report on time blocks. They will also appear regardless of whether you've run time calculations.

You can also configure attendance points for the No Show status and Workday will apply those points to the worker. Using Workday Talent, you can set up disciplinary actions that trigger according to the number of attendance points that a worker has.

You can use this feature with either Workday Scheduling or work schedule calendars.

Steps

1. Access the Create Time Attendance Status task.
2. Create a time attendance status to apply to workers when they unexpectedly don't check in for their shift. Example: *No Show*
3. Access either the Create Time Attendance Rule Set or Edit Time Attendance Rule Set task. As you complete the task, consider:

Option	Description
Option	Description
No Show Attendance Status	Select a status or create a new one.

Option	Description
Grace Period (Minutes)	Enter the number of minutes beyond the start time of the shift after which a worker is considered a no show. Example: You enter 15. Roy is scheduled for a 9:00AM shift. If he checks in at 9:20AM, he will be considered a No Show for his shift.

4. (Optional) Access the Create Time Attendance Point Configuration task to assign attendance points to the No Show status.

   You can also enter a date in the Expires After (Days) field so that after a particular number of days, Workday removes the attendance points from the worker. Enter a value between 1 and 366.

Result

If there's any increment of time off or a holiday on the same day, no No Shows will fire for that day.

However, when a worker takes an absence on the same day as their scheduled shift, you will need to rerun calculations in order for No Shows not to fire. Example: Ben is scheduled to work a shift starting at 9AM today, but requests sick time off at 8AM. You must rerun calculations in order for the No Show not to fire.

If you've added an absence on the day a No Show fired, you can rerun calculations to clear it.

No Shows do not display in the period calendar or in theEdit and Approve Timereport.

Example: Send Time Tracking Notifications

This example illustrates how to set up scheduled distribution notifications to workers who use Time Tracking.

Context

You want to create and send SMS notifications to workers with unsubmitted time entries for the past 2 months. You want to send weekly notifications starting next Monday at 11:00 AM until the end of the year and include a link to the Enter My Time task.

Prerequisites

Security:

- *Administer Scheduled Distribution* domain in the System functional area.
- *Custom/Standard Report Copy* domain in the Tenant Non-Configurable functional area.
- *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.

Steps

1. Access the Create Distribution Time Period task.
   a) Select these values:

Field	Value
Name	*Two Months*
Unit of Time	*Months*

Field	Value
Quantity	*2*

b) Click OK and Done.

2. Access the Copy Standard Report to Custom Report task.
    a) From the Standard Report Name prompt, select *Workers with Unsubmitted Time*.
    b) Click OK.
    c) Click OK.
    d) On the Share tab, select these values:

Field	Value
Report Definition Sharing Options	*Share with specific authorized groups and users*
Authorized Users	*Time Tracking Administrator*

    e) Click OK and Run.
    f) From the Time Period prompt, select *Two Months*.
    g) Click OK.
3. Access the Edit Tenant Setup - Notifications task.
    a) In the Notification Delivery Settings section, select Time Tracking.
    b) From the Rule prompt, select *Create Notification Routing Rule*.
    c) In the Name field, enter *Unsubmitted Time Notification*.
    d) Click Add.
    e) Select these values:

Field	Value
Channel	*Mobile Push Notification*
Default Frequency	*Immediately*

    f) Click OK.
    g) Click OK.
4. Access the Create Scheduled Distribution task.
    a) Select these values:

Field	Value
Title	*Workers with unsubmitted time for the past 2 months*
Content Type	*Enter Time*
Content	*Two Months*

    b) Click Next.
    c) Select Create New.
    d) Select these values:

Field	Value
Name	*Workers with unsubmitted time for the past 2 months*
Type	*Custom Report*

Field	Value
Selection	*Workers with Unsubmitted Time - Copy*

e) Expand the Report Criteria section.
f) In the Time Period row, select *Two Months* from the Value prompt.
g) Click Next.
h) Click Next.
i) In the Message field, enter a message to the workers. Example: Please submit your time.
j) Click Next.
k) From the Run Frequency prompt, select *Weekly Recurrence*.
l) Click Next.
m) Select these values:

Field	Value
Request Name	*Weekly notification to workers with unsubmitted time*
Day(s) of the Week	*Monday*
Start Time	*11:00 AM*
Start Date	Select the date of the next Monday.
End Date	Select the last day of the year.

n) Click OK and Done.

Related Information
Tasks
Steps: Schedule Worker Communication Notifications

Concept: Edit and Approve Time

Managers can use the Edit and Approve Time report to get a single-page overview of time entries for:

- Selected workers.
- Organizations.
- Their direct reports.

They can apply filters to refine the display by:

- Employee type.
- Job exempt status.
- Pay rate type.
- Worker type.

With the Edit and Approve Time report, managers can also:

- Correct existing worker time entries.
- Drill down on alerts for each worker to view details, correct errors, and resolve warnings causing these alerts.
- Enter time off for a worker or approve the time offs submitted through Time Tracking or Absence Management.
- Manually add new time entries or autofill from the work schedule calendar.
- Mass submit and approve time entries for multiple workers.
- Send back or deny individual worker time entries.
- View workers' scheduled hours alongside their reported time.

When you configure your tenant to submit by time period and review time by period, managers can approve, submit, send back, or deny time entries by period for workers based on their period schedules.

The report automatically sorts workers into grids of workers with or without alerts. The Workers with Alerts section displays workers with time entries that managers need to review and edit due to critical errors, warnings, or custom validations.

The Edit and Approve Time report doesn't:

- Display time blocks if they are outside the period selected.
- Enable you to delegate time submission or approval to another user.
- Filter out workers who don’t have time entry eligibility.
- Support the ability to manually advance time entries through business processes. Time entries can't be approved until the business process routes them to the approver.

You can't configure the:

- Time Approval Summary.
- Weekly Summary.
- Totals. Workday always displays reported quantities for daily totals and worker row totals.

We recommend you use the Edit and Approve Time report for groups of 50 workers or less.

When you configure the Edit and Approve Time report on desktop, the Edit and Approve Time worklet automatically displays on the Workday mobile app for all eligible managers. The mobile app enables managers and administrators to review, edit, and approve employee time directly from their iPhone and Android devices.

On mobile, managers and administrators can:

- Approve or submit multiple time entries at once for Workers without alerts.
- Filter time entries that have errors or warnings for Workers with Alerts .
- Easily contact employees if the employee's contact information is set to Primari and Public in Workday.

Note: This functionality is not currently available on iPads.

Access the Report

On desktop, you can access the Edit and Approve Time report:

- As a shortcut on your Home page.
- From the Team Time worklet.
- From the Time and Absence dashboard.
- From the Time and Scheduling Hub.
- Using global search.

Choose How to Review and Approve Time

You can configure both the Review Time and Edit and Approve Time reports so that managers can review and approve time for multiple workers at once. The Edit and Approve Time report also enables managers to make corrections before approval without switching between mass action and individual worker views. You can make both of these reports available for all your managers, or you can enable Review Time for some managers and Edit and Approve Time for others.

2024R1 What's New Post: Edit and Approve Time

Workday Community: Edit and Approve Time (EAT) FAQ

Tasks

Add Dashboard Menus

Set Up Hubs

Set Up Worklets

Concept: Time Block Approval Moments

Approval moments describe the date and time that a time block was approved. Example: 2015-09-12 08:14:38.

You can run a custom report built on the Calculated Time Blocks Approved Between a Date Range report data source. When you run the custom report, Workday returns all of the calculated time blocks approved within the approval moments that you specify. Approval moments include the time, as well as the date of the time block approval. You can refine the approval moment down to the minute.

The report data source returns the latest version of a time block within the date range that you specify. As a result, if you run the custom report frequently, you can observe time block changes over time. Example: You can keep track of fluctuations in project costs during a month by running the report weekly.

Example: Time Block Changes with Different Approval Moments

Amanda submits a time block for a project she worked on to her manager for approval. After the first approval, Amanda changes the number of hours. After the second approval, Amanda changes the project. In total, her manager approves the time block on 3 separate occasions.

Approval Moment	Hours	Project
2015-09-07 08:35:18	8	A
2015-09-09 13:05:23	4	A
2015-09-09 15:55:39	4	B

The report returns different results based on the start and end moments that you specify.

Approval Start and End Moments that Include Multiple Versions

If you enter start and end moments that capture multiple versions of a time block, the report returns the latest version of the time block within that range.

When you enter these approval moments:

- Approval Start Moment: *2015-09-07 6:00:00*
- Approval End Moment: *2015-09-09 18:00:00*

The report returns the third version:

Approval Moment	Hours	Project
2015-09-09 15:55:39	4	B

When you enter these approval moments:

- Approval Start Moment: *2015-09-07 6:00:00*
- Approval End Moment: *2015-09-09 14:00:00*

The report returns the second version:

Approval Moment	Hours	Project
2015-09-09 13:05:23	4	A

Approval Start and End Moments that Include a Single Version

If the start and end moments isolate a specific version of the time block, the report also returns any changes that offset a previous version of the time block.

When you enter these approval moments:

- Approval Start Moment: *2015-09-07 11:00:00*
- Approval End Moment: *2015-09-09 14:00:00*

The report returns the second version of the time block, with an offset for the first version:

Approval Moment	Hours	Project
(offset from first change)	-8	A
2015-09-09 13:05:23	4	A

When you enter these approval moments:

- Approval Start Moment: *2015-09-07 06:00:00*
- Approval End Moment: *2015-09-09 10:00:00*

The report returns the first version without an offset, because it doesn't have any previous changes:

Approval Moment	Hours	Project
2015-09-07 08:35:18	8	A

Concept: Time Anomalies

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

What Are Time Anomalies?

Time anomalies are time blocks that, for one or more reasons, are atypical for a worker. Workday uses machine learning to determine workers' normal time entry patterns from historical data based on:

- Time entries.
- Time off.
- Work schedules.
- Whether time approvers approved, denied, corrected, or sent back similar time blocks.

Workday identifies time blocks that violate these patterns and assigns the time block a score. This score quantifies the likelihood that the time block is anomalous. When Workday identifies a time block as anomalous, it doesn't mean that the time block is invalid. Rather, the time block is atypical and might require additional attention.

Once Workday identifies anomalous time blocks, you can:

- Create custom reports to view time anomaly scores and top time anomaly reasons for time blocks.
- Access the Time Anomaly Trends report to view time anomaly trends by supervisory organization.
- Enable managers and timekeepers to see and take action on time anomalies within the Review Time report.

Time anomaly detection is meant to supplement time entry validations. Time entry validations and rule conditions are the best way to catch known errors. Alternately, time anomaly detection helps you identify unusual time entries that don't violate validations.

Time Anomalies and Machine Learning

The machine learning model observes the actions (approving, denying, correcting, sending back) taken by managers, administrators, and workers. Using this data, the model learns what kinds of time entries are acceptable or unacceptable. Example: A manager regularly approves a worker’s time blocks from 8:00 AM-5:00 PM on Monday through Friday. Over time, Workday learns that 8:00 AM-5:00 PM blocks are acceptable. Alternatively, a worker repeatedly enters time blocks from 7:00 AM-11:00 PM, and the manager repeatedly sends back the time blocks. Workday learns that this behavior isn't acceptable and assigns a higher anomaly score to future similar time blocks.

As Workday observes more and more actions, the machine learning model more accurately identifies anomalies. However, this means that Workday isn’t able to detect anomalies if a manager or administrator has never taken action on them before. Example: A worker incorrectly submits time on a Saturday from 1:00 AM-5:00 AM. Since enabling time anomaly detection in the tenant, workers haven’t entered any similar time blocks, and administrators haven’t taken action on similar time blocks. Workday doesn’t flag this time block as anomalous. Once the manager takes action on the block, Workday will begin to learn that this block and similar blocks are unacceptable. Workday then assigns a higher anomaly score to similar time blocks.

Time Anomaly Implementation

The model trains on historical time data for each worker. To have sufficient data for the model to analyze, Workday recommends you deploy Time Tracking at least 1 year before implementing time anomaly detection. We recommend you opt in to the workforce management machine learning service and data categories in a Production tenant so that the model can train with live data for at least 3 weeks. You can monitor the results in the Time Anomaly Trends report. Wait until anomaly results are consistent before you make them visible in the Review Time report. To hide time anomalies from managers and time approvers during this period, don’t select the Include Time Anomalies check box on the Edit Time Approval Template task.

Testing this feature in a nonproduction tenant has limitations because the model needs a constant stream of live data to learn the patterns of acceptable and unacceptable time blocks. When you opt in to time anomaly detection in your Production tenant, the machine learning model can access more data and quickly improve accuracy. If you need to test time anomaly detection in a nonproduction tenant, you can enable the feature in Implementation tenants. To generate time anomalies in a nonproduction tenant, you need to submit and either approve or deny time blocks in that tenant.

Possible Anomaly Reasons

While there might be multiple factors that contribute to a time block being anomalous, Workday identifies only 1 top possible anomaly reason for each time block. You can view anomalies that a manager can take action on in the Review Time report. Possible anomaly reasons include:

Reason	Description	In Review Time
Calculated Quantity	The quantity of time that the worker entered is greater than or less than their scheduled quantity of time.	Yes
Check-in	The check-in occurs outside of the worker's usual check-in time (based on their work schedule calendar).	Yes
Check-out	The check-out occurs outside of the worker's usual check-out time (based on their work schedule calendar).	Yes
Day of Month	The worker entered time for a day of the month when they typically don't work.	
Day of Week	The worker entered time for a day of the week when they typically don't work.	Yes
Employee Type Location Location Type Job Profile Supervisory Organization Worker Type	The worker belongs to an employee type, worker type, job profile, or supervisory organization that frequently has anomalous time entries. Example: Members of the Sales organization have higher levels of time anomalies because they enter time on mobile devices while traveling. Workday takes this factor into account when determining the top possible anomaly reason.	
Modified by Others	Someone other than the worker modified the time block.	
Position Worker Time Block	A multiposition worker entered 1 or more positions that are different from the positions they typically work.	
Project Worker Time Block	A Projects worker entered 1 or more projects that are different from the projects they usually work on.	
Reported Quantity	The quantity of time that the worker entered is greater than or less than the worker's typical time entry pattern.	Yes
Reported & Scheduled Quantity Difference	The quantity of time that the worker entered is greater than	Yes

Reason	Description	In Review Time
	or less than their scheduled quantity of time.	
Shift Date	The shift date on the time block might be unusual.	
Time Anomaly Count	The worker has a history of multiple anomalous time entries.	
Time Calculation Tags	The worker entered time for 1 or more time calculation tags that they typically don't use.	
Time Clock Event History	The time clock event history for the time block might include a missed check-in, check-out, or both.	
Time in Position	Workers who have been in a position for a certain amount of time can enter more anomalies than others. Example: A worker just started in a new position and entered an anomalous time block. Their top possible anomaly reason could be Time in Position.	
Time Type	The time type entered is different from the worker's usual time type.	Yes
Worktags	The worktags the worker entered are different from the worktags they typically enter.	Yes

Time Anomaly Confidence Score

Workday uses an anomaly confidence score to quantify the likelihood that a time entry is anomalous. The anomaly confidence level is:

- Low when it corresponds to 50 to 80 percent.
- Medium when it corresponds to 80 to 90 percent.
- High when it corresponds to 90 to 100 percent.

You can include the anomaly score in custom reports using the Time Anomaly Score report field on the Time Block business object.

Time Anomalies in Review Time

You can enable time anomalies to display in the Review Time report. When you display anomalies in Review Time, managers and timekeepers can quickly identify time entry issues that need their attention. Workday displays a Workers with Possible Time Anomalies filter on the summary page of the Review Time report. Workday also displays these columns:

- Possible Time Anomaly Count on the summary page.
- Possible Time Anomaly Reason in the worker details view.
- Time Anomaly Confidence Level in the worker details view.

The Review Time report only displays time anomalies that a manager can take action on. Examples:

- Managers can only approve submitted time. Workday won't display time anomalies related to approved or unsubmitted time.
- Time needs to be ready to approve without any errors. Managers can't approve time with errors.
- Workday won't display time anomalies related to job profiles because managers can't modify job profiles from the Review Time report.

Concept: Dashboards for Time Tracking and Absence

Workday provides 2 dashboards from which you can access Workday Time Tracking and Absence Management reports, manager self-service (MSS) tasks, and analytics:

Dashboard	Description	Domain	Available on Mobile
Team Absence	Configure if you use Absence Management without Time Tracking.	*Management Dashboard: Absence* in the Time Off and Leave functional area	No.
Time and Absence	Configure if you use both Time Tracking and Absence Management.	*Management Dashboard: Time Tracking* in the Time Tracking functional area	No.

You can use the Maintain Dashboards task to configure the dashboards and select these reports to display on the dashboards as worklets:

Report	Description	Dashboard	Functional Area	Security Domain
Compare Reported and Scheduled Hours	Displays the variance between a worker's reported and scheduled hours over the last 2 months.	Time and Absence	Time Tracking	*Worker Data: Reports*
My Team's Upcoming Time Off	Displays leave information of workers in your supervisory organization for the current week. You can change the date range.	Team Absence	Time Off and Leave	*Worker Data: Time Off (Time Off)*
Weekly Average Calculated Hours	Displays average calculated hours.	Time and Absence	Time Tracking	*Reports: Time Tracking*

Report	Description	Dashboard	Functional Area	Security Domain
	You can configure the report using calculation tags so that you see a particular time type. Example: To report on average weekly overtime, select the Overtime tag in the Calculation Tags prompt.			
Workers Currently on Leave	Available only from the dashboard.	Both	Time Off and Leave	*Worker Data: Leave of Absence*
Workers Returning from Leave this Week	Available only from the dashboard.	Both	Time Off and Leave	*Worker Data: Leave of Absence*

You can display these Time Tracking reports on both dashboards as menu items:

Report	Description	Security Domain
My Team's Calculated Hours by Cost Center Worktag	Displays calculated hours by cost center for a manager's direct reports.	*Worker Data: Reports*
My Team's Scheduled Hours	Displays the scheduled hours for each worker in a manager's supervisory organization.	*Worker Data: Reports*
Time Block Audit	Provides audit history details for time blocks and time clock events over a specific period. The Time Block Changes report field enables users to view details of each modification per time block at a glance.	*Worker Data: Reports*
Weekly Average Calculated Hours	Displays average calculated hours. You can configure the report using calculation tags so that you see a particular time type. Example: To report on average weekly overtime, select the Overtime tag in the Calculation Tags prompt.	*Reports: Time Tracking*
Weekly Average Hours Worked	Displays the weekly average hours so you can compare average hours across weeks and identify patterns or changes in labor trends over time.	*Reports: Time Tracking*

The Next Level: Day in the Life: Absence Administrator

Reference: Time Tracking Background Jobs and Processes

You can monitor the background jobs and processes that Workday Time Tracking is running in your tenant.

Background Job or Process	Description	Where to View
Mass Auto-fill from Schedule	Populates time blocks for multiple workers at once based on their work schedules. Runs according to the Run Frequency setting that you select.	Background Job Monitor Process Monitor
Process Time Clock Events	Runs when you use these web services: • *Put Time Clock Events* • *Import Time Clock Events*	Background Job Monitor Process Monitor
Process Time Block from Reported Time Batch Event Process Time Off from Reported Time Batch Event	Run when you use the Mass Enter Time report to enter time for multiple workers at once. Also run when you use these web services: • *Put Reported Time Blocks* • *Import Reported Time Blocks*	Background Job Monitor Process Monitor
Rescind Reported Time Batch Event	Runs when you rescind the Reported Time Batch Event business process.	Background Job Monitor Process Monitor
Run Time Calculations for a Date Range	Runs when you manually run time calculations using the Run Time Calculations for a Date Range report.	Background Job Monitor
TCE Sweeper	Runs every 15 minutes to collect and process queued Process Time Clock Events jobs.	Background Job Monitor Process Monitor

Troubleshooting: Managers Can't View Project Time Blocks on Reports

Cause	Solution
The project manager doesn't have a role on the project.	Assign Roles to Projects. Assign the project manager a role on the project or project hierarchy.

Cause	Solution
	Security: *Manage: Project Details* domain in the Project Tracking functional area.
Workers report time outside of the project manager's supervisory organization.	Remove any indexed report fields from these fields in your custom report: • Custom Report Filter • Group By Field See Set Up Filter Options for Custom Reports. Indexed report fields prevent managers from viewing project time blocks outside of their supervisory organization.
The project manager doesn't have security domain access.	1. Give the project manager access to these security domains using an unconstrained, role-based security group: • *Reports: Time Tracking* domain in the Time Tracking functional area. • *Manage Project Plan* domain in the Project Tracking functional area. See Steps: Set Up Security Permissions. When you use this security setup, project managers can report on all time blocks for the workers on their projects, including time worked for different projects or supervisory organizations. 2. (Optional) Create Custom Reports. Use the *All Time Blocks* report data source with one of these project data source filters: • *Reported Time Blocks for Projects/ Project Hierarchies* • *Reported Time Blocks for Projects/ Project Hierarchies and Company* When you use project data source filters, you limit reports to display only time blocks of projects belonging to the project manager.

Troubleshooting: Review Time Report

Time approvers can't view time entries in the Review Time report.

Cause	Solution
The approver doesn't have security access to review and approve time.	Add the time approver to a security group authorized to approve or manually advance the *Enter Time* business process.
The time entry isn’t in a *Submitted* status.	Submit the time entry or edit the time entry so that it is in a *Submitted* status.

Cause	Solution
The worker has a different Start Day of Week from the Start Day of Week you selected when configuring the report.	Modify either the worker's work schedule calendar or the time approval template so that both have the same Start Day of Week.
You didn't enable Review Time by Period.	Select the Review Time by Period check box on the Edit Time Approval Template task. Ensure that the time entry you want to review is within the period you selected.

Workday displays workers without alerts on the Workers with Alerts tab.

Cause: Worker had an alert at the point of time submission, but the alert no longer applies.

Solution: Workday identifies workers with alerts at the point of time submission. It's possible that the alert might no longer apply if the condition of the alert isn't met. The condition might no longer be met due to a data change outside of time entry or because you change the validation. Workday will continue to include the worker on this tab even though they no longer have any alerts.

Safety Incident Tracking

Steps: Set Up Safety Incident Tracking

Prerequisites

Configure the *Report Safety Incident* and *Edit Safety Incident* business processes and security policies in the Safety Incident Tracking functional area.

Context

The Workday framework for safety incident tracking helps you identify and track safety-related trends and problems. You can:

- Restrict safety incident tracking to the United States only.
- Report safety incidents for workers based outside the U.S. by creating a Safety Partner in a non-U.S. position.
- Track industry or location-specific safety incident data by creating and attaching a questionnaire to a safety incident business process.
- Maintain the questionnaire.

Note: You're responsible for reporting safety incident information as required by regulations applicable to your business. Workday provides fields for typical use in the U.S., but doesn't assume any responsibility for compliance.

Steps

1. Create Location Hierarchies.
2. Access the Edit Tenant Setup - HCM task.

   Configure the ID Definition for Safety Incident ID prompt.

   Security: *Set Up: Tenant Setup - HCM* domain in the System functional area.

3. (Optional) Configure Questionnaires and Questions.
4. Access these tasks for safety incident tracking:
   - Maintain Body Part Categories
   - Maintain Body Parts
   - Maintain Government Reporting Agencies
   - Maintain Health Facilities
   - Maintain Health Treatment Types
   - Maintain Health Workers
   - Maintain Health Worker Types
   - Maintain Incident Types
   - Maintain Natures of Injury/Illness
   - Maintain Safety Incident Locations
   - Maintain Sources of Injury/Illness

   You can access these tasks in any order and skip the ones you don't need. Because Workday uses the values in the tables for custom reporting and tabulation, ensure they match the reporting needs of your company.

   Security: *Set Up: Safety Incident Tracking* domain in the Safety Incident Tracking functional area.

Next Steps

Set up leave of absence. Workday doesn't automatically coordinate safety incident tracking with leave of absence.

Related Information
Tasks
Steps: Set Up Leave of Absence on page 2563

Concept: Safety Incident Reports

Workers can log safety incidents using the Report Safety Incident task. Required details include the incident date and time, location, and the name of the person reporting the incident.

- Incident Type enables you to group incidents according to your needs.
- Incident Location areas are maintained in setup tables and are separate from business site locations. Example: A single location could have several buildings, each of which is a unique safety incident location.

You can use the Configure Optional Fields task to hide or require fields on these tasks and reports:

- Report Safety Incident task.
- Update Safety Incident task.
- View Safety Incident report.

You can provide information about each involved party in an incident, such as the nature of injury or illness, investigation details, and time lost. You can also add notes and attachments. The worker data in the report is current on the incident date.

Each incident report has a status: *Draft*, *New*, *Pending Investigation*, and *Completed Investigation*. You can submit the incident event to a business process and approval workflow.

For information about safety reports, access Workday Standard Reports and select *Safety Incident Tracking* as the report category.

Concept: Safety Incident Security

Safety incidents have 2 components with separate contextual security:

- A safety incident report associated with a business site location.
- One or more involved parties that belong to supervisory organizations.

This contextual security applies to all safety incident tasks, reports, business processes, and report data sources. This means:

- Safety incidents with an involved party are accessible to roles on either the location hierarchy or supervisory organization.
- Safety incidents without an involved party are accessible only to roles on the location hierarchy, since there's no supervisory organization.

The table displays examples of access to safety incidents for different roles:

Example	Security Group	Access
Safety Administrator (or similar role)	User-based	• Can view all safety incidents and involved parties, including nonworker involved parties. • Can report, update, and rescind safety incidents, when assigned to all safety domains and business processes.
Safety Partner (or similar role)	Role-based (location hierarchy)	• Can view all safety incidents in their business site location, as well as safety incidents they entered. • Can view all involved parties, including nonworker involved parties. • Can report, update, and rescind safety incidents, when assigned to safety domains and business processes.
Manager	Role-based (supervisory organization)	• Can view all safety incidents they entered and any safety incident involving at least 1 party in their organization. • Can only view involved parties in their organization and nonworker involved parties. • Can report and update safety incidents, when

Example	Security Group	Access
		assigned to safety domains and business processes.
Worker	Employee as Self	• Can only view safety incidents to which they're an involved party. • Can't see other involved parties.
Reporter	Any security group	Can see all safety incidents that they reported, as long as they are in a security group assigned to safety domains.

When you use the Report Safety Incident task to add an involved party to a safety incident report, you only see the Nature of Injury/Illness collapsible section. This is because the supervisory organization context isn't available. You see the additional tabs in the Update Safety Incident task when the involved party provides context for security access.

Alternatively, you can assign the *Employee as Self* and *Contingent Worker as Self* security groups to the *Self-Service: Safety Incidents* domain to display the additional tabs in the Report Safety Incident task. However, these collapsible sections are visible to workers if they have permission to view safety incidents.

Concept: Security Groups

Employee and Manager Self-Service

Steps: Set Up Employee Self-Service

Prerequisites

Understand which Workday-provided security groups enable employees and contingent workers to access the Workday security domains that you select for employee self-service (ESS).

Context

ESS tasks are available:

- On the Home landing page through worklet links.
- From a worker's related actions menu.

Workers can access their primary landing page by clicking the Workday logo at the top of any page in Workday. The worklets that employees see vary based on the functional areas you implement and which worklets you configure as required or optional.

You can grant access to ESS tasks through domain security policies in various functional areas:

Functional Area	Domain Security Policies
Benefits	• *Self-Service: Beneficiaries* • *Self-Service: Benefits*

Functional Area	Domain Security Policies
	• *Self-Service: Dependents*
Career and Development Planning	• *Self-Service: Connections* • *Self-Service: Mentoring*
Core Compensation	• *Self-Service: Compensation* • *Self-Service: Insurance Calculated Coverage* • *Self-Service: Total Rewards Dashboard*
Contact Information	• *Self-Service: Emergency Contacts* • *Self-Service: Home Contact Information* • *Self-Service: Name* • *Self-Service: Work Contact Information*
CAN Payroll	*Self-Service: Payroll - CAN*
Core Payroll	• *Self-Service: My Pay Dashboard* • *Self-Service: Payroll*
Expenses	• *Self-Service: Expense Report* • *Self-Service: Payment Election* • *Self-Service: Spend Authorizations* • *Self-Service: Travel Booking*
Performance Enablement	• *Self-Service: Check-Ins* • *Self-Service: Delete Development Item* • *Self-Service: Development Items* • *Self-Service: Employee Reviews* • *Self-Service: Feedback*
Personal Data	• *Self-Service: Person* • *Self-Service: Personal Data* • *Self-Service: Verify National ID*
Procurement	• *Self-Service: Procurement Card Transaction Verification* • *Self-Service: Purchase Order* • *Self-Service: Receipt* • *Self-Service: Requisitions and Templates* • *Self-Service: Supplier Contact Tasks* • *Self-Service: Time and Tasks*
Talent Pipeline	*Self-Service: Talent Card*
Time Off and Leave	• *Self-Service: Leave of Absence* • *Self-Service: Leave of Absence Entitlements* • *Self-Service: Team Absence Calendar* • *Self-Service: Time Off* • *Self-Service: Time Off Balances* • *Self-Service: Worklets: Absence*
Time Tracking	• *Self-Service: Time Tracking* • *Self-Service: Time Tracking High Volume*
USA Payroll	• *Self-Service: Payroll (My US Territory Year End Forms)*

Functional Area	Domain Security Policies
	• *Self-Service: Payroll - USA*
Worker Profile and Skills	• *Self-Service: Personal Notes* • *Self-Service: Skills and Experience* • *Self-Service: Upload My Experience*

Steps

1. Access the Maintain Functional Area task.

   Select the Enabled check box for the functional areas you plan to deploy.

   Security: *Security Configuration* domain in the System functional area.
2. Review the tasks and reports associated with the self-service domains:
   a) Search for *domain: self-service* and select the domain you want to review.
   b) In the Reports and Tasks section, view the reports and tasks secured to the domain and determine which you want visible to your employee population.
3. Disable access to specific tasks within the delivered domain security policies.

   See Edit Domain Security Policies.
4. Configure the Home landing page.

   See Steps: Set Up Dashboards and Landing Pages.

   Note: Workers can customize the Home landing page to suit their preferences.

Next Steps

Workday Knowledge Management offers an Adoption Kit with various resources and customizable training materials for self-service users. Learn more about this toolkit at Workday Community: Adoption Kit.

Note: The Workday documentation provides information for administrators to understand, set up, and manage Workday functionality and isn't designed to support self-service users.

Reference: Set Up Help for Self-Service Users

Steps: Set Up Manager Self-Service

Context

Managers can access self-service tasks and reports on the Home landing page, available by clicking the Workday logo at the top of any page in Workday. Customize this page by specifying which worklets are required or optional for different groups of managers. Managers can also customize their own Home landing pages to suit their preferences.

In addition, you can simplify manager self-service (MSS) tasks by limiting the number of reasons that managers can select for specific types of events. If you provide only 1 reason for an event, Workday automatically populates the reason on that task.

You can also hide links and related actions for job profiles, locations, management levels, and positions. Hiding these items prevents managers from misinterpreting them as editable on profiles, tasks, and reports.

Steps

1. Configure the Home landing page:
    a) Select the tasks and reports to include in each required or optional worklet.
    b) Add the *Manager* security group to the security policy for each manager self-service task and report.

    See Steps: Set Up Dashboards and Landing Pages.
2. Limit the reasons that are available for selection in MSS tasks:
    a) Access the Maintain Event Categories and Reasons task.

       Security: *Set Up: Staffing* domain in the Staffing functional area.
    b) Select an Event type.
    c) Select the Manager Reason check box for each reason that you want to include in selection lists for managers who perform this task.
    d) Repeat steps a-c for other Event types that managers perform.
3. Select Manager Reasons in these tasks if they're available in manager self-service:
    - Maintain End Additional Job Categories
    - Maintain Local Termination Reasons
    - Maintain Termination Categories

    Security: *Set Up: Staffing* domain in the Staffing functional area.
4. Hide links and related actions by removing the Manager role from these domains:
    - *Job Profile: View*
    - *Location: View*
    - *Management Level: View*
    - *Worker Position: View*

    See Edit Domain Security Policies.

Scorecards card	*Set Up: Merit and Bonus*	Enables you to view, edit, and create compensation scorecards.
Scorecard Results card	*Set Up: Merit and Bonus*	Enables you to edit and create compensation scorecard results.
Grid Configuration card	*Set Up: Merit and Bonus* *Grid Management*	Enables you to view, edit, and create grid configurations.
Participation Rule Sets card	*Set Up: Merit and Bonus*	Enables you to view, edit, and create compensation review participation rule sets.

Benefits Section

You can access these cards on the Core page:

Item	Security	Description
Provider card	*Set Up: Benefits*	Enables you to view, edit, and create benefit providers.
Group card	*Set Up: Benefits*	Enables you to view, edit, and create benefit groups.
Eligibility Rule card	*Set Up: Benefits*	Enables you to: • View, edit, and create benefit eligibility rules. • View benefit eligibility rule results.
General card	*Set Up: Benefits*	Enables you to: • View, edit, and add benefit electronic signatures. • View, edit, and add benefit coverage types. • View and edit benefit enrollment instructions. • View, edit, add, and remove benefit defaults.

You can access these cards on the Plans page:

Item	Security	Description
Benefit Plan card	*Set Up: Benefits*	Enables you to view, edit, and create benefit plans.
Health Care Rate card	*Set Up: Benefits*	Enables you to view, edit, and create health care rates.
Insurance Coverage card	*Set Up: Benefits*	Enables you to view, edit, and create insurance coverage.
Insurance Rate card	*Set Up: Benefits*	Enables you to view, edit, and create insurance rates.
Cross Plan Enrollment card	*Set Up: Benefits*	Enables you to view, edit, and create cross plan enrollment prerequisites.

You can access these cards on the Events page:

Item	Security	Description
Benefit Plan Years card	*Set Up: Benefits*	Enables you to view, edit, and create benefit plan year definitions.
Event Types card	*Set Up: Benefits*	Enables you to view, edit, and create benefit event types.
Enrollment Events card	*Set Up: Benefits*	Enables you to:

Item	Security	Description
		• View, edit, create, and delete benefit enrollment event types. • Edit and create benefit enrollment event rules.
Open Enrollment Events card	*Set Up: Benefits*	Enables you to view, edit, and create open enrollment event types.
Passive Events card	*Set Up: Benefits*	Enables you to: • View, edit, and create and passive event rules. • Schedule passive events.

Absence

You can access these cards on the Time Off page:

Item	Security	Description
Time Off Plan card	*Set Up: Time Off*	Enables you to view, edit, and create time off plans.
Absence Table card	*Set Up: Time Off (Calculations - Absence Specific)*	Enables you to view, edit, and create absence tables.
Accrual card	*Set Up: Time Off*	Enables you to view, edit, and create accruals.
Time Off card	*Set Up: Time Off*	Enables you to view, edit, and create time off.
Buy Time Off card	*Set Up: Time Off*	Enables you to view, edit, and create schedules for buying time off.
Sell Time Off card	*Set Up: Time Off*	Enables you to view, edit, and create schedules for selling time off.
Absence Threshold card	*Set Up: Absence Threshold Schedule*	Enables you to view, edit, and create absences threshold schedules.
Evaluate Tasks card	*Set Up: Time Off (Calculations - Absence Specific)* *Set Up: Time Off*	Enables you to: • Evaluate absence eligibility for a time off plan, accrual, or time off. • Evaluate absence calculations for a time off plan, accrual, or time off. • Reevaluate absence table time off entries for workers or organizations.

You can access these cards on the Leave of Absence page:

Item	Security	Description
Leave Type card	*Set Up: Leave of Absence*	Enables you to view, edit, and create leave types.
Leave of Absence Rule card	*Set Up: Leave of Absence*	Enables you to view, edit, and create leave of absence rules.

Time Tracking

You can access these cards on the Time Entry and Approvals page:

Item	Security	Description
Time Approval Template card	*Set Up: Time Tracking*	Enables you to view, edit, and create time approval templates.
Time Entry Template card	*Set Up: Time Tracking*	Enables you to view, edit, and create time entry templates.
Time Codes card	*Set Up: Timesheets*	Enables you to view, edit, and create time codes.
Time Code Group card	*Set Up: Time Tracking*	Enables you to view, edit, and create time code groups.
Time Calculation Tag card	*Set Up: Time Tracking*	Enables you view, edit, and create time calculation tags.
Time Entry Code card	*Set Up: Time Tracking*	Enables you to view, edit, and create time entry codes.
Time Request Code card	*Set Up: Time Tracking*	Enables you to view, edit, and create request codes.
Time Tracking Eligibility Rule card	*Set Up: Time Tracking*	Enables you to view, edit, and create time track eligibility rules.
Time Attestation Rule card	*Set Up: Time Tracking*	Enables you to view, edit, and create time attestation rules.

You can access these cards on the Schedules and Calendars page:

Item	Security	Description
Schedule Calendar Rule card	*Set Up: Calendar* *Set Up: Period Schedule*	Enables you to view, edit, and create holiday/work schedule calendar rules.
Holiday Calendar card	*Set Up: Calendar* *Set Up: Period Schedule*	Enables you to view, edit, and create holiday calendars.
Work Schedule Calendar card	*Set Up: Calendar* *Set Up: Period Schedule*	Enables you to view, edit, and create work schedule calendars.
Work Schedule Calendar Group card	*Set Up: Calendar* *Set Up: Period Schedule*	Enables you to view, edit, and create work schedule calendar groups.

You can access these cards on the Calculations and Validations page:

Item	Security	Description
Time Calculation card	*Set Up: Time Tracking* *Set Up: Time Calculations* *Process: Time Configuration Analyzer Tool*	Enables you to view, edit, and create time calculations.
Time Calculation Group card	*Set Up: Time Tracking* *Set Up: Time Calculations* *Process: Time Configuration Analyzer Tool*	Enables you to view, edit, and create time calculation groups.
Time Accumulator card	*Set Up: Time Tracking* *Set Up: Time Calculations* *Process: Time Configuration Analyzer Tool*	Enables you to view, edit, and create time accumulators.
Time Entry Validation Group card	*Set Up: Time Tracking* *Set Up: Time Calculations* *Process: Time Configuration Analyzer Tool*	Enables you to view, maintain, edit, and create time entry validation groups.

Scheduling Section

You can access these cards on the Workday Scheduling page:

Item	Security	Description
Schedule Override Settings card	Add security groups to the*Change Worker Scheduling Settings* initiating action on the *Change Worker Scheduling Settings* business process. *Set Up: Scheduling: High Level Scheduling Settings*	Enables you to: • Override schedule settings for workers. • Mass assign scheduling override settings.
Schedule Override Settings Template card	*Set Up: Scheduling: High Level Scheduling Settings*	Enables you to view, edit, add, remove, and override scheduling settings templates.
Worker Scheduling Availability card	Add security groups to the*Change Work Availability* initiating action on the *Change Work Availability* business process. *Reports: Scheduling Worker Configuration*	Enables you to view: • View worker scheduling availability. • Change work availability for workers.
Worker Schedule Tags card	Add security groups to the*Change Work Scheduling Settings* initiating action on the *Change Worker Scheduling Settings* business process.	Enables you to: • View worker schedule tags by organization. • Assign schedule tags to workers.

Item	Security	Description
	Add security groups to the*Change Worker Schedule Tags* initiating action on the *Change Worker Schedule Tags* business process.	
Meal Break Rule Set card	*Set Up: Time Tracking* *Set Up: Scheduling: High Level Scheduling Settings*	Enables you to view, edit, and create meal break rule sets.
Predictive Scheduling Rule Set card	*Set Up: Time Calculations* *Set Up: Predictive Scheduling*	Enables you to view, edit, and create predictive scheduling rule sets.
Scheduling School Types card	*Set Up: Scheduling: High Level Scheduling Settings* *Reports: Scheduling School Calendars* *Scheduling: Minor Compliance - School Calendar*	Enables you to view, edit, add, and remove scheduling school types.
Work Session Rule card	*Set Up: Scheduling: High Level Scheduling Settings* *Reports: Work Session Rules*	Enables you to view, edit, create, and delete work session rules.
Scheduling Settings card	*Set Up: Scheduling: High Level Scheduling Settings*	Enables you to view scheduling organization settings and edit schedule settings.
Scheduling Working Hours Configuration card	*Set Up: Scheduling: High Level Scheduling Settings*	Enables you to view, edit, and create scheduling validation working hours configurations.
Tenant Setup Scheduling card	*Set Up: Scheduling: High Level Scheduling Settings*	Enables you to access the Edit Tenant Setup - Scheduling task.
Scheduling Productivity Template card	*Set Up: Scheduling: High Level Scheduling Settings*	Enables you to view, edit, and create scheduling productivity templates.
Shift Profiles card	Add security groups to the*Assign Shift Profiles to Worker* initiating action on the *Assign Shift Profiles to Worker* business process. *Reports: Scheduling Worker Configuration*	Enables you to: • View worker shift profiles by organization. • Assign shift profiles to workers.
Work Schedule card	Add security groups to the*Assign Work Schedule* initiating action on the *Assign Work Schedule* business process. *Set Up: Time Tracking Reports: Time Tracking Set Up: Static Scheduling*	Enables you to: • View worker schedule calendars. • Assign work schedules. • Audit workers with multiple work schedule calendars.

Item	Security	Description
Centralized Scheduling card	*Set Up: Centralized Scheduling* *Set Up: Mass Generate Labor Demand*	Enables you to mass generate, mass publish, and mass clear schedules for organizations.
Scheduling Maintenance card	*Set Up: Scheduling: Daily Notes* *Set Up: Scheduling: Notifications* *Scheduling: Schedule and Shift Audit* *Scheduling: Cleanup Invalid Data*	Enables you to: • Maintain daily notes for scheduling organizations. • Maintain change published schedule notifications. • Access the Schedule and Shift Audit report. • Clean up invalid scheduling data.

Manager Insights Hub

Setup Considerations: Manager Insights Hub

You can use this topic to help make decisions when planning your configuration and use of Manager Insights Hub. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Manager Insights Hub provides managers with automated insights and actionable steps that they can take to support team career growth and development.

The Suggested Opportunities section uses machine learning to recommend personalized opportunities that managers can share with direct reports.

We support Manager Insights Hub in:

- Arabic
- Bulgarian
- Chinese (Simplified)
- Chinese (Traditional)
- Croatian
- Czech
- Danish
- Dutch
- Estonian

- Finnish
- French (Canada)
- French (France)
- German
- Greek
- Hebrew
- Hungarian
- Indonesian
- Italian
- Japanese
- Korean
- Latvian
- Lithuanian
- Malay
- Norwegian
- Polish
- Portuguese (Brazil)
- Romanian
- Russian
- Serbian
- Slovak
- Slovenian
- Spanish
- Swedish
- Thai
- Turkish
- Ukranian
- Vietnamese

Business Benefits

With Manager Insights Hub, you can enable managers to:

- Upskill and develop direct reports, supporting your organizational objectives.
- Identify career growth opportunities for direct reports, promoting employee engagement and retention.
- Leverage machine learning suggestions and insights, reducing time spent on individualized performance and career development.
- Build and support high-performing teams, fostering productivity and efficiency.

Use Cases

- Centralize and consolidate managerial tasks in a single hub to save time.
- Promote career opportunities to direct reports to support their career development.
- Use automated insights and suggestions to save time and promote action.
- View the status of in-progress job changes, create position events, and job requisition events.
- Request a compensation change or a one-time payment for an employee.
- Manage time off, leave, scheduling, and time entries for your team once you view information from the reports and cards that are related to time off, leave, scheduling, and time entries in the Time & Scheduling section.

Questions to Consider

Questions	Considerations
Which Workday features can you access in Manager Insights Hub?	Manager Insights Hub consists of different sections and cards that display insights from: • Absence • Calibration • Career Hub • Check-Ins • Compensation • Contingent Workers • Development items • Employee reviews • Feedback • Goals • Interests • Learning • Staffing • Talent Highlights • Time Tracking • Workday Peakon Employee Voice • Workday Scheduling • Workday VNDLY You can initiate some actions and business processes for these features from the Manager Insights Hub. When you don't use a feature, Manager Insights Hub doesn't display cards or tasks related to it.
How does the Manager Insights Hub work with the Career Hub?	When you use the Career Hub, the Manager Insights Hub displays suggestions for each direct report. Workday uses machine learning to suggest mentors, flex teams, connections, and learning opportunities based on direct reports' skill interests. Managers can share these opportunities for their direct reports to view in the Career Hub. You can also enable managers to create development items for their direct reports with AI assistance. See: Concept: AI-Generated Development Items on page 1531. When you enable Career Path Builder in the Career Hub, you can enable workers to share career paths so that managers can view them in the Manager Insights Hub. Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Questions	Considerations
Can you view suggested opportunities for direct reports when you don't use the Career Hub?	When you don't use the Career Hub but want to enable suggestions, you must configure Interests and Skills Cloud.
How does Manager Insights Hub work with Check-Ins?	Managers can view and manage check-ins from Manager Insights Hub. Cards related to Check-Ins include an Add as Topic to Check-In button. If you don't use Check-Ins, Workday provides a link to the relevant View task.
How does Manager Insights Hub work with Goals?	Manager Insights Hub displays a Goals tab. When you use the Maintain Feature Opt-Ins report to opt in to the Goals Redesign User Interface Changes feature, Workday displays the Goals Awaiting Your Action and Recently Updated Goals sections. When you have the *Manage Goals* business process configured with managers as approvers, the Goals Awaiting Your Action section includes goals that are pending manager approval. When you opt out of the Goals Redesign User Interface Changes feature, Workday displays a single card with 4 recently updated goals.
How can managers use Manager Insights Hub to view insights and suggestions for contingent workers?	Contingent workers display with [C] appended to their name and managers can view their career information and insights. Manager Insights Hub doesn't recommend suggested opportunities for contingent workers because opportunities are based on skill interests, which Workday doesn't support for contingent workers.
Who can managers view information about in Manager Insights Hub?	Managers can only access information about workers who report to them directly. Manager Insights Hub doesn't display information for workers more than 1 level removed from the manager.
How does the Manager Insights Hub relate to the My Team Management dashboard?	The Manager Insights Hub improves and builds upon the My Team Management dashboard. For your supervisory organizations, we recommend that you set up and use the Manager Insights Hub instead of the My Team Management dashboard.
Can I customize the Manager Insights Hub?	You can customize the Manager Insights Hub, such as by: • Renaming the hub, and sections. • Hiding sections, navigation items, and cards. • Including navigation items to custom reports, custom dashboards and Extend Apps. • Adding announcements to sections.

Questions	Considerations
	• Adding suggested links. See Set Up Hubs. Note: If you customize modify, add remove, or rename sections in the Manager Insights Hub, you will need to manually add all newly delivered sections, cards, and buttons.
Can managers request a compensation change, such as when an employee changes location and is eligible for a higher salary?	You can access the Request Compensation Change task to change an employees compensation. See: Steps: Propose Compensation for Employees or Positions on page 1032.
Can managers request a one-time payment for an employee as an off-cycle, special reward?	You can access the Request One-Time Payment task from the hub to pay an employee for any reason, including as a reward for completing a project ahead of schedule. See: Request One-Time Payments for Employees on page 1129.
Can I view my total rewards statement for myself or my employees?	You can access the Total Rewards Statement report on the hub. See: Steps: Set Up Total Rewards Statement on page 1221. Workday recommends that you use total rewards templates.

Recommendations

Enable the Suggested Opportunities section to recommend the best opportunities to help direct reports' careers grow and develop.

Workday also recommends using total rewards templates, and change job templates.

Requirements

Enable the Manager Insights Hub functional area and configure the *Manage: Manager Insights Hub* domain. You must have the Core HCM product area to access the hub.

Access to pages, sections, tasks, and reports depends on your organization’s Workday product subscriptions. The individual security permissions of supervisory organization managers determines what data they can view, and which tasks, reports, and cards they can use. See Reference: Manager Insights Hub on page 2944.

Limitations

- Manager Insights Hub doesn't support matrix organizations.
- If you create a custom hub title, you can't search for Manager Insights Hub in global search using that title.
- Managers can only see information for their supervisory reports. They can't see information for workers that report to their supervisory reports.
- You can't suggest Workday Learning opportunities through Manager Insights Hub.

Tenant Setup

You can select the Enable Employee Engagement in Manager Insights Hub option on the Edit Tenant Setup - HCM task to enable insights from Workday Peakon Employee Voice.

Security

Configure the *Manage: Manager Insights Hub* domain in the Manager Insights Hub functional area.

Consider the other domains that you want to enable as a part of your Manager Insights Hub setup.

Access to pages, sections, tasks, and reports depends on your organization's Workday product subscriptions. The individual security permissions of supervisory organization managers determines what data they can view, and which tasks, reports and cards they can use.

See Reference: Manager Insights Hub on page 2944.

Business Processes

Ensure that managers have the relevant security permissions for business processes in order to be able to view or initiate them from the hub.

Reporting

No impact.

Integrations

No impact.

Connections and Touchpoints

Features	Considerations
Talent Optimization	With Manager Insights Hub, you can access managerial tasks from these Talent Optimization features: • Career Hub • Check-Ins • Development items • Employee reviews • Feedback • Goals • Interests • Talent and Performance Calibration • Talent Highlights
Core HCM	With Manager Insights Hub, you can access managerial tasks from these Core HCM features: • Time Off and Leave • Advanced and Core Compensation • Staffing • Recruiting
Learning	Managers can view their team's recent learning activity.
Time Tracking	With Manager Insights Hub, you can access managerial tasks from these Time Tracking features: • Entering and Correcting Time • Reviewing and Approving Time

Features	Considerations
Workday Scheduling	With Manager Insights Hub, you can access managerial tasks from these Workday Scheduling features: • Manage Worker Schedule Settings, Preferences, and Availability • Schedule Generation and Management
Workday Peakon Employee Voice	The Employee Engagement section displays these insights: • Engagement Score • Highlighted Drivers of Engagement • Latest Comments
Workday VNDLY	From the the VNDLY Contingent Overview page, you can access: • An overview of all pending approvals in VNDLY. • Links to other frequently used actions within VNDLY. • Active work orders and their respective end dates. • The Work Order Budget Tracker, which displays an overview of your invoiced amount for contingent workers and the estimated budget. • Contingent workers in VNDLY at risk of tenure policy violation.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Workday Community: Languages

Steps: Set Up Manager Insights Hub

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Review the setup considerations for the Manager Insights Hub.

Context

The Manager Insights Hub provides managers with automated insights and personalized suggestions for team career growth and development. Managers can view actionable insights about their direct reports only, and they can gain visibility into team progress and activities.

Access to pages, sections, tasks, and reports depends on your organization’s Workday product subscriptions. The individual security permissions of supervisory organization managers determines what data they can view, and which tasks, reports, and cards they can use.

When you use the Career Hub, the Manager Insights Hub displays a Suggested Opportunities section that uses machine learning to recommend mentors, flex teams, and learning opportunities. You can configure it to also recommend connections. When a manager shares an opportunity with their direct report through the Manager Insights Hub, Workday displays the opportunity in the direct report's Career Hub with a Manager Suggested label. When you don't use the Career Hub but want to enable the Suggested Opportunities section, you must configure Interests and Skills Cloud.

Steps

1. Enable the Manager Insights Hub functional area.

   See Steps: Enable Functional Areas and Security Policies.
2. (Optional) Enable these functional areas.

Functional Area	Description
Core Compensation functional area (in the Core HCM product area)	You can perform basic compensation functions, including: • Creating and assigning compensation plans, such as salary and hourly plans.

Functional Area	Description
	• Creating and assigning compensation packages. • Creating eligibility rules. • Creating grades and grade steps.
Advanced Compensation functional area (in the Core HCM product area)	The Advanced Compensation functional area enables you to manage compensation review processes and give your employees merit increases, distribute bonuses, and manage stock grants.
Time Off and Leave functional area (in the Core HCM product area)	You can view information, access tasks, and take actions related to time off and leave on the Overview and Time & Scheduling sections.
Time Tracking	The Time Tracking functional area enables you to: • Define the core business process for entering and tracking time, and updating work schedules. • Set up time entry templates, time entry codes, and eligibility rules to tailor time entry to specific organizations and workers. • Track time against details such as projects, tasks, worktags, and organizations. • Set up time period schedules and map to Payroll period schedules to pull time blocks into Workday Payroll or Cloud Connect for 3rd Party Payroll. • Update and modify work schedules for employees.
Workday Scheduling	You can set up organizations and settings for Workday Scheduling, generate schedules, and enable workers to take action on them.
Performance Enablement (in the Talent Optimization product area)	You can view performance tasks for your team including: • Upcoming Check-Ins • Latest Career Activities • Team Progress

See Steps: Enable Functional Areas and Security Policies.

3. (Optional) Set up the Career Hub.

   Set up the Career Hub to enable the Suggested Opportunities section.

   See Steps: Set Up Career Hub.

4. (Optional) Set up Talent Highlights.

   Set up Talent Highlights to enable:

   - The My Team's Eligibility for Talent Highlights card in the Overview and Performance sections.
   - The Prepare for Worker's Development Conversation card in the Suggested Actions for Support section for a direct report.
   - The Talent Highlights tab for a direct report.

   See Steps: Set Up Talent Highlights on page 1790.

5. (Optional) Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   On the Innovation Services Opt-In task, select HCM Machine Learning GA Features on the Available Services tab in the HCM category.

   On the Maintain Innovation Services Data Selection Opt-In task in the HCM ML Features and Third Party Connectors GA innovation service, select Manager Insights Hub from the View Data Categories for Feature prompt. Select the opt-in check boxes for the categories for which you want to contribute data for Machine Learning:

Categories	Description
Learning Data	Select the Opt In check box to enable suggested learning opportunities.
Talent Opportunity Marketplace Data	Select the Opt In check box to enable suggested flex teams.
Worker Profile Data	Select the Opt In check box to enable suggested mentors and connections.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

6. Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality. The default region is the U.S.

   Security: *Set Up: Tenant Setup - Machine Learning* domain in the System functional area.

7. Edit Domain Security Policies.

   Configure these domains:

   - *Manage: Manager Insights Hub* in the Manager Insights Hub functional area. Managers must have Modify permissions to share suggested opportunities with direct reports.
   - *Worker Data: Career Connections* in the Career and Development Planning or Career Hub functional areas to enable connections in the Suggested Opportunities section.
   - *Manage: Talent Optimization in Manager Insights Hub* in the Manager Insights Hub functional area to enable Talent Optimization tasks and information.

   Configure domain security policies for other features that you want to enable in the Manager Insights Hub. See Reference: Manager Insights Hub Security.

8. Activate Pending Security Policy Changes.

9. (Optional) Set up Workday Peakon Employee Voice. See Steps: Set Up Manager Insights Hub on page 2940

   To enable the Employee Engagement section, set up Workday Peakon Employee Voice and select the Enable Employee Engagement in Manager Insights Hub check box on the Edit Tenant Setup - HCM task. You must also ensure that managers have access to:

   - A Peakon dashboard that meets the visibility thresholds set by your organization.
   - The Engagement question set.

   Note: Ensure that the Workday tenant name is mapped in Peakon Backoffice. Open a Customer Care ticket to set up tenant mapping.
10. (Optional) To enable the VNDLY Contingent Overview Page page in the Manager Insights Hub, set up the VNDLY contingent worker team. See ../../vndly/Integrations/workday-connector/steps--set-up-the-contingent-worker-hub.dita.
11. (Optional) Set Up Hubs.

    You can customize the Manager Insights Hub, such as by:

    - Renaming the hub, and sections.
    - Hiding sections, navigation items, and cards.
    - Including navigation items to custom reports, custom dashboards, and Extend Apps.
    - Adding announcements to sections.
    - Adding suggested links.

Example

You haven't subscribed to the Talent Optimization product area and the Peakon Employee Voice functional area. When you access the Manager Insights Hub, you can see the following:

- These cards on the Overview section:
  - Hiring and Staffing Summary
  - Time Offs Pending Approval
- Hiring and Staffing section.
- Time & Scheduling section.
- Budgets and Resources section.
- The My Team section, and these tabs on the worker pages:
  - Overview
  - Time & Scheduling
  - Compensation

Next Steps

Add the Manager Insights Hub worklet to the Home landing page.

Use the Configure Worklet task to add the Manager Insights Hub action to the Talent and Development worklets.

This topic lists security domains and consideration for the cards, reports, and tasks displayed in the different sections of the Manager Insights Hub:

Overview

Card	Product Area and Functional Area	Security	Description
Time Offs Pending Approval in the Awaiting Action section	Core HCM Time Off and Leave	*Worker Data: Time Off (Time Off Manager View)*	This card displays workers with time off requests that are pending approval and links to My Tasks. If there are no pending requests, we won't display information in the card.
Hiring and Staffing Summary in the Awaiting Action section	Core HCM Manager Insights Hub	*Manage: Manager Insights Hub*	This card displays pending job requisition events and job changes and links to the Hiring and Staffing Overview page.
Upcoming Absences in the Time & Scheduling section	Core HCM Time Off and Leave	*Worker Data: Time Off (Time Off Manager View)*	This card displays workers with upcoming approved time off within the next 30 days and links to the Team Absence Calendar page.
Time Entries to Review in the Time & Scheduling section.	Time Tracking	*Worker Data: Time Calendar*	This card displays the amount of workers with: • Submitted time entry hours. • No time entry hours entered. • Unsubmitted time entry hours. • Alerts at the point of time submission. The card also links to the Review and Approve Time page.
Time Offs Pending Approvals in the Time & Scheduling section.	Core HCM Time Off and Leave	*Worker Data: Time Off (Time Off Manager View)*	The card displays time off requests pending approval and links to My Tasks.
Workers Approaching Time Accumulator Threshold in the Time & Scheduling section.	Time Tracking	*Manager: Time and Scheduling Manager Hub*	The card displays workers who are close to approaching a time accumulator threshold and links to the Time

Card	Product Area and Functional Area	Security	Description
			Accumulations for Workers report.
Worker Name in the Team Career Highlights section	Talent Optimization Manager Insights Hub	*Manage: Talent Optimization in Manager Insights Hub* *Worker Data: Anytime Feedback* *Worker Data: Check-Ins* *Worker Data: Confidential Feedback* *Worker Data: Development Items* *Worker Data: Employee Goals* *Worker Data: Self Requested Feedback* *Worker Data: Role Requested Feedback*	Workday displays 1 card per direct report with up to 4 career highlights. Career highlights include overdue goals, as well as updates when there are no changes to feedback, goals, or development items in 90 days or more. Each career highlight displays for 1 month or until no longer relevant. Workday doesn't display cards for direct reports that don't have any career highlights. Workday doesn't display the Team Career Highlights section when there are no career highlights for any of the manager's direct reports.
My Team’s Eligibility for Talent Highlights in the Team Career Highlights section	Talent Optimization Manager Insights Hub	*Worker Data: Talent Highlights*	This card displays the number of direct reports who are eligible and ineligible for Talent Highlights, and links to the My Team’s Eligibility for Talent Highlights report. This report links to the Generate Talent Highlights for Employee task for eligible direct reports.
Engagement Score in the Employee Engagement section	Talent Optimization Manager Insights Hub	*Manage: Talent Optimization in Manager Insights Hub*	This card displays the engagement score from the segment that displays on the manager's Workday Peakon Employee Voice landing page when they sign in.
Highlighted Drivers of Engagement in the	Talent Optimization Manager Insights Hub	*Manage: Talent Optimization in Manager Insights Hub*	This card displays up to 3 drivers or subdrivers

Card	Product Area and Functional Area	Security	Description
Employee Engagement section			that are focus areas for the manager. Workday sorts the highlighted drivers of engagement in ascending order based on the: • Difference between the manager's score and the true benchmark. • Actual score.
Latest Comments in the Employee Engagement section	Talent Optimization Manager Insights Hub	*Manage: Talent Optimization in Manager Insights Hub*	This card displays the 3 latest comments by direct reports in their Peakon Employee Voice Survey responses, in descending order. For managers of managers, Workday displays comments from direct and indirect teams.

You can access these tasks in the Time & Scheduling Actions section:

- Request Absence
- Enter Time for Worker
- Assign Schedule Tags to Worker
- Override Scheduling Settings for Worker
- Assign Shift Profiles to Worker
- Change Schedule Preferences for Worker
- Change Work Availability for Worker

Hiring and Staffing

Hiring and Staffing Overview

You can customize the Hiring and Staffing Overview page on the Maintain Hubs report. You can add announcements. On the Hiring and Staffing Overview page:

Section	Product Area and Functional Area	Security	Description
These tasks in the Tasks and Reports section: • Create Job Requisition	Core HCM Pre-Hire Process	Add security groups to the initiating action on these business processes: • *Job Requisition*	You can use these tasks to create or close job requisitions for: • New positions

Section	Product Area and Functional Area	Security	Description
• Create Position • Close Job Requisition • Add Job • End Job		• *Create Position* • *Close Job Requisition* • *Add Additional Job*. Select the *Add Job* initiating action with the following description: Online task. • *End Additional Job*. Select the *End Job* initiating action with the following description: Related Task from Supervisory org.	• Existing positions • Multiple existing positions You can also use these tasks to contract contingent workers, and add or end additional jobs.
The Contract Contingent Worker tasks in the Tasks and Reports section.	Core HCM Pre-Hire Process	Add security groups to these initiating actions with these descriptions on the *Contract Contingent Worker* business process: • *Contract Contingent Worker*. Description: Search for pre-hires, former workers, inactive students, inactive external students, or create a new pre-hire and contract them into an open position. Also enables contracting from the related actions menu of a job requisition, supervisory organization, or an unfilled position. • *Contract Contingent*	You can use these tasks to initiate the *Contract Contingent Worker* business process.

Section	Product Area and Functional Area	Security	Description
		Worker. Description: Search for existing pre-hires, former workers, inactive students, inactive external students, or create a new pre-hire and contract them into an open position. If users have access to more than one initiating action, they'll display as separate buttons.	
The Hire Employee tasks in the Tasks and Reports section.	Core HCM Pre-Hire Process	Add security groups to these initiating actions with these descriptions on the *Hire* business process: • *Hire Employee*. Description: Search for pre-hires, former workers, inactive students, or inactive external students and hire them into an open position. Also enables hiring from the related actions menu of a job requisition, supervisory organization, or an unfilled position. • *Hire Employee*. Description: Search for existing pre-hires, former workers, inactive students, inactive external students, or create a new	You can use these tasks to initiate the *Hire* business process.

		pre-hire and hire them into an open position. Also enables hiring from the related actions menu of a job requisition, supervisory organization, or an unfilled position. • *Hire Employee*. Description: Select from existing pre-hires and former workers, or create a new pre-hire, and hire them into an open position. Also enables hiring from the related actions menu of a former worker, job requisition, pre-hire, supervisory organization, or an unfilled position. This initiating action is the only one that displays in the hub in the mobile app. • *Hire Employee*. Description: Select from existing pre-hires and former workers, and hire them into an open position. Also enables hiring from the related actions menu of a former worker, job requisition, pre-hire, supervisory organization,	

Section	Product Area and Functional Area	Security	Description
		or an unfilled position. If users have access to more than one initiating action, they'll display as separate buttons.	
The Start Job Change task in the Tasks and Reports section.	Core HCM	Add security groups to the initiating action on the *Change Job* business process.	You can use this task to initiate the *Change Job* business process for your direct reports.
The In-Progress Job Requisition Events card.	Core HCM	*Job Requisition Data* Add security groups to the View action on the *Job Requisition* business process.	This card displays the in progress *Job Requisition* events from supervisory organizations that the logged in user has the *Manager* role for. This card links to the In-Progress Job Requisition Events page.
Open and In-Progress Positions in the Team Highlights section	Core HCM	*Manage: Manager Insights Hub* Add security groups to the View action on the *Create Position* business process.	This card displays all open positions and in-progress *Create Position* events from supervisory organizations that the logged in user has the *Manager* role for.
In-Progress Job Changes in the Team Highlights section	Core HCM	*Manage: Manager Insights Hub* Add security groups to the View action on the *Change Job* business process.	This card displays any in-progress *Change Job* business process events for workers on your team. It also displays who needs to take action on the event.

In-Progress Job Requisition Events

On the In-Progress Job Requisition Events page, Workday displays the View In-Progress Job Requisition Events report that's secured to the *Job Requisition Data* domain.

Time & Scheduling

On the Time & Scheduling Overview page:

Section	Product Area and Functional Area	Security	Description
Request Absence task and Manage Absence report in the Absence Tasks & Reports section	Core HCM Time Off and Leave	Add security groups to 1 of these initiating actions: • *Request Time Off for Self* and *Request Time Off for Worker* on the *Request Time Off* business process. • *Edit Time Off for Self* and *Edit Time Off for Worker* on the *Correct Time Off* business process. • *Request Leave of Absence for Self* and *Request Leave of Absence for Worker* on the *Request Leave of Absence business* process.	You can use the Request Absence task to request time off and leave for yourself or on behalf of workers. You can use the Manage Absence report to manage your own time off or view another worker's absence calendar, review, and edit their absence, or request absence on their behalf.
Return Worker from Leave task in the Absence Tasks & Reports section	Core HCM Time Off and Leave	Add security groups to the initiating action on the *Request Return from Leave of Absence* business process.	You can use this task to record a worker's return from a leave of absence.
Worker Time Off Balance Details report in the Absence Tasks & Reports section	Core HCM Time Off and Leave	*Worker Data: Time Off (Time Off Balances)*	You can use this report to view details of time off balances for workers.
Enter Time for Worker task in the Time Tracking Tasks & Reports section	Time Tracking	*Worker Data: Time Calendar*	You can use this task to input the hours worked by a specific employee.
My Team's Time Requests report in the Time Tracking Tasks & Reports section	Time Tracking	*Worker Data: My Team's Time Requests*	You can use this report to review overtime requests submitted by your team members.
Time Clock History report in the Time Tracking Tasks & Reports section	Time Tracking	*Worker Data: View/Edit Time Clock Events*	You can use this report to review and add time clock events.
Assign Work Schedule task in the Time Tracking Tasks & Reports section	Time Tracking	Add security groups to the *Assign Work Schedule* initiating action on the *Assign Work*	You can use this task to manually assign work schedules to workers.

Section	Product Area and Functional Area	Security	Description
		Schedule business process.	
Assign Custom Work Schedule	Time Tracking	Add security groups to the *Assign Custom Work Schedule* initiating action on the *Assign Custom Work Schedule* business process.	You can use this task to manually assign custom work schedules to workers.
My Team's Schedule report in the Time Tracking Tasks & Reports section	Time Tracking	*Worker Data: Work Schedule*	You can use this report to display the work schedule of your team and the availability of team members.
Assign Shift Profiles to Worker in the Scheduling Tasks & Reports section	Workday Scheduling	Add security groups to the *Assign Shift Profiles to Worker* initiating action on the *Assign Shift Profiles to Worker* business process.	You can use this task to complete shift profile assignments for workers.
Assign Schedule Tags to Worker in the Scheduling Tasks & Reports section	Workday Scheduling	Add security groups to the *Assign Schedule Tags to Workers* initiating action on the *Change Worker Schedule Tags* business process.	You can use this task to assign schedule tags to a worker and include them in a schedule.
Change Schedule Preferences for Worker in the Scheduling Tasks & Reports section	Workday Scheduling	Add security groups to the *Change Schedule Preferences for Worker* initiating action on the *Change Schedule Preferences* business process.	You can use this task to change a worker's preferred schedule.
Override Scheduling Settings for Worker in the Scheduling Tasks & Reports section	Workday Scheduling	Add security groups to the *Override Scheduling Settings* initiating action on the *Change Worker Schedule Settings* business process.	You can use this task to override schedule settings, validations, and rules for workers.
Change Worker Availability in the Scheduling Tasks & Reports section	Workday Scheduling	Add security groups to the *Change Work Availability* initiating action on the *Change Work Availability* business process.	You can use this task to change and update the week days and times that a worker is availability for a schedule.
Upcoming Absences card in the Recommended for You section	Core HCM Time Off and Leave	*Worker Data: Time Off (Time Off Manager View)*	This card displays workers with upcoming absences within the next 30 days, as of the current date, and links

Section	Product Area and Functional Area	Security	Description
			to the Team Absence Calendar page.
Time Entries to Review card in the Recommended for You section	Time Tracking	*Worker Data: Time Calendar*	This card displays the amount of workers with: • Submitted time entry hours. • No time entry hours entered. • Unsubmitted time entry hours. • Time entry hour alerts. The card also links to the Review and Approve Time page.
Not Checked In (Time) card in the My Team Today section	Time Tracking	*Worker Data: View/Edit Time Clock Events*	This card displays all workers who haven't checked in and their scheduled start time has passed.
Checked In (Time) card in the My Team Today section	Time Tracking	*Worker Data: View/Edit Time Clock Events*	This card displays all workers currently checked in.
Workers Missing a Meal or Break card in the My Team Today section	Time Tracking	*Manager: Time and Scheduling Manager Hub*	This card displays all workers missing a meal or break time per the Meal and Break Rule Set on their Time Entry Template.
Time Offs Pending Approval card in the Needs Review section	Core HCM Time Off and Leave	*Worker Data: Time Off (Time Off Manager View)*	This card displays workers with time off requests that are pending approval and links to My Tasks.
Workers Approaching Time Accumulator Threshold card in the Needs Review section	Time Tracking	Manager: Time and Scheduling Manager Hub	The card displays workers who are close to approaching a time accumulator threshold and links to the Time Accumulations for Workers report.
Workers Returning from Leave card in the Needs Review section	Core HCM Time Off and Leave	*Worker Data: Leave of Absence*	This card displays workers currently on leave who are estimated to return within the next 2 weeks and links to the

Section	Product Area and Functional Area	Security	Description
			Workers Returning from Leave report.
Workers on Leave card in the Needs Review section	Core HCM Time Off and Leave	*Worker Data: Leave of Absence*	This card displays workers who are on leave as of the current date and links to the Workers on Leave report.

Team Absence Calendar

On the Team Absence Calendar page, Workday displays the Team Absence Calendar report (secured to the *Worker Data: Team Absence Calendar* domain). You can use the Team Absence Calendar report to analyze absence requests so that you can better manage team resources. See Concept: Absence Calendar Experience on page 2252.

Edit and Approve Time

On the Edit and Approve Time page, Workday displays the Edit and Approve Time report (secured to the *Manager: Time Tracking Manager Edit and Approve* domain). You can use this report to review, correct, send back, or deny worker time entries, as well as mass submit and approve time entries for multiple workers. See Concept: Edit and Approve Time on page 2903.

Review and Approve Time

On the Review and Approve Time page, Workday displays the Review Time report (secured to the *Manager: Time Tracking Manager Approval* domain). You can use the Review Time report to review, approve, deny, or send back the recorded work hours for team members. See Set Up the Review Time Report on page 2882.

Scheduled vs. Actuals

On the Scheduled vs. Actuals page, Workday displays the View Scheduled vs. Actual Hours for Workers report (secured to the *Worker Data: Reports and Worker Data* domain and the *Worker Data: Work Schedule* domain). You can use this report to compare the scheduled hours and the actual hours for team members. See Set Up Scheduled vs. Actuals Reporting on page 2889.

Budget and Resources

To use this section, set up the Core Compensation functional area (in the Core HCM product area). Each managers' security permissions determines the data that they can view. On the Team Compensation Summary page, Workday displays the Team Compensation Summary report that's secured to the*Reports: Manager* domain. Provided a manager has security access to view compensation details for their team, the report contains these fields:

- Base Pay Range
- Compa-ratio
- Job Profile
- Time in Position
- Total Base Pay
- Worker

On the Budget & Resources Overview page, we display:

- The Pay Range Analysis, Employee Grade Pay Range Analysis, and Bonus Payment History reports (secured to the *Worker Data: Compensation by Organization* domain).
- The Target vs. Actual Bonus Payment report (secured to the *Worker Data: Compensation Management by Organization* domain).

- The Employee Benchmark Data button and Internal Compensation Benchmark for Workers button that enable you to access the corresponding reports.

Card	Product Area and Functional Area	Security	Description
Pay Analysis	Core HCM Advanced Compensation	*Worker Data: Compensation by Organization*	This card displays links that enable you to access the Pay Range Analysis report and the EE Grade Pay Range Analysis report. You can use these reports to analyze pay alignment to established ranges across different job levels.
Bonus Payment History	Core HCM Advanced Compensation	*Worker Data: Compensation by Organization*	This card displays a link that enables you to access the Bonus Payment History report. You can use this report to view bonus history for your organizations.
Target vs. Actual Bonus Payments	Core HCM Advanced Compensation	*Worker Data: Compensation Management by Organization*	This card display a link that enables you to access the Target vs. Actual Bonus Payment report. You can use this report to compare your employees' actual bonus against their target bonus.

Performance

To use the Performance Overview page and its content:

- Your Workday subscription must include Talent Optimization, that is, the Talent Optimization SKU or Talent Optimization Add-On SKU.
- You must configure the *Manage: Talent Optimization in Manager Insights Hub* domain, as well as the domains that secure each card you want to use.

Each managers’ Product Area security permissions will determine the data that they can view, and the tasks they can run on the cards.

You can customize the Performance Overview page on the Maintain Hubs report. You can add announcements within the Performance section.

On the Performance Overview page, you can access:

- The 3 most recent calibration events awaiting action.
- An Open Calibration button that you can use to view the specific calibration events.
- The My Team’s Calibration History report for a selected team.

Card	Product Area and Functional Area	Security	Description
Goals in the Completed in the Past 3 Months section	Talent Optimization Performance Enablement	*Worker Data: Employee Goals*	This card displays goals that direct reports have completed. The Completed in the Past 3 Months section only displays when direct reports have completed goals, flex teams, or mentorships in the past 3 months.
Flex Teams in the Completed in the Past 3 Months section	Talent Optimization Talent Marketplace	*Worker Data: Flex Teams*	This card displays flex teams that direct reports have completed. The Completed in the Past 3 Months section only displays when direct reports have completed goals, flex teams, or mentorships in the past 3 months.

Worklets and Reports for Human Capital Management

Add Worklets to Business Processes

Prerequisites

- Access the Business Process Steps Enabled for Worklets report to see the enabled steps for worklets.
- Access the Business Process Security Policies for Functional Area report to determine which security groups have permission to perform those steps.
- Security: *Manage: All Custom Reports*, *Security Administration*, and *Business Process Administration* domains in the System functional area.

Context

Worklets display relevant analytic information within the context of a business process, enabling you to make more informed decisions. There are 2 options:

- Workday delivers a number of preconfigured worklets.
- You can create your own worklet from a custom report.

Workday defines which business processes can have embedded worklets and the steps they're available on. Only the default definition of a business process can have an embedded worklet on the *Initiation* step. Custom business process definitions inherit the *Initiation* step worklets from the default definition.

When you embed worklets in a business process, specify:

- How to display the worklet.
- Who has permission to view the worklet.
- Values for any worklet prompts.

Steps

1. To enable a custom worklet for use in a business process:
    a) Access the Edit Custom Report task.
    b) Click Output.
    c) Expand the Worklet Options area.
    d) Select the Enable As Worklet check box.
    e) Click the Available on prompt and select *Embedded on Tasks*.
2. Enable users to view the related worklet. The procedure is different for each worklet type.

    Note: When you add the worklet to your business process, you can remove security groups but not add them.

Option	Description
Delivered Worklet	a. Access the View Security for Securable Item report. b. In the Domain Item field, enter the worklet name. c. If you want to change the permitted security groups, as a related action on the Security Policy, select Domain Security Policy > Edit Permissions.

Option	Description
Custom Worklet	a. Access the Edit Custom Report task. b. Click Share. c. Under Report Definition Sharing Options, select either *Share with all authorized users* or *Share with specific authorized groups and users*. d. If you selected *Share with specific authorized groups and users*, select the Authorized Groups and Authorized Users.

3. Add the worklet to the business process by selecting Business Process > Maintain Related Worklets from the related actions.

Result

Depending on the way you configure the worklet, you might see the analytic information automatically. You can also click the button in the upper right corner to open the worklet. If you're not in a security group with permission to view the worklet, Workday hides the related information button.

Concept: Key HCM Reports by Functional Area

Standard Reports

Workday delivers standard reports for each functional area in Human Capital Management. You can browse for these reports in several ways:

- Access Workday Standard Reports and select categories of interest.
- Select Sitemap from the main menu and navigate by category to view the standard reports in each functional area.
- Use search to find reports by keyword, such as *merit* or *job*.

In addition, Workday delivers trending reports that enable you to analyze trends in worker data over the previous 36 periods. Access these reports through search.

Category	Trending Reports
Activity Reports	• Hires and Terminations by Quarter • Quarterly Turnover by Organization • Terminations by Performance Rating and Quarter • Terminations by Type and Quarter • Turnover Rate by Supervisory Hierarchy and Quarter
Audit Report	• Worker Trending Audit

Category	Trending Reports
Compensation Reports	• Average Compa-Ratio by Job Profile and Quarter • Average Total Compensation by Country and Quarter
Headcount Reports	• Headcount and FTE by Month • Headcount by Supervisory Organization Hierarchy and Month • Span of Control by Quarter

You can also build custom trending reports based on the Trended Workers data source. Rather than starting from scratch, use the delivered reports as a starting point and select different facets or drill-down options. Access the Maintain Trended Worker Organizations task to select up to 10 organization types to report on for trended worker data.

Custom Reports

Many resources are available to help you write custom reports:

- Reporting topics in the Workday documentation.
- Reporting at a Glance documents in the Workday Community help you build custom reports, calculated fields, and analytics in specific areas.

You can make analytic information available to decision makers by embedding worklets in business processes. These worklets provide contextual information in specific business process steps so managers can make more informed decisions. Worklets are either:

- Custom reports that you create and enable as worklets.
- Preconfigured by Workday based on standard reports as shown in the table. Use these reports for steps in compensation, staffing, and talent business processes.

Add Worklets to Business Processes on page 2969

Reference: FTE Report

You can use the FTE Report to view a count of FTE (full-time equivalent) workers by organization. You can use the numbers to create summarizations by category.

Field	Description
Total FTE	The number of positions and headcount for the organization. Includes both filled and unfilled positions.
FTE Filled	The number of filled positions and headcount for the organization selected. Example: A position with a worker assigned.
FTE Unfilled	The number of open positions and headcount. Example: A position without a worker assigned.
FTE Available	The number of open positions and headcount that you can hire into. Example: An open position has an availability date that's currently effective.
FTE Unavailable	The number of open positions and headcount that you can't hire into. Example: A frozen position.

Example: Map Worklet Prompts

This example illustrates how to map worklet prompts to fields in a business process.

Context

Jerry is an administrator who wants to map the prompts in the My Team's Review Ratings worklet to fields in the *Complete Manager Evaluation for Performance Review* business process. This gives Jerry's users more context when they use the worklet.

Compensation Change

The Average Market Salary For This Job worklet has 1 prompt. When Jerry adds this worklet to the *Request Compensation Change* business process, he configures the prompt as follows:

Prompt Field	Value Type	Business Object	Field
Job Profile	Determine Value at Runtime	Event	Job Profile - Current

The Job Profile prompt maps to Workday-delivered report fields:

- Event
- Job Profile - Current

When Jerry completes the business process, the worklet displays the average market salary for jobs based on this job profile.

Steps

1. Access the *Complete Manager Evaluation for Performance Review business process definition*.
2. As a related action on the business process definition, select Business Process > Maintain Related Worklets.
3. In the left pane, select step *a - Complete Manager Evaluation for Performance Review*.
4. Click Maintain Step Related Worklets.
5. Click Add.
6. In the Worklet Prompts section, map the prompt fields as shown:

Prompt Field	Value Type	Business Object	Field
Review Templates	Determine Value at Runtime	Manager Evaluation	Review Template
Organizations	Determine Value at Runtime	Employee	Supervisory Organization

Next Steps

When Jerry runs the business process, the worklet displays ratings from reviews that:

- Use the same template.
- Are in the same supervisory organization as the current process.

Some managers who perform the evaluations might have a location hierarchy role rather than a supervisory organization role. To account for these mangers, Jerry maps the Organizations prompt to the Location Hierarchy field instead of Supervisory Organization.

Workday Assistant

Setup Considerations: Workday Assistant

You can use this topic to help make decisions when planning your configuration and use of Workday Assistant. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Workday Assistant is a conversational tool that helps workers to quickly complete actions and retrieve information in Workday.

When you enable Workday Assistant and search for something in Workday, you can access Assistant-supported capabilities as machine learning-enhanced search results.

You can use Workday Assistant in these languages:

- Dutch
- English
- French (Canada)
- French (continental)
- German
- Italian
- Japanese
- Korean
- Spanish

Business Benefits

Workday Assistant can:

- Increase efficiency by reducing the time it takes for workers to find information and complete tasks in Workday.
- Provide customized responses, enabling you to surface the most relevant resources for your workers.
- Reduce Help cases by recognizing natural-language queries and enabling workers to locate tasks and reports they don't know the exact names for.

Use Cases

Examples: You can configure Workday Assistant to enable workers to:

- Clock in and out.
- Give feedback.
- Request time off.
- View and update personal information.

Examples: You can configure Workday Assistant to enable managers to:

- Change workers' job details.
- View and manage their team.
- View job requisitions.

Questions to Consider

Question	Considerations
On which platforms do you want to run Workday Assistant?	You can use Workday Assistant on: • Desktop. • Mobile. • Workday for Microsoft Teams. • Workday for Slack.
Who can use Workday Assistant?	Workday Assistant is available to all workers. You can configure Workday Assistant to help infrequent users of Workday to discover information, complete tasks, and get help.

Question	Considerations
What actions do you want to enable workers to complete using Workday Assistant?	You can configure Workday Assistant to enable workers to access information and complete common tasks in Workday. Examples: Workers can enter phrases like these into Workday Assistant: • Change my marital status. • How much vacation time do I have? • Request time off. • Tell me a joke. • What is my hire date? Workers can view the capabilities available to them in Workday Assistant by entering *What can you do?* or *Show available capabilities*.

Recommendations

You can enable:

- Workday Help to enable workers to access knowledge articles and open Help cases from Workday Assistant.
- Workday for Microsoft Teams or Workday for Slack to enable workers to access Assistant capabilities from their Slack or Microsoft Teams workspace.

Requirements

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Limitations

Workers can only attach files to their conversations with Workday Assistant when they open Help cases.

Workday delivers new Assistant capabilities in English, and provides translations for those capabilities as soon as possible. Workers who select a non-English preferred language might not be able to access some capabilities immediately.

Workday Assistant doesn't support:

- Custom labels.
- Integrations with other conversational tools.
- Pre-hire workers.
- Proxy users.

Workday Assistant supports these capabilities in chat, but not in search results:

- Custom help contact
- View direct report’s anniversary
- View direct report’s birthday
- View direct report’s check-in or check-out
- View direct report’s time off

Tenant Setup

Configure tenant-wide options for Workday Assistant on the Edit Tenant Setup - Assistant task.

Security

Configure these domains in the System functional area:

Domain	Considerations
Assistant	Enables Workday Assistant.
Assistant Usage Reports	Enables you to access and configure the Assistant Usage Reports discovery board to view data visualizations of how your workers interact with Assistant.
Bots	Enables Workday Assistant .
Manage Bot and User Conversations	Enables you to access the: • Get Conversation Data report. • Purge Bot Conversation Data task. • Purge Conversation Message Data report.
Manage: Innovation Services	Enables you to manage your Innovation Services.
Set Up: Tenant Setup - Assistant	Enables you to configure and manage Workday Assistant capabilities.

To enable specific capabilities for Workday Assistant, configure the security domains for each capability. Example: To enable time tracking in Assistant, configure the *Set Up: Time Tracking* domain.

Business Processes

No impact.

Reporting

Reports or Dashboards	Considerations
Assistant Usage Reports discovery board	Displays data visualizations for how your users interact with Workday Assistant. Examples: You can report on: • The number of workers in your organization who use Workday Assistant. • The capabilities your workers request most frequently. • The platforms on which workers access Assistant. Examples: web browser, mobile, or Workday for Microsoft Teams.
Get Conversation Data report	Enables you to download all Assistant and Worksheets conversation data in your tenant.
Purge Conversation Message Data report	Enables you to permanently delete conversation data for a specific message.

You can use the Assistant Usage Reports report data source to create custom visualizations.

Integrations

No impact.

Connections and Touchpoints

Touchpoints can vary by worker depending on security permissions and your selections on the Edit Tenant Setup - Assistant task.

Workday Assistant interacts with these functional areas in Workday:

Features	Considerations
Benefits	Workers can view details about their insurance and benefits.
Case Management	Workers can open Help cases.
Expenses	Workers can view their expense reports.
Feedback	Workers can give and request feedback. Managers can access feedback for their team.
Goals	Workers can view and manage their goals. Managers can view and manage goals for their team.
Knowledge Management	When workers enter keywords that Workday associates with knowledge articles, workers can read the articles in pop ups.
Learning	Workers can: • Browse courses. • Enroll in courses. • View Learning Home. • View enrolled, required, and completed courses. • View transcripts. Managers can view Learning reports for their team.
Pay	Workers can access compensation information and tax documents.
Performance	Workers can view and manage their performance reviews. Managers can access reviews for their team.
Procurement	Workers can view purchase requisition statuses and related supplier invoice details.
Productivity	Workers can access Drive.
Projects	Workers can view their projects, including statuses and related information.
Recruiting	Workers can: • Refer candidates. • Search jobs. Managers can: • Start new job requisitions. • View candidate statuses. • View in-progress job requisitions.

Features	Considerations
Staffing	Managers can access the *Change Job* business process and Change Job templates.
Team Management	Managers can view details about their teams such as birthdays, work anniversaries, and upcoming time off.
Time Off	Workers can: • Correct time off requests • Request time off • View holiday schedules • View time off balances
Time Tracking	Workers can enter and submit time worked.
Workday for Microsoft Teams	Workers can access Workday Assistant capabilities from their Microsoft Teams workspace.
Workday for Slack	Workers can access Workday Assistant capabilities from their Slack workspace.
Worker Data	Workers can search worker profiles and access or change their personal information, such as employee ID, hire date, and work location.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

2024R2 Feature Release Note: Workday Assistant Moving to Search

2024R2 Feature Release Note: AI Enhanced Search

2021R2 What's New Post: Workday Assistant for Projects

Steps: Set Up Workday Assistant

Prerequisites

Review setup considerations for Workday Assistant.

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.

3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Context

Workday Assistant is a conversational search tool designed to help casual Workday users discover information, complete common tasks, and get support.

Examples: Workers can enter phrases like these into Workday Assistant:

- Change my marital status.
- How much vacation time do I have?
- Request time off.
- What is my hire date?

Workers can view all of the capabilities available to them in Workday Assistant by entering *What can you do?* or *Show available capabilities*.

Workday Assistant responds to requests in one of 2 ways:

- Quick Actions: Workers can complete some tasks directly in the Workday Assistant chat window. Example: When you use Workday Assistant to request time off, it prompts you to enter the request date(s) and type and submits the request without requiring you to access the Request Time Off report.
- Navigation: Workday Assistant links workers to the task or report they're looking for in Workday. Example: When you use Workday Assistant to access your feedback, it provides a link to the View Feedback Received report.

Steps

1. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   On the Innovation Services Opt-In task, select the Workday Assistant service on the Available Services tab in the People Experience category.

2. Edit Domain Security Policies.

   To give workers access to Workday Assistant, create or edit security policies for these domains in the System functional area:

   - *Assistant*
   - *Bots*
   - *Manage Bot and User Conversations*
   - *Set Up: Tenant Setup - Assistant*
   - (Optional) *Assistant Usage Reports*

   Assign security groups Get, Put, View, and Modify permissions on both the *Assistant* and *Bots* domains.

   Note: To protect user data, Workday recommends that you restrict *Manage Bot and User Conversations* domain access to a small subset of administrators. Admins assigned to this domain can access the:

   - Get Conversation Data report. This enables you to download data for all Assistant and Worksheets conversation messages in your tenant.
   - Purge Bot Conversation Data task. This enables you to permanently delete all conversation message data in your tenant.
   - Purge Conversation Message Data report. This enables you to permanently delete data associated with a specific message.
3. Activate Pending Security Policy Changes.
4. Access the Edit Tenant Setup - Assistant task.

   Configure the actions you want users to perform in Workday Assistant.

   See Reference: Edit Tenant Setup - Assistant.

   Security: *Set Up: Tenant Setup - Assistant* domain in the System functional area.

Next Steps

From the Delivered Discovery Boards report, access the Assistant Usage Reports discovery board to view data visualizations of how your users interact with Workday Assistant.

Steps: Set Up Workday Assistant for Staffing

Prerequisites

Review setup considerations for Workday Assistant and Workday Staffing.

Configure these domain security policies in the Staffing functional area:

- *Staffing Actions*
- *Staffing Organizations* (for consolidated templates)
- *Worker Data: Collective Agreements*

Configure these domain security policies in the Advanced Compensation functional area for consolidated templates:

- *Add Compensation Management Plans*
- *Change Compensation Management Plans*

Context

You can use Workday Assistant to:

- Access the Start Job Change task.
- Initiate *Change Job* business process transactions using Change Job templates.

Steps

1. Set up Workday Assistant.

   Steps: Set Up Workday Assistant.
2. Access the Edit Tenant Setup - Assistant task.

   In the Staffing section, enable 1 of these options:

   - Enable Change Job Templates
   - Enable Change Job

   Security: *Set Up: Tenant Setup - Assistant* domain in the System functional area.
3. Access the Maintain Change Job Templates task.

   In the Enable For Initiating Action column, add Workday Assistant / REST API.

   Security: *Set Up: Staffing* domain in the Staffing functional area.

Setup Considerations: Workday Assistant on page 2974

Concept: Time Off in Workday Assistant

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Workers can use Workday Assistant to request time off, view time off balances, correct time off, and view holiday schedules. You can disable time off capabilities on the Edit Tenant Setup - Assistant task.

Workers can:

- Enter time off for days in the past, present, and future.
- Add comments to time off requests by clicking Edit or add details.
- Correct and delete approved time off requests for future dates.
- Group time off requests in absence tables.

When workers:

- Request time off, Assistant recognizes date formats depending on users' preferred locales. Example: If an American worker enters 10/15/22 and a German worker enters 15.10.22, Workday Assistant interprets both time off requests correctly as October 15, 2022.
- View their time off balances, Assistant displays up to 20 balances and provides a link to the Absence Calendar when they've more than 20.

You can enable workers to request time off by adding the *Employee as Self* security group to these permissions in the Time Off and Leave functional area:

- Initiating action permissions on the *Request Time Off* business process.
- Request Time Off (REST Service) permissions on the *Request Time Off* business process. You must configure this to enable workers to request time off in Assistant.

You can enable workers to correct time off by adding the relevant security group to the initiating action for the Correct Time Off Entry (REST Service) on the *Correct Time Off* business process security policy.

Workday Assistant doesn't support:

- Business process comments.
- Consecutive-day time off requests that spans multiple time off types.
- Time offs configured with Start Time and End Time.
- Time offs that workers can only enter through Time Tracking.

Concept: Time Tracking in Workday Assistant

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Using Workday Assistant for Time Tracking Tasks

Workers can use Workday Assistant to quickly access time entry tasks, reducing the number of clicks required to navigate to frequently used tasks. Example: When workers enter a phrase such as "enter my time" in Workday search, Assistant provides a link to the time entry calendar where the worker can enter time blocks.

Workday Assistant doesn't support:

- Entering time on mobile devices.
- Entering time for days in the past or future.
- High-volume time entry.
- Time approval.

To configure Workday Assistant for Time Tracking, you must be a member of a security group on these domains:

- *Manage Bot and User Conversations* in the System functional area.
- *Set Up: Edit Tenant Setup - Assistant* in the System functional area.
- *Set Up: Time Tracking* in the Time Tracking functional area.

You can enable workers to enter time using Workday Assistant by adding relevant workers to these security domains and business process security policies:

Functional Area or Business Process	Security Domain or Action	Notes
System Functional Area	• *Assistant* • *Bots*	Add workers to these domains so they can access Workday Assistant.
Time Tracking Functional Area	For check in and check out workers: • *Self Service: Time Clock*	Add workers to these domains so they can enter time. Workday Assistant navigates workers to

Functional Area or Business Process	Security Domain or Action	Notes
	• *Process: Time Block REST APIs* • *Process: Time Clock Event REST APIs* For workers who enter time on the calendar: • *Self Service: Time Calendar* • *Process: Time Block REST APIs* • *Process: Time Clock Event REST APIs*	the time entry calendar when they need to enter time blocks.
Enter Time Business Process	Ensure workers can access these initiating actions: • *Time Block Micro Edit* • *Submit Time* • *Submit Time (REST Service)*	Configure the business process security policy so workers can enter and submit time using Workday Assistant.

The Next Level: Innovation Services for Time Tracking

Reference: Workday Assistant and Workday Everywhere Capabilities

This topic lists capabilities that are supported by:

- Workday Assistant.
- Workday Everywhere:
    - Workday for Microsoft Teams.
    - Workday for Slack.

Workday supports capabilities in these ways:

- Guides: Direct links to Workday tasks or reports. Example: A worker wants to enroll in a Learning course, so they type "learning" into Workday Assistant and click the link Workday provides to the Browse Learning report.
- Notifications: Actionable notifications delivered via Slack or Microsoft Teams. Example: A worker submits a time off request, and Workday delivers a Microsoft Teams notification to their manager that displays the request details and an Approve button the manager can use to approve the request directly from the notification.
- Quick actions: Self-service tasks that you can complete within Workday Assistant or Workday Everywhere. Example: Workers can give anytime feedback without leaving Slack using theGive Anytime Feedback pop up in their Workday for Slack My Quick Actions menu.

Troubleshooting: Workday Assistant

Assistant is stuck in a conversational loop.

Solution: Enter *Reset* to begin a new conversation with Assistant.

Assistant isn't visible or responsive.

When workers attempt to interact with Workday Assistant, it fails to:

- Display the Assistant icon.
- Navigate to Workday tasks.
- Open a chat window.

- Submit transactions.

Cause: Workers aren't included in Assistant's security groups.

Solution:

Steps

1. Edit Domain Security Policies.

   Access these domains:

   - *Assistant*
   - *Bots*

   Make sure both domains have:

   - Get, Put, View, and Modify security permissions.
   - The appropriate workers included in their security groups.
2. Activate Pending Security Policy Changes.

Workday Everywhere

Steps: Set Up Security for Workday Everywhere

Prerequisites

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Context

Set up security to enable workers to perform some Workday self-service tasks directly in these workspaces:

- Microsoft Teams
- Slack

Steps

1. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   On the Innovation Services Opt-In task, select the Workday Everywhere service on the Available Services tab in the People Experience category.
2. Access the Maintain Functional Areas task.

   Enable the Workday Everywhere functional area.

   Security: *Security Configuration* domain in the System functional area.
3. Access the Domain Security Policies for Functional Area report.

   Enable these domain security policies in the System functional area:

   - *View: Public Innovation Services Items*. Secures worker data by checking the Innovation Services Agreement before granting user access.
   - *WQL for Workday Extend*. Enables you to integrate with your Slack or Microsoft Teams workspace.

   Security: *Security Activation* domain in the System functional area.
4. Edit Domain Security Policies.

   Add administrators who will install and manage Workday for Microsoft Teams and Workday for Slack to the *Workday Everywhere Administrator* domain in the Workday Everywhere functional area.

   After testing, add *All Employees* as a security group with:

   - View and Get access to these domains in the System functional area:
     - *View: Public Innovation Services Items*
     - *WQL for Workday Extend*
   - View and Modify access to the *Workday Everywhere User* domain in the Workday Everywhere functional area, which permits workers to use Workday in their Slack or Microsoft Teams workspace. Workday recommends that you:
     - Add *Employee As Self* as a security group to this domain.
     - Test Workday for Microsoft Teams and Workday for Slack with select security groups before adding *All Employees* to this domain. Workday recommends testing with a team of managers and their direct reports. See Workday for Slack and Workday for Microsoft Teams FAQ.

   (Optional) Add these security groups with View and Modify access to the *Workday Everywhere User* domain to enable contingent workers to use Workday Everywhere:

   - *All Contingent Workers*
   - *Contingent Worker as Self*

   Note: Feature availability for contingent workers depends on your tenant configurations.

   (Optional) Add managers as a security group with View and Modify access to these domains in the Time Off and Leave functional area:

   - *Worker Data: Time Off (Time Off Balances Manager View)*. Permits managers to receive Slack or Microsoft Teams notifications that enable them to approve time off requests for their workers.
   - *Worker Data: Time Off (Time Off Manager View)*.

Next Steps

- Activate Pending Security Policy Changes.
- Steps: Set Up Workday Everywhere on page 2997.

Steps: Set Up Workday Everywhere

Context

You can enable workers and managers to perform self-service Workday tasks directly from these workspaces:

- Microsoft Teams
- Slack

Workday Everywhere is designed to help casual Workday users discover information, complete common tasks, and get support without opening Workday in a web browser. Examples: Workers can enter phrases like these into Workday for Microsoft Teams or Workday for Slack:

- Change my marital status.
- How much vacation time do I have?
- Request time off.
- What is my hire date.

Workers can view the capabilities available to them in Workday Everywhere by clicking Explore all under My Quick Actions.

You can also enable workers and managers to receive notifications in Workday for Microsoft Teams and Workday for Slack. Example: You can configure Workday Everywhere to notify managers when their workers request time off, and to notify workers when their time off requests are approved or denied.

Steps

1. Set up security for your workspace.

   See Steps: Set Up Security for Workday Everywhere on page 2995.
2. (Optional) In your Microsoft Teams workspace, install Workday as a third-party app and add it to a permission policy assigned to your users. You must be a Microsoft Office 365 Global Administrator to manage app permission policies.

   Workday prompts you to enable these Microsoft Graph API permissions:

   - Allow the app to manage itself for all users.
   - Read all users' full profiles.
   - Sign in and read user profile.

   See Global App Permissions and Considerations.

3. (Optional) In your Slack workspace, install Workday as a third-party app and connect it to your Slack account when prompted. You must be a Slack Workspace Owner to install the Workday app.

   See Add Apps to Your Slack Workspace.
4. Navigate to the Workday app in your Slack workspace and enter *hi* into the Messages tab.
5. Click Connect to Workday and enter your Workday tenant alias when prompted.

   Tenant aliases use the naming convention for the environment of the tenant:

   - Production: tenantname
   - Sandbox: tenantname-sb

   Note: If you rename your tenant, you must disconnect and reconnect the Workday app in your workspace using your new tenant alias.
6. (Optional) To configure settings and capabilities for Workday for Slack or Workday for Microsoft Teams, navigate to the Admin Dashboard on the Home tab and click Configure. Workday automatically enables all features for all users.

   As you configure capabilities for your workspace, consider:

Option	Description
Give interview feedback	To enable workers to give interview feedback, configure the *Interview* business process with these action steps: *Schedule Interview* > *Manage Interview Feedback* > *Make Interview Decision*.
Look up a coworker	To enable coworker lookup, enable the *WQL for Workday Extend* domain in the System functional area and add All Employees as a security group with View permissions.

7. (Optional) Workday recommends that you set up Workday Assistant to enable these and many other capabilities:

   - Change job details
   - Request time off and view time off balance
   - View and update personal information

   See Steps: Set Up Workday Assistant on page 2979.
8. (Optional) Access the Set Up Notifications for Workday Everywhere task.

   On the Business Process Notifications tab, select 1 or more business process definitions for which you want to enable notifications.

   On the Workday Everywhere Notifications tab, select check boxes for notification types you want to enable.

   Security: *Workday Everywhere Administrator* domain in the Workday Everywhere functional area.
9. (Optional) Use App Setup Policies to Pin and Auto-Install Apps in Teams.

   To help workers find Workday for Microsoft Teams, use a setup policy to pin the Workday app. You must be a Microsoft Office365 Teams Administrator to manage pinned apps.

Steps: Set Up Time Off Notifications for Workday Everywhere

Context
You can make it easier for workers and managers to manage time off by configuring actionable time off request and time off correction notifications to deliver to their Slack and Microsoft Teams workspaces.

Workday Everywhere only supports approval notifications for business process approval steps, not review steps.

Prerequisites

- Configure the *Request Time Off* and *Correct Time Off* business processes. See Steps: Set Up Time Off Plans.
- Set up Workday Everywhere.
- Security: *Workday Everywhere Administrator* domain in the Workday Everywhere functional area.

Steps

1. Add the *Employee As Self* security group to these permissions in the Time Off and Leave functional area:
    - Initiating action permissions on either the *Absence Calendar* or *Request Time Off* business process.
    - Request Time Off (REST Service) permissions on the *Request Time Off* business process. You must configure this REST service for whichever business process you use to enable workers to request time off.
2. Access the Set Up Notifications for Workday Everywhere task.
    a) (Optional) To enable time off correction notifications, access the Business Process Notifications tab and add the *Correct Time Off* business process.
    b) (Optional) To enable time off request notifications, access the Workday Everywhere Notifications tab and select the Active check box for the Time Off Request notification definition.
3. (Optional) Make sure users connect to Workday for Microsoft Teams or Workday for Slack.

    Workday Everywhere:

    - Can deliver time off request notifications to unconnected users, but the notifications aren't actionable and don't contain specific information until users connect.
    - Can’t deliver time off correction notifications until users connect.

Workday Community:Workday for Microsoft Teams and Slack Product Capabilities

Reference: Workday Everywhere Notifications on page 3011
Reference: Edit Tenant Setup - Assistant

Concept: Workday Everywhere

You can enable your workers to perform self-service Workday tasks directly from their Slack or Microsoft Teams workspaces without opening Workday in a web browser. Workers can view the capabilities available to them in Workday for Microsoft Teams and Workday for Slack by clicking Explore all under My Quick Actions.

Workday recommends that you enable Workday Assistant. When you enable Workday Assistant capabilities on the Edit Tenant Setup - Assistant task, you also enable most Assistant capabilities in your Slack and Microsoft Teams workspaces.

You can use Workday for Microsoft Teams and Workday for Slack in these languages:

- English
- French (Canada)
- French (continental)
- German
- Japanese
- Korean
- Spanish

Workday Everywhere defaults to English unless workers select their preferred language in Slack or Microsoft Teams. Example: When a user selects French as their preferred language in Workday but doesn't select a preferred language in Microsoft Teams, we send them a Teams welcome message in English.

Workday delivers new capabilities in English, and provides translations for those capabilities as soon as possible. Workers who select a non-English preferred language might not be able to access some capabilities immediately.

Security

You can access actions and information in your workspace that you'd have access to in Workday. Example: Managers can use Workday Everywhere to access performance reviews for their team, while workers can only access their own reviews.

You can only connect:

- A production instance of Microsoft Teams or Slack to your Workday tenant.
- Slack or Microsoft Teams to your tenant if you're a worker. Contingent workers can use Workday Everywhere if you give them access, but they can't set it up for their organization.

If the person who installs Workday for Microsoft Teams or Workday for Slack leaves your organization, someone else must have access to the *Manage: Innovation Services* security domain to maintain feature and user permissions.

Capabilities

Workday recommends that you also set up Workday Assistant to enable most Assistant capabilities in your Slack and Microsoft Teams workspaces. For a full list of Assistant capabilities, see Reference: Edit Tenant Setup - Assistant. Workday might take up to 24 hours to apply changes on the Edit Tenant Setup - Assistant task to Workday for Microsoft Teams and Workday for Slack.

When you don't set up Workday Assistant, workers can still access these capabilities in their Slack and Microsoft Teams workspaces:

- Access their My Tasks.
- Enter expenses.

- Give feedback.
- Look up coworkers.
- Request interview feedback.
- View their payslip information.

Workday for Microsoft Teams and Workday for Slack don't support Custom Help Contact, even when you configure it in Workday Assistant.

For more information, see Workday for Microsoft Teams and Slack Product Capabilities.

Notifications
Workday occasionally delivers ad hoc Microsoft Teams or Slack notifications to highlight capabilities and help workers connect. We also notify Workday Everywhere administrators when we release new or updated features.

You can configure the Set Up Notifications for Workday Everywhere task to enable Workday to deliver specific notifications to workers' Slack and Microsoft Teams workspaces for:

- Anytime feedback: Notify everyone the feedback is shared with when workers receive feedback. Example: the recipient and their manager, unless the feedback is confidential or private.
- Case Management: Notify workers when someone replies to their open Help cases.
- Learning: Notify managers to approve new Learning enrollments for their workers.
- Time off: Notify managers to approve new or corrected time off requests for their workers.

Reference: Workday Assistant and Workday Everywhere Capabilities

This topic lists capabilities that are supported by:

- Workday Assistant.
- Workday Everywhere:
  - Workday for Microsoft Teams.
  - Workday for Slack.

Workday supports capabilities in these ways:

- Guides: Direct links to Workday tasks or reports. Example: A worker wants to enroll in a Learning course, so they type "learning" into Workday Assistant and click the link Workday provides to the Browse Learning report.
- Notifications: Actionable notifications delivered via Slack or Microsoft Teams. Example: A worker submits a time off request, and Workday delivers a Microsoft Teams notification to their manager that displays the request details and an Approve button the manager can use to approve the request directly from the notification.

- Quick actions: Self-service tasks that you can complete within Workday Assistant or Workday Everywhere. Example: Workers can give anytime feedback without leaving Slack using theGive Anytime Feedback pop up in their Workday for Slack My Quick Actions menu.

Reference: Workday Everywhere Notifications

You can configure the Set Up Notifications for Workday Everywhere task to enable Workday Everywhere to deliver Slack or Microsoft Teams notifications to workers.

To get the most out of notifications, Workday recommends that every worker connects to Workday for Slack or Workday for Microsoft Teams. Workday Everywhere still delivers notifications to unconnected workers, but the notifications:

- Aren't actionable.
- Don't contain any specific information.
- Only include an option to connect to Workday.

Workday Everywhere supports these notification types:

Notifications	Description
Anytime feedback	You can configure Workday Everywhere to deliver notifications when someone receives anytime feedback. Notifications include: • A link to view the feedback in Workday. • The feedback, badge, recipient’s name, and giver’s name unless the feedback was given anonymously. We deliver anytime feedback notifications to everyone the feedback is shared with. Example: Unless the feedback is private, we notify the recipient and their manager. Workday automatically enables anytime feedback notifications. You can disable them by accessing the Set Up Notifications for Workday Everywhere task and clearing the Active check box for Anytime Feedback on the Workday Everywhere Notifications tab.
Case management	You can configure Workday Everywhere to notify workers when someone replies to their open Help cases. Notifications include: • A link to view the Help case in Workday. • The Help case number. • The reply comment and commenter's name. You can set up case management notifications on the Set Up Notifications for Workday Everywhere task by accessing the Other Notifications tab and adding the Help functional area with Case Reply as the Content Type.
Expenses	You can configure Workday Everywhere to notify workers when their expense reports are reviewed. Notifications include: • A link to view the expense report in Workday. • Comments from the reviewer, if applicable. • The expense report memo, if applicable. • The expense report number. • Whether the expense report is approved, denied, or sent back for revision. Workday enables expense report notifications by default. You can disable them by accessing the Set Up Notifications for Workday Everywhere task and clearing the Active check box for

Notifications	Description
	Expense Everywhere on the Workday Everywhere Notificationstab.
Learning	Workday Everywhere supports 2 types of notifications for Learning enrollments. When you set up Learning notifications, we deliver: 1. Enrollment notifications to managers. When a worker enrolls in a Learning course, we deliver a notification to their manager that includes: • A link to view the enrollment in Workday. • A link to view their team calendar. • Approve and Deny buttons that the manager can use to respond to the enrollment. • The course name, dates, cost, and location. 2. Approval notifications to workers. When their manager approves or denies the enrollment, we deliver a notification back to the worker that includes: • A link to view the course in Workday. • Whether their enrollment was approved or denied, including the reason for denial. You can set up Learning notifications on the Set Up Notifications for Workday Everywhere task by configuring the *Enroll in Content* business process on the Business Process Notifications tab.
Time off	Workday Everywhere supports 2 types of notifications for time off requests and time off corrections. When you set up time off notifications, we deliver: 1. Request notifications to managers. When a worker submits a time off request or correction, we deliver a notification to their manager that includes: • A link to view the request in Workday. • A link to view their team calendar. • Approve and Deny buttons that the manager can use to respond to the request. • The request dates and type. 2. Approval notifications to workers. When their manager approves or denies the

Notifications	Description
	request, we deliver a notification back to the worker that includes: • A link to view the request in Workday. • Whether their request was approved or denied, including the reason for denial. See Steps: Set Up Time Off Notifications for Workday Everywhere on page 2999 for setup details.

Workday Help

Concept: Workday Help

Workday Help includes the Case Management and Knowledge Management features.

Case Management enables employees to get help by creating cases in the Workday Help Center. Case solvers can triage, manage, and resolve cases in the Help Case Workspace. Knowledge Management enables you to create custom internal articles that employees can find and access using Workday Search on the home page.

Feature	Description
Case Management	Create and manage service teams to handle HR inquiries, eliminating the need to maintain a separate help ticket application. You can create: • Routing rules for case categories that send workers' cases to the correct service team. • Eligibility rules to specify which workers can create which types of cases. Members of a service team can assign the cases to themselves or to another appropriate case solver.
Knowledge Management	You can create custom articles that contain company-specific information and then display

Feature	Description
	those articles to target audiences through search functionality, such as Workday Assistant. Note: Service Center Representatives and Students can access and view articles in the Help Center, but cannot access or create cases.

Tasks

Steps: Set Up Case Management on page 3021

Steps: Set Up Knowledge Management on page 3043

Case Management

Setup Considerations: Case Management

You can use this topic to help make decisions when planning your configuration and use of case management. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

What It Is

Case management is the collective name for those parts of Workday Help that enable the creation, tracking, and resolution of HR cases. Employees use self-service to create cases, check their statuses, and connect with the assigned case solvers. Case solvers use a dedicated Help Workspace to manage cases throughout their lifecycle and to communicate with their creators.

Business Benefits

Case management lowers the number of active cases. It enables case deflection by including self-service resources that employees can use before creating a case. These resources include links to articles and Workday tasks.

Case management also provides an interactive workspace where case solvers can collaborate and reply to employees on their queries to resolve cases. This increased workflow efficiency means they can resolve cases more quickly.

Use Cases

You can use case management to enable employees, case solvers, case collaborators, and managers to perform tasks specific to their business needs and assigned role.

Employees can:

- Access suggested resources before creating a case, such as articles and Workday tasks.
- Create cases about general HR queries, such as enrolling family members on their health plan.
- View and update cases they created.

Case solvers can:

- View, manage, and update cases.
- Create a case about an employee to investigate a salary overpayment, where the employee won't get notifications about the case created on their behalf.
- Collaborate and link cases with related information together.
- Manage their workflow by using case status, flags, and labels to filter their case lists.
- Add Workday links and other attachments to case replies, such as an article about gym reimbursements to help an employee create an expense report.

Collaborators can:

- Work with Help service teams on nonconfidential cases to speed up case resolution.
- Run reports to view the details and messages or notes associated with a case that a case solver shared with them.

HR Service Managers can optimize their reporting activities by running custom and standard reports in the Help Dashboard.

HR Administrators can:

- Configure worker access to the Help functional area and its domains.
- Configure case message templates.
- Configure case notifications, case sharing, and case replies.
- Configure case confidentiality levels, case types, service categories, and case solver visibility at the tenant level.
- Configure case satisfaction surveys to send to employees after a case solver closes their case.
- Configure worker access to the Help functional area and its domains.
- Create HR teams that deal with issues of specific types, such as a Sensitive Issues team to deal with disciplinary cases.

Questions to Consider

Questions	Considerations
How do you want your employees to create cases?	You can enable employees to create cases using these desktop or mobile applications: • Workday Help • Workday Assistant • Workday for Slack • Workday for Microsoft Teams You can also enable employees to create cases by email. You can configure a Service step in a business process to create cases for employees automatically.
How do you want to structure case management?	You can create service teams for specific areas. You can then configure routing rules that assign cases to the relevant team. Example: The benefits service team deals with cases related to health insurance. You can define which case types are confidential and route them to specific service teams.

Questions	Considerations
Do you want to commit to time limits for case resolution?	You can create SLA metrics by service team. You can also reassign cases to a service team with a different SLA metric. When you reassign cases, Workday doesn't restart the SLA calculation, which is based on the case creation time. You can also use SLA schedules to define when an SLA timer runs based on the operational hours of a service team. When you configure an SLA schedule for an SLA metric, Workday calculates the time remaining for the SLA based on that schedule.
Do you need to migrate cases from an existing HR system?	Implementers can bulk migrate cases from an existing HR system to Workday Help. Case management preserves existing notes and comments on migrated cases but doesn't preserve custom tags. Implementers can only migrate active cases into Workday.
Do you want to enable case owners to reopen closed cases?	By default, case owners can't reopen cases. You can enable a setting that enables case owners to reopen cases resolved for less than 7 days from the Help Center. With this setting enabled, case owners can't reopen cases resolved for more than 7 days. Workday treats cases resolved for more than 7 days as closed. External case owners still can't reopen cases with this setting enabled.

Recommendations

- Decide on your service delivery model before adopting Case Management to ensure a smooth transition.
- Perform an external services audit to establish which cases should go through Case Management and which cases should go to external third-party providers. Example: Define external links to route IT cases to your external service providers.
- Configure routing rules to ensure that cases with unassigned rules go to a default service team. You can use the Evaluate Case Routing task to test more complex rules and confirm they work as expected.
- Create eligibility rules and questionnaires before creating case types.
- Provide domain access for workers outside of the Help service team. They'll be able to add messages or internal notes to a case that a case solver shared with them.
- Consult your internal HR teams to identify which resources are the most useful in helping employees find an answer to their most common questions before creating a case.
- Configure case message templates that enable case solvers to reply quickly to cases with predefined messages. You can include text, report fields that dynamically populate data, articles or tasks, and file attachments in each template.
- Configure case suggestions to provide employees with the most useful self-serve options.
- Configure constrained security for case creation to streamline the users and organizations that managers can create cases for.

- Add custom text and a Knowledge article to the Create Case task. This provides additional instructions and context to employees when they create a new case.
- Create case validations that require case solvers to complete designated fields before resolving a case. Case validations ensure that case solvers enter the necessary information to resolve a case.
- Configure case satisfaction surveys to collect feedback from your employees. When configured, Workday automatically sends a case satisfaction survey after a case solver closes an employee's case. Employees can answer the survey in My Tasks and on the case view.

Requirements

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Limitations

- You can assign cases to only 1 case solver at a time.
- Service Center Representatives can't access case management.
- External case owners can't reopen cases resolved for more than 7 days.

Tenant Setup

You can use the Edit Tenant Setup - Help task to:

- Specify case IDs.
- Create the default message that displays on confidential case creation.
- Specify whether case notifications include potentially sensitive information.
- Enable or disable case visibility and sharing for case solvers.
- Enable a high level or more granular view of case types during case creation.
- Enable employees and external users who don't have access to Workday to create cases by email.
- Enable employees and external users who don't have access to Workday to communicate with case solvers by email.
- Enable case linking for case solvers.
- Enable external record linking.
- Enable case follow-up dates for case solvers.
- Specify a default external case contact for cases created by a business process.
- Specify additional text and a Help article to display on the Create Case task.
- Enable case owners to reopen cases resolved for less than 7 days from the Help Center.

You can use the Edit Tenant Setup - System task to configure your Workday Help mobile application. Example: Enable the importing or sharing of attachments with external sources.

Security

Domains	Considerations
Help Case Data *Help Case Messages* (Subdomain of the Help Case Data domain) *Help Case Internal Notes* (Subdomain of the Help Case Data domain)	Case solvers with access to this domain can view cases in the Help Workspace and in reports. They can also view and add case replies or internal notes in the workspace.
Manage: Case Create About	Case solvers can create cases about others without notifying them.
Manage: Case Create on Behalf Of	Case solvers can create cases on behalf of others.

Domains	Considerations
Process: Help Cases	Case solvers can: • Access the Help Case Workspace. • Access the Create Case - Advanced task. • Assign new cases to a service team and a specific case solver on the selected service team.
Help Case External Contacts (Subdomain of the *Process: Help Cases* domain.)	Case solvers can: • Create and edit external case contact records. • Create cases on behalf of external contacts. • Assign new cases to a service team and a specific case solver on the selected service team.
Reports: Help Case Management	Case solvers can view noncase-related Help reports.
Self-Service: Help Case Management	Employees can create and view their own cases.
Set Up: Help Case Management	Administrators can configure Help to fit your business needs.
View: Confidential Help Cases	Case solvers can view and process confidential Help cases.
Business Process Administration *Manage: Business Process Definitions*	Administrators can: • Set up a business process step to create cases. • Add a step of to the *Resolve Case* business process to send case satisfaction surveys.
Set Up: Custom Validations	Administrators can case validations that require case owners to complete specific fields before resolving a case.

Business Processes

Use the *Resolve Case* business process to define the case approval process.

Reporting

You can access the Workday Standard Reports report to view all reports for Case Management.

Reports	Considerations
Case History Case History by Person - Detailed Report	View all activity for a specific case.
Evaluate Help Case Management Configuration	Establish whether a worker can create cases or not.
Help SLA Passed vs Failed Help SLA Performance - Cases Opened Within The Last Month	Measure adherence to SLAs.

Reports	Considerations
View Case	View case details for a specific case.
View Cases for Worker	View all cases created by a specific employee.
View Case Type Eligibility Rule View Case Routing Rule	View the rules Workday uses to categorize and assign cases.
View My Cases	View case details for cases that you created.
View Open Cases By Category View Open Cases By Status and Service Team View Open Cases by Case Type	View open cases.
View Shared Case	View case details and messages or notes for cases that a case solver shared with you.
View SLA Schedule	View SLA schedule details for SLA schedules that you created.

Integrations

You can use the Create Case REST APIs in the Help Case REST service to enable your applications and integrations to access Help features and data in Workday.

Connections and Touchpoints

Case Management interacts with these features in Workday:

Features	Considerations
Workday Assistant	You must enable Workday Help case creation in the Edit Tenant Setup – Assistant task to access Help features through Workday Assistant.
Workday for Slack	We recommend that you enable case reply notifications for the Help functional area in the Set Up Notifications for Workday Everywhere task.
Workday for Microsoft Teams	We recommend that you enable case reply notifications for the Help functional area in the Set Up Notifications for Workday Everywhere task.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the Workday Touchpoints Kit on Workday Community.

Workday Help: Case Creation and Case Communication by Email

The Next Level: Request Framework vs. Case Management - Functionality Comparison

2024R1 What's New: Direct Case Assignment

2024R1 What's New: Dynamic Fields on Help Case Message Templates

Reference: Edit Tenant Setup - System

Reference: Edit Tenant Setup - Help

Reference: Edit Tenant Setup - Assistant

Steps: Set Up Case Management

Prerequisites

Set up People Experience.

Security: *Set Up: Help Case Management* domain in the Help functional area.

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Context

Case management enables you to create rules for case categories that route workers' cases to the correct service team. You can also create eligibility rules to specify which workers can create which types of cases. Members of the service team can assign the cases to themselves or to another appropriate case solver.

Steps

1. Enable Innovation Services Feature and Machine Learning Data Contributions for MSA Customers.

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   On the Innovation Services Opt-In task, select the Help service on the Available Services tab in the People Experience category.
2. Enable the Help functional area.

   See Steps: Enable Functional Areas and Security Policies.
3. Access the Manage Service Categories report.

   Create case categories and related case types to organize your cases. Example: Create a Benefits case category with Pensions, Health Insurance, and Gym Membership case types.

   As you complete the task consider:

Option	Description
Confidential	Select to route confidential cases only to teams that have confidentiality permission.

Option	Description
Is External Case Type	Select to specify an external redirection link for cases of that type.

4. (Optional) Access the Create Case Type Eligibility Rule task.

   Define eligibility rules for case creation. Example: Only full-time employees can create cases with the case type Employee Relations.
5. (Optional) ../../../../manage-workday/business-processes/questionnaires/tso1611016403011.dita.

   Create a questionnaire for the applicable case types.

   As you complete the task, consider:

Option	Description
Questionnaire Types	Select *Case*.
(Optional) Questionnaire Instructions	Enter text to alert users that some information might be personal or sensitive.
6. Access the Create Service Team task.

   Create service teams to organize case solvers.

   Select the Allow Confidential Cases check box to specify that a team can handle cases whose type is confidential.
7. ../../../../manage-workday/roles/dan1370796643079.dita.

   As you complete the task, consider:

Option	Description
Enabled for	Select Service Team.
Assigned/Reviewed by Security Groups	Select Security Administrator.
8. Access the View Service Team report.

   From the related actions menu of your service team, select Roles > Assign Roles to assign case solvers.
9. (Optional) ../../../../manage-workday/tenant-configuration/custom-objects-and-labels/dan1370796580624.dita.

   Replace Case with the preferred term in your organization.
10. (Optional) Access the Maintain Case Management Flags task.

    Create flags that case creators can apply to cases. A flag name can't exceed 40 characters. You can't delete flags, but you can make them inactive. You can have a maximum of 20 active flags at a time. Examples: Low Priority, Critical.
11. (Optional) Access the Maintain Case Suggestions task.

    Provide links that workers can use to find answers for their questions. You can link to:

    - Help articles.
    - External web pages.
    - Workday Learning content.
    - Workday tasks.
12. Access the Create Case Routing Rule task.

    Create rules to route cases to teams based on case parameters. Examples: location, type, category, source, and description.

13. Access the Maintain Case Routing task.

    Apply the routing rules. Workday routes unassigned cases to the default service team.

    You can use the Evaluate Case Routing Rules task to test complex rules and determine that they route cases as expected.

14. (Optional) configure-case-notifications.dita.
15. (Optional) Access the Maintain Case Statuses task.

    Use the default case statuses to organize your workflow. Examples: New, In Progress, On Hold, Canceled, and Resolved. You can provide overrides for any or all of them.

    Select the On Hold pauses SLAs check box to specify that on-hold cases are temporarily exempt from SLAs.

    Note: You can also add, remove, or deactivate case substatuses related to case statuses. You can have a maximum of 10 active substatuses. Examples: In Progress > Triaging or On Hold > Assignee on vacation.

16. (Optional) Access the Maintain Case Label Categories task.

    Create, remove, or deactivate case label categories. You can have a maximum of 100 active label categories at a time. Examples: Needs Approval, Resolutions.

17. (Optional) Access the Maintain Case Labels task.

    Create, remove, or deactivate case labels. You can't remove labels that you've already applied to cases but you can make them inactive. Examples: Information Needed, Duplicate.

18. (Optional) Access the Manage Help Case SLAs task.

    Define metrics for case solvers to respond to or resolve their cases. Example: You can define a metric that states that all case solvers must resolve their case within 2 hours of its creation.

    Clear the Active check box for a service team to exempt it from an SLA.

19. (Optional) Access the Manage Help Case SLAs task to define an SLA schedule for a given SLA metric.

    Use SLA schedule to define service team operational hours for a given SLA metric. You can define metrics that take into account time zones and nonworking hours, such as weekends and holidays. Workday calculates the SLA time target based on the schedule, providing greater accuracy when tracking SLAs.

20. (Optional) Access the Manage Help Case Message Templates task.

    Create and manage message templates that enable case solvers to reply quickly to cases with predefined messages. Example: You can create a template that contains instructions for submitting an expense report.

    You can include text, report fields that dynamically populate data, articles or tasks, and file attachments to message templates. You can also assign templates to service teams, enabling only the designated teams to access and use the specified templates.

21. (Optional) set-up-case-satisfaction-surveys.dita.

    Create case satisfactions surveys to send to employees when a case solver closes their case.

22. (Optional) Set up a business process step to create cases.

    Steps--Set-Up-a-Business-Process-Step-to-Create-Cases.dita

23. (Optional) Access the Manage Help Case Information task.

    Change the default employee information that displays in the Help workspace. You can specify up to 15 fields that apply globally or to specific teams.

24. (Optional) set-up-case-validations.dita.
25. (Optional) Set up email case creation.

    See jko1676579103302.dita.

26. (Optional) Set up email case communication.

    See ntm1657193282088.dita.

27. (Optional) Add cards to the Home page.

    Add cards to give employees brief updates on their Help cases and enable easy access to them. Single Case cards display the current status of a case and provide access to the full case view. Multiple Cases cards display when an employee has more than 2 active cases. They provide access to the My Cases report.

    See Concept: Home Page Workspace.

28. Access the Edit Tenant Setup - Help task.

    Manage tenant-wide settings for Workday Help.

    As you complete the task, consider:

Option	Description
Notification Display Details	Specify whether you want to display limited or complete details in the case notifications.
Access	Decide whether case solvers can access all cases or only cases assigned to their service teams.
Enable Case Linking	Specify whether case solvers can link cases together.
Custom Text	Specify custom text to display for users on the Create Case task when creating a case.
Article	Specify a Knowledge article to display for users on the Create Case task when creating a case.
Enable Case Owners to Reopen Cases	Enable case owners to reopen cases resolved from less than 7 days from the Help Center. With this option enabled, case owners still can't reopen cases resolved for more than 7 days. This option doesn't apply to external case owners.

    See ../../../../manage-workday/tenant-configuration/tenant-setup/che1594214441572.dita.

Result

Workers can create cases that route to the configured service teams. Administrators can also create new case types. Case solvers can create cases on a worker's behalf.

Next Steps

Use the Maintain Dashboards report to add the Help:

- Worklet.
- Workspace.
- Dashboard.

2023R1 What's New Post: Case Linking

2023R1 What's New: Case Communication by Email

2024R1 What's New: Dynamic Fields on Help Case Message Templates

Steps: Set Up Email Case Creation

Prerequisites

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Steps: Set Up Case Management on page 3021.

Context

You can set up email case creation for both workers who have access to Workday and external users who don't have access to Workday.

When you enable email case creation:

- Workers and external users can create new cases by email.
- Case solvers can view cases created by email in the Help Workspace.
- Case solvers can block external users to prevent unwanted case creation access.

Steps

1. Access the Edit Tenant Setup - Help task.

   As you complete the Email ~Case~ Creation section, consider these options:

~Case~ Creation Options	You can enable case creation for: • Only workers who have access to Workday Help. • Workday Help users and external users who don't have access to Workday.
Email Address Selection	Workday enables you to: • Create a case for the contact who initially sent the email (the Original Sender). • Create a case for the contact who most recently forwarded or generated the email (the email address in the *From Email* field).
Configure emails to exclude from ~case~ creation	Workday enables you to exclude entered email addresses from automatically creating emails by using the Excluded ~case~ creation email addresses field.
Manually assign the ~case~ owner if the ~case~ owner can’t be recognized	We enable you to manually assign the case owner if Workday can’t easily identify the case owner, enabling you to avoid incorrectly assigned cases.

   Security: *Set up: Help Case Management* domain in the Help functional area.

2. Steps: Set Up Email Ingestion.

   A case owner may not be recognized from email ingestion if:

   a. There are multiple contacts in the ‘To’ field. We recommend entering one email address in the ‘To’ field.
   b. The case creation email is included in the ‘Cc’ field.
   c. The email contains a long or complex email chain with multiple contacts or forwards. If the Manually assign the ~case~ owner if the ~case~ owner can’t be recognized check box is enabled, the case is created as unassigned and you can manually assign the correct case owner.

   If there’s no case owner assigned the Send option for a case message will be disabled for the case solver.
3. Configure Email Ingestion Settings

   - In the Configure Email Ingestion Settings task, select Help Case Creation from the drop down.
   - You must use separate email receiving domains for the Help Case Creation and Help Case Reply notification types.

   Security: *Set Up: Inbound Email* domain in the System functional area.
4. (Optional) Create Calculated Fields

   You can use calculated fields to display email metadata to case solvers in the case view to assign a case owner if it isn’t immediately identifiable.

   a. Enter *Original Sender, Email From* or *Email Addresses in the Email Ingestion Delivery Chain* in the Field Name field.
   b. Select *Case* as the Business Object from the drop down.
   c. Enter *Lookup Related Value* in the Function field.
   d. In the *Calculation* tab, enter *Inbound Email* in the Lookup Field field and *Original Sender, Email From* or *Email Addresses in the Email Ingestion Delivery Chain* in the Return Value field.
   e. Use the *Global* or the *Team Specific* tab on the Manage Help Case Information task to configure the field display. See Set Up Help Case Information.
5. (Optional) Steps: Set Up Email Case Communication on page 3026.

   You can set up email case communication so case owners can communicate with case solvers by email after creating a case.

Concepts

Concept: Email Ingestion

2023R1 What's New Post: Case Communication by Email

Workday Community: Workday Help: Case Creation and Case Communication by Email

Tasks

Configure Email Ingestion Settings

Steps: Set Up Email Case Communication

Prerequisites

Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

Steps: Set Up Case Management on page 3021.

Context

Email case communication enables case solvers and owners to communicate by email:

- Both workers who have access to Workday and external users who don't have access to Workday can communicate with case solvers by email.
- Case owners can view case solver replies and case updates from their email account.
- Case solvers can reply to an external case in the Help Workspace, and Workday then delivers the message to the email account of the case owner.
- Case solvers can block external users to prevent unwanted communication.

Steps

1. Access the Edit Tenant Setup - Help task.

   In the Notifications section, select Complete: Display details in notifications such as title, assignee, attachment alerts.

   In the Case Communication section, select Enable case replies within Workday and by email.

   Security: *Set up: Help Case Management* domain in the Help functional area.
2. Set up email ingestion to process inbound email. See ../../../../manage-workday/tenant-configuration/notifications-and-alerts/email-notifications/email-ingestion/bvx1657205354171.dita.

   In the Configure Email Ingestion Settings task, select Help Case Reply and add an email ingestion receiving domain. You must use separate email receiving domains for the Help Case Creation and Help Case Reply notification types.

   Workday recommends using the Workday-provided receiving domain because it doesn't require any setup for your company. It also eliminates the additional configurations steps that customer-provided receiving domains need after a non-Production refresh. If you set up your own email ingestion receiving domain, you must complete additional steps. See Steps: Set Up Customer-Provided Receiving Domains.

   If you have configured their email case ingestion settings with Most Recent Sender,Workday recommends disabling the Case Creation - Notify Case Owner Notification Manage ~Case~ Notification Recipients' task and its '~Case~ Creation - Notify ~Case~ Owner' Notification' to disable

   Email ingestion only supports one email address and doesn't support the ingestion of multiple addresses in a single email or emails included in a forwarding chain. You should only have one address in the *To* field.

   Note: When you use the Workday-provided receiving domain, you must reselect it after every non-Production refresh using the Configure Email Ingestion Settings task in your non-Production tenant.
3. (Optional) Access the Manage ~Case~ Notification Recipients. If you have configured your email case ingestion settings with Most Recent Sender, Workday recommends disabling the Case Creation - Notify Case Owner Notification to prevent loop notifications.
4. Access the Edit Tenant Setup - Notifications task.

   In the Notification Delivery Settings section, click the Help tab.

   In the Rule prompt, create a new notification routing rule.

   In the Channel Frequencies section, click Add.

   For the Channel prompt, select Email.

   Security: *Set Up: Tenant Setup - BP and Notifications* in the System functional area.

Workday Community: Workday Help: Case Creation and Case Communication by Email

Tasks

Configure Email Ingestion Settings

Steps: Set Up a Business Process Step to Create Cases

Prerequisites

- Steps: Set up Case Management.
- Steps: Create Custom Business Processes.

Context

You can configure a step in your custom business process to create and assign cases automatically, further streamlining the case creation process.

Steps

1. Access the Edit Tenant Setup - Help task.

   In the Business Process Case Creation section, enter a default external case contact.
2. Select Business Process > Edit Definition from the related actions menu of your business process.
3. Select an Effective Date for when the business process definition changes take effect.
4. Create a new step.

   Select Service as the Step Type.

   In the Specify field, select Create Case as the service type.
5. Click OK.
6. Click the Configure Create Event Service Configuration button.

   (Optional) Enable the setting to block the business process until the case is resolved.

   Select the worker that the business process creates the case for.

   (Optional) Select the worker that the business creates the case about.

   Select the type of case that the business process creates.

   Enter the case title that the business process creates.

   (Optional) Enter the case description that the business process creates.

Result

The customized business process now automatically creates cases based on your Create Case service step configuration.

Configure Case Notifications

Prerequisites

Security:

- The *Set Up: Help Case Management* domain in the Help functional area.
- The *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.

Context

You can configure and target case notifications to fit the specific use cases and needs of your organization. By configuring case notifications, you can determine which notifications Workday sends to case owners, case solvers, and collaborators.

Steps

1. Access the Manage Case Notification Recipients task.

   As you complete the task, consider:

Option	Description
Case Owners	Configure the notifications sent to internal and external case owners. Select the Notify Internal Case Owner check box to send the notification to an internal case owner. Select the Notify External Case Owner check box to send the notification to an external case owner. To send a notification to external stakeholders, you must: • Configure an email notification delivery channel for Help notifications in the Edit Tenant Setup - Notifications task. • Select the Enable case replies within Workday and by email option in the Case Communication section of the Edit Tenant Setup - Help task.
Case Solvers	Configure the notifications sent to case solvers and service teams. Select the Notify Assigned Case Solver check box to send the notification to the assigned case solver. To send a notification for an unassigned case to all members of a service team, select the Notify Team if Unassigned check box.
Collaborators	Configure the notifications sent to case collaborators. Select the Notify Case Collaborator check box next to a notification to send it to a case collaborator.

2. Click OK.

Create Case Validations

Prerequisites

Security: *Set Up: Custom Validations* in the System functional area.

Context

You can create custom case validations with a severity of *Critical* that require case solvers to complete specific fields before resolving a case.

Based on the rule conditions in your case validation, Workday

- Prevents case solvers from resolving a case until they enter values for the required fields.
- Displays an error message to case solvers that displays the required fields to resolve a case.

Note: Case validations only support the *Critical* severity.

Steps

1. Access the Maintain Custom Validations report.
2. Select the Case transaction type.
3. Click New Validation to create a new case validation.
4. Enter a description for the case validation rule.
5. Add one or more rule conditions.

   As you complete the task, consider:

Option	Description
And/Or	When 2 or more statements exist in the expression, set this condition to control how the statements relate to each other.
()	Use parentheses for 3 or more statements and a combination of And and Or conditions.
Source External Field or Condition Rule	The field or condition rule you select as the source determines which other options are available. Example: The Case Assignee report field
Relational Operator	These options depend on the data type. Example: *is empty*
Comparison Value	Based on the Comparison Type, select a comparison field or enter a value to compare to the source.

6. Click OK.

Result

When attempting to resolve a case without completing the required fields, case solvers now receive an error message that prevents them from resolving a case.

2024R2 Feature Release Note: Case Validations

Create a Case from a QuickTip

Prerequisites

- Workday Help SKU
- Steps: Set Up and Manage the Guidance Workspace
- Security: *Set Up: Tenant Setup - System* in the System functional area.

Context

You can enable users to create a Workday Help case from a QuickTip and reduce the number of abandoned tasks or tasks completed with errors. This improves case resolution metrics, reducing case resolution time and improving case satisfaction scores, because the case solver knows the task the worker or manager created their case from.

Steps

1. Access the Edit Tenant Setup - System task.
2. Select the Allow Help Cases to be created from QuickTips check box to display the Create a case link on all published QuickTips.
3. (Optional) Select a default case type in the Default Help Case Type made from QuickTip field. Setting a default case type applies to all QuickTips published from the Guidance Workspace.
4. Save your changes in the Edit Tenant Setup - System task.

Result

The Create a case link now appears in QuickTips in your tenant. If a worker selects the link, they will be redirected to the *Create Case* task and the *Case Type* and *Case Title* fields are pre-populated if a default case type is set in the Edit Tenant Setup - System task.

Example

You're a case solver working with the Allow Help Cases to be created from QuickTips check box enabled in your tenant. A new joiner is completing the *Get Feedback on Self* task. While completing the task, they are unsure which template to use and select the Create a case link in the QuickTip associated with the Feedback Template field. In the *Overview* tab on the case in your queue, you can see that the case was created from the *Get Feedback on Self* task and the time it was created. You use this context to respond in a timely manner.

Next Steps

Set Up Case Satisfaction Surveys

Prerequisites

- Security: These domains in the System functional area:
  - *Business Process Administration*
  - *Manage: Business Process Definitions*
- Set up case management. See Steps: Set Up Case Management on page 3021.

Context

You can set up case satisfaction surveys to collect employee feedback after a case solver resolves their case. Case satisfaction surveys enable you to measure employee satisfaction and improve your employee support model. Employees can view and complete case satisfaction surveys in My Tasks and on the case view.

Steps

1. From the related actions menu of the *Resolve Case* business process, select Business Process Policy > Edit.
2. In the Who Can Do Action Steps in the Business Process section, add the *Employee as Self* security group to the*Complete Case Satisfaction Survey* action step and click OK.
3. ../../../../authentication-and-security/configurable-security/security-change-control/dan1370796405018.dita.
4. Access the Create Case Satisfaction Survey Configuration task.

   As you complete the task, consider:

Option	Description
Survey Configuration Name	Enter a name for the survey.
Survey Rating Description	The rating scale for the survey. Workday uses a 1 - 5 to survey scale, with 1 being *Very Dissatisfied* and 5 being *Very Satisfied*. You can't modify the survey rating.
Survey Question Text	Select the default survey question or enter custom text for the survey question. The default survey question text is *How was your experience?*
Include Feedback Field	Enable this field to include a text field on surveys where the employee can enter additional qualitative feedback.
(Optional) Additional Survey Questionnaire	You can add a questionnaire with additional questions to the survey. The questionnaire must have *Case* as the value for the Questionnaire Types field. See ../../../../manage-workday/business-processes/questionnaires/tso1611016403011.dita.

5. Click OK.
6. From the related actions menu of the *Resolve Case* business process, select Business Process > Edit Definition.
7. Enter an Effective Date and click OK.
8. Add a new step on the Business Process Steps tab to send the case satisfaction survey.

   As you complete the task, consider:

Option	Description
Order	Enter an Order value that places the step after the defined completion step of the business process.
Type	Select Action as the step type.

Option	Description
Specify	Select Complete Case Satisfaction Survey.
Group	Select the *Employee as Self* security group.
(Optional) Due Date	Enter a due date to automatically remove unanswered case satisfaction surveys from My Tasks and the case view for employees. Workday removes unanswered surveys after the designated due date has passed.

9. Click OK.
10. On the new business process step, click Configure Complete Satisfaction Survey.
11. Enter an Effective Date and click OK.
12. Select your new Case Satisfaction Survey Configuration.
13. Click OK and Done.

Result

Workday now sends case satisfactions surveys to employees after a case solver resolves their case.

To view and analyze all survey responses, you can create a custom report using the Case Satisfaction Survey Responses report data source.

2024R2 Feature Release Note: Case Satisfaction Surveys

Set Up External Record Linking on Cases

Prerequisites

- Set up Case Management.
- Create an integration system user (ISU).
- Security: *Help External Records* domain in the Help functional area.

Context

You can set up external record linking for Help cases in Workday. External record linking enables an ISU to use the External Records APIs in the Help Case REST service to add, modify, and delete links to external records on your Help cases.

Case Solvers can use external record links on cases to manage related cases and navigate between multiple Workdays.

Example: You use Help cases to track internal employee cases and a different system to track service outage issues. When an outage occurs and employees open new cases, you use external record linking to display a link to the related service outage issue on the cases. After fixing the service outage, your case solvers can easily identify and resolve the related Help cases that have the external link to the issue.

Steps

1. Access the Edit Tenant Setup - Help task.

   Select the Enable External Record Linking check box.
2. Click OK.
3. Edit Domain Security Policies.

   Confirm that the security group for your ISU has permissions to the *Help External Records* security domain in the Help functional area.
4. Access the Workday REST Services Directory to configure and use the External Records APIs in the Help Case REST service.

   To obtain the source Id of an external system, the ISU can use the Prompt Values API in the Help Case REST service to perform a GET request.

Result

You can use the External Records APIs in the Help Case REST service to add, modify, and delete external record links on cases. When you add an external record link to a case, Workday will send a notification to the assigned case solver informing them of the new link.

Set Up Help Engagement Metrics

Prerequisites

Security: *Reports: Help Engagement Metrics* in the Help functional area.

Context

You can use this report to track user engagements with Workday Help articles, enabling you to analyze and improve your organization's knowledge base.

Steps

1. Access the Help Article User Engagement Metrics report.
2. Enter the Start Time and End Time. The report displays entries from June 5 2024 and you can access data data for 3 years prior, until June 5th 2024. Data is only available in production tenants, you won’t be able to access results in your Sandbox tenant.
3. The report displays a table of entries:

Option	Description
Article	The Help article available in the tenant.
Article View	The number of views a Help article receives.
Click ~Case~ creation from Article	The number of users that click Create Case on a Help article.
~Case~ created from Article	The number of users that click Create Case on a Help article and then create a case.

4. (Optional) You can drill down into the engagement metrics in the popup that displays when you click the count in the Article View, Click ~Case~ creation from Article or ~Case~ created from Article columns. The popup displays these entries:

Option	Description
Help Engagement Type	The engagement type for the drilldown you've clicked into.

Option	Description
Device Type	The device type from when the event was tracked.
Related Primary Job Location	The location of the worker.
Has Access to Manage Help Articles	Indicates if the creator is a content author.
Is Service Team Member	Indicates if the creator is a case solver.

5. (Optional) If you have access to the *Help: Case Data* domain, the popup displays these additional columns:

Option	Description
~Case~	The case that was created from the Help article.
Initial Assigned ~Case~ Type	The assigned case type for that case.

Result

You can use the report to:

- Understand self-service adoption across your worker population.
- Provide insights on potential content gaps through access to cases generated after a worker engages with a Workday Help Article.

Example

Next Steps

Example: Create a Case Type for 401(k) Savings Plans

This example describes how to create eligibility and routing rules, service teams, categories, subcategories, and case types.

Context

You want to enable U.S. workers to create cases with inquiries about their 401(k) plans and route qualifying cases to a Benefits (USA) service team.

Prerequisites

Security: *Set Up: Help Case Management* domain in the Help functional area.

Steps

1. Access the Create Case Type Eligibility Rule task.
2. In the Description field, enter *401k Eligibility*.
3. Enter these Rule Conditions values:

Field	Value
Source External Field or Condition Rule	*Primary Home Address - Country*
Relational Operator	*in the selection list*
Comparison Value	*United States of America*

4. Click OK.
5. Create a *Benefits (USA)* service team and assign roles to it.

   See Example: Create a Benefits (USA) Team and Assign Roles to It on page 3036.
6. Create a *Benefits* service category and a *USA Benefits* subcategory.

   See Example: Create a Benefits Service Category and 401k Queries Case Types on page 3037.
7. Create a case routing rule that directs *401k Queries* case types to the Benefits (USA) service team.

   See Example: Route 401k Queries to a Benefits (USA) Team on page 3037.

Result

U.S. workers can create cases for their 401(k) queries that automatically route to the Benefits (USA) service team.

Next Steps

(Optional) Create a questionnaire for the *401k Queries* case type.

Example: Create a Benefits (USA) Team and Assign Roles to It

This example describes how to create a service team and assign roles to it.

Context

You want to create a service team and assign roles to it for solving benefits queries in the U.S.

Prerequisites

Security: *Set Up: Help Case Management* domain in the Help functional area.

Steps

1. Access the Create Service Team task.
2. In the Service Team Name field, enter Benefits (USA).
3. Click OK and Done.
4. Access the Maintain Assignable Roles task.
5. Add a role with these values:

Field	Value
Role Name	*Case Solver*
Enabled for	*Service Team*
Assigned by Security Groups	*Security Administrator*

6. Click OK and Done.
7. Access the View Service Team report.
8. From the Service Team prompt, select *Benefits (USA)*.
9. Click OK.
10. Select Roles > Assign Roles from the related actions menu of the Benefits (USA) service team.
11. Select an effective date.
12. Click OK.
13. In the Assign Roles grid, from the Role prompt, select *Case Solver*.
14. From the Assign To prompt, select *Denis O'Dell*.

15. Click OK and Done.

Result

Denis O'Dell is a case solver assigned to the Benefits USA service team and can work on cases routed to this team.

Example: Create a Benefits Service Category and 401k Queries Case Types

This example describes how to create a service category and subcategory, as well as related case types.

Context

You want to create a *Benefits* service category and a *USA Benefits* subcategory to organize your cases and 401k-related case types.

Prerequisites

Create an eligibility rule for 401k-related case types using the Create Case Type Eligibility Rule task.

Security: *Set Up: Help Case Management* domain in the Help functional area.

Steps

1. Access the Manage Service Categories report.
2. Select Create Service Category.
3. In the Name and Description fields, enter *Benefits*.
4. Click OK.
5. Click Create Service Category again.
6. In the Name and Description fields, enter *USA Benefits*.
7. Select the Is this a subcategory? check box.
8. From the Parent Service Category prompt, select *Benefits*.
9. Click OK.
10. Click Create Case Type.
11. Enter these Rule Conditions values:

Field	Value
Name	*401k Queries*
Service Category	*USA Benefits*
Eligibility Rule	*401k Eligibility*

12. Click OK.

Result

You can use the *Benefits* service category and *USA Benefits* subcategory to organize your cases and 401k-related case types.

Example: Route 401k Queries to a Benefits (USA) Team

This example describes how to create a routing rule that directs certain case types to a specific service team.

Context

You want to route your 401k queries to your U.S. Benefits service team.

Prerequisites

Security: *Set Up: Help Case Management* domain in the Help functional area.

Steps

1. Access the Maintain Case Routing task.
2. Add a row in the grid.
3. From the Case Routing Rule prompt, access the Create Case Routing Rule task.
4. Click OK.
5. In the Description field, enter *401k Queries* .
6. Enter these Rule Conditions values:

Field	Value
Source External Field or Condition Rule	*Case Type*
Relational Operator	*in the selection list*
Comparison Value	*401k Queries*

7. Click OK.
8. From the Service Team prompt, select *Benefits (USA)*.
9. Click OK and Done.

Result

U.S. workers assigned to the Benefits (USA) service team can work on *401k Queries* routed to this team.

Example: Create a Workday Help Service Level Agreement Schedule

This example describes how to create a Workday Help SLA schedule based on a specific service team's operational hours.

Context

You want to create a service level agreement (SLA) schedule for the Payroll service team. The service team is located in London and operates Monday through Friday on a 9 to 5 schedule, including a holiday on Christmas Day. You create a custom SLA schedule with a schedule name of London.

Prerequisites

Security: *Set Up: Help Case Management* domain in Help functional area.

Steps

1. Access the Create SLA Schedule task.
2. In the Name prompt, enter *London*.
3. Select *GMT United Kingdom Time (London)* in the Time Zone prompt.
4. In the Operational Hours grid, add a row for each weekday that the Payroll team is operating (Monday to Friday).

   Omitting Saturday and Sunday means that any associated SLA metric will exclude these hours when calculating the time to complete for the SLA.
5. Select a different day of the week on each row for the Day prompt.
6. For each row in the Start Time field, enter *09:00 AM*.
7. Enter *05:00 PM* in the End Time field.

8. In the Holidays grid, add a row.

   Holidays are full days that any associated SLA metric will exclude when calculating the time to complete for the SLA.
9. In the Holiday Name field, enter *Christmas Day*.
10. Select *December 25th, 2022* on the Date prompt.

    To be a recurring holiday, you need to add this day in the holiday schedule for each year.
11. Click OK and Done.

Result

You can now link custom SLA schedules to service teams operating in the same time zone and have matching operational hours and holidays.

You can access the details of the SLA schedule through the View SLA Schedule report or modify the content through the Edit SLA Schedule task.

Next Steps

Create a Workday Help service level agreement (SLA).

Related Information

Concepts

2022R2 What's New Post: Service Level Agreement Management

Example: Create a Workday Help Service Level Agreement

This example describes how to create a Workday Help service level agreement for a specific team that reflects their operational hours.

Context

You want to create a service level agreement (SLA) for the Payroll service team located in London. You use a custom schedule based on the Payroll service team's operational hours and require a first response target time of 1 hour.

Prerequisites

Create:

- A Payroll service team.
- A service level agreement (SLA) schedule with a schedule name of London.

Security: *Set Up: Help Case Management* domain in Help functional area.

Steps

1. Access the Manage Help Case SLAs task.

   Select *Time to First Response* at the SLA Metric prompt.
2. In the Individual Team Settings grid, add a row.
3. From the Service Team prompt, select *Payroll*.
4. Select the Active check box.
5. In the Time Target (Hours) prompt, enter *1*.
6. From the SLA Schedule prompt, select *London*.
7. Click OK and Done.

Result

Workday notes Payroll cases that don't receive a response from the service team within 1 hour and makes their details available through these reports:

- Help SLA Passed vs Failed.
- Help SLA Performance - Cases Opened Within The Last Month.

The SLA calculation only considers the operational hours that you specified when calculating the time to complete the SLA. You can view the custom schedule on the View SLA Schedule report.

Reference: Case Management Notifications

Workday delivers case management notifications to keep case owners, case solvers, and collaborators informed of new cases and updates to existing cases.

Case Management Notification Recipients

Recipient	Description
Case Owner	An employee specified in the For field on a case. This field can record: • An employee who created a case for themselves. • An employee who someone else created a case for. Note: Employees added in the Create About field don't receive any notifications.
Case Solver	An employee assigned to work on and resolve a case. Case solvers can update the Created For field on a case and assign it to an internal employee or external contact.
Collaborator	An employee tagged in an internal note on a case.

Case Owner Notifications

Notification	Description
Case Assignee Change - Notify Case Owner	Notifies the case owner of a new case solver assignment or reassignment for their case.
Case Attachment - Notify Case Owner	Notifies the case owner when a case owner, case solver, or case collaborator adds an attachment to their case.
Case Creation - Notify Case Owner	Notifies the case owner when: • They create a case for themselves. • Someone else creates a case on their behalf.
Case Owner Change - Notify Case Owner	Notifies the new case owner when they have been assigned as the new case owner of a case.
Case Reply - Notify Case Owner	Notifies the case owner when a case solver adds a new message to their case.

Notification	Description
Case Service Team Change - Notify Case Owner	Notifies the case owner when the assigned service team for their case changes to a different team.
Case Status In Progress / In Review / On Hold - Notify Case Owner	Notifies the case owner when their case moves to a status of *In Progress*, *On Hold*, or *In Review*.
Case Status Resolved / Canceled - Notify Case Owner	Notifies the case owner when a case solver resolves or cancels their case.
Case Type Change - Notify Case Owner	Notifies the case owner when the case type on their case changes.

Case Solver Notifications

Notification	Description
Case Assignee Change - Notify Case Solver	Notifies the newly assigned case solver when a case is assigned to them.
Case Attachment - Notify Case or Service Team	Notifies the assigned case solver or service team when a case owner, case solver, or collaborator adds an attachment to a case.
Case Creation - Notify Case Solver or Service Team	Notifies the assigned case solver or service team of a new case.
Case External Record Linked or Delinked - Notify Case Solver or Service Team	Notifies the assigned case solver or service team of: • A new link to an external record on a case. • The removal of an existing link to an external record on a case.
Case Internal Note - Notify Case Solver or Service Team	Notifies the assigned case solver or service team of a new note added to a case.
Case Reply - Notify Case Solver or Service Team	Notifies the assigned case solver or service team of a new reply to a case.
Case Service Team Change - Notify Case Solver or Service Team	Notifies the case owner or service team when the assigned service team for their case changes to a different team.
Case Solver Digest - Notify Case Solver	Notifies all case solvers with a summary of: • Comments and notes added to assigned case in the past 24 hours. • New assigned cases in the past 24 hours.
Archived Case Attachment - Notify Case Solver or Service Team	Notifies the assigned case solver or service team when a case owner adds an attachment to a resolved or canceled case.
Archived Case Reply - Notify Case Solver or Service Team	Notifies the assigned case solver when a case owner adds an attachment to a resolved or canceled case.

Collaborator Notifications

Notification	Description
Case Attachment - Notify Case Collaborator	Notifies a collaborator when a case owner, case solver, or case collaborator adds an attachment to their case.
Case Internal Note - Notify Collaborator	Notifies a collaborator of a new note added to a case.
Case Note Tagging - Notify Collaborator	Notifies a collaborator when a case solver or case collaborator mentions them on a case note.
Case Reply - Notify Case Collaborator	Notifies a collaborator when a case owner adds a new message to the case.
Case Sharing - Notify Collaborator	Notifies a collaborator that another collaborator or case solver shared a case with them. The notification also contains a link to the shared case.
Case Type Change - Notify Case Collaborator	Notifies a collaborator when a case solver changes a case type to one that removes viewing access for the collaborator. Example: Changing the case type from non-confidential to confidential.

Concepts

2024R2 Feature Release Note: Case Notification Configuration

FAQ: Case SLAs

When does the timer for an SLA start?	The SLA timer starts when a case creator initially creates a case.
When does the timer for an SLA stop	The SLA timer stops when a case solver marks the case as resolved. Workday stops the Time to First Response metric once a case solver adds a response to the case.
What happens to an SLA when I reopen a case?	The SLA timer doesn't restart or continue when you reopen a case. Workday displays the initial passing or failure of SLA on a reopened case. If you resolve a case without leaving a comment, Workday doesn't mark the Time to First Response metric as passed. Passing the Time to First Response metric requires leaving a comment.
What happens to an SLA when I assign a case to a different service team?	The SLA doesn't reset. Workday carries over the time passed from the SLA of the initial assigned service team and applies it to the SLA of the new assigned service team. If the initial assigned service team failed an SLA, it continues to display as failed for the new assigned service team.

What happens to an SLA when I put a case On Hold?	SLA functionality for cases On Hold is dependent on the On Hold pauses SLA option on the Maintain Case Statuses task. If you enable the On Hold pauses SLA option, the SLA timer for cases with a On Hold status or substatus pauses. Once you change the On Hold status or substatus, the SLA timer restarts. Workday then recalculates the remaining SLA time to failure based on the time target and the SLA schedule. If you don't enable the On Hold pauses SLA option, the SLA timer uses the same functionality for cases that have any open status.

Knowledge Management

Steps: Set Up Knowledge Management

Prerequisites

- Steps: Set Up People Experience.
- Steps: Set up Drive.
- Ensure you're not in a proxy session. Knowledge Management doesn't support proxy sessions.

Note: You might need to take additional steps to enable this feature based on your organization's subscription service agreement. Your organization is either on the Main Service Agreement (MSA) or the Universal Main Service Agreement (UMSA). To determine your organization's subscription service agreement:

1. Select your profile avatar on Workday Community.
2. Select Profile.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your Subscription Service Agreement value.

If the value is:

- *UMSA*, the feature is automatically available. You can skip the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step. For more information on Machine Learning data contributions, see Concept: Workday AI for Universal Main Subscription Agreement Customers.
- *MSA*, you must enable this feature through Innovation Services using the Enable Innovation Services Features and Machine Learning Data Contributions for MSA Customers step.

Note: UMSA customers don't have Innovation Services tasks and reports in their tenants as these are for MSA customers only. UMSA customers can ignore all information regarding Innovation Services.

Context

Knowledge management in Workday enables you to share information with your employees through articles created in Workday. Articles can reduce and deflect internal cases submitted by your employees and enable them to become more self-sufficient. Article authors and editors can draft, share, and collaborate with one another to create optimized content for your employees. Before you create articles, you can configure security settings that enable you to define target audiences and categories to associate articles with.

Steps

1. Enable Innovation Services Feature and AI Data Contributions for MSA Customers

   Note: You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this Community article.

   On the Innovation Services Opt-In task, select the Help service on the Available Services tab in the People Experience category.

   (Optional) To enable AI and machine learning features for Knowledge Management, select the Knowledge Management Articles category within the People Experience: User Experience Machine Learning service on the Maintain Innovation Services and Data Selection Opt In task.
2. Access the Edit Tenant Setup - Machine Learning task.

   Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

   Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.
3. Enable the Help functional area.

   See Steps: Enable Functional Areas and Security Policies.
4. Edit Domain Security Policies.

   Grant security groups permissions to these domains in the Help functional area:

   - *Self-Service: Help Articles*. Enables authors to access draft articles. Workday recommends you add Employee As Self as a security group with modify permissions to this domain. With this configuration, authors can save draft articles that aren't secured to any category.
   - *View: Help Articles*. Enables employees to view Help articles. Authors must also have access to this domain to use the Help Article workspace and article editor.
   - *Manage: Help Articles*. Enables authors to create and edit Help articles.
   - *Manage: Article Sharing Versions*. Enables authors to collaborate on Help articles by sharing and commenting on article drafts. Workday automatically provides access to this domain when you share an article draft with another author or collaborator.
   - *Set Up: Help Knowledge Management*. Enables you to configure article audience and category security, but not create articles.
   - *Reports: Help Knowledge Managements*. Enables you to create and access reporting and discovery boards for Knowledge Management.

   Grant security groups permissions to the *Drive* domain in the System functional area. Enables you to access the new Drive user interface to create and manage Workday files associated with workbooks and media files.
5. Activate Pending Security Policy Changes.
6. Access the Maintain Article Categories task.

   Create categories to associate articles with.

   Workday displays the category name on published articles. We recommend that you name your categories something that makes sense to both administrators and workers. Examples: Benefits, General HR, Payroll.

   Security: *Set Up: Help Knowledge Management* domain in the Help functional area.
7. Create target audiences for articles.

   See Steps: Create Article Audiences Using Condition Rules on page 3045.
8. Designate authors for articles, restricted by article category.

   See Steps: Create Article Authors on page 3046.

9. (Optional) Set up your tenant for discovery boards.

   You can create discovery boards for Knowledge Management using the Knowledge Base Article Versions report data source. Workday also delivers the Help Article discovery board that you can copy.

   See Steps: Set Up Tenant for Discovery Boards.
10. (Optional) Create Custom Reports.

    You can create custom reports for Knowledge Management using the Knowledge Base Article Versions report data source. Workday also delivers the Help Article Performance advanced report.
11. Create Articles on page 3047.

Workday Help AI in Knowledge Management

Steps: Create Article Audiences Using Condition Rules

Context

You can use condition rules to create target audiences that restrict who can view a Help article. You can use existing or create new condition rules, providing you with flexibility for defining granular audiences. Knowledge management uses both Workday security and custom configuration to control visibility to articles. Condition rules enable you to manage these audiences without requesting security administrators to create and update segmented security groups.

By default, Workday indexes your article users and article audience condition rules reduce the amount of time it takes to evaluate article access. Workday runs a nightly job to index your article users and article audience condition rules. It can take up to 24 hours for new and updated indexed article audience condition rules to take affect.

Note: Workers, Students, and Service Center Representatives can access Help articles.

Steps

1. Access the Create Article Audience Rule task.

   Workday recommends that you create condition rules for 3 audiences:

   - *HR Admin*
   - *Manager*
   - *Public*

   You can select any existing condition rule as long as all the fields are on the Worker, Student, or Service Center Representatives business objects.

   Security: *Set Up: Help Knowledge Management* domain in the Help functional area.
2. Access the Maintain Article Audiences task.

   On the *Who Can View* column, select the condition rule that you want to apply to each audience.

   Security: *Set Up: Help Knowledge Management* domain in the Help functional area.

3. Edit Domain Security Policies.

   Review your domain security policy to ensure that users have sufficient privileges to the *View: Help Articles* domain in the Help functional area.

   Workday recommends that you provide a security group such as *All Employees* access to the *View: Help Articles* domain.

   Note: For a user to view an article, they must have access to the *View: Help Articles* domain and belong to the article's assigned audience.
4. Activate Pending Security Policy Changes.
5. (Optional) Access the Edit Tenant Setup - Help task.

   On the Knowledge Management tab, you can disable or enable indexed article evaluation. Disabling indexed article evaluation enables new and updated indexed article audience condition rules to take affect immediately, but also increases the amount of time it takes to evaluate article access.

   Security: *Set Up: Help Case Management* domain in the Help functional area.

2021R2 What's New Post: Knowledge Management Audience Condition Rules

Steps: Create Article Authors

Prerequisites

Security: These domains in the Help functional area:

- *Manage: Help Articles*
- *View: Help Articles*
- *Self-Service: Help Articles*

Context

You can create article authors that restrict who can create and edit a Help article.

Note: Knowledge Management only supports unconstrained security groups.

Steps

1. Create Segment-Based Security Groups.

   Create unconstrained segment-based security groups based on article categories that represent the authors. Grant the security groups access to the category segments that they represent.

   Example:

Option	Description
Name	Enter *Article Authors: Benefits*.
Security Groups	Select *Benefits Administrator*.
Access to Segments	Select *Security Segments* > *Knowledge Base Article Category* > *Benefits (Active)*.
2. Edit Domain Security Policies.

   Grant your new segment-based security groups permissions to these domains:

   - *Manage: Help Articles* in the Help functional area.
   - *Drive* in the System functional area.
3. Activate Pending Security Policy Changes.

Result

Users with access to the *Manage: Help Articles* domain in the Help functional area can create and edit articles that have the category segment that their security group represents.

2021R2 What's New Post: Knowledge Management Audience Condition Rules

Create Articles

Prerequisites

Security:

- *Manage: Help Articles*.
- *Drive* in the System functional area.
- *View Drive File and Media* in the System functional area.

Context

You can create articles and share them with target audiences, enabling workers to access information relevant to them more easily. Example articles:

- U.S. Paid Holidays
- Code of Conduct Policies
- Summer Party Details

Steps

1. Access the Create Article task.
2. As you complete the task, consider:

Option	Description
Language	Assign a language to the article. When article audience members specify a preferred language that matches the language you select, Workday displays that version of the article when they access an article from: • A direct link from another article. • A link from a journey. • A related article from another article. • Case Suggestions. • Workday Assistant. When audience members search for articles through global search, Workday displays all articles that contain the search text, regardless of the preferred language of the audience member. After Workday saves the first version of the article, click Add to create a translated version. Note: When you assign a language to an article, you must provide the translated

Option	Description
	content. Workday doesn't translate the content of the article to the selected language. You can create articles in any language that you have enabled in Workday.
Version History	Version History enables you to view, access, and edit previous or later versions of an article.
Category	Workday displays the categories that you created on the Maintain Article Categories task. Examples: Benefits, Expenses, Payroll, and Leave. You can filter articles by category in reports.
Who Can View	Select target audiences for the article. Examples: Public, Managers, and HR Admin.
Location	(Optional) Select a location that the article applies to so that Workday delivers the most relevant article in search results based on the location of the searcher. You: • Can only select 1 location. • Must have *View* access to location and location hierarchy to select it. If you need to create an article in different languages for one location, we recommend creating a base article and then creating multiple translated article versions from the base article. If you need to create articles that have a different language for each location, we recommend creating separate articles for each location and language.
Tags	Enter key words to associate your article with so that the article displays in search results when workers search on the key word.
Share	You can share the article draft with other users and add them as collaborators.
Comments	You can add comments for other article authors and collaborators to review and provide feedback.
Article Summarization with AI	(Optional) You can use AI to summarize the content in the article. You can also upload a DOCX or PDF file from your desktop or Drive and use AI to summarize the content of the file in the article.

Option	Description
Article Translations with AI	(Optional) After publishing an article, you can use AI to translate your content and create new translated versions of your article. Note: You must publish an article before creating translated article versions.

Result

When you publish an article, Workday surfaces the article through global search and Workday Assistant when you search for terms associated with the article.

Note: Workday automatically generates a reference ID for all business objects, including articles. While you can change reference IDs, changing article reference IDs results in loss of access to articles.

Next Steps

Access the Help Article Workspace task to manage your articles.

Bulk Article Upload

Context

Workday enables you to bulk upload up to 100 DOC or DOCX files as knowledge articles simultaneously. This feature streamlines the process of adding and creating content in your knowledge base, saving significant time and effort compared to creating articles individually.

This feature:

- Enables easier migration of existing documentation into Workday Help.
- Creates a large volume of knowledge management articles from existing documents.
- Reduces the manual effort required to build or expand your knowledge base.

Note: Images, videos, and PDFs can't be uploaded.

Steps

1. Access the Help Articles workspace.
2. Select the Upload Articles button.

   On the My Drafts tab, each file you upload through the pop-up window becomes a new, separate draft article.
3. Drag and drop up to 100 DOC or DOCX files into the upload area, or select them from your computer.

   After the upload, you can review, edit, and publish the articles according to the standard procedures of your organization.

24R2 Release Note: Bulk Article Upload

Summarize Articles with AI

Prerequisites

- Set up Knowledge Management. See Steps: Set Up Knowledge Management on page 3043.
- On the Maintain Innovation Services and Data Selection Opt In task, select the Knowledge Management Articles category within the People Experience: User Experience Machine Learning service.
- Security:
  - *Manage: Help Articles View: Help Articles*, and *Self-Service: Help Articles* in the Help functional area.
  - *Drive* and *View Drive File and Media* in the System functional area.

Context

Using generative AI, you can summarize the content of an existing article or create a new summarized article from an uploaded DOCX or PDF file. Workday enables you to summarize the content into a general summary article, a frequently asked questions article, or a talking points for managers article.

Note: You can disable AI article summarization in the Edit Tenant Setup - Help task. See../../../../manage-workday/tenant-configuration/tenant-setup/che1594214441572.dita.

Steps

1. Access the article editor for an existing article or new article.
2. As you complete the task, consider:

Option	Description
Click the Generate Content icon.	Use this option to upload a DOCX or PDF file from your desktop or Drive that you want to summarize in a new article. Workday automatically attaches the source file to the article in an additional Source Document section. You can remove the attached source document and section after the summarization. Note: If you don't enter an article title, Workday uses the name of the file as the article title.
Select the Restructure with AI option in the Edit menu.	Use this option to summarize content of an existing article.

   You can summarize up to maximum of 5000 words with AI. The minimum amount of words you can summarize is 100.
3. Select the type of summary that you want to generate with AI.
4. As you complete the task, consider:

Option	Description
General Summary	Summarizes the content into Overview, Key Takeaways, Call to Action sections. The Key Takeaways section displays content in a numbered list.
Talking Points	Summarizes the content into Summary, Key Talking Points for Managers, and Call to Action

Option	Description
	sections. The Key Talking Points for Managers section displays content in a numbered list.
FAQ	Summarizes the content into Introduction and FAQ sections. The FAQ section displays content in a question and answer format.

Note: Workday adds an AI Generated label to articles with content summarized with AI.

5. Review the summarized content and click Publish.

Result

Users can now view the summarized article in Workday.

2024R2 Feature Release Note: Article Summarization with AI

Translate Articles with AI

Prerequisites

- Set up Knowledge Management. See Steps: Set Up Knowledge Management on page 3043.
- On the Maintain Innovation Services and Data Selection Opt In task, select the Knowledge Management Articles category within the People Experience: User Experience Machine Learning service.
- Security:
  - *Manage: Help Articles View: Help Articles*, and *Self-Service: Help Articles* in the Help functional area.
  - *Drive* and *View Drive File and Media* in the System functional area.

Context

Using generative AI, you can translate the content of a published article to a new language. For each translation, Workday automatically creates a new version of the article with the text translated in the selected language.

Note: You can disable AI article translation in the Edit Tenant Setup - Help task. See../../../../manage-workday/tenant-configuration/tenant-setup/che1594214441572.dita.

Steps

1. Access a published article from the Help Articles workspace or the View Article task.

   Ensure that the selected article has the Base Article Version label. If a published article doesn't have the Base Article Version label, select Set as Base Article from the related action menu on the Translation section.

   Note: You can translate a maximum of 30,000 characters with AI.
2. In the Translations section, click Add Translation.
3. As you complete the task, consider:

Option	Description
Select Language	Select the language that you want to translate the article content to.

Option	Description
Select Option	Select Generate Translation from Base Article to create a new article version containing the translated text. Select Create Blank Article to create a new article version that contains no text. Use this option to provide your own manual translation.

4. Click Confirm.
5. Review the content and click Publish.
   Workday creates a new draft article version containing the translated text. We add an AI Generated label to the new draft article version. The original published article will have a Base Article Version label.
6. Review the translated content in the new version and click Publish to publish the translated article version.

Result

Users can now view a translated version of your article in Workday.

Apply Base Article Content Changes to a Translated Article Version

Prerequisites

- Translate Articles with AI.
- Security:
  - *Manage: Help Articles View: Help Articles*, and *Self-Service: Help Articles* in the Help functional area.
  - *Drive* and *View Drive File and Media* in the System functional area.

Context

You can apply and translate content changes in a published base article to a translated article version.

Steps

1. Access the published base article from the Help Articles workspace or the View Article task.
   Ensure that the published article has the Base Article Version label.
2. Click Edit to access the article editor.
3. Add and review your content changes.
4. Click Publish to publish the changes.
5. In the Translation section, select Update from Base Article from the related action menu of a translated article version.
   Workday uses AI to translate and apply the content changes from the base article to your translated article version.
6. Review the translated content and click Publish.

Result

Workday now reflects the content changes in both the published base article and translated article version.

Reference

2024R2 Feature Release Note: Article Translation with AI

Concept: Knowledge Management

Workday refers to knowledge management as the way in which you create, share, and manage knowledge. Workday enables you to capture, maintain, and share your HR knowledge through articles.

Article Formatting

You can create robust articles that include:

- Attachments
- Bulleted and numbered lists
- Different font sizes, font colors, and highlighted font
- External links
- Headings
- Images
- Links to internal tasks, reports, and articles
- Links to external URLs
- Paragraph formatting such as text alignment, line spacing, and indentations.
- Rich text formatting such as bold, italics, underline, and strikethrough.
- Tables
- Videos

Note: Article authors need security permissions for the tasks and reports that they want to link in the article.

Article Link Sharing

When you view an article, you can copy the article URL to share inside and outside of Workday. Example: You can link to an article in help text within a business process.

The security permissions that you configure still apply when sharing articles. Example: If Betty shares an article URL with Ryan, who isn't an audience member of the article, Workday displays an error instead of the article content.

Copying the URL also enables you to access the latest version of the article. When you copy the link directly from the web browser, the link doesn't work as the browser links change.

Article Collaboration

Article authors can share article drafts by adding other authors as article collaborators. When viewing a shared article draft, collaborators can also add comments on the draft. Article collaboration enables multiple authors to access, collaborate, and review new article drafts before publishing the draft.

Collaborators receive notifications in Workday when:

- An author adds them as a collaborator to an article draft.
- Other collaborators leave comments on shared drafts.

Article Feedback

You and your employees can help improve article content by letting authors know whether an article was helpful or not. You can leave a comment on articles that you find unhelpful. Workday sends a notification with the comment to the most recent author of that article version. Workday doesn't notify the original author or any other authors who might have edited the article.

Article Metrics and Reporting

You can view article usage details from the last 30 days, like:

- How helpful employees find an article.
- Feedback from employees.
- How many views an article receives.
- Median time employees spend reading an article.

You can access article metrics by selecting the:

- More button when you view a published article as an editor.
- *View Article Metrics* option from the ellipsis icon on each published article in the Help Article Workspace.

You can access these Workday-delivered reports:

Report Name	Description
Article Version Comments	The Article Version Comments advanced report displays comments for each article version.
Help Article Performance	The Help Article Performance advanced report displays article metrics for your entire knowledge base, enabling you to analyze your knowledge base and make data-driven improvements. This report displays article metrics for each individual published version of an article. Note: The Help Article Performance report refreshes daily, updating the Total Views, Helpfulness (%), and Article Version Feedback fields each day. The Article Version Feedback fields in the report only calculate and display metrics for negative feedback responses.

You can create custom reports to aggregate and view article metrics by using the Knowledge Base Article Versions report data source.

You can make a copy of the Workday-delivered Help Article discovery board to create and share a visual analysis of your knowledge base. You can create and share custom discovery boards by using the Knowledge Base Article Versions report data source.

From the Help Article Workspace, you can view the total number of views and Helpfulness (%) for all published versions of an article.

Article Summarization with AI

You can use generative AI in the article editor to summarize new or existing article content into:

- A general summary article with Overview, Key Takeaways, Call to Action sections. The Key Takeaways section displays content in a numbered list.

- A talking points for managers article with Summary, Key Talking Points for Managers, and Call to Action sections. The Key Talking Points for Managers section displays content in a numbered list.
- A frequently asked questions article with Introduction and FAQ sections. The FAQ section displays content in a question and answer format.

The Restructure with AI option in the article editor enables you to summarize your existing article content. The Generate Content option in the article editor enables you to select a DOCX or PDF file from your desktop or Drive and create a new summary of the content in the file.

Note: When you use theGenerate Content option to upload and summarize a file, Workday automatically attaches the source document and displays it in an additional Source Document section.

Article Translation with AI

You can use generative AI in the article editor to translate your article content into a different language.

From an initial base article, you can create and publish translated versions of the article by using the Add Translation button in the Translations section in the side panel. For each article translation, Workday automatically creates a new version of the base article.

When accessing a published base article in the Help Articles workspace, you can view each corresponding translated article version in the Translations section. You can use the Update from Base Article option to apply and translate content changes from a published base article to a translated article version.

The supported languages for translations are:

- Bulgarian
- Czech
- Danish
- Dutch
- English
- Estonian
- Finnish
- French (Canada)
- French (France)
- German
- Greek
- Hungarian
- Indonesian
- Italian
- Japanese
- Korean
- Latvian
- Norwegian
- Polish
- Portuguese (Brazil)
- Romanian
- Russian
- Simplified Chinese
- Spanish (Neutral)
- Swedish
- Turkish
- Ukrainian

Media in Articles

You can add these types of media to an article:

Media	Description
File	Displays as an attachment that viewers must download to view. Articles support these file types for attachment: • bmp • csv • doc • gif • jpeg • pdf • png • ppt • pptx • xlsx
Image	Displays in the article using the sizing settings you configured.
Video	Displays as an embedded video that viewers can watch directly in the article.

Related Articles

Workday uses the content of an article to search for and associate other related articles. Based on those associations, Workday displays up to 3 related articles at the bottom of an article.

While you can't manually designate which articles relate to each other, you can hyperlink to articles within an article body to promote visibility.

Glossary

Full Glossary of Terms

A	B	C	D	E	F	G	H	I	J	K	L	M
N	O	P	Q	R	S	T	U	V	W	X	Y	Z

Was this helpful?

A

Academic Date Range	The period of time associated with a student recruiting cycle.
Academic Level	The level of an educational objective that a student can pursue at an institution, such as:

- Undergraduate, Graduate, or Professional at a university.
- Associates or Baccalaureate at a community college.

Academic Unit	A Workday organization type that represents a school, college, university, or other unit of your institution. These units can recruit prospective students, admit students, offer programs of study or courses, or administer financial aid. Academic units are also used with academic appointments in Workday.
Academic Unit Hierarchy	A hierarchical grouping of academic units primarily used for roll-up reporting.
Accounting Cash	A group of cash ledger accounts that you can use to check cash balances against during settlement.
Accounting Cash Pool	One or more primary balancing worktag hierarchies that you can use to pool cash ledger balances for cash balance checks during settlement.
Active Candidate	A person with an application for a specific job requisition. Candidates must be linked to a job requisition for Workday to initiate a job application event.
All Ledgers Journal	An accounting journal that's not configured as a single ledger for the given company and is posted to both primary and alternate ledgers.
Applicant Pool	A subset of applications in an application grouping. Applicant pools enable you to control and adjust workload for application reviewers.
Application Grouping	A grouping of applications for the same admitting level of an academic unit and the same anticipated start date. Groupings can have 1 or more application pools, with an admissions counselor assigned to each pool.
Auto-fill	A time entry option that copies time blocks from a worker's schedule or from a previous week when entering time.
Award	A contract agreement with your sponsor in the form of funding to perform an activity for a public purpose. It defines how to capture direct and facilities and administration costs, recognize revenue, and bill your sponsor.
Award Costs Processing (ACP)	Processing facilities and administration costs and revenue recognition related to spend transactions on awards.
Award Credits	Percentage of award or award lines you allocate to specific worktags for reporting purposes.
Award Line	A line of authorized amount associated with a grant on an award. It includes information on the line's effective date, spend restrictions, basis limit, salary

	cap, and facilities and administration cost rates for expenditures charged to the grant.
Award Tasks	Administrative tasks that you do or track for a sponsor to support the terms of your award contract. Example: Quarterly progress report, financial report.
Aggregation Security Group	A security group that grants access rights to members of an included set of security groups. Revokes access of members of any excluded security groups.
Approve	An action in a business process that designated participants select to progress the event to the next step.
Assignable Roles	Positions you can assign to organization roles.

Back to Top

B

Basis Limit	The maximum amount of direct costs you can use to calculate facilities and administration costs.
Base Pay Element	The compensation components that are included in the calculation of base pay for the purposes of determining the compa-ratio and target penetration. Example: Include both base pay and bonuses in the base pay calculation for compa-ratio.
Benefit Credit Bundle	A defined group of benefit credits that you can award together.
Benefit Defaulting Rule	A rule that identifies the benefit plans, coverage targets, and coverage amounts that employees receive by default when they do not complete an enrollment event.
Benefit Event Rules	These rules specify coverage increase limits, EOI requirements, waiting periods, and other rules and conditions of enrollment for benefits enrollment events.
Benefit Event Type	Identifies the events that trigger benefit enrollment, such as open enrollment, new hires, or the birth of a child. It also identifies the coverage types to make available to employees for when an event of this type occurs.
Benefit Group	A group of employees who qualify for benefits based on eligibility rules. Employees must be included in a benefit group to enroll in a benefit plan.
Business Object	Objects used to store data in Workday (such as organizations or workers). A business object has *fields* and *instances*, which are analogous to rows

	and columns in a spreadsheet. Workday links related business objects: a worker is associated with a position, the position to a job profile, and so on.
Business Process Definition	The tasks that compose a business process, the order in which they must be done, and who can do them.
Business Process Instance	A business process that the initiator has started. The *Hire Employee for Organization X* business process definition becomes an instance when the initiator uses it to hire an employee.
Business Process Security Policy	A business process security policy secures the steps and process-wide actions including view, rescind, cancel and correct. It specifies which security groups have access to each action.

Back to Top

C

Calculated Time	Result of applying time calculations to a worker's reported time. Automates application of company or regulatory rules.
Calendar-Based Time Entry	A time entry method that uses the time entry calendar as the focal point for entering, editing, and submitting time.
Cancel (business process)	Canceling a business process stops the workflow in progress and reverses changes made to data. You can't cancel a completed business process; you must rescind it. A securable action in a business process security policy.
Candidate	Candidates include both prospects and active candidates.
Candidate Pipeline	All active candidates.
Candidate Pool	Candidates grouped together based on specific criteria.
Cascading Leave	A sequence of related leave types that are linked together. When an employee meets the conditions defined for ending a leave, Workday generates a return from leave request and a separate request for the next leave.
Company	Companies are organizations within Workday that represent the internal business entities within your enterprise. In Workday Financial Management, companies are the primary organization for all business processes. A Company is considered the level at which one holds a balanced set of books and should reflect Legal Entities where possible.
Company Hierarchy	Defines a parent-child or reporting relationship between Companies in your organizations. The way that you structure your hierarchies influences

	many important Workday functions, especially role assignments, planning, and reporting.
Compensation Basis	A grouping of compensation components, such as salary, commission, and allowance plans, that define estimated earnings for an employee population.
Compensation Component	The umbrella term for compensation packages, grades, grade profiles, and plans that can be associated with compensation eligibility rules.
Compensation Defaulting Rule	A rule that establishes the criteria for how compensation components default to worker compensation during staffing transactions (such as hire or job change).
Compensation Element	Compensation elements link Compensation to Payroll. When a compensation element is attached to a plan that is assigned to an employee, Workday can determine which earnings to use to pay the employee.
Compensation Package	A grouping of compensation guidelines (grades, grade profiles, and their associated steps) and plans that you can assign to workers as a set. Packages provide a quick view of the eligible plans for a particular job or group of employees.
Compensation Rule	Guidelines for determining which workers are eligible for which components of compensation.
Compensation Step	A specific monetary amount within a grade or grade profile.
Compensation Target Rule	A rule used to segment your employee population for assignment of compensation plans.
Conditional Calculation	Time calculation that tags time blocks that meet certain conditions.
Conditions	Conditions are one or more logical matches that are resolved to True or False and used to decide if some action should be taken. You can add conditions to steps in a business process to determine if the step should run.
Connection Map	A tool on a customer profile that enables you to establish and manage the relationships between business entities and ship-to addresses.
Connector	A set of 1 or more integration templates that provide a framework for building integrations in a particular functional area. The integration can support a specific type of data, or can support a specific endpoint (example: Salesforce.com or Okta).
Consolidated Billing Schedule	A billing schedule type that allows you to combine all charges for multiple projects or services within a specific billing period into one invoice.
Contextual Custom Report	A custom report created from the related actions menu of a Workday object by selecting Reporting

	> Create Custom Report from Here. Simplifies choices of data and fields to those related to the context of the object.
Contract Rate Sheet	A document that outlines the contract billing hourly rates for roles such as the engineer, manager, or consultant, with the option to add billing rules for specific contract considerations.
Conversation Tag	A descriptor, such as Dietary Restrictions or Special Needs that you can assign to an engagement conversation to identify its topic. You can search for conversations by conversation tag.
Conversation Topic	A conversation tag or recruiting event name that you can associate with an engagement conversation to make conversations easier to find.
Correct (business process)	Correcting a business process changes a specification or data in the workflow while in progress. A securable action in a business process security policy.
Cost Reimbursable Spend	A billing item that Workday creates to help you bill your sponsor for award-related spending. The cost reimbursable spend amount includes both the original spend amount and any overhead costs Workday calculates based on your award costs configurations.
Coverage Target	Defines whether a specific health care plan or insurance plan applies only to the employee or also to the dependents, spouse, family, and so on.
Cross Plan Dependency	Limits the coverage options available to workers during an enrollment event based on their choice of other benefit plans and coverage amounts. Example: You can limit coverage in a specific plan to a percentage of the total coverage in 1 or more other benefit plans.
Custom Report	Reports not delivered by Workday and built using the Workday Report Writer. Can be created new or by copying another standard or custom report.
Customer Payment Matching	A feature that uses historical payment applications to suggest customer invoices and adjustments that match customer payments with insufficient remittance advice.
Customer Refund Payments in Settlement Runs	A refund payment generated by the settlement run with a payment date that reflects the date you settle the refund.

Back to Top

D

Dashboard (landing pages)	A specialized landing page containing a set of pre-configured worklets for a functional area that you

	can copy or modify. You can add additional custom worklets to dashboards using the report writer.
Data Source	A data source defines a set of business object instances for reporting purposes. Allows reporting access to all business objects related to those in the data source.
Day Breaker	The time of day on which a worker's work day and work week begins. Defines the 24-hour period over which daily time calculations execute and the 168-hour period over which weekly time calculations execute. Unless otherwise specified, the default day breaker is 12am.
Deny (business process)	When you deny a business process, the business process is terminated and all Workday data is restored to its state before the business process started. To restart the business process, you need to submit the process again, and redo all previously completed steps.
Depreciation Profile	A configuration that determines how Workday depreciates assets by defining a depreciation method, convention, and useful life.
Designation	An attribute, such as Community Learning Partner, Honors, or STEM, that you can associate with educational institutions and external associations to make them easy to find and report on.
Discrete Composite Asset	A combination of related but distinct assets for which you can individually track cost, depreciation, and lifecycle events.
Disposition	Status of candidates that have been rejected for hire or declined a job during the job application event.
Domain	A collection of related securable items such as actions, reports, report data, report data sources, or custom report fields. Each domain is secured by a domain security policy.
Domain Security Policy	A collection of related securable elements of different types and user-specified security groups that have access to elements of each type.
Dynamic Period	A date that identifies the anticipated start date for a student of online education or other asynchronous learning.

Back to Top

E

Educational Taxonomy	A taxonomy scheme and set of codes you can assign to programs of study and their concentrations to meet state, local, or other classification requirements.

Effort Grant	The sponsor funded grant associated with the worker's certified effort.
Effort Recertification	The process you use to recertify an employee's effort in response to payroll accounting changes that occur after you last certified the effort.
Eligible Investigator	A type of role that you can use to assign individuals to awards, grants, and grant hierarchies, so that the role assignments remain intact even when the person's position or organization changes.
Engagement Action Item	Defines a requirement that must be met for an application for admission to be considered complete. Example: Submit transcripts.
Engagement Item	An engagement email or printed engagement item. You can include engagement items in engagement plans and use them to support student recruiting events.
Enrollment Event Rule	A rule that defines coverage start and end dates, waiting periods, coverage increase limits, Evidence of Insurability requirements, and other coverage rules and conditions. Rules ensure that the benefits process presents only the options that each employee is eligible for based on the event type.
Enterprise Interface Builder (EIB)	An integration tool that enables you to create simple, secure, and customizable integrations with Workday. Alternately, an EIB is a simple integration created by the integration tool. An EIB consists of an integration system, an integration data source, an integration transformation, and an integration transport protocol.
Estimate at Completion (EAC)	Includes all the hours logged and approved for the project, as well as the future hours the worker expects to complete.
Estimate to Completion (ETC)	Includes the future hours the worker expects to complete.
Event	A business process transaction that occurs within your organization, such as hiring or terminating an employee.
External Association	A nonprofit, community-based, or other noneducational organization that you can associate with student prospects or identify as a location for recruiting events.
External Engagement Item	Used to send and track third-party engagement items for recruiting events, communication plans, or ad hoc communications.

Back to Top

F

Fast Path	A streamlined approach to moving applications for admission from submission to matriculation as quickly as possible.
Field Overrides	A tool that lets you customize integration systems that are based on a connector template. Field overrides are managed through an integration service. They use calculated fields or report fields to supply values to an integration system. Example: member IDs in benefit provider integrations.
Financial Aid Period Record	A record containing data such as academic unit, academic level, and program of study for a student that Workday uses to process financial aid for an academic period.
Functional Area	A collection of domain or business process security policies that are related to the same set of product features, for example, Benefits or Compensation.

Back to Top

G

Grade Profile	A breakdown of a compensation grade by functional task, geographical region, or other categorization your business requires. A profile enables you to assign more granular compensation ranges to workers.
Grant	A worktag you use to charge award-related expenditures to an award line.

Back to Top

H

Headcount Plan	Provides visibility into the number of workers necessary to achieve your business goals within a specified period of time.

Back to Top

I

Individual Target	An individual bonus or merit target for a worker during a compensation review process that overrides the target defined on the compensation plan.
Integration Attribute	An integration component that specifies the tenanted value of a data element in Workday. Example: Plan Sponsor Name is a type of attribute in benefit provider integrations.
Integration Data Source	Indicates the type of data that Workday receives from or exports to an external system and its location.

Integration Event	The record of an integration process. Every integration—current or past, involving the import or export of data, successful or not—gets recorded as an integration event. The integration event contains all the information about the integration process, including its status.
Integration Map	An integration component that specifies how values in Workday map to values in an external system. Example: Pay Rate Frequency is a type of map in third-party payroll integrations.
Integration Service	A group of related integration attributes, maps, and XSLT that provides a framework to transform Workday data into the format required by an external system.
Integration System	A tenanted definition of an integration between Workday and an external system based on a template that provides the methodology for communicating data.
Integration Template	A collection of integration services that enables communication between Workday and an external system. Workday provides integration templates in categories such as Benefits, Financials, HCM, Payroll, Payroll Interface, Procurement, Recruiting, Security, and Settlement. Many of the delivered templates contain default values for attributes, as well as prompt values for attributes and maps, to define the integration further.
Integration Transformation	Converts data into a format that Workday or a receiving external system can understand. Workday provides some delivered transformations, and you can also create custom transformations.
Integration Transport Protocol	Controls how Workday exports data to an external endpoint or service or imports the data from an external endpoint or service. Workday supports several types of transport protocols, including email, FTP and SFTP, HTTP/SSL, Workday attachments, and Workday Web Services.
Intersection Security Group	A security group whose members are other security groups. Members associated with all included security groups are granted access through an intersection security group.
Initiation Step	The first step of a business process.

Back to Top

J

Job-Based Security Group	A security group that includes one or more job-related attributes or objects including job profile, job family, job category, management level, or exempt/non-exempt status.

Job Management Staffing Model	A structure that defines 1 set of hiring restrictions for all jobs in a supervisory organization, with no specific limits on the number of jobs that can be filled.
Job Profile	The generic features and characteristics of a job or position, such as management level, pay rate type, compensation, skills, and other qualifications.

Back to Top

K

Knowledge Article	An article that is accessible to workers in your organization based on the assigned article audience. You can use these articles to document, share, and manage HR information specific to your organization.
Knowledge Article Audience	A group of employees that can view designated Knowledge articles. Their access to articles is determined by condition rules assigned to the audience.

Back to Top

L

Landing Page	Landing pages display a collection of worklets. Landing pages may have different display formats (grid or bubble) and support different functions. The Home landing page is intended for common worklets, such as self-service worklets.
Leave Family	A set of similar leave of absence types. Example: A company-specific family includes disability leave and bereavement leave, while a separate regulatory family includes jury duty and family medical leave.
Leave of Absence Rule	A rule that defines worker eligibility for leaves of absence.
Line Tax Rate Application (LTRA)	A collection of tax amounts that apply to a given transaction line or supplier invoice line split on a taxable document.
Linked Customer Contracts	Child customer contracts that you associate with a parent customer contract for revenue allocation purposes.
Linked Leave	A leave type that shares an entitlement with other leave types or time offs. Eligibility rules, validation rules, and supporting data reference the combined balance of the associated leave types and time offs. Also known as coordinated leaves and time off.
Location Membership Security Group	A security group whose members are any workers assigned to that location.

Back to Top

M

Match and Merge	A process that helps eliminate duplicate student prospect information in Workday.
Micro-edit	The ability to edit existing time blocks or add time blocks directly to a day by clicking the time entry calendar.
Multiplier-Based Coverage	Insurance coverage based on multiples of salary, such as 1x, 2x, or 3x salary.

Back to Top

N

Nonbillable	A nonbillable project is an internal project that you don't invoice customers for.

Back to Top

O

Object Class	The spend categories that award sponsors agree to reimburse award recipients for maintaining their projects.
On-Account Document	A document that's generated when you place a payment amount on an existing customer account. You can apply on-account documents to future payments.
Organization Security Group	A security group whose members are any workers assigned to that organization.

Back to Top

P

Parent Customer Contract	A customer contract that you associate with a child customer contract so you can add contract lines across contracts to the same schedule. When you view the parent customer contract, Workday displays the child customer contracts as linked contracts.
Passive Event	Events that result from the passage of time rather than from a specific change to employee data.
Payment Group	The payments that result from a settlement run.
Payment Tax Rate Application (PTRA)	A collection of tax amounts that apply to a given payment on a taxable document.
Position Management Staffing Model	A structure that defines different staffing rules and restrictions for each position in an organization.
Position Restrictions	The attributes and conditions that apply to an unfilled position in a supervisory organization that uses the position management staffing model. Example: Job profile, location, qualifications, and worker type.

Pre-Hire	In Staffing, an individual you're tracking before employment. In Recruiting, a candidate who is in the *Offer*, *Employment Agreement*, *Background Check*, or *Ready for Hire* stage.
Procurement Contract	Contracts enable your organization to define preferred suppliers, analyze spend for better control, and standardization. They also allow your organization to implement contractual spend to better negotiate and enforce discounts and other supplier terms.
Procurement Contract Type	A procurement contract in Workday is always associated with a Contract Type that dictates how the contract can be used across the procure-to-pay chain. Example: when a Contract Type has the Scheduled Purchase Orders option set, Workday can use the contract to automatically create purchase orders based on a predefined schedule.
Pro Forma Effort Certification	A report you can run before you run effort certification to review estimated effort based on salaries and wages that payroll accounting attributes to grants. It allows you to take corrective action, such as payroll accounting adjustments, prior to certifying employee effort, to ensure a more seamless certification process.
Project Advanced Labor Costing	Prorating project labor costs using standard or fully burdened costing.
Project Asset	A container that captures separate, ongoing costs of a capital project in progress. You can associate multiple projects assets with a project to track costs over the life of a project.
Project Billing Rate Sheet	A document that outlines the hourly or daily rates charged per project role, with the option to be more specific based on defined categories such as Region, Skill Level, and Project Size.
Project Plan Phase	A phase in the project plan that represents a stage in the project work. Example: Plan and Strategize. A project plan organizes projects into sequenced phases and tasks. A project phase is generally project agnostic, but when you add that phase into a project plan, it becomes a project plan phase.
Project Plan Task	The work details in a project plan phase. Example: Define Project Objectives.
Project Transaction Source	The source of project billing transactions. Example: Supplier Invoice, Expense, or Time.
Prospect	Someone you are interested in tracking who isn't associated with a specific job. You can use tags, prospect types, and prospect statuses to help track these individuals.

Back to Top

Q

Quick Add	A time entry option that enables you to create a time block and copy it to multiple days in a week.

Back to Top

R

Recipient Threshold	The maximum number of prospects to whom you can send an engagement item at the same time without requiring approval.
Recruiting Cycle	A recruiting period for 1 or more academic levels of an academic unit. You associate recruiting cycles with campaigns to measure the effectiveness of each campaign per recruiting cycle.
Reference ID	A unique identifier used to look up data for integration purposes.
Reference Pay Range	A range of pay established for a compensation grade or grade profile.
Related Customer Contract	A customer contract that you associate with another customer contract for reporting purposes. When you create a customer contract, you can associate 1 related customer contract with it. The related customer contract must share the same company and sold-to customer.
Reported Time	A worker's time that has been entered, but has not had any time calculations applied.
Revenue Category	An attribute in customer contracts and billing used to search for and report on goods and services you sell. Also a dimension in account posting rule types for customer contracts, billing, and accounts receivable that drives accounting behavior.
Risk Insight	Provides the reason why Workday identifies an expense report with a High or Medium risk level. Reasons may include 1 or more of these: Amount Anomaly, Duplicate Expense, and Incorrect Expense Item.
Risk Level	The value (Low, Medium, and High) that Workday provides from risk evaluation. Workday provides default risk levels, which can also be configured based on Risk Score.
Risk Score	The numerical value (0 to 100) that Workday provides from risk evaluation. The score helps identify anomalous expense reports.

Back to Top

S

Salary Over the Cap Basis	A worktag type representing the effort grant on over-the-cap salaries when you have salary over the cap enabled on your tenant. For the portion of

	salary that's over the cap, the Salary Over the Cap Basis worktag identifies the effort grant, while the Grant worktag, if applied, identifies the grant on the salary over the cap suballocation.
Salary Over the Cap Suballocation	Worktags and their distribution percentages that you want to allocate on the portion of salary that's over the salary cap.
Single Ledger Journal	An accounting journal that's a single primary or alternate ledger currency for the given company.
Source	The duplicate record that you want to merge in the Duplicate Management Framework.
Spend Category	A logical grouping to search and report on acquired items and services. Also a dimension in account posting rules for procurement and spend that drives accounting behavior.
Staffing Model	A structure that defines how jobs and positions are created and filled in a supervisory organization. Workday supports 2 kinds of staffing models: • Job management. • Position Management.
Staffing Organization	An organization category that includes supervisory organizations, matrix organizations, or retiree organizations.
Stage	A value, such as Lead, Inquirer, or Applicant, that identifies where a student prospect is in the recruitment or admissions process.
Student Financials Period Record	A record containing data such as academic unit, academic level, and program of study for a student that Workday uses to process student financials transactions for an academic period.
Student Prospect Profile	A worklet that displays information for a prospective student, including contact information and recruitment details.
Student Prospect Type	A value, such as First Year or Adult Returning, that you can assign to prospective students and use to match student prospects to admissions counselors automatically.
Student Recruiting Region	Workday term for recruiting territory. A recruiting region can represent a geographical area, 1 or more schools, or schools in selected school districts.
Student Tags	An attribute, such as Veteran, Athlete, or Scholarship Recipient, that you can assign to student prospects. You can use tags to match student prospects to recruiters automatically, find prospects, and use as criteria for associating engagement plans with prospects.
Supplier Contract	Contracts enable your organization to define preferred suppliers, analyze spend for better

	control, and standardization. They also allow your organization to implement contractual spend to better negotiate and enforce discounts and other supplier terms.
Supplier Contract Type	A supplier contract in Workday is always associated with a Contract Type that dictates how the contract can be used across the procure-to-pay chain. Example: when a Contract Type has the Scheduled Purchase Orders option set, Workday can use the contract to automatically create purchase orders based on a predefined schedule.
System User	An account associated with and required to launch a Connector or Studio integration. Workday delivered integrations and custom integrations require a system user account for authentication and web service calls. A system user account is not associated with a person in Workday.
Staffing Organization	An organization category that includes supervisory organizations, matrix organizations, or retiree organizations.

Back to Top

T

Target	The record into which you want to merge the source in the Duplicate Management Framework.
Tax Code	A combination of tax rates that you select on transaction lines.
Tax Rate Application (TRA)	A collection of tax amounts across all lines on a taxable document with the same tax applicability, tax code, tax option, tax point date, tax rate, and tax recoverability.
Tax Recovery Pro Rata Factor Percentage	A company-specific percentage that modifies the tax recoverabilities that you configure for the tenant.
Termination Adjustment	A time off adjustment that automatically sets the remaining balance of a worker's time off plan to zero upon the worker's termination.
Time Block	A time block carries information about a portion of time, such as the number of hours worked or in/out times. Time blocks can be reported or calculated, but only calculated time blocks are pulled into Workday Payroll.
Time Calculation	A set of rules to apply time calculation tags to calculated time blocks for Payroll or other purposes. Example: You could create a time calculation to convert regular hours into overtime hours automatically if a worker works more than 40 hours in a week.
Time Calculation Tag	Workday applies calculation tags to time blocks during time calculations. The tags map to payroll

	earnings to drive how time blocks are paid and can be included in time off and accrual calculations. You can also use them to display time and time off totals on the time entry calendar.
Time Clock Event	A time clock event describes a worker's actions, such as a check-in or check-out, on the web time clock or an external time clock. Workday matches time clock events to form time blocks, which workers can edit and submit.
Time Code Group	The primary use of a time code group is to determine which time entry codes a worker is eligible for. Time code groups are assigned to a worker or to a position through eligibility rules.
Time Entry Calendar	A set of self-service pages that workers use to enter, edit, and submit time, when using calendar-based time entry. When using high volume time entry, workers can view and submit time from the time entry calendar.
Time Entry Code	A time entry code describes the type of time a worker enters, such as worked time or meal allowance. To use time entry codes, you must attach them to time code groups, except for the default time entry code assigned to a time entry template.
Time Entry Template	A template defines how a worker's time entry calendar is configured. Workers are matched to time entry templates through eligibility rules.
Time Entry Validation	Errors or warnings that prevent users from entering invalid time. Critical validations prevent a user from submitting time. Warnings display when entering time but don't prevent the worker from submitting time.
Time Off	The rules that apply to a specific type of time off, including eligibility rules, whether adjustments are allowed, and limits that differ from the time off plan.
Time Off Plan	The rules for entering and tracking 1 or more related time offs. Identifies the unit of time, eligibility requirements, whether to track balances, and if time offs are position-based or worker-based.
Time Period Schedule	A time period schedule defines which dates are available for entry at a given time and defines which dates are paid in which pay periods. They can line up with pay periods, or, in more complex scenarios, they can be paid on a lag.
Time Proration Rule	A rule that prorates employees' target compensation in a bonus or merit increase compensation event according to time-based criteria, such as leave of absence or time since hire.

Time Shift	A grouping of consecutive time blocks that you can use in standard overtime calculations, time block conditional calculations, and validations.

Back to Top

U

Unbillable	An unbillable transaction is a billing transaction that has an issue preventing it from being billed. You can't take action on the transaction until you resolve the issue.
Unnamed Resources	Placeholders for project resources that you can use to assign tasks and perform resource forecasting without specific resource assignments.

Back to Top

V

Value-Based Project	A customer contract line type that you use when your project billing installment values are not known at the time of contract creation.

Back to Top

W

Wave Picking	Enables you to group picking lists together in groups to better organize and prioritize your inventory picking process
Week Breaker	The day of the week on which a worker's work week begins. Defines the 7-day period over which weekly time calculations execute. Unless otherwise specified, the default week breaker is Sunday at 12am.
Work Schedule Calendar	A calendar that defines the days and hours that a worker is scheduled to work. In Time Tracking, work schedule calendars affect time entry options, calendar displays, and time calculations.
Workday Studio	An Eclipse-based development environment that enables you to build more complex integrations with Workday.
Workday Web Services	Workday's public API. Based on open standards, Workday Web Services (WWS) provide the core method for integration with Workday.
Worker	An employee or a contingent worker.
Worklets	Mini applications represented by clickable icons in Workday, providing quick and easy access to tasks and data that you access regularly. Example: the Inventory or Time Off worklets, or a worklet based on a report.

X

No Entries

Back to Top

Y

No Entries

Back to Top

Z

Zone Picking	A method of picking for orders from different zones at an inventory site. In Workday, you can split a stock request into multiple zone picking lists for more efficient picking and shipping. You can then ship the zone picking lists separately or merge them before shipment.

Back to Top
